Cystic fibrosis (CF) is a genetic disorder characterised by the production of sweat with a high salt content and mucus secretions with an abnormal viscosity. The disease is chronic and generally progressive, with onset usually occurring during early childhood or, occasionally, at birth (meconium ileus). Virtually any internal organ may be involved but the principle manifestations concern the breathing apparatus (chronic bronchitis), pancreas (pancreatic insufficiency, adolescent diabetes and occasionally pancreatitis) and, more rarely, the intestine (stercoral obstruction) or liver (cirrhosis). The usual presenting symptoms and signs include persistent pulmonary infection, pancreatic insufficiency, and elevated sweat chloride levels. However, many patients demonstrate mild or atypical symptoms, and clinicians should remain alert to the possibility of CF even when only a few of the usual features are present. Both criteria; clinical symptoms consistent with CF in at least one organ system and evidence of cystic fibrosis transmembrane conductance regulator (CFTR) dysfunction must be met to diagnose cystic fibrosis.

**Inclusions:** mucoviscidosis

**CA25.0**

#### **Classical cystic fibrosis**

**Coded Elsewhere:** Exocrine pancreatic manifestations of classical cystic fibrosis  
(DC30.Y)

Endocrine pancreatic manifestations of classical cystic fibrosis  
(DC30.Y)

**CA25.1**

#### **Atypical cystic fibrosis**

**Coded Elsewhere:** Endocrine pancreatic manifestations of atypical cystic fibrosis  
(DC30.Y)

**CA25.2**

#### **Subclinical cystic fibrosis**

**Coding Note:**

Cystic fibrosis with no clinical manifestations is coded here.

**Inclusions:** Asymptomatic cystic fibrosis

**CA25.Z**

#### **Cystic fibrosis, unspecified**

**CA26**

### **Chronic bronchiolitis**

Bronchiolitis and bronchiolitis obliterans are general terms used to describe a nonspecific inflammatory injury that primarily affects the small airways and generally spares the interstitium. Bronchiolitis may be caused by inhalation injury, infection, or drugs; associated with organ transplantation or connective tissue disease; or may be idiopathic. The main pathologic categories of bronchiolitis are: constrictive, proliferative, follicular, airway-centred interstitial fibrosis, and diffuse panbronchiolitis. The constrictive and proliferative patterns may occur together.

<b>CA26.0</b>	<b>Chronic obliterative bronchiolitis</b> Bronchiolitis obliterans is commonly used to describe a number of unrelated conditions whose common end point is functional obstruction of bronchioles. A typical form is constrictive bronchiolitis. Constrictive bronchiolitis is an uncommon histologic finding characterised by alterations in the walls of membranous and respiratory bronchioles, often without extensive changes in alveolar ducts and alveolar walls. These changes lead to concentric narrowing or complete obliteration of the airway lumen. The clinical manifestations of constrictive bronchiolitis usually include progressive airflow obstruction, sometimes in the presence of a relatively normal chest radiograph. The clinical severity depends upon the type, extent, and severity of the initial lung injury.
	<b><i>Exclusions:</i></b> Respiratory conditions due to inhalation of chemicals, gases, fumes or vapours (CA81)
<b>CA26.1</b>	<b>Diffuse panbronchiolitis</b> Diffuse panbronchiolitis (DPB) is an idiopathic inflammatory disease principally affecting the respiratory bronchioles, causing a progressive suppurative and severe obstructive respiratory disorder. Onset occurs in the second to fifth decade of life and manifests by chronic cough, exertional dyspnoea, and sputum production. Most patients also have chronic paranasal sinusitis. If left untreated, DPB progresses to bronchiectasis, respiratory failure and death. A significant improvement in the prognosis has been reported thanks to the use of long-term therapy with macrolide antibiotics, the effect of which is attributed to an anti-inflammatory and immunoregulatory action.
<b>CA26.Y</b>	<b>Other specified chronic bronchiolitis</b>
<b>CA26.Z</b>	<b>Chronic bronchiolitis, unspecified</b>
<b>CA27</b>	<b>Tracheobronchitis</b> Tracheobronchitis is inflammation of the trachea and bronchi. <b>Coded Elsewhere:</b> Relapsing polychondritis (FB82.3)
<b>CA27.0</b>	<b>Tracheobronchopathia osteochondroplastica</b> Tracheobronchopathia osteochondroplastica is a rare disorder of unknown cause, seen with a frequency of 0.4 percent at bronchoscopy, affecting the large airways. It is characterised by the development of multiple osseous and cartilaginous submucosal nodules connected to tracheal cartilage. The abnormality spares the posterior tracheal membranous wall. In spite of marked radiographic changes, patients are only rarely symptomatic since severe airway obstruction is unusual. Linear tracheoplasty may be required in patients with symptomatic airway obstruction.
<b>CA27.1</b>	<b>Tracheobronchomegaly</b> Tracheobronchomegaly is a disorder of unknown cause defined by dilatation of trachea and large bronchi presenting in adults.
<b>CA27.Y</b>	<b>Other specified tracheobronchitis</b>
<b>CA27.Z</b>	<b>Tracheobronchitis, unspecified</b>
<b>CA2Y</b>	<b>Other specified lower respiratory tract disease</b>

**CA2Z**

**Lower respiratory tract disease, unspecified**

**Lung infections (CA40-CA4Z)**

Any condition of the lungs, caused by an infection with a bacterial, viral, fungal, or parasitic source.

**Coded Elsewhere:** Influenza (1E30-1E32)

Pulmonary histoplasmosis capsulati (1F2A.0)

Chronic obstructive pulmonary disease with acute lower respiratory infection (CA22.1)

Influenza with pneumonia, seasonal influenza virus identified (1E30)

**CA40**

**Pneumonia**

A disease of the lungs, frequently but not always caused by an infection with bacteria, virus, fungus, or parasite. This disease is characterised by fever, chills, cough with sputum production, chest pain and shortness of breath. Confirmation is by chest x-ray.

**Inclusions:** infectious pneumonia

**Exclusions:** Pneumonitis (CA70-CA7Z)

**Coded Elsewhere:** Pulmonary toxoplasmosis due to Toxoplasma gondii (1F57.2)

Severe acute respiratory syndrome (1D65)

Congenital pneumonia (KB24)

Abscess of lung with pneumonia (CA43.1)

**CA40.0**

**Bacterial pneumonia**

A disease of the pulmonary system, caused by an infection with a bacterial source. This disease is characterised by fever, lethargy, headache, myalgia, vomiting, or coughing. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the bacterial source in a sputum sample.

**Coding Note:** Code also the causing condition

**Inclusions:** bronchopneumonia due to bacteria other than *S. pneumoniae* and *H. influenzae*

**Exclusions:** Congenital pneumonia (KB24)

Legionellosis (1C19)

**Coded Elsewhere:** Pulmonary actinomycosis (1C10.0)

Pulmonary nocardiosis (1C1B.0)

Legionnaires disease (1C19.1)

Pneumonia in Q fever (1C33)

Pulmonary anthrax (1B97)

<b>CA40.00</b>	Pneumonia due to Chlamydophila pneumoniae  A disease of the pulmonary system, caused by an infection with the gram-negative bacteria Chlamydia pneumoniae. This disease commonly presents with a gradual onset of cough with low-grade fever. This disease may also present with pharyngitis, laryngitis, and sinusitis. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of Chlamydia pneumoniae in a sputum sample.
	<b>Coded Elsewhere:</b> Congenital pneumonia due to Chlamydia (KB24)
<b>CA40.01</b>	Pneumonia due to Escherichia coli  A disease of the pulmonary system, caused by an infection with the gram-negative bacteria Escherichia coli. This disease is characterised by fever, cough, and dyspnoea. Transmission is commonly by inhalation of infected respiratory secretions. Confirmation is by identification of Escherichia coli in blood, sputum, or pleural fluid samples.
	<b>Coded Elsewhere:</b> Congenital pneumonia due to Escherichia coli (KB24)
<b>CA40.02</b>	Pneumonia due to Haemophilus influenzae  A disease of the pulmonary system, caused by an infection with the gram-negative bacteria Haemophilus influenzae. This disease is characterised by cough, shortness of breath, fever, chills, muscle aches, and chest pain. Transmission is by inhalation of infected respiratory secretions or direct contact. Confirmation is by identification of Haemophilus influenzae in blood or other typically sterile body fluid.
	<b>Inclusions:</b> Bronchopneumonia due to H. influenzae
	<b>Exclusions:</b> Congenital pneumonia (KB24)
<b>CA40.03</b>	Pneumonia due to Klebsiella pneumoniae  A disease of the pulmonary system, caused by an infection with the gram-negative bacteria Klebsiella pneumoniae. This infection commonly presents with thick, haemorrhagic, mucoid sputum. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of Klebsiella pneumoniae in a sputum sample.
<b>CA40.04</b>	Pneumonia due to Mycoplasma pneumoniae  A disease of the pulmonary system, caused by an infection with Mycoplasma pneumoniae. This infection commonly presents with a non-productive cough, chest pain, or fever. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of Mycoplasma pneumoniae in a sputum sample.
<b>CA40.05</b>	Pneumonia due to Pseudomonas aeruginosa  A disease of the pulmonary system, caused by an infection with the gram-negative bacteria Pseudomonas aeruginosa. This disease is characterised by fever, cough, and dyspnoea.
	<b>Coded Elsewhere:</b> Congenital pneumonia due to Pseudomonas aeruginosa (KB24)

<b>CA40.06</b>	Pneumonia due to Staphylococcus A disease of the pulmonary system, caused by an infection with the gram-positive bacteria Staphylococcus. This disease is characterised by fever, cough, dyspnoea, and pulmonary abscesses.
	<b>Coded Elsewhere:</b> Congenital pneumonia due to staphylococcus (KB24)
<b>CA40.07</b>	Pneumonia due to Streptococcus pneumoniae A disease of the pulmonary system, caused by an infection with the gram-positive bacteria Streptococcus pneumoniae. This disease is characterised by an acute onset of fever and chills, or rigors. This disease may also present with chest pain, productive cough, dyspnoea, tachypnoea, hypoxia, or tachycardia. Transmission is by inhalation of infected respiratory secretions, or indirect contact. Confirmation is by identification of Streptococcus pneumoniae in a sputum sample.
	<b>Inclusions:</b> Bronchopneumonia due to S. pneumoniae
	<b>Exclusions:</b> Pneumonia due to other streptococci (CA40.0) congenital pneumonia due to S. pneumoniae (KB24) Pneumonia due to beta-haemolytic streptococcus (CA40.08)
<b>CA40.08</b>	Pneumonia due to beta-haemolytic streptococcus A disease of the lungs, caused by an infection with the gram-positive bacteria beta-haemolytic streptococcus. This disease is characterised by an acute onset of fever and chills, or rigors. This presents with chest pain, productive cough, dyspnoea, tachypnoea, hypoxia, or tachycardia. Transmission is by inhalation of infected inspiratory secretions, or direct contact.
	<b>Inclusions:</b> Pneumonia due to streptococcus, group B
	<b>Coded Elsewhere:</b> Congenital pneumonia due to streptococcus, group B (KB24)
<b>CA40.0Y</b>	Pneumonia due to other specified bacteria
<b>Coding Note:</b>	Code also the causing condition
<b>CA40.0Z</b>	Bacterial pneumonia, unspecified
<b>Coding Note:</b>	Code also the causing condition

<b>CA40.1</b>	<b>Viral pneumonia</b> A disease of the pulmonary system, caused by an infection with a viral source. This disease is characterised by fever, lethargy, headache, myalgia, vomiting, or coughing. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the viral source in a sputum sample.
<b>Coding Note:</b>	Code also the causing condition
<b>Inclusions:</b>	bronchopneumonia due to viruses other than influenza viruses
<b>Exclusions:</b>	aspiration pneumonia (CA71.0) Influenza with pneumonia, virus not identified (1E32) Severe acute respiratory syndrome (1D65) lipid pneumonia (CA71.1) Idiopathic interstitial pneumonitis (CB03) Aspiration pneumonitis due to anaesthesia during labour or delivery (JB0C.0) Pulmonary complications of anaesthesia during pregnancy (JA67.0) Congenital pneumonia (KB24) Pneumonitis due to solids and liquids (CA71) Pulmonary complications of anaesthesia during the puerperium (JB43.0)
<b>CA40.10</b>	Pneumonia due to Adenovirus A disease of the pulmonary system, caused by an infection with adenovirus. This disease is characterised by fever, chills, or rigors. This disease may also present with chest pain, productive cough, dyspnoea, tachypnoea, hypoxia, and tachycardia. Transmission is by droplet transmission. Confirmation is by identification of adenovirus in a sputum sample.
<b>CA40.11</b>	Pneumonia due to Respiratory syncytial virus A disease caused by an infection with respiratory syncytial virus. This disease is characterised by an inflammatory condition of the lung commonly affecting the alveoli (pneumonia), leading to coughing, sneezing, fever, or wheezing. This disease may be severe in premature babies and those with concurrent disease or immunosuppression. Transmission is by direct contact, droplet transmission, or indirect contact with infected respiratory secretions. Confirmation is by identification of respiratory syncytial virus, commonly through antigen detection or cell culture.
<b>CA40.12</b>	Pneumonia due to parainfluenza virus A disease of the pulmonary system, caused by an infection with parainfluenza virus. This disease is characterised by fever, malaise, cough, or tachypnoea. Transmission is by inhalation of infected respiratory secretions, direct contact, or through fomites. Confirmation is by identification of the parainfluenza virus in respiratory secretions, detection of a significant rise in parainfluenza specific IgG antibodies in paired serum, or detection of parainfluenza specific IgM antibodies in a single serum sample.

<b>CA40.13</b>	Pneumonia due to Human metapneumovirus A disease of the pulmonary system, caused by an infection with Human metapneumovirus. This disease is characterised by fever, myalgia, rhinorrhoea, dyspnoea, tachypnoea, or wheezing. This disease also presents with symptoms of pneumonia. Transmission is by direct or indirect contact, inhalation of infected respiratory secretions, or through fomites. Confirmation is by identification of Human metapneumovirus in a nasopharyngeal, nose, or throat swab or blood sample.
<b>CA40.1Y</b>	Pneumonia due to other specified virus
<b>Coding Note:</b>	Code also the causing condition
<b>CA40.1Z</b>	Viral pneumonia, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>CA40.2</b>	<b>Fungal pneumonia</b>
<b>Coding Note:</b>	Code also the causing condition
	<b>Coded Elsewhere:</b> Pulmonary adiaspiromycosis (1F2L.1)
	Pulmonary candidosis (1F23.31)
	Pulmonary cryptococcosis (1F27.0)
	Chronic pulmonary aspergillosis (1F20.12)
	Disseminated histoplasmosis capsulati (1F2A.Y)
	Early-onset pneumonia due to Candida (1F23.31)
<b>CA40.20</b>	Pneumonia due to pneumocystis A disease of the pulmonary system, caused by an infection with the fungi Pneumocystis jirovecii. This disease is characterised by fever, dry cough, shortness of breath, or fatigue. Transmission is by opportunistic infection. Confirmation is by identification of Pneumocystis jirovecii in a lung fluid or tissue sample.
<b>CA40.2Y</b>	Other specified fungal pneumonia
<b>Coding Note:</b>	Code also the causing condition
<b>CA40.2Z</b>	Fungal pneumonia, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>CA40.Y</b>	<b>Other specified pneumonia</b>
<b>CA40.Z</b>	<b>Pneumonia, organism unspecified</b>
<b>CA41</b>	<b>Acute bronchiolitis</b> An acute disease of the bronchioles, commonly caused by an infection with a bacteria or viral source. This disease is characterised by inflammation of the bronchioles and coryza. This disease presents with cough, wheezing, tachypnoea, fever, or chest retraction. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the infectious agent in a sputum or blood sample.

CA41.0	<b>Acute bronchiolitis due to respiratory syncytial virus</b> A disease of the bronchioles, caused by an infection with respiratory syncytial virus. This disease is characterised by inflammation of the bronchioles. This disease may present with cough, wheezing, or shortness of breath. Transmission is by direct contact, droplet transmission, or indirect contact with infected respiratory secretions. Confirmation is by identification of respiratory syncytial virus from nasopharyngeal swabs.
CA41.Y	<b>Other specified acute bronchiolitis</b>
CA41.Z	<b>Acute bronchiolitis, unspecified</b>
<b>CA42</b>	<b>Acute bronchitis</b> An acute disease of the bronchi, commonly caused by an infection with a bacterial or viral source. This disease is characterised by inflammation of the bronchi. This disease presents with cough, wheezing, chest pain or discomfort, fever, or dyspnoea. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of the infectious agent in a sputum sample.  <b><i>Exclusions:</i></b> tracheobronchitis: chronic obstructive (CA22) tracheobronchitis: chronic (CA22) Tracheobronchitis, NOS (CA27) bronchitis, chronic: obstructive (CA22.1) Simple chronic bronchitis (CA20.10) Chronic bronchitis, NOS (CA20.1) Mucopurulent chronic bronchitis (CA20.11)
CA42.0	<b>Acute bronchitis due to Streptococcus</b> A disease of the bronchi, caused by an infection with the gram-positive bacteria Streptococcus. This disease is characterised by inflammation of the bronchi leading to cough, sputum production, or shortness of breath and wheezing. Transmission is by inhalation of infected respiratory secretions. Confirmation is by identification of Streptococcus in a sputum sample.
CA42.1	<b>Acute bronchitis due to Rhinovirus</b> A disease of the pulmonary system, caused by an infection with rhinovirus. This disease is characterised by cough, with or without production of sputum. Transmission is by inhalation of infected respiratory secretions, or direct contact.
CA42.2	<b>Acute bronchitis due to Respiratory syncytial virus</b> Rapid onset inflammation of the large airways in the lung, including any part of the bronchi due to infection with respiratory syncytial virus.

- CA42.3      Acute bronchitis due to Parainfluenza virus**  
A disease of the bronchi, caused by an acute infection with parainfluenza virus. This disease is characterised by acute inflammation of the bronchi leading to cough, sputum production, wheezing, or shortness of breath. Transmission is by inhalation of infected respiratory secretions, direct contact, or through fomites. Confirmation is by identification of the parainfluenza virus in respiratory secretions, detection of a significant rise in parainfluenza specific IgG antibodies in paired serum, or detection of parainfluenza specific IgM antibodies in a single serum sample.
- CA42.4      Acute bronchitis due to Haemophilus influenzae**  
A disease of the bronchi, caused by an infection with the gram-negative bacteria Haemophilus influenzae. This disease is characterised by acute inflammation of the bronchi leading to cough, sputum production, wheezing or shortness of breath. Transmission is by inhalation of infected respiratory secretions, or direct contact. Confirmation is by identification of Haemophilus influenzae in blood or other typically sterile body fluid.
- CA42.5      Acute bronchitis due to Coxsackievirus**  
A disease of the pulmonary system, caused by an infection with Coxsackie virus. This disease is characterised by cough, fever, or tachypnoea. Transmission is by the faecal-oral route, or vertical transmission. Confirmation is by identification of coxsackievirus in upper respiratory secretion samples.
- CA42.Y      Other specified acute bronchitis**
- CA42.Z      Acute bronchitis, unspecified**
- CA43      Abscess of lung or mediastinum**  
*Coded Elsewhere:* Amoebic lung abscess (1A36.11)
- CA43.0      Gangrene or necrosis of lung**  
The term "necrotizing pneumonia" or "lung gangrene" is used to distinguish pulmonary necrosis with multiple small abscesses from a larger cavitary lesion (lung abscess).
- CA43.1      Abscess of lung with pneumonia**
- CA43.2      Abscess of lung without pneumonia**
- CA43.3      Abscess of mediastinum**
- CA43.Y      Other specified abscess of lung or mediastinum**
- CA43.Z      Abscess of lung or mediastinum, unspecified**

**CA44**

### **Pyothorax**

Suppurative inflammation of the pleural space, typically due to acute bacterial infection. It can occur as a complication of pneumonia, thoracotomy, abscesses (lung, hepatic, or subdiaphragmatic), or penetrating trauma with a secondary infection.

**Inclusions:** empyema

pyopneumothorax

**Exclusions:** due to tuberculosis (1B10)

**CA45**

### **Respiratory infections, not elsewhere classified**

**Exclusions:** Upper respiratory tract disorders (CA00-CA0Z)

Chronic obstructive pulmonary disease (CA22)

Certain lower respiratory tract diseases (CA20-CA2Z)

**CA4Y**

### **Other specified lung infections**

**CA4Z**

### **Lung infections, unspecified**

Lung diseases due to external agents (CA60-CA8Z)

**Exclusions:** Asthma (CA23)

**CA60**

### **Pneumoconiosis**

Pneumoconiosis is a lung disease due to inhalation of minute particles and characterised pathologically by interstitial fibrosis. The different types of pneumoconiosis vary in relation to the types of inhaled particles, often accompanied by certain occupational environments.

**CA60.0**

### **Pneumoconiosis due to dust containing silica**

Interstitial lung disease due to inhalation of silica dust. The accumulation of silica/silicates in lung leads to fibrosis and formation of opacities in upper lobes of lungs on chest X-ray

**Exclusions:** with tuberculosis (1B10-1B1Z)

**CA60.00**

Pneumoconiosis due to talc dust

**CA60.0Y**

Other specified pneumoconiosis due to dust containing silica

**CA60.0Z**

Pneumoconiosis due to dust containing silica, unspecified

- CA60.1      Coal worker pneumoconiosis**  
Coalworker pneumoconiosis, an interstitial lung disease due to inhalation of coal dust. The accumulation of coal in the lung leads to fibrosis and formation of coal macules which are seen on chest X-ray as opacities and fibrosis.
- Inclusions:**      Black lung  
                         Anthracosis  
                         Anthracosilicosis  
                         Coalworker lung
- Exclusions:**      with tuberculosis (1B10-1B1Z)
- CA60.2      Pneumoconiosis due to mineral fibres including asbestos**  
Asbestosis is pneumoconiosis, an interstitial lung disease due to inhalation of asbestos fibres. The accumulation of fibres in the lung leads to diffuse fibrosis and formation of opacities in lower parts of lungs on chest X-ray. Asbestos bodies may be detected in lungs and sputum.
- Inclusions:**      Asbestosis
- Exclusions:**      Pleural plaque with presence of asbestos (CB20)  
                         with tuberculosis (1B10-1B1Z)
- CA60.3      Pneumoconiosis associated with tuberculosis**  
This is an occupational lung disease and a restrictive lung disease caused by the inhalation of dust, often in mines, associated with a common, and in many cases lethal, infectious disease caused by various strains of mycobacteria, usually Mycobacterium tuberculosis.
- CA60.4      Aluminosis of lung**  
Aluminosis is a lung disease caused by the inhalation of dusts of certain aluminium compounds.
- CA60.5      Bauxite fibrosis of lung**
- CA60.6      Berylliosis**  
Chronic beryllium disease also known as berylliosis is an occupational hypersensitivity disorder caused by beryllium exposure at the workplace. It is characterised by non-caseating, non-necrotising granulomata within affected organs, most frequently lung and skin.
- Coded Elsewhere:** Hepatic berylliosis (DB97.1)
- CA60.7      Graphite fibrosis of lung**  
Graphite fibrosis of lung is the pulmonary damage caused by excessive inhalation of graphite.
- CA60.8      Siderosis**  
Siderosis refers to pneumoconiosis resulting from inhalation of iron from welding fumes or from iron or hematite mine dust.

<b>CA60.9</b>	<b>Stannosis</b>
	Stannosis is a benign non-fibrotic pneumoconiosis caused by exposure to tin oxides including stannous oxide (SnO) and stannic oxide (SnO <sub>2</sub> ).
<b>CA60.Y</b>	<b>Other specified pneumoconiosis</b>
<b>CA60.Z</b>	<b>Pneumoconiosis, unspecified</b>

**Pneumonitis (CA70-CA7Z)**

Pneumonitis is a general term that refers to inflammation of lung tissue. Pneumonitis includes the non-infectious lung diseases that cause inflammation of the interstitium of the lung tissue mainly.

**Exclusions:** Pneumonia (CA40)

**Coded Elsewhere:** Chronic pneumonitis of infancy (CB04.6)

Aspiration pneumonitis due to anaesthesia during labour or delivery (JB0C.0)

**CA70 Hypersensitivity pneumonitis due to organic dust**

Hypersensitivity pneumonitis due to organic dust is an inflammation of the alveoli, terminal bronchioli and the interstitium within caused by hypersensitivity to inhaled organic dusts, such as allergens derived from fungal, bacterial, animal protein.

**Coding Note:** Includes: allergic alveolitis and pneumonitis due to inhaled organic dust and particles of fungal, actinomycetic or other origin

**Exclusions:** pneumonitis due to inhalation of chemicals, gases, fumes or vapours (CA81.0)

**CA70.0 Farmer lung**

Farmer's lung disease is a hypersensitivity pneumonitis, caused by inhalation of organic dust containing spores of microorganisms, often thermophilic actinomycetes and less commonly *Saccharopolyspora rectivirgula*, living in mouldy hay, straw, or grain. Typical symptoms include dyspnoea, cough, tiredness, headaches and occasional fever/night sweats, with acute, sub-acute or chronic clinical course and can result in chronic disability with granulomatous disease.

**CA70.1 Bagassosis**

Bagassosis is hypersensitivity pneumonitis due to inhalation of dust from bagasse (the residue of cane after extraction of sugar).

**CA70.2 Bird fancier lung**

Bird fancier lung, also called Pigeon-breeder's lung disease, is an allergic alveolitis caused by inhalation of particulate avian emanations, sometimes specified by avian species. Presentation can be acute with chills, cough, fever, shortness of breath, chest tightness usually resolving within 24h after cessation of antigen exposure, sub-acute with cough and dyspnoea over several days to weeks, whereas chronic form results in breathlessness, coughing, lack of appetite and weight loss.

<b>CA70.3</b>	<b>Suberosis</b> Suberosis also known as corkhandler disease or corkworker lung is a type of hypersensitivity pneumonitis usually caused by the fungus <i>Penicillium glabrum</i> (formerly called <i>Penicillium frequentans</i> ) from exposure to moldy cork dust. <i>Chrysonilia sitophila</i> , <i>Aspergillus fumigatus</i> , uncontaminated cork dust, and <i>Mucor macedo</i> may also have significant roles in the pathogenesis of the disease.
<b>CA70.4</b>	<b>Malt worker lung</b> A disease of the pulmonary system, caused by the fungi <i>Aspergillus clavatus</i> or <i>Aspergillus fumigatus</i> . This disease commonly presents with fever, chills, fatigue, weight loss, cough, headache, myalgia, or shortness of breath. Transmission is by inhalation of fungal spores. Confirmation is by identification of <i>Aspergillus</i> in a sputum, blood, or skin sample.  <i>Inclusions:</i> Alveolitis due to <i>Aspergillus clavatus</i>
<b>CA70.5</b>	<b>Mushroom worker lung</b> Mushroom-worker's lung is occupational hypersensitivity pneumonitis due to mushroom spores and moldy compost.
<b>CA70.6</b>	<b>Maple bark stripper lung</b> Maple-bark-stripper's lung is occupational hypersensitivity pneumonitis due to moldy maple bark containing <i>Cryptostroma corticale</i> .  <i>Inclusions:</i> Alveolitis due to <i>Cryptostroma corticale</i> Cryptostromosis
<b>CA70.7</b>	<b>Air conditioner or humidifier lung</b> A form of the sick building syndrome caused by organisms that contaminate humidifiers and the piping of air conditioner ducts. The air conditioner blows cold air containing spores of the organisms throughout the building.
<b>CA70.Y</b>	<b>Other specified hypersensitivity pneumonitis due to organic dust</b>
<b>Coding Note:</b>	Includes: allergic alveolitis and pneumonitis due to inhaled organic dust and particles of fungal, actinomycetic or other origin
<b>CA70.Z</b>	<b>Hypersensitivity pneumonitis due to organic dust, unspecified</b>
<b>Coding Note:</b>	Includes: allergic alveolitis and pneumonitis due to inhaled organic dust and particles of fungal, actinomycetic or other origin
<b>CA71</b>	<b>Pneumonitis due to solids and liquids</b> <i>Exclusions:</i> Neonatal aspiration syndromes (KB26)
<b>CA71.0</b>	<b>Pneumonitis due to inhalation of food or vomit</b> Acute inflammation of the lung parenchyma due to inadvertent passage of ingested solids or liquids into the airway from swallowing dysfunction or after an acute vomiting or gastroesophageal reflux episode.  <i>Exclusions:</i> Mendelson syndrome (CA72)

- CA71.1 Pneumonitis due to oils or essences**  
Lipoid pneumonia (pneumonitis) is a rare form of pneumonia (pneumonitis) caused by inhalation or aspiration of fat containing substances like petroleum jelly, mineral oils, few laxatives etc.
- CA71.2 Pneumonitis due to aspiration of blood**
- CA71.3 Lipoid pneumonitis**  
Lipoid pneumonia (pneumonitis) refers to two types lipoid pneumonias (pneumonitises), one is Exogenous lipoid pneumonia (pneumonitis) and another is Endogenous lipoid pneumonia (pneumonitis). Exogenous lipoid pneumonia (pneumonitis) is the accumulation of aspirated oils within the alveoli and subsequent foreign body reaction. Endogenous lipoid pneumonia (pneumonitis), also called cholesterol pneumonia (pneumonitis) or golden pneumonia (pneumonitis), is a localised accumulation of lipid-laden macrophages within alveolar spaces distal to an obstructed airway.
- CA71.Y Other specified pneumonitis due to solids and liquids**
- CA71.Z Pneumonitis due to solids and liquids, unspecified**
- CA72 Mendelson syndrome**  
This is chemical pneumonitis caused by aspiration during anaesthesia, especially during pregnancy. Aspiration contents may include gastric juice, blood, bile, water or an association of them.
- Exclusions:**      Complications of anaesthesia during pregnancy (JA67)  
                        Complications of anaesthesia during labour or delivery (JB0C)  
                        Complications of anaesthesia during the puerperium (JB43)
- CA7Y Other specified pneumonitis**
- CA7Z Pneumonitis, unspecified**
- CA80 Airway disease due to specific organic dust**  
Airway disease due to specific organic dust includes airway diseases due to cotton dust or dusts from other vegetable fibres such as flax, cannabis, hemp, or sisal.
- Exclusions:**      Farmer lung (CA70.0)  
                        reactive airways dysfunction syndrome (CA81)  
                        Hypersensitivity pneumonitis due to organic dust (CA70)  
                        Bagassosis (CA70.1)
- CA80.0 Byssinosis due to exposure to cotton**  
Byssinosis (brown lung disease) is a lung disease caused by exposure to dusts from cotton processing.
- Inclusions:**      airway disease due to cotton dust
- CA80.1 Byssinosis due to exposure to flax**  
A form of chronic obstructive pulmonary disease caused by inhalation of particles of unprocessed flax; a form of byssinosis.

- CA80.2** **Byssinosis due to exposure to cannabis**  
Lung disease caused by exposure to dusts from the processing cannabis.
- CA80.Y** **Other specified airway disease due to specific organic dust**
- CA80.Z** **Airway disease due to specific organic dust, unspecified**
- CA81** **Respiratory conditions due to inhalation of chemicals, gases, fumes or vapours**  
This refers to conditions affecting the organs and tissues that make gas exchange due to inhalation of chemicals, gases, fumes, and vapours.
- CA81.0** **Bronchitis or pneumonitis due to chemicals, gases, fumes or vapours**  
This is an inflammation of the mucous membranes of the bronchi (the larger and medium-sized airways that carry airflow from the trachea into the more distal parts of the lung parenchyma) and inflammation of lung tissue, due to chemicals, gases, fumes and vapours.
- CA81.1** **Pulmonary oedema due to chemicals, gases, fumes or vapours**
- CA81.2** **Upper respiratory inflammation due to chemicals, gases, fumes or vapours, not elsewhere classified**
- CA81.Y** **Other specified respiratory conditions due to inhalation of chemicals, gases, fumes or vapours**
- CA81.Z** **Respiratory conditions due to inhalation of chemicals, gases, fumes or vapours, unspecified**
- CA82** **Respiratory conditions due to other external agents**
- CA82.0** **Acute pulmonary manifestations due to radiation**  
An acute inflammatory reaction of the lung in response to repeated or high dose radiation exposure.
- CA82.1** **Chronic or other pulmonary manifestations due to radiation**  
A chronic inflammatory reaction of the lung ultimately resulting in fibrosis in response to repeated or high dose radiation exposure.
- CA82.2** **Acute drug-induced interstitial lung disorders**  
An acute inflammatory reaction of the lung in response to drugs.
- CA82.3** **Chronic drug-induced interstitial lung disorders**  
A chronic inflammatory reaction of the lung ultimately resulting in fibrosis in response to drugs.
- CA82.4** **Aspergillus-induced allergic or hypersensitivity conditions**  
**Coded Elsewhere:** Malt worker lung (CA70.4)  
Allergic aspergillus rhinosinusitis (CA0A.Y)
- CA82.Y** **Other specified respiratory conditions due to other external agents**
- CA82.Z** **Respiratory conditions due to other external agents, unspecified**

**CA8Y**      **Other specified lung diseases due to external agents**

**CA8Z**      **Lung diseases due to external agents, unspecified**

Respiratory diseases principally affecting the lung interstitium (CB00-CB0Z)

**Coded Elsewhere:** Lipoid pneumonitis (CA71.3)

**CB00**      **Acute respiratory distress syndrome**

Acute respiratory distress syndrome ("ARDS") is a life-threatening inflammation with oedema in the lungs which leads to severe respiratory failure. ARDS is a clinical syndrome of lung injury with hypoxic respiratory failure caused by intense pulmonary inflammation that develops after a severe physiologic insult.

**Coded Elsewhere:** Respiratory distress syndrome of newborn (KB23.0)

**CB01**      **Pulmonary oedema**

Pulmonary oedema is a condition caused by excess fluid in the lungs. This fluid collects in the numerous air sacs in the lungs, making it difficult to breathe.

**Exclusions:**      Pulmonary oedema due to chemicals, gases, fumes or vapours (CA81.1)

Pulmonary oedema with mention of heart disease NOS or heart failure (BD11)

**CB02**      **Pulmonary eosinophilia**

Pulmonary eosinophilia are a heterogeneous group of disorders that share the feature of abnormally increased numbers of eosinophils.

**CB02.0**      **Asthmatic pulmonary eosinophilia**

Asthmatic pulmonary eosinophilia is a form of pulmonary eosinophilia associated with asthma which has been commonly attributed to fungi such as Aspergillus species. Although many cases have not shown any allergen.

**CB02.1**      **Idiopathic eosinophilic pneumonitis**

This is an idiopathic disease in which a certain type of white blood cell called an eosinophil accumulates in the lung. These cells cause disruption of the normal air spaces (alveoli) where oxygen is extracted from the atmosphere.

**Inclusions:**      Idiopathic eosinophilic pneumonia

**CB02.10**      Idiopathic acute eosinophilic pneumonitis

Idiopathic acute eosinophilic pneumonia (pneumonitis) is characterised by acute febrile respiratory failure associated with diffuse radiographic infiltrates and eosinophilia in bronchoalveolar lavage fluid (BAL) in the absence of infection. Patients, who are initially healthy and often young, present with severe hypoxemia.

**Inclusions:**      Idiopathic acute eosinophilic pneumonia

<b>CB02.11</b>	Idiopathic chronic eosinophilic pneumonitis Idiopathic chronic eosinophilic pneumonia (pneumonitis) is a pulmonary disease characterised by subacute or chronic respiratory and general symptoms, alveolar and/or blood eosinophilia, and peripheral pulmonary infiltrates on chest imaging and blood eosinophilia in most cases.
	<b>Inclusions:</b> Idiopathic chronic eosinophilic pneumonia
<b>CB02.1Y</b>	Other specified idiopathic eosinophilic pneumonitis
<b>CB02.1Z</b>	Idiopathic eosinophilic pneumonitis, unspecified
<b>CB02.2</b>	<b>Tropical pulmonary eosinophilia</b> Tropical pulmonary eosinophilia (TPE) is a syndrome of wheezing, fever and eosinophilia seen predominantly in the Indian subcontinent and other tropical areas. The syndrome has been termed tropical eosinophilia, tropical pulmonary eosinophilia (TPE), or tropical filarial pulmonary eosinophilia (TFPE). Tropical filarial pulmonary eosinophilia (TFPE) is a clinical manifestation of lymphatic filariasis, a parasitic infection caused by filarial nematodes ( roundworms) that inhabit the lymphatics and bloodstream.
<b>CB02.Y</b>	<b>Other specified pulmonary eosinophilia</b>
<b>CB02.Z</b>	<b>Pulmonary eosinophilia, unspecified</b>
<b>CB03</b>	<b>Idiopathic interstitial pneumonitis</b> The idiopathic interstitial pneumonias (pneumonitises) are a subset of diffuse interstitial lung diseases of unknown etiology characterised by expansion of the interstitial compartment (i.e. that portion of the lung parenchyma sandwiched between the epithelial and endothelial basement membranes) with an infiltrate of inflammatory cells. The inflammatory infiltrate is sometimes accompanied by fibrosis, either in the form of abnormal collagen deposition or proliferation of fibroblasts capable of collagen synthesis. <b>Inclusions:</b> Idiopathic interstitial pneumonia
<b>CB03.0</b>	<b>Acute interstitial pneumonitis</b> Acute interstitial pneumonia (pneumonitis), also referred to as Hamman-Rich syndrome, is a rapidly progressive and histologically distinct form of idiopathic interstitial pneumonia (pneumonitis).
<b>CB03.1</b>	<b>Combined pulmonary fibrosis and emphysema syndrome</b> Combined pulmonary fibrosis and emphysema (CPFE) is a syndrome of combined emphysema of the upper lobes and fibrosis of the lower lobes defined on chest computed tomography, and characterised by subnormal spirometry, severe impairment of gas exchange, high prevalence of pulmonary hypertension, and poor survival. Characteristic functional profile of CPEF is strongly impaired carbon monoxide diffusing capacity of the lung, and hypoxaemia at exercise, with preserved lung volumes. Despite subnormal spirometry, which may be responsible for its under recognition, CPFE is a severe entity. The presence of pulmonary arterial hypertension at diagnosis is a critical determinant of prognosis.

- CB03.2** **Cryptogenic organizing pneumonitis**  
 Cryptogenic organizing pneumonia (pneumonitis) (COP) or bronchiolitis obliterans with organizing pneumonia (pneumonitis) (BOOP) is an inflammatory, non-infectious lung disease with distinctive clinical, radiological and pathological features, and that responds to corticosteroid therapy.
- CB03.3** **Desquamative interstitial pneumonitis**  
 This is a form of idiopathic interstitial pneumonia (pneumonitis) featuring elevated levels of macrophages.  
*Inclusions:* Desquamative interstitial pneumonia
- CB03.4** **Idiopathic pulmonary fibrosis**  
 Idiopathic pulmonary fibrosis (IPF) is defined as a specific form of chronic, progressive fibrosing interstitial pneumonia (pneumonitis) of unknown cause, occurring primarily in older adults, limited to the lungs, and associated with the histopathologic and/or radiologic pattern of UIP. The definition of IPF requires the exclusion of other forms of interstitial pneumonia (pneumonitis) including other idiopathic interstitial pneumonias (pneumonitis) and Interstitial Lung Disease (ILD) associated with environmental exposure, medication, or systemic disease.
- CB03.5** **Lymphoid interstitial pneumonia**  
 This refers to several conditions in which lymphocytes are produced in excessive quantities. They typically occur in patients who have compromised immune systems. They are sometimes equated with "immunoproliferative disorders", but technically lymphoproliferative disorders are a subset of immunoproliferative disorders, along with hypergammaglobulinemia and paraproteinaemias.
- CB03.6** **Respiratory bronchiolitis - interstitial lung disease**  
 Respiratory bronchiolitis - interstitial lung disease is a mild inflammatory pulmonary disorder developed by cigarette smokers and characterised by shortness of breath and cough, pulmonary function abnormalities of mixed restrictive and obstructive lung disease and high resolution CT scanning showing centrilobular micronodules, ground glass opacities and peribronchiolar thickening.
- CB03.Y** **Other specified idiopathic interstitial pneumonitis**
- CB03.Z** **Idiopathic interstitial pneumonitis, unspecified**
- CB04** **Primary interstitial lung diseases specific to infancy or childhood**
- CB04.0** **Diffuse pulmonary developmental disorders**
- CB04.1** **Pulmonary lymphatic dysplasia syndromes**  
*Coded Elsewhere:* Yellow nail syndrome (EE11.1)  
 Congenital pulmonary lymphangiectasia (LA75.Y)

<b>CB04.2</b>	<b>Disorders of surfactant metabolism</b> Primary interstitial lung disease specific to childhood due to pulmonary surfactant protein anomalies is a group of interstitial lung diseases (ILD) induced by genetic mutations disrupting surfactant function and gas exchange in the lung. The disorders caused by these mutations affect full-term infants and older children and exhibit considerable overlap in their clinical and histologic presentation
<b>CB04.3</b>	<b>Alveolar or peri-alveolar conditions</b>
<b>CB04.30</b>	Idiopathic pulmonary haemosiderosis Idiopathic pulmonary hemosiderosis is a respiratory disease due to repeated episodes of diffuse alveolar haemorrhage without any underlying apparent cause, most often in children. Anaemia, cough, and pulmonary infiltrates on chest radiographs are found in majority of the patients.
<b>CB04.31</b>	Pulmonary alveolar proteinosis This is a rare lung disease in which abnormal accumulation of surfactant occurs within the alveoli, interfering with gas exchange. PAP can occur in a primary form or secondarily in the settings of malignancy (especially in myeloid leukemia), pulmonary infection, or environmental exposure to dusts or chemicals.
<b>CB04.3Y</b>	Other specified alveolar or peri-alveolar conditions
<b>CB04.3Z</b>	Alveolar or peri-alveolar conditions, unspecified
<b>CB04.4</b>	<b>Pulmonary capillaritis</b> Isolated pauciimmune pulmonary capillaritis is a small vessel vasculitis restricted to the lungs that may induce diffuse alveolar haemorrhage with dyspnoea, anaemia, chest pain, haemoptysis, bilateral and diffuse alveolar infiltrates at chest X-rays, without any underlying systemic disease. ANCA are frequently positive but could be negative.
<b>CB04.5</b>	<b>Brain-lung-thyroid syndrome</b> Brain-lung-thyroid syndrome is a rare disorder characterised by congenital hypothyroidism, infant respiratory distress syndrome (IRDS) and benign hereditary chorea.
<b>CB04.6</b>	<b>Chronic pneumonitis of infancy</b> Chronic pneumonitis of infancy is a rare paediatric form of interstitial lung disease (ILD) sharing clinical and radiologic features with other forms of ILD (cough, tachypnoea, and infiltrative opacities on chest imaging) and harbouring specific histological abnormalities including diffuse thickening of alveolar septa, hyperplasia of type 2 alveolar epithelial cells (AEC), and presence of primitive mesenchymal cells within the alveolar septa.
<b>CB04.7</b>	<b>Neuroendocrine cell hyperplasia of infancy</b> Neuroendocrine cell hyperplasia of infancy is a non-lethal paediatric form of interstitial lung disease (ILD) characterised by tachypnoea and respiratory distress without respiratory failure.
<b>CB04.Y</b>	<b>Other specified primary interstitial lung diseases specific to infancy or childhood</b>

**CB04.Z Primary interstitial lung diseases specific to infancy or childhood, unspecified**

**CB05**

**Interstitial lung diseases associated with systemic diseases**

This refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs). This diagnosis is associated with diseases that affect a number of organs and tissues, or affects the body as a whole.

**Coding Note:** Code also the causing condition

**CB05.0**

**Diffuse alveolar damage**

This is a histological pattern in lung disease. It is seen in acute respiratory distress syndrome (ARDS), transfusion related acute lung injury (TRALI) and acute interstitial pneumonia (pneumonitis) (AIP).

**CB05.1**

**Interstitial lung diseases associated with connective tissue diseases**

Interstitial lung diseases associated with connective tissue diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs) associated with connective tissue diseases.

**Coding Note:** Code also the causing condition

**Coded Elsewhere:** Respiratory disorders in juvenile dermatomyositis (CB40.Y)

Respiratory disorders in other dermatomyositis (CB40.Y)

Respiratory disorders in polymyositis (CB40.Y)

Respiratory disorders in Sjögren syndrome (CB40.Y)

Respiratory disorders in systemic lupus erythematosus (CB40.Y)

Respiratory disorders in systemic sclerosis (CB40.Y)

**CB05.2**

**Interstitial lung diseases associated with granulomatous diseases**

Interstitial lung diseases associated with granulomatous diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs) associated with granulomatous diseases, such as sarcoidosis.

**Coded Elsewhere:** Sarcoidosis of lung (4B20.0)

Sarcoidosis of lung with sarcoidosis of lymph nodes (4B20.Y)

**CB05.3**

**Interstitial lung diseases associated with metabolic diseases**

Interstitial lung diseases associated with metabolic diseases refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs). This diagnosis is associated with a large class of genetic diseases involving disorders of metabolism.

**Coding Note:** Code also the causing condition

**Coded Elsewhere:** Familial hypocalciuric hypercalcaemia (5A51.2)

Hermansky-Pudlak syndrome with pulmonary fibrosis (EC23.20)

<b>CB05.4</b>	<b>Interstitial lung diseases associated with systemic vasculitides</b> Interstitial lung diseases associated with systemic vasculitides refers to a group of lung diseases affecting the interstitium (the tissue and space around the air sacs of the lungs). This diagnosis is associated with a type of small vessel vasculitis. <b>Coded Elsewhere:</b> Respiratory disorders in Wegener's granulomatosis (CB40.Y)
<b>CB05.40</b>	Respiratory disorders in Churg-Strauss syndrome This encompasses pathological conditions affecting the organs and tissues that make gas exchange possible in higher organisms, and includes conditions of the upper respiratory tract, trachea, bronchi, bronchioles, alveoli, pleura and pleural cavity, and the nerves and muscles of breathing. This diagnosis is in a medium and small vessel autoimmune vasculitis, leading to necrosis.
<b>CB05.41</b>	Respiratory disorders in microscopic polyangiitis This encompasses pathological conditions affecting the organs and tissues that make gas exchange possible in higher organisms, and includes conditions of the upper respiratory tract, trachea, bronchi, bronchioles, alveoli, pleura and pleural cavity, and the nerves and muscles of breathing. This diagnosis is in an ill-defined autoimmune disease characterised by a systemic, pauci-immune, necrotizing, small-vessel vasculitis without clinical or pathological evidence of necrotizing granulomatous inflammation.
<b>CB05.4Y</b>	Other specified interstitial lung diseases associated with systemic vasculitides
<b>CB05.4Z</b>	Interstitial lung diseases associated with systemic vasculitides, unspecified
<b>CB05.5</b>	<b>Secondary pulmonary haemosiderosis</b> Secondary pulmonary hemosiderosis is a respiratory disease due to the deposition of hemosiderin-laden macrophages in lungs as a result of repeated alveolar haemorrhage secondary to another disease, especially dysimmune disorders (i.e. Heiner syndrome, autoimmune diseases), thrombotic disorders and cardiovascular disorders such as mitral stenosis. It manifests as a triad of haemoptysis, anaemia and diffuse parenchymal infiltrates on chest radiography
<b>Coding Note:</b>	Code also the causing condition
<b>CB05.Y</b>	<b>Other specified interstitial lung diseases associated with systemic diseases</b>
<b>Coding Note:</b>	Code also the causing condition
<b>CB05.Z</b>	<b>Interstitial lung diseases associated with systemic diseases, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>CB06</b>	<b>Pulmonary alveolar microlithiasis</b> Pulmonary alveolar microlithiasis is an idiopathic rare disease in which concretions composed of calcium and phosphorus collect in alveolar spaces. A systemic disorder of calcium metabolism has not been identified, and the serum calcium and phosphate levels are normal. Cough and dyspnoea are the most common presenting symptoms. Expectorated microliths have been reported. Inspiratory crackles, finger clubbing, and signs of cor pulmonale may be present in more advanced disease.

**CB07**

### **Lymphangioleiomyomatosis**

Lymphangioleiomyomatosis (LAM) is a multiple cystic lung disease characterised by progressive cystic destruction of the lung and lymphatic abnormalities, frequently associated with renal angiomyolipomas (AMLs). LAM occurs either sporadically or as a manifestation of tuberous sclerosis complex (TSC).

**CB07.0**

### **Lymphangioleiomyomatosis associated with tuberous sclerosis complex**

This is a rare lung disease that results in a proliferation of disorderly smooth muscle growth (leiomyoma) throughout the lungs, in the bronchioles, alveolar septa, perivascular spaces, and lymphatics, resulting in the obstruction of small airways (leading to pulmonary cyst formation and pneumothorax) and lymphatics (leading to chylous pleural effusion). This diagnosis is associated with a rare multi-system genetic disease that causes non-malignant tumours to grow in the brain and on other vital organs such as the kidneys, heart, eyes, lungs, and skin.

**CB07.1**

### **Sporadic lymphangioleiomyomatosis**

This is a rare lung disease that results in a proliferation of disorderly smooth muscle growth (leiomyoma) throughout the lungs, in the bronchioles, alveolar septa, perivascular spaces, and lymphatics, resulting in the obstruction of small airways (leading to pulmonary cyst formation and pneumothorax) and lymphatics (leading to chylous pleural effusion). LAM occurs in a sporadic form, which affects only females, usually of childbearing age; LAM also occurs in patients who have tuberous sclerosis.

**CB07.Y**

### **Other specified lymphangioleiomyomatosis**

**CB07.Z**

### **Lymphangioleiomyomatosis, unspecified**

**CB0Y**

### **Other specified respiratory diseases principally affecting the lung interstitium**

**CB0Z**

### **Respiratory diseases principally affecting the lung interstitium, unspecified**

## **Pleural, diaphragm or mediastinal disorders (CB20-CB2Z)**

Pleural, diaphragm and mediastinal disorders are disorders of the potential space between the two pleura (visceral and parietal) of the lungs, disorders of the diaphragm and mediastinum. The mediastinum is an undelineated group of structures in the thorax, surrounded by loose connective tissue. It is the central compartment of the thoracic cavity.

**CB20**

### **Pleural plaque**

Deposits of hyalinized collagen fibres in the parietal pleura that result from chronic inflammation. Most commonly associated with past exposure to asbestos, typically becoming visible years after inhalation of the inciting exposure.

**CB21**

### **Pneumothorax**

Pneumothorax is an abnormal collection of air or gas in the pleural space that separates the lung from the chest wall, and that may interfere with normal breathing.

**Exclusions:**      pyopneumothorax (CA44)  
                        pneumothorax: tuberculous (not confirmed) (1B10.1)  
                        Traumatic pneumothorax (NB32.0)  
                        pneumothorax: tuberculous (confirmed) (1B10.0)

**Coded Elsewhere:** Pneumothorax originating in the perinatal period (KB27.1)

**CB21.0**

### **Spontaneous tension pneumothorax**

A tension pneumothorax is present when the intrapleural pressure is greater than atmospheric throughout expiration and often during inspiration as well. The mechanism responsible for tension pneumothorax is the disruption of the visceral or parietal pleura in such a manner that a one-way valve develops. A tension pneumothorax can occur after any type of pneumothorax; it is independent of the etiology. It can sometimes occur after a spontaneous pneumothorax but is more common after a traumatic pneumothorax, with mechanical ventilation, or during cardiopulmonary resuscitation.

**CB21.1**

### **Other spontaneous pneumothorax**

Spontaneous pneumothorax that is not tension pneumothorax is included in this classification.

They include primary spontaneous pneumothorax without tension and secondary spontaneous pneumothorax without tension. Primary spontaneous pneumothorax occurs in patients without underlying pulmonary disease, classically in tall, thin young men in their teens and 20s. It is thought to be due to spontaneous rupture of subpleural apical blebs or bullae that result from smoking or that are inherited. It generally occurs at rest, although some cases occur during activities involving reaching or stretching. Primary spontaneous pneumothorax also occurs during diving and high-altitude flying because of unequally transmitted pressure changes in the lung. Secondary spontaneous pneumothorax occurs in patients with underlying pulmonary disease. It most often results from rupture of a bleb or bulla in patients with severe COPD, HIV-related *Pneumocystis jirovecii* infection, cystic fibrosis, or any underlying pulmonary parenchymal disease. Secondary spontaneous pneumothorax is more serious than primary spontaneous pneumothorax because it occurs in patients whose underlying lung disease decreases their pulmonary reserve.

**CB21.Y**

### **Other specified pneumothorax**

**CB21.Z**

### **Pneumothorax, unspecified**

**CB22**

### **Diseases of mediastinum, not elsewhere classified**

This refers to diseases of the mediastinum where the mediastinum is an undelineated group of structures in the thorax, surrounded by loose connective tissue. It is the central compartment of the thoracic cavity

**Exclusions:**      Abscess of mediastinum (CA43.3)

- CB22.0 Fibrosing mediastinitis**  
Fibrosing mediastinitis, also known as sclerosing mediastinitis or mediastinal fibrosis, is a disorder characterised by an excessive fibrotic reaction in the mediastinum. It can result in compromise of airways, great vessels, and other mediastinal structures, with morbidity directly related to the location and extent of fibrosis. The commonest cause is histoplasmosis, of which it is a rare late complication, but it may also occur in association with other infections and with systemic autoimmune disorders such as Behçet disease, granulomatosis with polyangiitis and retroperitoneal fibrosis.
- CB22.Y Other specified diseases of mediastinum, not elsewhere classified**
- CB22.Z Diseases of mediastinum, not elsewhere classified, unspecified**
- CB23 Disorders of diaphragm**  
This category includes the abnormalities of diaphragmatic position or motion (paralysis, relaxation, and acquired deformity) and the inflammation of the diaphragm, but neoplasms of the diaphragm, congenital malformation of diaphragm, and diaphragmatic hernias are included in other categories.
- Exclusions:** Congenital diaphragmatic hernia (LB00.0)  
Structural developmental anomalies of diaphragm (LB00)
- CB24 Chyloous effusion**  
A chylothorax (chyloous effusion) signifies leakage of chyle from the thoracic duct. A pleural fluid triglyceride concentration of more than 110 mg per decilitre signifies a high likelihood of chylothorax, whereas a triglyceride concentration below 50 mg per decilitre makes chylothorax highly unlikely.
- Inclusions:** Chyliform effusion
- CB25 Fibrothorax**  
Fibrothorax results from fibrosis of the visceral pleura, and is clinically manifested by decreased respiratory excursion and restrictive pulmonary physiology. There are two distinct mechanisms that can lead to the formation of fibrothorax: 1) Most often, fibrothorax develops as a consequence of pleural inflammation in patients with pleural effusions, including hemothorax, tuberculous effusion, or chronic empyema; 2) Less frequently, fibrothorax results from pulmonary parenchymal disease, and can be seen in patients with tuberculosis, bronchiectasis, or lung abscess.
- CB26 Haemothorax**  
Hemothorax is the presence of blood with or without air in the pleural space. The most common cause is chest trauma. Hemothorax should be considered to be present when the haematocrit of the pleural fluid is more than half that of the peripheral blood. A number of bleeding sites may be responsible for the hemothorax, including pulmonary laceration, intercostal vessel laceration, and rupture of pleural adhesions.

**CB27****Pleural effusion**

Presence of fluid in the pleural cavity resulting from excessive transudation or exudation from the pleural surfaces.

**Coding Note:**

Code also the causing condition

**Inclusions:** Pleurisy with effusion

**Exclusions:** Tuberculosis of the respiratory system (1B10)

Chylous effusion (CB24)

Pleurisy (MD31)

**CB2Y****Other specified pleural, diaphragm or mediastinal disorders****CB2Z****Pleural, diaphragm or mediastinal disorders, unspecified****CB40****Certain diseases of the respiratory system**

**Coded Elsewhere:** Pulmonary sporotrichosis (1F2J.2)

Alpha-1-antitrypsin deficiency (5C5A)

Airway obstruction in the neonate due to airway abnormality (KB2J)

**CB40.0****Ciliary dyskinesia**

Defective function of the cilia lining the respiratory tract (lower and upper, sinuses, Eustachian tube, middle ear) resulting in altered mucociliary transport and manifesting as recurrent upper and lower respiratory infection, chronic productive cough, chronic rhinosinusitis or persistent otitis media. Acquired forms result from respiratory tract injury associated especially with respiratory infections such as bronchiolitis or chronic obstructive pulmonary disease. The rare primary forms are inherited as autosomal recessive disorders presenting early in life and typically progressing to bronchiectasis; they may be associated with infertility in men and women due to abnormal sperm motility or fallopian tube function respectively.

**Coded Elsewhere:** Primary ciliary dyskinesia (LA75.Y)

Syndromic ciliary dyskinesia (LA75.Y)

**CB40.1****Young syndrome**

Young syndrome is characterised by the association of obstructive azoospermia with recurrent sinobronchial infections.

**CB40.2****Pulmonary collapse**

**Inclusions:** Atelectasis

**Exclusions:** Primary atelectasis of newborn (KB2B)

atelectasis (of): tuberculous (not confirmed) (1B10.1)

atelectasis (of): tuberculous (confirmed) (1B10.0)

<b>CB40.3</b>	<b>Interstitial emphysema</b> This is a collection of air outside of the normal air passages in the body and instead is found inside the connective tissue of the peribronchovascular sheaths, interlobular septa, and visceral pleura. This collection develops as a result of alveolar and terminal bronchiolar rupture.
	<p><b>Exclusions:</b>      emphysema: NOS (CA21)                                  emphysema: surgical (subcutaneous) (NE81)                                  Traumatic subcutaneous emphysema, not elsewhere classified                                  (NF0A.7)</p>
	<p><b>Coded Elsewhere:</b> Pneumomediastinum originating in the perinatal period                                  (KB27.2)</p> <p>Interstitial emphysema originating in the perinatal period                                  (KB27.0)</p>
<b>CB40.4</b>	<b>Compensatory emphysema</b> Compensatory emphysema is a condition in which one portion of the lung increases in size and function, when another portion is destroyed or temporarily useless. It occurs, for instance, in association with pneumonias, pleural effusions and pneumothorax. Anatomically, there is found an enlargement of the normal lung; there are no variations from the normal structure; the unaffected lung, as a result of distention, has an increased vital capacity and is able to perform a greater amount of work than when in its usual condition. The tissues show no similarity to those truly emphysematous. This change is in no way related to true emphysema and the term should not be used, as it creates great confusion in the literature. Its use is no more justified than that of speaking of the compensatory enlargement of a kidney, when the opposite kidney has been removed, as of a compensatory nephritis. True emphysema can never compensate for diseased lung tissue, because the emphysematous lung is totally or almost totally functionless.
<b>CB40.Y</b>	<b>Other specified diseases of the respiratory system</b>
<b>CB41</b>	<p><b>Respiratory failure</b></p> <p>Respiratory failure is a life-threatening impairment of oxygenation or carbon dioxide (CO<sub>2</sub>) elimination. Respiratory failure may occur because of impaired gas exchange, decreased ventilation, or both. The level of oxygen in the blood becomes dangerously low or the level of carbon dioxide becomes dangerously high.</p> <p><b>Coding Note:</b> Code also the causing condition</p> <p><b>Exclusions:</b>      Acute respiratory distress syndrome (CB00)                                  Respiratory arrest (MD33)                                  Respiratory distress of newborn (KB23)</p>
<b>CB41.0</b>	<b>Acute respiratory failure</b> Respiratory failure can be acute (short term) or chronic (ongoing), using time as the main parameter. In acute respiratory failure hypoxemia occurs over a period of hours to days (less than 7 days), and acute respiratory failure can develop quickly and may require emergency treatment.
	<p><b>Coding Note:</b> Code also the causing condition</p>

<b>CB41.00</b>	Acute respiratory failure, Type I When acute respiratory failure causes a low level of oxygen in the blood without a high level of carbon dioxide, it's called hypoxic acute respiratory failure.
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.01</b>	Acute respiratory failure, Type II When acute respiratory failure causes a high level of carbon dioxide in the blood, it's called hypercapnic acute respiratory failure.
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.0Z</b>	Acute respiratory failure, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.1</b>	<b>Chronic respiratory failure</b> In chronic respiratory failure hypoxemia occurs over a period of weeks to months (more than seven days), and chronic respiratory failure develops more slowly and lasts longer than acute respiratory failure.
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.10</b>	Chronic respiratory failure, Type I When chronic respiratory failure causes a low level of oxygen in the blood without a high level of carbon dioxide, it's called hypoxic chronic respiratory failure.
<b>CB41.11</b>	Chronic respiratory failure, Type II When chronic respiratory failure causes a high level of carbon dioxide in the blood, it's called hypercapnic chronic respiratory failure.
<b>CB41.1Z</b>	Chronic respiratory failure, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.2</b>	<b>Respiratory failure, unspecified as acute or chronic</b> This is inadequate gas exchange by the respiratory system, with the result that levels of arterial oxygen, carbon dioxide or both cannot be maintained within their normal ranges, unspecified.
<b>Coding Note:</b>	Code also the causing condition
<b>CB41.20</b>	Respiratory failure, unspecified, Type I This is when the PaCO <sub>2</sub> may be normal or low. It is typically caused by a ventilation/perfusion (V/Q) mismatch; the volume of air flowing in and out of the lungs is not matched with the flow of blood to the lungs. The basic defect in type 1 respiratory failure is failure of oxygenation
<b>CB41.21</b>	Respiratory failure, unspecified, Type II Type 2 respiratory failure is caused by inadequate ventilation; both oxygen and carbon dioxide are affected. Defined as the build up of carbon dioxide levels (PaCO <sub>2</sub> ) that has been generated by the body.

**CB41.2Z** Respiratory failure, unspecified

**Coding Note:** Code also the causing condition

### Postprocedural disorders of the respiratory system (CB60-CB64)

**Exclusions:** Acute pulmonary manifestations due to radiation (CA82.0)

**Coded Elsewhere:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

**CB60** **Tracheostomy malfunction**

**CB61** **Chronic pulmonary insufficiency following surgery**

**CB62** **Postprocedural subglottic stenosis**

**CB63** **Postprocedural stenosis of the trachea**

**CB64** **Transfusion related acute lung injury**

This is a serious blood transfusion complication characterised by the acute onset of non-cardiogenic pulmonary oedema following transfusion of blood products.

**CB7Z** **Diseases of the respiratory system, unspecified**

# CHAPTER 13

---

## Diseases of the digestive system

This chapter has 158 four-character categories.

Code range starts with DA00

- Exclusions:**
- Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Neoplasms (Chapter 02)
  - Certain infectious or parasitic diseases (Chapter 01)
  - Complications of pregnancy, childbirth and the puerperium (Chapter 18)
  - Mental, behavioural or neurodevelopmental disorders (Chapter 06)
- Coded Elsewhere:**
- Digestive system disorders of fetus or newborn (KB80-KB8Z)
  - Symptoms, signs or clinical findings of the digestive system or abdomen (MD80-ME4Y)
  - Structural developmental anomalies of the digestive tract (LB10-LB1Z)
  - Diseases of the digestive system complicating pregnancy, childbirth or the puerperium (JB64.6)

This chapter contains the following top level blocks:

- Diseases or disorders of orofacial complex
- Diseases of oesophagus
- Diseases of the stomach or the duodenum
- Diseases of small intestine
- Diseases of appendix
- Diseases of large intestine
- Diseases of anal canal
- Diseases of liver
- Diseases of gallbladder or biliary tract
- Diseases of pancreas
- Diseases of peritoneum
- Diverticular disease of intestine
- Ischaemic vascular disorders of intestine
- Hernias
- Inflammatory bowel diseases
- Functional gastrointestinal disorders

- Postprocedural disorders of digestive system

## Diseases or disorders of orofacial complex (DA00-DA0Z)

Morbid process, derangement or abnormality localised in the mouth or related tissues of the face

**Coded Elsewhere:** Structural developmental anomalies of mouth or tongue (LA31)

Symptoms or signs of the orofacial complex (MD80)

Jaw pain (ME86.9)

**DA00**

### **Disorders of lips**

A group of any derangement or condition affecting the normal structure and function of the lips resulting from developmental or traumatic factors or systemic disease.

**Coded Elsewhere:** Lichen planus of lips (EA91.Y)

**DA00.0**

### **Cheilitis**

Cheilitis is the generic term given to inflammatory conditions of the lip.

**Coded Elsewhere:** Actinic cheilitis (EK90.Y)

**DA00.1**

### **Self-induced lip trauma**

Self-inflicted damage to lips by biting, picking, chewing etc.

**Coded Elsewhere:** Artefactual cheilitis (ED00)

**DA00.2**

### **Pigmentary abnormalities of lips**

This is an abnormality in the material that changes the colour of reflected or transmitted light as the result of wavelength-selective absorption, of the lips.

**DA00.3**

### **Lip fissure**

**DA00.Y**

### **Other specified disorders of lips**

**DA00.Z**

### **Disorder of lips, unspecified**

**DA01**

### **Disorders of oral mucosa**

Inflammation of the soft tissues of the mouth, such as mucosa; palate; gingiva; and/or lip, as well as any associated pathological or traumatic discontinuity of tissue

**Exclusions:** Noma (DA0C.31)

gangrenous stomatitis (1C1H)

Cheilitis (DA00.0)

cancrum oris (DA0C.31)

**Coded Elsewhere:** Lichen planus and lichenoid reactions of oral mucosa (EA91.4)

Oral submucous fibrosis (DA02.2)

Oral allergy syndrome (EK10.0)

Contact gingivostomatitis (DA02.3)

Neonatal disorders of the oral mucosa (KC23)

<b>DA01.0</b>	<b>Disturbances of oral epithelium</b>
	<b>Coded Elsewhere:</b> Cheek-biting (6B25.Y)
<b>DA01.00</b>	Oral leukoplakia Leukoplakia is a condition where areas of keratosis appear as adherent white patches on the mucous membranes of the oral cavity. Leukoplakia may affect other gastrointestinal tract mucosal sites, or mucosal surfaces of the urinary tract and genitals.  <b>Inclusions:</b> Leukoplakia of gingiva <b>Exclusions:</b> Hairy leukoplakia (DA01.01)
<b>DA01.01</b>	Hairy leukoplakia Oral hairy leukoplakia is a focal epithelial hyperplasia of the oral mucosa associated with Epstein-Barr virus. It is closely associated with HIV and occurs in both immunocompromised and immunocompetent HIV-infected individuals. It is also, however, found in uninfected people who are immunosuppressed, e.g. organ transplant recipients. It presents as white patches with a corrugated or hairy appearance affecting particularly the lateral borders of the tongue.
<b>DA01.02</b>	Wandering rash of the mouth The counterpart of geographic tongue affecting other parts of the oral epithelium. It is less common than geographic tongue.
<b>DA01.0Y</b>	Other specified disturbances of oral epithelium
<b>DA01.1</b>	<b>Noninfectious erosive or ulcerative disorders of oral mucosa</b> A group of erosive and ulcerative disorders of oral mucosa without infection.  <b>Coded Elsewhere:</b> Oral pemphigus (EB40.00) Stevens-Johnson syndrome (EB13.0) Pyodermatitis–pyostomatitis vegetans (EL3Y) Lupus erythematosus of oral mucosa (4A40.Y)
<b>DA01.10</b>	Oral aphthae or aphtha-like ulceration This is a frequent small, shallow, painful ulceration in the oral mucosa. Recurrent oral ulceration that clinically resembles recurrent aphthous stomatitis but presents atypically, including commencement after adolescence, with fever, with a strong family history, or failing to resolve with age.  <b>Coded Elsewhere:</b> Oropharyngeal ulceration due to Behçet disease (4A62)
<b>DA01.11</b>	Oral mucositis Ulcerative mucositis is the inflammation of the oral mucosa with inflammation, ulceration and frequently with bleeding.

- DA01.12** Chronic ulcerative stomatitis  
Chronic ulcerative stomatitis (CUS) is a rare disease which presents with chronic oral mucosal erosions and ulceration resembling erosive lichen planus but refractory to standard therapies. It typically occurs in older women. Diagnosis requires the demonstration of speckled granular perinuclear IgG deposits in the basal and parabasal layers of oral epithelium (stratified epithelium-specific antinuclear or SES-ANA pattern). There is increasing evidence that CUS is an autoimmune disease provoked by circulating IgG antibodies directed against delta-Np63, an isoform of the p53 family of nuclear transcription factors which is present around the nuclei of normal oral epithelial basal keratinocytes. CUS normally responds to treatment with hydroxychloroquine.
- DA01.13** Erythema multiforme with oral ulceration  
This is a skin condition of unknown cause, possibly mediated by deposition of immune complex (mostly IgM) in the superficial microvasculature of the skin and oral mucous membrane that usually follows an infection or drug exposure.
- DA01.14** Drug-induced oral ulcer  
Ulceration of the oral mucosa attributable to medication. Non-steroidal anti-inflammatory drugs (NSAIDs) and cytotoxic drugs such as methotrexate are well recognised causes but many others have been incriminated.
- DA01.15** Mouth ulcers  
Oral ulceration of other specified or unspecified type.  
**Exclusions:**      Mechanical oral ulceration (DA01.1)  
                        Drug-induced oral ulcer (DA01.14)
- DA01.1Y** Other specified noninfectious erosive or ulcerative disorders of oral mucosa
- DA01.2** **Granuloma or granuloma-like lesions of oral mucosa**  
This is a specific type of chronic inflammatory response of the oral mucosa characterised by a localised accumulation of epithelioid macrophages, multi nucleate giant cells, and lymphocytes.  
**Inclusions:**      Denture granuloma  
**Coded Elsewhere:** Sarcoidosis of oral cavity (4B20.Y)  
                        Crohn disease of lips or oral mucosa (DD70.0)
- DA01.20** Giant cell granuloma, central  
A benign condition of the jaws. It is twice as likely to affect women and is more likely to occur in individuals between the age of 20 and 40. Central giant cell granulomas are more common in the mandible and often cross the midline.  
**Exclusions:**      peripheral giant cell granuloma (DA0D)

- DA01.21** Orofacial granulomatosis  
Orofacial granulomatosis (OFG) is an uncommon clinicopathological entity characterised by persistent and/or recurrent lymphoedema and fissuring of the lips and oral mucosa (the latter resulting in a "cobblestone" appearance), oral ulceration and the presence on biopsy of non-caseating granulomas. OFG may be an early manifestation of Crohn disease, sometimes presenting months or years before bowel disease. Some cases are associated with dental infections, sarcoidosis, food allergy or contact allergy. Granulomatous cheilitis is a form of OFG confined to the lips. Rarely, OFG may be associated with fissured tongue and facial palsy (Melkersson-Rosenthal syndrome).
- Coded Elsewhere:** Granulomatous cheilitis (DA00.0)
- DA01.2Y** Other specified granuloma or granuloma-like lesions of oral mucosa
- DA01.3** **Infections of lips or oral mucosa**  
A group of conditions characterised by the invasion of lips and oral mucosa by harmful organisms (pathogens), such as bacteria, fungi, protozoa, rickettsiae, or viruses.
- Coded Elsewhere:** Enteroviral vesicular stomatitis (1F05.0)  
Enteroviral vesicular pharyngitis (1F05.1)  
Candidosis of lips or oral mucous membranes (1F23.0)  
Warts of lips or oral cavity (1E82)  
Angular cheilitis due to bacterial infection (DA00.0)
- DA01.30** Cellulitis or abscess of soft tissues of the mouth  
Infection of the soft tissues of the mouth resulting in cellulitis and/or abscess formation.
- Exclusions:** Peritonsillar abscess (CA0K.1)  
Abscess of salivary gland (DA04.3)  
Periapical abscess without sinus (DA09.62)  
Periapical abscess with sinus (DA09.61)  
Periapical abscess with facial involvement (DA09.60)
- Coded Elsewhere:** Abscess of periodontium (DA0C.4)
- DA01.3Y** Other specified infections of lips or oral mucosa
- DA01.4** **Irritative hyperplasia of oral mucosa**  
**Exclusions:** irritative hyperplasia of edentulous ridge [denture hyperplasia] (DA0D.2)
- DA01.40** Papillary hyperplasia of oral mucosa  
This is an oral pathologic condition that appears in the mouth as an overgrowth of tissue usually beneath a denture and is associated with poor denture hygiene, denture overuse, and ill-fitting dentures.
- DA01.41** Denture hyperplasia
- DA01.42** Oral fibroepithelial polyp

<b>DA01.4Z</b>	Irritative hyperplasia of oral mucosa, unspecified
<b>DA01.Y</b>	<b>Other specified disorders of oral mucosa</b>
<b>DA01.Z</b>	<b>Disorder of oral mucosa, unspecified</b>
<b>DA02</b>	<b>Miscellaneous specified disorders of lips or oral mucosa</b>
	<b><i>Exclusions:</i></b> Diseases of tongue (DA03) Cysts of oral or facial-neck region (DA05) Certain specified disorders of gingiva or edentulous alveolar ridge (DA0D)
	<b><i>Coded Elsewhere:</i></b> Drug-induced oral conditions (EH74)
<b>DA02.0</b>	<b>Genetic or developmental disorders involving lips or oral mucosa</b> A group of genetic and developmental disorders characterised by abnormal facial development that particularly involves the lips and oral mucosa.  <b><i>Coded Elsewhere:</i></b> Chronic mucocutaneous candidosis (1F23.14) Peutz-Jeghers syndrome (LD2D.0) Hereditary haemorrhagic telangiectasia (LA90.00) Pachyonychia congenita (LD27.Y) Cowden syndrome (LD2D.Y) Dyskeratosis congenita (3A70.0) Heterotopic sebaceous glands of lips (ED91.0) Heterotopic sebaceous glands of oral mucosa (ED91.0)
<b>DA02.1</b>	<b>Xerostomia</b> Dry mouth. This may result from many causes including dehydration, salivary gland dysfunction, suppression of saliva production by drugs (e.g. anticholinergics) or habitual mouth-breathing.
<b>DA02.2</b>	<b>Oral submucous fibrosis</b>
<b>DA02.3</b>	<b>Contact gingivostomatitis</b> Inflammation of the gingivae and oral mucosa due to contact with irritants or allergens but without specification of which mechanism is involved.
<b>DA02.30</b>	Allergic contact gingivostomatitis Allergic contact dermatitis affecting the gingivae and oral mucosa.
<b>DA02.31</b>	Irritant contact gingivostomatitis Inflammation of gingivae and oral mucosa due to contact with irritants.

**DA03**

**Diseases of tongue**

Any pathological process affecting the structural tissues of the tongue with or without interference of its normal functions.

- Exclusions:**
- leukoplakia of tongue (DA01.00)
  - erythroplakia of tongue (DA01.0)
  - leukoedema of tongue (DA01.0)
  - Hairy leukoplakia (DA01.01)
  - submucous fibrosis of tongue (DA02.2)
  - Ankyloglossia (LA31.2)

**Coded Elsewhere:** Sublingual varices (BD75.0)

**DA03.0**

**Glossitis**

Inflammation of the tongue

- Exclusions:**
- atrophic glossitis (DA03.2)

**DA03.1**

**Geographic tongue**

A condition characterised by migratory glossitis and loss of dorsal papillae with a map-like appearance that gives origin to the name.

- Inclusions:**
- Benign migratory glossitis
  - Glossitis areata exfoliativa
  - Erythema migrans of tongue

**DA03.2**

**Atrophy of tongue papillae**

- Inclusions:**
- Atrophic glossitis
  - Central papillary atrophy of the tongue

**DA03.3**

**Median rhomboid glossitis**

**DA03.4**

**Hypertrophy of tongue papillae**

- Inclusions:**
- Hypertrophy of foliate papillae

**DA03.5**

**Macroglossia**

Macroglossia is the medical term for a large or enlarged tongue. It may be due to a variety of congenital and acquired conditions. Isolated macroglossia has no determinable cause. It is seen commonly in Down syndrome. The most common causes of tongue enlargement are vascular malformations (e.g. lymphangioma or haemangioma) and muscular hypertrophy. It may, however, be due to infiltration, as with primary systemic amyloidosis.

**Coded Elsewhere:** Congenital macroglossia (LA31.0)

Macroglossia due to primary systemic amyloidosis (5D00.Y)

**DA03.Y**

**Other specified diseases of tongue**

**DA03.Z**

**Diseases of tongue, unspecified**

**DA04**

## **Diseases of salivary glands**

A group of diseases with any pathological condition that affects the structural tissues of the salivary glands or the salivary ducts which may or not interfere with the normal production and transport of saliva into the oral cavity.

**Coded Elsewhere:** Aplasia of lacrimal or salivary glands (LA14.10)

Uveoparotid fever (4B20.Y)

**DA04.0**

### **Atrophy of salivary gland**

Salivary gland atrophy is a wasting or decrease in size of salivary gland, which is not sufficient to cause necrosis. It may occur in response to poor nutrition, lack of use (disuse or immobilization), reduction in blood supply, loss of nerve supply, chronic cell injury, or ageing etc. It is including Sjögren's syndrome, irradiation therapy and obstructive sialadenitis.

**DA04.1**

### **Hypertrophy of salivary gland**

**DA04.2**

### **Sialoadenitis**

Sialoadenitis (or Sialadenitis) is an inflammation of the salivary gland. It is often associated with pain, tenderness, redness, and gradual localised swelling of the affected area.

**Exclusions:** epidemic parotitis (1D80.0)

Uveoparotid fever (4B20)

**DA04.3**

### **Abscess of salivary gland**

This is a collection of pus (neutrophils) that has accumulated within the salivary gland because of an inflammatory process in response to either an infectious process (usually caused by bacteria or parasites) or other foreign materials.

**DA04.4**

### **Sialolithiasis**

Sialolithiasis is a condition where a calcified mass forms within a salivary gland, usually in the duct of the submandibular gland. The usual symptoms are pain and swelling of the affected salivary gland, both of which get worse when salivary flow is stimulated.

**Inclusions:** Calculus of salivary gland or duct

Stone of salivary gland or duct

**DA04.5**

### **Mucocele of salivary gland**

This is a clinical term used to describe a bluish, soft, often fluctuant swelling caused by either blockage or rupture of a salivary gland duct.

**DA04.6**

### **Disturbances of salivary secretion**

A group of conditions characterised by an increase or decrease in saliva secretion.

**Exclusions:** Dry mouth (DA02.1)

**Coded Elsewhere:** Xerostomia due to disturbance of salivary secretion (DA02.1)

**DA04.7**

### **Sialophagia**

Excessive swallowing of saliva

<b>DA04.8</b>	<b>Sialoschesis</b> Suppression of the secretion of saliva.
<b>DA04.Y</b>	<b>Other specified diseases of salivary glands</b>
<b>DA04.Z</b>	<b>Diseases of salivary glands, unspecified</b>
<b>DA05</b>	<p><b>Cysts of oral or facial-neck region</b> Cysts of oral or facial-neck region, having a distinct epithelial lining and division compared to the nearby tissue, which may contain air, fluids, or semi-solid material.</p> <p><b>Exclusions:</b> Radicular cyst (DA09.8)</p> <p><b>Coded Elsewhere:</b> Epstein pearl (KC23)</p>
<b>DA05.0</b>	<p><b>Developmental odontogenic cysts</b> Cysts derived from odontogenic (tooth forming) tissue, usually containing fluid or semisolid material, which develop during various stages of odontogenesis.</p>
<b>DA05.1</b>	<p><b>Developmental nonodontogenic cysts of oral region</b> Cysts that arise from non-odontogenic (non-tooth forming) tissue. By definition, the cysts are lined by epithelium. These cysts include for example; nasopalatine duct cyst, palatal cyst of the neonate, globulomaxillary cyst and more.</p>
<b>DA05.Y</b>	<b>Other specified cysts of oral or facial-neck region</b>
<b>DA05.Z</b>	<b>Cysts of oral or facial-neck region, unspecified</b>
<b>DA06</b>	<p><b>Certain specified diseases of jaws</b> A group of diseases which are associated with the jaws and which are not classified elsewhere.</p>
<b>DA06.0</b>	<p><b>Inflammatory conditions of jaws</b> <b>Exclusions:</b> Cervicofacial actinomycosis (1C10.2)</p>
<b>DA06.1</b>	<p><b>Alveolitis of jaw</b> Inflammation of the alveolus.</p> <p><b>Inclusions:</b> Alveolar osteitis Dry socket</p>
<b>DA06.2</b>	<p><b>Exostosis of jaw</b> Formation of bone mass on the vestibular, buccal or facial side of the maxilla or the mandibular jaw where it may affect the lingual aspect; exostoses are more frequent in the maxillary bone.</p>

DA06.3	<b>Stafne mandibular bone cavity</b> Although commonly called a Stafne cyst, this entity is not a true cyst but rather a cavity due to a focal cortical defect of the medial aspect of the mandible. It is found most frequently in middle-aged men and is usually discovered radiologically as an incidental finding. Its importance is that it may be difficult to distinguish from other radiolucent lesions in the mandible such as myeloma or metastatic squamous carcinoma. The cavity is usually filled by part of the submandibular salivary gland or adjacent fat and it is thought to result from remodelling of the bone by adjacent salivary tissue. Stafne cysts are most frequently seen in middle-aged men. The estimated prevalence ranges around 0.10-0.48%. Pathology: Stafne cysts are thought to result from remodelling of the bone by adjacent salivary tissue, and have been noted to regress following resection of the gland nearby. They generally appear in the area between the mandibular first molar and the mandibular angle 6.
DA07	<b>Disorders of tooth development or eruption</b> Alteration of the normal formation process of the tooth, the normal chronology of eruption into the mouth or the proper alignment in the dental arch affecting a single or multiple teeth.  <b><i>Inclusions:</i></b> disorder of tooth development <b><i>Coded Elsewhere:</i></b> Anodontia (LA30.0) Hypodontia (LA30.1) Oligodontia (LA30.2) Hyperdontia (LA30.3) Abnormalities of size or form of teeth (LA30.4) Amelogenesis imperfecta (LA30.6) Dentine dysplasia (LA30.7) Dentinogenesis imperfecta (LA30.8) Odontogenesis imperfecta (LA30.9) Solitary median maxillary central incisor syndrome (LA30.Y) Hereditary disturbances in tooth structure (LA30.Z) Papillon-Lefèvre syndrome (EC20.30)
DA07.0	<b>Fluoride related opacities or lesions</b> This is a fluoride related abnormality in the tissue of an organism (in layman's terms, "damage"), usually caused by disease or trauma.
DA07.1	<b>Nonfluoride enamel opacities</b> This is a condition characterised by enamel opacities, white spots, or visibly lighter areas on a tooth's surface, not attributed to fluorine, which occur in low-fluoride areas.

<b>DA07.3</b>	<b>Disturbances in tooth formation</b> A group of conditions characterised by disturbances in tooth formation.  <b>Inclusions:</b> Dental dysplasia <b>Exclusions:</b> Hutchinson teeth and mulberry molars in congenital syphilis (1A60) mottled teeth (DA07.0)
<b>DA07.4</b>	<b>Root anomaly</b> Common presence of fused roots showed by X-ray film that short or long root, supernumerary root, or fused roots. These root anomalies are commonly seen in permanent molars, especially in third molars which are the most anomaly in one fused root, 2 or 3 fused roots, even 4 fused roots, round apical root or dilacerations.
<b>DA07.5</b>	<b>Cementum dysplasia</b>
<b>DA07.6</b>	<b>Disturbances in tooth eruption</b>
<b>DA07.60</b>	Teething syndrome Gum and jaw discomfort when an infant's teeth emerges. Teething typically starts between 4 and 7 months of age and lasts until about the age of 3 years. Most common symptoms include irritability, crying, lack of appetite, red and swollen gums, drooling, and inability to sleep.
<b>DA07.61</b>	Ankylosis of teeth Tooth ankylosis is the solid fixation of a tooth, resulting from fusion of the cementum and alveolar bone, with obliteration of the periodontal ligament. It is uncommon in deciduous dentition, and very rare in permanent teeth.  <b>Inclusions:</b> Absence of exfoliation of teeth
<b>DA07.6Y</b>	Other specified disturbances in tooth eruption
<b>DA07.6Z</b>	Disturbances in tooth eruption, unspecified
<b>DA07.7</b>	<b>Embedded teeth</b> an unerupted tooth, usually completely covered with bone  <b>Exclusions:</b> embedded teeth with abnormal position of such teeth or adjacent teeth (DA0E.3)
<b>DA07.8</b>	<b>Impacted teeth</b> An impacted tooth is a tooth that is all the way or partially below the gum line and is not able to erupt properly. Wisdom teeth (third molars) are the most commonly impacted teeth  <b>Inclusions:</b> dental impaction impacted tooth <b>Exclusions:</b> impacted teeth with abnormal position of such teeth or adjacent teeth (DA0E.3)
<b>DA07.Y</b>	<b>Other specified disorders of tooth development or eruption</b>
<b>DA07.Z</b>	<b>Disorders of tooth development or eruption, unspecified</b>

**DA08**

**Diseases of hard tissues of teeth**

This is a group of conditions affecting the integrity of tooth enamel, dentine or cementum.

**DA08.0**

**Dental caries**

A condition characterised by localised destruction of calcified tissue, initiated on the tooth surface by decalcification of the enamel, followed by the enzymatic lysis of organic structures, resulting in cavity formation.

**Inclusions:** Dental decay

**DA08.1**

**Certain specified diseases of hard tissues of teeth**

**Exclusions:** Dental caries (DA08.0)

bruxism (DA0E.7)

teeth-grinding NOS (DA0E.7)

**Coded Elsewhere:** Ankylosis of teeth (DA07.61)

**DA08.10**

**Excessive attrition of teeth**

The pathological wearing away of tooth substance as a result of tooth-to-tooth contact.

**DA08.11**

**Abrasion of teeth**

Abrasion is abnormal tooth surface loss resulting from direct friction forces between the teeth and external objects or from frictional forces between contacting teeth components in the presence of an abrasive medium.

**DA08.12**

**Erosion of teeth**

Tooth erosion is a gradual and irreversible loss of the normally hard surface of the tooth due to chemical, not bacterial, processes.

**DA08.13**

**Abfraction**

Theoretical concept of loss of tooth structure not caused by dental caries

**Inclusions:** non-carious cervical lesion

**DA08.14**

**Pathological resorption of teeth**

Tooth resorption, external, resorption of calcified dental tissue, beginning on the external surface, usually at the apex or the lateral surface of the root, as a result of tissue reaction in the periodontal or pericoronal tissue, increasing in severity with age.

**DA08.15**

**Posteruptive colour changes of dental hard tissues**

This is a condition characterised by colour changes of the dental hard tissues after tooth eruption.

**Exclusions:** Deposits on teeth (DA08.4)

**DA08.2**

**Chronic dental injuries**

A group of conditions characterised by persistent or long-lasting damage caused by an external force applied to the tooth resulting from intentional or unintentional means.

- DA08.3 Nontraumatic fracture of tooth**  
 Discontinuity of tooth structure in vertical or horizontal direction of the long axis of a tooth and which may affect enamel and/or dentine. This condition is referred as incomplete fracture and may be related to flexural loads acting on the teeth. In some cases the dental pulp may become affected.
- Inclusions:** Incomplete fracture not involving vital pulp  
 Complete nontraumatic fracture not involving vital pulp
- Exclusions:** traumatic fracture of tooth (NA0D.02)
- DA08.4 Deposits on teeth**  
 In dentistry, calculus or tartar is a form of hardened dental plaque.
- DA08.Y Other specified diseases of hard tissues of teeth**
- DA08.Z Diseases of hard tissues of teeth, unspecified**
- DA09 Diseases of pulp or periapical tissues**  
 Dental pulp is that part of the tooth located in the centre of the coronal portion underneath dentin and composed of connective tissue, blood vessels and nerve endings.  
 Periapical tissues are designated as those located at the tip of the tooth root surrounding the apical foramen.
- DA09.0 Pulpitis**  
 Inflammation of pulpal tissue resulting from irritating factors of diverse nature such as bacterial, hyperaemic, chemical or thermal that act directly or indirectly on the dental pulp.
- DA09.1 Necrosis of pulp**  
 Necrosis of the dental pulp which clinically does not respond to thermal stimulation; the tooth may be asymptomatic or sensitive to percussion and palpation.
- DA09.2 Pulp abscess**  
 This is an acute or chronic inflammation of dental pulp, associated with a circumscribed collection of necrotic tissue and pus arising from breakdown of leukocytes and bacteria, sometimes walled off with connective tissue.
- Inclusions:** Pulpal abscess
- DA09.3 Phoenix abscess**  
 This is an acute condition that results immediately after endodontic therapy or in tooth with necrotic pulp
- DA09.4 Pulp degeneration**
- DA09.5 Abnormal hard tissue formation in pulp**  
 This is a condition affecting the tooth characterised by secondary or irregular dentine in the pulp.
- DA09.6 Periapical abscess**

- DA09.60** Periapical abscess with facial involvement  
Purulent periapical lesion resulting from necrosis of dental pulpal tissues and that has penetrated facial soft and bone tissues.
- DA09.61** Periapical abscess with sinus  
**Inclusions:**  
Dental abscess with sinus  
Dentoalveolar abscess with sinus  
Dental sinus
- DA09.62** Periapical abscess without sinus
- DA09.6Y** Other specified periapical abscess
- DA09.6Z** Periapical abscess, unspecified
- DA09.7** **Periapical periodontitis**
- DA09.70** Acute apical periodontitis of pulpal origin  
Acute, apical periodontitis is a result of inflammation of the periapical tissues following pulpal necrosis.
- DA09.71** Chronic apical periodontitis  
A periapical inflammation characterised by dental granuloma formation.
- DA09.7Y** Other specified periapical periodontitis
- DA09.7Z** Periapical periodontitis, unspecified
- DA09.8** **Radicular cyst**  
The radicular cyst is defined as an area of chronic inflammation exhibiting a closed central cavity surrounded by an epithelial lining.  
**Exclusions:** lateral periodontal cyst (DA05.0)
- DA09.Y** Other specified diseases of pulp or periapical tissues
- DA09.Z** Diseases of pulp or periapical tissues, unspecified
- DA0A** **Certain specified disorders of teeth or supporting structures**
- DA0A.0** **Exfoliation of teeth due to systemic causes**  
Premature loss of teeth associated with systemic disease usually results from some change in the immune system or connective tissue.
- DA0A.1** **Loss of teeth due to accident, extraction or local periodontal disease**
- DA0A.2** **Atrophy of edentulous alveolar ridge**
- DA0A.3** **Retained dental root**  
Complete or fragment of root structure that remains in the jaw usually as result of fracture during the corresponding tooth extraction procedure.
- DA0A.Y** **Other specified disorders of teeth and supporting structures**

<b>DA0A.Z</b>	<b>Unspecified disorders of teeth and supporting structures</b>	
<b>DA0B</b>	<b>Gingival diseases</b>	
	Gingivitis is inflammation of the tissues of the gingiva (gum) without loss of connective tissue.	
	<b>Coded Elsewhere:</b> Periodontal pocket (DA0C.Y)	
<b>DA0B.0</b>	<b>Allergic gingivitis</b>	
<b>DA0B.1</b>	<b>Catarrhal gingivitis</b>	
<b>DA0B.2</b>	<b>Eruptive gingivitis</b>	
<b>DA0B.3</b>	<b>Atrophic senile gingivitis</b>	
<b>DA0B.4</b>	<b>Acute multiple gingival abscesses</b>	
<b>DA0B.5</b>	<b>Developmental or acquired deformities or conditions of gingiva</b> This is a major developmental difference in the shape of a body part or organ compared to the average shape of that part.	
<b>DA0B.6</b>	<b>Pericoronitis</b> A gum condition in which irritation and inflammation are produced by the crown of an incompletely erupted tooth.	
<b>DA0B.Y</b>	<b>Other specified gingival diseases</b>	
<b>DA0B.Z</b>	<b>Gingival diseases, unspecified</b>	
<b>DA0C</b>	<b>Periodontal disease</b>	
	Periodontal disease can refer to any pathological process involving the gum (GINGIVA), the alveolar bone (alveolar process), the dental cementum, and / or the periodontal ligament	
<b>DA0C.0</b>	<b>Acute periodontitis</b> This is an acute disease affecting the tooth-supporting structures, i.e. gingiva, alveolar bone and periodontal membrane.	
	<b>Exclusions:</b>	Periapical abscess without sinus (DA09.62) Acute apical periodontitis of pulpal origin (DA09.70) Periapical abscess with sinus (DA09.61) Periapical abscess with facial involvement (DA09.60)
<b>DA0C.1</b>	<b>Aggressive periodontitis</b> A type of periodontal disease and includes localised aggressive periodontitis (LAP), and Generalised aggressive periodontitis (GAP).	
	<b>Inclusions:</b>	Juvenile periodontitis
<b>DA0C.2</b>	<b>Periodontosis</b> Periodontosis defined as a disease of the periodontium occurring in an otherwise healthy adolescent and characterised by a rapid loss of the alveolar bone around more than one tooth of the permanent dentition.	

<b>DA0C.3</b>	<b>Necrotising periodontal diseases</b> An infection characterised by necrosis of periodontal tissues <b>Coded Elsewhere:</b> Necrotising ulcerative gingivitis (1C1H)
<b>DA0C.30</b>	Necrotising ulcerative periodontitis <b>Inclusions:</b> Necrotising ulcerative gingivo-periodontitis
<b>DA0C.31</b>	Noma This is a devastating infectious disease which destroys the soft and hard tissues of the oral and para-oral structures. <b>Inclusions:</b> Cancrum oris Gangrenous stomatitis Stomatonecrosis
<b>DA0C.3Y</b>	Other specified necrotising periodontal diseases
<b>DA0C.3Z</b>	Necrotising periodontal diseases, unspecified
<b>DA0C.4</b>	<b>Abscess of periodontium</b> localised purulent infection of periodontal tissues; common clinical feature in patients with moderate or advanced periodontitis. <b>Inclusions:</b> Periodontal abscess
<b>DA0C.5</b>	<b>Linear gingival erythema</b>
<b>DA0C.Y</b>	<b>Other specified periodontal disease</b>
<b>DA0C.Z</b>	<b>Periodontal disease, unspecified</b>
<b>DA0D</b>	<b>Certain specified disorders of gingiva or edentulous alveolar ridge</b> A group of diseases which are associated with gingiva or alveolar ridge, which are not classified elsewhere. <b>Exclusions:</b> Chronic gingivitis (DA0B) Atrophy of edentulous alveolar ridge (DA0A.2) gingivitis NOS (DA0B) Acute gingivitis (DA0B)
<b>DA0D.0</b>	<b>Gingival recession</b>
<b>DA0D.1</b>	<b>Gingival enlargement</b> An abnormal overgrowth of gingival tissues.
<b>DA0D.2</b>	<b>Gingival or edentulous alveolar ridge lesions associated with trauma</b> Damage of gingival or mucosal lesions resulting from external stimuli. Common causes of traumatic ulcers include: denture irritation, biting, injuries, burns and friction irritation from sharp or fractured teeth.

<b>DA0D.3</b>	<b>Hypoplasminogenaemia</b> Severe hypoplasminogenaemia or type 1 plasminogen (plg) deficiency is a systemic disease characterised by markedly impaired extracellular fibrinolysis leading to the formation of ligneous (fibrin-rich) pseudomembranes on mucosae during wound healing.
<b>DA0D.4</b>	<b>Cotton-roll gingivitis</b>
<b>DA0D.5</b>	<b>Gingival ulceration</b>
<b>DA0D.Y</b>	<b>Other specified disorders of gingival or edentulous alveolar ridge</b>
<b>DA0E</b>	<p><b>Dentofacial anomalies</b></p> <p>A congenital or acquired abnormality in which the dental and oral structures deviate from normal form, function, or position.</p> <p><b>Exclusions:</b>      hemifacial atrophy or hypertrophy (LA52)                            Robin's syndrome (LA56)                            acromegaly (5A60.0)</p>
<b>DA0E.0</b>	<b>Major anomalies of jaw size</b>
<b>DA0E.00</b>	Micrognathia Apparently reduced length and width of the mandible when viewed from the front but not from the side. This is a bundled term comprising shortening and narrowing of the mandible and chin.
	<b>Exclusions:</b> Pierre Robin syndrome (LA56)
<b>DA0E.0Y</b>	Other specified major anomalies of jaw size
<b>DA0E.0Z</b>	Major anomalies of jaw size, unspecified
<b>DA0E.1</b>	<b>Anomalies of jaw-cranial base relationship</b> This is a congenital or acquired abnormality in which the portion of the skull that holds the upper jaw deviates from the normal form, function, or position.
<b>DA0E.2</b>	<b>Anomalies of dental arch relationship</b> This is a congenital or acquired abnormality in which dental arch relationship deviate from normal form, function, or position. <b>Coded Elsewhere:</b> Crossbite (DA0E.5Y)
<b>DA0E.3</b>	<b>Anomalies of tooth position</b> Dental anomalies are craniofacial abnormalities of form, function, or position of the teeth, bones, and tissues of the jaw and mouth. Anomalies of tooth position can be classified in ectopic, transmigration, transposition, rotation.
<b>DA0E.4</b>	<b>Food impaction</b> The forcible wedging of food between adjacent teeth during mastication, producing gingival recession and pocket formation.

<b>DA0E.5</b>	<b>Malocclusion</b> Malocclusion is the atypical relationship between maxillary and mandibular teeth which may interfere with the efficiency of excursive movements of the mandible that are essential for the effective mastication process.
<b>DA0E.50</b>	Class II division 2 malocclusion This condition relates to Angle's classification of occlusion in which the first permanent maxillary molar position is aligned or in an anterior relationship to that of the mandibular first permanent molar, such that the mesiobuccal cusp of the maxillary molar is mesial to the buccal groove of the mandibular molar and the central incisors are in linguoversion.
<b>DA0E.51</b>	Angle class I malocclusion The maxillary first permanent molar is in slight distoversion in relation to the mandibular first permanent molar, and the mesiobuccal cusp of the maxillary molar is aligned with the buccal groove of the mandibular molar.
<b>DA0E.5Y</b>	Other specified malocclusion
<b>DA0E.5Z</b>	Malocclusion, unspecified
<b>DA0E.6</b>	<b>Dentofacial functional abnormalities</b> Temporomandibular joint disorder (TMJ) is the name given to a group of symptoms that cause pain in the head, face, and jaw. The symptoms include headaches, soreness in the chewing muscles, and clicking or stiffness of the joints. They often have psychological as well as physical causes.  <b>Exclusions:</b> teeth-grinding NOS (DA0E.7) bruxism (DA0E.7) teeth clenching (DA0E.7)
<b>DA0E.7</b>	<b>Dentofacial parafunctional disorders</b> Bruxism is a repetitive jaw-muscle activity characterised by clenching or grinding of the teeth and/or by bracing or thrusting of the mandible. Bruxism has two distinct circadian manifestations: it can occur during sleep (indicated as sleep bruxism) or during wakefulness (indicated as awake bruxism)  <b>Exclusions:</b> Atypical facial pain (8A85) dyskinesia (MB47.4) trismus (DA0E.8)
<b>DA0E.8</b>	<b>Temporomandibular joint disorders</b> This is an umbrella term covering acute or chronic pain, especially in the muscles of mastication and/or inflammation of the temporomandibular joint, which connects the mandible to the skull.  <b>Inclusions:</b> Temporomandibular joint-pain-dysfunction syndrome <b>Exclusions:</b> current temporomandibular joint: strain (NA03.3) current temporomandibular joint: dislocation (NA03.0)
<b>DA0E.Y</b>	<b>Other specified dentofacial anomalies</b>

<b>DA0E.Z</b>	<b>Dentofacial anomalies, unspecified</b>
<b>DA0F</b>	<b>Sensory disturbances affecting orofacial complex</b>
	<i>Coded Elsewhere:</i> Trigeminal neuralgia (8B82.0)
	Dysgeusia (MB41.2)
<b>DA0F.0</b>	<b>Burning mouth syndrome</b>
	Chronic burning mouth pain is chronic orofacial pain with an intraoral burning or dysaesthetic sensation that recurs for more than two hours per day on 50 % of the days over more than three months, without evident causative lesions on clinical investigation and examination. It is characterised by significant emotional distress (anxiety, anger/frustration or depressed mood) or interference with orofacial functions such as eating, yawning, speaking etc. Chronic burning mouth pain is multifactorial: biological, psychological and social factors contribute to the pain condition. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms.
	<i>Inclusions:</i> Orodynia
<b>DA0F.Y</b>	<b>Other specified sensory disturbances affecting orofacial complex</b>
<b>DA0F.Z</b>	<b>Sensory disturbances affecting orofacial complex, unspecified</b>
<b>DA0Y</b>	<b>Other specified diseases or disorders of orofacial complex</b>
<b>DA0Z</b>	<b>Diseases or disorders of orofacial complex, unspecified</b>

### Diseases of oesophagus (DA20-DA2Z)

	<i>Coded Elsewhere:</i> Neoplasms of the oesophagus
	Structural developmental anomalies of oesophagus (LB12)
	Foreign body in oesophagus (ND73.1)
<b>DA20</b>	<b>Acquired anatomical alterations of the oesophagus</b>
	This group incorporates oesophageal disorders principally due to acquired morphological changes of the oesophagus.
	<i>Exclusions:</i> Structural developmental anomalies of oesophagus (LB12)
<b>DA20.0</b>	<b>Oesophageal obstruction</b>
	Hindrance of the passage of luminal contents in the oesophagus. Obstruction of oesophagus can be partial or complete, and caused by intrinsic or extrinsic factors.
	<i>Exclusions:</i> Congenital stenosis or stricture of oesophagus (LB12.3)
	Anatomical alteration due to gastro-oesophageal reflux disease (DA22)
	Neoplasms of the oesophagus ()
	Foreign body in oesophagus (ND73.1)

<b>DA20.1</b>	<b>Diverticulum of oesophagus, acquired</b> Diverticulum of oesophagus is a disorder having out-pouchings from the oesophageal wall.
	<b>Inclusions:</b> Oesophageal pouch, acquired Rokitansky diverticulum
	<b>Exclusions:</b> Congenital diverticulum of oesophagus (LB12.4)
<b>DA20.2</b>	<b>Oesophageal web</b> Oesophageal web is a thin membrane located in the middle or upper oesophagus, resulting in pain and dysphagia.
	<b>Exclusions:</b> Congenital oesophageal web or ring (LB12.0)
	<b>Coded Elsewhere:</b> Plummer-Vinson syndrome (3A00.Y)
<b>DA20.3</b>	<b>Perforation of oesophagus</b> Perforation of oesophagus is a penetration or hole of the wall of the oesophagus, resulting in luminal contents in oesophagus flowing into the mediastinum and/or thoracic cavity.
	<b>Exclusions:</b> Oesophageal ulcer (DA25)
	<b>Coded Elsewhere:</b> Oesophagitis due to external causes (DA24.2) Foreign body in oesophagus (ND73.1)
<b>DA20.30</b>	Spontaneous rupture of oesophagus Spontaneous perforation of the oesophageal wall. This most commonly results from a sudden increase in intraoesophageal pressure combined with relatively negative intrathoracic pressure caused by straining or vomiting. This is known as effort rupture of the oesophagus or Boerhaave's syndrome.
	<b>Inclusions:</b> Rupture of oesophagus
	<b>Exclusions:</b> traumatic perforation of (thoracic) oesophagus (NB32) Mallory-Weiss syndrome (DA26.3) Perforation due to malignant neoplasm ()
<b>DA20.3Y</b>	Other specified perforation of oesophagus
<b>DA20.3Z</b>	Perforation of oesophagus, unspecified
<b>DA20.Y</b>	<b>Other specified acquired anatomical alterations of the oesophagus</b>
<b>DA20.Z</b>	<b>Acquired anatomical alterations of the oesophagus, unspecified</b>
<b>DA21</b>	<b>Motility disorders of oesophagus</b> This group incorporates oesophageal disorders due to disturbances of oesophageal motor function.
	<b>Coding Note:</b> Code also the causing condition

<b>DA21.0</b>	<b>Achalasia</b> Achalasia is an oesophageal smooth muscle motility disorder characterised by a loss of peristalsis in the distal oesophagus and a failure of lower oesophageal sphincter (LES) relaxation. Basic mechanism is the degeneration of neurons (ganglion cells) in the myenteric plexuses in the oesophageal wall, but the cause is still unclear.  <b>Inclusions:</b> Cardiospasm <b>Exclusions:</b> congenital cardiospasm (LB12) <b>Coded Elsewhere:</b> Achalasia in Chagas disease (1F53.3)
<b>DA21.1</b>	<b>Motility disorder of cervical or upper oesophagus</b> Motility disorder of cervical and upper oesophagus is a condition characterised by choke, swallow air, regurgitate fluid into the nose, or experience discomfort in swallowing food due to incompetence of upper oesophageal sphincter.  <b>Coding Note:</b> Code also the causing condition <b>Inclusions:</b> Dyskinesia of cervical and upper oesophagus
<b>DA21.2</b>	<b>Disorder of oesophageal peristalsis</b> Disorder of oesophageal peristalsis is part of a spectrum of motility disorders in the thoracic oesophagus characterised by dysphagia and chest pain due to incoordination of oesophageal peristaltic contractions. There is no abnormality in lower oesophageal sphincter relaxation.  <b>Coding Note:</b> Code also the causing condition <b>Exclusions:</b> Achalasia (DA21.0) Gastro-oesophageal reflux disease (DA22)
<b>DA21.20</b>	Hypertensive peristalsis This is a motility disorder of oesophagus characterised by hypertensive peristalsis. This motility abnormality includes nutcracker oesophagus that has been reported in association with dysphagia, non-cardiac chest pain, and heartburn.
<b>DA21.21</b>	Hypotensive peristalsis This is a motility disorder of oesophagus characterised by hypotensive peristalsis. The peristaltic dysfunction likely leads to impaired volume clearance.
<b>DA21.22</b>	Spastic peristalsis This is a motility disorder of oesophagus characterised by hypercontractile spastic peristalsis, known as "jackhammer oesophagus" in the presence of normal lower oesophageal sphincter (LES) relaxation. This category also includes diffuse oesophageal spasm (DES) with uncoordinated contraction characterised by reduced distal latency on oesophageal manometry.  <b>Inclusions:</b> Diffuse oesophageal spasm Spasm of oesophagus
<b>DA21.2Y</b>	Other specified disorder of oesophageal peristalsis <b>Coding Note:</b> Code also the causing condition

<b>DA21.2Z</b>	Disorder of oesophageal peristalsis, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>DA21.3</b>	<b>Disorder of lower oesophageal sphincter function</b> Disorder of lower oesophageal sphincter function is a condition characterised by dysphagia, chest pain, heartburn and regurgitation due to incompetence of lower oesophageal sphincter.
<b>Coding Note:</b>	Code also the causing condition
<b>DA21.Y</b>	<b>Other specified motility disorders of oesophagus</b>
<b>Coding Note:</b>	Code also the causing condition
<b>DA21.Z</b>	<b>Motility disorders of oesophagus, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>DA22</b>	<b>Gastro-oesophageal reflux disease</b> A condition which develops when the reflux of stomach contents causes troublesome symptoms and/or complications <b>Coded Elsewhere:</b> Gastro-oesophageal reflux disease in newborn (KB80)
<b>DA22.0</b>	<b>Non-erosive gastro-oesophageal reflux disease</b> A disease condition in that patients have classic symptoms of gastro-oesophageal reflux disease (GERD), but do not have apparent esophagitis or oesophageal mucosal injury. <b>Exclusions:</b> Functional heartburn (DD90.2)
<b>DA22.1</b>	<b>Erosive gastro-oesophageal reflux disease</b> Erosive gastro-oesophageal reflux disease is defined endoscopically by visible breaks of the distal oesophageal mucosa. <b>Inclusions:</b> Reflux oesophagitis Peptic oesophagitis
<b>DA22.Z</b>	<b>Gastro-oesophageal reflux disease, unspecified</b>
<b>DA23</b>	<b>Columnar metaplastic epithelium of the oesophagus</b> An acquired condition in which the tissue lining the oesophagus is replaced by tissue that is similar to the lining of the intestine or the stomach following chronic gastro-oesophageal reflux. <b>Coded Elsewhere:</b> Barrett adenocarcinoma (2B70.00)
<b>DA23.0</b>	<b>Barrett epithelium</b> Barrett epithelium is defined as those having circumferential columnar metaplasia of oesophagus from the esophago-gastric junction. Recently, from the view of adenocarcinogenesis of the oesophagus, the term of Barrett epithelium require the histological confirmation of specialized intestinal metaplasia.

<b>DA23.1</b>	<b>Dysplasia of Barrett epithelium</b> Dysplasia of Barrett epithelium is defined as neoplastic epithelium that remains confined within the basement membrane of Barrett oesophagus. Dysplasia of Barrett epithelium is considered as a precursor of adenocarcinoma arising in Barrett Oesophagus.
<b>DA23.2</b>	<b>Barrett ulcer</b> Barrett ulcer is defined as ulceration in columnar epithelium of oesophagus.
<b>DA23.Y</b>	<b>Other specified columnar metaplastic epithelium of the oesophagus</b>
<b>DA23.Z</b>	<b>Columnar metaplastic epithelium of the oesophagus, unspecified</b>
<b>DA24</b>	<p><b>Oesophagitis</b></p> <p>Oesophagitis is inflammation of the oesophagus. Oesophagitis can cause painful, difficult swallowing and chest pain. Oesophagitis has several causes; some common causes include stomach reflux, infection, oral medicines and allergies. Treatment for esophagitis depends on the underlying cause and how badly the tissue lining the esophagus is damaged. If left untreated, this condition can cause ulcers or scarring of the oesophagus causing narrowing of the oesophagus, unintended weight loss and dehydration.</p> <p><b>Exclusions:</b> reflux oesophagitis (DA22.1) Oesophageal erosion (DA25.0) Gastro-oesophageal reflux disease (DA22) Crohn disease (DD70)</p> <p><b>Coded Elsewhere:</b> Oesophagitis in newborn (KB81)</p>
<b>DA24.0</b>	<p><b>Infectious oesophagitis</b></p> <p>Infectious oesophagitis is inflammation, irritation and swelling of the oesophagus due to the infectious agent.</p> <p><b>Coding Note:</b> Code also the causing condition</p>
<b>DA24.00</b>	<p>Oesophageal phlegmon</p> <p>A spreading diffuse inflammatory process with formation of suppurative/purulent exudate or pus in the oesophageal wall. It often develops to a defined pocket of pus, oesophageal abscess. This is mainly due to the result of acute inflammation by bacterial infection.</p> <p><b>Inclusions:</b> Abscess of oesophagus</p>
<b>DA24.0Y</b>	Other specified infectious oesophagitis
<b>Coding Note:</b>	Code also the causing condition
<b>DA24.0Z</b>	Infectious oesophagitis, unspecified
<b>Coding Note:</b>	Code also the causing condition

<b>DA24.1</b>	<b>Eosinophilic oesophagitis</b> Eosinophilic oesophagitis is an inflammatory condition in which the wall of the oesophagus becomes filled with a large number of eosinophils. It is diagnosed based on typical oesophageal symptoms and oesophageal mucosal biopsies demonstrating oesophageal epithelial infiltration with eosinophils.
	<b>Inclusions:</b> Allergic oesophagitis
	<b>Coded Elsewhere:</b> Food-induced eosinophilic oesophagitis (4A83.1) Neonatal eosinophilic oesophagitis (KB81.0)
<b>DA24.2</b>	<b>Oesophagitis due to external causes</b> Inflammation of the oesophagus due to external cause such as radiation, ingestion of the alkali and acid, and swallowed pills or food failing to traverse entire oesophagus. <b>Coded Elsewhere:</b> Thermal injury of oesophagus (NE02)
<b>DA24.20</b>	Chemical oesophagitis This is oesophageal inflammation caused by chemical injury including alkaline or acid solutions.
<b>DA24.21</b>	Drug-induced oesophagitis This refers to a drug-induced inflammation of the oesophagus. Medications can induce oesophageal abnormalities via both systemic effects and by causing direct oesophageal mucosal injury, so-called 'pill-induced' oesophagitis.
<b>DA24.22</b>	Radiation oesophagitis
<b>DA24.2Z</b>	Oesophagitis due to external causes, unspecified
<b>DA24.Y</b>	<b>Other specified oesophagitis</b>
<b>DA24.Z</b>	<b>Oesophagitis, unspecified</b>
<b>DA25</b>	<p><b>Oesophageal ulcer</b> Oesophageal ulcer is tissue defect located in the oesophagus. It causes inflammatory injuries in the oesophageal mucosa, with extension beyond the submucosa into the muscularis mucosa. The oesophageal ulcer due to acidic digestive juices is classified elsewhere in gastro-oesophageal reflux disease, and excluded from here.</p> <p><b>Exclusions:</b> Barrett ulcer (DA23.2) Neoplasms of the oesophagus () Crohn disease (DD70)</p>
<b>DA25.0</b>	<b>Oesophageal erosion</b> Oesophageal erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Oesophageal erosion due to gastro-oesophageal reflux disease is excluded from here.

<b>DA25.1</b>	<b>Infectious oesophageal ulcer</b> Infectious oesophageal ulcer is ulceration or erosion in the mucosa of oesophagus due to the infectious agent, such as bacteria, viruses, fungi and parasites.
<b>DA25.10</b>	Bacterial oesophageal ulcer Ulcer in the mucosa of oesophagus due to bacterial infection.
<b>DA25.11</b>	Fungal oesophageal ulcer Ulcer in the mucosa of oesophagus due to fungal infection.
<b>DA25.12</b>	Parasitic oesophageal ulcer Ulcer in the mucosa of oesophagus due to parasitic infection.
<b>DA25.13</b>	Viral oesophageal ulcer Ulcer in the mucosa of oesophagus due to viral infection.
<b>DA25.1Y</b>	Other specified infectious oesophageal ulcer
<b>DA25.1Z</b>	Infectious oesophageal ulcer, unspecified
<b>DA25.2</b>	<b>Oesophageal ulcer due to allergic or immunologic disorder</b> Oesophageal ulcer or erosion due to allergic disorders or systemic immunologic disorders.
<b>Coding Note:</b>	Code also the causing condition
<b>DA25.3</b>	<b>Oesophageal ulcer due to external causes</b> Oesophageal ulcer or erosion due to external causes such as ingestion of certain chemical substances or drugs, radiation and thermal injury, or other external causes.  <b>Coded Elsewhere:</b> Thermal oesophageal ulcer (NE02)
<b>DA25.30</b>	Chemical oesophageal ulcer This is oesophageal ulcer caused by chemical injury including alkaline or acid solutions.  <b>Inclusions:</b> Ulcer of oesophagus due to ingestion of chemicals
<b>DA25.31</b>	Drug-induced oesophageal ulcer <b>Inclusions:</b> Ulcer of oesophagus due to ingestion of drugs and medicaments
<b>DA25.32</b>	Radiation oesophageal ulcer
<b>DA25.3Y</b>	Oesophageal ulcer due to other specified external causes
<b>DA25.3Z</b>	Oesophageal ulcer due to external causes, unspecified
<b>DA25.Y</b>	<b>Other specified oesophageal ulcer</b>
<b>DA25.Z</b>	<b>Oesophageal ulcer, unspecified</b>

**DA26****Vascular disorders of the oesophagus**

This group incorporates vascular disorders principally affecting the blood vessels of the oesophagus. They include vascular disorders of arteries, veins and capillaries that carry blood to and from the oesophagus.

**DA26.0****Oesophageal varices**

Abnormally dilated veins developed as portosystemic shunts in the lining of the lower oesophagus in patients with portal hypertension. Once oesophageal varices develop, they continue to grow, and bleeding from oesophageal varices can be fatal.

**Coding Note:**

Code also the causing condition

**DA26.00**

Oesophageal varices with bleeding

**Coding Note:**

Code also the causing condition

**DA26.01**

Oesophageal varices without bleeding

**Coding Note:**

Code also the causing condition

**DA26.0Z**

Oesophageal varices, unspecified

**Coding Note:**

Code also the causing condition

**DA26.1****Angiodysplasia or arteriovenous malformation of oesophagus**

Enlarged or widened blood vessels with thin walls that are similar to varicose veins. It can be a source of gastrointestinal bleeding and anaemia.

**DA26.2****Intramural haemorrhage of oesophagus**

Hematoma in the oesophageal wall that can be formed spontaneously or as a result of trauma, toxic ingestion, or endoscopic procedures. It is rarely observed.

**Inclusions:** Intramural haematoma of oesophagus

**Exclusions:** Oesophageal varices (DA26.0)

**DA26.3****Gastro-oesophageal laceration-haemorrhage syndrome**

Bleeding from tears in the mucosa at the junction of the stomach and oesophagus, usually caused by severe vomiting, retching or coughing.

**Inclusions:** Mallory-Weiss syndrome

Mallory-Weiss tear

Mallory-Weiss lesion

**DA26.Y****Other specified vascular disorders of the oesophagus****DA26.Z****Vascular disorders of the oesophagus, unspecified****DA2Y****Other specified diseases of oesophagus****DA2Z****Diseases of oesophagus, unspecified**

## Diseases of the stomach or the duodenum (DA40-DA7Z)

### Diseases of stomach (DA40-DA4Z)

This is a group of conditions characterised as being in or associated with the stomach.

- Exclusions:**
- Gastrostomy malfunction (DE12.1)
  - Diaphragmatic hernia (DD50.0)

- Coded Elsewhere:**
- Neoplasms of the stomach
  - Structural developmental anomalies of stomach (LB13)
  - Gastric ulcer (DA60)
  - Peptic ulcer, site unspecified (DA61)
  - Anastomotic ulcer (DA62)
  - Foreign body in stomach (ND73.2)

**DA40**

### **Acquired anatomical alterations of the stomach**

This group incorporates gastric disorders principally due to acquired morphological changes of the stomach.

- Exclusions:**
- Structural developmental anomalies of stomach (LB13)
  - Diaphragmatic hernia (DD50.0)

**DA40.0**

### **Gastric outlet obstruction**

Gastric outlet obstruction is a disorder characterised by epigastric abdominal pain and postprandial vomiting due to mechanical obstruction mostly at the level of the pylorus.

**DA40.1**

### **Gastric fistula, acquired**

Acquired gastric fistula is an opening through the gastric wall and into the peritoneal cavity, into another organ and vessels that normally do not connect, or through the abdominal wall.

**DA40.2**

### **Gastric volvulus**

Gastric volvulus is an uncommon clinical entity defined as an abnormal rotation (twisting) of all or part of the stomach by more than 180 degrees, creating a closed-loop obstruction of the flow of material through the stomach. It can result in incarceration and strangulation, with variable loss of blood supply.

Although rare in childhood, a wandering spleen may also be associated with gastric volvulus, because they share a common etiology: congenital absence of intraperitoneal visceral attachments.

**DA40.3**

### **Gastric diverticulum**

Gastric diverticulum is a disorder having out-pouchings from the gastric wall.

- Exclusions:**
- Congenital diverticulum of stomach (LB13)

<b>DA40.4</b>	<b>Hourglass stricture and stenosis of stomach</b> This is a structural change of stomach in which one more or less completely divided into two parts, resembling an hourglass in shape, due to often scarring which complicates chronic gastric ulcer.
<b>DA40.5</b>	<b>Gastrophtosis</b> This is the abnormal downward displacement of the stomach.
<b>DA40.Y</b>	<b>Other specified acquired anatomical alterations of the stomach</b>
<b>DA40.Z</b>	<b>Acquired anatomical alterations of the stomach, unspecified</b>
<b>DA41</b>	<p><b>Gastroduodenal motor or secretory disorders</b> This group incorporates disorders due to abnormalities of gastroduodenal motor function and gastroduodenal secretory function, often resulting in the disturbance of transportation and/or digestion of foods.</p> <p><b>Coded Elsewhere:</b> Dumping syndrome (DE11)</p>
<b>DA41.0</b>	<b>Abnormal gastric motility</b>
<b>DA41.00</b>	<b>Gastroparesis</b> Gastroparesis is a disorder in which the stomach takes too long to empty its contents principally due to malfunction of vagus nerve.
<b>DA41.0Y</b>	Other specified abnormal gastric motility
<b>DA41.0Z</b>	Abnormal gastric motility, unspecified
<b>DA41.1</b>	<b>Acute dilatation of stomach</b> Acute dilatation of stomach is a disorder due to acute enlargement of the gastric cavity by over-distention, resulting in the retention of food and the products of digestion in the stomach.
	<b>Inclusions:</b> Acute distension of stomach
<b>DA41.2</b>	<b>Acid hypersecretion</b> Acid hypersecretion is a condition due to basal hypersecretion of gastric acid in the stomach, resulting in peptic ulcer and steatorrhoea.
	<b>Exclusions:</b> Zollinger-Ellison syndrome (5A43.1)
<b>DA41.3</b>	<b>Achlorhydria</b> Achlorhydria is a condition due to the absence of gastric acid in the stomach, resulting in indigestion and malabsorption.
<b>DA41.Y</b>	<b>Other specified gastroduodenal motor or secretory disorders</b>
<b>DA41.Z</b>	<b>Gastroduodenal motor or secretory disorders, unspecified</b>

**DA42**

## **Gastritis**

Gastritis is an injury of gastric mucosa that involves epithelial damage, mucosal inflammation, and epithelial cell regeneration except for any epithelial defect. Gastritis is caused by various factors such as infectious agents, drugs, chemical agents, autoimmune reaction and others. Gastritis is diagnosed histopathologically and/or endoscopically. Gastritis is classified as acute and chronic phase by clinical course.

**Inclusions:**      Gastroduodenitis

**DA42.0**

### **Autoimmune gastritis**

A type of chronic atrophic gastritis restricted to gastric body mucosa, and characterised by a severe atrophy of the acid secreting glands and achlorhydria. This is usually associated with serum antiparietal cell antibody, with or without pernicious anaemia.

**Coding Note:**

Code also the causing condition

**DA42.1**

### **Helicobacter pylori induced gastritis**

Gastritis with Helicobacter pylori infection. H. pylori infection causes acute gastritis at first. Lasting the infection the gastric mucosa turns into chronic gastritis and atrophic gastritis, one of the risk factors of gastric adenocarcinoma(CJBAA).

**DA42.2**

### **Eosinophilic gastritis**

**Coded Elsewhere:** Food-induced eosinophilic gastroenteritis (4A83.0)

**DA42.3**

### **Lymphocytic gastritis**

Chronic gastritis characterised by a peculiar infiltration of benign lymphocytes into the glands and surface mucosa. Lymphocytic gastritis is associated with celiac disease, Helicobacter pylori (HP) gastritis, and varioliform gastritis.

**DA42.4**

### **Allergic gastritis**

Gastritis due to allergic disorders, principally meaning acute gastritis that occurs secondary to food allergy. But this also includes allergic gastritis due to non-food substances and allergic gastritis due to non-IgE-mediated hypersensitivity. This includes gastroduodenitis and gastroenteritis.

**Exclusions:**

Allergic eosinophilic gastritis (DA42.2)

Food-induced eosinophilic gastroenteritis (4A83.0)

**DA42.40**

Allergic gastritis due to IgE-mediated hypersensitivity

**DA42.41**

Allergic gastritis due to non-IgE-mediated hypersensitivity

**DA42.4Y**

Other specified allergic gastritis

**DA42.4Z**

Allergic gastritis, unspecified

**DA42.5**

### **Gastritis due to duodenogastric reflux**

Gastritis due to an excessive reflux of duodenal contents including bile into the stomach.

<b>DA42.6</b>	<b>Menetrier disease</b> Gastritis characterised by gastric mucosal hypertrophy, which may cause the giant rugal folds. The thickening of the rugae is predominantly caused by the expansion of the epithelial cell compartment of the gastric mucosa. Patients with Ménétier disease most often present with hypoalbuminemia secondary to a loss of albumin into the gastric lumen.
<b>DA42.7</b>	<b>Gastritis of unknown aetiology with specific endoscopic or pathological features</b>
<b>DA42.70</b>	Acute superficial gastritis of unknown aetiology
<b>DA42.71</b>	Chronic superficial gastritis of unknown aetiology Persistent or recurrent inflammation of the lamina propria, limited to the outer third of the mucosa in the foveolar area.
<b>DA42.72</b>	Acute haemorrhagic gastritis of unknown aetiology Rapid onset inflammation of the mucosal lining of the stomach with associated bleeding or abnormal blood flow.  <b><i>Exclusions:</i></b> Gastric erosion (DA60.0)
<b>DA42.73</b>	Chronic atrophic gastritis of unknown aetiology Persistent or recurrent inflammation of the gastric mucosa with atrophy leading to decreased hydrochloric acid concentration in the gastric juice. Atrophic gastritis frequently progresses from chronic gastritis.  <b><i>Inclusions:</i></b> Gastric atrophy
<b>DA42.74</b>	Metaplastic gastritis of unknown aetiology Gastritis with intestinal metaplastic lesion, endoscopically visualized as an ash-coloured nodular change.  <b><i>Inclusions:</i></b> Intestinal metaplasia
<b>DA42.75</b>	Granulomatous gastritis of unknown aetiology A rare disease characterised by the presence of granulomas within the gastric mucosa or submucosa. Common causes of GG are Crohn's disease (CD), disseminated sarcoidosis and infections (tuberculosis [TB], syphilis, fungal).
<b>DA42.76</b>	Hypertrophic gastritis of unknown aetiology Gastritis with rugal hypertrophy of greater curvature in corpus, in which hypertrophy of glands is observed.  <b><i>Exclusions:</i></b> Menetrier disease (DA42.6)
<b>DA42.7Y</b>	Other specified gastritis of unknown aetiology with specific endoscopic or pathological features
<b>DA42.8</b>	<b>Gastritis due to external causes</b> Gastritis caused by external substances, such as alcohol, radiation, chemical agent and by other external causes.

- DA42.80** Alcoholic gastritis  
Inflammation of the gastric mucosa due to excessive alcohol use.
- DA42.81** Radiation gastritis
- DA42.82** Chemical gastritis
- DA42.83** Drug-induced gastritis  
Acute or chronic gastritis induced by taking some known gastric mucosal damaged agents such as NSAIDs, aspirin and antibiotics.
- DA42.8Z** Gastritis due to external causes, unspecified
- DA42.9** **Gastric phlegmon**  
A spreading diffuse inflammatory process with formation of suppurative/purulent exudate or pus in the gastric wall. It often develops to a defined pocket of pus, gastric abscess. This is mainly due to the result of acute inflammation by bacterial infection.
- Inclusions:**      Gastric abscess  
                         Phlegmonous gastritis
- DA42.Y** Other specified gastritis
- DA42.Z** Gastritis, unspecified
- DA43** **Vascular disorders of the stomach**  
This group incorporates vascular disorders principally affecting the blood vessels of the stomach. They include vascular disorders of arteries, veins and capillaries that carry blood to and from the stomach
- DA43.0** **Gastric varices**  
Abnormally dilated veins developed as portosystemic shunts in the lining of stomach (fundus and/or cardia) in patients with portal hypertension. Once gastric varices develop, they continue to grow, and bleeding from gastric varices can be fatal.
- DA43.1** **Angiodysplasia of stomach**  
Small vascular malformation of the stomach. Most lesions are less than 10mm in size and often observed in multiple sites. It can be a source of gastrointestinal bleeding and anaemia.  
**Coded Elsewhere:** Hereditary haemorrhagic telangiectasia (LA90.00)
- DA43.2** **Arteriovenous malformation of stomach**  
Arteriovenous malformation is a vascular lesion in which arteries and veins are tangled and not connected by capillaries.
- DA43.3** **Portal hypertensive gastropathy**  
Changes in the mucosa of the stomach in patients with portal hypertension; by far the most common cause of this is cirrhosis of the liver.

<b>DA43.4</b>	<b>Diffuse vascular ectasia of stomach</b> Tortuous dilated blood vessels in the pyloric antrum radiating outward from the pylorus (so-called watermelon stomach). It may cause both acute and chronic gastrointestinal haemorrhage.
<b>DA43.Y</b>	<b>Other specified vascular disorders of the stomach</b>
<b>DA43.Z</b>	<b>Vascular disorders of the stomach, unspecified</b>
<b>DA44</b>	<p><b>Gastric polyp</b> Protruding lesion on the gastric epithelium caused by local overgrowth of gastric epithelial cells, classified as pedunculated and sessile type.</p> <p><b>Inclusions:</b> Non-neoplastic gastric polyp  <b>Exclusions:</b> Adenomatous gastric polyp (2E92.1)  Adenoma of stomach (2E92.1)</p>
<b>DA44.0</b>	<b>Hyperplastic polyp of stomach</b> Due to over growth of gastric foveolar epithelial cells. The histological background of hyperplastic polyp is atrophic gastritis, mostly caused by long-term H. pylori infection.
<b>DA44.1</b>	<b>Fundic gland polyp of stomach</b> Due to hyperplasia of fundic gland cells. Fundic polyp rises on fundic gland area without atrophic gastritis. Most cases show H. pylori negative.
<b>DA44.2</b>	<b>Hamartomatous polyp of stomach</b> Formed of dilated oxyntic glands and irregularly deformed oxyntic glands histologically. Most of them are located in the gastric body or the fundus.
<b>DA44.Y</b>	<b>Other specified gastric polyp</b>
<b>DA44.Z</b>	<b>Gastric polyp, unspecified</b>
<b>DA4Y</b>	<b>Other specified diseases of stomach</b>
<b>DA4Z</b>	<b>Diseases of stomach, unspecified</b>

#### Diseases of duodenum (DA50-DA5Z)

This is a group of conditions characterised as being in or associated with the duodenum, the first portion of the small intestine.

**Coded Elsewhere:** Neoplasms of the duodenum

- Structural developmental anomalies of duodenum (LB14)
- Duodenal ulcer (DA63)

#### **DA50** **Acquired anatomical alterations of the duodenum**

This group incorporates duodenal disorders principally due to acquired morphological changes of the duodenum.

<b>DA50.0</b>	<b>Obstruction of duodenum</b> Hindrance of the passage of luminal contents in the duodenum. Obstruction of duodenum can be partial or complete, and caused by intrinsic or extrinsic factors. Simple obstruction is associated with diminished or stopped flow of luminal contents. Strangulating obstruction is associated with impaired blood flow to the duodenum in addition to obstructed flow of luminal contents.
	<b><i>Exclusions:</i></b> congenital stenosis of duodenum (LB14)
<b>DA50.1</b>	<b>Diverticulum of duodenum</b> Diverticulum of duodenum is a disorder having out-pouchings from the duodenal wall.
	<b><i>Exclusions:</i></b> Congenital diverticulum of duodenum (LB14)
<b>DA50.2</b>	<b>Fistula of duodenum</b> Fistula of duodenum is an opening through the duodenal wall and into the peritoneal cavity, into another organ and vessels that normally do not connect, or through the abdominal wall.
<b>DA50.3</b>	<b>Deformity of duodenum, acquired</b> Changes of duodenum in response to the influence by duodenal disease, compression of other organs around the duodenum.
<b>DA50.Y</b>	<b>Other specified acquired anatomical alterations of the duodenum</b>
<b>DA50.Z</b>	<b>Acquired anatomical alterations of the duodenum, unspecified</b>
<b>DA51</b>	<p><b>Duodenitis</b> Duodenitis is an injury of duodenal mucosa that involves epithelial damage and mucosal inflammation except for any epithelial defect. Duodenitis is caused by various factors such as high acid secretion, infectious agents, drugs, chemical agents and others. Gastric metaplasia (GM) is considered adaptive responses to hyperacidity. Helicobacter pylori can be colonized on GM epithelium, and induce duodenitis. Duodenitis is diagnosed histopathologically and/or endoscopically. Duodenitis is classified as acute and chronic phase by clinical course.</p> <p><b><i>Inclusions:</i></b> Inflammation of duodenum  <b><i>Exclusions:</i></b> Crohn disease (DD70)</p>
<b>DA51.0</b>	<b>Helicobacter-pylori associated duodenitis</b> Duodenitis with Helicobacter pylori infection. H. pylori can be colonized on gastric metaplasia epithelium at bulb, and induce duodenitis.
<b>DA51.1</b>	<b>Eosinophilic duodenitis</b> A disease characterised by eosinophilic infiltration of various layers of duodenum in the absence of any known cause of eosinophilia.
<b>DA51.2</b>	<b>Lymphocytic duodenitis</b> Chronic duodenitis characterised by a dense infiltration of benign lymphocytes into the epithelium and lamina propria. Lymphocytic duodenitis may present early gluten-induced damage.

<b>DA51.3</b>	<b>Allergic duodenitis</b> Duodenitis due to allergic disorders.
<b>DA51.4</b>	<b>Duodenitis of unknown aetiology with specific endoscopic or pathologic features</b> Duodenitis of unknown etiology showing specific endoscopic or pathological findings, including acute haemorrhagic duodenitis and Granulomatous duodenitis.
<b>DA51.40</b>	Acute haemorrhagic duodenitis of unknown aetiology
<b>DA51.41</b>	<b>Granulomatous duodenitis of unknown aetiology</b> A rare disease characterised by the presence of granulomas within the duodenal mucosa or submucosa. Common causes are Crohn's disease (CD), disseminated sarcoidosis and infections (tuberculosis [TB], syphilis, fungal).
<b>DA51.4Z</b>	Duodenitis of unknown aetiology with specific endoscopic or pathologic features, unspecified
<b>DA51.5</b>	<b>Duodenitis due to external causes</b> Duodenitis caused by external substances, such as alcohol, radiation, chemical agent and by other external causes.
<b>DA51.50</b>	Alcoholic duodenitis <b>Inclusions:</b> Inflammation of the duodenal mucosa due to alcohol use
<b>DA51.51</b>	Drug-induced duodenitis Acute or chronic duodenitis induced by taking some known duodenal mucosal damaged agents such as NSAIDs and aspirin.
<b>DA51.52</b>	Chemical duodenitis <b>Inclusions:</b> Toxic duodenitis
<b>DA51.53</b>	Radiation duodenitis
<b>DA51.5Y</b>	Duodenitis due to other specified external causes
<b>DA51.5Z</b>	Duodenitis due to external causes, unspecified
<b>DA51.6</b>	<b>Infectious duodenitis</b>
<b>DA51.60</b>	Duodenal phlegmon A spreading diffuse inflammatory process with formation of suppurative/purulent exudate or pus in the duodenal wall. It often develops to a defined pocket of pus, duodenal abscess. This is mainly due to the result of acute inflammation by bacterial infection.
<b>DA51.6Y</b>	Other specified infectious duodenitis
<b>DA51.6Z</b>	Infectious duodenitis, unspecified
<b>DA51.Y</b>	<b>Other specified duodenitis</b>
<b>DA51.Z</b>	<b>Duodenitis, unspecified</b>

**DA52**

### **Vascular disorders of the duodenum**

This group incorporates vascular disorders principally affecting the blood vessels of the duodenum. They include vascular disorders of arteries, veins and capillaries that carry blood to and from the stomach.

**DA52.0**

#### **Duodenal varices**

Abnormally dilated veins developed as portosystemic shunts in the lining of duodenum in patients with portal hypertension. Once duodenal varices develop, they continue to grow, and bleeding from duodenal varices can be fatal.

**DA52.1**

#### **Angiodysplasia of duodenum**

Ectasia of duodenal submucosal veins and overlying mucosal capillaries. Most lesions are less than 10mm in size, and multiple lesions are frequent. On endoscopy, flat or slightly elevated, reddish, roundish or starry lesions are observed.

**DA52.2**

#### **Arteriovenous malformation of duodenum**

Arteriovenous malformation is a vascular lesion in which arteries and veins are tangled and not connected by capillaries. Dilated weak-walled blood vessels in the duodenum usually close to the inside surface. They appear as very red areas, and tend to bleed easily with minimal trauma.

**DA52.Y**

#### **Other specified vascular disorders of the duodenum**

**DA52.Z**

#### **Vascular disorders of the duodenum, unspecified**

**DA53**

### **Duodenal polyp**

Protruding lesion on the duodenal epithelium caused by local overgrowth of duodenal epithelial cells.

***Exclusions:***

Gastric heterotopia of duodenum (LB14)

adenoma or adenomatous polyp of the duodenum (2E92.2)

**DA53.0**

#### **Hyperplastic duodenal polyp**

Due to overgrowth of gastric foveolar type epithelial cells in duodenum.

**DA53.Y**

#### **Other specified duodenal polyp**

**DA53.Z**

#### **Duodenal polyp, unspecified**

**DA5Y**

#### **Other specified diseases of duodenum**

**DA5Z**

#### **Diseases of duodenum, unspecified**

Ulcer of stomach or duodenum (DA60-DA63.Z)

**DA60**

**Gastric ulcer**

Gastric ulcer is defined as a distinct breach in the mucosa of the stomach as a result of caustic effects of acid and pepsin in the lumen. Histologically, gastric ulcer is identified as necrosis of the mucosa extending through the muscularis mucosae into the submucosa. In the endoscopic or radiological view, there is an appreciable depth of the lesion. When the break of epithelial lining is confined to the mucosa without penetrating through the muscularis mucosae, the superficial lesion is called 'erosion'.

**Inclusions:** Mucosal defect of the stomach

Peptic ulcer of stomach

**Exclusions:** acute haemorrhagic erosive gastritis (DA42.72)

Malignant neoplasms of stomach (2B72)

**DA60.0**

**Gastric erosion**

Gastric erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Gastric erosion may constitute a phase of ulcer development or accompany some forms of gastric ulcer.

**DA60.1**

**Helicobacter pylori associated gastric ulcer**

Helicobacter pylori (H. pylori) is a gram-negative bacillus that is found in the mucous layer overlying gastric epithelium, within epithelial cells and attached to mucous cells, leading to inflammation. It accounts for the majority of gastric ulcer. H. pylori that involves the acid-producing mucosa of the stomach can lead to hypochlorhydria or achlorhydria, and subsequent gastric ulceration.

**Exclusions:** Helicobacter pylori associated and drug-induced gastric ulcer (DA60.2)

**DA60.2**

**Helicobacter pylori associated and drug-induced gastric ulcer**

**DA60.3**

**Stress ulcer of stomach**

Stress ulcers of stomach are acute mucosal lesions occurring in critically ill patients that may result in acute upper gastrointestinal bleeding. They are usually superficial erosions but can develop into ulcers. Stress ulcers of stomach may develop anywhere within the stomach but are more likely to occur in fundic mucosa, which lines the body and fundus of the stomach.

**DA60.4**

**Eosinophilic gastric ulcer**

Gastric ulcer caused by eosinophilic gastritis.

**DA60.5**

**Lymphocytic gastric ulcer**

Gastric ulcer caused by lymphocytic gastritis.

**DA60.6**

**Gastric ulcer due to external causes**

Gastric ulcer caused by external substances, such as alcohol, radiation, chemical agent and by other external causes.

**DA60.60**

Alcohol-induced gastric ulcer

- DA60.61** Chemical gastric ulcer
- DA60.62** Drug-induced gastric ulcer  
Medications such as NSAIDs can cause gastric ulcer. Other drugs that may increase the risk of ulceration include potassium chloride, concomitant use of steroids with NSAIDs, bisphosphonates, and mycophenolate mofetil.
- Inclusions:** Toxic gastric ulcer
- Exclusions:** Helicobacter pylori associated and drug-induced gastric ulcer (DA60.2)
- DA60.63** Radiation gastric ulcer
- DA60.6Y** Other specified gastric ulcer due to external causes
- DA60.6Z** Gastric ulcer due to external causes, unspecified
- DA60.7** **Infectious secondary gastric ulcer**  
Gastric ulcer due to infectious diseases other than Helicobacter pylori, such as bacteria such as mycobacterium, virus, fungus and parasites.
- Coding Note:** Code also the causing condition
- DA60.Y** Other specified gastric ulcer
- DA60.Z** Gastric ulcer, unspecified
- DA61** **Peptic ulcer, site unspecified**  
Peptic ulcer is defined as a distinct breach in the mucosa of the gastrointestinal tract as a result of caustic effects of acid and pepsin in the lumen. A peptic ulcer may develop in any part of the gastrointestinal tract exposed to acid and pepsin. The most common locations are the stomach and duodenal bulb, but peptic ulcer may also develop in the oesophagus in gastro-oesophageal reflux diseases, and in the distal ileum as a result of a Meckel's diverticulum lined with heterotopic gastric mucosa.
- DA62** **Anastomotic ulcer**  
Anastomotic ulcer develops following gastric resection or other procedures, such as gastroenterostomy, that involve the anastomosis of the stomach to some other portion of the gastrointestinal tract. In such cases an ulcer develops near the stoma; it is almost invariably in the efferent limb of the intestine, not in the stomach.
- Exclusions:** Primary ulcer of small intestine (DA94.0)
- DA62.0** **Anastomotic erosion**  
Anastomotic erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Anastomotic erosion may constitute a phase of ulcer development or accompany some forms of anastomotic ulcer.
- DA62.1** **Helicobacter pylori associated anastomotic ulcer**  
Helicobacter pylori associated anastomotic ulcer is an ulcer at the anastomosis that is associated with Helicobacter pylori infection. Helicobacter pylori infection is considered as one of the risk factors for anastomotic ulcer.

<b>DA62.2</b>	<b>Drug-induced anastomotic ulcer</b> Drug-induced anastomotic ulcer is an ulcer at the anastomosis that is caused by drug ingestion. NSAID is considered as one of the risk factors for anastomotic ulcer.
<b>DA62.3</b>	<b>Peptic anastomotic ulcer</b> Anastomotic ulcer, peptic is an ulcer resulting from the effects of gastric acid on the susceptible intestinal mucosa.
<b>DA62.Y</b>	<b>Other specified anastomotic ulcer</b>
<b>DA62.Z</b>	<b>Anastomotic ulcer, unspecified</b>
<b>DA63</b>	<p><b>Duodenal ulcer</b></p> <p>Duodenal ulcer is defined as a distinct breach in the mucosa of the duodenum as a result of caustic effects of acid and pepsin in the lumen. Histologically, duodenal ulcer is identified as necrosis of the mucosa extending through the muscularis mucosae into the submucosa. In the endoscopic or radiological view, there is an appreciable depth of the lesion. When the break of epithelial lining is confined to the mucosa without penetrating through the muscularis mucosae, the superficial lesion is called 'erosion'.</p> <p><b>Exclusions:</b> Anastomotic ulcer (DA62)</p>
<b>DA63.0</b>	<b>Duodenal erosion</b> Duodenal erosion represents a mucosal breach extending up to, but not through, the muscularis mucosa. Duodenal erosion may constitute a phase of ulcer development or accompany some forms of duodenal ulcer.
<b>DA63.1</b>	<b>Helicobacter-pylori associated duodenal ulcer</b> Helicobacter pylori (H. pylori) is a gram-negative bacillus that is found in the mucous layer overlying gastric epithelium, within epithelial cells and attached to mucous cells, leading to inflammation. In the case of duodenal ulcers, H. pylori is believed to infect the gastric antrum or ectopic gastric mucosa in the duodenum. This is associated with increased acid production and duodenal ulceration.
<b>DA63.2</b>	<b>Helicobacter-pylori associated and drug-induced duodenal ulcer</b>
<b>DA63.3</b>	<b>Stress ulcer of duodenum</b> Stress ulcers of duodenum are acute mucosal lesions occurring in critically ill patients that may result in acute upper gastrointestinal bleeding. They are usually superficial erosions but can develop into ulcers.
<b>DA63.4</b>	<b>Eosinophilic duodenal ulcer</b> Duodenal ulcer caused by eosinophilic duodenitis
<b>DA63.5</b>	<b>Duodenal ulcer due to external causes</b> Duodenal ulcer caused by external substances, such as alcohol, radiation, chemical agent and by other external causes.

<b>DA63.50</b>	Drug-induced duodenal ulcer Medications such as NSAIDs can cause duodenal ulcer. Other drugs that may increase the risk of ulceration include potassium chloride, concomitant use of steroids with NSAIDs, bisphosphonates, and mycophenolate mofetil.
	<b>Inclusions:</b> Toxic duodenal ulcer
<b>DA63.51</b>	Radiation duodenal ulcer
<b>DA63.52</b>	Chemical duodenal ulcer
<b>DA63.5Y</b>	Duodenal ulcer due to other specified external causes
<b>DA63.5Z</b>	Duodenal ulcer due to external causes, unspecified
<b>DA63.6</b>	<b>Infectious duodenal ulcer</b> <b>Coded Elsewhere:</b> Parasitic duodenal ulcer (1F61)
<b>DA63.60</b>	Bacterial duodenal ulcer Duodenal ulcer caused by infection with bacteria. This includes mycobacterium, Treponema pallidum (syphilis bacterium) and other bacterial infections in the duodenum. <b>Exclusions:</b> Helicobacter-pylori associated duodenal ulcer (DA63.1)
<b>DA63.61</b>	Viral duodenal ulcer Duodenal ulcer caused by infection with virus. Infectious diseases such as cytomegalovirus and herpes simplex virus are often associated with duodenal ulcer.
<b>DA63.62</b>	Fungal duodenal ulcer Duodenal ulcer caused by infection with fungus. This includes infection with candida and other fungal infections in the duodenum.
<b>DA63.6Z</b>	Infectious duodenal ulcer, unspecified
<b>DA63.Y</b>	<b>Other specified duodenal ulcer</b>
<b>DA63.Z</b>	<b>Duodenal ulcer, unspecified</b>

---

**DA7Z                  Diseases of the stomach or the duodenum, unspecified**

## Diseases of small intestine (DA90-DA9Z)

This is a group of conditions characterised as being in or associated with the small intestine.

**Exclusions:** Ileostomy malfunction (DE12.0)

Diseases of duodenum (DA50-DA5Z)

**Coded Elsewhere:** Neoplasms of the small intestine

Foreign body in small intestine (ND73.3)

Structural developmental anomalies of small intestine (LB15)

**DA90**

### **Nonstructural developmental anomalies of small intestine**

Any congenital defect of small intestine that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some becomes evident later.

**Coded Elsewhere:** Maltase-glucoamylase deficiency (5C61.1)

Congenital sucrase-isomaltase deficiency (5C61.2)

Alpha, alpha trehalase deficiency (5C61.3)

Congenital lactase deficiency (5C61.61)

**DA90.0**

### **Syndromic diarrhoea**

Syndromic diarrhoea (SD), also known as phenotypic diarrhoea (PD) or tricho-hepato-enteric syndrome (THE), is a congenital enteropathy presenting with early-onset of severe diarrhoea requiring parenteral nutrition (PN), associated with facial dysmorphism, woolly and poorly pigmented hair and liver disease, with extensive fibrosis or cirrhosis, in about half of the patients.

**Inclusions:** Phenotypic diarrhoea

DA90.1	<b>Congenital intestinal transport defect</b> This is a congenital disease of the small intestinal mucosa that presents with intractable diarrhoea and malabsorption of nutrients in young children, due to defect of transporter of nutrients in enterocytes.  <b>Coded Elsewhere:</b> Glucose-galactose malabsorption (5C61.0) Fructose malabsorption (5C61.40) Acrodermatitis enteropathica (5C64.20) Idiopathic bile acid malabsorption (DA96.02) Hereditary megaloblastic anaemia due to transcobalamin deficiency (3A01.0) Glycogen storage disease due to GLUT2 deficiency (5C51.3) Lysinuric protein intolerance (5C60.Y) Haptocorrin deficiency (5C63.0) Hereditary folate malabsorption (5C63.1) Vitamin B12 deficiency anaemia due to selective vitamin B12 malabsorption with proteinuria (3A01.Y)
DA90.2	<b>Congenital intestinal motility disorders</b> This is a congenital disorder of the small intestinal intestine that presents severe impairment or change of bowel movement often associated with malabsorption of nutrients in young children.  <b>Coded Elsewhere:</b> Megacystis - microcolon - intestinal hypoperistalsis - hydronephrosis (LD2F.1Y)
DA90.Y	<b>Other specified nonstructural developmental anomalies of small intestine</b>
DA90.Z	<b>Nonstructural developmental anomalies of small intestine, unspecified</b>
<b>DA91</b>	<b>Obstruction of small intestine</b> Hindrance of the passage of luminal contents in the small intestine. Obstruction of the small intestine can be partial or complete, and caused by intrinsic or extrinsic factors. Simple obstruction is associated with diminished or stopped flow of luminal contents. Strangulating obstruction is associated with impaired blood flow to the small intestine in addition to obstructed flow of luminal contents.  <b>Inclusions:</b> Occlusion of small intestine <b>Exclusions:</b> Diverticular disease of small intestine (DC70-DC72.Z) Crohn disease of small intestine (DD70.1) hernia involving small intestine (DD50.2) ischaemic stricture of small intestine (DD31) Paralytic ileus (DA93.0) Intestinal obstruction of newborn (KB87)
DA91.0	<b>Intussusception of small intestine</b> Intussusception occurs when a segment of bowel invaginates, or telescopes, into adjacent distal bowel, leading to obstruction and possibly ischemic injury.

<b>DA91.1</b>	<b>Volvulus of small intestine</b> A volvulus is an abnormal twisting of the intestine around the axis of its own mesentery, resulting in obstruction of the more proximal bowel. Twisting of the mesentery may involve the mesenteric vessels and so make the involved loop particularly susceptible to strangulation and gangrene, with resulting perforation, peritonitis, and sepsis.
<b>DA91.2</b>	<b>Intestinal adhesions or bands of small intestine with obstruction</b> Small bowel obstruction resulting from intraabdominal adhesion due to laparotomy, trauma, and intraabdominal inflammation such as endometriosis.
<b>DA91.3</b>	<b>Obstructive ileus of small intestine due to impaction</b> Small bowel obstruction may result when a substance such as gallstone or enterolith is too large to traverse the small intestine, especially at the ileocecal valve.
<b>DA91.30</b>	Gallstone ileus of small intestine Small bowel obstruction due to stenosis resulting from impaction of gallstones.
<b>DA91.31</b>	Enterolith of small intestine This is a mineral concretion or calculus formed anywhere in the gastrointestinal system, but in this case the small intestine.
<b>DA91.3Y</b>	Other specified obstructive ileus of small intestine due to impaction
<b>DA91.3Z</b>	Obstructive ileus of small intestine due to impaction, unspecified
<b>DA91.Y</b>	<b>Other specified obstruction of small intestine</b>
<b>DA91.Z</b>	<b>Obstruction of small intestine, unspecified</b>
<b>DA92</b>	<p><b>Other acquired anatomical alterations of small intestine</b></p> <p>This group incorporates small intestinal disorders principally due to acquired morphological changes of the small intestine, except for obstruction of small intestine (EC).</p> <p><b>Coded Elsewhere:</b> Diverticular disease of small intestine (DC70-DC72.Z)            Perforation of small intestine (ME24.30)            Endometriosis of small intestine (GA10.C1)</p>
<b>DA92.0</b>	<p><b>Fistula of small intestine</b></p> <p>A small intestinal fistula is defined as an abnormal communication between the small intestine and another epithelialized surface such as the skin or an adjacent loop of bowel.</p> <p><b>Inclusions:</b> Fistula of intestine, site unspecified  <b>Exclusions:</b> Fistula of duodenum (DA50.2)  <b>Coded Elsewhere:</b> Fistula of small intestine to vagina (GC04.11)</p>

DA92.1	<b>Pneumatosis intestinalis of small intestine</b> Pneumatosis intestinalis is a rare condition characterised by multiple, gas-filled cysts, typically within the subserosa and submucosa of the small intestine.
DA92.Y	<b>Other specified other acquired anatomical alterations of small intestine</b>
DA92.Z	<b>Other acquired anatomical alterations of small intestine, unspecified</b>
<b>DA93</b>	<p><b>Motility disorders of small intestine</b></p> <p>Disorders of small intestinal motility due to abnormal contractions, such as weak contractions and disorganised (unsynchronized) contractions. The loss of ability to coordinate motor activity may cause a variety of disorders including small intestinal distention and bacterial overgrowth.</p>
DA93.0	<p><b>Paralytic ileus</b></p> <p>A type of ileus, a functional not mechanical obstruction of the small intestines, and a state of pathophysiologic inhibition of motor activity due to non-mechanical causes. The paralysis does not need to be complete, but the intestinal muscles must be so inactive that it leads to a functional blockage of the intestine.</p> <p><b>Exclusions:</b> Obstructive ileus of small intestine due to impaction (DA91.3) Gallstone ileus of small intestine (DA91.30)</p> <p><b>Coded Elsewhere:</b> Transitory ileus of newborn (KB87.3)</p>
DA93.Y	<b>Other specified motility disorders of small intestine</b>
DA93.Z	<b>Motility disorders of small intestine, unspecified</b>
<b>DA94</b>	<p><b>Noninfectious enteritis or ulcer of small intestine</b></p> <p>Noninfectious enteritis and ulcer of small intestine is inflammation or tissue defect in the small intestine of non-infectious origin, usually due to medication including chemotherapy or radiation therapy side effects; or allergic or systemic disorders. Its severity may vary from mild and inconvenient to severe and life-threatening.</p> <p><b>Inclusions:</b> Noninfectious small intestinal inflammation, erosion, ulcer or ulcer scar</p> <p><b>Exclusions:</b> Crohn disease of small intestine (DD70.1) Functional diarrhoea (DD91.2) Noninfectious neonatal diarrhoea (KB8C)</p>
DA94.0	<p><b>Primary ulcer of small intestine</b></p> <p>Enteritis or ulcer of small intestine of unknown origin</p>
DA94.00	<p>Primary nonspecific ulceration of small intestine</p> <p>Primary or simple ulcer of the small intestine occurring beyond the duodenum is rare. The lesion includes single ulcers within the jejunum and ileum of unknown etiology. Non-specific ulcer accompanied with Behcet disease is classified elsewhere in EGD.</p> <p><b>Inclusions:</b> Simple ulcer of small intestine</p>

- DA94.01** Chronic non-specific multiple ulcers of small intestine  
In CNSU patients chronic non-specific multiple ulcers are predominantly found in the ileum, which are circular or irregular in shape. The margins of ulcers are always clear and the intervening mucosa appears normal. CNSU is often characterised by anaemia and hypoalbuminemia due to bleeding and protein loss from multiple ulcers.
- DA94.02** Cryptogenic multifocal ulcerous stenosing enteritis  
CMUSE is an independent, rare disease characterised by chronic diarrhoea and by non-specific small intestinal ulceration and ulcerative stenosis which responds to corticosteroid therapy.
- DA94.0Y** Other specified primary ulcer of small intestine
- DA94.0Z** Primary ulcer of small intestine, unspecified
- DA94.1** **Drug-induced or toxic enteritis of small intestine**  
Enteritis or ulcer of small intestine due to medication including mucosal damaged agents such as NSAIDs, aspirin and antibiotics, due to chemotherapy and due to chemical toxic substances.
- DA94.2** **Allergic or dietetic enteritis of small intestine**  
Enteritis or ulcer of small intestine due to allergic disorders including food allergy. This category includes both immediate-type (IgE mediated) and non-IgE-mediated intestinal hypersensitivity, and eosinophilic disorders of small intestine. Food protein-induced enterocolitis syndrome (EPIES) is also included here.
- DA94.20** IgE mediated allergic enteritis of small intestine  
Immediate type (IgE-mediated) enteric hypersensitivity due to exposure to an allergen in individuals previously sensitized. The symptoms are acute abdominal pain and diarrhoea and can be combined to other symptoms in cases of anaphylaxis.
- DA94.21** Eosinophilic enteritis  
This refers to a rare and heterogeneous condition of inflammation of small intestine characterised by patchy or diffuse eosinophilic infiltration of the intestinal tissue.
- DA94.22** Food protein-induced enterocolitis syndrome  
A non-IgE-mediated intestinal hypersensitivity cell-mediated persistent chronic inflammation of the enteric tract which primarily affects children. The most common causal foods are: cow's milk, soy, rice, oat, meat. In cases of chronic exposure, the most frequent symptoms are emesis, diarrhoea, poor growth and lethargy. In cases of re-exposure after restriction, the patient can present emesis, diarrhoea, hypotension (15%) 2 hours after ingestion.
- DA94.2Y** Other specified allergic or dietetic enteritis of small intestine
- DA94.2Z** Allergic or dietetic enteritis of small intestine, unspecified

- DA94.3** **Enteritis or ulcer of small intestine due to other external causes**  
Enteritis and ulcer of small intestine induced by external causes, such as foreign body, radiation, trauma, and other external causes. Enteritis due to chemical and toxic substances is excluded from here and classified in EGB.
- DA94.30** Enteritis or ulcer of small intestine due to foreign body
- DA94.31** Enteritis or ulcer of small intestine due to radiation
- DA94.32** Enteritis or ulcer of small intestine due to trauma
- DA94.3Z** Enteritis or ulcer of small intestine due to other external causes, unspecified
- DA94.Y** **Other specified noninfectious enteritis or ulcer of small intestine**
- DA94.Z** **Noninfectious enteritis or ulcer of small intestine, unspecified**
- DA95** **Coeliac disease**  
Coeliac disease is a permanent intolerance to gluten proteins, present in wheat, rye, and barley. It is an autoimmune disorder, characterised by a chronic inflammatory state of the small intestinal mucosa and submucosa, which can impair digestion and absorption of nutrients, leading to malnutrition.
- Inclusions:**      Gluten-sensitive enteropathy  
                        Nontropical sprue  
                        Idiopathic steatorrhoea
- DA96** **Intestinal malabsorption or protein-losing enteropathy**  
Intestinal malabsorption is a diseased condition in which absorption of food nutrients across the intestinal tract is disturbed. Impairment of single or multiple nutrients may lead to malnutrition.  
Protein-losing enteropathy is a diseased condition in which there is excessive loss of plasma protein into the intestine. More loss of proteins than synthesis may lead to hypoalbuminemia.
- Exclusions:**      Crohn disease (DD70)
- DA96.0** **Intestinal malabsorption**  
Intestinal malabsorption (syndrome) occurs due to pathological interference with the normal physiological sequence of digestion (intraluminal process), absorption (mucosal process), and transport (post-mucosal events) of nutrients in the small intestine. The concept of intestinal failure is a life-threatening severe type of intestinal malabsorption due to short bowel, structural enterocyte defects, and intestinal dysmotility etc.
- Coded Elsewhere:** Postsurgical malabsorption, not elsewhere classified (DE13)  
Neonatal malabsorption syndromes (KB89)  
Amyloidosis of small intestine (5D00.0)

<b>DA96.00</b>	Bacterial overgrowth syndrome  Bacterial overgrowth syndrome is a term that describes clinical manifestations that occur when poor movement of intestinal contents allows certain normal intestinal bacteria to grow excessively, causing diarrhoea and poor absorption of nutrients (malabsorption). Various etiological processes can disrupt mechanisms that keep the number of these bacteria low. These include structural abnormalities (congenital or surgical) and disorders that cause decreased gastric acidity, reduced peristaltic activity, and mucosal damage or atrophy.
	<b>Coded Elsewhere:</b> Bowel-associated dermatosis-arthritis syndrome (EB2Y)
<b>DA96.01</b>	Tropical sprue  Tropical sprue is a syndrome involving the entire small intestine that causes acute or chronic diarrhoea and malabsorption of nutrients of progressive severity that results in malnutrition and anaemia due to folic acid deficiency. The disorder occurs only among persons (mostly adults) who visit, or are residents of, certain tropical and subtropical areas. Histological changes consist of lengthening of the crypt area and broadening and shortening of the villi with chronic inflammation of small intestine. The cause of tropical sprue is not known, but excess levels of certain types of bacteria in the small intestines have been suggested, and antimicrobial therapy may result in cure of the intestinal abnormalities.
	<b>Inclusions:</b> Tropical steatorrhoea
<b>DA96.02</b>	Malabsorption or intolerance of specific nutrients  Food intolerance is a term used for difficulty in digesting a food due to various physiological responses associated with a particular food, or compound found. Food intolerance should not be mistaken for food allergy, which is primarily involving the immune reaction against the food.
	<b>Coded Elsewhere:</b> Lactose intolerance (5C61.6)
<b>DA96.04</b>	Short bowel syndrome  Having less than 200 cm of residual small bowel with or without colon in an adult and for children (< 18 yrs), less than 25% of the normal length of intestine for their respective age.
	<b>Exclusions:</b> Congenital short bowel (LB15.2) <b>Coded Elsewhere:</b> Short bowel syndrome in neonate (KB89.1)
<b>DA96.05</b>	Intestinal failure  The reduction of gut function below the minimum necessary for the absorption of macronutrients and/or water and electrolytes, such that intravenous supplementation is required to maintain health and/or growth.
<b>DA96.0Y</b>	Other specified intestinal malabsorption
<b>DA96.0Z</b>	Intestinal malabsorption, unspecified

DA96.1	<b>Protein-losing enteropathy</b> Protein-losing enteropathy is a syndrome characterised by the severe loss of serum proteins into the intestine. It is not a single disease, but an atypical manifestation of other diseases, which involves intestinal mucosa as well as intestinal blood or lymphatic vessels.  <b>Coded Elsewhere:</b> Intestinal lymphangiectasia (BD92.0)
DA96.Y	<b>Other specified intestinal malabsorption or protein-losing enteropathy</b>
DA96.Z	<b>Intestinal malabsorption or protein-losing enteropathy, unspecified</b>
<b>DA97</b>	<p><b>Certain vascular disorders of small intestine</b></p> <p>The whole small intestine receives its blood supply from the superior mesenteric artery and the venous drainage is through the portal system via the superior mesenteric vein. Vascular disorders includes lesions in these vessels and capillary.</p> <p><b>Exclusions:</b> Ischaemic vascular disorders of intestine (DD30-DD3Z)</p> <p><b>Coded Elsewhere:</b> Non-occlusive mesenteric ischaemia (DD31.0)  Segmental arterial mediolysis (BD52.0)  Vascular abnormality of small intestine due to injury or trauma (NB90.Y)</p>
DA97.0	<b>Angiodysplasia of small intestine</b> Small dilated submucosal vessels of small intestinal mucosa with perforating vessels going through the muscularis mucosae.  <b>Coded Elsewhere:</b> Hereditary haemorrhagic telangiectasia (LA90.00)
DA97.1	<b>Arteriovenous malformation of small intestine</b> Vascular malformations of small intestine that result from a localised maldevelopment of part of the primitive vascular plexus and consist of abnormal arteriovenous communications without intervening capillaries. They vary in size, ranging from massive lesions that are fed by multiple vessels to lesions so small that they are hard to identify at arteriography, surgery, or autopsy, but relatively larger than angiodysplasia.
DA97.2	<b>Vasculitis of mesenteric arteries</b> A part of systemic vasculitis involving the gastrointestinal tract which causes mesenteric ischemia. This includes systemic lupus erythematosus, polyarteritis nodosa, allergic granulomatous vasculitis (Churg-Strauss syndrome), and thromboangiitis obliterans (Buerger's disease).
DA97.3	<b>Varices of small intestine</b> The dilation of venous plexus in the small intestine.  <b>Exclusions:</b> Duodenal varices (DA52.0)
DA97.Z	<b>Certain vascular disorders of small intestine, unspecified</b>

**DA98****Polyps of small intestine**

Polyps of small intestine are benign mushroom-like abnormalities of the small intestine that may have a stalk or be flat with a stalk. (Polyps of small intestine are any mass of tissue that arises from the small intestinal wall and protrudes into the lumen.)

***Exclusions:***

Adenoma of small intestine (2E92.3)

Adenomatous polyp of small intestine (2E92.3)

Polyposis syndrome (2E92.40)

**DA98.0****Hamartoma of small intestine**

Hamartoma of small intestine is a non-neoplastic mass of indigenous tissue in the small intestine.

**DA98.1****Hyperplastic polyp of small intestine**

Hyperplastic/metaplastic polyps of small intestine usually result from the abnormal maturation of the mucosal cells of the small intestines and are usually of small size.

**DA98.2****Inflammatory fibroid polyp of small intestine**

Inflammatory fibroid polyp (IFP) is a rare tumour and it presents either as a solitary large or sessile lesion that arises in the submucosa. It is characterised by spindle and stellate cells set in an inflammatory, myxoid stroma.

**DA98.3****Lymphoid hyperplasia of small intestine**

Lymphoid hyperplasia of small intestine is a formation of well differentiated lymphoid tissue due to enhanced cell division in the small intestinal mucosa.

**DA98.Y****Other specified polyps of small intestine****DA98.Z****Polyps of small intestine, unspecified****DA9Y****Other specified diseases of small intestine****DA9Z****Diseases of small intestine, unspecified****Diseases of appendix (DB10-DB1Z)**

**Coded Elsewhere:** Neoplasms of the appendix

**DB10****Appendicitis**

Appendicitis is a condition characterised by inflammation of the veriform appendix.

**DB10.0****Acute appendicitis**

Acute inflammation and enlargement of the veriform appendix. It has been recognised as one of the most common causes of severe acute abdominal pain worldwide. Most cases require appropriate medical treatment or removal of the inflamed appendix. If untreated, mortality is high, mainly because of the risk of rupture leading to peritonitis and shock. In this category acute appendicitis only due to common bacterial infection is included, and appendicitis due to specific organisms is ruled out from here, and described elsewhere.

- DB10.00** Acute appendicitis with generalised peritonitis  
This is a condition characterised by acute inflammation of the veriform appendix that is extending into the free, not contained, inflammation of the peritoneum. There is usually a free perforation and surgical treatment is recommended.
- Inclusions:**
- Acute appendicitis with free perforation to the abdominal cavity
  - acute appendicitis with diffuse peritonitis following rupture or perforation
- DB10.01** Acute appendicitis with localised peritonitis  
This condition is characterised by acute inflammation of the veriform appendix with peritonitis that is contained into an abscess or phlegmone. There is often an underlying covered perforation of appendix with leakage from the appendix lumen.
- Inclusions:**
- Acute appendicitis with contained perforation to a localised abscess
- DB10.02** Acute appendicitis without localised or generalised peritonitis  
This condition is characterised by acute inflammation of the veriform appendix in that there is no mention about the extent of the peritonitis. Acute appendicitis without peritonitis is included here. Acute appendicitis with no perforation or abscess, and simply phlegmonous or suppurative appendicitis, these can usually be treated conservatively, are also included here.
- DB10.1** **Chronic appendicitis**  
A correctly diagnosed non-acute form of appendicitis. Chronic appendicitis is a disorder caused by inflammation of the appendix over a period of time. While acute appendicitis shows the typical manifestation of an inflamed appendix, chronic appendicitis may cause symptoms related to abdominal discomfort or more generalised symptoms. In this category chronic appendicitis only due to common bacterial infection is included, and appendicitis due to specific organisms is ruled out from here, and described elsewhere.
- DB10.Y** **Other specified appendicitis**
- DB10.Z** **Appendicitis, unspecified**
- DB11** **Certain specified diseases of appendix**  
Diseases of appendix other than appendicitis or neoplasm. This includes intussusception, mucocele, hyperplasia, appendicular concretions, diverticulum, fistula and other specified diseases of appendix.
- Exclusions:**
- Appendicitis (DB10)
  - Neoplasms of the appendix ()
- DB11.0** **Megaloappendix**  
The veriform appendix is an organ that can have variable sizes, locations as well as functional potentials. This refers to the longer and the larger appendix than normal size.

- DB11.1**      **Hyperplasia of appendix**  
                 Hyperplasia of appendix is the rapid growth proliferation of normal lymphoid cells that resemble lymphoid tissue.
- DB11.2**      **Appendicular concretions**  
                 A condition of the appendix filled with calcification
- DB11.3**      **Diverticulum of appendix, acquired**  
                 A condition of an outpouching of a hollow structure of the appendix.
- DB11.4**      **Fistula of appendix**  
                 A condition of an abnormal passageway between the appendix and neighbour organs.
- DB11.5**      **Intussusception of appendix**  
                 A condition in which a part of the appendix has invaginated into another section of the appendix. Complete invagination of the appendix into the caecum may progress to a colo-colic and/or ileo-colic intussusception.
- DB11.6**      **Mucocele of appendix**  
                 Mucocele of the appendix is a cystic, dilated appendix filled with mucin. Simple mucocele is not a neoplasm and results from chronic obstruction of the proximal lumen, usually by fibrous tissue.
- DB1Y**            **Other specified diseases of appendix**
- DB1Z**            **Diseases of appendix, unspecified**

## Diseases of large intestine (DB30-DB3Z)

**Coded Elsewhere:** Neoplasms of the large intestine

- Structural developmental anomalies of large intestine (LB16)
- Diverticular disease of large intestine (DC80-DC82.Z)
- Polyposis syndrome (2E92.40)

**DB30**

### Obstruction of large intestine

Hindrance of the passage of luminal contents in the large intestine. Obstruction of the large intestine can be partial or complete, and caused by intrinsic or extrinsic factors. Simple obstruction is associated with diminished or stopped flow of luminal contents. Strangulating obstruction is associated with impaired blood flow to the large intestine in addition to obstructed flow of luminal contents.

**Exclusions:**      Paralytic ileus of large intestine (DA93.0)

**DB30.0**

### Intussusception of the large intestine

Intussusception occurs when a segment of bowel invaginates, or telescopes, into adjacent distal bowel, leading to obstruction and possibly ischemic injury. Colonic intussusception is a relatively uncommon condition that is most frequent in the early years of life. There are three main varieties: caecocolic, colocolic and sigmoidrectal.

- DB30.1 Volvulus of large intestine**  
A volvulus is an abnormal twisting of the intestine around the axis of its own mesentery, resulting in obstruction of the more proximal bowel. Twisting of the mesentery may involve the mesenteric vessels and so make the involved loop particularly susceptible to strangulation and gangrene, with resulting perforation, peritonitis, and sepsis. The classical sites of large intestinal volvulus are the caecum and the sigmoid colon, although there are reports of volvulus of the transverse colon and the splenic flexure.
- DB30.2 Adhesions of large intestine with obstruction**  
Large bowel obstruction resulting from intraabdominal adhesion due to laparotomy, trauma, and intraabdominal inflammation such as endometriosis.
- DB30.3 Impaction of large intestine**  
Large bowel obstruction may result when a substance such as gallstone, foreign body, or enterolith, but not faecal, is too large to traverse the large intestine.  
**Inclusions:** Impaction of large bowel  
**Exclusions:** faecal impaction (ME05.0)
- DB30.4 Stenosis of the rectum**  
Rectal stenosis is defined as narrowing of the rectum.
- DB30.Y Other specified obstruction of large intestine**
- DB30.Z Obstruction of large intestine, unspecified**
- DB31 Other acquired anatomical alterations of large intestine**  
This group incorporates acquired large intestinal disorders principally due to morphological changes of the colon and rectum. Diverticular diseases and obstruction of large intestine are classified in GB a GD, respectively.  
**Exclusions:** Obstruction of large intestine (DB30)  
Diverticular disease of large intestine (DC80-DC82.Z)  
**Coded Elsewhere:** Perforation of large intestine (ME24.31)  
Endometriosis of large intestine (GA10.C1)
- DB31.0 Fistula of large intestine**  
Fistula of large intestine is defined as an abnormal communication between the large intestine and another epithelialized surface such as the skin, an adjacent organ or an adjacent loop of bowel. Colovesical fistula is the most common, but colovaginal, colocolic, coloileal, colocutaneous, and coloanal fistulae have been described. Fistulas due to Crohn disease are excluded from here.  
**Coded Elsewhere:** Fistula of large intestine to vagina (GC04.12)  
Rectovaginal fistula (GC04.16)
- DB31.1 Pneumatosis intestinalis of large intestine**  
This refers to pneumatosis intestinalis in the large intestine, which is a condition characterised by multiple, gas-filled cysts, typically within the subserosa and submucosa of the intestine.

<b>DB31.2</b>	<b>Rectal prolapse</b> Rectal mucosal prolapse refers to abdominal descent of the rectal mucosa. The best recognised site of the mucosal prolapse is the anterior wall of the rectum.
	<b>Inclusions:</b> Prolapse of rectal mucosa
<b>DB31.Y</b>	<b>Other specified other acquired anatomical alterations of large intestine</b>
<b>DB31.Z</b>	<b>Other acquired anatomical alterations of large intestine, unspecified</b>
<b>DB32</b>	<p><b>Motility disorders of large intestine</b> Disorders of colonic motility due to abnormal contractions, such as spasms and colonic paralysis. The loss of ability to coordinate motor activity may cause a variety of disorders including colonic distention and severe constipation.</p> <p><b>Coded Elsewhere:</b> Paralytic ileus of large intestine (DA93.0) Paralytic ileus of small intestine or colon (DA93.0)</p>
<b>DB32.0</b>	<b>Pseudo-obstruction of colon</b> Colonic pseudo-obstruction is a rare condition with symptoms of decreased ability of the colon to push fluid, food and air through like those caused by a colonic obstruction, or blockage. The clinical and radiological findings are often similar to true obstruction, but no true mechanical blockage is found. The symptoms generally includes dyspepsia, chronic constipation and, in the moments where appear abdominal colic. Ogilvie syndrome: acute pseudoobstruction of the colon in severely ill debilitated patients is included here as acute form.
<b>DB32.1</b>	<b>Slow transit constipation</b> Slow transit constipation (STC) typically involves the unusually slow passage of luminal contents through the large intestine. This can lead to chronic problems, such as constipation and uncontrollable soiling and could require colectomy.
<b>DB32.2</b>	<b>Megacolon</b> Megacolon is a descriptive term indicating an abnormal dilation of large intestine. The dilatation is often accompanied by a paralysis of the peristaltic movements of the bowel.
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b> Congenital megacolon (LB16.1) Hirschsprung disease (LB16.1)
<b>DB32.20</b>	Toxic megacolon Toxic megacolon is an acute form of colonic distension characterised by a very dilated colon, accompanied by abdominal distension (bloating), and sometimes fever, abdominal pain, or shock. "Toxic" means that this complication occurs with inflammation. Toxic megacolon is a rare, life-threatening widening of the large intestine that occurs within a few days, occurring as a complication of inflammatory bowel disease, such as ulcerative colitis and Crohn disease.
<b>Coding Note:</b>	Code also the causing condition
<b>DB32.2Y</b>	Other specified megacolon
<b>Coding Note:</b>	Code also the causing condition

<b>DB32.2Z</b>	Megacolon, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>DB32.3</b>	<b>Acquired hypoganglionosis of large intestine</b> Acquired hypoganglionosis is characterised as a degeneration of ganglion cells and gliosis histologically. The prognosis is usually good following resection of the affected bowel.
	<b>Exclusions:</b> Congenital hypoganglionosis of large intestine (LB16.3)
<b>DB32.Y</b>	<b>Other specified motility disorders of large intestine</b>
<b>DB32.Z</b>	<b>Motility disorders of large intestine, unspecified</b>
<b>DB33</b>	<p><b>Certain noninfectious colitis or proctitis</b> Noninfectious colitis and proctitis is inflammation or tissue defect in the large intestine of non-infectious origin, but not included in inflammatory bowel diseases, including specific type of colitis, colitis due to medication including chemotherapy or radiation therapy side effects; or allergic or systemic disorders.</p> <p><b>Exclusions:</b> Inflammatory bowel diseases (DD70-DD7Z) Gastroenteritis or colitis of infectious origin (1A00-1A40.Z)</p>
<b>DB33.0</b>	<b>Primary ulcer of colon</b> A condition with single or multiple ulcers (mucosal defect) develops in the rectum or colon. Ulcers of the colon can cause bleeding with straining in people with chronic constipation.
	<b>Inclusions:</b> Simple ulcer of colon
<b>DB33.1</b>	<b>Microscopic colitis</b> A condition of inflammation of the colon that is only detectable when the colon's lining is examined under a microscope. The endoscopic appearance of the inner colon lining is normal. There are two types of microscopic colitis: lymphocytic colitis and collagenous colitis.
<b>DB33.10</b>	Collagenous colitis Collagenous colitis is characterised by chronic watery diarrhoea, normal radiological and endoscopic appearance of the colon, and a specific histopathological feature consisting in the presence of a subepithelial collagen band (10 mm or more) adjacent to the basal membrane, together with epithelial lymphocyte infiltration and chronic inflammation of the lamina propria.
<b>DB33.11</b>	Lymphocytic colitis Lymphocytic colitis is an intestinal inflammatory disorder characterised by increased intraepithelial lymphocytes and manifesting as chronic watery diarrhoea, abdominal pain, nausea, incontinence and faecal urgency. Together with collagenous colitis it makes up a group known as microscopic colitis.
<b>DB33.1Y</b>	Other specified microscopic colitis
<b>DB33.1Z</b>	Microscopic colitis, unspecified

- DB33.2** **Allergic or dietetic colitis**  
 Colitis and proctitis due to allergic disorders including food allergy. This category includes both immediate-type (IgE mediated) and non-IgE-mediated colonic hypersensitivity, and eosinophilic disorders of large intestine. Food protein-induced proctitis/colitis of infants is also included here.
- DB33.20** Food protein-induced proctitis or colitis of infants  
 A non-IgE-mediated intestinal hypersensitivity (in the absence of IgE antibodies) induced by food protein that induces inflammatory response mainly to the rectum and distal sigmoid colon. This is a condition in infants that results from an immune response triggered by proteins in the diet mainly milk (through breast-feeding). Patients usually appear healthy and have normal, soft stools that contain flecks or streaks of blood. The diagnosis is usually made based upon the resolution of symptoms upon withdrawal of the presumed food antigen. The usual onset is in the first 2 months of life but it also occurs in infants from 1 day to 6 months of age.
- DB33.2Y** Other specified allergic or dietetic colitis
- DB33.2Z** Allergic or dietetic colitis, unspecified
- DB33.3** **Diversion colitis**  
 An inflammatory condition that occurs in segments of the colon and rectum that are diverted from the faecal stream by surgery.
- DB33.4** **Colitis or proctitis due to external causes**  
 Colitis and proctitis induced by external causes, such as chemical and toxic substances, foreign body, radiation, trauma, and other external causes.
- Inclusions:** Gastroenteritis or colitis of infectious origin (1A00-1A40.Z)
- DB33.40** Chemical colitis or proctitis  
 This refers to condition of inflammation of large intestine caused by chemical or toxic substances.
- DB33.41** Radiation-induced colitis  
 This refers to inflammation of the large intestine and colonic ulcer due to radiation.
- DB33.42** Radiation proctitis  
 Radiation proctitis is a rare rectal disease directly induced by pelvic radiotherapy and characterised by rectal bleeding, change in bowel habits, tenesmus and sepsis.
- DB33.43** Drug-induced colitis  
 Colitis or ulcer of large intestine due to medication including mucosal damaged agents such as NSAIDs, antibiotics, chemotherapy drugs, and other medications.
- Inclusions:** Drug-induced proctitis  
 Drug-induced colonic ulcer
- Coded Elsewhere:** Pseudomembranous colitis (1A04)
- DB33.4Y** Other specified colitis or proctitis due to external causes
- DB33.4Z** Colitis or proctitis due to external causes, unspecified

- DB33.Y**      **Other specified noninfectious colitis or proctitis**
- DB33.Z**      **Certain noninfectious colitis or proctitis, unspecified**
- DB34**      **Certain vascular disorders of large intestine**  
The whole large intestine receives its blood supply from colonic branches of the superior mesenteric artery and the inferior mesenteric artery, and the venous drainage is through the portal system via the superior and inferior mesenteric vein. Vascular disorders includes lesions in these vessels and capillary.
- Exclusions:**      Ischaemic vascular disorders of intestine (DD30-DD3Z)
- Coded Elsewhere:** Ischaemic colitis (DD31.00)  
Vascular disorders of large intestine due to injury or trauma (NB90.Y)
- DB34.0**      **Angiodysplasia of colon**  
Small dilated submucosal vessels of colonic mucosa with perforating vessels going through the muscularis mucosae.
- DB34.1**      **Arteriovenous malformation of large intestine**  
Vascular malformations of large intestine that result from a localised maldevelopment of part of the primitive vascular plexus and consist of abnormal arteriovenous communications without intervening capillaries. They vary in size, ranging from massive lesions that are fed by multiple vessels to lesions so small that they are hard to identify at arteriography, surgery, or autopsy, but relatively larger than angiodysplasia.
- DB34.2**      **Vasculitis of large intestine**
- DB34.3**      **Varices of large intestine**  
Abnormally dilated veins in the lining of large intestine. Intestinal varices represent varices at an unusual site in patients with cirrhosis and portal hypertension.
- DB34.4**      **Acute haemorrhagic rectal ulcer**  
Acute haemorrhagic rectal ulcer is regarded as an acute ischemic mucosal disorder that occurs in elderly patients who are suffering from incipient blood flow reduction due to arteriosclerotic factors. These patients are often bedridden, and this causes a decrease in mucosal blood flow in the lower rectum, which in turn triggers this pathology.
- DB34.Y**      **Other specified vascular disorders of large intestine**
- DB34.Z**      **Vascular disorders of large intestine, unspecified**
- DB35**      **Polyp of large intestine**  
Polyps are abnormal growths rising from the lining of the large intestine that protrude into the intestinal lumen. Polyps can cause bleeding, and over time, can develop into cancers.
- Exclusions:**      Polyposis syndrome (2E92.40)  
Malignant neoplasms of colon (2B90)
- Coded Elsewhere:** Adenomatous polyp of the colon (2E92.4Y)

- DB35.0      Hyperplastic polyp of large intestine**  
Hyperplastic polyps are truly benign growths, possessing no potential for progression to colorectal cancer. Hyperplastic polyps pathologically lack dysplasia.
- Inclusions:**      Hyperplastic nodule of large intestine  
                          Serrated polyp of large intestine
- DB35.1      Inflammatory polyp of large intestine**  
Inflammatory polyps occur as a result of the chronic inflammation that takes place in the colon and rectum.
- Exclusions:**      Crohn disease of large intestine (DD70.3)
- DB35.2      Benign lymphoid polyp of large intestine**  
Benign lymphoid polyps are associated with hyperplasia (enhanced cell division) of lymphoid tissue in the colonic mucosa. It is seen in parts of the intestine where lymphoid tissues are concentrated like the ileum of the small intestine or rectum.
- Inclusions:**      Focal lymphoid hyperplasia
- DB35.3      Hamartomatous polyp**  
The hamartomatous polyp is a non-neoplastic, benign tumour-like malformation resulting from an abnormal formation of normal tissue. It contains mesenchymal elements of excess vascular and/or fibrous stroma and glandular proliferation with cystic dilatation.
- Exclusions:**      PTEN Hamartoma tumour syndrome (LD2D)
- DB35.4      Inflammatory fibroid polyp of large intestine**  
Inflammatory fibroid polyp is a benign, non-encapsulated submucosal lesion, composed mainly of loose connective tissues, vessels and with an eosinophilic inflammatory component.
- DB35.Y      Other specified polyp of large intestine**
- DB35.Z      Polyp of large intestine, unspecified**
- DB36      Certain infections of the large intestine**
- DB36.0      Colonic abscess**  
A condition of the colon, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by focal accumulation of purulent material in colonic tissue. This disease may present with back pain, abdominal pain, fever, rectal bleeding, or diarrhoea. Confirmation is commonly by advanced imaging.
- DB36.1      Rectal abscess**  
A condition of the rectum, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the rectal area.

<b>DB36.10</b>	Perirectal abscess A condition of the perirectal region, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by focal accumulation of purulent material within the perirectal region. This condition may present with perirectal pain and swelling, fever, chills, or constipation. Confirmation is commonly by advanced imaging.
	<b>Exclusions:</b> Streptococcal cellulitis of skin (1B70.1) Staphylococcal cellulitis of skin (1B70.2)
<b>DB36.11</b>	Ischiorectal abscess A condition of the rectum, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the ischiorectal space. This condition presents with pain in the perianal region, back pain, swelling, or fever. Confirmation is commonly by advanced imaging.
	<b>Inclusions:</b> Abscess of ischiorectal fossa
<b>DB36.12</b>	Rectal cellulitis
<b>DB36.Y</b>	<b>Other specified infections of the large intestine</b>
<b>DB36.Z</b>	<b>Certain infections of the large intestine, unspecified</b>
<b>DB3Y</b>	<b>Other specified diseases of large intestine</b>
<b>DB3Z</b>	<b>Diseases of large intestine, unspecified</b>

### Diseases of anal canal (DB50-DB7Z)

**Coded Elsewhere:** Neoplasms of the anal canal

Structural developmental anomalies of anal canal (LB17)

### Acquired anatomical alterations of the anal canal (DB50-DB5Z)

This group incorporates disorders principally due to morphological changes of the anus and anal canal.

**Exclusions:** congenital anomalies of the anal canal (LB17)  
Anal abscess (DB70.00)

**Coded Elsewhere:** Haemorrhage of anus and rectum (ME24.A1)  
Crohn disease of anal region (DD70.4)  
Open wound of anus (NB51.Z)

### **DB50** **Fissure or fistula of anal regions**

Anal fissure and fistula are the common disorders of anal regions. An anal fissure is a superficial linear tear in the anoderm that is distal to the dentate line. An anal fistula is an inflammatory tract between the anal canal and the skin.

- DB50.0      Anal fissure**  
An anal fissure is a linear break or tear in the mucosa that lines the anal canal. It may occur when hard or large stools are passed after defecation and typically cause pain and bright red anal bleeding.
- DB50.1      Anal fistula**  
Anal fistula is an abnormal communication, hollow tract lined with granulation tissue connecting the primary opening inside the anal canal to a secondary opening in the perineal skin. They are usually associated with anorectal abscesses, and they are thought to be a chronic condition after an abscess evacuation.
- DB50.2      Anorectal fistula**
- DB50.Y      Other specified fissure or fistula of anal regions**
- DB50.Z      Fissure or fistula of anal regions, unspecified**
- DB51           Stenosis of anal canal**
- DB52           Ulcer of anus**  
Ulcer of anus is tissue defect located in the anal regions, extending beyond the submucosa into the muscularis mucosa.  
*Inclusions:*      Ulcer of anus and rectum  
                         Solitary ulcer of anus  
                         Stercoral ulcer of anus  
*Coded Elsewhere:* Drug-induced anal ulceration (EH76.Y)
- DB53           Anal prolapse**  
This is a condition in which the rectal tissue loses its internal support and protrudes from the anus to the exterior of the body.  
*Inclusions:*      Prolapse of anal canal
- DB5Y           Other specified acquired anatomical alterations of the anal canal**
- DB5Z           Acquired anatomical alterations of the anal canal, unspecified**

## Haemorrhoids or perianal venous conditions (DB60-DB6Z)

Haemorrhoids are anatomical structures of swollen veins of the rectal plexus in the walls of the anal canal and/or under the skin around the anus. The term haemorrhoids is usually related to the symptoms caused by haemorrhoids resulting in bleeding and painful swelling when they become enlarged, inflamed, thrombosed, or prolapsed. Haemorrhoids are classified according to the degree of prolapse, although this may not always reflect the severity of symptoms.

**Inclusions:** varicose veins of anus and rectum

**DB60**

### **Haemorrhoids**

A prolapse of vascular cushions resulting in bleeding and painful swelling in the anal canal. Internal haemorrhoids are swollen veins inside the anal canal and one in a vein of the superior rectal plexus, originating above the pectinate line and covered by mucous membrane.

Internal haemorrhoids are classified according to the degree of prolapse, although this may not always reflect the severity of symptoms.

**Inclusions:** piles

**Coded Elsewhere:** Haemorrhoids in pregnancy (JA61.4)

Haemorrhoids in the puerperium (JB41.2)

**DB60.0**

### **First degree haemorrhoids**

(grade I): First-degree haemorrhoids bulge into the anal canal and sometimes bleed, but do not prolapse through the anus.

**Inclusions:** Haemorrhoids (bleeding) without prolapse outside of anal canal

**DB60.1**

### **Second degree haemorrhoids**

(grade II): Second-degree haemorrhoids prolapse from the anus during bowel movements but then withdraw back up into the anal canal, spontaneously.

**Inclusions:** Haemorrhoids (bleeding) that prolapse with straining, but retract spontaneously

**DB60.2**

### **Third degree haemorrhoids**

(grade III): Third-degree haemorrhoids remain prolapsed unless pushed gently back into the anal canal, and they can be reduced manually.

**Inclusions:** Haemorrhoids (bleeding) that prolapse with straining, and require manual reduction back inside the anal canal

**DB60.3**

### **Fourth degree haemorrhoids**

(grade IV): Fourth-degree haemorrhoids cannot be pushed back into the anal canal and permanently prolapsed.

**Inclusions:** Haemorrhoids (bleeding) with prolapsed tissue that cannot be manually reduced

**DB60.Z**

### **Haemorrhoids, unspecified**

**DB61**

### **Perianal venous thrombosis**

Extremely painful cherry like lesions under the perianal skin containing clotted blood have been attributed to rupture of a blood vessel with haematoma. However, histology confirmed that these lesions are thrombi lying within the thin-walled vessels of the external anal plexus.

**Inclusions:** perianal thrombosis

Perianal haematoma (nontraumatic)

**DB62**

### **Residual haemorrhoidal skin tags**

This refers to residual small benign tumours that form primarily in areas where the skin forms creases, especially in the anal canal which help with stool control.

**DB6Y**

### **Other specified haemorrhoids or perianal venous conditions**

**DB6Z**

### **Haemorrhoids or perianal venous conditions, unspecified**

**DB70**

### **Infections of the anal region**

Infections of anal canal caused by various microorganisms including bacteria, virus, fungus, parasite and the other specified agents.

**Coded Elsewhere:** Anal warts (1A95.0)

Primary anal syphilis (1A61.1)

Herpes simplex infection of perianal skin or rectum (1A94.1)

Gonococcal infection of anus (1A72.2)

Infections of the anus or perianal skin (EG61)

Tuberculosis of anal canal (1B12.7)

**DB70.0**

### **Abscess of anal regions**

A condition of the anal and rectal region, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the anal or rectal region.

**Coded Elsewhere:** Ischiorectal abscess (DB36.11)

**DB70.00**

### **Anal abscess**

A condition of the anus, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the perianal crypts or glands. This condition may present with pain and swelling in the perianal region, or fever. Confirmation is commonly by rectal examination.

**Inclusions:** Perianal abscess

**Exclusions:** Intrasphincteric abscess (DB70.02)

Streptococcal cellulitis of skin (1B70.1)

Staphylococcal cellulitis of skin (1B70.2)

**DB70.01**

### **Anorectal abscess**

- DB70.02** Intrasphincteric abscess  
A condition of the intrasphincteric space, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material between the internal and external anal sphincter. Confirmation is commonly by ultrasonography or advanced imaging.
- DB70.0Y** Other specified abscess of anal regions
- DB70.0Z** Abscess of anal regions, unspecified
- DB70.Y** **Other specified infections of the anal region**
- DB70.Z** **Infections of the anal region, unspecified**
- DB71**
- Anal polyp**  
Abnormal mushroom-like growth sticking out from the epithelium rising from the lining of the anus and anal canal.
- DB71.0** **Inflammatory anal polyp**  
Inflammatory polyp is an abnormal, mushroom-like growth sticking out from the mucous membrane that lines the anus. This mass is a reaction to some type of chronic inflammation in the anus.
- DB71.1** **Lymphoid polyp**  
Lymphoid polyp is a benign, focal or diffuse small polypoid lesion composed of well-differentiated lymphoid tissue.
- DB71.2** **Hypertrophied anal papillae**  
The enlargement of existing anal papillae is a consequence of chronic inflammation and fibrotic proliferation within the anorectal zone, which is known as hypertrophied or fibrous anal polyp.
- DB71.Y** **Other specified anal polyp**
- DB71.Z** **Anal polyp, unspecified**
- DB72**
- Certain specified diseases of anal canal**
- Coded Elsewhere:** Crohn disease of anal region (DD70.4)
- Anal pruritus (EG60)
  - Foreign body in anus or rectum (ND73.5)
- DB72.0** **Anal spasm**  
Spasm of the anal sphincter muscle.
- DB72.Z** **Certain specified diseases of anal canal, unspecified**
- DB7Y** **Other specified diseases of anal canal**
- DB7Z** **Diseases of anal canal, unspecified**

## Diseases of liver (DB90-DB9Z)

**Exclusions:** Unspecified jaundice (ME10.1)

**Coded Elsewhere:** Neoplasms of the liver

Structural developmental anomalies of liver (LB20.0)

Metabolic or transporter liver disease (5C90)

Viral hepatitis (1E50-1E5Z)

**DB90**

### Infectious liver disease

**Exclusions:** Viral hepatitis (1E50-1E5Z)

**Coded Elsewhere:** Dengue (1D20-1D2Z)

Yellow fever (1D47)

Cytomegaloviral hepatitis (1D82.0)

Hepatitis due to Toxoplasma gondii (1F57.0)

Herpes simplex hepatitis (1F00.Y)

**DB90.0**

### Abscess of liver

A condition of the liver, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the liver. This condition may present with fever, abdominal pain, or shock. Confirmation is by advanced imaging or ultrasonography.

**Exclusions:** pylephlebitis without liver abscess (DB98.3)

**Coded Elsewhere:** Amoebic liver abscess (1A36.10)

**DB90.Y**

### Other specified infectious liver disease

**DB90.Z**

### Infectious liver disease, unspecified

**DB91****Acute or subacute hepatic failure**

Acute and subacute liver failure is characterised by onset of coagulopathy and/or hepatic encephalopathy within 8 weeks of onset of symptoms in a patient without previously known liver diseases.

- Exclusions:**
- Chronic viral hepatitis (1E51)
  - Alcoholic hepatitis (DB94.1)
  - Alcoholic cirrhosis of liver with hepatic encephalopathy (DB94.3)
  - Hepatic failure complicating abortion, ectopic or molar pregnancy (JA00-JA0Z)
  - Icterus of fetus and newborn (KA87)
  - Non-alcoholic fatty liver disease with hepatic encephalopathy (DB92)
  - Chronic hepatic failure due to portosystemic shunt (DB98)
  - Drug-induced or toxic liver disease (DB95)
  - Hepatic encephalopathy (DB97)
  - Liver disorders in pregnancy, childbirth or the puerperium (JA65.0)

**DB91.0****Acute or subacute hepatic failure due to hepatitis virus**

Acute infection of hepatitis A, B, C, D and E viruses can cause acute and subacute hepatic failure. The prognosis varies depending on the virus.

**DB91.1****Other acute or subacute hepatic failure**

Other causes of acute and subacute hepatic failure are drugs, toxic agents, metabolic diseases (particularly Wilson's disease), ischemic diseases, autoimmune hepatitis, and unknown diseases.

**DB91.Z****Acute or subacute hepatic failure, unspecified****DB92****Non-alcoholic fatty liver disease**

NAFLD is characterised by fatty liver related to insulin resistance in the absence of significant alcohol consumption. It embraces a pathological spectrum from simple steatosis to steatohepatitis. 10-20% of cases have steatohepatitis (non-alcoholic steatohepatitis: NASH), which can progress to cirrhosis and hepatocellular carcinoma.

- Exclusions:**
- Reye syndrome (8E46)
  - Acute fatty liver of pregnancy (JA65.0)
  - Drug-induced or toxic liver disease (DB95)
  - Chronic hepatitis C (1E51.1)
  - Alcoholic liver disease (DB94)
  - inherited defects in mitochondrial metabolism (5C53)

**DB92.0****Non-alcoholic fatty liver disease without non-alcoholic steatohepatitis**

<b>DB92.1</b>	<b>Non-alcoholic steatohepatitis</b> Non-alcoholic steatohepatitis (NASH) is a histological form of Non-alcoholic fatty liver disease (NAFLD) in which the key features are histological evidence of hepatocyte injury (such as ballooning or Mallory hyaline) and substantial lobular inflammation. NASH is often associated with fibrosis in pericentral and perisinusoidal distribution (a portal fibrosis pattern also exists, particularly in children). NASH is the clinically progressive form of NAFLD with clinical outcomes including cardiovascular events, and cirrhosis or hepatocellular carcinoma. While novel biomarkers for NASH have been reported, histology remains the gold standard for diagnosis.
<b>DB92.Y</b>	<b>Other specified non-alcoholic fatty liver disease</b>
<b>DB92.Z</b>	<b>Non-alcoholic fatty liver disease, unspecified</b>
<b>DB93</b>	<p><b>Hepatic fibrosis or cirrhosis</b></p> <p><b>Exclusions:</b> Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver (DB95.5)</p> <p>Alcoholic cirrhosis of liver without hepatitis (DB94.3)</p> <p>Alcoholic liver fibrosis (DB94.2)</p> <p>Fibropolycystic liver disease (LB20.00)</p> <p>Congenital hepatic fibrosis (LB20.00)</p> <p>Chronic viral hepatitis with cirrhosis (1E51)</p> <p>Non-alcoholic steatohepatitis (DB92.1)</p> <p>Non-alcoholic fatty liver disease (DB92)</p> <p>Cardiac cirrhosis (DB98.8)</p>
<b>DB93.0</b>	<p><b>Hepatic fibrosis</b></p> <p>Hepatic Fibrosis is defined as an excess deposition of the components of extracellular matrix (i.e. collagens, glycoproteins, proteoglycans) within the liver. This response to liver injury potentially is reversible. In contrast, in most patients, cirrhosis is not a reversible process.</p> <p><b>Inclusions:</b> hepatic sclerosis hepatic fibrosis with hepatic sclerosis</p> <p><b>Exclusions:</b> Alcoholic liver fibrosis (DB94.2) Congenital hepatic fibrosis (LB20.00) Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver (DB95.5)</p> <p><b>Coded Elsewhere:</b> Hepatic fibrosis due to Schistosomiasis without portal hypertension (1F86.Z)</p>

<b>DB93.1</b>	<b>Hepatic cirrhosis</b>
	Hepatic (liver) cirrhosis is the end stage of fibrosis of the liver caused by many kinds of liver diseases and conditions. Diffuse nodulation of liver due to fibrous bands subdividing liver into regenerative nodules. Blood vessels reach outflow through resistant collagen which contributes to the portal hypertension. Liver cirrhosis is usually irreversible. Some patients with cirrhosis in the early stage are asymptomatic, and other patients in the advanced stage showed signs and symptoms caused by decreased hepatic synthetic function, portal hypertension or decreased detoxification function.
<b>Coding Note:</b>	Code also the causing condition
<b>Exclusions:</b>	Alcoholic cirrhosis of liver without hepatitis (DB94.3) Alcoholic hepatitis with cirrhosis (DB94.10) Congenital cirrhosis of liver (KB80-KB8Z) Secondary biliary cirrhosis (DB93) Cardiac fibrosis and cirrhosis of liver (DB98.8) Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver (DB95.5)
<b>DB93.2</b>	<b>Certain specified fibrosis or cirrhosis of liver</b>
	This is other formation of excess fibrous connective tissue in an organ or tissue in a reparative or reactive process and chronic liver disease characterised by replacement of liver tissue by fibrosis, scar tissue and regenerative nodules.
<b>Inclusions:</b>	Biliary cirrhosis, unspecified
<b>Coded Elsewhere:</b>	Joubert syndrome with hepatic defect (LD20.0Y)
<b>DB93.20</b>	Hereditary North American Indian childhood cirrhosis
	Hereditary North American Indian childhood cirrhosis is a severe autosomal recessive intrahepatic cholestasis that has only been described in aboriginal children from northwestern Quebec. Manifesting first as transient neonatal jaundice, the disease evolves into periportal fibrosis and cirrhosis during a period ranging from childhood to adolescence.
<b>DB93.21</b>	Idiopathic copper-associated cirrhosis
	Idiopathic copper-associated cirrhosis is a rare copper-overload liver disease characterised by a rapidly progressive liver cirrhosis from the first few years of life leading to hepatic insufficiency and harbouring a specific pathological aspect: pericellular fibrosis, inflammatory infiltration, hepatocyte necrosis, absence of steatosis, poor regeneration and histochemical copper staining.
<b>DB93.Y</b>	<b>Other specified hepatic fibrosis or cirrhosis</b>

**DB94**

### **Alcoholic liver disease**

Alcoholic liver disease is damage to the liver and its function due to excessive intake of alcohol over a prolonged period of time. The diagnosis is made by a history of excessive intake of alcohol and exclusion of other causes of liver disease. However, it is important to note that excessive alcohol intake interacts with other causes of chronic liver disease to worsen the pathological severity and clinical outcome; important (relatively common) examples are with chronic hepatitis C, obesity and diabetes-related fatty liver, and haemochromatosis.

**DB94.0**

### **Alcoholic fatty liver**

Alcoholic fatty liver is abnormal retention of lipids in liver cells evident as stainable fat (steatosis) due to excessive intake of alcohol. It is the earliest stage of alcoholic liver disease. It is difficult to histologically distinguish alcoholic fatty liver from non-alcoholic fatty liver. Diagnosis is dependent on history of level of alcohol intake (see definition of NAFLD).

**DB94.1**

### **Alcoholic hepatitis**

Alcoholic hepatitis is injury and inflammation of the liver caused by excessive intake of alcohol. It is characterised by infiltration by neutrophils, ballooning degeneration of hepatocytes and deposit of Mallory hyaline bodies. Alcoholic hepatitis often occurs concomitantly in patients with other forms of alcoholic liver disease such as fatty liver (alcoholic steatohepatitis), liver fibrosis and cirrhosis.

**DB94.10**

### Alcoholic hepatitis with cirrhosis

This is an inflammation of the liver due to excessive intake of alcohol, consequence of liver disease characterised by replacement of liver tissue by fibrosis, scar tissue and regenerative nodules.

**DB94.1Y**

### Other specified alcoholic hepatitis

**DB94.1Z**

### Alcoholic hepatitis, unspecified

**DB94.2**

### **Alcoholic liver fibrosis**

Alcoholic fibrosis of liver is defined as an excess deposition of the collagens and extracellular matrix within the liver as evident histologically, caused by excessive intake of alcohol.

**Inclusions:**              Alcoholic sclerosis of liver

**DB94.3**

### **Alcoholic cirrhosis of liver without hepatitis**

Alcoholic cirrhosis is an advanced pathological stage of alcoholic liver disease characterised by diffuse fibrosis that links portal tracts and central veins, distortion of the hepatic architecture and the formation of regenerative nodules. It often occurs with alcoholic hepatitis.

**Exclusions:**              Alcoholic hepatitis with cirrhosis (DB94.10)

**DB94.Y**

### **Other specified alcoholic liver disease**

**DB94.Z**

### **Alcoholic liver disease, unspecified**

**DB95**

**Drug-induced or toxic liver disease**

Drug-induced and toxic liver disease is hepatotoxicity as injury to the liver that is associated with impaired liver function caused by exposure to a drug or another noninfectious agent.

**Exclusions:**      Budd-Chiari syndrome (DB98.5)  
                          Alcoholic liver disease (DB94)

**DB95.0**

**Drug-induced or toxic liver disease with acute hepatic necrosis or acute hepatitis**

This is an acute hepatocellular injury that develops within 1 to 20 weeks after starting treatment. The histological lesions consist mainly of focal, zonal or bridging necrosis, but lobular and portal tract inflammation evident with drug hepatitis. Extrahepatic features of drug hypersensitivity, including rash, lymphadenopathy, eosinophilia or other systemic features, are observed in some cases.

**DB95.1**

**Drug-induced or toxic liver disease with chronic hepatitis**

This is the chronic form of drug-induced liver injury that almost always depends on continued exposure to the agent, and is characterised by interface hepatitis, bridging necrosis, and fibrosis.

**DB95.10**

Drug-induced or toxic liver disease with chronic hepatitis with cirrhosis

This is the chronic form of drug-induced liver injury characterised by interface hepatitis, bridging necrosis and fibrosis, with the development of cirrhosis.

**DB95.11**

Drug-induced or toxic liver disease with chronic hepatitis without cirrhosis

**DB95.1Y**

Other specified drug-induced or toxic liver disease with chronic hepatitis

**DB95.1Z**

Drug-induced or toxic liver disease with chronic hepatitis, unspecified

**DB95.2**

**Drug-induced or toxic liver disease with cholestasis**

This is a drug-induced cholestatic liver injury where the symptoms of pruritus and jaundice are often prominent, and elevated serum alkaline phosphatase is the dominant biochemical finding.

**Inclusions:**      Cholestasis with hepatocyte injury

**DB95.20**

Chronic drug-induced or toxic liver disease with cholestasis

This is a chronic cholestasis defined by persistence of drug-induced cholestatic liver injury for more than 3 months.

**DB95.2Y**

Other specified drug-induced or toxic liver disease with cholestasis

**DB95.2Z**

Drug-induced or toxic liver disease with cholestasis, unspecified

**DB95.3**

**Drug-induced or toxic liver disease with fatty liver**

This is a drug-induced fatty liver that consists of three types of steatosis, including microvesicular steatosis, macrovesicular steatosis, and phospholipidosis.

- DB95.30** Drug-induced or toxic liver disease with chronic fatty liver disease  
This is a chronic drug-induced steatosis characterised by relatively large triglyceride globules, which effectively fill the hepatocyte, displace the nucleus and other intracellular constituents to the periphery. Some patients show steatohepatitis, steatosis with focal necrosis and inflammatory cell infiltrate, leading to the development of cirrhosis.
- DB95.3Y** Other specified drug-induced or toxic liver disease with fatty liver
- DB95.3Z** Drug-induced or toxic liver disease with fatty liver, unspecified
- DB95.4** **Drug-induced or toxic liver disease with granulomatous hepatitis**
- DB95.5** **Drug-induced or toxic liver disease with fibrosis or cirrhosis of liver**  
This is a drug-induced hepatic fibrosis as the end result of chronic hepatitis, chronic hepatotoxicity, steatohepatitis, or chronic cholestasis with bile duct injury.
- DB95.6** **Drug-induced or toxic liver disease with vascular disorders of the liver**  
Drug-associated disorders, leading to portal hypertension independent of primary liver disease, include hepatic vein thrombosis, hepatic veno-occlusive disease, non-cirrhotic portal hypertension, and nodular regenerative hyperplasia.
- DB95.7** **Drug-induced or toxic liver disease with liver tumours**  
Medication and chemical exposure have been associated with many forms of hepatic neoplasms, including focal nodular hyperplasia, hepatic adenoma, hepatocellular carcinoma, cholangiocarcinoma and angiosarcoma.
- DB95.Y** Other specified drug-induced or toxic liver disease
- DB95.Z** Drug-induced or toxic liver disease, unspecified
- DB96** **Autoimmune liver disease**  
Autoimmune liver diseases are generally forms of chronic liver disease in which the etiology is unclear but autoimmune mechanisms are evident or postulated for the development of the disease. The primary target organ is the liver and/or biliary system. It can progress to liver cirrhosis.
- DB96.0** **Autoimmune hepatitis**  
Autoimmune hepatitis is a chronic hepatitis, which can progress to liver cirrhosis, generally featured by the presence of circulating autoantibodies and hyperglobulinemia. It has been subdivided into three main categories according to the autoantibodies detected.

<b>DB96.1</b>	<b>Primary biliary cholangitis</b> Primary biliary cholangitis is characterised by progressive destruction and disappearance of the intralobular bile duct epithelial cells leading to cholestasis (high alkaline phosphatase and GGT (gamma glutamyl transferase)) and eventually liver cirrhosis and liver failure, generally associated with the presence of circulating antimitochondrial antibodies and an increase of serum IgM levels.
	<b>Inclusions:</b> chronic nonsuppurative destructive cholangitis
	<b>Exclusions:</b> Hepatic fibrosis or cirrhosis (DB93) Alcoholic cirrhosis of liver without hepatitis (DB94.3) Primary sclerosing cholangitis (DB96.2)
<b>DB96.10</b>	Primary biliary cholangitis with overlap syndrome
<b>DB96.1Y</b>	Other specified primary biliary cholangitis
<b>DB96.1Z</b>	Primary biliary cholangitis, unspecified
<b>DB96.2</b>	<b>Primary sclerosing cholangitis</b> Primary sclerosing cholangitis is a chronic disease which shows focal or multifocal strictures of intra- and/or extra-hepatic bile ducts without any apparent causes, leading to cholestasis and ultimately liver cirrhosis and liver failure.
<b>DB96.20</b>	Primary sclerosing cholangitis with cirrhosis Primary sclerosing cholangitis with cirrhosis is primary sclerosing cholangitis complicated with liver cirrhosis.
<b>DB96.2Y</b>	Other specified primary sclerosing cholangitis
<b>DB96.2Z</b>	Primary sclerosing cholangitis, unspecified
<b>DB96.Y</b>	<b>Other specified autoimmune liver disease</b>
<b>DB96.Z</b>	<b>Autoimmune liver disease, unspecified</b>
<b>DB97</b>	<b>Certain specified inflammatory liver diseases</b>
	<b>Inclusions:</b> Nonspecific reactive hepatitis
	<b>Exclusions:</b> Drug-induced or toxic liver disease (DB95) Acute viral hepatitis (1E50) Acute or subacute hepatic failure (DB91) Chronic viral hepatitis (1E51) Infectious liver disease (DB90) Phlebitis of portal vein (DB98.3)
	<b>Coded Elsewhere:</b> Hepatic sarcoidosis (4B20.2)
<b>DB97.0</b>	<b>Idiopathic granulomatous hepatitis</b>
<b>DB97.1</b>	<b>Hepatic berylliosis</b>

<b>DB97.2</b>	<b>Chronic hepatitis, not elsewhere classified</b>
	<p><b>Inclusions:</b> Chronic hepatitis, unspecified Other specified chronic hepatitis</p>
	<p><b>Exclusions:</b> hepatitis (chronic): granulomatous NEC (DB97.0) Drug-induced or toxic liver disease (DB95) hepatitis (chronic): viral (1E50-1E5Z) hepatitis (chronic): alcoholic (DB94.1)</p>
<b>DB97.Y</b>	<b>Other specified inflammatory liver disease</b>
<b>DB97.Z</b>	<b>Inflammatory liver disease, unspecified</b>
<b>DB98</b>	<p><b>Vascular disorders of the liver</b> Vascular disorders of the liver are conditions where the hepatic blood flow is deranged due to damage, malformation and obstruction of hepatic artery, portal vein and hepatic vein.</p> <p><b>Coded Elsewhere:</b> Hereditary haemorrhagic telangiectasia (LA90.00) Congenital portosystemic shunt (LA90.21)</p>
<b>DB98.0</b>	<p><b>Infarction of liver</b> Infarction of the liver is hepatic damage caused by limited blood supply to the liver due to obstruction or reduced blood flow of hepatic artery, portal vein or both.</p>
<b>DB98.1</b>	<p><b>Peliosis hepatis</b> <b>Inclusions:</b> Hepatic angiomas</p>
<b>DB98.2</b>	<p><b>Nodular regenerative hyperplasia of liver</b> Nodular regenerative hyperplasia of the liver is a rare disorder characterised by diffuse micronodular transformation of the hepatic parenchyma without fibrous septa between the nodules.</p>
<b>DB98.3</b>	<p><b>Portal vein thrombosis</b> Portal vein thrombosis is a condition where the portal vein and/or its branches are obstructed, mainly by a blood clot or malignant tumour invasion.</p> <p><b>Inclusions:</b> Phlebitis of portal vein</p>
<b>DB98.4</b>	<p><b>Splenic vein thrombosis</b> Splenic vein thrombosis is a condition where the splenic vein is obstructed, mainly by a blood clot or malignant tumour invasion.</p>

<b>DB98.5</b>	<b>Budd-Chiari syndrome</b> Budd-Chiari syndrome is caused by obstruction of hepatic venous outflow involving either the hepatic veins or the terminal segment of the inferior vena cava and leading to hepatic congestion and ischemic necrosis. Severity depends on the speed of onset and extent of the obstruction.  Obstructions are generally caused by thrombosis in primary BCS, while secondary BCS results from tumour invasion into the lumen or compression of the vein by an expansive lesion. The principle manifestations of BCS are ascites leading to undernutrition and renal insufficiency, gastrointestinal haemorrhage due to portal hypertension, and hepatic insufficiency resulting in encephalopathy and severe infections. Asymptomatic forms have also been reported.
<b>DB98.6</b>	<b>Hepatic veno-occlusive disease</b> Hepatic veno-occlusive disease (hepatic VOD) is a liver disease resulting from toxic injury to the hepatic sinusoidal capillaries that leads to obstruction of the small hepatic veins. The clinical picture is characterised by painful hepatomegaly, jaundice, oedemas, and ascites.  <b>Exclusions:</b> Budd-Chiari syndrome (DB98.5) Hepatic veno-occlusive disease - immunodeficiency syndrome (4A01.33)
<b>DB98.7</b>	<b>Portal hypertension</b> Portal hypertension is abnormal increase of portal vein pressure, which induces development of collateral vessels of portal vein including oesophageal and cardiac varices. It also contributes to development of ascites.
<b>DB98.70</b>	Idiopathic portal hypertension
<b>DB98.71</b>	Non-cirrhotic portal fibrosis
<b>DB98.72</b>	Partial nodular transformation of liver
<b>DB98.73</b>	Splanchnic arteriovenous fistula
<b>DB98.74</b>	Secondary portal hypertension This is secondary hypertension (high blood pressure) in the portal vein system, which is composed by the portal vein, and its branches and tributaries.  <b>Exclusions:</b> Partial nodular transformation of liver (DB98.72) Splanchnic arteriovenous fistula (DB98.73) <b>Coded Elsewhere:</b> Portal hypertension in schistosomiasis (1F86.Z)
<b>DB98.7Y</b>	Other specified portal hypertension
<b>DB98.7Z</b>	Portal hypertension, unspecified
<b>DB98.8</b>	<b>Passive congestion of liver</b> A condition of congestion, due to impaired venous drainage, typically by right heart failure, that affects the liver.  <b>Exclusions:</b> Hepatic veno-occlusive disease (DB98.6) Budd-Chiari syndrome (DB98.5)

<b>DB98.9</b>	<b>Hepatic artery aneurysm</b> An aneurysm which develops on the hepatic artery. Causes of the aneurysm include arteriosclerosis, vasculitis, trauma and infection.
<b>DB98.A</b>	<b>Hepatic haemorrhage</b> Traumatic or nontraumatic spontaneous bleeding in the liver. The most common cause of the latter is the rupture of liver tumours.  <b>Exclusions:</b> Hepatic haemorrhage due to hepatocellular carcinoma (2C12.02)  <b>Coded Elsewhere:</b> Neonatal hepatic haemorrhage (KA83.3)
<b>DB98.B</b>	<b>Ischaemia reperfusion injury of liver</b> Liver injury caused by reperfusion of blood after non-lethal ischaemia of the liver.  <b>Inclusions:</b> Ischaemic hepatitis
<b>DB98.Y</b>	<b>Other specified vascular disorders of the liver</b>
<b>DB98.Z</b>	<b>Vascular disorders of the liver, unspecified</b>
<b>DB99</b>	<b>Certain specified diseases of liver</b> This is a group of conditions characterised as being in or associated with the liver that are not classified elsewhere.  <b>Exclusions:</b> cystic disease of liver (congenital) (LB20.00) hepatic vein thrombosis (BD71) toxic liver disease (DB95) hepatomegaly NOS (ME10.00) portal vein thrombosis (DB98.3) amyloid degeneration of liver (5D00.0) alcoholic liver disease (DB94)  <b>Coded Elsewhere:</b> Liver disorders in pregnancy, childbirth or the puerperium (JA65.0) Cirrhotic cardiomyopathy (BC43.Y)
<b>DB99.0</b>	<b>Chronic liver disease</b>
<b>DB99.1</b>	<b>Hepatic cyst</b> This is a closed sac, having a distinct membrane and division compared to the nearby tissue. It may contain air, fluids, or semi-solid material of the liver.  <b>Inclusions:</b> Simple cyst of liver
<b>DB99.10</b>	<b>Polycystic liver disease</b> Polycystic liver disease is a genetic disorder characterised by the appearance of numerous cysts spread throughout the liver.
<b>DB99.1Y</b>	<b>Other specified hepatic cyst</b>
<b>DB99.1Z</b>	<b>Hepatic cyst, unspecified</b>

<b>DB99.2</b>	<b>Hepatorenal syndrome</b>
	<b><i>Exclusions:</i></b> Hepatorenal syndrome following labour or delivery (JB44.4)
<b>DB99.3</b>	<b>Portopulmonary hypertension</b>
	This is the coexistence of portal and pulmonary hypertension, and is a serious complication of liver disease, present in 0.25 to 4% of all patients suffering from cirrhosis.
<b>DB99.4</b>	<b>Hepatopulmonary syndrome</b>
	This is a syndrome of shortness of breath and hypoxemia (low oxygen levels in the blood of the arteries) caused by vasodilation (broadening of the blood vessels) in the lungs of patients with liver disease.
<b>DB99.5</b>	<b>Hepatic encephalopathy</b>
	Hepatic encephalopathy is a complication of liver cirrhosis and a hallmark of acute liver failure, and is also observed in patients with portosystemic shunts without cirrhosis. Hepatic encephalopathy is characterised by personality changes, intellectual impairment, flapping tremor and a decreased consciousness level. In the advanced stages it is called hepatic coma, which may lead to death. The diagnosis of hepatic encephalopathy is made primarily by recognition of neuropsychiatric changes occurring in a patient with liver disease, after exclusion of brain diseases.
<b>Coding Note:</b>	Code also the causing condition
	<b><i>Exclusions:</i></b> Chronic liver disease (DB99.0)
<b>DB99.6</b>	<b>Intrahepatic cholestasis, not elsewhere classified</b>
	<b><i>Exclusions:</i></b>
	Metabolic liver disease (5C90)
	Neonatal jaundice due to isoimmunization (KA84.0)
	Neonatal hyperbilirubinaemia (KA87)
	Progressive familial intrahepatic cholestasis (5C58.03)
	Benign recurrent intrahepatic cholestasis (5C58.04)
	Chronic cholestasis (DC10.02)
	<b><i>Coded Elsewhere:</i></b> Hepatic amyloidosis with intrahepatic cholestasis (5D00.0)
<b>DB99.60</b>	<b>Cholestasis of parenteral nutrition</b>
	This is a condition where bile cannot flow from the liver to the duodenum, so one must feed a person intravenously, bypassing the usual process of eating and digestion.
<b>DB99.6Y</b>	Other specified intrahepatic cholestasis, not elsewhere classified
<b>DB99.6Z</b>	Intrahepatic cholestasis, not elsewhere classified, unspecified
<b>DB99.7</b>	<b>Hepatic failure without mention whether acute or chronic</b>
<b>DB99.8</b>	<b>Chronic hepatic failure</b>
<b>DB99.Y</b>	<b>Other diseases of liver</b>
<b>DB9Z</b>	<b>Diseases of liver, unspecified</b>

## Diseases of gallbladder or biliary tract (DC10-DC1Z)

This is a group of conditions characterised as being in or associated with the gallbladder (an organ) and the biliary tract (the passageways for bile).

**Coded Elsewhere:** Neoplasms of the gallbladder or biliary tract

Structural developmental anomalies of gallbladder (LB20.1)

Structural developmental anomalies of bile ducts (LB20.2)

Structural developmental anomalies of gallbladder or bile ducts (LB20.Z)

**DC10**

### **Acquired anatomical alterations of gallbladder or bile ducts**

This considers the structure in the alterations of the gall bladder and the long tube-like structures that carry bile.

**Exclusions:** Congenital anomalies of gall bladder and bile ducts (LB20)

**Coded Elsewhere:** Perforation of gallbladder or bile ducts (ME24.35)

**DC10.0**

### **Obstruction of gallbladder or bile ducts**

This is obstruction in the small organ that aids mainly in fat digestion and concentrates bile produced by the liver and in any of a number of long tube-like structures that carry bile.

**Exclusions:** Obstruction of gall bladder and bile ducts: with cholelithiasis (DC11)

**DC10.00**

Obstruction of cystic duct

**DC10.01**

Obstruction of gall bladder

**DC10.02**

Obstruction of bile duct

**Exclusions:** with cholelithiasis (DC11)

**DC10.0Y**

Other specified obstruction of gallbladder or bile ducts

**DC10.0Z**

Obstruction of gallbladder or bile ducts, unspecified

**DC10.1**

### **Hydrops of gallbladder**

Abnormal accumulation of serous fluid in the gallbladder

**DC10.2**

### **Fistula of gallbladder or bile duct**

This is an abnormal connection or passageway between gallbladder or bile duct and other organs.

**DC10.3**

### **Polyp of gallbladder**

The deposits of cholesterol and triglyceride in the gallbladder wall, projecting into the lumen.

**Exclusions:** Adenoma of gallbladder (2E92.6)

**DC10.4**

### **Cholesterolosis of gallbladder**

**Inclusions:** Strawberry gallbladder

**DC10.Y**

### **Other specified acquired anatomical alterations of gallbladder or bile ducts**

**DC10.Z      Acquired anatomical alterations of gallbladder or bile ducts, unspecified**

**DC11      Cholelithiasis**

Cholelithiasis is calculus of gallbladder, cystic duct or bile duct. Most stones in the gallbladder are asymptomatic, but the most common initial symptom is biliary colic before the development of complications, including acute cholecystitis or cholangitis.

**DC11.0      Calculus of gallbladder or cystic duct with acute cholecystitis**

Stones in gallbladder or cystic duct present with acute inflammation of the gall bladder wall typically follows the cystic duct obstruction by the stone.

**DC11.1      Calculus of gallbladder or cystic duct with other cholecystitis**

Stones in gallbladder or cystic duct present with inflammation of the gall bladder wall and bile duct.

**DC11.2      Calculus of gallbladder or cystic duct with cholangitis**

**DC11.3      Calculus of gallbladder or cystic duct without cholecystitis or cholangitis**

Stones in gallbladder present without inflammation of the gall bladder wall and bile duct.

**DC11.4      Calculus of bile duct with cholangitis**

Stones in bile duct present with inflammation of bile duct.

*Inclusions:*      Choledocholithiasis with cholangitis

**DC11.5      Calculus of bile duct with cholecystitis**

Stones in bile duct present with inflammation of gallbladder wall.

**DC11.6      Calculus of bile duct without cholangitis or cholecystitis**

Stones in bile duct present without inflammation of gallbladder wall and bile duct.

**DC11.7      Intrahepatic cholelithiasis**

**DC11.Y      Other specified cholelithiasis**

**DC11.Z      Cholelithiasis, unspecified**

**DC12      Cholecystitis**

Inflammation of gallbladder wall by infection of various organism and/or unspecified disorders.

*Exclusions:*      Cholelithiasis (DC11)

**DC12.0      Acute cholecystitis**

Acute inflammation of the gall bladder wall typically follows the cystic duct obstruction. The inflammation is evoked by mechanical, chemical, vascular, and bacterial inflammatory factors.

*Inclusions:*      acute acalculous cholecystitis

**DC12.00      Acute or chronic cholecystitis**

<b>DC12.0Y</b>	Other specified acute cholecystitis
<b>DC12.0Z</b>	Acute cholecystitis, unspecified
<b>DC12.1</b>	<p><b>Chronic cholecystitis</b></p> <p>Chronic inflammation of the gall bladder wall resulted from repeated acute cholecystitis or from mechanical irritation of the gall bladder wall by unspecified disorders</p> <p><b>Inclusions:</b> chronic acalculous cholecystitis</p>
<b>DC12.Y</b>	<b>Other specified cholecystitis</b>
<b>DC12.Z</b>	<b>Cholecystitis, unspecified</b>
<b>DC13</b>	<p><b>Cholangitis</b></p> <p><b>Exclusions:</b> chronic nonsuppurative destructive cholangitis (DB96.1) cholangitis with cholelithiasis (DC11.4) Primary sclerosing cholangitis (DB96.2)</p>
<b>DC14</b>	<p><b>Certain specified biliary diseases</b></p> <p>This is a group of conditions characterised as being in or associated with the biliary tract, the passageway for bile, which are not classified elsewhere.</p> <p><b>Exclusions:</b> Malignant neoplasms of hepatobiliary system (2B70-2C1Z) Carcinoma in situ of gallbladder, biliary tract or ampulla of Vater (2E61.3) Benign neoplasm of gallbladder, extrahepatic bile ducts or ampulla of Vater (2E92.6)</p>
<b>DC14.0</b>	<p><b>Haemorrhage of bile duct</b></p> <p><b>Inclusions:</b> Haemobilia</p>
<b>DC14.1</b>	<p><b>Postcholecystectomy syndrome</b></p> <p>This describes the presence of abdominal symptoms after surgical removal of the gallbladder. Symptoms may include nausea and vomiting, bloating and diarrhoea, and pain in the upper right abdomen. The pain is often ascribed to discoordination of biliary sphincter of Oddi.</p>
<b>DC14.2</b>	<p><b>Dyskinesia of sphincter of Oddi</b></p> <p>This is a movement disorder which consists of adverse effects including diminished voluntary movements and the presence of involuntary movements in the muscular valve that controls the flow of digestive juices (bile and pancreatic juice) through the ampulla of Vater into the second part of the duodenum.</p> <p><b>Inclusions:</b> Dysfunction of sphincter of Oddi Malfunctioning of sphincter of Oddi</p>
<b>DC14.3</b>	<p><b>Adenomyomatosis of gallbladder</b></p> <p>This is a condition of an abnormal gallbladder wall. There can be overgrowth of mucosa, thickened muscle, and Rokitansky-Aschoff sinuses.</p>

<b>DC14.Y</b>	<b>Other biliary diseases</b>
<b>DC14.Z</b>	<b>Biliary disease, unspecified</b>
<b>DC1Y</b>	<b>Other specified diseases of gallbladder or biliary tract</b>
<b>DC1Z</b>	<b>Diseases of gallbladder or biliary tract, unspecified</b>

## Diseases of pancreas (DC30-DC3Z)

This is a group of conditions characterised as being in or associated with the pancreas.

**Coded Elsewhere:** Neoplasms of pancreas

Structural developmental anomalies of pancreas (LB21)

<b>DC30</b>	<b>Cystic diseases of the pancreas</b> This is a closed sac, having a distinct membrane and division compared to the nearby tissue, which may contain air, fluids, or semi-solid material, of the pancreas.
<b>DC30.0</b>	<b>Cyst of pancreas</b> <b>Coded Elsewhere:</b> Congenital pancreatic cyst (LB21.Y)
<b>DC30.1</b>	<b>Pseudocyst of pancreas</b>
<b>DC30.Y</b>	<b>Other specified cystic diseases of the pancreas</b>
<b>DC30.Z</b>	<b>Cystic diseases of the pancreas, unspecified</b>
<b>DC31</b>	<p><b>Acute pancreatitis</b> Inflammation of the pancreas with sudden onset. Pathological changes range from oedema to necrosis. While mild cases often recover without complications, severe cases have high mortality due to systemic complications despite intensive treatment.</p> <p><b>Coded Elsewhere:</b> Cytomegaloviral pancreatitis (1D82.1) Pancreatitis due to mumps virus (1D80.4)</p>
<b>DC31.0</b>	<b>Acute idiopathic pancreatitis</b> Acute pancreatitis of which etiology cannot be identified. It should be diagnosed by exclusion of alcohol, gallstone, and other possible etiologies.
<b>DC31.1</b>	<b>Acute alcohol-induced pancreatitis</b> Acute pancreatitis associated with alcohol consumption. Although alcohol consumption is a major cause of this disease, the diagnosis should be made after exclusion of other etiologies.
<b>DC31.2</b>	<b>Acute biliary pancreatitis</b> Acute pancreatitis associated with gallstone. Although gallstone is a major etiology, the diagnosis should be made after exclusion of other etiologies. Bile reflux into pancreatic duct caused by an impacted stone at the duodenal papilla is assumed to be a cause.
	<b>Inclusions:</b> Gallstone pancreatitis

- DC31.3      Acute drug-induced pancreatitis**  
Acute pancreatitis caused by drug administration. Some diuretics, anti-tumour or antibiotic drugs, estrogen-containing contraceptives, azathioprine and others have been reported to induce acute pancreatitis.
- DC31.4      Hereditary acute pancreatitis**  
This is a recurrent acute inflammation of pancreas characterised by episodes of severe abdominal pain. Several genetic mutations are associated with this pancreatitis. Onset of the disease is generally under 20 years old, but it can be at any age.
- DC31.5      Acute exacerbation of chronic pancreatitis**
- DC31.Y      Other specified acute pancreatitis**
- DC31.Z      Acute pancreatitis, unspecified**
- DC32      Chronic pancreatitis**
- Exclusions:***      Cystic fibrosis of pancreas with pancreatic insufficiency (DC30)  
Pancreatic steatorrhoea (DC35.2)
- DC32.0      Calcific pancreatitis**  
This is inflammation of the pancreas which requires immediate medical attention and hospitalization during an attack, which calcium salts build up in soft tissue, causing it to harden.
- DC32.1      Groove pancreatitis**
- DC32.2      Hereditary chronic pancreatitis**  
Hereditary chronic pancreatitis is a very rare form of childhood onset chronic pancreatitis. With the exception of an earlier onset and a slower progression the clinical course, the morphological features and laboratory findings of HCP do not differ from those present in patients with alcoholic chronic pancreatitis.
- DC32.3      Chronic alcohol-induced pancreatitis**
- DC32.4      Chronic idiopathic pancreatitis**  
This is an inflammation of the pancreas characterised by recurring or persistent abdominal pain, not associated with known risk factors.
- DC32.5      Tropical pancreatitis**  
Tropical pancreatitis is a rare pancreatic disease of juvenile onset occurring mainly in tropical developing countries and characterised by chronic non-alcoholic pancreatitis manifesting with abdominal pain, steatorrhoea and fibrocalculous pancreatopathy. It is also commonly associated with the development of pancreatic calculi and pancreatic cancer at a much higher frequency than seen in ordinary chronic pancreatitis.
- DC32.Y      Other specified chronic pancreatitis**
- DC32.Z      Chronic pancreatitis, unspecified**

**DC33****Autoimmune pancreatitis**

Autoimmune pancreatitis (AIP) is a rare pancreatic disease characterised by chronic non-alcoholic pancreatitis that presents with abdominal pain, steatorrhoea, obstructive jaundice and responds well to steroid therapy and is seen in two subforms: type 1 AIP which affects elderly males, involves other organs and has increased immunoglobulin G4 (IgG4) levels and type 2 AIP which affects both sexes equally but presents at a younger age and has no other organ involvement or increased IgG4 levels.

**DC34****Obstructive pancreatitis**

This is obstruction in the inflammation of the pancreas which requires immediate medical attention and hospitalization during an attack that has multiple causes and symptoms, which occurs when pancreatic enzymes (especially trypsin) that digest food are activated in the pancreas instead of the small intestine.

**DC35****Certain specified diseases of pancreas**

- DC35.0      **Atrophy of pancreas**
- DC35.1      **Secondary pancreatic insufficiency**
- Coding Note:** Code also the causing condition
- DC35.2      **Pancreatic steatorrhoea**
- DC35.Z      **Certain specified diseases of pancreas, unspecified**
- DC3Y**      **Other specified diseases of pancreas**
- DC3Z**      **Diseases of pancreas, unspecified**

## Diseases of peritoneum (DC50-DC5Z)

This is the serous membrane that forms the lining of the abdominal cavity or the coelom—it covers most of the intra-abdominal (or coelomic) organs—in amniotes and some invertebrates.

**Coded Elsewhere:** Neoplasms of peritoneum or retroperitoneum

**DC50**

### **Peritonitis**

Peritonitis is inflammation of the peritoneum, a condition marked by exudations in the peritoneum of serum, fibrin, cells, and pus.

**Exclusions:** Female pelvic peritonitis, unspecified (GA05.2)

peritonitis with or following: abortion or ectopic or molar pregnancy (JA05.0)

puerperal peritonitis (JB40.0)

peritonitis with or following diverticular disease of small intestine (DC70-DC72.Z)

peritonitis with or following diverticular disease of large intestine (DC80-DC82.Z)

periodic familial peritonitis (5D00.21)

**Coded Elsewhere:** Neonatal peritonitis (KB8B)

**DC50.0**

### **Primary peritonitis**

Peritonitis without surgical source nor the evident source of the infecting and other agent.

**DC50.00**

### Spontaneous bacterial peritonitis

Acute bacterial infection of ascetic fluid without the evident source of the infecting agent in the patient with liver cirrhosis, or in the patient receiving peritoneal dialysis

**DC50.01**

### Other specified primary peritonitis

**DC50.1**

### **Secondary peritonitis**

Peritonitis with evident source of an infecting agent or due to other diseases.

**Coding Note:**

Code also the causing condition

**Exclusions:** Female pelvic peritonitis, unspecified (GA05.2)

Neonatal peritonitis (KB8B)

Genital tract or pelvic infection following abortion, ectopic or molar pregnancy (JA05.0)

Puerperal sepsis (JB40.0)

**DC50.10**

### Eosinophilic peritonitis

10% or more eosinophils in peritoneal effluent at presentation, and its causes are often obscure. However, cases have been reported with allergic reactions, exposure to drugs such as vancomycin, fungal and viral infections, soon after catheter replacement, and icodextrin treatment

**DC50.11**

### Mesenteric peritonitis

peritonitis due to mesenterial fat necrosis or saponification

<b>DC50.12</b>	Chronic proliferative peritonitis Extensive peritoneal fibrosis in response to asbestos, continuous ambulatory peritoneal dialysis. Clinical intestinal obstruction due to massive peritoneal adhesions.
<b>DC50.13</b>	Peritonitis due to <i>Streptococcus pneumoniae</i> This is an inflammation of the peritoneum due to a Gram-positive, alpha-haemolytic, aerotolerant anaerobic member of the genus <i>Streptococcus</i> .
<b>DC50.1Y</b>	Other specified secondary peritonitis
<b>Coding Note:</b>	Code also the causing condition
<b>DC50.1Z</b>	Secondary peritonitis, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>DC50.2</b>	<b>Peritoneal abscess</b> A confined collection of inflammatory exudate in peritonitis.
<b>DC50.Z</b>	<b>Peritonitis, unspecified</b>
<b>DC51</b>	<b>Certain specified disorders of peritoneum or retroperitoneum</b>
	<b>Exclusions:</b> Ascites (ME04)
	<b>Coded Elsewhere:</b> Pneumoperitoneum, originating in the perinatal period, due to primary pulmonary air leak syndromes (KB27.4)
<b>DC51.0</b>	<b>Chylous ascites</b> Chylous ascites is a rare form of ascites caused by accumulation of lymph in the peritoneal cavity, usually due to intra-abdominal malignancy, liver cirrhosis or abdominal surgery complications, and present with painless but progressive abdominal distension, dyspnoea and weight gain.
<b>DC51.1</b>	<b>Peritoneal adhesions</b> Disorders of peritoneum sticking by scar tissue or fibrosis
	<b>Exclusions:</b> Adhesions of large intestine with obstruction (DB30.2) Postprocedural pelvic peritoneal adhesions (GC73) Intestinal adhesions or bands of small intestine with obstruction (DA91.2)
<b>DC51.2</b>	<b>Haemoperitoneum</b> Blood retention in peritoneal cavity
	<b>Exclusions:</b> traumatic retroperitoneal haemorrhage or haematoma (NB97.0)
<b>DC51.Y</b>	<b>Other specified disorders of peritoneum or retroperitoneum</b>
<b>DC5Z</b>	<b>Diseases of peritoneum, unspecified</b>

## Diverticular disease of intestine (DC70-DD1Z)

Diverticula are a major burden of illness in an aging population, presenting with bleeding or in form of a diverticulitis. Many are asymptomatic. Most diverticula (pseudodiverticula) occur in the colon, occurrence in the small intestine is also possible, but less frequent.

- Exclusions:**
- Gastric diverticulum (DA40.3)
  - Diverticulum of oesophagus, acquired (DA20.1)
  - Meckel diverticulum (LB15.0)

## Diverticular disease of small intestine (DC70-DC72.Z)

Diverticula can occur anywhere in the small intestine, but they are most common in the jejunum. They represent herniations through the mesenteric side of the bowel and are usually acquired. This refers to the clinical entity characterised by the presence of sac-like outpocketings of the intestinal mucosa and submucosa through weak points of the muscle layer of the small intestine. This contains both diverticulitis and diverticulosis.

- Exclusions:**
- Meckel diverticulum (LB15.0)
  - Diverticulum of duodenum (DA50.1)

**Coded Elsewhere:** Diverticulum of duodenum, with complication (DA50.1)

### **DC70      Diverticulitis of small intestine**

When the pouches of small intestine (diverticula) become infected or inflamed, the condition is called diverticulitis. Diverticulitis may lead to several serious complications, such as small tears, called perforations and abscess, formation of fistula to adjacent organs, bleeding, or blockages in the lumen, and medical care is needed.

### **DC70.0      Diverticulitis of small intestine with complication**

This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the small intestine and results if one or some of these diverticula becomes inflamed, of the small intestine with complication.

#### **DC70.00      Diverticulitis of small intestine with perforation or abscess**

This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the small intestine and results if one or some of these diverticula becomes inflamed, of the small intestine with perforation or abscess.

#### **DC70.0Y      Diverticulitis of small intestine with other specified complication**

#### **DC70.0Z      Diverticulitis of small intestine with unspecified complication**

### **DC70.1      Diverticulitis of small intestine without complication**

This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the small intestine and results if one or some of these diverticula becomes inflamed, of the small intestine without complication.

### **DC70.Z      Diverticulitis of small intestine without specification of presence of complications**

**DC71**

**Diverticulosis of small intestine**

Diverticulosis of small intestine is a condition characterised by the presence of multiple sack-like mucosal herniations called diverticula through weak points in the wall or lining of the small intestine. Small intestinal diverticula are far less common than colonic diverticula. Most people with diverticulosis do not have any discomfort or symptoms. However, some people may experience pain or discomfort in the abdomen, bloating, and bleeding.

**DC71.0**

**Diverticulosis of small intestine with haemorrhage**

This is the condition of having diverticula in the small intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the small intestine, with haemorrhage.

**DC71.1**

**Diverticulosis of small intestine without haemorrhage**

This is the condition of having diverticula in the small intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the small intestine, without haemorrhage.

**DC71.Z**

**Diverticulosis of small intestine, unspecified**

**DC72**

**Diverticulum of small intestine**

This is a morphological condition in which there is a small pouch in the lining of the small intestine, bulging outward through a weak spot. Each pouch is called a diverticulum. The condition of having multiple diverticula with symptoms, or with inflammation is excluded from here.

**DC72.0**

**Diverticulum of small intestine with haemorrhage**

This is a morphological condition in which there is a small pouch called diverticulum in the lining of the small intestine, with haemorrhage.

**DC72.1**

**Diverticulum of small intestine without haemorrhage**

This is a morphological condition in which there is a small pouch called diverticulum in the lining of the small intestine, without haemorrhage.

**DC72.Z**

**Diverticulum of small intestine, no specification about presence or absence of haemorrhage**

**Diverticular disease of large intestine (DC80-DC82.Z)**

This refers to the clinical entity characterised by the presence of sac-like outpocketings of the colonic mucosa and submucosa through weak points of the muscle layer of the large intestine. This contains both diverticulitis and diverticulosis. Diverticular disease is used to describe a specific clinical disorder with defined radiological and pathological appearance, in which there is a characteristic muscle abnormality, usually, but not invariably accompanied by the presence of diverticula which may or may not be inflamed.

**Exclusions:**

Diverticular disease of small and large intestine (DC90)

**DC80**

**Diverticulitis of large intestine**

Diverticulitis is applied when one or more diverticula are the source of visible macroscopic inflammation. It is often accompanied by pericolic abscess formation.

<b>DC80.0</b>	<b>Diverticulitis of large intestine with complication</b> This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the colon and results if one or some of these diverticula becomes inflamed, of the large intestine with complication.
<b>DC80.00</b>	Diverticulitis of large intestine with perforation or abscess This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the colon and results if one of these diverticula becomes inflamed, of the large intestine with perforation or abscess.
<b>DC80.0Z</b>	Diverticulitis of large intestine with complication, unspecified
<b>DC80.1</b>	<b>Diverticulitis of large intestine without complication</b> This develops from diverticulosis, which involves the formation of pouches (diverticula) on the outside of the colon and results if one or some of these diverticula becomes inflamed, of the large intestine without complication.
<b>DC80.Z</b>	<b>Diverticulitis of large intestine without specification of presence of complications</b>
<b>DC81</b>	<p><b>Diverticulosis of large intestine</b> The name diverticulosis is used merely to indicate the presence of multiple diverticula in the large intestine, with or without the accompanying muscle abnormalities found in classical diverticular disease. The condition of having multiple pouches (diverticula) is called diverticulosis. Most people with diverticulosis do not have any discomfort or symptoms. However, some people may experience crampy pain or discomfort in the lower abdomen, bloating, and constipation.</p>
<b>DC81.0</b>	<b>Diverticulosis of large intestine with haemorrhage</b> This is the condition of having diverticula in the large intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the large intestine, with haemorrhage.
<b>DC81.1</b>	<b>Diverticulosis of large intestine without haemorrhage</b> This is the condition of having diverticula in the large intestine, which are outpocketings of the mucosa and submucosa through weaknesses of muscle layers in the wall of the large intestine, without haemorrhage.
<b>DC81.Z</b>	<b>Diverticulosis of large intestine, unspecified</b>
<b>DC82</b>	<p><b>Diverticulum of large intestine</b> This is a morphological condition in which typical pulsion type of consisting of a pouch of mucous membrane (including muscularis mucosae) projecting through and beyond the circular muscle layers of the bowel wall so that they come to lie in the pericolic fat and appendices epiploicae. Each pouch is called a diverticulum. The condition of having multiple diverticula with symptoms, or with inflammation is excluded from here.</p>
<b>DC82.0</b>	<b>Diverticulum of large intestine with haemorrhage</b> This is a morphological condition in which there is a small pouch called diverticulum in the lining of the large intestine, with haemorrhage.

**DC82.1** **Diverticulum of large intestine without haemorrhage**  
This is a morphological condition in which there is a small pouch called diverticulum in the lining of the large intestine, without haemorrhage.

**DC82.Z** **Diverticulum of large intestine, unspecified**

Diverticular disease of intestine of overlapping sites (DC90-DC90)

**DC90** **Diverticular disease of small and large intestine**

Diverticular disease of unspecified part of intestine (DD00-DD02.Z)

**DD00** **Diverticulitis of unspecified part of intestine**

**DD00.0** **Diverticulitis of unspecified part of intestine with complication**

**DD00.00** Diverticulitis of unspecified part of intestine with perforation or abscess

**DD00.0Y** Other specified diverticulitis of unspecified part of intestine with complication

**DD00.0Z** Diverticulitis of unspecified part of intestine with complication, unspecified

**DD00.1** **Diverticulitis of unspecified part of intestine without complication**

**DD00.Z** **Diverticulitis of unspecified part of intestine without specification of presence or absence of complications**

**DD01** **Diverticulosis of unspecified part of intestine**

**DD01.0** **Diverticulosis of unspecified part of intestine with haemorrhage**

**DD01.1** **Diverticulosis of unspecified part of intestine without haemorrhage**

**DD01.Z** **Diverticulosis of unspecified part of intestine, unspecified**

**DD02** **Diverticulum of unspecified part of intestine**

**DD02.0** **Diverticular disease of unspecified part of intestine with haemorrhage**

**DD02.1** **Diverticulum of unspecified part of intestine without complication**

**DD02.Z** **Diverticulum of unspecified part of intestine, unspecified**

---

**DD1Z** **Diverticular disease of intestine, unspecified**

## Ischaemic vascular disorders of intestine (DD30-DD3Z)

Intestinal ischemia characterised by blood supply to the gastrointestinal tract that is inadequate to meet its metabolic demand

**Exclusions:** necrotizing enterocolitis of fetus or newborn (KB88)

**Coded Elsewhere:** Angiodysplasia of colon (DB34.0)

### DD30

#### Acute vascular disorders of intestine

Intestinal ischaemia has an associated vascular block, usually due to atheroma, thrombus, or embolus but occasionally the result of an arteritis, vasculitis, or other condition.

**Coded Elsewhere:** Non-occlusive mesenteric ischaemia (DD31.0)

### DD30.0

#### Acute mesenteric arterial infarction

Acute mesenteric arterial infarction is an ischemic disorder of sudden interruption of mesenteric arterial flow because of occlusion of mesenteric artery. This may be further subdivided into acute mesenteric arterial embolus (AMAE) and acute mesenteric arterial thrombosis (AMAT).

### DD30.1

#### Acute mesenteric arterial ischaemia

Acute mesenteric ischemia is low flow states of mesenteric circulation, in which inadequate blood flow through the mesenteric circulation causes ischemia and eventual gangrene of the bowel wall. It can be caused by various conditions such as arterial occlusion, venous occlusion, strangulating obstruction, and hypoperfusion associated with nonocclusive vascular diseases.

### DD30.2

#### Acute mesenteric venous occlusion

Acute mesenteric venous occlusion is an ischemic disorder of sudden interruption of mesenteric venous flow because of venous thrombosis.

### DD30.Y

#### Other specified acute vascular disorders of intestine

### DD30.Z

#### Acute vascular disorders of intestine, unspecified

### DD31

#### Chronic vascular disorders of intestine

Chronic mesenteric ischaemia is a clinical syndrome characterised by recurrent abdominal pain and weight loss as a result of repeated transient episodes of insufficient intestinal blood flow, usually related with the increased metabolic demand associated with digestion.

### DD31.0

#### Non-occlusive mesenteric ischaemia

Non-occlusive mesenteric ischaemia causes 20% to 30% of acute mesenteric ischaemia episodes. Mesenteric ischaemia without anatomic arterial or venous obstruction is due to mesenteric vasospasm, which can occur during periods of relatively low mesenteric flow, especially if there is underlying arterial atherosclerotic disease. Such low-flow state can result from heart failure, hypotension, or hypovolemia.

**Coded Elsewhere:** Acute non-occlusive mesenteric arterial ischaemia (DD30.1)

<b>DD31.00</b>	Ischaemic colitis Ischemic colitis is the most common form of ischemic injury to the gut and occurs more frequently in elderly people. The disease can result from either occlusive or nonocclusive events, mainly in the territory of the inferior mesenteric artery, in colonic branches of the superior mesenteric artery, and in the superior and inferior mesenteric veins. The splenic flexure and rectosigmoid junction, where low perfusion exists, are commonly affected.
	<b>Coded Elsewhere:</b> Acute ischaemic colitis (DD30.Z)
	Fulminant ischaemic colitis (DD30.Z)
<b>DD31.0Y</b>	Other specified non-occlusive mesenteric ischaemia
<b>DD31.0Z</b>	Non-occlusive mesenteric ischaemia, unspecified
<b>DD31.Y</b>	<b>Other specified chronic vascular disorders of intestine</b>
<b>DD31.Z</b>	<b>Chronic vascular disorders of intestine, unspecified</b>
<b>DD3Y</b>	<b>Other specified ischaemic vascular disorders of intestine</b>
<b>DD3Z</b>	<b>Ischaemic vascular disorders of intestine, unspecified</b>

## Hernias (DD50-DD5Z)

A hernia is the protrusion of an organ or the fascia of an organ through the wall of the cavity that normally contains it. In this category hernia which relates to gastrointestinal organs is included.

<b>DD50</b>	<b>Non-abdominal wall hernia</b> A hernia occurs through the foramen in the diaphragm, the pelvic wall and the other opening covered by peritoneum not through the abdominal wall.
<b>DD50.0</b>	<b>Diaphragmatic hernia</b> A hernia occurs through the foramen in the diaphragm.  <b>Inclusions:</b> paraoesophageal hernia <b>Exclusions:</b> Congenital diaphragmatic hernia (LB00.0) Congenital hiatus hernia (LB13.1)
<b>DD50.1</b>	<b>Pelvic hernia</b> A hernia occurs through the foramen in the pelvic wall.
<b>DD50.2</b>	<b>Intra-abdominal hernia</b> A hernia occurs intra-abdominally through the opening covered by peritoneum.
<b>DD50.20</b>	Primary intra-abdominal hernia A hernia occurs intra-abdominally and primarily through the opening covered by peritoneum without surgery and trauma.  <b>Exclusions:</b> congenital malpositioning of the intestine (LB18)

**DD50.21** Secondary intra-abdominal hernia  
A hernia occurs intra-abdominally and secondarily through the opening covered by peritoneum after abdominal surgery and trauma.

**Coding Note:** Code also the causing condition

**DD50.2Y** Other specified intra-abdominal hernia

**DD50.2Z** Intra-abdominal hernia, unspecified

**DD50.Y** Other specified non-abdominal wall hernia

**DD50.Z** Non-abdominal wall hernia, unspecified

### **DD51** Inguinal hernia

A hernia occurs when part of an internal organ bulges through a weak area of muscle. Most hernias occur in the abdomen. Inguinal hernia is the most common type and is in the groin.

**Coding Note:** Use additional codes, if desired, to identify complications such as obstruction or gangrene.

**Inclusions:**      bubonocele  
                      scrotal hernia

### **DD52** Femoral hernia

A femoral hernia is a protrusion of a loop of the intestine through a weakened abdominal wall, located in the lower abdomen near the thigh.

A hernia occurs when the contents of the abdomen (usually part of the small intestine) push through a weak point or tear the thin muscular wall of the abdomen, which holds the abdominal organs in place. Femoral hernias tend to occur more often in women than in men.

### **DD53** Umbilical hernia

A hernia occurs when part of an internal organ bulges through a weak area of muscle. An umbilical hernia is a protrusion of the peritoneum and fluid, omentum, or a portion of abdominal organ(s) through the umbilical ring. The umbilical ring is the fibrous and muscle tissue around the navel (belly-button). Small hernias usually close spontaneously without treatment by age 1 or 2. Umbilical hernias are usually painless and are common in infants.

**Exclusions:**      Omphalocele (LB01)  
                      Urachal cyst (LB03.0)

### **DD54** Paraumbilical hernia

Paraumbilical or periumbilical hernias occur next to and supra-umbilical occur just above the navel. Paraumbilical hernias are large abdominal defects through the linea alba in the region of the umbilicus and are usually related to diastasis of the rectus abdominis muscles.

**Inclusions:**      Supraumbilical hernia

**DD55**

### **Epigastric hernia**

A hernia occurs through the weak area of the upper abdomen between the umbilicus and the xiphoid on the linea alba. Although congenital epigastric hernias have been described in infants, they are usually considered an acquired condition.

**DD56**

### **Incisional hernia**

A hernia occurs through the weak area on the incision of the past abdominal surgery or major abdominal trauma.

**DD57**

### **Parastomal hernia**

A hernia occurs through the weak parastomal area after making stoma.

**DD5Y**

### **Other specified hernias**

**DD5Z**

### **Hernias, unspecified**

## **Inflammatory bowel diseases (DD70-DD7Z)**

Inflammatory bowel disease is a group of inflammatory conditions of the intestine of unknown aetiology. Regarding its pathogenesis, it is hypothesized that the mucosal immune system shows an aberrant response towards luminal antigens such as dietary factors and commensal microbiota in genetically susceptible individuals.

**DD70**

### **Crohn disease**

Crohn's disease is characterised by chronic and relapsing transmural inflammation extending through all layers of the small and/or large intestinal walls and has potential to involve the patient's entire gastrointestinal tract.

**Inclusions:** Granulomatous enteritis

Regional enteritis

Intestinal ulcer and erosion due to Crohn disease

**Exclusions:** Ulcerative colitis (DD71)

**Coded Elsewhere:** Cutaneous or mucocutaneous Crohn disease (EE8Y)

**DD70.0**

### **Crohn disease of upper gastrointestinal tract**

Crohn disease involved in upper gastrointestinal tract, such as oral cavity, oesophagus, stomach and duodenum.

**DD70.1**

### **Crohn disease of small intestine**

Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involving the small intestine.

**Exclusions:** Crohn disease of both small and large intestine (DD70.5)

**DD70.2**

### **Crohn disease of appendix**

Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involving the appendix.

- DD70.3 Crohn disease of large intestine**  
Crohn's disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involved in the large intestine.  
**Exclusions:** Crohn disease of both small and large intestine (DD70.5)
- DD70.4 Crohn disease of anal region**  
Crohn disease commonly involves the anus and perianal area and may precede any other gut involvement by years. The constellation of symptoms and signs which may occur include pruritus ani, maceration, skin tags, fissures, fistulae, erosions and secondary infection with abscesses.
- DD70.5 Crohn disease of both small and large intestine**  
Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involved in both small and large intestine.
- DD70.6 Crohn disease of anastomotic sites**  
Crohn disease, which is characterised by chronic and relapsing transmural inflammation, may affect any part of the digestive tract. This refers to Crohn disease involving anastomotic site of gastrointestinal tract, such as anastomotic ulcer due to Crohn disease.
- DD70.Y Crohn disease of other specified site**
- DD70.Z Crohn disease, unspecified site**
- DD71 Ulcerative colitis**  
Ulcerative colitis is a chronic inflammatory disorder of unknown etiology that continuously causes ulcers in the lining of the rectum and colon. Inflammation is histologically restricted to the mucosa.
- DD71.0 Ulcerative pancolitis**
- DD71.1 Left sided ulcerative colitis**  
**Inclusions:** left hemicolitis
- DD71.2 Ulcerative rectosigmoiditis**
- DD71.3 Ulcerative proctitis**
- DD71.Y Other specified ulcerative colitis**
- DD71.Z Ulcerative colitis, unspecified**
- DD72 Indeterminate colitis**  
Indeterminate colitis is a chronic inflammatory disorder of the colon, for which a definitive diagnosis of either Crohn's disease or ulcerative colitis can be made.
- DD7Y Other specified inflammatory bowel diseases**
- DD7Z Inflammatory bowel diseases, unspecified**

## Functional gastrointestinal disorders (DD90-DD9Z)

Functional gastrointestinal disorder (FGID) is used to define several variable combinations of chronic or recurrent gastrointestinal (GI) symptoms that do not have an identified underlying pathophysiology, and that occur in the absence of underlying structural abnormalities. FGID may include a number of separate idiopathic disorders which affect different parts of the gastrointestinal tract. FGID are the most common problem in gastroenterological practice. The Rome process has helped to define the functional gastrointestinal disorders.

- Exclusions:**
- Bodily distress disorder (6C20)
  - Hypochondriasis (6B23)
  - Symptoms, signs or clinical findings, not elsewhere classified (Chapter 21)

### DD90

#### Functional oesophageal or gastroduodenal disorders

This group incorporates oesophageal and gastroduodenal disorders which principally present unpleasant upper gastrointestinal complaints without apparent morphological changes of oesophagus and gastroduodenum.

- Exclusions:**
- Bodily distress disorder (6C20)
  - Hypochondriasis (6B23)

### DD90.0

#### Globus

Globus is a persistent or intermittent non-painful sensation of a lump or foreign body in the throat unrelated to swallowing without structural or motor disorder of the pharynx and/or oesophagus, often accompanying with acute anxiety or emotional conflicts.

### DD90.1

#### Functional swallowing disorder

Functional dysphagia is a disorder having no structural abnormalities and absence of gastroesophageal reflux for dysphagia, characterised by sense of solid and/or liquid foods sticking, lodging, or passing abnormally through the oesophagus.

- Inclusions:** Functional dysphagia  
**Exclusions:** dysphagia NOS (MD93)

### DD90.2

#### Functional heartburn

Functional heartburn is a disorder having no structural abnormalities and absence of gastroesophageal reflux for heartburn, characterised by burning retrosternal discomfort or pain.

- Exclusions:** heartburn NOS (MD95)

### DD90.3

#### Functional dyspepsia

Functional dyspepsia is a disorder defined as the presence of dyspepsia symptoms thought to originate from the gastroduodenal region, in the absence of any organic, systemic, or metabolic disease that is likely to explain the symptoms such as epigastric pain, epigastric burning, postprandial fullness, and early satiation.

- Inclusions:** Indigestion  
**Exclusions:** Heartburn (MD95)  
Dyspepsia NOS (MD92)

**Coded Elsewhere:** Chronic primary epigastric pain syndrome (MG30.00)

<b>DD90.4</b>	<b>Functional nausea or vomiting</b> Functional nausea and vomiting is a disorder having no structural abnormalities for nausea and vomiting.  <b>Exclusions:</b> Nausea or vomiting NOS (MD90) <b>Coded Elsewhere:</b> Cyclic vomiting syndrome (8A80.4)
<b>DD90.5</b>	<b>Functional belching disorders</b> Functional belching disorders are having troublesome repetitive belching with observed excessive air swallowing and no evidence of excessive air swallowing.  <b>Inclusions:</b> Excessive belching, unspecified Aerophagia <b>Exclusions:</b> Belching NOS (MD91)
<b>DD90.6</b>	<b>Adult rumination syndrome</b> Adult rumination syndrome is a disorder in adulthood characterised by the persistent or recurrent regurgitation of recently ingested food into the mouth with subsequent spitting or remastication and swallowing.  <b>Exclusions:</b> Rumination-regurgitation disorder (6B85) Rumination-regurgitation (MB29.4)
<b>DD90.Y</b>	<b>Other specified functional oesophageal or gastroduodenal disorders</b>
<b>DD90.Z</b>	<b>Functional oesophageal or gastroduodenal disorders, unspecified</b>
<b>DD91</b>	<b>Irritable bowel syndrome or certain specified functional bowel disorders</b> This group incorporates functional bowel disorders which principally present symptoms attributable to the intestinal tract in the absence of specific and unique organic pathology in the small and large intestine.  <b>Inclusions:</b> Functional intestinal disorders NOS <b>Exclusions:</b> Bodily distress disorder (6C20) Hypochondriasis (6B23)
<b>DD91.0</b>	<b>Irritable bowel syndrome</b> Irritable bowel syndrome (IBS) is a functional bowel disorder in which abdominal pain or discomfort is associated with defecation or a change in bowel habit, and with features of disordered defecation.  <b>Inclusions:</b> irritable colon
<b>DD91.00</b>	Irritable bowel syndrome, constipation predominant This is a bowel pattern subtype of irritable bowel syndrome, characterised by alteration of bowel habits with constipation predominant.
<b>DD91.01</b>	Irritable bowel syndrome, diarrhoea predominant This is a bowel pattern subtype of irritable bowel syndrome, characterised by alteration of bowel habits with diarrhoea predominant.

- DD91.02** Irritable bowel syndrome, mixed type  
This is a bowel pattern subtype of irritable bowel syndrome, characterised by alteration of bowel habits having both diarrhoea and constipation. The subtype having diarrhoea and constipation alternatively often varying over time is also considered as synonymous.
- DD91.03** Irritable bowel syndrome, unsubtyped
- DD91.0Z** Irritable bowel syndrome, type unspecified
- DD91.1** **Functional constipation**  
Functional constipation is a functional bowel disorder that presents as persistently difficult, infrequent, or seemingly incomplete defecation, which do not meet IBS criteria.  
**Exclusions:** Constipation NOS (ME05.0)  
**Coded Elsewhere:** Slow transit constipation (DB32.1)
- DD91.2** **Functional diarrhoea**  
Functional diarrhoea is a continuous or recurrent syndrome characterised by the passage of loose (mushy) or watery stools without abdominal pain or discomfort.
- DD91.3** **Functional bloating**  
Functional bloating is a recurrent sensation of abdominal distension, that may or may not be associated with measurable distension, but is not part of another functional bowel or gastroduodenal disorder.
- DD91.4** **Functional abdominal pain syndrome**  
Functional abdominal pain syndrome represents a pain syndrome attributed to the abdomen that is poorly related to gut function, is associated with some loss of daily activities, and has been present at least 6 months. The pain is constant, nearly constant, or at least frequently recurring. Also there is the lack of symptom relationship to food intake or defecation.
- DD91.Y** **Other specified irritable bowel syndrome or functional bowel disorders**
- DD91.Z** **Irritable bowel syndrome or functional bowel disorders, unspecified**
- DD92** **Functional anorectal disorders**  
This group incorporates anorectal disorders which principally present anorectal and defecation complaints without apparent morphological changes of anorectal regions. However, the distinction between organic and functional anorectal disorders may be difficult to make in individual patients.  
**Exclusions:** Bodily distress disorder (6C20)

- DD92.0      Functional faecal incontinence**  
Recurrent uncontrolled passage of faecal material in an individual with a developmental age of at least 4 years and one or more of the following;  
a. Abnormal functioning of normally innervated and structurally intact muscles  
b. Minor abnormalities of sphincter structure and/or innervation  
c. Normal or disordered bowel habits  
d. Psychological causes  
**Exclusions:**      Encopresis (6C01)  
                        Encopresis with constipation or overflow incontinence (6C01.0)  
                        Encopresis without constipation or overflow incontinence (6C01.1)
- DD92.1      Functional anorectal pain**  
This group incorporates functional disorders which principally complaints pain in the anorectal regions. In this category two disorders (chronic proctalgia – Levator ani syndrome and proctalgia fugax) are distinguished on the basis of duration, frequency, and characteristic quality of pain.
- DD92.2      Functional defaecation disorders**  
Functional defaecation disorders are characterised by paradoxical contraction or inadequate relaxation of the pelvic floor muscles during attempted defaecation (dyssynergic defaecation) or inadequate propulsive forces during attempted defaecation (inadequate defaecatory propulsion). The patients must satisfy diagnostic criteria for functional constipation.  
**Exclusions:**      Encopresis (6C01)  
                        Encopresis with constipation or overflow incontinence (6C01.0)  
                        Encopresis without constipation or overflow incontinence (6C01.1)
- DD92.Y      Other specified functional anorectal disorders**
- DD92.Z      Functional anorectal disorders, unspecified**
- DD93      Functional digestive disorders of infants, toddlers or children**  
This group incorporates functional gastrointestinal disorders in infants and toddlers and disorders diagnosed more often in school-aged children and adolescents. These disorders include a variable combination of often age-dependent, chronic or recurrent symptoms not explained by structural or biochemical abnormalities.  
**Exclusions:**      Bodily distress disorder (6C20)  
                        Hypochondriasis (6B23)  
                        Rumination-regurgitation (MB29.4)  
                        Rumination-regurgitation disorder (6B85)

- DD93.0** **Infant regurgitation**  
This is a functional regurgitation that presents frequently (greater than or equal to 2 times/day for greater than equal to 3 weeks) in infants during the first year of life, without retching, haematemesis, aspiration, apnoea, or feeding or swallowing difficulties, or abnormal posturing.
- DD93.1** **Infantile colic**  
This is a condition in which an otherwise healthy baby cries or displays symptoms of distress (cramping, moaning, etc.) frequently and for extended periods, without any discernible reason.
- DD93.2** **Infant dyschezia**
- DD93.Y** **Other functional digestive disorders of infants, neonates or toddlers**
- DD93.Z** **Functional digestive disorders of infants, toddlers or children, unspecified**
- DD94** **Functional gallbladder disorder**  
This is a motility disorder that manifests symptomatically with biliary pain as consequence of either an initial metabolic disorder (supersaturated bile with cholesterol) or a primary motility alteration of gallbladder, at least initially, of any abnormalities of bile composition. There are normal liver enzymes, conjugated bilirubin and amylase/lipase.
- DD95** **Functional sphincter of Oddi disorder**  
This is a functional disorder of the sphincter of Oddi which defines motility abnormalities of sphincter of Oddi associated with prevention of bile and pancreatic juice from flowing through and a backup of the juice. It causes severe abdominal pain with elevated pancreatic enzymes, liver enzymes or both.
- DD9Y** **Other specified functional gastrointestinal disorders**
- DD9Z** **Functional gastrointestinal disorders, unspecified**

## Postprocedural disorders of digestive system (DE10-DE13)

This is a group of disorders associated with the digestive system that occur after medical procedures and are not classified elsewhere.

**Exclusions:** Radiation proctitis (DB33.42)

**Coded Elsewhere:** Postcholecystectomy syndrome (DC14.1)

- Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)
- Chronic dental injuries (DA08.2)
- Radiation oesophageal ulcer (DA25.32)
- Intramural haemorrhage of oesophagus (DA26.2)
- Anastomotic ulcer (DA62)
- Radiation oesophagitis (DA24.22)
- Radiation gastritis (DA42.81)
- Radiation gastric ulcer (DA60.63)
- Radiation duodenal ulcer (DA63.51)
- Radiation duodenitis (DA51.53)
- Enteritis or ulcer of small intestine due to trauma (DA94.32)
- Enteritis or ulcer of small intestine due to radiation (DA94.31)
- Radiation-induced colitis (DB33.41)
- Incisional hernia (DD56)
- Short bowel syndrome (DA96.04)
- Thermal oesophageal ulcer (NE02)

**DE10**

### Vomiting following gastrointestinal surgery

Vomiting occurred following gastrointestinal surgery due to disturbance or inadequate movement of GI tract.

**DE11**

### Dumping syndrome

Dumping syndrome is a group of signs and symptoms that develops most often in people who have had surgery to remove all or part of their stomach, or in whom surgically bypassed. It may occur early (during a meal or within 15-30 minutes after a meal with nausea, vomiting, abdominal pain, cramps, diarrhoea, dizziness, and heart palpitations) or late (1 to 3 hours after eating with sweating, weakness, fatigue, dizziness, lightheadedness, heart palpitations, and fainting).

**DE12**

### Malfunction or complication of external stoma of digestive organs

**Exclusions:** Postsurgical leak (NE81.3)

Acute gastrointestinal bleeding, not elsewhere classified (ME24.90)

Acute postoperative haemorrhage (NE81.0)

**Coded Elsewhere:** Skin problem resulting from external stoma of digestive organs (EM0Y)

**DE12.0**

### Colostomy or enterostomy malfunction or complication

- DE12.1**      **Gastrostomy malfunction**
- DE13**      **Postsurgical malabsorption, not elsewhere classified**
- Inclusions:*      Postsurgical blind loop syndrome
- Exclusions:*      Osteoporosis due to malabsorption (FB83.14)
- 
- DE2Y**      **Other specified diseases of the digestive system**
- DE2Z**      **Diseases of the digestive system, unspecified**

# CHAPTER 14

---

## Diseases of the skin

This chapter has 246 four-character categories.

Code range starts with EA00

Diseases of the skin incorporate conditions affecting the epidermis, its appendages (hair, hair follicle, sebaceous glands, apocrine sweat gland apparatus, eccrine sweat gland apparatus and nails) and associated mucous membranes (conjunctival, oral and genital), the dermis, the cutaneous vasculature and the subcutaneous tissue (subcutis).

- Inclusions:**
- Diseases of the epidermis
  - Diseases of the dermis
  - Diseases of the epidermal appendages (hair, hair follicle, sebaceous glands, apocrine sweat gland apparatus, eccrine sweat gland apparatus and nails)
  - Diseases of subcutaneous tissue
  - Diseases of cutaneous vasculature
- Coded Elsewhere:**
- Malignant neoplasms involving the skin
  - Haematoma of surgical wound of skin (NE81.00)
  - Superficial incisional site infection (NE81.20)
  - Neonatal phototherapy burn (KC50)
  - Symptoms or signs involving the skin (ME60-ME6Y)

This chapter contains the following top level blocks:

- Certain skin disorders attributable to infection or infestation
- Inflammatory dermatoses
- Metabolic and nutritional disorders affecting the skin
- Genetic and developmental disorders affecting the skin
- Sensory and psychological disorders affecting the skin
- Skin disorders involving specific cutaneous structures
- Skin disorders involving certain specific body regions
- Skin disorders associated with pregnancy, the neonatal period and infancy
- Adverse cutaneous reactions to medication
- Skin disorders provoked by external factors
- Benign proliferations, neoplasms and cysts of the skin
- Disorders of the skin of uncertain or unpredictable malignant potential
- Cutaneous markers of internal disorders
- Postprocedural disorders of the skin
- Malignant neoplasms involving the skin

## Certain skin disorders attributable to infection or infestation (EA00-EA6Y)

Infections and infestations affecting the skin incorporate both direct invasion of the skin (including associated mucous membranes, hair and nails) by microorganisms or parasites and dermatoses arising from systemic or other distant infections (e.g. viral exanthems)

**Coded Elsewhere:** Certain parasitic infections or infestations affecting the skin

- Infestation of the skin by ectoparasites
- Pythiosis (1G60.1)
- Protothecosis (1G60.2)
- Mycetoma of unknown or unspecified type (1G60.0)

## Certain skin disorders attributable to viral infection (EA00-EA3Z)

This group incorporates both localised infection of the skin by virus (e.g. viral warts) and systemic or distant viral infections with important skin manifestations (e.g. viral exanthemata).

**Coded Elsewhere:** Pox virus infections of the skin

- Human herpes virus infections involving skin or mucous membrane
- Human papillomavirus infection of skin or mucous membrane (1E80-1E8Z)

## Viral exanthems (EA00-EA0Y)

Acute viral infections characterised by the appearance of a skin rash.

**Coded Elsewhere:** Measles without complication (1F03.0)  
Rubella without complication (1F02.2)  
Roseola infantum (1F01)  
Erythema infectiosum (1F04)  
Enteroviral vesicular stomatitis (1F05.0)  
Foot and mouth disease (1F05.3)  
Picornavirus infections presenting in the skin or mucous membranes (1F05)

**EA00**

### **Viral exanthem due to unknown or unspecified agent**

An exanthematic rash with symptoms suggestive of a viral aetiology where the agent is either unknown or unspecified.

**EA0Y**

### **Viral exanthem due to other specified virus**

## Certain dermatoses with suspected viral aetiology (EA10-EA12)

Skin disorders for which there are indications but no proof that viral infection is responsible.

**EA10**

### **Pityriasis rosea**

Pityriasis rosea is an acute, self-limiting skin disease, probably infective in origin, affecting mainly children and young adults, and characterised by a distinctive skin eruption and minimal constitutional symptoms. The cause of pityriasis rosea is uncertain, but many epidemiological and clinical features suggest that an infective agent may be implicated. In the majority of cases the disease follows a characteristic course whereby a so-called herald patch, larger than subsequent lesions, appears several days before the eruption of multiple oval scaly pink macules over the trunk and proximal limbs predominantly.

**EA11**

### **Papular purpuric gloves and socks syndrome**

This acute acral dermatosis is characterised by an intensely pruritic papular and often purpuric eruption affecting the hands, wrists, feet and ankles. This is frequently accompanied by oral inflammation and ulceration, malaise and fever. It affects adults predominantly and had been linked to a range of viral infections, most commonly to parvovirus B19.

**EA12**

### **Infantile papular acrodermatitis**

Infantile papular acrodermatitis (Gianotti-Crosti syndrome) is a cutaneous reaction pattern to a range of infective agents affecting predominantly young children aged from six months to two years. Agents implicated include hepatitis B virus, Epstein-Barr virus and a number of enteroviruses. The rash consists in a profuse eruption of 5-10 mm diameter dull red flat-topped papules which appear first on the thighs and buttocks, then on the extensor aspects of the arms, and finally on the face. There may be lymphadenopathy but the child is usually otherwise well and the eruption fades over the course of a few weeks.

***Exclusions:***

Acrodermatitis chronica atrophicans (1C1G.14)

Acrodermatitis continua of Hallopeau (EA90.41)

Acrodermatitis enteropathica (5C64.20)

Acrodermatitis perstans (EA90.41)

## Dermatoses from distant or systemic viral infection (EA20-EA20)

**Coded Elsewhere:** Hairy leukoplakia (DA01.01)

Erythema multiforme provoked by viral infection (EB12.Y)

Skin disorders associated with Human immunodeficiency virus infection (EL3Y)

**EA20**

### **Necrolytic acral erythema**

Necrolytic acral erythema is a distinctive acrally-located dermatosis affecting patients with active viral hepatitis C. It manifests principally on the dorsal surfaces of the feet and hands as well circumscribed dusky erythematous areas with flaccid blisters in its early stages and elevated scaly psoriasiform plaques in its chronic form. Microscopically there is keratinocyte necrosis in the upper epidermis.

**EA3Z**

### **Unspecified skin disorder attributable to viral infection**

Certain skin disorders attributable to bacterial infection (EA40-EA5Z)

Disorders of the skin and/or subcutaneous tissues caused by bacteria which a) cause infection normally limited to the skin (e.g. erythrasma); b) characteristically involve the skin at the same time as other organs (e.g. syphilis); c) which may cause disease in the skin as well as in other organs (e.g. cutaneous tuberculosis) or d) which infect other organs but which may manifest in the skin as a result of release of toxins or other indirect mechanism (e.g. streptococcal toxic shock syndrome).

**Exclusions:** Asymptomatic colonization of the skin by virulent or therapy resistant bacteria (QD04)

**Coded Elsewhere:** Certain sexually transmissible bacterial infections affecting skin

Certain zoonotic bacterial infections involving the skin

Dermatoses due to certain filamentous bacteria

Pyogenic bacterial infections of the skin or subcutaneous tissues (1B70-1B7Z)

Non-pyogenic bacterial infections of the skin (1C44)

Yaws (1C1D)

Pinta (1C1E)

Endemic non-venereal syphilis (1C1F)

Cutaneous tuberculosis (1B12.8)

Leprosy (1B20)

Cutaneous non-tuberculous mycobacterial infection (1B21.2)

Acute meningococcaemia (1C1C.20)

Disseminated gonococcal infection (1A73)

Non-venereal treponematoses (1C4Z)

Systemic bacterial infection affecting skin (1C41)

Predominantly tropical or subtropical bacterial infections affecting skin (EA40-EA40)

**Coded Elsewhere:** Cutaneous and subcutaneous melioidosis (1C42)

**EA40**

**Tropical phagedaenic ulcer**

Tropical (phagedaenic) ulcer is an acute or chronic skin disease seen in the tropics and subtropics that is characterised by necrosis of the epidermis and underlying superficial tissue. Ulcers may heal spontaneously, leaving regular depressed scars, but sometimes enlarge to enter a chronic phase. Chronic ulcers are often large and irregular in shape and may involve the whole circumference of a limb. Pseudoepitheliomatous changes can develop which may proceed to the development of frank squamous carcinoma. Vincent's organisms (*Fusobacterium nucleatum* and *Borrelia vincentii*) are thought to play a pathogenic role.

**EA50**

**Toxin-mediated cutaneous reactions to distant or systemic bacterial infection**

**Coded Elsewhere:** Scarlet fever (1B50)

Streptococcal toxic shock syndrome (1C45.0)

Staphylococcal toxic shock syndrome (1C45.1)

Toxic shock syndrome (1C45)

<b>EA50.0</b>	<b>Erythema marginatum rheumaticum</b> A cutaneous exanthem occurring in up to 10% of cases of rheumatic fever. The rash appears as widespread pink or red macules or papules that expand centrifugally with central clearing to form annular or polycyclic erythematous plaques. The exanthem may persist intermittently for weeks to months.
<b>EA50.1</b>	<b>Streptococcal toxin-mediated perineal erythema</b> Streptococcal toxin-mediated perineal erythema is characterised by a striking diffuse macular erythema in the perineum occurring abruptly after a streptococcal pharyngitis. It is often recurrent.
<b>EA50.2</b>	<b>Staphylococcal scalded skin syndrome</b> A syndrome caused by an infection with the gram-positive bacteria Staphylococcus. This syndrome is characterised by fever, blisters, erythema, large areas of skin peel, or Nikolsky's sign. Transmission is by direct or indirect contact with an infected individual, through fomites, or by iatrogenic transmission. Confirmation is by identification of Staphylococcus in a blood or skin sample.  <i>Exclusions:</i> Toxic epidermal necrolysis (EB13.1) <i>Coded Elsewhere:</i> Neonatal staphylococcal scalded skin syndrome (EH11)
<b>EA50.3</b>	<b>Staphylococcal scarlatina</b> An exanthem mediated by staphylococcal toxins from distant <i>Staphylococcus aureus</i> infection but without the systemic complications seen in staphylococcal toxic shock syndrome, of which it may be regarded as a mild form. Clinically it resembles scarlet fever.  <i>Exclusions:</i> Scarlatina NOS (1B50)
<b>EA50.Y</b>	<b>Other specified toxin-mediated cutaneous reactions to distant or systemic bacterial infection</b>
<b>EA50.Z</b>	<b>Toxin-mediated cutaneous reactions to distant or systemic bacterial infection, unspecified</b>
<b>EA51</b>	<b>Skin complications of BCG immunisation</b> Complications secondary to immunization with attenuated <i>Mycobacterium bovis</i> ( <i>Bacillus Calmette-Guérin</i> or BCG).  <i>Exclusions:</i> Cutaneous tuberculosis (1B12.8) <i>Coded Elsewhere:</i> BCG-induced tuberculid (EA5Y) Adverse reaction to BCG immunization (PK81.7)
<b>EA5Y</b>	<b>Cutaneous involvement by other specified bacterial infection</b>
<b>EA5Z</b>	<b>Cutaneous involvement by unspecified bacterial infection</b>

**EA60**

**Certain skin disorders attributable to fungal infection**

This group incorporates both localised infection of the skin by fungus (e.g. pityriasis versicolor) and systemic fungal infections with important skin manifestations (e.g. cutaneous cryptococcosis).

**Coded Elsewhere:** Candidosis of skin or mucous membranes (1F23.1)

Dermatophytosis (1F28)

Non-dermatophyte superficial dermatomycoses (1F2D)

Otomycosis (AA03)

**EA60.0**

**Subcutaneous mycoses**

**Coded Elsewhere:** Lobomycosis (1F2B)

Lymphocutaneous sporotrichosis (1F2J.0)

Fixed cutaneous sporotrichosis (1F2J.1)

Eumycetoma (1F29)

Chromoblastomycosis (1F24)

Conidiobolomycosis (1F26)

Cutaneous mucormycosis (1F2C)

Cutaneous or lymphocutaneous sporotrichosis (1F2J.Z)

Subcutaneous infections due to dematiaceous fungi (1F2Y)

**EA60.1**

**Systemic mycoses affecting skin**

**Coded Elsewhere:** Primary cutaneous coccidioidomycosis (1F25.11)

Disseminated paracoccidioidomycosis (1F2E.1)

Talaromycosis (1F2K)

Histoplasmosis due to Histoplasma duboisii (1F2A.1)

Disseminated adiaspiromycosis (1F2L.0)

Disseminated histoplasmosis capsulati (1F2A.Y)

Primary cutaneous blastomycosis (1F22)

Disseminated blastomycosis (1F22)

Mucocutaneous paracoccidioidomycosis (1F2E.Y)

Cutaneous cryptococcosis (1F27.Y)

**EA60.Y**

**Skin involvement in other specified fungal infection**

**EA60.Z**

**Fungal infection of the skin, unspecified**

**EA6Y**

**Cutaneous involvement by other specified infection or infestation**

## Inflammatory dermatoses (EA80-EB7Y)

A large group of skin disorders in which inflammation plays an important role.

- Exclusions:**
- Napkin candidosis (1F23.12)
  - Bullous impetigo of the napkin area (1B72.0)
  - Dermatoses precipitated by drug therapy (EH71)
  - Dermatoses associated with specific classes of medication (EH76)

- Coded Elsewhere:**
- Nonorgan specific systemic autoimmune disorders involving the skin
  - Autoinflammatory disorders (4A60-4A6Z)

### Dermatitis and eczema (EA80-EA8Z)

Dermatitis and eczema are synonymous and describe an inflammatory reaction pattern in the skin characterised histologically by spongiosis with varying degrees of acanthosis, and a superficial perivascular lympho-histiocytic infiltrate. The clinical features may include itching, redness, scaling and clustered papulo-vesicles. The condition may be induced by a wide range of external and internal factors acting singly or in combination.

- Exclusions:**
- Dermatitis herpetiformis (EB44)
  - Periorificial dermatitis (ED90.1)
  - Cercarial dermatitis (1F86.4)
- Coded Elsewhere:**
- Allergic contact dermatitis (EK00)
  - Photo-allergic contact dermatitis (EK01)
  - Irritant contact dermatitis (EK02)
  - Contact dermatitis of external ear (EG40)
  - Allergic contact blepharoconjunctivitis (9A06.72)
  - Irritant contact blepharoconjunctivitis (EK02.11)
  - Contact gingivostomatitis (DA02.3)
  - Irritant contact dermatitis of hands (EK02.12)
  - Irritant contact dermatitis of vulva (EK02.13)
  - Dermatitis or eczema of eyelids (9A06.7)
  - Dermatitis or eczema of external ear
  - Eczematous nail dystrophy (EE13.5)
  - Dermatitis due to exogenous factors (EK5Y)
  - Eczematous drug eruption (EH6Y)

EA80

### Atopic eczema

A chronic inflammatory genetically-determined eczematous dermatosis associated with an atopic diathesis (elevated circulating IgE levels, Type I allergy, asthma and allergic rhinitis). Filaggrin mutations resulting in impaired epidermal barrier function are important in its pathogenesis. Atopic eczema is manifested by intense pruritus, exudation, crusting, excoriation and lichenification. The face and non-flexural areas are often involved in infants; involvement of the limb flexures may be seen at any age. Although commonly limited in extent and duration, atopic eczema may be generalised and life-long.

**Inclusions:** atopic dermatitis  
**Coded Elsewhere:** Atopic eczema of eyelids (9A06.70)  
Atopic eczema of hands (EA85.20)

**EA80.0 Infantile atopic eczema**

Infantile atopic eczema is defined as atopic eczema present during the first year of life. It typically first manifests between the ages of 2 and 6 months: approximately 50% of people with atopic eczema first present in infancy. The face and non-flexural areas are commonly affected. The napkin area tends to be relatively spared. Involvement of the limb flexures, as is typical in childhood atopic eczema, is also often seen in infancy.

**EA80.1 Childhood atopic eczema**

Atopic eczema in children and adolescents first presenting or continuing after infancy up to age 19 years. Its prevalence is highest in northern latitudes (e.g. nearly 20% in Norwegian children as compared with 0.7% in Tanzanian children). The sites most characteristically involved are the elbow and knee flexures, sides of the neck, wrists and ankles. As the disease progresses, lichenification (skin thickening) becomes a typical clinical feature, especially in areas that can be easily reached and scratched. Discoid variants are more common in children of African and Asian ancestry.

**EA80.2 Adult atopic eczema**

Atopic eczema in adults (19 years or greater) may persist from childhood, recur in adulthood in individuals with a history of atopic eczema in childhood or, less commonly, may develop de novo in adult life.

**EA80.Y Other specified forms of atopic eczema**

**EA80.Z Atopic eczema, unspecified**

**EA81 Seborrhoeic dermatitis and related conditions**

A group of related inflammatory skin disorders affecting predominantly the scalp, face, upper trunk and flexures and characterised by variable amounts of erythema, scale, inflammation and exudation. It is thought that *Malassezia* yeasts play an important role in their pathogenesis. Although these disorders are common, they are seen with increased frequency and severity amongst persons infected with HIV.

**Exclusions:** Seborrhoea (ED91.2)

**Coded Elsewhere:** Infantile seborrhoeic dermatitis (EH40.0)  
Seborrhoeic dermatitis of eyelids (9A06.71)  
Seborrhoeic otitis externa (AA10)  
*Malassezia* folliculitis (1F2D.1)  
HIV-associated seborrhoeic dermatitis (EL3Y)

**EA81.0 Seborrhoeic dermatitis of face**

Seborrhoeic dermatitis affecting the face, most typically the nasolabial folds and chin.

**Exclusions:** Seborrhoea (ED91.2)

<b>EA81.1</b>	<b>Seborrhoeic dermatitis of the scalp</b> Seborrhoeic dermatitis of the scalp is characterised by varying degrees of scaling, inflammation, exudation and crusting affecting the scalp. It may occur in isolation or may be accompanied by seborrhoeic dermatitis of other sites. It may be difficult to differentiate from scalp psoriasis. Pityriasis capitis (dandruff) is considered to represent a mild form of seborrhoeic dermatitis of the scalp.
	<b><i>Inclusions:</i></b> Cradle cap (EH40.00) Seborrhoea (ED91.2)
<b>EA81.Y</b>	<b>Seborrhoeic dermatosis of other specified type or distribution</b>
<b>EA81.Z</b>	<b>Seborrhoeic dermatitis, unspecified</b>
<b>EA82</b>	<b>Nummular dermatitis</b> Cutaneous eruption otherwise known as discoid eczema characterised by discoid or coin-shaped plaques of eczema. The lesions usually occur on the extensor surfaces of the extremities, but the face and trunk may also be involved. The cause is unknown. <b><i>Coded Elsewhere:</i></b> Nummular dermatitis of hands (EA85.2Y)
<b>EA83</b>	<b>Lichen simplex or lichenification</b> If a circumscribed area of skin is subjected to repeated rubbing or scratching, localised epidermal thickening or lichenification will ensue. This may occur as a discrete patch within normal skin (lichen simplex) but frequently complicates eczema or other pruritic dermatoses.
<b>EA83.0</b>	<b>Lichen simplex</b> Circumscribed pruritic lichenification of the skin of any origin. If a circumscribed area of skin is subjected to repeated rubbing or scratching, localised epidermal thickening or lichenification will ensue. The nape of the neck, genitalia, perianal area and lateral calf are commonly affected sites. <b><i>Inclusions:</i></b> Neurodermatitis
<b>EA83.00</b>	Lichen simplex of vulva Circumscribed pruritic lichenification of female external genitalia.
<b>EA83.01</b>	Lichen simplex of male genitalia Circumscribed pruritic lichenification of male genitalia. The scrotum or the base of the penis are commonly affected sites.
<b>EA83.02</b>	Perianal lichen simplex Circumscribed pruritic lichenification of perianal localisation.
<b>EA83.0Y</b>	Lichen simplex of other specified site
<b>EA83.0Z</b>	Lichen simplex of unspecified site

- EA83.1      Secondary lichenification**  
 Thickening of skin affected by a primary dermatosis as the result of repeated rubbing and scratching.
- Coding Note:** Code also the causing condition
- EA84      Asteatotic eczema**  
 Asteatotic eczema develops from asteatosis cutis. In the latter cracking and crazing of the epidermal stratum corneum produces a flaky skin with a reticulate erythema beneath the scales. It occurs particularly on the lower legs. It is more common in the elderly and is provoked by a combination of defatting and desiccation of the epidermis. If inflammation progresses then it may become more pruritic and eczematous, asteatotic eczema.
- EA85      Dermatitis or eczema of hands and feet**  
 Dermatitis (eczema) involving the hands and/or feet.
- Inclusions:**
- Dermatitis of hands and feet
  - Eczema of hands and feet
- EA85.0      Vesicular dermatitis of hands and feet**  
 An eczema of unknown cause affecting principally the palms, soles and sides of the fingers and toes. It is commonly known as pompholyx and is characterised by eruptions of itchy, often multiloculated blisters, which tend to rupture and become secondarily infected. It occurs most commonly in adolescents and young adults. Its relationship to other forms of eczema and to allergic sensitisation, especially to nickel, remains to be adequately elucidated.
- EA85.1      Hyperkeratotic dermatitis of hands and feet**  
 Form of eczema (dermatitis) characterised by highly irritable, scaly, fissured, hyperkeratotic patches on the palms and/or soles. The aetiology is unknown. This disorder takes a chronic course and may be extremely refractory to treatment.
- EA85.2      Dermatitis of hands**  
 Dermatitis or eczema involving predominantly the hands.
- Coded Elsewhere:** Irritant contact dermatitis of hands (EK02.12)
- Vesicular dermatitis of hands (EA85.0)
  - Chronic relapsing vesiculosquamous dermatitis of hands (EA85.0)
  - Hyperkeratotic fissured palmar dermatitis (EA85.1)
- EA85.20      Atopic eczema of hands**  
 Atopic eczema involving predominantly the hands. Individuals with an atopic diathesis are particularly prone to hand eczema. It may be provoked by repeated contact with irritants at work as in hairdressers, cooks and health care workers. It may manifest in a discoid pattern of eczema.
- EA85.2Y      Other specified dermatitis of hands**
- EA85.2Z      Dermatitis of hands, unspecified**

<b>EA85.3</b>	<b>Dermatitis of feet</b> Dermatitis (eczema) involving predominantly the feet.  <b>Coded Elsewhere:</b> Vesicular dermatitis of feet (EA85.0) Hyperkeratotic fissured plantar dermatitis (EA85.1)
<b>EA86</b>	<b>Dermatitis and eczema of lower legs</b> Dermatitis (eczema) affecting the lower legs, most commonly associated with lower limb venous insufficiency, lymphoedema and/or immobility.  <b>Coded Elsewhere:</b> Lower limb venous eczema (EF70)
<b>EA86.0</b>	<b>Stasis dermatitis of the lower legs</b> A chronic eczematous process affecting the skin of the lower legs in association with chronic lower limb lymphoedema and immobility. It is often associated with lipodermatosclerosis. Failure of the normal "muscle pump" to aid venous return is an important component in the aetiology. It is common in the morbidly obese. It is characterised by low grade inflammation with variable scaling and desquamation.
<b>EA87</b>	<b>Dermatitis or eczema of anogenital region</b> Dermatitis (eczema) affecting the external genitalia, crural folds and/or perianal skin.
<b>EA87.0</b>	<b>Dermatitis or eczema of male genitalia</b> Dermatitis (eczema) involving male external genital organs.
<b>EA87.1</b>	<b>Dermatitis or eczema of female genitalia</b> Dermatitis (eczema) affecting the female external genitalia.  <b>Coded Elsewhere:</b> Irritant contact dermatitis of vulva (EK02.13)
<b>EA87.2</b>	<b>Dermatitis or eczema of perianal area</b> Dermatitis (eczema) involving perianal skin.  <b>Coded Elsewhere:</b> Perianal dermatitis of the newborn (KC21.2) Irritant contact dermatitis of perianal skin (EK02.1Y)
<b>EA87.Z</b>	<b>Dermatitis or eczema of anogenital region, unspecified</b>
<b>EA88</b>	<b>Miscellaneous specified eczematous dermatoses</b> A heterogeneous group of eczematous dermatoses not classified elsewhere.
<b>EA88.0</b>	<b>Infectious dermatitis</b> Infective dermatitis (infective eczematoid dermatitis) is an acute exudative dermatitis developing on normal skin surrounding a focus of suppurative infection. Such foci include infected wounds, suppurating sinuses and acute inflammatory fungal and/or bacterial infection of the toe clefts. The dermatitis may spread well beyond the skin directly affected by the suppuration.  <b>Inclusions:</b> Infective eczematoid dermatitis <b>Coded Elsewhere:</b> Infectious dermatitis of the forefeet (EA85.3)

**EA88.00** Human T-cell lymphotropic virus type 1 associated infective dermatitis of childhood  
An inflammatory dermatitis of childhood which develops in a minority of children with HTLV-1 infection, acquired usually via breast milk from an infected mother. Although the disease may clear spontaneously in adolescence, there is a high risk of development of Human T-cell lymphotropic virus-associated myelopathy (tropical spastic paraparesis) in later life. The onset is most frequent between the ages of 2 and 3, but it can manifest from as early as a few months of age to late childhood. Sites of predilection include the scalp, ears, eyelids, nostrils, neck, axillae and groin: erosions and crusting are commonly seen.

**EA88.0Y** Other specified infectious dermatitis

**EA88.0Z** Infectious dermatitis, unspecified

**EA88.1** **Post traumatic eczema**

Eczema localised to skin damaged by physical trauma or by chemical or thermal burns. It may appear months or years after the injury has healed, usually with visible scarring.

**EA88.2** **Disseminated secondary eczema**

The development of eczematous inflammation at sites distant from the primary site of an eczema or dermatitis. The onset of such dissemination may occur days or weeks after the primary dermatitis. The distribution of the secondary eczema tends to be symmetrical. Venous eczema, allergic contact dermatitis, acute irritant contact dermatitis and infective dermatitis are all potential triggers. The precise aetiopathology is as yet poorly understood.

**Coding Note:** Code also the causing condition

**Inclusions:** Eczematid

**EA88.3** **Secondary eczema**

An eczematous reaction to the presence of another, usually inflammatory, skin disorder. This may be observed in some forms of psoriasis when the underlying disease may be obscured by a concurrent eczematous reaction.

**Coding Note:** Code also the causing condition

**EA88.4** **Pityriasis alba**

A common low grade inflammatory dermatosis of unknown aetiology in which multiple small finely scaling macules appear on the face, and less commonly the shoulders and upper arms, of children. These may initially be mildly erythematous but soon become hypopigmented with fine surface scale. Histopathologically there is a mild subacute spongiotic dermatitis with reduction in melanin. It is more prominent in children with pigmented skin and may give rise to concern about vitiligo.

**EA89** **Generalised eczematous dermatitis of unspecified type**

Generalised eczema of uncertain, unknown or unspecified aetiology.

**EA8Y** **Other specified eczematous dermatosis**

**EA8Z** **Dermatitis or eczema, unspecified**

## Papulosquamous dermatoses (EA90-EA95)

A group of skin disorders characterised by epidermal thickening and scaling. The archetypal papulosquamous dermatosis is psoriasis.

### EA90

#### **Psoriasis**

Psoriasis is a common, chronic, relapsing, inflammatory skin disorder characterised by abnormal epidermal keratinization and hyperproliferation. It has a strong genetic component and affects some 2% of the populations of many regions of the world. Up to 10-20% of patients with psoriasis also experience an inflammatory polyarthritis (psoriatic arthritis). Although many people with psoriasis have limited disease, both psoriasis and its associated arthritis often cause major functional and psychosocial disability. The more severe forms of psoriasis are frequently associated with the metabolic syndrome and, as a result, a reduced life expectancy.

### EA90.0

#### **Plaque psoriasis**

The commonest form of psoriasis, which manifests as well-defined red, scaly plaques on the skin. Typical sites of initial involvement are the scalp, the extensor surfaces of the elbows and knees, the lower back and the shins. In severe disease a majority of the skin surface may be involved.

### EA90.1

#### **Guttate psoriasis**

An acute, usually widespread eruption of small (<1cm) papules of psoriasis associated in a majority of cases with preceding streptococcal infection, particularly tonsillitis and streptococcal sore throat. This form of psoriasis is seen typically in children and young adults. If untreated it tends to resolve over a period of four to six months.

### EA90.2

#### **Unstable psoriasis**

Unstable psoriasis is an inflammatory form of psoriasis which may be the precursor of erythrodermic or generalised pustular psoriasis. It is characterised by intense inflammation around the edges of existing plaques and/or the appearance of multiple small fresh inflammatory papules and plaques. Some patients may have a lifelong tendency to unstable psoriasis. It tends to be difficult to control without resort to systemic therapy.

### EA90.3

#### **Erythrodermic psoriasis**

Erythrodermic psoriasis is a severe generalised inflammatory form of psoriasis characterised by confluent intense erythema involving more than 90% of the skin surface. Erythrodermic psoriasis usually develops from preceding extensive, active plaque psoriasis but may arise de novo. Precipitating or trigger factors include withdrawal of systemic glucocorticosteroids, and, less frequently, abrupt discontinuation of methotrexate, phototherapy burns, or intercurrent infections. Patients may develop hypothermia or high output cardiac failure.

### EA90.4

#### **Pustular psoriasis**

Psoriasis characterised by clinically visible pustules. Pustular psoriasis may be localised or generalised and life-threatening.

**Coded Elsewhere:** Infantile pustular psoriasis (EH40.Y)

- EA90.40** Generalised pustular psoriasis  
An inflammatory form of psoriasis characterised by the presence of widely distributed areas of visible sterile pustulation.
- EA90.41** Acropustulosis of Hallopeau  
An uncommon pustular form of psoriasis which may rarely eventuate into generalised pustular psoriasis. It is characterised by pustules and variable scaling occurring in and around the nails and nail-beds of the fingers and toes. It may cause marked nail destruction and may be associated with a distal interphalangeal joint arthritis, with palmoplantar pustulosis or with plaque psoriasis elsewhere.
- Exclusions:** Palmoplantar pustulosis (EA90.42)
- EA90.42** Palmoplantar pustulosis  
Palmoplantar pustulosis (PPP) is a chronic inflammatory skin condition characterised by crops of sterile pustules on the palms and soles which erupt repeatedly over months or years. The affected areas tend to become red and scaly; cracks may form and these are often painful. It is strongly associated with smoking. It is associated with psoriasis elsewhere on the body in up to 24% of patients though appears to have a genetic profile distinct from psoriasis vulgaris. Interleukin-36 receptor gene polymorphisms are strongly associated with generalised pustular psoriasis and have been detected in a minority of patients with PPP.
- Inclusions:** Palmoplantar pustular psoriasis
- EA90.4Y** Other specified pustular psoriasis
- EA90.4Z** Pustular psoriasis, unspecified
- EA90.5** **Psoriasis of specified site or distribution**  
The appearance, management and impact of psoriasis can vary considerably according to its location. Important variants are listed under this heading.
- EA90.50** Scalp psoriasis  
The scalp is frequently the site of initial presentation and is the commonest anatomical site to be involved by psoriasis. Morphologies range from discrete plaques to total scalp involvement with either thick plaques or scaly non-thickened areas almost identical to seborrhoeic dermatitis. Sites of predilection include the immediate post-auricular area and occiput.
- EA90.51** Nail psoriasis  
Psoriasis of the nails manifests as pitting, roughening, thickening or detachment of the nail plate and in its early stages is accompanied by reddening of the distal nail bed.
- EA90.52** Flexural and intertriginous psoriasis  
Psoriasis involving flexures (retro-auricular folds, axillae, crural folds) and/or intertriginous areas (groins, under the breasts and, in obese individuals, abdominal apron fold). It may occur on its own or in association with seborrhoeic psoriasis or chronic plaque psoriasis. Plaques are thin, shiny and beef-red in colour with minimal scale. They may become secondarily fissured and/or macerated.

**EA90.53** Anogenital psoriasis  
Psoriasis involving anogenital skin including the vulva, penis or perianal area.

**EA90.5Y** Psoriasis of other specified site or distribution

**EA90.Y** Other specified forms of psoriasis

**EA90.Z** Psoriasis of unspecified type

**EA91** **Lichen planus**

Lichen planus is an inflammatory disease of skin and mucous membranes characterised by intense inflammation at the interface between epidermis/epithelium and dermis/corium. Its clinical manifestations vary according to how acutely it develops and to where it attacks. On the skin it typically presents as a symmetrical eruption of itchy, flat-topped pink or purple papules or plaques. Involvement of the scalp or nail matrix can produce permanent loss of hair or nails respectively. Although mucous membrane involvement can be asymptomatic, it can cause significant pain and distress, particularly when it is erosive.

**EA91.0** **Acute eruptive lichen planus**

An acute generalised form of lichen planus.

**Exclusions:** Lichenoid drug eruption (EH62)

**EA91.1** **Hypertrophic lichen planus**

A chronic recalcitrant form of lichen planus often localised to the lower legs and ankles and characterised by plaques of markedly thickened skin. It is often extremely pruritic. It can leave permanent pigmentation and scarring.

**EA91.2** **Follicular lichen planus**

Lichen planus involving the hair follicle rather than the epidermis. It typically involves the scalp but may be seen elsewhere. Clinically it presents as grouped small, slightly scaly erythematous follicular papules.

**EA91.3** **Lichen planus of genital skin and mucous membranes**

Lichen planus of genital mucous membranes tends to be mild in men but may give rise to concern about sexually-transmitted infection. Although it may be asymptomatic in women the severe erosive form may cause mark pain and disability.

**EA91.4** **Lichen planus and lichenoid reactions of oral mucosa**

Oral lichenoid reactions represent a common end point in response to extrinsic agents (drugs, allergens), altered self-antigens, or superantigens. Clinical presentation can vary from asymptomatic white reticular striae to painful erythema and erosions. Cutaneous and mucosal involvement of other sites is common. Although oral lichen planus is by definition idiopathic, oral lichenoid reactions may be caused by medications or exogenous agents such as cinnamates and other flavourings.

**EA91.40** Non-erosive lichen planus of oral mucosa

Oral lichen planus in which the epithelium remains intact.

- EA91.41** Erosive oral lichen planus  
Oral lichen planus in which the epithelium is ulcerated.  
**Coded Elsewhere:** Vulvovaginal gingival syndrome (EA91.3)
- EA91.42** Oral lichen planus, unspecified  
Lichen planus of oral mucosa without mention of presence or absence of ulceration.
- EA91.43** Lichenoid mucositis  
Oral lichenoid mucositis is a term describing clinicopathological features of the oral mucosa which represent a common end point in response to extrinsic agents such as drugs or contact allergens, or to presumed altered self-antigens as in lichen planus. Clinical presentation can vary from asymptomatic white reticular striae to painful erythema and erosions. Idiopathic lichen planus cannot always be distinguished from lichenoid reactions to external agents and in such circumstances it is appropriate to label the changes observed as oral lichenoid mucositis until a more definitive diagnosis can be made.
- EA91.4Y** Other specified lichenoid reactions of oral mucosa
- EA91.5** **Lichen planus of the nails**  
Lichen planus of the nail most commonly presents as nail plate thinning with longitudinal grooving and ridging. Hyperpigmentation, subungual hyperkeratosis, onycholysis, and longitudinal melanonychia can also occur. Rarely, the matrix can be permanently destroyed with prominent pterygium formation. Lichen planus has been linked to childhood idiopathic nail atrophy and may overlap with twenty-nail dystrophy of childhood.
- EA91.6** **Subacute lichen planus**  
The commonest form of lichen planus affecting the skin. It may be limited to a few papules or plaques but may be widespread. It may continue to extend over months and may remain active over several years.
- EA91.Y** Other specified lichen planus
- EA91.Z** Lichen planus of unspecified type
- EA92** **Lichenoid dermatoses**  
Conditions other than lichen planus in which there is histological damage to the lower epidermis accompanied by a chronic inflammatory infiltrate in the papillary dermis disturbing the interface between the epidermis and dermis.  
**Coded Elsewhere:** Lichenoid drug eruption (EH62)
- EA93** **Pityriasis lichenoides**  
Pityriasis lichenoides is an uncommon inflammatory skin disease of unknown aetiology. It can range from a relatively mild chronic form to a fulminant form with skin necrosis and severe constitutional symptoms. The disease can last from just weeks to months or years. The chronic form is manifest as multiple small flat asymptomatic scaly papules located predominantly on the trunk and proximal limbs. The acute forms present with the abrupt appearance of multiple papules in the same distribution which rapidly progress to haemorrhagic blisters and ulceration.

**EA94**

### **Pityriasis rubra pilaris**

Pityriasis rubra pilaris (PRP) is the name given to a group of clinically similar papulosquamous dermatoses of unknown aetiology. They initially present with erythematous, hyperkeratotic perifollicular papules, which tend to coalesce into plaques, but may progress to erythroderma, particularly in adults. The distribution, age of onset and speed of onset differ markedly between patients and these differences have been used to classify PRP into a number of clinically distinct subtypes.

**EA95**

### **Small plaque parapsoriasis**

The benign form of parapsoriasis, a chronic multifocal skin disease characterised by atrophic erythematous patches located preferentially on the trunk and proximal extremities. The aetiology is unknown.

**Inclusions:**      Digitate dermatosis

Chronic superficial dermatitis

Urticaria, angioedema and other urticarial disorders (EB00-EBOY)

A heterogeneous group of disorders characterised by dermal and/or subcutaneous and submucosal oedema. The most common underlying mechanism is release of histamine from mast cells with consequent capillary dilatation and tissue oedema. This is responsible for the weals of spontaneous and most physical urticarias. A variety of other mechanisms are involved in other urticarial disorders.

**Exclusions:**      Urticaria pigmentosa (2A21.10)

    Papular urticaria (EK50.00)

**Coded Elsewhere:** Hereditary angioedema (4A00.14)

    Acquired angioedema (4A00.15)

    Urticular vasculitis (EF40.10)

    Food-induced urticaria or angioedema (4A85.21)

    Drug-induced urticaria, angioedema and anaphylaxis (EH61)

    Angioedema due to disordered complement activation or kinin metabolism  
        (4A00.1Z)

**EB00**

### **Spontaneous urticaria**

Spontaneous urticaria is a disease characterised by the daily or almost daily eruption of spontaneous weals, angioedema or both.

**Inclusions:**      ordinary urticaria

**EB00.0**

### **Acute urticaria**

Spontaneous urticaria lasting less than six weeks

**EB00.1**

### **Chronic urticaria**

Spontaneous urticaria lasting six weeks or more.

**Inclusions:**      Chronic spontaneous urticaria

    Chronic ordinary urticaria

**EB00.Z**

### **Spontaneous urticaria, unspecified**

**EB01****Inducible urticaria and angioedema**

The inducible or physical urticarias are a heterogeneous subgroup of urticarias in which pruritic weals, angioedema or both are triggered reproducibly by specific external physical stimuli. The onset of wealing is characteristically rapid with resolution within an hour. The exception is delayed pressure urticaria where weals take longer to develop and resolve. Individual susceptibility to a physical urticaria may be short-lived or may last for years.

**EB01.0****Dermographism**

Dermographism is characterised by the development of short-lived itchy weals in response to stroking of the skin. The weals are typically linear. Symptomatic dermographism is triggered by light skin stroking or friction and is pruritic, whereas simple dermographism is a common physiological response to firm skin stroking and is not pruritic.

**Inclusions:**              Factitious urticaria  
                                  Dermatographic urticaria

**EB01.1****Cold urticaria**

Cold urticaria is triggered by skin cooling. Weals often develop as the skin rewarms afterwards. Cold contact urticaria is triggered by local skin cooling whereas the much less common cold reflex urticaria is triggered by generalised chilling causing a fall in core temperature.

**EB01.2****Delayed pressure urticaria**

Delayed pressure urticaria differs from other forms of physical urticaria in that the appearance of weals is delayed for several hours following the provoking stimulus. It is commonly associated with chronic spontaneous urticaria but tends to respond poorly to antihistamine therapy. The palms and soles, the waist, and the buttocks and thighs are commonly affected areas. Wealing can be induced by a variety of stimuli, including standing, walking, wearing of tight clothes, or sitting on a hard surface.

**EB01.3****Contact urticaria**

Urticaria resulting from skin or mucosal contact with a substance or substances capable of inducing wealing either by immunological or by non-immunological means.

**Coded Elsewhere:** Allergic contact urticaria (EK10)

**EB01.Y****Other specified forms of inducible urticaria and angioedema****EB01.Z****Inducible urticaria and angioedema, unspecified****EB02****Cholinergic urticaria and related conditions**

A range of urticarial disorders associated with heat and activation of sweating.

**Coded Elsewhere:** Exercise-induced anaphylaxis (4A84.30)

<b>EB02.0</b>	<b>Cholinergic urticaria</b> Cholinergic urticaria presents as an eruption of multiple small 2-3 mm monomorphic papular weals in response to sweat-inducing stimuli such as physical exertion, hot baths, spicy foods or sudden emotional stress. The weals tend to be pink in milder cases but white with surrounding macular erythema when the oedema is more intense. Angioedema and systemic manifestations including faintness, headache, palpitations and wheezing may occur in severe cases.
	<b><i>Inclusions:</i></b> Exercise-induced anaphylaxis (4A84.30)
<b>EB02.Y</b>	<b>Other conditions mediated by cholinergic activation</b>
<b>EB03</b>	<b>Syndromes with urticarial reactions or angioedema</b> Periodic and other syndromes in which urticarial reactions or angioedema play an important part.  <b>Coded Elsewhere:</b> Cryopyrin-associated periodic syndromes (4A60.1) Tumour necrosis factor receptor 1 associated periodic syndrome (4A60.2)
<b>EB04</b>	<b>Idiopathic angioedema</b>
<b>EB05</b>	<b>Urticaria of unspecified type</b> <b><i>Inclusions:</i></b> Hives Nettle rash
<b>EB0Y</b>	<b>Other specified urticarial disorders</b>  Inflammatory erythemas and other reactive inflammatory dermatoses (EB10-EB31) A heterogeneous group of disorders characterised by skin inflammation in response to known (usually infections or drugs) or unknown triggers  <b>Coded Elsewhere:</b> Inflammatory dermatoses of the newborn (KC21) Pyodermititis–pyostomatitis vegetans (EL3Y)
<b>EB10</b>	<b>Diffuse inflammatory erythemas</b> A group of disorders characterised by diffuse redness of the skin. They may be due to drugs, viral infections or circulating toxins but frequently a precise aetiology cannot be determined.  <b>Coded Elsewhere:</b> Drug-induced erythroderma (EH64) Neonatal toxic erythema (KC21.1)

**EB11****Annular erythema**

Annular erythema is the term given to a group of chronic annular and gyrate eruptions in which irregular rings and arcs of elevated erythema form from initial inflammatory papules which slowly enlarge whilst clearing centrally. The lesions are usually located on the buttocks, thighs and upper arms, but any area may be involved. The condition may persist for months to years. In the majority of cases the aetiology remains obscure.

**Coded Elsewhere:** Erythema gyratum repens (EL10)

Necrolytic migratory erythema (EL10)

**EB12****Erythema multiforme**

Erythema multiforme is a self-limiting reactive inflammatory dermatosis triggered by cell-mediated hypersensitivity, most commonly to drugs or infection, particularly Herpes simplex. It is characterised by an eruption of macules, papules, nodules, vesicles and/or bullae affecting preferentially the dorsal aspects of the hands and forearms. It may also involve oral and genital mucous membranes.

**Exclusions:** Stevens-Johnson syndrome or toxic epidermal necrolysis (EB13)

**EB12.0****Cutaneous erythema multiforme**

Erythema multiforme confined to the skin and typically triggered by recurrent Herpes simplex infection.

**EB12.1****Mucocutaneous erythema multiforme**

Erythema multiforme with mucosal involvement, usually of oral and/or genital mucous membranes. It causes significantly more morbidity than erythema multiforme confined to the skin.

**Coded Elsewhere:** Erythema multiforme with oral ulceration (DA01.13)

**EB12.Y****Other specified erythema multiforme****EB12.Z****Erythema multiforme, unspecified****EB13****Stevens-Johnson syndrome or toxic epidermal necrolysis**

A spectrum of severe and life-threatening hypersensitivity disorders affecting skin and mucous membranes, most commonly precipitated by an idiosyncratic reaction to medication. Stevens-Johnson syndrome (SJS) always involves mucosal surfaces but the skin involvement is limited by definition to <10% body surface area (BSA). Toxic epidermal necrolysis (TEN) may sometimes spare mucous membranes but skin involvement is by definition >30% BSA. An intermediate form is recognised in which mucosal involvement is accompanied by skin involvement of 10-30% BSA (SJS-TEN overlap syndrome). All forms result in extensive sloughing and ulceration and carry a significant risk of fatal outcome.

**Coded Elsewhere:** Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug (EH63)

EB13.0	<b>Stevens-Johnson syndrome</b> Stevens-Johnson syndrome is an immune-complex–mediated hypersensitivity disorder involving mucous membranes (conjunctivae, oral mucosa and genital mucosa) with, by definition, skin involvement limited to no more than 9% body surface area. It is related to toxic epidermal necrolysis and shares many of the same triggers, notably drugs, but the inflammation is centred on and close to mucosal surfaces. Although mortality is low, acute morbidity is high and conjunctival involvement has the potential to cause blindness.
	<b>Coded Elsewhere:</b> Drug-induced Stevens-Johnson syndrome (EH63.0)
	Acute cicatrizing conjunctivitis, Stevens-Johnson's (9A60.2)
	Chronic cicatrizing conjunctivitis, Stevens-Johnson's (9A60.2)
EB13.1	<b>Toxic epidermal necrolysis</b> Toxic epidermal necrolysis (TEN) is an acute life-threatening skin disease with commonly quoted overall risk of mortality of between 25 and 30%, though the risk of fatal outcome is around 90% in the most severely affected patients (SCORTEN score >5). It is characterised by the rapid onset of extensive erythema, necrosis, and bullous detachment of the epidermis (> 30% body surface area). Commonly, the mucous membranes are also involved. Death may result from a combination of sepsis, fluid depletion and multi-organ failure. In two thirds of cases, TEN is triggered by a clearly identifiable drug allergy.
	<b>Coded Elsewhere:</b> Drug-induced toxic epidermal necrolysis (EH63.1)
EB13.2	<b>Stevens-Johnson and toxic epidermal necrolysis overlap syndrome</b> A severe reactive skin disorder with features of both toxic epidermal necrolysis and Stevens-Johnson syndrome. It is defined by the presence of mucosal involvement and between 10% and 30% body surface area detachment of skin. It may be regarded as an intermediate form of these two disorders and, as with them, it can in most cases be attributed to a drug.
	<b>Coded Elsewhere:</b> Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome (EH63.2)

## Neutrophilic dermatoses (EB20-EB2Y)

A group of inflammatory skin disorders characterised by neutrophilic infiltration of the skin.

**Coded Elsewhere:** Disseminated gonococcal infection (1A73)

Behçet disease (4A62)

### EB20

#### Acute febrile neutrophilic dermatosis

Sweet syndrome (the eponym for acute febrile neutrophilic dermatosis) is characterised by a constellation of clinical symptoms, physical features, and pathological findings which include fever, neutrophilia, tender erythematous skin lesions (papules, nodules, and plaques), and a diffuse infiltrate consisting predominantly of mature neutrophils that are typically located in the upper dermis. Sweet syndrome presents in three clinical settings: classical (or idiopathic), malignancy-associated, and drug-induced.

**Inclusions:** Sweet syndrome

**EB21****Pyoderma gangrenosum**

An idiopathic, rapidly evolving, and severely debilitating disease occurring most commonly in association with chronic ulcerative colitis. It is characterised by the presence of boggy, purplish ulcers with undermined borders, appearing mostly on the legs. The majority of cases are in people between 40 and 60 years old. Its etiology is unknown.

**Inclusions:** Phagedenic pyoderma

**EB2Y****Other specified neutrophilic dermatoses****EB30****Eosinophilic cellulitis**

Eosinophilic cellulitis (Wells syndrome) is characterised by a distinctive clinical picture resembling cellulitis, and a typical histology with tissue eosinophilia, oedema and 'flame' figures (clusters of eosinophils and histiocytes around a core of collagen and eosinophilic debris). It can affect either sex, usually in adult life. Any site may be involved, with single or multiple lesions, and recurrences are common. Initially, the lesions are itchy erythematous plaques with features resembling both urticaria and cellulitis but bullous and nodular forms have also been described. It may arise spontaneously but a number of drugs and infections have been implicated.

**EB31****Erythema nodosum**

An erythematous eruption commonly associated with drug reactions or infection and characterised by inflammatory nodules that are usually tender, multiple, and bilateral. These nodules are located predominantly on the shins with less common occurrence on the thighs and forearms. They undergo characteristic colour changes ending in temporary bruise-like areas. This condition usually subsides in 3-6 weeks without scarring or atrophy.

**Coded Elsewhere:** Acute sarcoidosis with erythema nodosum (4B20.5)

Drug-induced erythema nodosum (EH6Y)

**Immunobullous diseases of the skin (EB40-EB4Y)**

A group of disorders characterised by the presence of circulating auto-antibodies directed against specific skin or mucous membrane antigens and resulting in blisters or erosions.

**EB40****Pemphigus**

Pemphigus is a group of chronic autoimmune skin diseases characterised by blister formation on the skin and the mucous membranes. The exact causes of the disease are unknown but the disease is mediated by auto-antibodies to desmosome components. Three clinical forms have been characterised. Pemphigus vulgaris, pemphigus foliaceus and pemphigus vegetans. Other variants exist, namely intercellular IgA dermatosis and paraneoplastic pemphigus.

**Coded Elsewhere:** Neonatal pemphigus (KA07.1)

**EB40.0****Pemphigus vulgaris**

Pemphigus vulgaris is a chronic autoimmune skin disease characterised by blister formation on the skin and the mucous membranes mediated by auto-antibodies to the desmosome components desmoglein 1 and 3.

- EB40.00** Oral pemphigus  
 Oral pemphigus is a variant of pemphigus vulgaris, and is a chronic autoimmune skin disease characterised by blister formation on the oral mucous membrane mediated by auto-antibodies to the desmosome component desmoglein 3.
- EB40.0Y** Other specified pemphigus vulgaris
- EB40.0Z** Pemphigus vulgaris, unspecified
- EB40.1** **Pemphigus foliaceus**  
 Pemphigus foliaceus is a chronic autoimmune skin disease characterised by superficial blister formation on the skin mediated by auto-antibodies to the desmosome component desmoglein 1.
- EB40.2** **Paraneoplastic pemphigus**  
 Paraneoplastic pemphigus is a severe, often fatal autoimmune disease characterised by blisters and erosions not only on the skin and the mucous membranes but also involving other organs including the respiratory system. Auto-antibodies to a variety of plakin components of desmosomes and hemidesmosomes and to the protease inhibitor, Alpha-2-macroglobulin-like-1 protein, have all been implicated in its pathogenesis. It is strongly associated with lymphoproliferative disease.
- Coding Note:** Code also the causing condition
- EB40.Y** Other specified pemphigus
- EB40.Z** Pemphigus, unspecified
- EB41** **Pemphigoid**  
 The pemphigoid group of immunobullous diseases is characterised by the production of IgG antibodies to the epidermal basement membrane zone, leading to subepidermal clefts which are clinically manifest as blisters or erosions of skin or mucous membranes.
- Coded Elsewhere:** Gestational pemphigoid (JA65.10)  
 Neonatal gestational pemphigoid (KA07.Y)
- EB41.0** **Bullous pemphigoid**  
 Bullous pemphigoid is the most common autoimmune blistering disease in the Western world. It chiefly affects the elderly and typically presents with a pruritic urticated erythema which evolves into a widespread eruption of intact tense blisters. It can sometimes involve mucous membranes. It is characterised by IgG antibodies to the basement membrane zone, leading to subepidermal clefts that are clinically manifest as blisters.

<b>EB41.1</b>	<b>Mucous membrane pemphigoid</b> Mucous membrane pemphigoid (MMP) encompasses a heterogeneous group of mucous membrane-dominated autoimmune diseases in which autoantibodies to antigens of the basement membrane zone (BMZ) of mucous membranes and the skin result in subepithelial blistering. MMP may be limited to the conjunctivae (ocular pemphigoid) or to the oral cavity (oral pemphigoid). When the skin is involved, it is generally less extensive and less migratory than in bullous pemphigoid. MMP follows a chronic course and may lead to severe scarring with the attendant risks of loss of vision and oesophageal strictures.
	<b>Coded Elsewhere:</b> Mucous membrane pemphigoid with ocular involvement (9A62)
<b>EB41.Y</b>	<b>Other specified pemphigoid</b>
<b>EB41.Z</b>	<b>Pemphigoid, unspecified</b>
<b>EB42</b>	<b>Linear IgA bullous dermatosis</b> Linear IgA bullous dermatosis is an uncommon immunobullous disorder which occurs in both adults and children. It is characterised by linear deposition of IgA along the epidermal basement membrane. Although the clinical picture may resemble dermatitis herpetiformis, it is not associated with gluten enteropathy and it has different clinical and immunopathological attributes.
<b>EB43</b>	<b>Epidermolysis bullosa acquisita</b> Epidermolysis bullosa acquisita is an acquired non-familial blistering disease characterised by the presence of autoantibodies to collagen VII at the epidermal basement membrane zone, as demonstrated by direct immunofluorescence. There is a wide spectrum of clinical manifestations including a trauma-induced variant and a more inflammatory variant.
	<b>Exclusions:</b> Genetically-determined epidermolysis bullosa (EC30-EC3Z)
	<b>Coded Elsewhere:</b> Transient neonatal epidermolysis bullosa acquisita (KA07.Y)
<b>EB44</b>	<b>Dermatitis herpetiformis</b> Dermatitis herpetiformis is an immunobullous skin characterised by recurrent eruptions of intensely itchy papules, vesicles or bullae, which are typically grouped symmetrically on the extensor surfaces of the limbs and on the buttocks and back. The primary lesions are frequently obscured by excoriation. An incompletely understood abnormal response to dietary gluten provokes the formation of autoantibodies to tissue and epidermal transglutaminases and granular deposition of IgA in dermal papillae. The disease is strongly associated with gluten-sensitive enteropathy, which can range from mild jejunal epithelial inflammation to total villous atrophy (coeliac disease).
<b>EB4Y</b>	<b>Other specified immunobullous disorder</b>

### Cutaneous lupus erythematosus (EB50-EB5Z)

Lupus erythematosus involving the skin. This ranges from acute cutaneous lupus as may accompany a flare of systemic lupus erythematosus to a variety of chronic forms which are in the majority of cases limited to the skin.

**Exclusions:** Systemic lupus erythematosus (4A40.0)

Lupus vulgaris (1B12.8)

**Coded Elsewhere:** Systemic lupus erythematosus with skin involvement (4A40.00)

Neonatal lupus erythematosus (KA07.0)

#### EB50

##### **Subacute cutaneous lupus erythematosus**

Subacute cutaneous lupus erythematosus is a non-scarring form of lupus erythematosus typified by the presence of circulating anti-Ro/SSA antibodies and discoid or annular inflamed red patches with variable fine scaling on sun-exposed skin, especially the sides of the face and neck, the vee of the neck, the extensor surfaces of the upper arms and the upper back: in contrast with systemic lupus erythematosus the cheeks tend to be spared. Visceral disease is less frequent than in systemic lupus erythematosus: renal involvement is rare and mild.

#### EB51

##### **Chronic cutaneous lupus erythematosus**

Chronic cutaneous lupus erythematosus (LE) is characterised by the presence of circumscribed cutaneous plaques showing varying degrees of oedema, erythema, scaling, follicular plugging and atrophy. It most commonly presents as discoid plaques involving the face, ears and scalp but can be widely disseminated or may affect predominantly the extremities (chilblain LE) or subcutaneous fat (lupus panniculitis). It can cause marked disfigurement with prominent facial scarring and permanent hair loss. Most patients remain otherwise in good health but 5-10% may develop systemic lupus erythematosus. Photosensitivity is less apparent than in subacute cutaneous lupus erythematosus.

**Exclusions:** Systemic lupus erythematosus (4A40.0)

#### EB51.0

##### **Discoid lupus erythematosus**

Discoid lupus erythematosus is characterised by the presence of discoid plaques showing varying degrees of oedema, erythema, scaling, follicular plugging and atrophy. It typically involves the face, ears and scalp, but widespread dissemination may occur. It can cause marked disfigurement with prominent facial scarring and permanent hair loss.

#### EB51.Y

##### **Other specified chronic cutaneous lupus erythematosus**

#### EB51.Z

##### **Chronic cutaneous lupus erythematosus, unspecified**

#### EB5Z

##### **Cutaneous lupus erythematosus of unspecified type**

**Scarring or sclerosing inflammatory dermatoses (EB60-EB61.Z)**

A group of inflammatory dermatoses limited to skin and mucous membranes and characterised by variable degrees of sclerosis, fibrosis and atrophy.

**Coded Elsewhere:** Graft-versus-host disease (4B24)

**EB60**

**Lichen sclerosus**

Lichen sclerosus is a chronic inflammatory dermatosis of unknown aetiology. It affects both women and men of all ages. It is characterised by the development of white, smooth, atrophic plaques on vulval and perianal skin in females and on the prepuce and glans penis in males. It often results in scar formation leading to a narrow introitus or phimosis with impairment of urinary and sexual function. The risk of anogenital squamous cell carcinoma is slightly increased. Less commonly other sites of the skin are affected, either independently or in conjunction with anogenital involvement.

**EB60.0**

**Lichen sclerosus of vulva**

Lichen sclerosus of the vulva is an inflammatory disorder of unknown aetiology affecting the skin of the vulva and perianal area. Typically it affects women in the fifth and sixth decades of life though is not uncommon in prepubertal girls. It presents with pruritus, soreness or dyspareunia. The affected skin is white and atrophic, though secondary changes including maceration, purpura and erosion may dominate the clinical picture. In longstanding cases there may be marked shrinkage of the vulva, labial fusion and an increased risk of malignant transformation.

**EB60.1**

**Lichen sclerosus of penis**

Lichen sclerosus of the penis develops almost exclusively in uncircumcised males and is the result of chronic occluded contact of susceptible epithelium to urine. It often causes dyspareunia and difficulties with micturition. It manifests typically as a sclerotic phimosis of the prepuce, which it may not be possible to retract, together with inflammation and sclerosis of the mucocutaneous surface of the prepuce and glans penis. Stenosis and occasionally obliteration of the external meatal orifice may occur in severe cases. Although most commonly recognised in adult men it is a common cause of acquired phimosis in boys.

**Inclusions:**              Balanitis xerotica obliterans

**EB60.Y**

**Lichen sclerosus of other specified sites**

**EB60.Z**

**Lichen sclerosus, unspecified**

**EB61**

**Morphea**

A group of related diseases of poorly understood aetiology affecting principally skin and subcutaneous tissue and characterised by variable fibrosis, sclerosis and cutaneous atrophy.

**Coded Elsewhere:** Extranodal lichen sclerosus with morphea (EB60.Y)

Atrophoderma of Pasini and Pierini (EE7Y)

<b>EB61.0</b>	<b>Plaque morphoea</b>
	The commonest form of morphoea which presents as indurated waxy plaques, often with a violaceous border and commonly affecting the trunk, especially in the submammary folds and around the waist. The cause is unknown. It is commoner in women than men.
	<b>Inclusions:</b> Circumscribed scleroderma
<b>EB61.1</b>	<b>Linear morphoea</b>
	Linear morphoea is a form of morphoea which usually presents in childhood or adolescence and is usually unilateral, affecting a limb with a linear induration of skin, subcutis and occasionally underlying muscle and bone. It may also affect the scalp and forehead ("en coup de sabre") producing a depressed scar likened to a healed sabre wound, with sclerosis of the skin and alopecia of affected scalp.
<b>EB61.Y</b>	<b>Other specified forms of morphoea</b>
<b>EB61.Z</b>	<b>Morphoea, unspecified</b>

---

### **EB7Y      Other specified inflammatory dermatoses**

#### Metabolic and nutritional disorders affecting the skin (EB90-EB9Y)

This group includes dermatoses resulting either from disturbed metabolic processes or from defective nutrition

- Coded Elsewhere:** Disorders of essential minerals or their metabolism affecting the skin  
 Disorders of vitamins or their metabolism which may affect the skin  
 Neonatal nutritional disorders affecting the skin (KC24)  
 Dermatoses resulting from defective nutrition (5C3Y)

### **EB90      Dermatoses resulting from disturbed metabolic processes**

This group comprises dermatoses where abnormal quantities of biological material accumulate in the skin. The effects of such accumulations depend on the particular material involved. Examples include lipid, mucin, amyloid, porphyrins and calcium.

- Coded Elsewhere:** Tophaceous gout (FA25.20)  
 Genetic disorders of amino acid metabolism or transport  
 affecting the skin  
 Cutaneous amyloidosis (5D00.Y)

<b>EB90.0</b>	<b>Diabetic skin lesions</b>
	Unspecified skin changes attributable to diabetes.

**Coding Note:** Always assign an additional code for diabetes mellitus.

<b>EB90.1</b>	<b>Cutaneous mucinosis</b> Skin disorders characterised by accumulation of mucin in the skin <b>Coded Elsewhere:</b> Mucopolysaccharidosis type 1 (5C56.30) Mucopolysaccharidosis type 2 (5C56.31) Mucopolysaccharidosis type 6 (5C56.33)
<b>EB90.10</b>	Pretibial myxoedema  Pretibial myxoedema is a form of diffuse cutaneous mucinosis in which there is an accumulation of excess glycosaminoglycans, especially hyaluronic acid, in the dermis and subcutis. It is most commonly seen on the shins (pretibial areas) but does occur elsewhere on the lower extremities. It manifests as violaceous or brownish, firm, non-pitting, asymmetrical nodules or plaques or nodules which tend to coalesce to produce extensive areas of induration with a "peau d'orange" (orange peel) appearance.  It is nearly always associated with autoimmune thyroiditis (Graves disease) and may be associated with finger clubbing (acropachy) and exophthalmos (thyroid eye disease).
<b>Coding Note:</b>	Code also the causing condition
<b>EB90.11</b>	Lichen myxedematosus  Localised lichen myxedematosus is a group of skin diseases characterised by the development of papules, nodules and/or plaques with mucin deposits and a variable degree of fibrosis in the absence of thyroid disease. The group comprises five sub-forms: nodular lichen myxedematosus, discrete papular lichen myxedematosus, papular mucinosis of infancy, acral persistent papular mucinosis and self-healing papular mucinosis.
<b>EB90.12</b>	Reticular erythematous mucinosis  Reticular erythematous mucinosis comprises areas of reticular infiltrated erythema affecting particularly the upper anterior chest wall. Histologically there is a mucinous and chronic inflammatory cell infiltrate in the dermis. It occurs most frequently in women in middle years of life. The aetiology is not understood though exposure to sunlight may play a part.
<b>EB90.1Y</b>	Other specified forms of cutaneous mucinosis
<b>EB90.2</b>	<b>Cutaneous and subcutaneous xanthomata</b> An abnormal accumulation of lipid in the skin or soft tissues, most frequently due to an associated dyslipidaemia.  <b>Exclusions:</b> Benign cephalic histiocytosis (EE81)

<b>EB90.20</b>	Plane xanthoma Plane (planar) xanthomata are flat cutaneous xanthomata and contrast with eruptive and tuberous xanthomata which present as papules and nodules. They are often completely macular but may develop into elevated plaques. The commonest type is the xanthelasma of the eyelid but also included is the palmar xanthoma and a less common widespread form, diffuse plane xanthoma, which may be mimicked by a clinically similar disorder associated with paraproteinaemia, diffuse normolipidaemic plane xanthomatosis.
<b>Coding Note:</b>	Code also the causing condition
	<b>Coded Elsewhere:</b> Xanthelasma of eyelid (9A06.4)
<b>EB90.21</b>	Tuberous xanthoma Tuberous xanthomas are firm yellow-red nodules that occur over sites of pressure: they usually indicate the presence of hyperlipidaemia type 3 (Type III hyperlipoproteinæmia). They start as small xanthomas, usually over the extensor aspects of the elbows and knees, but can develop into quite exuberant exophytic lesions several centimetres in diameter and height. They can develop over other pressure sites particularly the heels and plantar surfaces of the feet.
<b>Coding Note:</b>	Code also the causing condition
<b>EB90.22</b>	Eruptive xanthoma Eruptive xanthomata manifest as crops of small yellow papules which erupt in large numbers over extensor surfaces, particularly the buttocks, back, legs and arms. They are associated with severe hypertriglyceridaemia and may be associated with uncontrolled diabetes mellitus.
<b>Coding Note:</b>	Code also the causing condition
<b>EB90.23</b>	Tendinous xanthoma Tendinous xanthomata manifest most commonly as subcutaneous nodules attached to the extensor tendons over the knuckles or the Achilles tendon, though other tendons can sometimes be affected. They are most frequently seen in familial hypercholesterolaemia but may also be associated with secondary hypercholesterolaemia due to prolonged cholestasis.
<b>Coding Note:</b>	Code also the causing condition
<b>EB90.24</b>	Xanthoma due to specified disorder of lipid metabolism Lipid accumulations in the skin and soft tissues resulting from disordered lipid metabolism.
<b>Coding Note:</b>	Code also the causing condition
<b>EB90.2Z</b>	Cutaneous and subcutaneous xanthomata of unspecified type
<b>EB90.3</b>	<b>Porphyria or pseudoporphyria affecting the skin</b> Skin disorders resulting from or simulating disorders due to certain disorders of porphyrin metabolism.
	<b>Coded Elsewhere:</b> Porphyria cutanea tarda (5C58.10) Variegate porphyria (5C58.13) Erythropoietic porphyrias (5C58.12)

- EB90.30** Pseudoporphyria  
The development of blistering of exposed skin on the extremities resembling porphyria cutanea tarda without demonstrable abnormalities of porphyrin metabolism.
- EB90.3Y** Other specified porphyria or pseudoporphyria affecting the skin
- EB90.4** **Calcification of skin or subcutaneous tissue**  
A heterogeneous group of disorders which result in deposition of calcium in skin and soft tissues.
- EB90.40** Dystrophic calcification of the skin of uncertain or unspecified aetiology  
Abnormal deposition of calcium in the skin and subcutaneous tissues of unknown (idiopathic) or unspecified cause.  
**Coded Elsewhere:** Scrotal calcinosis (GA81.Y)
- EB90.41** Calcific panniculitis  
Calcific panniculitis presents as discrete, firm subcutaneous masses, often affecting the thighs and hips. It is strongly associated with hyperparathyroidism, particularly in the context of chronic renal failure. It may occur in conjunction with but is clinically distinct from calcific arteriolopathy (calciphylaxis).
- EB90.42** Calcific arteriolopathy  
Calcific arteriolopathy (calciphylaxis) is a life-threatening vasculopathic disorder characterised by painful cutaneous ischaemia and infarction due to calcification, intimal fibroplasia, and thrombosis of subcutaneous arterioles. It is most commonly associated with end-stage kidney disease or renal transplantation, particularly in the context of longstanding diabetes mellitus. Affected skin, commonly on the hips and thighs, appears mottled, grey and devitalized before progressing to full thickness infarction and deep ulceration. These changes may be accompanied by indurated subcutaneous plaques indicating an underlying calcifying panniculitis. The condition may be but is not always associated with hyperparathyroidism or an elevated calcium-phosphate product.  
**Inclusions:** Calciphylaxis
- EB90.4Y** Other specified calcification of skin or subcutaneous tissue
- EB9Y** **Other specified metabolic and nutritional disorders affecting the skin**

## Genetic and developmental disorders affecting the skin (EC10-EC7Y)

A large group of disorders, some limited to the skin but many involving other organ systems, due to heritable genetic defects, chromosomal abnormalities or embryofetal developmental anomalies.

**Coded Elsewhere:** Chromosomal disorders affecting the skin

- DNA instability syndromes affecting the skin
- Genetic disorders of adipose tissue or lipid metabolism affecting the skin
- Genetic disorders of amino acid metabolism or transport affecting the skin
- Sphingolipidoses with skin manifestations
- Genetic hamartoneoplastic syndromes affecting the skin (LD27.5)
- Variegate porphyria (5C58.13)
- Mucopolysaccharidosis type 1 (5C56.30)
- Mucopolysaccharidosis type 2 (5C56.31)
- Mucopolysaccharidosis type 6 (5C56.33)
- Acrodermatitis enteropathica (5C64.20)
- Monogenic autoinflammatory syndromes (4A60)
- Chronic mucocutaneous candidosis (1F23.14)
- Congenital anomalies of skin development (LC60-LC60)
- Developmental hamartomata of the epidermis and epidermal appendages (LC00-LC0Y)
- Developmental anomalies of skin pigmentation (LC10-LC1Y)
- Hamartomata derived from dermal connective tissue (LC20-LC2Y)
- Developmental defects of hair or nails (LC30-LC31)
- Developmental anomalies of cutaneous vasculature (LC50-LC5Z)

## Genetic syndromes affecting the skin (EC10-EC1Y)

**Coded Elsewhere:** Genetic syndromes affecting cutaneous vasculature

- Ectodermal dysplasia syndromes (LD27.0)
- Syndromes with premature ageing appearance as a major feature (LD2B)

**EC10**

### Genetic syndromes with poikiloderma

Hereditary syndromes in which poikiloderma (cutaneous pigmentation, atrophy and telangiectasia) is a conspicuous feature.

**Coded Elsewhere:** Cockayne syndrome (LD2B)

- Rothmund-Thomson syndrome (LD2B)
- Hereditary acrokeratotic poikiloderma, Weary type (LD27.Y)
- Kindler syndrome (LD2B)
- Bloom syndrome (4A01.31)
- Dyskeratosis congenita (3A70.0)

**EC1Y**

### Other specified genetic syndromes affecting the skin

**EC20**

### **Genetic disorders of keratinisation**

Heritable disorders characterised by abnormal epidermal keratinization. They include the ichthyoses and palmoplantar keratodermas.

**Coded Elsewhere:** Syndromic ichthyosis (LD27.2)

Keratosis pilaris (ED56)

**EC20.0**

#### **Non-syndromic ichthyosis**

Hereditary ichthyoses with clinical manifestations limited to the integument.

**EC20.00**

#### **Ichthyosis vulgaris**

Ichthyosis vulgaris accounts for 95% of all cases of hereditary ichthyosis. It is an autosomal dominant condition due to filaggrin gene mutations. At birth the skin may appear normal but it gradually becomes dry, rough and scaly, with most signs and symptoms appearing by the age of 5. Ichthyosis vulgaris can affect all parts of the skin surface including the face and scalp though the limb flexures are usually spared. Hyperlinearity of the palms is a characteristic feature. It is closely associated with the development of atopic eczema.

**EC20.01**

#### **X-linked ichthyosis**

X-linked ichthyosis is an X-linked recessive genodermatosis associated with steroid sulfatase deficiency and elevated plasma cholesterol sulfate. Generalised scaling is present at or shortly after birth, most prominently over the extremities, neck, trunk, and buttocks. It occurs only in males and may be associated with testicular disease and corneal opacities.

**EC20.02**

#### **Autosomal recessive congenital ichthyosis**

A heterogeneous group of genetically-determined ichthyoses with autosomal recessive inheritance.

**EC20.03**

#### **Keratinopathic ichthyoses**

Heritable ichthyoses resulting from mutations in keratin genes.

**EC20.0Y**

#### **Other specified or unclassifiable non-syndromic ichthyosis**

**EC20.1**

#### **Hereditary skin peeling**

A group of uncommon heritable disorders characterised by abnormal skin peeling

**EC20.2**

#### **Hereditary acantholytic dermatoses**

A group of heritable disorders characterised by epidermal acantholysis and loss of epidermal integrity.

**EC20.3**

#### **Hereditary palmoplantar keratodermas**

Heritable disorders of keratinisation of the skin of the palms and soles.

**EC20.30**

#### **Diffuse palmoplantar keratodermas**

Palmoplantar keratoderma in which there is confluent epidermal thickening affecting the palms and soles.

**Coded Elsewhere:** Hidrotic ectodermal dysplasia, Clouston type (LD27.03)

- EC20.31** Focal palmoplantar keratodermas  
 Palmoplantar keratoderma in which there is focal epidermal thickening with areas of normal intervening palmar and plantar skin.
- Coded Elsewhere:** Tyrosinaemia type 2 (5C50.12)
- EC20.32** Papular palmoplantar keratodermas  
 Palmoplantar keratoderma characterised by the presence of multiple small discrete hyperkeratotic papules involving palmar and plantar skin.
- EC20.3Z** Hereditary palmoplantar keratoderma of unspecified type
- EC20.Y** Other specified genetic disorders of keratinisation
- EC21**
- Genetic defects of hair or hair growth**
- Coded Elsewhere:** Genetic syndromes with hypertrichosis (LD27.3)
- EC21.0** Genetic defects of the hair shaft
- Exclusions:** Menkes' kinky hair syndrome (5C64.0)
- EC21.1** Genetic syndromes with abnormalities of the hair shaft
- Coded Elsewhere:** Bamforth-Lazarus syndrome (5A00.0Y)
- Cartilage-hair hypoplasia (LD27.0Y)
  - Netherton syndrome (LD27.2)
  - Woolly hair – palmoplantar keratoderma – dilated cardiomyopathy (BC43.6)
  - Woolly hair – hypotrichosis – everted lower lip – outstanding ears (LD27.0Y)
  - Menkes disease (5C64.0Y)
  - Curly hair – ankyloblepharon – nail dysplasia syndrome (LD27.0Y)
- EC21.2** Hereditary alopecia or hypotrichosis  
 Genetically-determined absence or sparsity of hair.

EC21.3	<p><b>Genetic syndromes with alopecia or hypotrichosis</b></p> <p>Hereditary syndromes in which sparse or absent hair is a component</p> <p><b>Coded Elsewhere:</b> Argininosuccinic aciduria (5C50.A0)</p> <ul style="list-style-type: none"> <li>Hidrotic ectodermal dysplasia, Clouston type (LD27.03)</li> <li>Severe T-cell immunodeficiency - congenital alopecia - nail dystrophy (4A01.1Y)</li> <li>Ichthyosis – hypotrichosis syndrome (LD27.2)</li> <li>Neonatal sclerosing cholangitis – ichthyosis – hypotrichosis syndrome (DB96.2Y)</li> <li>Odonto-onycho-dermal dysplasia (LD27.0Y)</li> <li>Woolly hair – hypotrichosis – everted lower lip – outstanding ears (LD27.0Y)</li> <li>Autosomal dominant palmoplantar keratoderma and congenital alopecia (LD27.0Y)</li> <li>Autosomal recessive palmoplantar keratoderma and congenital alopecia (LD27.0Y)</li> <li>Alopecia - contractures - dwarfism - intellectual deficit (LD27.0Y)</li> <li>Alopecia – psychomotor epilepsy – periodontal pyorrhoea – intellectual disability syndrome (LD90.Y)</li> <li>Cataract - alopecia - sclerodactyly (LD27.0Y)</li> <li>Odonto-onycho dysplasia - alopecia (LD27.0Y)</li> <li>Schöpf-Schulz-Passarge syndrome (LD27.0Y)</li> <li>Macrocephaly – alopecia – cutis laxa – scoliosis syndrome (LD28.2)</li> </ul>

<b>EC23</b>	<b>Genetic disorders of skin pigmentation</b> Genetic disorders of the skin characterised by disordered pigmentation, including albinism and inherited forms of lentiginosis.
<b>EC23.0</b>	<b>Non-syndromic genetically-determined hypermelanosis or lentiginosis</b>
<b>EC23.1</b>	<b>Syndromic genetically-determined hypermelanosis or lentiginosis</b>
	<b>Coded Elsewhere:</b> Peutz-Jeghers syndrome (LD2D.0)  Incontinentia pigmenti (LD27.00) Neurofibromatoses (LD2D.1) Arterial dissection - lentiginosis (BD50.Z) McCune-Albright syndrome (FB80.0) LEOPARD syndrome (LD2F.1Y) Carney complex (5A70.Y) Bannayan-Riley-Ruvalcaba syndrome (LD2D.Y) Legius syndrome (LD27.5)
<b>EC23.2</b>	<b>Albinism or other specified genetically-determined hypomelanotic disorders</b> A large group of heritable disorders in which cutaneous melanin production is reduced or absent, mainly as the result of defects in enzymes required for normal melanin biosynthesis.  <b>Coded Elsewhere:</b> Ocular albinism (9E1Y)
<b>EC23.20</b>	Oculocutaneous albinism Oculocutaneous albinism is a genetically heterogeneous congenital disorder characterised by decreased or absent pigmentation in the hair, skin, and eyes.
<b>EC23.2Y</b>	Other specified genetically-determined hypomelanotic disorders
<b>EC23.Y</b>	<b>Other specified genetic disorders of skin pigmentation</b>
<b>EC23.Z</b>	<b>Genetic disorders of skin pigmentation, unspecified</b>

Genetically-determined epidermolysis bullosa (EC30-EC3Z)

Epidermolysis bullosa (EB) is the name given to a heterogeneous group of blistering disorders which in the majority of cases are due to genetically-determined defects in structural proteins of the epidermis and dermo-epidermal junction. The genetic forms are to be distinguished from the immunobullous disorder, epidermolysis bullosa acquisita (qv).

**Exclusions:** Epidermolysis bullosa acquisita (EB43)

<b>EC30</b>	<b>Epidermolysis bullosa simplex</b> Epidermolysis bullosa simplex is the name given to a heterogeneous group of genetically-determined defects in epidermal cell-cell adhesion. These give rise to blistering in response to frictional and shearing stresses.
-------------	--

**EC31**

### **Junctional epidermolysis bullosa**

Junctional (lucidolytic) epidermolysis bullosa is due to defects at the level of the lamina lucida of the epidermal basement membrane. The generalised severe form (Herlitz) is associated with widespread mucosal involvement of internal organs and has a high mortality in infancy.

**EC32**

### **Dystrophic epidermolysis bullosa**

Dystrophic (dermolytic) epidermolysis bullosa is due to defects in or absence of type VII collagen. As a result the anchoring fibrils which secure the epidermal basement membrane to the dermis are defective or absent. The severe recessive form causes extensive scarring and predisposes to aggressive squamous cell carcinoma.

**EC33**

### **Syndromic epidermolysis bullosa**

A small group of disorders including Kindler syndrome in which skin blistering is associated with other defects.

**Coded Elsewhere:** Kindler syndrome (LD2B)

Ectodermal dysplasia – skin fragility syndrome (EC30)

Skin fragility-woolly hair syndrome (EC21.1)

**EC3Z**

### **Epidermolysis bullosa**

Genetic disorders affecting dermal collagen, elastin or other matrix proteins (EC40-EC4Y)

A heterogeneous group of disorders due to genetically-determined abnormalities of dermal structural proteins including collagen and elastin.

**Coded Elsewhere:** Ehlers-Danlos syndrome (LD28.1)

Marfan syndrome (LD28.01)

Genetically-determined cutis laxa (LD28.2)

Familial cutaneous collagenoma (LC2Y)

**EC40**

### **Pseudoxanthoma elasticum**

Pseudoxanthoma elasticum (PXE) is an inherited connective tissue disorder characterised by progressive calcification and fragmentation of elastic fibres in the skin, retina, and arterial walls.

**EC4Y**

### **Other specified genetic disorders affecting dermal matrix proteins**

Specified developmental anomalies affecting the skin (EC50-EC5Y)

**Coded Elsewhere:** Structural developmental anomalies of eyelids (LA14.0)

Structural developmental anomalies of mouth or tongue (LA31)

Facial clefts (LA51)

Minor anomalies of pinnae (LA21)

Amniotic bands (LD2F.1Y)

**EC50**

### **Developmental anomalies of the umbilicus**

**Coded Elsewhere:** Allantoic duct remnants or cysts (LB03.0)

Umbilical sinus (LB03.Y)

Umbilical vitelline cyst or remnants (LB03.Y)

Subcutaneous vitelline cyst or remnants (LB03.Y)

**EC5Y**

### **Other specified developmental anomalies affecting the skin**

**EC7Y**

### **Other specified genetic and developmental disorders affecting the skin**

Sensory and psychological disorders affecting the skin (EC90-ED3Y)

A group of skin disorders due to disturbances of cutaneous sensation including pruritus and pain, psychological disorders including artefact and delusional states, and dermatoses resulting from nerve damage and other neurological conditions.

Disturbances of cutaneous sensation (EC90-EC9Y)

This group includes dermatoses associated with itch, pain and other disturbances of cutaneous sensation.

**Coded Elsewhere:** Lichen simplex (EA83.0)

**EC90**

### **Pruritus**

An intense itching sensation that produces the urge to rub or scratch the skin to obtain relief.

**Exclusions:** neurotic excoriation (6B25.1)

**Coded Elsewhere:** Pruritus of pregnancy (JA65.11)

**EC90.0**

### **Pruritus due to skin disorder**

Pruritus due to skin disorder, especially those such as xerosis cutis or psoriasis where itch may occur but is not an inherent component of the disorder.

**EC90.1**

### **Pruritus due to systemic disorder**

Pruritus due to underlying systemic disorder such as renal failure or cholestatic jaundice.

**Coded Elsewhere:** HIV-associated pruritus (EL3Y)

Paraneoplastic pruritus (EL1Y)

- EC90.10** Uraemic pruritus  
Pruritus in patients with chronic renal failure. Although common in untreated chronic kidney disease, it is particularly prevalent in patients receiving peritoneal or haemodialysis. The itch is not due to elevated serum urea levels. The precise mechanisms are not fully understood.
- EC90.11** Cholestatic pruritus  
Pruritus due to defective elimination of bile.  
**Coded Elsewhere:** Intrahepatic cholestasis of pregnancy (JA65.0)
- EC90.12** Haemodialysis-associated pruritus  
Generalised pruritus attributable to haemodialysis rather than to chronic kidney disease. The causes are not well understood.
- EC90.1Y** Pruritus due to other specified systemic disorder
- EC90.2** **Drug-induced pruritus**  
Pruritus attributable to drugs, in particular opioids.
- EC90.3** **Pruritus due to neurological disorder**  
Pruritus resulting from damage or irritation of sensory nerves or their central connections.
- EC90.4** **Psychogenic pruritus**  
Chronic episodic pruritus in the absence of an identifiable organic cause and typically associated with stress and/or depression.
- EC90.5** **Anogenital pruritus**  
Persistent itching of the perianal skin and/or external genitalia.  
**Coded Elsewhere:** Penoscrotal pruritus (GA81.0)  
Vulval pruritus (GA42.0)  
Anal pruritus (EG60)
- EC90.6** **Pruritus of unknown cause**  
Pruritus without identifiable cause despite thorough investigation.
- EC90.Y** **Pruritus of other specified type or aetiology**
- EC90.Z** **Pruritus, unspecified**
- EC91** **Prurigo**  
Prurigo is a cutaneous reaction pattern due to chronic scratching of itchy skin. It is characterised by widespread, symmetrically distributed, itchy, excoriated papules and nodules with focal epidermal acanthosis and hyperkeratosis on histology.  
**Coded Elsewhere:** HIV-associated papular pruritic eruption (EL3Y)

EC91.0	<b>Nodular prurigo</b> A chronic highly pruritic dermatosis of poorly understood aetiology which presents with multiple warty nodules on the skin, particularly on the limbs. Exudation, crusting and scale result from repeated scratching.
EC91.1	<b>Atopic prurigo</b> A clinical variant of atopic eczema characterised by multiple discrete itchy, often excoriated papules, particularly on the limbs.  <b>Coded Elsewhere:</b> Childhood atopic eczema, prurigo pattern (EA80.1) Adult atopic eczema, prurigo pattern (EA80.2)
EC91.Z	<b>Prurigo, unspecified</b>
EC92	<b>Mucocutaneous or cutaneous pain syndromes</b> A range of chronic focal pain disorders affecting skin or mucosal sites, with a predilection for the orocervical and urogenital regions. They are diagnoses of exclusion and should be made only when no other explanation for the symptoms can be found. They are frequently associated with severe psychological distress.  <b>Coded Elsewhere:</b> Burning mouth syndrome (DA0F.0) Vulvodynia (GA34.02)
EC92.0	<b>Penoscrotodynia</b> An uncommon but distressing somatoform disorder affecting men in which there is a clear and precise complaint of genital pain and/or a skin burning sensation for which no underlying cause can be found.
EC92.1	<b>Scalp dysaesthesia</b> An uncommon but distressing somatoform disorder in which there is a clear and precise complaint of scalp pain or burning sensation for which no underlying cause can be found.
EC9Y	<b>Other specified disturbances of cutaneous sensation</b>

## Mental conditions affecting the skin (ED00-ED2Y)

This group includes cutaneous artefacts and disorders of cutaneous image and perception including delusional states and body dysmorphic disorder.

**Coded Elsewhere:** Olfactory reference disorder (6B22)

Body dysmorphic disorder (6B21)

Somatic delusion directed at the skin (MB26.09)

## Self-inflicted skin disorders (ED00-ED0Y)

This heterogeneous group of disorders all result from self-inflicted skin injury or pathomimicry directly induced either by psychopathological behaviour or by intentional deception.

**Coded Elsewhere:** Body-focused repetitive behaviour disorders (6B25)

Trichotillomania (6B25.0)

Self-inflicted hair-damaging disorder (6B25.Z)

**ED00**

### Artefactual skin disorder

Artefactual skin disorder encompasses a diverse range of self-inflicted skin injuries that are provoked by mechanical means or by the application or injection of chemical irritants or caustics. They may simulate other dermatoses but usually have a distinctive, geometric, bizarre configuration which cannot be otherwise explained.

**Inclusions:** Dermatitis artefacta

**Exclusions:** Excoriation disorder (6B25.1)

Factitious disorders (6D50-6D5Z)

Malingering (QC30)

**Coded Elsewhere:** Artefactual panniculitis (EF00.Y)

**ED01**

### Simulated skin disease

Simulated skin disease can present in a variety of ways such as application of glue, dyes or make-up to the skin (particularly by children or adolescent girls) and is usually though not always readily recognised for what it is. The motivation for the simulation can vary but may point to some form of psychopathology or may be purely experimentation.

**Exclusions:** Factitious disorders (6D50-6D5Z)

Malingering (QC30)

**ED02**

### Painful bruising syndrome

Painful bruising syndrome (Gardner-Diamond syndrome, autoerythrocyte sensitization, psychogenic purpura) is a rare and poorly understood clinical presentation of unexplained painful ecchymoses, mostly on the extremities and/or the face. It has been associated with emotional stress or one or more concomitant mental illnesses.

**ED0Y**

### Other specified self-inflicted skin disorders

---

**ED2Y**

**Other specified mental conditions affecting the skin**

Neurological conditions affecting the skin (ED30-ED3Y)

Skin conditions resulting from degeneration of or damage to the nervous system

**Coded Elsewhere:** Pruritus due to neurological disorder (EC90.3)

Hereditary sensory or autonomic neuropathy (8C21)

**ED30**

**Neuropathic skin damage**

Skin changes attributable entirely or in part to sensory or autonomic nerve damage.

**ED30.0**

**Neuropathic skin ulceration**

Ulceration of the skin resulting from impairment of pain sensation due to sensory nerve dysfunction.

**Inclusions:** Neuropathic ulcer

**Coded Elsewhere:** Neuropathic skin ulceration due to leprosy (1B20.3)

**ED30.Y**

**Other specified neuropathic skin damage**

**ED31**

**Burning feet syndrome**

Burning feet syndrome is thought to be due to a specific autonomic neuropathy affecting predominantly small fibre cholinergic nerves. It is characterised by an uncomfortable burning sensation on the feet, often accentuated by heat or cold. It may be sporadic, familial or associated with diabetes mellitus.

**ED3Y**

**Cutaneous involvement in other specified neurological condition**

## Skin disorders involving specific cutaneous structures (ED50-EG02)

### Disorders of the epidermis and epidermal appendages (ED50-EE21)

This group incorporates skin disorders involving principally the epidermis, including abnormalities of keratinization and pigmentation, and the epidermal appendages, namely the hair follicular unit (hair, hair follicle, sebaceous gland, apocrine duct and apocrine gland), the eccrine sweat gland apparatus (eccrine duct and gland) and the nail apparatus.

### Disorders of epidermal keratinisation (ED50-ED5Y)

This group incorporates dermatoses characterised by scaling (ichthyoses and hyperkeratoses), epidermal thickening (acanthoses and keratodermas), loss of cohesion (acantholytic dermatoses and skin peeling) or xeroderma.

**Coded Elsewhere:** Hereditary acantholytic dermatoses (EC20.2)

**ED50**

#### **Ichthyoses**

Genetically-determined and acquired disorders of epidermal keratinization characterised by diffuse scaling and/or thickening of the stratum corneum.

**Coded Elsewhere:** Non-syndromic ichthyosis (EC20.0)

Syndromic ichthyosis (LD27.2)

Hereditary ichthyosis (EC20.Y)

**ED50.0**

#### **Acquired ichthyosis**

Acquired ichthyosis resembles autosomal dominant ichthyosis vulgaris but develops in adult life in individuals without a previous history of ichthyosis. It may be caused by certain drugs but when associated with underlying malignancy (i.e. paraneoplastic) it is strongly associated with Hodgkin lymphoma and may be the presenting sign of that disease. It may less commonly be associated with other lymphoid neoplasms or solid tumours.

**Exclusions:** Hereditary ichthyosis (EC20)

**Coded Elsewhere:** Paraneoplastic acquired ichthyosis (EL10)

**ED50.Z**

#### **Ichthyosis of unspecified type**

**ED51**

#### **Diffuse epidermal hyperkeratosis and acanthosis**

Conditions characterised by diffuse thickening of the horny and/or spinous layers of the epidermis.

**ED51.0**

#### **Acanthosis nigricans**

Acanthosis nigricans is characterised by dark, thick, velvety skin in body folds and creases. It is most commonly encountered in association with obesity and type 2 diabetes though may be a component of a number of genetic syndromes. Hyperinsulinaemia and insulin resistance are important underlying factors. Acanthosis nigricans may rarely be due to underlying malignancy (paraneoplastic acanthosis nigricans).

**Coded Elsewhere:** Paraneoplastic acanthosis nigricans (EL10)

<b>ED51.00</b>	Benign acanthosis nigricans Benign acanthosis nigricans is a thickening and pigmentation affecting predominantly flexural skin, especially the neck, axillae and groins. It is thought to be due to high concentrations of insulin binding to insulin-like growth factor receptors, with resultant keratinocyte proliferation. It is strongly associated with insulin resistance and obesity. Type 2 diabetes and the metabolic syndrome are commonly associated.
	<b><i>Exclusions:</i></b> Paraneoplastic acanthosis nigricans (EL10)
<b>ED51.0Y</b>	Other specified acanthosis nigricans
<b>ED51.0Z</b>	Acanthosis nigricans, unspecified
<b>ED51.Y</b>	<b>Other specified hyperkeratotic and acanthotic dermatoses</b>
<b>ED52</b>	<p><b>Porokeratoses</b></p> <p>Porokeratoses result from a clonal disorder of keratinization. They are characterised by one or more atrophic patches surrounded by a clinically and histologically distinctive ridged hyperkeratotic border (cornoid lamella). Multiple clinical variants of porokeratosis are recognised.</p>
<b>ED53</b>	<p><b>Skin peeling</b></p> <p>A range of hereditary and acquired disorders characterised by an increased tendency to superficial skin peeling.</p> <p><b>Coded Elsewhere:</b> Hereditary skin peeling (EC20.1)</p>
<b>ED54</b>	<p><b>Xerosis cutis or asteatosis</b></p> <p>Dryness of the skin surface commonly due to defatting of the epidermis by excessive exposure to soaps and detergents or desiccation from prolonged exposure to low ambient humidity. It occurs most commonly in the elderly and is seen particularly on the lower legs. It is a major cause of pruritus in the elderly. In more severe cases the skin may become inflamed (asteatotic eczema).</p> <p><b>Coded Elsewhere:</b> Asteatotic eczema (EA84)</p> <p>Xerosis cutis due to leprosy (1B20.3)</p>
<b>ED55</b>	<p><b>Palmoplantar keratodermas</b></p> <p>A range of genetic and acquired disorders in which there is thickening of the epidermal keratin of the skin of the palmar surfaces of the hands and plantar surfaces of the feet.</p> <p><b>Coded Elsewhere:</b> Hereditary palmoplantar keratodermas (EC20.3)</p>
<b>ED55.0</b>	<p><b>Acquired palmoplantar keratodermas</b></p> <p><b><i>Exclusions:</i></b> inherited keratosis palmaris et plantaris (EC50-EC5Y)</p> <p><b>Coded Elsewhere:</b> Arsenical keratosis (EK90.Y)</p>
<b>ED55.Z</b>	<b>Palmoplantar keratoderma, unspecified</b>

**ED56**

### **Keratosis pilaris**

Keratosis pilaris is a very common abnormality of keratinization characterised by keratinous plugging of follicular orifices with varying degrees of perifollicular erythema. It is seen in up to half of normal children and in three quarters of children with ichthyosis vulgaris. The sides of the face and the extensor surfaces of the upper arms are sites of predilection. Autosomal dominant inheritance can often be demonstrated. In some variants atrophy or pigmentation may be more prominent than keratosis.

**ED5Y**

### **Other specified disorders of epidermal keratinisation**

## **Disorders of skin colour (ED60-ED6Y)**

This group includes not only abnormalities of melanin pigmentation (e.g. vitiligo and melasma) but also skin colour changes due to other pigments (e.g. carotenaemia and argyria).

**Coded Elsewhere:** Genetic disorders of skin pigmentation (EC23)

Developmental anomalies of skin pigmentation (LC10-LC1Y)

Late lesions of pinta (1C1E.2)

Pigmentary abnormalities of skin due to drug (EH70)

**ED60**

### **Acquired hypermelanosis**

Increased melanin pigmentation of the skin resulting from disease or from other stimuli including ultraviolet radiation and hormones.

**Coded Elsewhere:** Drug-induced hypermelanosis (EH70)

Labial melanin incontinence (DA00.2)

Oral melanin incontinence (DA01.Y)

Occupational melanosis (EK5Y)

**ED60.0**

### **Physiological hypermelanosis**

The response of normal skin to exposure to natural or artificial ultraviolet radiation.

**ED60.00**

#### Suntan

Increased melanin pigmentation of the skin as a result of exposure to natural sunlight.

**ED60.01**

Tanning due to exposure to artificial sources of ultraviolet radiation

Increased melanin pigmentation as a result of deliberate (sunbeds and tanning booths) or unintentional exposure to UV.

**Exclusions:** Burn from exposure to artificial source of ultraviolet radiation (EJ41)

**ED60.1**

### **Melasma**

A common condition of incompletely understood aetiology characterised by patchy melanin pigmentation of the malar prominences, forehead and perioral skin. The pigmentation is exacerbated by sun exposure. Melasma is common in pregnancy and in women taking oral contraceptive preparations; it may, however, also be seen in men.

<b>ED60.2</b>	<b>Postinflammatory hypermelanosis</b> Melanin pigmentation of the skin resulting from preceding cutaneous inflammation, particularly when this is centred on the dermo-epidermal junction as in lichen planus. Damage to melanocytes results in release of melanin into the dermis (pigmentary incontinence).
<b>ED60.Y</b>	<b>Hypermelanosis of other specified aetiology</b>
<b>ED60.Z</b>	<b>Hypermelanosis of unspecified aetiology</b>
<b>ED61</b>	<p><b>Acquired melanotic macules or lentigines</b> Acquired discrete macules and flat patches of melanin skin pigmentation including freckles and lentigines.</p> <p><b>Coded Elsewhere:</b> Actinic lentigo (EJ20.1) Actinic lentiginosis (EJ20.2) PUVA lentiginosis (EM0Y)</p>
<b>ED61.0</b>	<p><b>Freckles</b> The presence of multiple ephelides (ephelis = freckle) as is commonly seen in sun-exposed skin of individuals with phototype I (sun-sensitive) skin. They occur as a profusion of light brown macules, particularly on the face and upper extremities, and become more prominent after sun exposure. In contrast to lentigines there is no keratinocyte proliferation histologically.</p>
<b>ED61.1</b>	<p><b>Mucosal melanosis</b> Abnormal pigmentation of the mucous membranes</p> <p><b>Coded Elsewhere:</b> Labial melanotic macule (DA00.2) Melanotic macule of oral mucosa (DA01.Y)</p>
<b>ED61.10</b>	<p>Penile melanotic macule Discrete circumscribed area of macular hypermelanosis affecting the glans penis or the shaft of the penis. These are much commoner than melanoma of the penis but may be clinically suspected to be melanoma and thus require biopsy. By definition the cause is unknown.</p>
<b>ED61.11</b>	<p>Vulval melanotic macule Benign genital melanosis affecting the vulva.</p>
<b>ED61.1Y</b>	Other specified mucosal melanosis
<b>ED61.Y</b>	<b>Other specified acquired melanotic macules or lentigines</b>
<b>ED62</b>	<p><b>Endogenous non-melanin pigmentation</b> Pigmentation of the skin resulting from endogenous pigments other than melanin. The most important of these is haemosiderin.</p> <p><b>Coded Elsewhere:</b> Endogenous ochronosis (5C50.10)</p>

<b>ED62.0</b>	<b>Haemosiderin pigmentation of skin</b> Dermal haemosiderin deposition causes a yellowish-brown or bronze discolouration of the skin. The deposition may be focal as seen following repeated extravasation of red blood cells (e.g. in association with venous hypertension or chronic vasculitis) or from generalised iron overload (e.g. haemochromatosis). Haemosiderin may stimulate melanogenesis and thus the colour is due to variable proportions of haemosiderin and melanin.  <i>Coded Elsewhere:</i> Hereditary haemochromatosis (5C64.10)
<b>ED62.Y</b>	<b>Other specified endogenous non-melanin pigmentation</b>
<b>ED63</b>	<b>Acquired hypomelanotic disorders</b> Acquired disorders characterised by diminution or loss of pigment from the skin. The most important of these is vitiligo.
<b>ED63.0</b>	<b>Vitiligo</b> Vitiligo is an acquired pigmentary disorder of the skin and mucous membranes where progressive destruction of melanocytes results in loss of skin pigmentation. Half of all cases first appear before the age of 20. The clinical course is unpredictable but gradual extension of the areas involved is the norm. The disease may have a devastating psychological impact, particularly in people with dark skin.  <i>Coded Elsewhere:</i> Vitiligo of eyelid or periocular area (9A06.1)
<b>ED63.1</b>	<b>Hypomelanosis due to exposure to chemicals</b> Loss of skin pigment due to exposure to depigmenting agents such as hydroquinone, which is frequently employed as a cosmetic skin lightener, and industrial chemicals such as 4-tert-butylcatechol (PTBC) and para-substituted phenols (PSP).  <i>Coded Elsewhere:</i> Occupational leukoderma (EK5Y)
<b>ED63.2</b>	<b>Postinflammatory hypomelanosis</b> A reduction in skin pigmentation apparent following the resolution of skin inflammation. This may be from an inflammatory dermatosis such as dermatitis or lichen planus or may follow trauma or interventional procedures. The loss of pigment may cause significant psychological distress in dark-skinned individuals but in most cases is temporary.  <i>Exclusions:</i> Postinfective hypomelanosis (ED63)
<b>ED63.3</b>	<b>Vogt-Koyanagi-Harada syndrome</b> <i>Coded Elsewhere:</i> Vogt-Koyanagi-Harada syndrome-associated anterior uveitis (9A96.1) Posterior uveitis due to Vogt Koyanagi Harada syndrome (9B65.0)
<b>ED63.Y</b>	<b>Acquired hypomelanosis due to other specified disorder</b>
<b>ED63.Z</b>	<b>Acquired hypomelanosis of unknown or unspecified aetiology</b>
<b>ED64</b>	<b>Abnormal skin pigmentation</b> Abnormal skin pigmentation without specification of type or cause.

**ED6Y****Other specified disorders of skin pigmentation****Disorders of hair (ED70-ED7Y)**

**Coded Elsewhere:** Genetic defects of hair or hair growth (EC21)

Developmental defects of hair or hair growth (LC30)

Trichotillomania (6B25.0)

Drug-induced hair abnormalities (EH72)

Self-inflicted hair-damaging disorder (6B25.Z)

**ED70****Alopecia or hair loss**

Disorders characterised by abnormal temporary or permanent loss of hair, particularly from the scalp and beard.

**Coded Elsewhere:** Madarosis of eyelid or periocular area (9A04.1)

**ED70.0****Male pattern hair loss**

Male pattern hair loss (common baldness; male androgenetic alopecia) is the result of a progressive, patterned hair loss mediated by exposure to androgens. Although over 90% of men demonstrate some degree of frontoparietal recession of the hairline by the age of 20, the extent of hair loss is genetically determined and only 30% of men ever develop extensive hair loss.

**Inclusions:** Common balding

**ED70.1****Female pattern hair loss**

Female pattern hair loss differs from male pattern hair loss not only in being generally less pronounced than in men but also by the fact that the normal frontal hair line is usually preserved. A quarter of women will develop clinically detectable pattern hair loss by the age of 70. In the majority of cases it can be attributed to the effects of androgens.

**ED70.2****Alopecia areata**

A microscopically inflammatory, usually reversible, patchy hair loss occurring in sharply defined areas and usually involving the beard or scalp

**ED70.20****Patchy alopecia areata of scalp**

The commonest form of alopecia areata in which one or more usually circular patches of scalp hair loss develop.

**ED70.21****Alopecia totalis**

Alopecia totalis is a form of alopecia areata in which hair loss extends to the entire scalp

**ED70.2Y****Other specified forms of alopecia areata****ED70.2Z****Alopecia areata, unspecified**

<b>ED70.3</b>	<b>Telogen effluvium</b> Increased shedding of telogen hairs from the scalp. There are numerous triggers of which severe systemic illness and pregnancy are important examples.  <b>Coded Elsewhere:</b> Drug-induced telogen hair loss (EH72.00)
<b>ED70.30</b>	Acute telogen effluvium Acute telogen effluvium is an acute-onset scalp hair loss that occurs two to three months after a triggering, often life-threatening, stress which interrupts normal anagen hair growth. It is commonly seen in survivors who have required intensive care for severe sepsis, blood loss, inflammatory disease or trauma. It may also result from acute starvation. Large numbers of anagen hairs are converted to telogen and are shed two to three months later resulting in a diffuse alopecia.
<b>ED70.31</b>	Postpartum telogen effluvium A physiological phenomenon in which diffuse hair loss occurs two to three months following parturition. It is due to a postponement of the normal cyclical conversion of anagen hairs to telogen during pregnancy. After parturition a large number of anagen hairs are converted simultaneously to telogen and shed two to three months later. Normal hair cycling is then resumed.
<b>ED70.3Y</b>	Telogen hair shedding due to other specified cause
<b>ED70.3Z</b>	Telogen effluvium unspecified
<b>ED70.4</b>	<b>Anagen effluvium</b> Anagen effluvium occurs after any insult to the hair follicle that impairs its mitotic or metabolic activity. Patients present with diffuse hair loss after an exposure to drugs or toxic chemicals. Chemotherapeutic agents are most commonly responsible for hair loss. The most severe hair loss occurs in association with doxorubicin, the nitrosoureas, and cyclophosphamide. Hair loss usually begins 7-14 days after a single pulse of chemotherapy. The hair loss is clinically most apparent after 1-2 months.  <b>Coded Elsewhere:</b> Drug-induced anagen effluvium (EH72.01)
<b>ED70.5</b>	<b>Scarring alopecia</b> Hair loss in which there is irreversible damage to the hair follicle from inflammation, infection, malignant infiltration or trauma, resulting in destruction of the follicle and repair by fibrosis. Regeneration does not occur once the follicle has been destroyed.  <b>Inclusions:</b> Cicatricial alopecia <b>Exclusions:</b> Lichen planopilaris (EA91.2)

<b>ED70.50</b>	Folliculitis decalvans  Folliculitis decalvans is characterised by the progression of scalp folliculitis to extensive inflammation, follicular destruction and scarring. In a variant called tufted folliculitis the hairs become clumped into tufts containing a dozen or more hairs. In contrast to the course in the vast majority of people who develop a bacterial pustular folliculitis of the scalp, individuals with folliculitis decalvans appear unable to eradicate <i>Staphylococcus aureus</i> from the hair follicle even with appropriate antibiotic therapy. Recurrent pustulation with surrounding inflammation and scaling leads to extensive permanent scarring and loss of hair.
<b>ED70.51</b>	Dissecting cellulitis  Dissecting cellulitis is a destructive inflammatory disorder of the scalp characterised by widespread perifolliculitis with dermal abscess and sinus tract formation and extensive scarring. It occurs predominantly in black males aged between 18 and 40 years. It may be associated with hidradenitis suppurativa and acne conglobata (follicular occlusion triad), and with pilonidal sinus. Painful swellings develop around the vertex of the scalp and coalesce to form irregular undulating oedematous ridges and furrows. With time an extensive network of sinuses discharging pus may develop. Progressive scarring and permanent alopecia ensue.  <b>Coded Elsewhere:</b> Follicular occlusion syndrome (ED80.41)
<b>ED70.5Y</b>	Scarring alopecia due to other specified cause
<b>ED70.5Z</b>	Scarring alopecia of unknown or unspecified aetiology
<b>ED70.Y</b>	<b>Other specified alopecia or hair loss</b>
<b>ED70.Z</b>	<b>Alopecia, unspecified</b>
<b>ED71</b>	<p><b>Hypertrichosis</b></p> <p><b>Exclusions:</b> congenital hypertrichosis (9B70) Hirsutism and syndromes with hirsutism (ED72)</p> <p><b>Coded Elsewhere:</b> Hypertrichosis of eyelid (9A04.Y) Naevoid hypertrichosis (LC30) Acquired hypertrichosis lanuginosa (EL10) Drug-induced hypertrichosis (EH72.Y)</p>
<b>ED72</b>	<p><b>Hirsutism and syndromes with hirsutism</b></p> <p><b>Coded Elsewhere:</b> Polycystic ovary syndrome (5A80.1) Congenital adrenal hyperplasia (5A71.01) HAIR-AN syndrome (5A44)</p>
<b>ED72.0</b>	<p><b>Constitutional hirsutism</b></p> <p>Hirsutism in a person with normal endocrine and reproductive function. It is more prevalent in some ethnic groups (e.g. South Asian) than others.</p>

- ED72.1** **Hirsutism associated with hyperandrogenaemia**  
 Excessive male-pattern facial and body hair in women, mostly caused by PCOS, by hyperandrogenemia combined with normal ovulation, or idiopathically, after exclusion of androgen-secreting neoplasm, congenital adrenal hyperplasia and HAIR-AN syndrome. The severity of hirsutism can be assessed by the Ferriman-Gallwey score.
- ED72.Z** **Hirsutism, unspecified**
- ED73** **Acquired disorders of the hair shaft**
- ED73.0** **Weathered hair**  
 Weathered hair results from repetitive damage to the hair shaft from excessive sunlight, excessive wetting, chemical insults including hair cosmetics and physical damage. The hair appears dull and lustreless, fractures readily and may show "split ends".
- ED73.1** **Acquired changes in hair colour**  
 Abnormal diffuse or circumscribed alterations in natural hair colour. Causes include drugs, idiopathic premature greying of the hair, differential shedding of pigmented hair in alopecia areata or hair pigment loss in association with vitiligo or regressing melanocytic naevi.  
**Coded Elsewhere:** Drug-induced hair colour change (EH72.Y)  
 Segmental heterochromia of hair (LC30)
- ED73.10** **Premature canities**  
 Premature greying of the hair, usually taken to mean before the age of 20 in Caucasians and before the age of 30 in Africans.  
**Inclusions:** Premature greying of hair
- ED73.11** **Acquired poliosis**  
 Circumscribed loss of hair pigment. This is most commonly associated with vitiligo (especially segmental vitiligo), alopecia areata or regressing melanocytic naevi. It is also a component of Vogt-Koyanagi-Harada syndrome and Alezzandrini syndrome.  
**Inclusions:** Circumscribed loss of hair pigment  
**Coded Elsewhere:** Acquired poliosis of eyelashes (9A04.Y)
- ED73.Y** **Other specified acquired disorders of the hair shaft**
- ED7Y** **Other specified disorders of hair**

## Disorders of the hair follicle (ED80-ED9Y)

This group incorporates disorders of the hair shaft and hair follicular unit including, for example, hirsutism, alopecia, acne and hidradenitis suppurativa.

**Coded Elsewhere:** Chronic deep bacterial folliculitis (1B75.4)

### Acne and related disorders (ED80-ED81.Y)

A group of related disorders characterised by follicular occlusion and inflammation.

<b>ED80</b>	<b>Acne</b> Acne without further specification.  <b>Coded Elsewhere:</b> Neonatal acne (KC21.0)
<b>ED80.0</b>	<b>Comedonal acne</b> Acne in which the principal manifestation is the presence of open and/or closed comedones, respectively blackheads and whiteheads.  <b>Exclusions:</b> Actinic comedonal plaque (EJ20.0) Comedo naevus (LC01)
<b>ED80.1</b>	<b>Superficial mixed comedonal and papulopustular acne</b> Acne in which comedones are accompanied by small inflammatory papules and pustules
<b>ED80.2</b>	<b>Papulopustular acne</b> Acne in which the principal manifestation is the presence of multiple small inflammatory papules and pustules.
<b>ED80.3</b>	<b>Nodular acne</b> Acne in which large inflammatory nodules and fluid-filled cystic swellings as well as more superficial lesions are present. Systemic therapy with antibiotics or retinoids is usually required.
<b>ED80.4</b>	<b>Severe inflammatory acne</b> Intensely inflammatory acne which may be acute (acne fulminans) or subacute and chronic (acne conglobata).
<b>ED80.40</b>	Acne fulminans Acne fulminans is a severe systemic disease in which acute inflammatory acne with multiple follicular abscesses and skin ulceration is accompanied by fever, weight loss and arthralgia. It typically affects adolescent white males.
<b>ED80.41</b>	Acne conglobata An uncommon chronic severe inflammatory form of acne characterised by the development of multiple abscesses and sinuses followed by extensive hypertrophic and atrophic scarring. It may be associated with spondyloarthropathy or with other follicular occlusive diseases including dissecting cellulitis of the scalp and hidradenitis suppurativa.

- ED80.4Y** Other specified severe inflammatory acne
- ED80.4Z** Severe inflammatory acne, unspecified
- ED80.5** **Acne scarring**  
Scarring resulting from acne, ranging from mild irregularity of the skin surface to highly disfiguring or functionally disabling distortion of normal skin anatomy.  
*Coded Elsewhere:* Keloidal acne (EE60.Y)
- ED80.6** **Infantile acne**  
Infantile acne usually presents at 3–6 months of age but has been reported as late as 16 months. Male infants are affected more commonly than females and there may be a history of severe acne in one or more parents. It may last up to the age of five years. Both comedonal and inflammatory acne with papules, pustules and nodules may be seen; scarring may result.
- ED80.Y** **Other specified acne**
- ED80.Z** **Acne, unspecified**
- ED81** **Acneform inflammatory disorders**  
Disorders characterised by acne-like follicular inflammation.  
*Coded Elsewhere:* Scalp folliculitis (EG30.0)  
Acne or acneform reactions attributable to drugs (EH67)  
Folliculitis keloidalis (EE60.Y)
- ED81.0** **Folliculitis cruris pustulosa atrophicans**  
A folliculitis prevalent in Sub-Saharan Africa due to the custom of applying of greasy ointments to the lower legs. It presents as an inflammatory folliculitis which may result in follicular scarring and atrophy.
- ED81.1** **Acneform reactions to halogenated aromatic hydrocarbons**  
Acne caused by exposure to halogenated hydrocarbons such as chlorinated naphthalene, dioxins and dibenzofurans. Numerous comedones and noninflammatory cysts are a common feature. The course is often chronic. Frequently affected body parts are the face, neck, axillae and groin area.  
*Inclusions:* Chloracne
- ED81.Y** **Other specified acneform inflammatory disorders**
- ED90** **Rosacea and related disorders**

<b>ED90.0</b>	<b>Rosacea</b> The term rosacea encompasses a spectrum of changes that occur mainly in facial skin but may also involve the eyes. Most patients with rosacea have facial erythema and vascular instability which are variably associated with inflammatory papules and pustules, hypertrophic changes and ocular involvement. The cause of rosacea is unknown. It is doubtful that any single aetiological factor is responsible for the diverse features that comprise this disorder.
	<b>Coded Elsewhere:</b> Posterior blepharitis (9A02.1)
	Lymphoedematous rosacea (BD93.1Y)
<b>ED90.00</b>	Erythematotelangiectatic rosacea Erythematotelangiectatic rosacea manifests as facial erythema and a flushing tendency affecting but not confined to the central face and forehead: the lateral cheeks, the ears and the sides of the neck may also be involved. It is commonest in fair-skinned individuals and tends to be made worse by exposure to wind and sunlight. With time permanent telangiectasia develops.
<b>ED90.01</b>	Papulopustular rosacea Papulopustular rosacea is characterised, as the name implies, by erythematous papules and sterile pustules affecting facial skin. These are typically located on the cheeks, central chin, nose and central forehead. The perilesional skin is inflamed and may be oedematous. In contradistinction to papulopustular acne, comedones, nodules and cysts are not a feature.
<b>ED90.02</b>	Phymatous rosacea The hallmark of phymatous rosacea is rhinophyma but the forehead, chin and ears may also be affected. It is characterised by hypertrophy of the affected tissue which can produce gross distortion, particularly of the nose. The pathological changes include a variably severe mixed inflammatory infiltrate, sebaceous gland hyperplasia and dermal fibrosis. The aetiology is poorly understood. It is not always accompanied by other features of rosacea.
<b>ED90.0Y</b>	Other specified rosacea
<b>ED90.0Z</b>	Rosacea, unspecified
<b>ED90.1</b>	<b>Periorificial dermatitis</b> Periorificial dermatitis is a term which links two erythematous and papulopustular facial dermatoses that are strongly linked to prolonged potent topical corticosteroid use, namely perioral dermatitis and periocular dermatitis. It is characterised by the development of erythema, papules and pustules in perioral and periocular skin.
<b>ED90.Y</b>	<b>Other specified rosacea-like disorders</b>
<b>ED90.Z</b>	<b>Rosacea-like disorders unspecified</b>
<b>ED91</b>	<b>Disorders of the sebaceous gland</b> A group of disorders in which sebaceous gland size, location, anatomy or secretion is abnormal.
<b>ED91.0</b>	<b>Heterotopic sebaceous glands</b>

- ED91.1**      **Sebaceous gland hyperplasia**
- ED91.2**      **Seborrhoea**  
The secretion of excessive amounts of sebum resulting in an excessively greasy skin, a situation which may cause considerable distress. It may be associated with a number of conditions including acne, acromegaly and Parkinson disease. It is not normally a prominent component of seborrhoeic dermatitis, which is an inflammatory dermatitis.  
*Exclusions:*      Seborrhoeic dermatitis and related conditions (EA81)
- ED91.Y**      **Other specified disorders of the sebaceous gland**
- ED91.Z**      **Disorders of the sebaceous gland, unspecified**
- ED92**      **Disorders involving the apocrine follicular unit**  
A group of disorders involving apocrine glands and their associated follicular units. The most important of these is hidradenitis suppurativa.
- ED92.0**      **Hidradenitis suppurativa**  
Hidradenitis suppurativa is a chronic disease characterised by recurrent, painful, deep-seated, rounded nodules and abscesses due to follicular occlusion with secondary inflammation and destruction of the pilo-sebaceous-apocrine apparatus and extension to the adjacent subcutaneous tissue. Subsequent hypertrophic scarring and suppuration of apocrine gland-bearing skin (axillae, groins, peri-anal and perineal regions) are the main clinical features. Infection and hormonal influence are described but are not the primary pathogenetic factor: the exact aetiology remains unknown. Obesity is common and is associated with more severe disease. The main complications are fistulae, arthropathy, carcinoma and amyloidosis.
- ED92.1**      **Apocrine sweat disorders**  
Disorders in which apocrine secretion is abnormal or obstructed.  
*Exclusions:*      Hidradenitis suppurativa (ED92.0)
- ED92.Y**      **Other specified disorders involving the apocrine follicular unit**
- ED92.Z**      **Disorders involving the apocrine follicular unit, unspecified**
- ED9Y**      **Other specified disorders involving the hair follicle**

## Disorders of eccrine sweat glands or sweating (EE00-EE0Y)

This group incorporates disorders characterised by increased or reduced sweating (hyper- and hypohidrosis respectively), and by eccrine duct occlusion (miliaria).

**EE00**

### **Hyperhidrosis**

Excessive sweating. In the localised type, the most frequent sites are the palms, soles, axillae, inguinal folds, and the perineal area. Emotional factors may play a part. Generalised hyperhidrosis may be induced by a hot, humid environment, by fever, or by vigorous exercise.

**Inclusions:** Excessive sweating

**EE00.0**

### **Localised hyperhidrosis**

Excessive sweating in specific and localised sites.

**EE00.00**

### Palmoplantar hyperhidrosis

Excessive sweating of palms and soles. This is usually bilateral. Palmar hyperhidrosis may be triggered by emotional stress but, in severe cases, can be continuous and cause major disability by inhibiting normal social interaction and interfering with everyday tasks such as writing, preparing food or handling papers. Plantar hyperhidrosis may accompany palmar hyperhidrosis but may occur independently.

**EE00.01**

### Axillary hyperhidrosis

Excessive axillary sweating, sometimes in response to emotional stress but often persistent and disabling.

**EE00.02**

### Craniofacial hyperhidrosis

Excessive sweating involving the scalp, face and/or neck.

**EE00.0Y**

### Other specified localised hyperhidrosis

**EE00.0Z**

### Localised hyperhidrosis, unspecified

**EE00.1**

### **Primary generalised hyperhidrosis**

Primary generalised hyperhidrosis is characterised by sweating that exceeds the amount necessary to maintain thermal regulation.

**Coded Elsewhere:** Cold-induced sweating syndrome (8C21.Y)

**EE00.Z**

### **Hyperhidrosis, unspecified**

**EE01**

### **Hypohidrosis**

Abnormally diminished or absent perspiration. Both generalised and segmented (reduced or absent sweating in circumscribed locations) forms of the disease are usually associated with other underlying conditions.

**Coding Note:**

Code also the causing condition

**Inclusions:** Impaired sweating

**EE01.0**

### **Hypohidrosis attributable to defective sudomotor innervation or function**

**Coding Note:**

Code also the causing condition

<b>EE01.1</b>	<b>Hypohidrosis due to genetic abnormalities of eccrine gland structure or function</b>
	Hypohidrosis due to a heritable disorder of sweat gland or duct development. Sweating may be severely diminished or absent due to a paucity or absence of eccrine glands or to defective autonomic innervation. An absence of sweating leads to an inability to thermoregulate by evaporative cooling, and hyperthermia can occur with physical exertion or in a warm environment.
<b>Coding Note:</b>	Code also the causing condition
	<b>Coded Elsewhere:</b> Hereditary sensory and autonomic neuropathy type IV (8C21.2)
<b>EE01.2</b>	<b>Hypohidrosis of undetermined aetiology</b>
	Reduced or absent sweating for which no explanation has been found.
<b>EE01.Y</b>	<b>Other specified forms of hypohidrosis</b>
<b>Coding Note:</b>	Code also the causing condition
<b>EE01.Z</b>	<b>Hypohidrosis, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>EE02</b>	<b>Miliaria</b>
	Miliaria is a common skin disorder resulting from occlusion of eccrine sweat ducts. It is precipitated by hot, humid conditions.
<b>EE02.0</b>	<b>Neonatal miliaria</b>
<b>EE02.Y</b>	<b>Other specified forms of miliaria</b>
<b>EE02.Z</b>	<b>Miliaria, unspecified</b>
<b>EE0Y</b>	<b>Other specified disorders of eccrine sweat glands or sweating</b>

## Disorders of the nail or peronychium (EE10-EE1Z)

Disorders affecting the nail and surrounding tissues

**Coded Elsewhere:** Genetic defects of nails or nail growth (EC22)

<b>EE10</b>	<b>Acquired deformities of the nail plate</b>
	Acquired abnormalities of nail shape, surface, thickness or adhesion
<b>EE10.0</b>	<b>Abnormality of nail shape</b>
	<b>Exclusions:</b> Congenital club finger (LB90.5)
<b>EE10.1</b>	<b>Abnormality of nail surface</b>
<b>EE10.10</b>	Nail pitting <b>Coded Elsewhere:</b> Psoriatic nail pitting (EA90.51)
<b>EE10.1Y</b>	Other specified abnormality of nail surface

- EE10.1Z** Abnormality of nail surface, unspecified
- EE10.2** **Onycholysis**
- Coded Elsewhere:* Psoriatic onycholysis (EA90.51)  
Drug-induced onycholysis (EH73)
- EE10.3** **Nail hypertrophy**
- Coded Elsewhere:* Psoriatic nail hypertrophy (EA90.51)  
Drug-induced nail hypertrophy (EH73)
- EE10.4** **Nail atrophy**
- EE10.5** **Nail dystrophy, not otherwise specified**
- EE10.Y** **Other specified acquired deformities of the nail plate**
- EE10.Z** **Acquired deformities of the nail plate, unspecified**
- EE11** **Acquired abnormalities of nail colour**
- Coded Elsewhere:* Pseudomonas infection of nail (EE12.Y)  
Drug-induced nail pigmentation (EH73)
- EE11.0** **Melanonychia**  
Melanin pigmentation of the nail plate. This may be of no significance but may signify the presence of melanoma arising from the nail matrix
- EE11.1** **Yellow nail syndrome**  
Yellow nail syndrome is characterised by yellow, dystrophic, thick and slowly growing nails, associated with lymphoedema and respiratory involvement. Less than 100 cases have been described. Lymphoedema occurs more often in the lower limbs. It can appear at birth or later in life. Onset generally follows the onset of ungual abnormalities. Patients usually suffer from chronic bronchitis and in some cases, from chronic sinusitis, bronchiectasia and recurring pneumonitis. They can also present with pleural effusion (30% of cases) and bronchial hyperreactivity. Most cases are sporadic. However, familial forms have been described. Aetiology is unknown.
- EE11.Y** **Other abnormalities of nail colour**
- EE11.Z** **Acquired abnormalities of nail colour, unspecified**
- EE12** **Infections of the nail or perionychium**  
Infections involving the nail or perionychium for which no information on the infecting organism is available.
- Coded Elsewhere:* Candidosis of nail or paronychium (1F23.13)  
Paronychial herpes simplex infection (1F00.0Y)

<b>EE12.0</b>	<b>Acute bacterial paronychia</b>
	Acute bacterial paronychia is an acute infection, usually by <i>Staphylococcus aureus</i> , of the paronychial tissues of a digit. It may result from local injury, e.g. a thorn prick in a lateral nail groove, a splinter, torn hangnails or nail biting, but also occurs frequently as an episode during the course of chronic paronychia, when other organisms may be involved, including streptococci, <i>Pseudomonas aeruginosa</i> , coliform organisms and <i>Proteus vulgaris</i> .
	<b>Inclusions:</b> Whitlow
	<b>Exclusions:</b> Herpetic whitlow (1F00.0)
<b>EE12.1</b>	<b>Onychomycosis</b>
	Fungal infection of fingernails and/or toenails due most commonly to dermatophytes ( <i>tinea unguium</i> ) or yeasts, especially <i>Candida</i> species.
	<b>Inclusions:</b> Fungal infection of the nails
	<b>Exclusions:</b> Candidosis of nail or paronychium (1F23.13)
	<b>Coded Elsewhere:</b> Onychomycosis due to non-dermatophyte mould (1F2D.5) Dermatophytosis of nail (1F28.1) <i>Candida</i> onychomycosis (1F23.13)
<b>EE12.Y</b>	<b>Other specified infections of the nail or perionychium</b>
<b>EE12.Z</b>	<b>Infections of the nail or perionychium, unspecified</b>
<b>EE13</b>	<b>Certain disorders affecting the nails or perionychium</b>
	Abnormalities of the nails and perionychium (the soft tissues surrounding the nail plate including the matrix, nail folds, eponychium and hyponychium) which are not classified elsewhere.
	<b>Coded Elsewhere:</b> Drug-induced nail abnormalities (EH73) Nail psoriasis (EA90.51) Lichen planus of the nails (EA91.5) Subungual haematoma (NC50) Traumatic injury to nail bed or matrix of nail of foot (ND10) Traumatic injury to nail bed or matrix of nail of hand (NC50) Alopecia areata of the nails (ED70.2Y)
<b>EE13.0</b>	<b>Nail fragility</b>
	A range of nail disorders in which the integrity of the nail plate is disturbed.
	<b>Coded Elsewhere:</b> Drug-induced nail fragility (EH73)
<b>EE13.1</b>	<b>Ingrowing nail</b>
<b>EE13.10</b>	Ingrowing toenail
<b>EE13.11</b>	Infected ingrowing toenail
<b>EE13.1Y</b>	Other specified ingrowing nail
<b>EE13.1Z</b>	Ingrowing nail, unspecified

<b>EE13.2</b>	<b>Chronic paronychia</b>
	<b>Coded Elsewhere:</b> Candida paronychia (1F23.13)
<b>EE13.3</b>	<b>Nail disorder associated with specified dermatosis</b>
	Abnormality of the nail plate attributable to other specified skin disease.
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b>
	Lichen planus of the nails (EA91.5)
	Nail psoriasis (EA90.51)
	Alopecia areata of the nails (ED70.2)
<b>EE13.4</b>	<b>Nail disorder associated with specified systemic disease</b>
	Nail dystrophy attributable to systemic disorder. A wide range of systemic disorders may produce abnormalities of the nails.
<b>Coding Note:</b>	Code also the causing condition
<b>EE13.5</b>	<b>Eczematous nail dystrophy</b>
	Nail dystrophy attributable to eczema affecting paronychial tissues.
<b>EE13.Y</b>	<b>Other specified nail disorder</b>
<b>EE1Y</b>	<b>Other specified disorders of the nail or perionychium</b>
<b>EE1Z</b>	<b>Disorders of the nail or perionychium, unspecified</b>

### Disorders of epidermal integrity (EE20-EE21)

**Coded Elsewhere:** Diabetic bullae (EB90.0)

<b>EE20</b>	<b>Acute cutaneous distension syndrome</b>
	A common sequela of acute oedema, especially of the lower extremities. It manifests as blisters, which may be mistaken for an immunobullous disorder, (acute oedema blisters); or as superficial fissuring and inflammation of the skin (eczéma craquelé).
<b>EE21</b>	<b>Epidermal fragility</b>

Epidermal fragility of unknown or unspecified cause resulting in reduced resistance to mechanical stress and manifesting as abnormal fissuring, erosion or blistering of the skin surface.

## Disorders of the dermis and subcutis (EE40-EF0Y)

This group incorporates disorders of dermal connective tissue, dermal histiocytic and granulomatous disorders and disorders affecting subcutaneous fat.

**Coded Elsewhere:** Cutaneous mastocytosis (2A21.1)

## Disorders of cutaneous connective tissue (EE40-EE7Y)

Skin disorders attributable to abnormalities affecting dermal and subcutaneous collagen, elastin and other connective tissue components.

**Coded Elsewhere:** Genetic disorders affecting dermal collagen, elastin or other matrix proteins (EC40-EC4Y)

**EE40**

### **Atrophy or degeneration of dermal or subcutaneous connective tissue**

A heterogeneous group of disorders resulting from atrophic and degenerative changes in dermal and subcutaneous collagen and elastin.

**Coded Elsewhere:** Actinic elastosis (EJ20.0)

**EE40.0**

### **Corticosteroid-induced skin atrophy**

**EE40.1**

### **Stretch marks**

Linear scars attributable to rupture of the normal dermal matrix from distension by abnormal physical forces (pregnancy, obesity, pubertal growth spurt), increased collagenase activity (corticosteroids) or as a result of genetically abnormal dermal matrix proteins.

**EE40.10**

Stretch marks of pregnancy

**EE40.1Y**

Stretch marks of other specified aetiology

**EE40.1Z**

Stretch marks, unspecified

**EE40.2**

### **Atrophic scarring of the skin**

The process whereby healing of damaged skin results in a reduction of dermal thickness as well as scarring, thus the counterpart of hypertrophic scarring.

**Coded Elsewhere:** Atrophic surgical scar (EL50.2)

**EE40.3**

### **Skin fragility**

Fragility of the skin due principally to genetic or acquired abnormalities of dermal matrix proteins.

**Exclusions:** Epidermal fragility (EE21)

**Coded Elsewhere:** Skin fragility of prematurity (KC30)

**EE40.30**

Genetically-determined skin fragility

**Coded Elsewhere:** Purpura or bruising due to genetically-determined skin fragility (EE40.32)

**EE40.31**

Age-related skin fragility

**EE40.32** Purpura or bruising due to vascular fragility  
Purpura due to leakage or rupture of abnormally fragile cutaneous blood vessels.

**Coded Elsewhere:** Scorbutic purpura (5B56.0)

**EE40.Y** Other specified atrophy or degeneration of dermal or subcutaneous connective tissue

**EE40.Z** Atrophy or degeneration of dermal or subcutaneous connective tissue, unspecified type

#### **EE41** Abnormalities of dermal elastin

**Coded Elsewhere:** Blepharochalasis (9A06.8)

Pseudoxanthoma elasticum (EC40)

Granulomatous slack skin (2B01)

**EE41.0** Cutis laxa

Cutis laxa is the term used for a group of inherited and acquired conditions in which abnormalities of elastic fibres result in loose, redundant, hypoelastic skin. Typically, the skin can easily be pulled away from underlying tissue and only slowly returns to its original position. Unlike some conditions in the differential diagnosis, cutis laxa is not characterised by spontaneous bruising or abnormal scarring. Redundant skin is often most noticeable on the neck, hands, and groin, but can also be seen on the face, creating a premature aging appearance.

**Coded Elsewhere:** Genetically-determined cutis laxa (LD28.2)

**EE41.1** Anetoderma

A condition presenting as focal areas of thinned, flaccid skin and resulting from focal defects in dermal elastin. The involved skin is often elevated above the surrounding normal skin but can be depressed. The condition may be primary and without identifiable cause or may be a sequela of a large number of different conditions which may damage elastin in the dermis.

**EE41.Y** Other specified dermatoses characterised by abnormal dermal elastin

**EE41.Z** Abnormalities of dermal elastin, unspecified

#### Poikiloderma (EE50-EE50)

Poikiloderma is defined as a combination of skin atrophy, pigmentation and telangiectasia. It is a component of a number of genetic syndromes, of certain non-organ-specific systemic autoimmune disorders and may follow skin injury including from radiotherapy.

**Coded Elsewhere:** Genetic syndromes with poikiloderma (EC10)

Poikiloderma vasculare atrophicans (EK91.1)

#### **EE50** Acquired poikiloderma

**Coded Elsewhere:** Poikiloderma following radiotherapy (EL61)

Poikiloderma of Civatte (EK20)

## Fibromatoses and keloids (EE60-EE6Y)

A heterogeneous group of disorders characterised by pathologically increased deposition of fibrous tissue in the skin and subcutaneous tissues.

**EE60**

### **Keloid or hypertrophic scars**

Keloid and hypertrophic scars result from the production of excessive amounts of collagen in the dermis during connective tissue repair following inflammation, injury or surgery. Keloid scars often develop apparently spontaneously after minor injury or inflammation and expand beyond the boundary of that initial injury or inflammation. Hypertrophic scars on the other hand remain confined to the area of injury or inflammation and may undergo spontaneous resolution.

**EE60.0**

### **Keloid**

A keloid is a progressively enlarging scar resulting from formation of excessive amounts of collagen in the dermis during connective tissue repair following inflammation, injury or surgery. It differs from a hypertrophic scar in that a keloid expands beyond the boundaries of the initial wound or site of inflammation.

**Coded Elsewhere:** Keloidal surgical scar (EL50.0)

**EE60.00**

### **Ear-lobe keloid**

A common type of keloid which usually follows ear-piercing

**EE60.0Y**

### **Other specified keloid**

**EE60.0Z**

### **Keloid, unspecified**

**EE60.1**

### **Hypertrophic scar**

Hypertrophic scars result from the production of excessive amounts of collagen in the dermis during connective tissue repair following inflammation, injury or surgery. In contrast to keloid scars, they do not expand beyond the boundary of the initial injury or inflammation and may undergo spontaneous resolution.

**Coded Elsewhere:** Hypertrophic surgical scar (EL50.1)

**EE60.Y**

### **Other specified keloidal disorders**

**EE61**

### **Superficial fibromatoses**

**Coded Elsewhere:** Palmar fascial fibromatosis (FB51.0)

Knuckle pads (FB51.1)

Penile fibromatosis (GB06.2)

Plantar fascial fibromatosis (FB51.Y)

Fibro-osseous pseudotumour of the digit (FB51.Y)

**EE6Y**

### **Other specified fibromatous disorders of skin and soft tissue**

**EE70**

### **Perforating dermatoses**

A group of skin disorders characterised by trans-epidermal elimination of abnormal matter, especially collagen or elastin, from the dermis to the exterior.

**Coded Elsewhere:** Perforating granuloma annulare (EE80.0)

<b>EE70.0</b>	<b>Acquired perforating dermatosis</b>
	A condition commonly seen in association with longstanding diabetes mellitus, particularly in association with renal failure, in which multiple large follicular and non-follicular keratotic papules develop on the trunk and limbs. Trauma from scratching pruritic skin may be the initiating event leading to transepidermal elimination of degenerate collagen and elastic fibres from the dermis.
<b>EE70.Y</b>	<b>Other specified perforating dermatoses</b>
<b>EE70.Z</b>	<b>Perforating dermatoses, unspecified</b>
<b>EE7Y</b>	<b>Other specified disorders of cutaneous connective tissue</b>

### Histiocytic-granulomatous disorders of the skin (EE80-EE8Y)

A range of disorders characterised by the presence of increased numbers of histiocytes in the skin as a result of granulomatous inflammation or histiocytic infiltration.

**Coded Elsewhere:** Cutaneous sarcoidosis (4B20.5)

Crohn disease of anal region (DD70.4)

Langerhans cell histiocytosis involving the skin (2B31.20)

Indeterminate cell histiocytosis (2B31.6)

<b>EE80</b>	<b>Necrobiotic granulomatous skin disorders</b>
-------------	---

<b>EE80.0</b>	<b>Granuloma annulare</b>
---------------	---------------------------

A common inflammatory disorder in which granulomatous inflammation surrounds foci of degenerate dermal collagen. It presents clinically as dermal papules and annular plaques. It may be localised, especially over bony prominences, or generalised. The cause is unknown.

<b>EE80.1</b>	<b>Necrobiosis lipoidica</b>
---------------	------------------------------

Necrobiosis lipoidica is an uncommon skin condition in which degenerate dermal collagen is surrounded by a granulomatous inflammatory response to produce shiny, red-brown or yellowish patches in the skin, particularly on the shins. In severe cases the affected skin may ulcerate. It is associated in the majority of but not all cases with underlying diabetes mellitus, the onset of which it may precede.

<b>EE80.Z</b>	<b>Necrobiotic granulomatous skin disorders, unspecified</b>
---------------	--

<b>EE81</b>	<b>Dermal dendrocyte, Class IIa histiocytoses</b>
-------------	---

A sub-class of cutaneous histiocytic disorders involving dermal dendritic cells.

**Inclusions:** Non-Langerhans cell histiocytoses of dermal dendrocyte lineage

**Coded Elsewhere:** Juvenile xanthogranuloma (2B31.0)

Erdheim-Chester disease (2B31.Y)

<b>EE8Y</b>	<b>Other specified histiocytic and granulomatous disorders of the skin</b>
-------------	--

Benign dermal lymphocytic or lymphoplasmacytic infiltrations or proliferations (EE90-EE91)

**EE90**

**Benign lymphocytic infiltration of the skin**

Benign lymphocytic infiltration of Jessner is a chronic benign T-cell lymphoproliferative disorder characterised by the presence of non-scarring red tumid nodules, usually on facial skin. It may be difficult to distinguish from cutaneous lupus erythematosus.

**Inclusions:** Jessner lymphocytic infiltration

**EE91**

**Lymphocytoma cutis**

Lymphocytoma cutis is a benign, cutaneous B-cell lymphoproliferative disorder. It presents as papules, nodules or plaques usually on the head and neck and pursues a chronic course. It occurs as a response to known or unknown antigenic stimuli that result in the accumulation of lymphocytes and other inflammatory cells.

**Inclusions:** Benign cutaneous lymphoid hyperplasia

**Coded Elsewhere:** Borrelial lymphocytoma cutis (1C1G.14)

Disorders of subcutaneous fat (EF00-EF0Y)

**Coded Elsewhere:** Neonatal disorders of subcutaneous fat (KC22)

**EF00**

**Panniculitis**

Panniculitis is the name given to a heterogeneous group of diseases all characterised by inflammation of subcutaneous adipose tissue.

**Exclusions:** Calcific panniculitis (EB90.41)

**Coded Elsewhere:** Erythema nodosum (EB31)

Lipodermatosclerosis (BD74.2)

Cold panniculitis of the newborn (KC22.1)

Alpha-1 antitrypsin deficiency panniculitis (5C5A)

Lupus panniculitis (EB51.Y)

Erythema induratum (EF40.2Y)

Cytophagic histiocytic panniculitis (EE8Y)

Gouty panniculitis (FA25.2Y)

**EF00.0** **Pancreatic enzyme panniculitis**

**EF00.Y** **Panniculitis of other specified aetiology**

**EF00.Z** **Panniculitis of undetermined or unspecified etiology**

**EF01**

**Lipoatrophy or lipodystrophy**

Hereditary or acquired disorders characterised by loss of subcutaneous fat.

**Coded Elsewhere:** Genetic lipodystrophy (LD27.6)

<b>EF01.0</b>	<b>Acquired partial lipodystrophy</b> Acquired partial lipodystrophy, or Barraquer-Simons syndrome, is characterised by the association of lipoatrophy of the upper part of the body and lipohypertrophy of the thighs.
<b>EF01.1</b>	<b>Localised lipoatrophy and lipodystrophy</b> Localised lipodystrophies covers a heterogeneous group of conditions characterised by loss of subcutaneous tissue from small regions of the body.
<b>EF01.Y</b>	<b>Other specified forms of lipodystrophy and lipoatrophy</b>
<b>EF01.Z</b>	<b>Lipodystrophy of unspecified type</b>
<b>EF02</b>	<b>Certain noninflammatory disorders of subcutaneous fat</b>
<b>EF02.0</b>	<b>Fat hypertrophy</b> Focal hypertrophy of subcutaneous adipose tissue. It is a common sequela of long-term insulin injection into the skin.
<b>EF02.1</b>	<b>Subcutaneous lipomatosis</b> Diffuse infiltration of the subcutis by non-encapsulated adipose tissue.
<b>EF02.2</b>	<b>Lipoedema</b> Lipoedema is characterised by non-pitting diffuse "fatty" swelling, usually confined to the legs, thighs, hips and upper arms. It may be confused with lymphoedema. Lipoedema may also occur in the scalp. <i>Coded Elsewhere:</i> Lipo-lymphoedema (BD93.1Y)
<b>EF02.3</b>	<b>Cellulite</b> Cellulite is a common architectural derangement of subcutaneous adipose tissue which results in dimpling and nodularity of the overlying skin. It is seen most commonly in postpubertal women and affects principally the pelvic region, lower limbs, and abdomen. It is thought to result from herniation of multiple small aggregates of subcutaneous fat through the fibrous tissue at the dermohypodermal junction. Obesity predisposes to but is not necessary for its development. The term is in widespread use but is misleading as it has nothing to do with cellulitis. The condition is asymptomatic but may cause considerable embarrassment.
<b>EF02.Y</b>	<b>Other specified noninflammatory disorders of subcutaneous fat</b>
<b>EF02.Z</b>	<b>Noninflammatory disorders of subcutaneous fat, unspecified</b>
<b>EF0Y</b>	<b>Other specified disorders of subcutaneous fat</b>

Disorders of cutaneous blood and lymphatic vessels (EF20-EG02)

**Coded Elsewhere:** Malformations involving cutaneous lymphatic vessels

- Oedema of skin or soft tissues
- Superficial thrombophlebitis (BD70)
- Lower limb deep vein thrombosis (BD71.4)
- Lymphoedema (BD93)
- Venous varicosities of sites other than lower extremity (BD75)

Malformations involving cutaneous blood vessels (EF20-EF2Z)

**Coded Elsewhere:** Genetic syndromes affecting cutaneous vasculature

Developmental anomalies of cutaneous vasculature (LC50-LC5Z)

**EF20**

### **Acquired malformations of cutaneous blood vessels**

**Coded Elsewhere:** Erythematotelangiectatic rosacea (ED90.00)

Actinic telangiectasia (EJ20.3)

Lower limb superficial venous ectasia (BD74.0)

**EF20.0**      **Venous lake**

**EF20.1**      **Angiokeratoma**

Angiokeratomas are acquired vascular lesions that result from the ectatic dilatation of pre-existing vessels in the papillary dermis, accompanied by hyperkeratotic epidermis. There are several clinical variants: solitary papular angiokeratoma, angiokeratoma corporis diffusum, angiokeratoma of Mibelli and angiokeratoma of Fordyce, amongst which the last, in which the lesions are located on the vulva or scrotum, is the most common.

**Coded Elsewhere:** Angiokeratoma corporis diffusum (5C56.01)

**EF20.2**      **Lower limb venous telangiectases**

Finely dilated superficial veins of lower limbs resulting from chronic venous hypertension.

**EF20.3**      **Spider telangiectasis**

A benign vascular ectasia consisting of a central dilated terminal arteriole from which radiate several ectatic capillaries, giving rise to a spider-like appearance. They occur most commonly on the upper trunk and proximal upper limbs. Large numbers may develop in association with pregnancy or liver disease.

**Exclusions:**      Lower limb venous telangiectases (EF20.2)

**EF20.4**      **Generalised essential telangiectasia**

**EF20.Y**      **Other specified acquired malformations of cutaneous blood vessels**

**EF20.Z**      **Acquired malformations of cutaneous blood vessels, unspecified**

**EF2Z**

### **Cutaneous vascular malformation, unspecified**

## Purpura or bruising (EF30-EF3Z)

Purpura is a non-blanchable multifocal purple skin discolouration due to bleeding into the skin and manifested as petechiae (pinpoint foci of intradermal haemorrhage) and ecchymoses (larger areas of intradermal haemorrhage). It has many causes and may be the presenting sign of diseases as diverse as thrombocytopenia, primary amyloidosis, meningococcal septicaemia and scurvy. It will often be accompanied by haemorrhage into the subcutaneous tissues (spontaneous bruising or haematoma).

**Coded Elsewhere:** Purpura due to disorders of platelets

Purpura or bruising due to vascular fragility (EE40.32)

Painful bruising syndrome (ED02)

**EF30**

### Purpura or bruising due to disorders of coagulation

Purpura resulting from genetically-determined or acquired deficiencies or dysfunction of clotting factors.

**EF31**

### Traumatic purpura

Purpura and bruising attributable to trauma which may be self-induced (as from rubbing itchy skin), due to friction from clothing or due to man-handling, particularly of debilitated elderly patients.

**EF3Y**

### Other specified purpura

**EF3Z**

### Purpura of unspecified aetiology

**EF40**

### Vasculitis or capillaritis involving the skin

A range of conditions characterised by inflammation of cutaneous blood vessels with or without extravasation of red blood cells into the interstitium.

**Coded Elsewhere:** Giant cell arteritis (4A44.2)

Mucocutaneous lymph node syndrome (4A44.5)

Sneddon syndrome (4A44.6)

Thromboangiitis obliterans (4A44.8)

Pityriasis lichenoides (EA93)

Vasculitis associated with probable aetiology (4A44.Y)

**EF40.0**

### Capillaritis

Capillaritis results from extravasation of red blood cells from leaky capillaries into the dermis and manifests initially as a finely stippled pink to purple purpura, most commonly affecting the lower limbs. As iron is released and converted into haemosiderin, the skin stains gold or brown. Various patterns of capillaritis have been described and given separate names depending on the distribution, time course, extent and degree of pigmentation and presence or otherwise of epidermal thickening. The underlying processes involved in all these variants are very similar and of unknown cause. Histology may show mild inflammation around capillaries but no vasculitis.

**Inclusions:** Pigmented purpura

**Exclusions:** Pulmonary capillaritis (CB04.4)

<b>EF40.1</b>	<b>Vasculitis affecting small cutaneous blood vessels</b>
	<b>Coded Elsewhere:</b> Antineutrophil cytoplasmic antibody-associated vasculitis (4A44.A)
	Cryoglobulinaemic vasculitis (4A44.90)
	IgA vasculitis (4A44.92)
	Acute haemorrhagic oedema of infancy (EH40.3)
	Cutaneous leukocytoclastic vasculitis (4A44.B0)
<b>EF40.10</b>	<b>Urticular vasculitis</b>
	An uncommon form of cutaneous leucocytoclastic vasculitis manifested by urticarial weals which, in contrast to those of chronic urticaria, are long-lasting and painful rather than itchy. A cause is often not identified. It may be associated with hypocomplementaemia and systemic inflammation (hypocomplementaemic urticarial vasculitis).
	<b>Coded Elsewhere:</b> Hypocomplementaemic urticarial vasculitis (4A44.91)
<b>EF40.1Y</b>	Other specified vasculitis affecting small cutaneous blood vessels
<b>EF40.2</b>	<b>Localised cutaneous vasculitis</b>
	A heterogeneous group of uncommon, predominantly chronic inflammatory dermatoses, each with a characteristic limited distribution, which all exhibit vasculitis on histopathological examination.
<b>EF40.20</b>	Granuloma faciale
<b>EF40.2Y</b>	Other specified localised cutaneous vasculitis
<b>EF40.Z</b>	<b>Cutaneous vasculitis unspecified</b>

### Dermatoses attributable to hyperviscosity or microvascular occlusion (EF50-EF5Y)

A range of disorders characterised by vascular occlusion but attributable not to primary vascular inflammation but to intravascular occlusion.

<b>Coded Elsewhere:</b>	Thrombotic thrombocytopenic purpura (3B64.14)
	Antiphospholipid syndrome (4A45)
	Disseminated intravascular coagulation (3B20)
	Cryoglobulinaemic vasculitis (4A44.90)

<b>EF50</b>	<b>Livedoid vasculopathy</b>
<b>EF5Y</b>	<b>Other specified dermatoses attributable to hyperviscosity or microvascular occlusion</b>

### Dermatoses resulting from vascular insufficiency (EF60-EF9Y)

<b>EF60</b>	<b>Ischaemic ulceration of skin</b>
-------------	-------------------------------------

**Coding Note:** Code also the causing condition

Dermatoses due to venous disease (EF70-EF7Z)

**Coded Elsewhere:** Venous leg ulcer (BD74.3)

Lipodermatosclerosis (BD74.2)

**EF70**

**Lower limb venous eczema**

A pruritic inflammatory dermatitis affecting the lower legs and ankles of individuals with lower limb venous hypertension. It may become acutely exudative, when the possibility of superimposed allergic contact dermatitis should be considered. Treatment of the associated venous hypertension is an important part of management. Venous eczema is not necessarily associated with the presence of varicose leg veins.

**EF7Y**

**Other specified dermatoses due to venous disease**

**EF7Z**

**Dermatoses due to venous disease, unspecified**

**EF9Y**

**Other specified dermatoses resulting from vascular insufficiency**

Functional vascular disorders of the skin (EG00-EG02)

Skin disorders due to disturbances in vascular tone and skin blood flow.

**EG00**

**Vasodilatation of extremities**

Disorders due to failure of normal vasoconstrictive mechanisms in the cutaneous vasculature.

**EG01**

**Vasoconstriction of extremities**

Disorders characterised by peripheral vasospasm including Raynaud disease and ergotism.

**Coded Elsewhere:** Raynaud phenomenon (BD42)

**EG02**

**Flushing disorders**

**Coded Elsewhere:** Carcinoid syndrome (5B10)

Flushing (ME64.4)

Menopausal hot flush (GA30.4)

## Skin disorders involving certain specific body regions (EG30-EG9Z)

### Skin disorders involving the head and neck (EG30-EG4Z)

Dermatoses specific to the scalp; external ear; the eyes, eyelids and eyebrows; the lips and oral cavity; and to dermatoses specific to the skin of the head and neck

**Coded Elsewhere:** Dermatoses of the eye, eyelids or eyebrows

Dermatoses of the lips or oral cavity

**EG30**

#### **Skin disorders localised to the scalp**

Skin disorders affecting preferentially or exclusively the scalp.

**Coded Elsewhere:** Dermatophytosis of scalp (1F28.0)

Seborrhoeic dermatitis of the scalp (EA81.1)

Scalp psoriasis (EA90.50)

Contact dermatitis of scalp (EK5Y)

Lichen planopilaris of scalp (EA91.2)

Chronic cutaneous lupus erythematosus of scalp (EB51.Y)

Scalp pruritus (EC90.Y)

Cutis verticis gyrata (EE7Y)

Lipoedema of the scalp (EF02.2)

Aplasia cutis congenita of scalp (LC60)

Hereditary hypotrichosis of scalp (EC21.2)

**EG30.0**

#### **Scalp folliculitis**

A non-scarring chronic superficial folliculitis of the scalp that is typically characterised by multiple minute, very itchy pustules within the scalp and which has in the past been termed acne necrotica miliaris. The cause is not well understood but an inflammatory response to Propionibacterium acnes has been postulated.

**EG30.1**

#### **Erosive pustular dermatosis of scalp**

Erosive pustular dermatosis of the scalp is a distinctive scalp disorder of the elderly characterised by the development of sterile pustules, erosions and crusts in areas of chronically sun-damaged scalp skin. Local trauma may also play an aetiological role. It normally responds to high-potency topical corticosteroids.

**EG30.2**

#### **Pityriasis amiantacea**

Pityriasis amiantacea refers to a reaction pattern on the scalp where large adherents are attached to the growing hairs and overlap like tiles on a roof. The abnormality may be localised and confined to a small patch or widespread involving the entire scalp. The underlying scalp is often moist and inflamed. The condition may occur on its own or may be associated with inflammatory disorders such as seborrhoeic dermatitis and psoriasis or with underlying dermatophytosis (tinea capitis).

**EG30.Y**

#### **Other specified scalp disorders not elsewhere classifiable**

**EG30.Z**

#### **Skin disorders localised to the scalp, unspecified**

## Disorders of the external ear involving the skin (EG40-EG4Z)

**Coded Elsewhere:** Dermatitis or eczema of external ear

Otitis externa (AA10-AA3Z)

Acquired deformity of pinna (AA41)

## Inflammatory disorders of the external ear (EG40-EG4Z)

**Coded Elsewhere:** Chronic otitis externa (AA13)

Acute noninfectious otitis externa (AA11)

Seborrhoeic otitis externa (AA10)

**EG40**

### **Contact dermatitis of external ear**

Contact dermatitis of external ear may be due to irritants or allergy. Antimicrobial aural preparations are common causes of allergic contact dermatitis.

**Coded Elsewhere:** Irritant contact dermatitis of external ear (EK02.10)

**EG40.0**

### **Allergic contact dermatitis of external ear**

Allergic contact dermatitis affecting the external ear.

**EG4Y**

### **Other specified inflammatory disorder of external ear**

**EG4Z**

### **Inflammatory disorder of external ear, unspecified**

## Skin disorders involving the genital and perianal regions (EG60-EG7Y)

**Coded Elsewhere:** Dermatoses of male genitalia (GA80-GA81.Y)

Dermatoses of female genitalia (GA40-GA4Y)

## Dermatoses of the anus, perianal area or perineum (EG60-EG63.Z)

Disorders affecting the skin of and surrounding the anus including the intergluteal cleft and genitocrural folds.

**Coded Elsewhere:** Perianal lichen simplex (EA83.02)

Herpes simplex infection of perianal skin or rectum (1A94.1)

Anal warts (1A95.0)

Primary anal syphilis (1A61.1)

Drug-induced anal ulceration (EH76.Y)

**EG60**

### **Anal pruritus**

Anal pruritus is irritation of the skin at the anal margin and surrounding perianal skin which results in the desire to scratch.

**EG61**

### **Infections of the anus or perianal skin**

**EG62**

**Inflammatory dermatoses of the perianal area**

**Coded Elsewhere:** Crohn disease of anal region (DD70.4)

Dermatitis or eczema of perianal area (EA87.2)

Perianal psoriasis (EA90.53)

Hidradenitis suppurativa of anogenital region (ED92.0)

**EG63**

**Sacrococcygeal pilonidal disease**

Pilonidal disease describes a spectrum of clinical presentations, ranging from asymptomatic hair-containing cysts and sinuses to large symptomatic abscesses of the sacrococcygeal area which tend to recur. It is found predominantly in white males in their second and third decades and is thought to result from penetration of hair into the tissues with the formation of sinuses and a foreign-body granulomatous response. Risk factors for pilonidal disease include male gender, Caucasian ethnicity, sitting occupations, obesity, a deep natal cleft, and presence of hair within the natal cleft.

**EG63.0      Sacrococcygeal pilonidal sinus**

**EG63.1      Sacrococcygeal pilonidal cyst**

**EG63.2      Sacrococcygeal pilonidal abscess**

**EG63.Z      Sacrococcygeal pilonidal disease, unspecified**

---

**EG7Y**

**Other specified skin disorders involving the genital and perianal regions**

---

**EG9Y**

**Skin disorders involving other specific body regions**

**EG9Z**

**Skin disorders involving certain specific body regions, unspecified**

## Skin disorders associated with pregnancy, the neonatal period and infancy (EH10-EH40.Z)

Dermatoses which are either specific to or occur predominantly in pregnancy, the neonatal period or the first few months of life

**Coded Elsewhere:** Pregnancy dermatoses (JA65.1)

Diseases of the skin complicating pregnancy, childbirth or the puerperium (JB64.7)

### Skin disorders specific to the perinatal or neonatal period (EH10-EH3Y)

This group incorporates both skin disorders of the neonate and other disorders of the neonate with skin manifestations

**Coded Elsewhere:** Prenatally acquired infections with neonatal skin manifestations

Inflammatory dermatoses of the newborn (KC21)

Neonatal dermatoses due to maternal antibodies (KA07)

Neonatal nutritional disorders affecting the skin (KC24)

Neonatal disorders of subcutaneous fat (KC22)

Neonatal disorders of the oral mucosa (KC23)

Skin disorders associated with prematurity (KC30-KC3Y)

Iatrogenic injuries involving the skin of the neonate (KC50-KC7Y)

Miscellaneous skin disorders in the neonate (KC40)

### Neonatal skin infection (EH10-EH1Z)

Any condition of the skin affecting neonates, caused by an infection with a bacterial, viral, fungal, or parasitic source.

**EH10**

#### **Neonatal viral infections involving the skin**

**Coded Elsewhere:** Perinatal Herpes simplex infection (KA62.A)

Disseminated perinatal varicella (KA62.2)

Mucocutaneous perinatal varicella (KA62.2)

**EH11**

#### **Neonatal pyogenic skin infections**

**Coded Elsewhere:** Neonatal necrotising fasciitis (1B71.2)

**EH12**

#### **Neonatal fungal infections involving the skin**

**Exclusions:** Prenatally-acquired mucocutaneous candidosis (KA63.2)

**EH1Z**

#### **Neonatal skin infection, unspecified**

**EH3Y**

#### **Other specified skin disorders specific to the perinatal or neonatal period**

**EH40**

## **Dermatoses of infancy**

**Exclusions:** Syndromes with skin or mucosal anomalies as a major feature (LD27)

Congenital malformations affecting the skin (LC00-LC7Z)

**Coded Elsewhere:** Infantile atopic eczema (EA80.0)

Infantile acne (ED80.6)

Infantile papular acrodermatitis (EA12)

**EH40.0**

### **Infantile seborrhoeic dermatitis**

An inflammatory but usually non-pruritic dermatitis of infants with a similar distribution to adult seborrhoeic dermatitis. Its principal manifestations are a confluent psoriasiform napkin eruption and greasy, adherent scaling over the scalp ("cradle cap"). In disseminated forms the face, retroauricular folds, neck and trunk may be involved. A small proportion of cases represent infantile onset of psoriasis ("napkin psoriasis"). Its onset is characteristically earlier than that of infantile atopic eczema, the subsequent development of which it does not preclude.

**Inclusions:** Neonatal seborrhoeic dermatitis

**Exclusions:** Seborrhoea (ED91.2)

**EH40.00**

#### **Cradle cap**

Cradle cap is a form of seborrhoeic dermatitis that manifests as yellowish, crusty, greasy patches of scaling on the scalp of infants between the second week and sixth month of life. The forehead and eyebrows are frequently affected. It is usually asymptomatic. It may be associated with infantile seborrhoeic dermatitis of other areas including the trunk and napkin area.

**EH40.01**

#### **Disseminated infantile seborrhoeic dermatitis**

A widespread form of infantile seborrhoeic dermatitis affecting the napkin area, scalp, face, neck, axillae and anterior trunk. In contrast to atopic eczema, pruritus is not usually evident and the infant remains otherwise well.

**EH40.02**

#### **Psoriasiform napkin dermatitis**

A napkin eruption characterised by sharply marginated confluent erythema and scale in the napkin area. It is considered a component of infantile seborrhoeic dermatitis, the disseminated form of which may start in the napkin area. In some cases, however, the same clinical picture may eventuate into psoriasis (napkin psoriasis). The clinical picture is essentially identical.

**EH40.0Z**

#### **Infantile seborrhoeic dermatitis, unspecified**

**EH40.1**

### **Infantile napkin dermatoses**

**Coded Elsewhere:** Psoriasiform napkin dermatitis (EH40.02)

Acrodermatitis enteropathica (5C64.20)

<b>EH40.10</b>	Primary irritant napkin dermatitis A type of irritant dermatitis seen most frequently in infants localised to the area in contact with a napkin (diaper) and occurring most often as a reaction to prolonged contact with urine, faeces, or retained soap or detergent.
	<b>Inclusions:</b> Nappy rash Diaper rash
<b>EH40.1Y</b>	Other specified infantile napkin dermatoses
<b>EH40.1Z</b>	Infantile napkin dermatoses, unspecified
<b>EH40.2</b>	<b>Erythrodermas of infancy</b> <b>Coded Elsewhere:</b> Severe combined immunodeficiency with hypereosinophilia (4A01.10) Wiskott-Aldrich syndrome (3B62.0Y) Congenital non-bullous ichthyosiform erythroderma (EC20.02) Netherton syndrome (LD27.2) Multiple carboxylase deficiency due to holocarboxylase synthetase deficiency (5C50.E0)
<b>EH40.3</b>	<b>Acute haemorrhagic oedema of infancy</b> Acute haemorrhagic oedema is an immune complex-mediated cutaneous vasculitis usually associated with respiratory infection or immunization. It affects children between the ages of 4 months and 2 years, with males being affected twice as frequently as females. The dramatic clinical appearance of facial and limb oedema with multiple targetoid purpuric macules belies its generally benign course.
<b>EH40.Y</b>	<b>Other specified dermatoses of infancy</b>
<b>EH40.Z</b>	<b>Dermatoses of infancy, unspecified</b>

### Adverse cutaneous reactions to medication (EH60-EH7Z)

This group incorporates not only drug rashes but also other acute and chronic cutaneous and mucocutaneous effects of topical or systemic medicaments, whether conventional or "alternative".

**Coded Elsewhere:** Drug-induced pruritus (EC90.2)

Drug eruptions (EH60-EH6Z)

**Coded Elsewhere:** Drug-associated immune complex vasculitis (4A85.03)

<b>EH60</b>	<b>Exanthematic drug eruption</b> Acute skin eruption typically resembling viral infections such as measles, rubella or scarlatina attributable to drug. Antibiotics are common causes. <b>Inclusions:</b> Drug-induced toxic erythema
-------------	--

**EH61**

**Drug-induced urticaria, angioedema and anaphylaxis**

Adverse reaction to drugs due to release of histamine or vasoactive kinins.

**Coded Elsewhere:** Drug-induced anaphylaxis (A84.1)

**EH61.0**

**Drug-induced urticaria**

Urticaria provoked by drug. This may be due to immunological or non-immunological mechanisms. Mild anaphylactic reactions may cause little more than urticaria but may serve as a warning of more severe reactions if the responsible agent is encountered again. Aspirin is a well-known cause of non-allergic urticaria.

**EH61.1**

**Drug-induced angioedema**

Non-allergic angioedema due to drugs, in particular angiotensin converting enzyme inhibitors and nonsteroidal anti-inflammatory drugs.

**EH62**

**Lichenoid drug eruption**

**Coded Elsewhere:** Drug-induced oral lichenoid reaction (A91.4Y)

**EH63**

**Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug**

A spectrum of severe and potentially life-threatening reactions affecting skin and mucous membranes. In the majority of cases a drug can be implicated.

**EH63.0**

**Drug-induced Stevens-Johnson syndrome**

This is one of the four principal forms of severe cutaneous adverse reaction to drugs (SCARs) and is characterised by inflammation, blistering and erosion of skin and mucous membranes. By definition, there is involvement of at least one mucous membrane and skin detachment is limited to less than 10% of body surface area. Most cases occur within the first 8 weeks of drug exposure. The drugs most commonly involved are antimicrobial sulfonamides, anticonvulsants, allopurinol, nevirapine and oxicam–nonsteroidal anti-inflammatory drugs.

**EH63.1**

**Drug-induced toxic epidermal necrolysis**

**EH63.2**

**Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome**

**EH64**

### **Drug-induced erythroderma**

Erythroderma (defined as erythema and scaling involving at least 90% of the skin surface) which is attributable to drug administration but which cannot be more precisely categorized, thus excluding more specific severe cutaneous adverse reactions to drugs reaction patterns such as DRESS syndrome, acute generalised exanthematous pustulosis (AGEP) and toxic epidermal necrolysis. Many drugs have been implicated.

***Inclusions:***

DRESS syndrome (EH65)

Stevens-Johnson syndrome and toxic epidermal necrolysis due to drug (EH63)

Drug-induced toxic epidermal necrolysis (EH63.1)

Drug-induced Stevens-Johnson and toxic epidermal necrolysis overlap syndrome (EH63.2)

Drug-induced acute generalised exanthematous pustulosis (EH67.0)

**EH65**

### **DRESS syndrome**

DRESS syndrome (Drug Rash with Eosinophilia and Systemic Symptoms) is a hypersensitivity reaction characterised by a generalised skin rash, fever, eosinophilia, lymphocytosis and visceral involvement (hepatitis, nephritis, pneumonitis, pericarditis and myocarditis) and, in some patients, reactivation of human herpes virus 6.

***Inclusions:***

Drug-induced hypersensitivity syndrome

**EH66**

### **Fixed drug eruption**

The term fixed drug eruption describes the development of one or more annular or oval inflamed erythematous patches on the skin as a result of systemic exposure to a drug. The patches may develop into bullae. The inflamed patches normally resolve with post-inflammatory hyperpigmentation but typically recur at the same site(s), often with progressively more involved sites, following each reexposure to the drug. In extreme cases (generalised bullous fixed drug eruption) the clinical picture may mimic toxic epidermal necrolysis. A large number of drugs have been implicated as triggers.

**EH67**

### **Acne or acneform reactions attributable to drugs**

***Coded Elsewhere:*** Corticosteroid-induced acne (EH76.2)

**EH67.0**

### **Drug-induced acute generalised exanthematous pustulosis**

This uncommon reaction to systemic medication is characterised by fever (generally on the same day as the start of the rash) and multiple, small, non-follicular pustules that arise on a widespread inflammatory erythema centred on the upper trunk and body folds. It may be difficult to differentiate from acute generalised pustular psoriasis. It usually appears within 24 hours of drug exposure. Antibiotics are probably the commonest precipitants although many drugs have been implicated.

***Inclusions:***

Drug-induced toxic pustuloderma

**EH67.Y**

### **Other specified acne or acneform reactions attributable to drugs**

**EH67.Z**

### **Acne or acneform reactions attributable to drugs, unspecified**

- EH6Y** **Drug eruption of other specified type**
- EH6Z** **Drug eruption of unspecified type**
- EH70** **Pigmentary abnormalities of skin due to drug**  
Disturbances of skin colour due to an ingested or injected drug. These may result from a number of different mechanisms including the colour of the drug itself, disturbed melanisation of the skin or deposition of pigments by drug breakdown products.
- Coded Elsewhere:** Non-melanin pigmentation due to drug (ED6Y)
- EH71** **Dermatoses precipitated by drug therapy**  
Specific dermatoses which are not in themselves commonly associated with drugs but which may be precipitated in susceptible individuals by certain drugs.
- Coded Elsewhere:** Drug-induced lupus erythematosus (4A40.1)  
Drug-induced thrombocytopenic purpura (3B64.12)  
Acute febrile neutrophilic dermatosis, drug-induced (EB20)  
Drug-induced capillaritis (EF40.0)  
Drug-induced ichthyosis (ED50.0)
- EH72** **Drug-induced hair abnormalities**
- EH72.0** **Drug-induced alopecia**
- EH72.00** Drug-induced telogen hair loss  
Telogen hair loss due to drug. Many drugs may occasionally cause telogen hair loss. Commonly implicated drugs include retinoids and anticonvulsants.
- Exclusions:** Anagen effluvium (ED70.4)
- EH72.01** Drug-induced anagen effluvium  
Anagen effluvium due to medication, most commonly from cytotoxic cancer chemotherapy.
- EH72.Y** **Other specified drug-induced hair abnormalities**
- EH72.Z** **Drug-induced hair abnormalities, unspecified**
- EH73** **Drug-induced nail abnormalities**  
Abnormalities of nails or nail growth attributable to drugs.
- Coded Elsewhere:** Drug-induced photo-onycholysis (EH75)
- EH74** **Drug-induced oral conditions**
- Coded Elsewhere:** Drug-induced oral ulcer (DA01.14)  
Drug-induced cheilitis (DA00.0)  
Oral mucositis due to cancer chemotherapy (DA01.11)  
Drug-induced gingival hyperplasia (DA0D.1)

**EH75****Photosensitivity due to drug**

A photosensitive skin reaction to a medicament, most commonly a phototoxic reaction to a systemically administered drug, although photoallergy to drugs may rarely occur.

**EH76****Dermatoses associated with specific classes of medication**

A heterogeneous group of adverse skin reactions characteristic for each drug or class of drug involved. Cancer chemotherapeutic agents and systemic corticosteroids are two important examples.

**EH76.0****Dermatoses resulting from cytotoxic or cancer chemotherapy**

**Coded Elsewhere:** Oral mucositis due to cancer chemotherapy (DA01.11)

Neutrophilic eccrine hidradenitis (EB2Y)

**EH76.1****Dermatoses resulting from immunosuppressive therapy****EH76.2****Dermatoses attributable to corticosteroid therapy**

**Coded Elsewhere:** Corticosteroid-induced skin atrophy (EE40.0)

Corticosteroid-modified dermatophytosis (1F28.Y)

Perioral dermatitis (ED90.1)

Corticosteroid-induced stretch marks (EE40.1Y)

Corticosteroid-induced purpura (EE40.32)

**EH76.3****Dermatoses resulting from anticoagulant therapy**

**Coded Elsewhere:** Heparin-induced thrombocytopenia (3B64.12)

**EH76.Y****Other dermatoses associated with specific classes of medication****EH77****Localised adverse cutaneous reactions to administration of drug**

**Coded Elsewhere:** Allergic contact dermatitis due to topical medicaments (EK00.C)

Allergic contact dermatitis due to systemic medicaments (EK00.B)

Localised lipoatrophy due to injected drug (EF01.1)

Insulin-induced localised fat hypertrophy (EF02.0)

Superficial thrombophlebitis resulting from infusion or injection of drug (BD70.1)

**EH78****Adverse cutaneous reactions to herbal, homoeopathic or other alternative therapies**

These may range from "drug" eruptions, phototoxicity, contact allergy to skin infections and scarring. (The primary code should be the adverse cutaneous reaction but this may be used to add supplementary information.)

**EH7Y****Other specified adverse cutaneous reactions to medication****EH7Z****Unspecified adverse cutaneous reactions to medication**

## Skin disorders provoked by external factors (EH90-EK5Y)

A large group of skin disorders due to exposure of the skin to various external physical, chemical or environmental insults including chemical irritants and allergens, poisons, pressure, cold, heat, sunlight, radiation and physical injury.

**Coded Elsewhere:** Miscellaneous specified dermatoses provoked by pressure

- Skin injury due to exposure to corrosive substances
- Hand and arm vibration syndrome (NF08.20)
- Contact dermatitis of external ear (EG40)
- Allergic contact blepharoconjunctivitis (9A06.72)
- Contact gingivostomatitis (DA02.3)
- Haematoma of surgical wound of skin (NE81.00)
- Superficial incisional site infection (NE81.20)
- Cutaneous wounds, injuries or scars (ND56.0)

### EH90

#### Pressure ulceration

Pressure ulcers result from localised injury and ischaemic necrosis of skin and underlying tissues due to prolonged pressure, or pressure in combination with shear; bony prominences of the body are the most frequently affected sites; immobility and debility are major contributing factors.

- Inclusions:**
- pressure injury
  - pressure ulcer
  - bedsore

- Exclusions:**
- decubitus (trophic) ulcer of cervix (uteri) (GA15.1)

### EH90.0

#### Pressure ulceration grade 1

Pressure ulceration grade I is a precursor to skin ulceration. The skin remains intact but there is non-blanchable redness of a localised area, usually over a bony prominence. The area may be painful, firm, soft, warmer or cooler as compared to adjacent tissue. It can be difficult to detect in individuals with dark skin but affected areas may differ in colour from the surrounding skin. The presence of pressure ulceration grade 1 may indicate persons at risk of progressing to frank ulceration.

- Inclusions:**
- pressure injury stage 1 with nonblanchable erythema

### EH90.1

#### Pressure ulceration grade 2

Pressure injury with partial thickness loss of dermis. It presents as a shallow open ulcer with a red or pink wound bed without slough or as a serum-filled or serosanguinous blister which may rupture.

This category should not be used to describe skin tears, tape burns, incontinence associated dermatitis, maceration or excoriation

- Inclusions:**
- pressure injury stage 2 with partial thickness skin loss

<b>EH90.2</b>	<b>Pressure ulceration grade 3</b> Pressure ulcer with full thickness skin loss. Subcutaneous fat may be visible but bone, tendon or muscle are not exposed. Slough may be present but does not obscure the depth of tissue loss. There may be undermining and tunnelling into adjacent structures. The depth varies by anatomical location: grade 3 pressure ulcers can be shallow in areas with little or no subcutaneous fat (e.g. bridge of the nose, ear, occiput and malleolus). In contrast, grade 3 pressure ulcers can be extremely deep in areas of significant adiposity.
	<b>Inclusions:</b> pressure injury stage 3 with full thickness skin loss
<b>EH90.3</b>	<b>Pressure ulceration grade 4</b> Pressure ulcer with visible or directly palpable muscle, tendon or bone as a result of full thickness loss of skin and subcutaneous tissue. Slough or eschar may be present. The depth varies by anatomical location: grade IV pressure ulcers can be shallow in areas with little or no subcutaneous fat (e.g. bridge of the nose, ear, occiput and malleolus) but are typically deep and often undermine or tunnel into adjacent structures.
	<b>Inclusions:</b> pressure injury stage 4 with full thickness tissue loss
<b>EH90.4</b>	<b>Suspected deep pressure-induced tissue damage, depth unknown</b> An area of soft tissue damage due to pressure or shear which is anticipated to evolve into a deep pressure ulcer but has not yet done so. The affected skin is typically discoloured purple or maroon and may display haemorrhagic blistering. It may be painful and oedematous. It can be either warmer or cooler than adjacent tissue. Evolution into a deep ulcer may be rapid even with optimal treatment.
<b>EH90.5</b>	<b>Pressure ulceration, ungradable</b> Pressure ulcer with full thickness skin loss in which actual depth of the ulcer is completely obscured by slough (yellow, tan, grey, green or brown) and/or eschar (tan, brown or black) in the wound bed. Until enough slough and/or eschar are removed to expose the base of the wound, it is not possible to determine whether the ulcer is grade 3 or grade 4.
	<b>Inclusions:</b> pressure injury with depth unknown
<b>EH90.Z</b>	<b>Pressure ulcer of unspecified grade</b>
<b>EH92</b>	<b>Dermatoses provoked by friction or mechanical stress</b> <b>Coded Elsewhere:</b> Contact dermatitis due to skin damage from friction or micro-trauma (EK02.Y)
<b>EH92.0</b>	<b>Corns or callosities</b> Callosities are areas of focal hyperkeratosis due to repeated friction and pressure. A corn is a sharply demarcated callosity occurring over a bony prominence, usually on the foot, and is painful. <b>Coded Elsewhere:</b> Occupational callosities (EK5Y)

<b>EH92.00</b>	Hard corn A discrete area of painful hyperkeratosis resulting from repeated pressure and friction over a bony prominence, most commonly a metatarsal head or an interphalangeal joint of the forefoot.
<b>EH92.01</b>	Soft corn A soft corn is a painful callosity extending from the side of one toe across to the side of the adjacent toe. It is normally caused by lateral pressure from ill-fitting footwear and appears white as a result of maceration of the excess keratin.
<b>EH92.0Z</b>	Callosity, unspecified
<b>EH92.1</b>	<b>Friction blister</b> A blister due to disruption of epidermal integrity as a result of repeated frictional stress. They usually form in areas with a strong, thick epidermis, i.e. the palms, fingers, soles and sides of the feet and toes. Common causes include repetitive heavy manual tasks or ill-fitting footwear.
<b>EH92.Y</b>	<b>Other specified skin damage due to repetitive friction and mechanical trauma</b>
<b>EH93</b>	<b>Dermatoses due to foreign bodies</b> <i>Coded Elsewhere:</i> Sacrococcygeal pilonidal disease (EG63)
<b>EH93.0</b>	<b>Tattoos or tattoo reactions</b> Tattoos are the result of injection into the skin of insoluble coloured pigments as ornamentation of the body, or of inert materials such as coal dust as a result of superficial trauma or blast injury. They may provoke both allergic and foreign body reactions.
<b>EH93.1</b>	<b>Foreign body reaction to inorganic matter in the skin</b> A usually granulomatous, often sarcoidal reaction to the presence in the skin of inorganic foreign material which cannot be degraded or eliminated. Responsible agents include tattoo pigment, suture materials, silica, zirconium, aluminium, paraffin, and silicone.
<b>EH93.2</b>	<b>Foreign body reaction to organic matter in the skin</b>
<b>EH93.3</b>	<b>Foreign body granuloma of skin</b>
<b>EH93.Y</b>	<b>Other specified reaction to foreign body in the skin</b>
<b>EH93.Z</b>	<b>Dermatoses due to foreign bodies, unspecified</b>
<b>EH94</b>	<b>Scar of skin, not elsewhere classified</b>

Dermatoses provoked or exacerbated by exposure to cold (EJ0Y-EJ0Y)

Skin conditions provoked by exposure to low temperatures.

**Coded Elsewhere:** Skin or soft tissue injury due to exposure to cold

Abnormal vascular reactivity to cold

**EJ0Y**

**Other specified dermatoses provoked or exacerbated by exposure to cold**

Dermatoses provoked by heat or electricity (EJ10-EJ1Y)

**Coded Elsewhere:** Burns of external body surface, specified by site (ND90-ND9Z)

Heat contact urticaria (EB01.Y)

Thermal keratosis (EK90.Y)

**EJ10**

**Erythema ab igne**

A characteristic reticular telangiectatic and pigmented dermatosis resulting from repeated or prolonged exposure to infrared radiation (heat) of insufficient energy to produce a burn. It most commonly affects the lower extremities or lower back as a result of habitually sitting too close to a heat source (radiator or open hearth) or from keeping a hot water bottle held against the skin.

**Exclusions:** Burns of external body surface, specified by site  
(ND90-ND9Z)

**EJ1Y**

**Other specified dermatoses provoked by heat or electricity**

Dermatoses provoked by light or UV radiation (EJ20-EJ6Y)

**Coded Elsewhere:** Porphyria or pseudoporphyrina affecting the skin (EB90.3)

Cutaneous lupus erythematosus (EB50-EB5Z)

Dermatomyositis (4A41.0)

Rosacea (ED90.0)

Phototoxic reactions to skin contact with photoactive agents (EK20-EK2Z)

Abnormal sensitivity to light or UV radiation of uncertain or unspecified nature (ME66.0)

Photo-allergic contact dermatitis (EK01)

Chronic effects of ultraviolet radiation on the skin (EJ20-EJ2Y)

**Coded Elsewhere:** Actinic keratosis (EK90.0)

Diffuse actinic keratinocyte dysplasia (EK90.1)

Brachioradial pruritus (EC90.3)

Disseminated superficial actinic porokeratosis (ED52)

Poikiloderma of Civatte (EK20)

Actinic cheilitis (EK90.Y)

## EJ20

### **Photoaging of the skin**

The changes in skin which can be attributed to chronic exposure to ultraviolet radiation and which are clinically manifest principally as actinic elastosis, wrinkles and dyspigmentation.

**Inclusions:** Sun damage due to chronic sun exposure

## EJ20.0

### **Actinic elastosis**

**Inclusions:** Solar elastosis

Rhytides

## EJ20.1

### **Actinic lentigo**

A circumscribed grey or brown macule resulting from chronic exposure to the sun or to artificial sources of ultraviolet such as sun-beds. They are typically located on the backs of the hands and forearms, shoulders, forehead and the scalp (if bald). They often coexist with and may be difficult to differentiate from plane seborrhoeic keratoses, which differ clinically in exhibiting fine scaling and histologically in showing proliferation of keratinocytes as well as melanocytes.

**Inclusions:** Liver spot

## EJ20.2

### **Actinic lentiginosis**

The presence of multiple actinic lentigines. This is a common finding in people with fair skin who have a long history of repeated exposure to the sun where it most commonly affects the upper extremities, upper back, forehead and scalp (if bald). It can be generalised and occur at an earlier age in people with an addiction to sun-bathing and use of sun beds.

## EJ20.3

### **Actinic telangiectasia**

<b>EJ20.Z</b>	<b>Photoaging of the skin, unspecified</b>
<b>EJ2Y</b>	<b>Other specified chronic effects of ultraviolet radiation on the skin</b>
<b>EJ30</b>	<b>Autoimmune or other photodermatoses</b> A heterogeneous group of dermatoses mostly involving an interaction between the immune system and ultraviolet radiation or visible light <b>Coded Elsewhere:</b> Solar urticaria (EB01.Y)
<b>EJ30.0</b>	<b>Polymorphic light eruption</b> Polymorphic light eruption is a common delayed-onset abnormal inflammatory cutaneous reaction to sunlight or other source of ultraviolet radiation. It typically manifests as an eruption of papules and vesicles affecting normally sun-protected skin sites following exposure to sunlight. Tolerance is commonly seen after repeated sunlight or UV exposure.
<b>EJ30.1</b>	<b>Chronic actinic dermatitis</b>
<b>EJ30.Y</b>	<b>Other specified photodermatoses</b>
<b>EJ30.Z</b>	<b>Photodermatoses, unspecified</b>

#### Acute effects of ultraviolet radiation on normal skin (EJ40-EJ4Z)

**Coded Elsewhere:** Photosensitivity due to drug (EH75)

Photo-onycholysis (EE10.2)

<b>EJ40</b>	<b>Sunburn</b> An injury to the skin causing erythema, tenderness, and sometimes blistering and resulting from excessive exposure to the sun. The reaction is produced by the ultraviolet radiation in sunlight.
<b>EJ40.0</b>	<b>Sunburn erythema</b>
<b>EJ40.1</b>	<b>Sunburn with blisters or exudation</b>
<b>EJ40.Z</b>	<b>Sunburn, unspecified</b>
<b>EJ41</b>	<b>Burn from exposure to artificial source of ultraviolet radiation</b> <b>Exclusions:</b> Tanning due to exposure to artificial sources of ultraviolet radiation (ED60.01)
<b>EJ41.0</b>	<b>Burn from exposure to therapeutic ultraviolet radiation</b>
<b>EJ41.Y</b>	<b>Other specified burn from exposure to artificial source of ultraviolet radiation</b>
<b>EJ41.Z</b>	<b>Burn from exposure to artificial source of ultraviolet radiation, unspecified</b>
<b>EJ4Z</b>	<b>Acute effects of ultraviolet radiation on normal skin, unspecified</b>
<b>EJ6Y</b>	<b>Other specified dermatoses provoked by light or UV radiation</b>

Dermatoses due to ionizing radiation (EJ71-EJ7Z)

**Coded Elsewhere:** Acute effects of ionizing radiation on the skin

**EJ71**

**Chronic effects of ionizing radiation on the skin**

The long-term sequelae of prior exposure of skin to ionizing radiation.

**Coded Elsewhere:** Chronic radiodermatitis following radiotherapy (EL61)

Radionecrosis of skin attributable to diagnostic procedure  
(EL80)

Chronic radiation keratosis (EK90.Y)

**EJ7Z**

**Dermatoses due to ionizing radiation, unspecified**

**EK00**

**Allergic contact dermatitis**

Allergic contact dermatitis is an eczematous response provoked by a Type IV delayed immune reaction in the skin to a substance or substances to which the individual has previously been sensitized.

**Exclusions:** Irritant contact dermatitis (EK02)

Allergic contact sensitisation (EK12)

**Coded Elsewhere:** Allergic contact dermatitis of external ear (EG40.0)

Allergic contact gingivostomatitis (DA02.30)

**EK00.0**

**Allergic contact dermatitis due to clothing or footwear**

Allergic contact dermatitis due to exposure to allergens found in clothing and footwear: these include colophony, p-phenylenediamine (PPD), disperse dyes, potassium dichromate and formaldehyde resins.

**EK00.1**

**Allergic contact dermatitis due to cosmetics or fragrances**

Allergic contact dermatitis due to sensitisation to any of a large number of allergens which may be found in cosmetics and other products to which fragrances are added. Common allergens include colophony, fragrances such as hydroxycitronellal, emollients such as lanolin (wool wax alcohols), surfactants such as cocamidopropyl betaine, or preservatives such as isothiazolinones, parabens or formaldehyde-releasing agents. Fragrances are found in many household products as well as in cosmetics.

**EK00.2**

**Allergic contact dermatitis due to dental materials**

Allergic contact dermatitis due to sensitisation to agents used in dentistry. Dentists, dental nurses and dental technicians are generally at greater risk than their clients. Important allergens include acrylates and methacrylates, disinfectant aldehydes and fragrances.

**EK00.3**

**Allergic contact dermatitis due to food flavours or additives**

Allergic contact dermatitis due to flavouring agents (e.g. cinnamyl alcohol) and other food additives (e.g. ammonium persulfate, benzoic acid). Such agents may be encountered at work in food processing or preparation, or may rarely cause allergic contact cheilitis or stomatitis.

- EK00.4 Allergic contact dermatitis due to hairdressing products**  
Allergic contact dermatitis due to hair care products such as dyes, permanent wave and bleaching agents and shampoos. Such allergens may show occupational relevance among hairdressers although consumers are most commonly affected.
- EK00.5 Allergic contact dermatitis due to industrial biocides, cutting oils or disinfectants**  
Allergic contact dermatitis due to any of a large number of potential allergens used to prevent microbial contamination in industrial processes or in commercial, health care and other public environments. These allergens are of predominantly occupational relevance.
- EK00.6 Allergic contact dermatitis due to metals or metal salts**  
Allergic contact dermatitis due to exposure to metals and metal salts such as nickel, cobalt or chromate.
- EK00.7 Allergic contact dermatitis due to allergenic haptens derived from plants or organic matter**  
Allergic contact dermatitis due to low molecular weight allergens from organic matter including plants and woods such as Primula obconica, sesquiterpene lactones and teak.
- EK00.8 Allergic contact dermatitis due to plastics, glues or resin systems**  
Allergic contact dermatitis due to exposure to chemicals used in plastics and resin systems. It is normally the uncured chemicals (e.g. uncured epoxy resin or methacrylates) which are responsible.
- EK00.9 Allergic contact dermatitis due to preservatives or biocides**  
Allergic contact dermatitis due to exposure to preservatives and biocides such as parabens, isothiazolinones, formaldehyde, formaldehyde releasers and phenoxyethanol.
- EK00.A Allergic contact dermatitis due to rubber chemicals**  
Allergic contact dermatitis due to exposure to rubber chemicals such as thiurams, mercaptobenzothiazoles, N-isopropyl-N-phenyl-p-phenylenediamine (IPPD), thiourea derivatives or carbamates.
- EK00.B Allergic contact dermatitis due to systemic medicaments**  
Allergic contact dermatitis due to exposure to systemic medicaments, usually during the manufacturing process. Examples include penicillins, carbamazepine and tetrazepam.
- EK00.C Allergic contact dermatitis due to topical medicaments**  
Allergic contact dermatitis due to exposure to topical medicaments such as corticosteroids, antibiotics, antimycotics, disinfectants, local anaesthetics or NSAIDs.
- EK00.Y Other specified allergic contact dermatitis**
- EK00.Z Allergic contact dermatitis, unspecified**

**EK01**

**Photo-allergic contact dermatitis**

Allergic contact dermatitis caused by sensitisation to a photoproduct of a compound either applied directly to the skin or taken up by the skin via the systemic circulation. The parent compound does not elicit an allergic reaction until it is chemically modified by exposure to ultraviolet radiation.

**EK02**

**Irritant contact dermatitis**

Irritant contact dermatitis is an eczematous reaction provoked by acute or prolonged and repeated contact with a substance or substances which are injurious to the skin. Common irritants include defatting agents (solvents, soaps and detergents), acids (both inorganic and organic) and alkalis (e.g. sodium hydroxide and wet cement).

**Exclusions:** Allergic contact dermatitis (EK00)

**EK02.0**

**Irritant contact dermatitis from specified external agents**

Irritant contact dermatitis from external agents grouped according to the type of causative agent.

**EK02.00**

Irritant contact dermatitis due to wet work

Irritant contact dermatitis caused by prolonged or repetitive wet work. It usually affects predominantly the skin of the hands and wrists but may affect other sites if clothing is repeatedly drenched. Although water and sweat alone (especially from under occlusive protection gloves) may be responsible, the risk is increased by exposure to defatting agents and irritants including soaps, detergents and cooling fluids. It is seen commonly in those looking after dependent relatives, especially young mothers. Professions or occupational sectors where there are substantial risks include health care, hairdressing, cleaning, catering and food-processing.

**EK02.01**

Irritant contact dermatitis due to solvents

Irritant contact dermatitis caused by skin contact with solvents such as tetrachloroethylene, toluene, turpentine, acetone, methyl acetate, ethyl acetate, hexane, citrus terpenes or ethanol. These have numerous uses including in dry-cleaning chemicals, paint thinners, nail polish removers, glue solvents and perfumes. Occupations where there are substantial risks include painters and decorators, construction workers, dry-cleaners, machinists and workers in the chemical industry.

**EK02.02**

Irritant contact dermatitis due to exposure to acids, alkalis or other specified chemical irritants

**EK02.03**

Irritant contact dermatitis due to cosmetics or emollients

Irritant contact dermatitis caused by skin contact with cosmetics and emollients containing substances with irritant capacities such as fragrances, sodium lauryl sulfate, formaldehyde, alcohols, urea, lactic acid, enzymes or peeling particles.

- EK02.04** Irritant contact dermatitis due to topical medicaments or antimicrobials  
 Irritant contact dermatitis caused by repetitive or prolonged skin contact with topical medicaments and antimicrobials containing e.g. benzoyl peroxide, hydrogen peroxide, povidone iodine, formaldehyde, salicylic acid, alcohols, 5-fluorouracil, dithranol, chlorhexidine, quaternary ammonium compounds or tretinoin. Their irritancy is usually mild and sometimes part of their therapeutic action.
- EK02.05** Irritant contact dermatitis due to plants or other vegetable matter  
 Irritant contact dermatitis caused by exposure to plants and other vegetable matter. Irritation may be due to the mechanical (e.g. hairs, thorns, or spines) or chemical (e.g. acids, proteolytic enzymes) properties of the plant. Occupations where there is a substantial risk include agricultural workers, florists and gardeners.
- EK02.06** Irritant contact dermatitis due to foods
- EK02.1** **Irritant contact dermatitis of specified site**  
 Irritant contact dermatitis organised by the body part affected.  
**Exclusions:** Irritant contact dermatitis from specified external agents (EK02.0)  
**Coded Elsewhere:** Irritant contact gingivostomatitis (DA02.31)
- EK02.10** Irritant contact dermatitis of external ear  
 Irritant contact dermatitis affecting skin of external ear. This may result from retention of irritants such as soaps and shampoos in the external auditory canal or from friction and maceration from use of hearing-aids etc. Irritant damage to the skin may predispose to secondary infection.
- EK02.11** Irritant contact blepharoconjunctivitis  
 Irritant contact dermatitis affecting skin of eyelid and/or conjunctiva. Cosmetics are often responsible.
- EK02.12** Irritant contact dermatitis of hands  
 Irritant contact dermatitis affecting skin of hands. This is the commonest site for the development of irritant contact dermatitis. In the early stages the dorsal finger-webs are affected before the inflammation extends to involve the fingers, the dorsa of the hands and frequently the wrists. The palms are usually but not always less severely affected.  
**Inclusions:** Irritant hand dermatitis
- EK02.13** Irritant contact dermatitis of vulva  
 Irritant contact dermatitis affecting the vulva and surrounding skin. It is much more frequent than allergic contact dermatitis in this area. It is commonly due to a combination of occlusion and use of feminine hygiene products in the genital area. Leakage of urine or profuse vaginal discharge are sometimes important factors.  
**Inclusions:** Vulval irritant contact dermatitis
- EK02.1Y** Irritant contact dermatitis of other specified site

- EK02.2** **Irritant contact dermatitis due to friction, sweating or contact with body fluids**  
 Irritant contact dermatitis due to friction, sweating and contact with body fluids. Irritation from body fluids may be due to high or low pH, to proteolytic enzymes or both; the irritant effect may be aggravated or caused solely by sweating and repetitive friction of apposed skin surfaces.
- Coded Elsewhere:** Primary irritant napkin dermatitis (EH40.10)
- EK02.20** Intertriginous dermatitis due to friction, sweating or contact with body fluids  
 Intertriginous dermatitis (intertrigo) is a form of irritant contact dermatitis of the skin folds (axillary, submammary, genitocrural, abdominal apron) caused by repetitive shearing forces of skin on skin. Sweat, other body fluids, occlusion and obesity all contribute to its development.
- EK02.21** Irritant contact dermatitis due to saliva  
 Perioral irritant contact dermatitis caused by repetitive or prolonged contact with saliva.
- EK02.22** Irritant contact dermatitis due to incontinence  
 Irritant contact dermatitis from prolonged contact with urine or faeces as a result of incontinence.  
**Inclusions:** Incontinence-associated dermatitis
- EK02.23** Irritant contact dermatitis related to stoma or fistula  
 Irritant contact dermatitis of skin surrounding stomas or fistulas caused by prolonged or repeated contact with gastrointestinal secretions, faeces, urine, pus, mucus, or cleansing materials.
- EK02.24** Irritant contact dermatitis related to skin contact with prostheses or surgical appliances  
 Irritant contact dermatitis resulting from friction and sweating between the skin surface and a prosthesis or appliance in contact with the skin, especially limb prostheses.
- EK02.Y** **Irritant contact dermatitis due to other specified cause**
- EK02.Z** **Irritant contact dermatitis, unspecified**
- EK10** **Allergic contact urticaria**  
 Allergic contact urticaria is a Type I IgE-mediated immediate immune reaction from cutaneous or mucosal contact to a substance or substances to which the individual has previously been exposed.
- EK10.0** **Oral allergy syndrome**  
 Type I IgE-mediated immediate immune reaction limited to the lips, oral cavity, tongue and throat caused by direct contact with allergen in sensitized patient. Symptoms include mucosal swelling, itching or a burning sensation.  
**Inclusions:** Pollen-food allergy syndrome

**EK10.1** **Contact urticaria due to food allergen**  
Contact urticaria due to food allergen is a IgE-mediated immediate immune reaction from cutaneous or mucosal contact to food allergen in a sensitized patient.

**EK10.Y** **Other specified allergic contact urticaria**

**EK10.Z** **Allergic contact urticaria, unspecified**

**EK11** **Protein contact dermatitis**

Immediate contact dermatitis due to exposure to proteins from plants, animal tissue and other organic matter.

**Exclusions:** Allergic contact dermatitis due to food allergen (4A85.22)

**EK12** **Allergic contact sensitisation**

The presence of specific delayed type IV hypersensitivity of the immune system to a given substance without imputation of past or current disease. Such sensitisation is normally acquired by prior contact of the skin or mucous membranes with the substance or with one chemically closely related to it (cross-reactivity). Subsequent contact with the substance may provoke an allergic reaction. In certain circumstances such sensitisation may prevent an individual from taking up or continuing employment where exposure to the allergen cannot be avoided. Some individuals sensitized to a specific allergen may, however, never experience symptoms on contact with it.

Phototoxic reactions to skin contact with photoactive agents (EK20-EK2Z)

Non-allergic skin inflammation caused by cellular damage from reactive oxygen species in the skin produced by the interaction between ultraviolet or visible light and a photoactive substance in contact with the skin.

**EK20** **Phototoxic reaction to fragrance or cosmetics**

Phototoxic reaction caused by a combination of sun exposure and skin contact with fragrances or cosmetics containing photoactive substances such as oak moss, musk ambrette or bergamot oil.

**EK2Y** **Phototoxic reaction to skin contact with other specified photoactive agent**

**EK2Z** **Phototoxic dermatitis, unspecified**

**EK50** **Cutaneous reactions to venomous or noxious animals**

**Coded Elsewhere:** Cutaneous reactions to arthropods (NE61)

Cutaneous reactions to venomous or noxious aquatic invertebrates (NE61)

Cutaneous reactions to venomous or noxious vertebrates (NE61)

<b>EK50.0</b>	<b>Cutaneous insect bite reactions</b> Skin reactions to known or presumed insect bites. Commonly the nature of the insect responsible is unknown.
	<b>Coded Elsewhere:</b> Cutaneous allergic or hypersensitivity reactions to Hymenoptera venom (4A85.31)
<b>EK50.00</b>	Papular urticaria A reaction pattern to insect bites with the formation of multiple itchy, urticated papules or papulovesicles.
<b>EK50.01</b>	Bullous insect bite reaction Cutaneous blisters resulting from a brisk immune response to insect bites. These are most common around the lower legs and ankles and in children rather than adults.
<b>EK50.02</b>	Persistent insect bite reaction Bite reactions lasting for months as inflamed papules and nodules, this is particularly likely to be seen with tick bites and mosquito bites. These may be confused with lymphoma histologically, with a dense inflammatory infiltrate of lymphoid cells, histiocytes, eosinophils and plasma cells together with the presence of atypical mononuclear cells.  <b>Inclusions:</b> Insect bite granuloma
<b>EK50.0Y</b>	Other specified cutaneous insect bite reactions
<b>EK50.0Z</b>	Cutaneous insect bite reactions, unspecified
<b>EK5Y</b>	<b>Other specified skin disorders provoked by external factors</b>

## Benign proliferations, neoplasms and cysts of the skin (EK70-EK71.Z)

**Coded Elsewhere:** Benign adipocytic neoplasms of skin or soft tissue  
Benign cutaneous neoplasms (2F20-2F2Z)

<b>EK70</b>	<b>Cutaneous cysts</b> <b>Coded Elsewhere:</b> Neonatal milia (KC40.1)
<b>EK70.0</b>	<b>Epidermoid cyst</b> A cutaneous cyst with an epidermoid wall filled with keratin and its breakdown products. It most commonly forms as the result of squamous metaplasia in a damaged sebaceous gland but may result from trauma (traumatic inclusion cyst), especially when situated on the extremities. It typically presents as a spherical skin-coloured or yellowish nodule, often with a central pore opening onto the skin surface.  <b>Inclusions:</b> Epidermal inclusion cyst
<b>EK70.00</b>	Infected epidermoid cyst An epidermoid cyst which has become secondarily infected by, most commonly, <i>Staphylococcus aureus</i> . It manifests as pain, swelling and erythema of a preexisting cyst and is predisposed to rupture.

- EK70.0Z** Epidermoid cyst, unspecified
- EK70.1** **Trichilemmal cyst**  
A trichilemmal (pilar) cyst is a common, typically non-tender, intradermal or subcutaneous cyst. The cysts are typically confined to the scalp and are often multiple. They usually occur sporadically but may be inherited in an autosomal dominant manner. They are derived from the outer root sheath of the hair follicle and as such contain keratin or keratin degradation products. Rarely, they may undergo malignant transformation.  
*Inclusions:* Pilar cyst
- EK70.2** **Digital myxoid pseudocyst**  
Digital myxoid cysts (DMCs) are benign ganglion cysts of the digits, which typically present as a small dome-shaped, often translucent papule on the dorsum of the terminal phalanx and/or as longitudinal "guttering" of the nail plate which is focally compressed by the cyst as it develops from the underlying nail matrix. In the majority of cases a stalk connecting the cyst with the adjacent distal interphalangeal joint can be demonstrated, accounting for the alternative names of digital ganglion cyst and digital synovial cyst.  
*Inclusions:* Digital ganglion cyst
- EK70.3** **Hidrocystoma**  
A hidrocystoma is a cystic cutaneous swelling lined by either apocrine or eccrine ductal epithelium. It presents typically as a small solitary bluish translucent papule on or around the eyelids. It is not always possible to be certain whether it is of apocrine or eccrine origin though the majority show apocrine differentiation.
- EK70.Y** Other specified cutaneous cysts
- EK70.Z** Cutaneous cysts, unspecified
- EK71** **Skin tags or polyps**  
Benign outgrowths of skin consisting of a fibrovascular core covered with normal or thinned epidermis. They may be single or multiple and range in diameter from less than a millimetre to a centimetre or more.
- EK71.0** **Fibroepithelial polyp of skin**  
A common polypoid, often pedunculated non-neoplastic benign skin growth consisting of a fibrovascular core covered with normal or thinned epidermis. If torsion of the stalk occurs they may become painful, swollen and necrotic.
- EK71.1** **Multiple skin tags**  
Very common non-neoplastic fibroepithelial skin growths ranging from less than one to several millimetres in diameter. They favour the neck and intertriginous areas and may be very numerous. They are associated with obesity, type II diabetes, insulin resistance and acanthosis nigricans.
- EK71.Z** **Polyp of skin not elsewhere classified**

## Disorders of the skin of uncertain or unpredictable malignant potential (EK90-EK92)

**Coded Elsewhere:** Neoplasms of uncertain behaviour of skin (2F72)

**EK90**

### **Actinic keratosis and other discrete epidermal dysplasias**

A group of conditions characterised by varying degrees of keratinocytic atypia resulting from damage to keratinocyte DNA. They carry a small propensity to develop into invasive squamous cell carcinoma.

**EK90.0**

#### **Actinic keratosis**

Actinic keratoses (AKs) are focal areas of abnormal keratinocyte proliferation and differentiation induced by chronic exposure to ultraviolet radiation. They are very common on sun-exposed skin of fair-skinned individuals who have had excessive exposure to sunlight. Initially flat scaly papules, they may become significantly elevated from the skin surface by producing dense adherent keratin or as a result of unregulated cellular proliferation which may progress to frank carcinoma in situ or invasive squamous cell carcinoma.

*Inclusions:* Solar keratosis

**EK90.1**

#### **Diffuse actinic keratinocyte dysplasia**

Diffuse actinic dysplasia develops after repeated exposure of skin to ultraviolet radiation, usually over decades, and results from cumulative DNA damage within the nuclei of epidermal keratinocytes. It is characterised initially by subtle diffuse skin changes including mottling, erythema, telangiectasia and irregular fine scaling. It is seen most commonly on the unprotected scalp skin of bald men. Histologically there are early signs of dysplasia in the basal epidermis. As damage accumulates the clinical changes become more pronounced with the formation of discrete actinic keratoses, from which intraepidermal or invasive squamous cell carcinoma may develop.

*Inclusions:* "Field change" due to chronic exposure to ultraviolet radiation

**EK90.Y**

#### **Other discrete epidermal dysplasias**

**EK91**

### **Dermatoses which may presage cutaneous lymphoma**

Dermatoses which may represent the earliest stages of cutaneous lymphoma but where it is not possible to confirm their neoplastic nature.

**EK91.0**

#### **Large plaque parapsoriasis**

Large plaque parapsoriasis is a chronic skin disorder characterised by the indolent development over years or decades of scaly patches or slightly elevated plaques which may be clinically indistinguishable from early mycosis fungoides but in which no evidence of infiltration by abnormal lymphocytes can be found. Approximately 10% of patients will, however, eventually progress to mycosis fungoides.

**EK91.1**

**Poikiloderma vasculare atrophicans**

Poikiloderma vasculare atrophicans is a cutaneous reaction pattern characterised by mottled hyper- and hypomelanosis, telangiectasia and progressive dermal and epidermal atrophy. It may manifest as a component of established mycosis fungoides but may precede the development of the latter by many years and, in some cases, may persist indefinitely without progression to frank lymphoma. It should be distinguished from other causes of poikiloderma such as may be seen with dermatomyositis.

**EK91.2**

**Primary cutaneous plasmacytosis**

A skin disorder resulting from focal or multifocal dense infiltration of the skin by plasma cell aggregates. It may be associated with high levels of serum IgG4. It typically presents as widespread reddish-brown papules, nodules and pigmented indurated plaques involving the trunk and limbs but may present as a single nodule or plaque. The majority of patients with this uncommon skin disorder are of East Asian descent. There is a risk of progression to systemic lymphoproliferative malignancy.

**EK92**

**Histiocytoses of uncertain malignant potential**

Disorders characterised by abnormal proliferation of dendritic cells and macrophages. The proliferation may or may not be clonal and the prognosis is unpredictable.

**Coded Elsewhere:** Langerhans cell histiocytosis (2B31.2)

Indeterminate cell histiocytosis (2B31.6)

## Cutaneous markers of internal disorders (EL10-EL3Y)

A heterogeneous group of skin disorders associated with underlying disease.

**Coded Elsewhere:** Tophaceous gout (FA25.20)

- Diabetic skin lesions (EB90.0)
- Benign acanthosis nigricans (ED51.00)
- Acquired perforating dermatosis (EE70.0)
- Calcific arteriolopathy (EB90.42)
- Pretibial myxoedema (EB90.10)
- Acromegaly or pituitary gigantism (5A60.0)
- Cholestatic pruritus (EC90.11)
- Yellow nail syndrome (EE11.1)
- Uraemic pruritus (EC90.10)
- Nail-patella syndrome (LD24.J0)
- Hairy leukoplakia (DA01.01)
- Immune reconstitution inflammatory syndrome (4B23)

## Cutaneous markers of internal malignancy (EL10-EL1Y)

A range of generally uncommon skin signs which may point to the presence of an internal malignancy

**EL10**

### Paraneoplastic syndromes involving skin

**Coded Elsewhere:** Paraneoplastic pemphigus (EB40.2)

- Thrombophlebitis migrans (BD70.2)
- Paraneoplastic dermatomyositis (4A41.00)
- Paraneoplastic hypertrophic osteoarthropathy (FB86.10)

**EL1Y**

### Other specified cutaneous markers of internal malignancy

---

**EL3Y**

### Other specified cutaneous markers of internal disorders

**Coding Note:** Code also the causing condition

## Postprocedural disorders of the skin (EL50-EL80)

This group of disorders incorporates drug eruptions, other cutaneous side effects of medication and adverse reactions to medical and surgical interventions.

**EL50**

### Unsatisfactory surgical scar of skin

A surgical skin scar with a poor functional or cosmetic outcome.

**EL50.0**

### Keloidal surgical scar

A surgical scar which heals with an overgrowth of fibrous scar tissue which extends beyond the limits of the original surgical wound.

<b>EL50.1</b>	<b>Hypertrophic surgical scar</b> An elevated surgical scar containing an excess of fibrous tissue which, in contrast to a keloidal scar, does tend to flatten with time.
<b>EL50.2</b>	<b>Atrophic surgical scar</b> A surgical scar in which there is thinning of the skin giving it a wrinkled appearance. <b>Exclusions:</b> Postinflammatory atrophic scarring of the skin (EE40.2)
<b>EL50.3</b>	<b>Expanded surgical scar</b> A widened surgical scar, often resulting from inadequate deep suturing or poor surgical technique. They are common in disorders of connective tissue such as Ehlers-Danlos syndrome. <b>Inclusions:</b> Stretched scar
<b>EL50.Z</b>	<b>Unsatisfactory surgical scar of skin, unspecified</b>
<b>EL51</b>	<b>Cutaneous flap necrosis</b> Necrosis of surgical skin flap
<b>EL52</b>	<b>Myocutaneous flap necrosis</b> Necrosis of a surgical flap containing both skin and muscle
<b>EL53</b>	<b>Skin graft failure</b> Failure of skin graft tissue to engraft as intended
<b>EL54</b>	<b>Composite graft failure</b> Failure of composite graft tissue (e.g. skin and cartilage) to engraft as intended
Adverse cutaneous effects of therapeutic ionizing irradiation (EL60-EL63)	
<b>Coded Elsewhere:</b> Oral mucositis due to radiotherapy (DA01.11)	
Radiotherapy-induced xerostomia (DA02.1)	
Scarring alopecia following radiotherapy (ED70.5Y)	
Radiotherapy-induced skin malignancy (2C3Y)	
<b>EL60</b>	<b>Acute radiodermatitis following radiotherapy</b> The reaction of the skin, and in particular the epidermis, to acute exposure to ionising radiation directed at the skin for therapeutic purposes. It manifests as inflammation, erosion and crusting.
<b>EL61</b>	<b>Chronic radiodermatitis following radiotherapy</b> The late cutaneous sequelae of the therapeutic use of ionising radiation. It may take five to ten years to develop and is characterised by cutaneous atrophy, fibrosis, dyspigmentation, alopecia and telangiectasia with associated damage to underlying subcutaneous fat.
<b>EL63</b>	<b>Radionecrosis of skin due to therapeutic ionizing irradiation</b> Necrosis and ulceration of skin attributable to radiotherapy

Complications of cutaneous cosmetic procedures (EL73-EL73.6)

**Coded Elsewhere:** Specified cutaneous complications of cosmetic procedures (EL73)

**EL73**

**Unsatisfactory outcome from cutaneous cosmetic surgical procedure**

The outcome from a surgical intervention designed to improve cosmetic appearance which is considered by the practitioner who performed the procedure to be less satisfactory than anticipated.

**EL73.0**

**Adverse reaction to dermal or deep fillers**

Any adverse event attributable to the use of injected fillers used for soft tissue augmentation.

**Exclusions:** Pyogenic abscess of the skin (1B75.3)

**EL73.1**

**Adverse reaction to chemical peel**

Any adverse reaction attributable to the use of chemical peels on the skin for cosmetic enhancement. Examples include infection, chemical burns, pustular acneform eruptions, dyspigmentation and scarring. The precise adverse reaction should be documented separately.

**EL73.2**

**Adverse reaction to injection of neurotoxin**

Adverse event resulting from use of neurotoxins, especially botulinum toxin, into the skin. This is most commonly administered for aesthetic reasons. Recognised problems include ptosis, diplopia and hypersensitivity to the toxin. Details of the reaction should be coded separately.

**EL73.3**

**Unsatisfactory outcome from cosmetic laser surgery**

The outcome from an intervention using lasers designed to improve cosmetic appearance which is considered by the practitioner who performed the procedure to be less satisfactory than anticipated.

**EL73.4**

**Hypomelanosis resulting from cosmetic procedure**

Loss of skin pigmentation attributable to a cosmetic intervention and particularly associated with chemical peels.

**EL73.5**

**Dyspigmentation resulting from cosmetic procedure**

Disturbed skin pigmentation following a cosmetic procedure

**EL73.6**

**Fibrosis or scarring following cosmetic procedure**

Unsatisfactory scarring and fibrosis following a procedure designed to improve cosmesis.

**EL80**

**Adverse cutaneous effects of diagnostic procedures**

Skin problems arising from diagnostic procedures. Examples would be radiation necrosis from prolonged fluoroscopy or anaphylaxis from use of radiocontrast media.

**Coded Elsewhere:** Nephrogenic systemic fibrosis (FB51.Y)

**EM0Y**

**Other specified diseases of the skin**

**EM0Z**

**Skin disease of unspecified nature**

# CHAPTER 15

---

## Diseases of the musculoskeletal system or connective tissue

This chapter has 90 four-character categories.

Code range starts with FA00

This chapter contains diseases of musculoskeletal system and diseases of connective tissue.

- Exclusions:**
- Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Complications of pregnancy, childbirth and the puerperium (Chapter 18)
  - Certain infectious or parasitic diseases (Chapter 01)
  - Temporomandibular joint disorders (DA0E.8)
  - Certain conditions originating in the perinatal period (Chapter 19)

- Coded Elsewhere:**
- Neoplasms of the musculoskeletal system
  - Monogenic autoinflammatory syndromes (4A60)
  - Nonorgan specific systemic autoimmune disorders (4A40-4A4Z)
  - Symptoms, signs or clinical findings of the musculoskeletal system (ME80-MF1Y)
  - Structural developmental anomalies of the skeleton (LB70-LB9Z)
  - Syndromes with connective tissue involvement as a major feature (LD28)
  - Syndromes with skeletal anomalies as a major feature (LD24)

This chapter contains the following top level blocks:

- Arthropathies
- Conditions associated with the spine
- Soft tissue disorders
- Osteopathies or chondropathies
- Neoplasms of the musculoskeletal system

## Arthropathies (FA00-FA5Z)

### Osteoarthritis (FA00-FA0Z)

Osteoarthritis (OA) can be defined as a group of distinct, but overlapping diseases, which may have different etiologies, but similar biological, morphological, and clinical outcomes affecting the articular cartilage, subchondral bone, ligaments, joint capsule, synovial membrane, and periarticular muscles. OA is the most common joint disease in persons 65 years of age and above. Its etiology is not fully understood, although there are several related factors, such as female gender, genetics, metabolism, and excessive mechanical stress. The diagnosis of OA is primarily based on clinical history and physical examination. The cardinal radiographic features of OA are focal/non-uniform narrowing of the joint space in the areas subjected to the most pressure, subchondral cysts, subchondral sclerosis, and osteophytes.

<b>FA00</b>	<b>Osteoarthritis of hip</b>
<b>FA00.0</b>	<b>Primary osteoarthritis of hip</b>
<b>FA00.1</b>	<b>Post traumatic osteoarthritis of hip</b>
<b>FA00.2</b>	<b>Other secondary osteoarthritis of hip</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA00.Z</b>	<b>Osteoarthritis of hip, unspecified</b>
<b>FA01</b>	<b>Osteoarthritis of knee</b>
	Primary osteoarthritis occurring in an otherwise intact knee joint, involving genetically related, age-related or use-related degeneration with microscopic and macroscopic anatomical changes, which ultimately limit motion in one or more joints. Changes to the joint include increasing cartilage loss and osseous transformation such as sclerosis, osteophyte formation and cysts as well as potential inflammatory changes in surrounding soft tissue structures.
<b>FA01.0</b>	<b>Primary osteoarthritis of knee</b>
<b>FA01.1</b>	<b>Post traumatic osteoarthritis of knee</b>
<b>FA01.2</b>	<b>Other secondary osteoarthritis of knee</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA01.Z</b>	<b>Osteoarthritis of knee, unspecified</b>
<b>FA02</b>	<b>Osteoarthritis of wrist or hand</b>
<b>FA02.0</b>	<b>Primary osteoarthritis of wrist or hand</b>
<b>FA02.1</b>	<b>Post traumatic osteoarthritis of wrist or hand</b>
<b>FA02.2</b>	<b>Other secondary osteoarthritis of wrist or hand</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA02.Z</b>	<b>Osteoarthritis of wrist or hand, unspecified</b>
<b>FA03</b>	<b>Osteoarthritis of other specified joint</b>

<b>FA03.0</b>	<b>Primary osteoarthritis of other specified joint</b>
<b>FA03.1</b>	<b>Post traumatic osteoarthritis of other specified joint</b>
<b>FA03.2</b>	<b>Other secondary osteoarthritis of other specified joint</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA03.Z</b>	<b>Osteoarthritis of other specified joint, unspecified</b>
<b>FA04</b>	<b>Oligoosteoarthritis</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA05</b>	<b>Polyosteoarthritis</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA0Z</b>	<b>Osteoarthritis, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition

#### Infection related arthropathies (FA10-FA1Z)

A disease of the joints, caused by an infection with a bacterial, viral, fungal, or parasitic source.

Distinction is made between the following types of etiological relationship.

- a) direct infection of joint, where organisms invade synovial tissue and microbial antigen is present in the joint;
- b) indirect infection, which may be of two types: a reactive arthropathy, where microbial infection of the body is established but neither organisms nor antigens can be identified in the joint, and a postinfective arthropathy, where microbial antigen is present but recovery of an organism is inconstant and evidence of local multiplication is lacking.

<b>FA10</b>	<b>Direct infections of joint</b>
	Hematogenic or non-hematogenic infections of joints.
	<b>Exclusions:</b> Reactive arthropathies (FA11) Postinfectious arthropathies (FA12)
<b>FA10.0</b>	<b>Bacterial infection of joint</b>
	<b>Coded Elsewhere:</b> Gonococcal arthritis (1A72.0)
<b>FA10.1</b>	<b>Viral infection of joint</b>
<b>FA10.2</b>	<b>Fungal infection of joint</b>
<b>FA10.Z</b>	<b>Direct infections of joint, unspecified</b>

**FA11****Reactive arthropathies**

A disease of the joints, caused by an infection in another part of the body, auto-immune disease, or post-vaccination. This disease is characterised by a secondary inflammation of the joints in reaction to infection, auto-immune disease, or vaccination. Common previous sites of infection are the enteric or genitourinary system.

**Coding Note:** Code also the underlying disease or aetiology.

**Exclusions:** Acute rheumatic fever (1B40-1B42)

Behçet disease (4A62)

**Coded Elsewhere:** Arthritis mutilans (FA21.Y)

**FA11.0 Arthropathy following intestinal bypass**

**Coded Elsewhere:** Bowel-associated dermatosis-arthritis syndrome (EB2Y)

**FA11.1 Arthropathy following vaccination****FA11.2 Arthropathy following genitourinary infection**

Reactive arthritis (ReA) is an autoimmune disorder belonging to the group of seronegative spondyloarthropathies and is characterised by the classic triad of arthritis, urethritis and conjunctivitis.

**Coding Note:** Code also the causing condition

**FA11.Y Other specified reactive arthropathies**

**Coding Note:** Code also the underlying disease or aetiology.

**FA11.Z Reactive arthropathies, unspecified**

**Coding Note:** Code also the underlying disease or aetiology.

**FA12****Postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.0 Bacterial postinfectious arthropathy**

**Coding Note:** Code also the causing condition

**FA12.1 Viral postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.2 Fungal postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.3 Parasitic postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.Y Other specified postinfectious arthropathies**

**Coding Note:** Code also the causing condition

**FA12.Z** **Postinfectious arthropathies, unspecified**

**Coding Note:** Code also the causing condition

**FA13** **Infectious spondyloarthritis**

A condition of the spine, caused by an infection with a bacterial, viral, fungal, or parasitic source. This condition is characterised by inflammation of the vertebrae.

**Exclusions:** Inflammatory spondyloarthritis (FA92)

**FA1Y** **Other specified infection related arthropathies**

**FA1Z** **Infection related arthropathies, unspecified**

Inflammatory arthropathies (FA20-FA2Z)

**Coded Elsewhere:** Peripheral spondyloarthritis (FA92.1)

**FA20** **Rheumatoid arthritis**

Rheumatoid arthritis (RA) is persistent and/or erosive disease that is defined as the confirmed presence of synovitis in at least 1 joint, absence of an alternative diagnosis that better explains the synovitis, and achievement of a total score of 6 or greater (of a possible 10) from the individual scores in 4 domains: number and site of involved joints, serologic abnormality, elevated acute-phase response, and symptom duration.

**Exclusions:** rheumatoid arthritis, juvenile (FA24.1)

Acute rheumatic fever (1B40-1B42)

**Coded Elsewhere:** Respiratory disorders in rheumatoid arthritis (CB05.1)

**FA20.0** **Seropositive rheumatoid arthritis**

**FA20.1** **Seronegative rheumatoid arthritis**

**FA20.Z** **Rheumatoid arthritis, serology unspecified**

**FA21** **Psoriatic arthritis**

Psoriatic arthritis, a member of the spondyloarthritis family, is defined as an inflammatory arthropathy associated with psoriasis that is usually rheumatic factor negative. It is characterised by various clinical manifestations, including symmetric polyarthritis, asymmetric oligoarthritis or polyarthritis, spinal inflammation similar to ankylosing spondylitis, peripheral enthesitis, anterior chest wall involvement, distal interphalangeal arthritis of the hands and feet, dactylitis (sausage digit or toe), arthritis mutilans and onycho-pachydermo-periostitis. The CASPAR has high sensitivity and specificity.

**Exclusions:** Juvenile psoriatic arthritis (FA24.2)

**FA21.0** **Psoriatic spondyloarthritis**

**Inclusions:** Psoriatic spondylitis

**FA21.Y** **Other specified psoriatic arthritis**

**FA21.Z** **Psoriatic arthritis, unspecified**

**FA22**

### **Polymyalgia rheumatica**

Polymyalgia rheumatica (PMR) is a syndrome characterised by aching of the proximal portions of the extremities and torso. Provisional classification criteria for PMR by the European League Against Rheumatism/American College of Rheumatology Collaborative Initiative should be applied to patients aged 50 years or older with bilateral shoulder aching, and abnormal CRP and/or ESR. The scoring algorithm is based on morning stiffness >45 minutes (2 points), hip pain/limited range of motion (1 point), absence of rheumatoid factor and/or anti-citrullinated protein antibody (1 point), with optional ultrasound criteria. Most commonly, PMR occurs in isolation, but may be seen in 40-50% of patients with giant cell arteritis.

**Exclusions:** Giant cell arteritis with polymyalgia rheumatica (4A44.2)

**FA23**

### **Adult-onset Still disease**

Adult onset Still's disease is a rare rheumatic condition characterised by a combination of symptoms, such as fever higher than 39 degrees C, cutaneous rash during fever peaks, joint or muscle pain, lymph node hypertrophy, increase of white blood cells (especially polymorphonuclear neutrophils) and abnormalities of liver metabolism.

**Exclusions:** Still disease NOS (FA24.4)

**FA24**

### **Juvenile idiopathic arthritis**

Juvenile idiopathic arthritis (JIA) is the term used to describe a group of inflammatory articular disorders of unknown cause that begin before the age of 16 and last over 6 weeks. Six disorders have been defined: systemic-onset juvenile idiopathic arthritis (formerly referred to as Still's disease), oligoarticular arthritis, rheumatoid factor-positive polyarthritis, rheumatoid factor-negative polyarthritis, enthesitis-related arthritis (spondyloarthropathies), and the juvenile form of psoriatic arthritis (see these terms). A seventh category has been defined comprising unclassified types of arthritis (types that do not correspond to any of the defined disease or that correspond to more than one of the disease definitions).

**Coding Note:** Arthritis in children, with onset before 16th birthday and lasting longer than 6 weeks

**Exclusions:** Juvenile dermatomyositis (4A41.01)

Felty syndrome (FA20.0)

**FA24.0**

### **Juvenile idiopathic oligoarthritis**

Oligoarticular juvenile arthritis is the most common form of juvenile idiopathic arthritis, representing nearly 50% of cases. It is more common in girls (80% of cases), with onset occurring between ages 2 and 4. It is usually asymmetrical and affects between one and a maximum of four joints, predominantly those of the lower limbs (knee or foot).

**Coding Note:** Use additional code, if desired, to identify associated uveitis

**FA24.00**

Juvenile idiopathic oligoarthritis, onset persistent

Onset persistent refers to the fact that the child never has more than four joints involved throughout the course of the disease.

<b>FA24.01</b>	Juvenile idiopathic oligoarthritis, onset extended Onset extended refers to the fact that after the initial six month period, the total number of affected joints exceeds four.
<b>FA24.0Z</b>	Juvenile idiopathic oligoarthritis, onset unspecified
<b>Coding Note:</b>	Use additional code, if desired, to identify associated uveitis
<b>FA24.1</b>	<b>Juvenile idiopathic polyarthritis</b> Juvenile idiopathic polyarthritis is a type of juvenile idiopathic arthritis (JIA) that affects five or more joints in the first six months after onset. It often affects the same joints on each side of the body. It is more common in girls.
<b>FA24.2</b>	<b>Juvenile psoriatic arthritis</b> Juvenile psoriatic arthritis is an autoimmune inflammatory disorder representing less than 10% of all juvenile idiopathic arthritis (JIA) cases, and characterised by the association of psoriasis with one of two forms of arthritis: the association of psoriasis with an arthritis that most resembles oligoarticular arthritis with a risk of uveitis is more common in girls with onset at around 6 years of age, whereas the association of psoriasis with a form of arthritis that most resembles a spondyloarthropathy is most common in boys and manifests later.
<b>Coding Note:</b>	Use additional code to identify associated uveitis
<b>FA24.3</b>	<b>Juvenile enthesitis related arthritis</b> Enthesitis-related arthritis is a type of juvenile idiopathic arthritis (JIA) that represents the paediatric form of spondyloarthropathy in adults, but differs from it as the initial manifestations in the paediatric form are asymmetric oligoarticular arthritis of the lower limbs, associated with enthesitis. Axial manifestations (sacroiliac involvement) are present in only 25% of cases at onset but appear several years later in the disease course.
<b>Coding Note:</b>	Use additional code to identify associated uveitis
<b>FA24.4</b>	<b>Juvenile systemic arthritis</b> Systemic-onset juvenile idiopathic arthritis represents 10-11% of cases of juvenile idiopathic arthritis (JIA) and is marked by the severity of the extra-articular manifestations (fever, cutaneous eruptions) and by an equal sex ratio. Fever peaks are associated with transient cutaneous eruptions and diffuse erythematosis or urticarial-like lesions. The presence of arthritis is essential for diagnosis but may appear later in the disease course. The number of sites affected is variable (mono-, oligo- or polyarthritis) affecting both the small and large joints in a nearly symmetrical manner. This characteristic diagnostic triad may also be associated with an adenopathy and hepatosplenomegaly. Visceral complications (pericarditis, pleural effusion or serous peritonitis with abdominal pain) may be present.
<b>Coding Note:</b>	Code also the causing condition
<b>FA24.Y</b>	<b>Other specified juvenile idiopathic arthritis</b>
<b>Coding Note:</b>	Arthritis in children, with onset before 16th birthday and lasting longer than 6 weeks
<b>FA24.Z</b>	<b>Juvenile idiopathic arthritis, unspecified</b>
<b>Coding Note:</b>	Arthritis in children, with onset before 16th birthday and lasting longer than 6 weeks

**FA25**

### **Gout**

Gout is an acute or chronic arthropathy resulting from deposition of monosodium urate monohydrate crystals in joint tissues. It is strongly associated with hyperuricaemia, which may be secondary to certain drugs, poisons or lymphoproliferative disorders. Gout is definitively diagnosed by demonstration of urate crystals in aspirated synovial fluid in the absence of an alternative aetiology for arthritis. It may be associated with focal urate deposition in skin and subcutaneous tissue (tophaceous gout) and with urate nephropathy

**Exclusions:** Hyperuricaemia without signs of inflammatory arthritis or tophaceous disease (5C55)

**FA25.0**

### **Primary gout**

Primary gout refers to those cases that appear to be innate, that are neither secondary to another acquired disorder nor a subordinate manifestation of an inborn error that leads initially to a major disease unlike gout. Although some cases of primary gout have a genetic basis, others do not.

**Inclusions:** Gouty bursitis  
Gouty arthropathy

**FA25.1**

### **Secondary gout**

Secondary gout refers to those cases that develop during the course of another disease, or as a consequence of treatment with drugs. Secondary gout is associated with increased purine biosynthesis de novo, increased nucleic acid turnover, or decreased renal clearance of uric acid.

**Coding Note:** Code also the causing condition

**FA25.10** Lead-induced gout

**FA25.11** Drug-induced gout

**FA25.12** Gouty arthropathy due to enzyme defects or other inherited disorders

**Coding Note:** Code also the causing condition

**FA25.1Y** Other specified secondary gout

**Coding Note:** Code also the causing condition

**FA25.1Z** Secondary gout, unspecified

**Coding Note:** Code also the causing condition

**FA25.2** **Gout without specification whether primary or secondary**

**FA25.20** Tophaceous gout

Tophi are precipitates of monosodium urate in the tissues of patients with hyperuricaemia and may be associated with other manifestations of hyperuricaemia including gouty arthropathy. They present particularly in the skin and subcutaneous tissue. One of the more common sites for them is the helix of the ear.

**FA25.2Y** Other specified gout without specification whether primary or secondary

**FA25.2Z** Gout, unspecified

<b>FA26</b>	<b>Certain specified crystal arthropathies</b>
	<b><i>Exclusions:</i></b> Gout (FA25)
<b>FA26.0</b>	<b>Calcium pyrophosphate dehydrate deposition disease</b> Familial calcium pyrophosphate deposition is a chronic inherited arthropathy characterised by chondrocalcinosis (cartilage calcification), often associated with recurrent acute calcium pyrophosphate crystal arthritis and polyarticular osteoarthritis.
<b>FA26.1</b>	<b>Hydroxyapatite deposition disease</b> Calcium hydroxyapatite crystal deposition disease is characterised by the presence of basic calcium phosphate crystals - predominantly hydroxyapatite - in periarticular soft tissues, especially tendons. This entity is best recognised as "calcific tendinitis" at its most frequent site about the shoulder, but the disease involves numerous other sites and may be more appropriately termed calcific periarthritis.
<b>FA26.2</b>	<b>Chondrocalcinosis</b> Chondrocalcinosis refers to radiographic calcification in hyaline and/or fibrocartilage and is not specific for CPPD or other particular crystal deposition disease. Familial I CPPD deposition disease has been reported from many countries and some kindred have CPPD disease linked to ANKH mutation on chromosome 5p. <b><i>Inclusions:</i></b> Familial chondrocalcinosis
<b>FA26.Y</b>	<b>Other specified crystal arthropathies</b>
<b>FA26.Z</b>	<b>Crystal arthropathies, unspecified</b>
<b>FA27</b>	<b>Certain specified inflammatory arthropathies</b>
	<b><i>Exclusions:</i></b> cricoarytenoid arthropathy (CA0H) arthropathy NOS (FA38)
<b>FA27.0</b>	<b>Kashin-Beck disease</b> Kashin-Beck disease (KBD) is a chronic, endemic osteochondropathy of unknown etiology. The disease is mainly distributed in a diagonal belt ranging from the northeast to the southwest of China, where the soil selenium content is low. Mineral deficiencies (e.g., selenium, iodine), fungal cereal contamination, and water contamination may be contributing factors to its etiology. The disease is manifested by arthritic pain, morning stiffness, enlarged and shortened fingers, deformed and enlarged joints, and limited motion of the joints in the extremities.
<b>FA27.1</b>	<b>Pigmented villonodular synovitis</b> This condition is characterised by outgrowths of synovial membrane composed of villi and fibrous nodules and is histologically characterised by hemosiderin- and lipid-containing macrophages and multinucleated giant cells. It usually occurs in the knee and hip, and is often diagnosed by Magnetic Resonance Imaging.

<b>FA27.2</b>	<b>Palindromic rheumatism</b>
	Palindromic rheumatism causes sudden attacks of joint pain and swelling, typically in the hands and feet. An episode may last from a few hours to several days. The frequency of attacks also varies. Between attacks, pain and swelling completely disappear, and the affected joints look normal on X-rays. It is likely that 30 to 50 percent of patients with palindromic rheumatism go on to develop rheumatoid arthritis, but the progression may take several years.
<b>FA27.3</b>	<b>Transient synovitis</b>
<b>FA27.4</b>	<b>Intermittent hydrarthrosis</b>
<b>FA27.Y</b>	<b>Other specified inflammatory arthropathies</b>
<b>FA2Z</b>	<b>Inflammatory arthropathies, unspecified</b>

Certain specified joint disorders or deformities of limbs (FA30-FA3Z)

**Exclusions:** Conditions associated with the spine (FA70-FB1Z)

<b>FA30</b>	<b>Acquired deformities of fingers or toes</b>
	<b>Exclusions:</b> congenital deformities and malformations of fingers and toes (LB80-LB81.Z)
	Congenital absence of finger (LB99.7)
	Congenital absence of toe (LB9A.5)
	Acquired absence of toe (QF00)
	Acquired absence of finger, including thumb, unilateral (QF00)
	amputation of finger (QF00)
	amputation of toe (QF00)
<b>FA30.0</b>	<b>Acquired hallux valgus</b>
<b>FA30.1</b>	<b>Hallux rigidus</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA30.2</b>	<b>Acquired hammer toe</b>
	<b>Exclusions:</b> Congenital hammer toe (LB98.5)
<b>FA30.Y</b>	<b>Other specified acquired deformities of fingers or toes</b>
<b>FA30.Z</b>	<b>Acquired deformities of fingers or toes, unspecified</b>

<b>FA31</b>	<b>Other acquired deformities of limbs</b>
	<b>Exclusions:</b> congenital: deformities and malformations of limbs (LB70-LB9Z)
	Acquired deformities of fingers or toes (FA30)
	congenital: absence of limbs (LB70-LB9Z)
	Coxa plana (FB82.1)
	Acquired absence of limb (QF00)
<b>FA31.0</b>	<b>Valgus deformity, not elsewhere classified</b>
	<b>Exclusions:</b> Talipes calcaneovalgus (LB98.22)
	Metatarsus valgus (LB98.21)
<b>FA31.1</b>	<b>Varus deformity, not elsewhere classified</b>
	<b>Exclusions:</b> Metatarsus varus (LB98.02)
	tibia vara (FB82.1)
<b>FA31.2</b>	<b>Flexion deformity</b>
<b>FA31.3</b>	<b>Acquired wrist drop</b>
<b>FA31.4</b>	<b>Acquired foot drop</b>
<b>FA31.5</b>	<b>Acquired pes planus</b>
	<b>Exclusions:</b> Congenital pes planus (LB98.1)
<b>FA31.6</b>	<b>Acquired clawhand or clubhand</b>
<b>FA31.7</b>	<b>Acquired clawfoot or clubfoot</b>
	<b>Exclusions:</b> congenital clubfoot - varus (LB98.0)
	congenital clubfoot - valgus (LB98.22)
<b>FA31.8</b>	<b>Acquired unequal limb length</b>
<b>FA31.Y</b>	<b>Other specified acquired deformities of limbs</b>
<b>FA31.Z</b>	<b>Acquired deformities of limbs, unspecified</b>
<b>FA32</b>	<b>Disorders of patella</b>
	<b>Exclusions:</b> Dislocation of patella (NC93.1)
	<b>Coded Elsewhere:</b> Chondromalacia patellae (FB82.00)
<b>FA32.0</b>	<b>Recurrent instability of patella</b>
<b>FA32.1</b>	<b>Patellofemoral disorders</b>
<b>FA32.Y</b>	<b>Other specified disorders of patella</b>
<b>FA32.Z</b>	<b>Disorders of patella, unspecified</b>

**FA33****Internal derangement of knee**

Internal derangement of the knee (IDK) is a chronic disorder of the knee due to a torn, ruptured or deranged meniscus of the knee, or a partial or complete cruciate rupture, with or without injury to the capsular ligament, resulting in ongoing or intermittent signs and symptoms such as pain, instability, or abnormal mobility of that knee.

If indicated that derangement is due to trauma, code to Injury, poisoning and certain other consequences of external causes, regardless of time past since injury.

**Exclusions:**

- recurrent dislocation or subluxation patella (FA32.0)
- Ankylosis of joint (FA34.4)
- deformity of knee (FA31)
- Injuries to the knee or lower leg (NC90-NC9Z)
- Disorders of patella (FA32)

**FA33.0 Cystic meniscus**

**FA33.1 Discoid meniscus**

**FA33.2 Derangement of meniscus due to old tear or injury**

**Inclusions:** Old bucket-handle tear

**FA33.3 Loose body in knee**

**FA33.4 Chronic instability of knee**

**Exclusions:** Recurrent instability of patella (FA32.0)

**FA33.40** Chronic instability of knee, medial collateral ligament or other or unspecified part of medial meniscus

**FA33.4Y** Other specified chronic instability of knee

**FA33.4Z** Chronic instability of knee, unspecified

**FA33.Y Other specified internal derangement of knee**

**FA33.Z Internal derangement of knee, unspecified**

**FA34****Certain specified joint derangements**

**Exclusions:**

- Temporomandibular joint disorders (DA0E.8)
- current injury - see injury of joint by body region (Chapter 22)

**FA34.0 Loose body in joint**

**Exclusions:** Loose body in knee (FA33.3)

**FA34.1 Disorder of ligament**

**Exclusions:**

- Chronic instability of knee (FA33.4)
- familial ligamentous laxity (LD28.1)

<b>FA34.2</b>	<b>Recurrent instability of joint</b>
	<p><b><i>Exclusions:</i></b> vertebral subluxation (ME93) Recurrent instability of patella (FA32.0)</p>
<b>FA34.3</b>	<b>Contracture of joint</b>
	<p><b><i>Exclusions:</i></b> Dupuytren contracture (FB51.0) contracture of tendon (sheath) without contracture of joint (FB42.1) acquired deformities of limbs (FA31)</p>
<b>FA34.4</b>	<b>Ankylosis of joint</b>
	<p><b><i>Exclusions:</i></b> stiffness of joint without ankylosis (ME85) Ankylosis of spinal joint (FB00)</p>
<b>FA34.5</b>	<b>Impingement syndrome of hip</b>
<b>FA34.Y</b>	<b>Other joint derangements</b>
<b>FA35</b>	<b>Wear of articular bearing surface of joint prosthesis</b>
	<p><b><i>Exclusions:</i></b> Mode of injury or harm associated with a surgical or other medical device, implant or graft (PL12)</p>
<b>FA35.0</b>	<b>Wear of articular bearing surface of joint prosthesis of hip</b>
<b>FA35.1</b>	<b>Wear of articular bearing surface of joint prosthesis of knee</b>
<b>FA35.2</b>	<b>Wear of articular bearing surface of joint prosthesis of other joint</b>
<b>FA35.Z</b>	<b>Wear of articular bearing surface of joint prosthesis of unspecified joint</b>
<b>FA36</b>	<b>Effusion of joint</b>
	Increased intra-articular fluid secondary to trauma and/or other acquired conditions not detailed in other codes.
	<p><b><i>Inclusions:</i></b> hydrarthrosis <b><i>Exclusions:</i></b> hydrarthrosis of yaws (1C1D.2)</p>
<b>FA36.0</b>	<b>Effusion of joint containing blood</b>
	<p><b><i>Inclusions:</i></b> haemarthrosis <b><i>Exclusions:</i></b> Dislocation or strain or sprain of unspecified body region (ND56.3)</p>
<b>FA36.Y</b>	<b>Other specified effusion of joint</b>
<b>FA36.Z</b>	<b>Effusion of joint, unspecified</b>

<b>FA37</b>	<b>Certain joint disorders, not elsewhere classified</b>
	<p><b>Exclusions:</b> calcification of: tendon (FB40.3)            difficulty in walking (MB44.2)            abnormality of gait and mobility (MB44)            Acquired deformities of fingers or toes (FA30)            Other acquired deformities of limbs (FA31)</p>
	<p><b>Coded Elsewhere:</b> Pain in joint (ME82)            Stiffness of joint (ME85)</p>
<b>FA37.0</b>	<b>Osteophyte</b>
<b>FA37.Y</b>	<b>Other specified certain joint disorders, not elsewhere classified</b>
<b>FA37.Z</b>	<b>Certain joint disorders, not elsewhere classified, unspecified</b>
<b>FA38</b>	<b>Arthropathy in diseases classified elsewhere</b>
	<p><b>Coding Note:</b> Code also the causing condition</p>
	<p><b>Exclusions:</b> arthropathy in: haematological disorders (Chapter 03)            neuropathic spondylopathy (FB00-FB0Z)            psoriatic and enteropathic arthropathies juvenile (FA24.2)</p>
<b>FA38.0</b>	<b>Diabetic arthropathy</b>
	<p><b>Coding Note:</b> Code also the causing condition</p>
	<p><b>Exclusions:</b> Diabetic Charcot arthropathy (FA38.10)            Diabetic cheiroarthropathy (EE40-EE7Y)</p>
<b>FA38.1</b>	<b>Neuropathic arthropathy</b>
	<p>Neuropathic arthropathy is a progressive destructive arthritis associated with loss of pain sensation, proprioception, or both. Normal muscular reflexes that modulate joint movement are decreased. Without these protective mechanisms, joints are subjected to repeated trauma, resulting in progressive cartilage and bone damage. Additional symptoms include skin changes, such as erythema, swelling, hyperpigmentation, or purpura and soft tissue ulcers over the affected area, as well as joint loosening or instability and joint deformities.</p>
	<p><b>Coding Note:</b> Use additional code, if desired, to identify neuropathy.</p>
<b>FA38.10</b>	Diabetic Charcot arthropathy
	<p>Joint damage resulting from diabetic sensory polyneuropathy. This most commonly affects the ankle and foot in patients with longstanding diabetes mellitus.</p>
	<p><b>Coding Note:</b> Always assign an additional code for diabetes mellitus.</p>
<b>FA38.1Y</b>	Other specified neuropathic arthropathy
	<p><b>Coding Note:</b> Use additional code, if desired, to identify neuropathy.</p>
<b>FA38.1Z</b>	Neuropathic arthropathy, unspecified
	<p><b>Coding Note:</b> Use additional code, if desired, to identify neuropathy.</p>

**FA38.2** **Arthropathy in hypersensitivity reactions classified elsewhere**

**Coding Note:** Code also the causing condition

**FA38.3** **Haemophilic arthropathy**

Joint destruction in the knees, shoulders, ankles, elbows, and hips is associated with haemophilia. The condition includes acute hemarthrosis, subacute or chronic arthritis, and end-stage haemophilic arthropathy. Nearly all patients with severe haemophilia A or B and half of patients with moderate disease activity experience hemarthrosis. Symptoms include joint pain, joint swelling, joint fibrosis, development of flexion deformities, and erosion of joint cartilage. Joints most commonly affected are knees, ankles, elbows, shoulders, and hips (in order of frequency). Bleeding into muscle and soft tissue also causes musculoskeletal dysfunction.

**Coding Note:** Code also the causing condition

**FA38.Y** **Other specified arthropathy in diseases classified elsewhere**

**Coding Note:** Code also the causing condition

**FA38.Z** **Unspecified arthropathy in diseases classified elsewhere**

**Coding Note:** Code also the causing condition

**FA3Z** **Unspecified joint disorders and deformities of limbs**

**FA5Y** **Other specified arthropathies**

**FA5Z** **Arthropathies, unspecified**

## Conditions associated with the spine (FA70-FB1Z)

This is a group of conditions in which there is a deviation from or interruption of the normal structure or function of the spine.

**Coded Elsewhere:** Spinal pain (ME84)

Neck syndrome (ME86.C)

## Structural disorders of spine (FA70-FA7Z)

**FA70** **Spinal deformities**

**FA70.0** **Kyphosis**

This is a curving of the spine that causes a bowing or rounding of the back, which leads to a hunchback or slouching posture.

**Exclusions:** Post radiation kyphosis (FC01.2)

**FA70.1** **Scoliosis**

**Coded Elsewhere:** Post radiation scoliosis (FC01.5)

Congenital scoliosis due to congenital bony malformation  
(LB73.25)

<b>FA70.2</b>	<b>Lordosis</b> This is the inward curvature of a portion of the lumbar and cervical vertebral column, excessive curvature is called hyperlordosis.  <b>Coded Elsewhere:</b> Postsurgical lordosis (FC01.4)
<b>FA70.Z</b>	<b>Spinal deformities, unspecified</b>
<b>FA71</b>	<b>Torticollis</b>  <b>Exclusions:</b> Cervical dystonia or spasmotic torticollis (8A02.0) Congenital torticollis (LA62) current injury - see injury of spine by body region (NB50-NB9Z)  torticollis: due to birth injury (KA43.3)
<b>FA72</b>	<b>Disorders of vertebra</b> Changes in the structure of the spine causing damage to vertebrae and surrounding tissue secondary to infection, injury, tumours, infections, bone changes that come with age etc. Spinal diseases often limit movement and cause pain when bone changes put pressure on the spinal cord or nerves.
<b>FA72.0</b>	<b>Ankylosing hyperostosis</b>
<b>FA72.1</b>	<b>Kissing spine</b>
<b>FA72.2</b>	<b>Traumatic spondylopathy</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FA72.3</b>	<b>Fatigue fracture of vertebra</b>
<b>Coding Note:</b>	Code also the causing condition  <b>Inclusions:</b> Stress fracture of vertebra
<b>FA72.4</b>	<b>Collapsed vertebra, not elsewhere classified</b>  <b>Exclusions:</b> collapsed vertebra in osteoporosis (FB00-FB0Z) current injury - see injury of spine by body region (NB50-NB9Z)
<b>FA72.Y</b>	<b>Other specified disorders of vertebra</b>
<b>FA72.Z</b>	<b>Disorders of vertebra, unspecified</b>
<b>FA7Y</b>	<b>Other specified structural disorders of spine</b>
<b>FA7Z</b>	<b>Structural disorders of spine, unspecified</b>

Degenerative condition of spine (FA80-FA8Z)

This is a disease characterised by degenerative changes in the intervertebral disc, vertebral end-plates and spinal joints due to aging or structural change.

<b>FA80</b>	<b>Intervertebral disc degeneration</b>
<b>FA80.0</b>	<b>Intervertebral disc degeneration of cervical spine without prolapsed disc</b> This is a disease characterised by degenerative changes in the intervertebral disc and vertebral end-plates without prolapse of the intervertebral disc. <b>Exclusions:</b> Intervertebral disc degeneration of cervical spine with nervous system involvement (FA80.3)
<b>FA80.1</b>	<b>Intervertebral disc degeneration of cervical spine with prolapsed disc</b> <b>Exclusions:</b> Intervertebral disc degeneration of cervical spine with nervous system involvement (FA80.3)
<b>FA80.2</b>	<b>Intervertebral disc degeneration of cervical spine with bony spur at the vertebra</b> <b>Exclusions:</b> Intervertebral disc degeneration of cervical spine with nervous system involvement (FA80.3)
<b>FA80.3</b>	<b>Intervertebral disc degeneration of cervical spine with nervous system involvement</b>
<b>FA80.4</b>	<b>Intervertebral disc degeneration of thoracic spine without prolapsed disc</b> <b>Exclusions:</b> Intervertebral disc degeneration of thoracic spine with nervous system involvement (FA80.7)
<b>FA80.5</b>	<b>Intervertebral disc degeneration of thoracic spine with prolapsed disc</b> <b>Exclusions:</b> Intervertebral disc degeneration of thoracic spine with nervous system involvement (FA80.7)
<b>FA80.6</b>	<b>Intervertebral disc degeneration of thoracic spine with bony spur at the vertebra</b> <b>Exclusions:</b> Intervertebral disc degeneration of thoracic spine with nervous system involvement (FA80.7)
<b>FA80.7</b>	<b>Intervertebral disc degeneration of thoracic spine with nervous system involvement</b>
<b>FA80.8</b>	<b>Intervertebral disc degeneration of lumbar spine without prolapsed disc</b> <b>Exclusions:</b> Intervertebral disc degeneration of lumbar spine with nervous system involvement (FA80.B)
<b>FA80.9</b>	<b>Intervertebral disc degeneration of lumbar spine with prolapsed disc</b> <b>Exclusions:</b> Intervertebral disc degeneration of lumbar spine with nervous system involvement (FA80.B)
<b>FA80.A</b>	<b>Intervertebral disc degeneration of lumbar spine with bony spur at the vertebra</b> <b>Exclusions:</b> Intervertebral disc degeneration of lumbar spine with nervous system involvement (FA80.B)

**FA80.B** **Intervertebral disc degeneration of lumbar spine with nervous system involvement**

**FA80.Y** **Other specified intervertebral disc degeneration**

**FA80.Z** **Intervertebral disc degeneration, unspecified**

**FA81** **Spondylolysis**

This is a condition characterised by degeneration of a portion of the vertebra, usually in the pars interarticularis (the bone bridge between the superior and inferior facet joints of the lumbar vertebra).

**FA81.0** **Spondylolysis with slippage**

This is a condition characterised by degeneration of a portion of the vertebra, usually in the pars interarticularis (the bone bridge between the superior and inferior facet joints of the lumbar vertebra) with forward displacement of a superior vertebral body over the vertebral body below.

**FA81.1** **Spondylolysis without slippage**

This is a condition characterised by degeneration of a portion of the vertebra, usually in the pars interarticularis (the bone bridge between the superior and inferior facet joints of the lumbar vertebra) without slippage of the vertebrae.

**FA81.Z** **Spondylolysis, unspecified**

**FA82** **Spinal stenosis**

This is a condition characterised by narrowing of the spinal canal.

**FA83** **Ossification of spinal ligaments**

**Coding Note:** Code also the causing condition

**Coded Elsewhere:** Ankylosing hyperostosis (FA72.0)

**FA84** **Spondylolisthesis**

This is a forward displacement of a vertebral body (the anterior or front-facing portion of a vertebra), with a higher position over the vertebral body below.

**Coding Note:** Code also the causing condition

**FA84.0** **Spondylolisthesis with pars defect**

**FA84.1** **Spondylolisthesis without pars defect**

This is a condition characterised by forward displacement of a superior vertebral body over the vertebral body below without a defect in the pars interarticularis.

**FA84.Z** **Spondylolisthesis, unspecified**

**Coding Note:** Code also the causing condition

**FA85** **Spinal endplate defects**

**FA85.0** **Spinal epiphysiolopathy with no determinant**

**FA85.1** **Spinal epiphysiolopathy with determinants**

- FA85.10** Localised central endplate defect
- FA85.11** Multiple anterior endplate defect  
Familial Scheuermann disease is an inherited disorder characterised by kyphotic deformity of the spine that develops in adolescence. The spinal deformity includes irregularities of the vertebral endplates, the presence of Schmorl's nodes, disk-space narrowing, and vertebral wedging.
- FA85.12** Separation of ring apophysis
- FA85.1Y** Other specified spinal epiphysiology with determinants
- FA85.1Z** Spinal epiphysiology with determinants, unspecified
- FA85.Y** **Other specified spinal endplate defects**
- FA85.Z** **Spinal endplate defects, unspecified**
- FA8Y** **Other specified degenerative condition of spine**
- FA8Z** **Degenerative condition of spine, unspecified**

Inflammation of spine (FA90-FA9Z)

- FA90** **Infection of vertebra**  
A condition of the vertebrae, caused by an infection with a bacterial, viral, fungal, or parasitic source. This condition commonly presents with fever, chills, headache, weight loss, or may be asymptomatic. Confirmation is by identification of the infectious agent in a blood sample, or radiographic tests.
- FA90.0** **Infection of vertebra with no determinant**
- FA90.1** **Infection of vertebra with determinants**
- FA90.Y** **Other specified infection of vertebra**
- FA90.Z** **Infection of vertebra, unspecified**
- FA91** **Infection of intervertebral disc**  
A condition of the intervertebral discs, caused by an infection with a bacterial, viral, fungal, or parasitic source. This condition commonly presents with fever, chills, headache, stiffness of the neck, or tingling sensations in the arms or legs. Confirmation is by identification of the infectious agent in a blood sample, or radiographic tests.

**FA92****Inflammatory spondyloarthritis**

Inflammatory spondyloarthritis is a rheumatic disease referring to the group of inflammatory disorders affecting the lower limb, enthesitis, dactylitis, and uveitis. Clinical characteristics include typical patterns of peripheral arthritis (i.e., predominantly of the lower limb and asymmetric), absence of rheumatoid factor, absence of subcutaneous nodules and other extra-articular features of rheumatoid arthritis, overlapping extra-articular features of the group (e.g., anterior uveitis), and significant familial aggregation and association with HLA-B27.

**Exclusions:** Infectious spondyloarthritis (FA13)

**FA92.0****Axial spondyloarthritis**

**Inclusions:** Ankylosing spondylitis

**Exclusions:** Behçet disease (4A62)

**FA92.00**

Spinal enthesitis

**FA92.01**

Sacroiliitis, not elsewhere classified

Inflammation of the sacroiliac joint that may be related to local disease or systemic disease.

**FA92.0Y**

Other specified axial spondyloarthritis

**FA92.0Z**

Axial spondyloarthritis, unspecified

**FA92.1****Peripheral spondyloarthritis**

Experts from the Assessment of SpondyloArthritis international Society (ASAS) developed classification criteria for axSpA and peripheral SpA. These criteria were developed for patients with peripheral manifestations without back pain, arthritis, enthesitis or dactylitis plus SpA features.

**FA92.Y**

Other specified inflammatory spondyloarthritis

**FA92.Z**

Inflammatory spondyloarthritis, unspecified

**FA9Y**

Other specified inflammation of spine

**FA9Z**

Inflammation of spine, unspecified

Spondylopathies (FB00-FB0Z)

**Coded Elsewhere:** Infectious spondyloarthritis (FA13)

Collapsed vertebra, not elsewhere classified (FA72.4)

Nonunion after spinal arthrodesis (FC01.70)

**FB00**

Ankylosis of spinal joint

**FB0Y**

Other specified spondylopathies

**FB0Z**

Spondylopathies, unspecified

<b>FB10</b>	<b>Spinal instabilities</b>
	<b>Exclusions:</b> Spondylolysis (FA81)
<b>FB1Y</b>	<b>Other specified conditions associated with the spine</b>
<b>FB1Z</b>	<b>Conditions associated with the spine, unspecified</b>

## Soft tissue disorders (FB30-FB6Z)

**Coded Elsewhere:** Diabetic radiculoplexoneuropathy (8B94)  
**Exclusions:** Autoimmune neuritis (8E4A.1)

## Disorders of muscles (FB30-FB3Z)

**Exclusions:** Muscular dystrophy (8C70)  
**Coded Elsewhere:** Foreign body granuloma of soft tissue, not elsewhere classified (FB56.0)

<b>FB30</b>	<b>Infectious myositis</b>  Infective myositis is an acute, subacute, or chronic infection of skeletal muscle and may be caused by a wide range of infecting organisms. Immunosuppression, particularly as the result of HIV infection, is an important predisposing factor.
<b>FB31</b>	<b>Calcification or ossification of muscle</b>
<b>FB31.0</b>	<b>Progressive osseous heteroplasia</b>
<b>FB31.1</b>	<b>Fibrodysplasia ossificans progressiva</b>  This is an extremely rare disease of the connective tissue where a mutation of the body's repair mechanism causes fibrous tissue (including muscle, tendon, and ligament) to be ossified when damaged.
<b>FB31.Y</b>	<b>Other specified calcification or ossification of muscle</b>
<b>FB31.Z</b>	<b>Calcification or ossification of muscle, unspecified</b>
<b>FB32</b>	<b>Certain specified disorders of muscle</b>  This is an impairment of health or a condition of abnormal functioning of the muscle that does not fit in another category.  <b>Exclusions:</b> Alcoholic myopathy (8D44.1) Myalgia (FB56.2) Cramp or spasm (MB47.3) Stiff person syndrome (8E4A.0) Primary disorders of muscles (8C70-8C7Z)  <b>Coded Elsewhere:</b> Drug-induced myopathy (8C80) Sarcoid myositis (4B20.Y)

<b>FB32.0</b>	<b>Diastasis of muscle</b> This is a pathological separation or tearing of muscle fibres from other muscle fibres, tendons or fascia
<b>FB32.1</b>	<b>Spontaneous rupture of muscle</b> This is a spontaneous tearing or separation of muscle fibres from other muscle fibres and/or tendons in the absence of trauma.  <b>Exclusions:</b> rupture of tendon (Chapter 22)  traumatic rupture of muscle - see injury of muscle by body region (Chapter 22)
<b>FB32.2</b>	<b>Ischaemic infarction of muscle</b> <b>Exclusions:</b> Volkmann ischaemic contracture (NF0A.6)  traumatic ischaemia of muscle (NF0A.6)  compartment syndrome, traumatic (NF0A.6)
<b>FB32.20</b>	<b>Idiopathic rhabdomyolysis</b> Skeletal muscle breakdown with leakage of muscle contents, frequently accompanied by myoglobinuria, occurring in both adult and paediatric populations with no identifiable cause. The attacks are often recurrent. Renal failure due to tubular necrosis is a severe complication.  <b>Exclusions:</b> Myasthenia gravis or certain specified neuromuscular junction disorders (8C60-8C6Z)  Secondary myopathies (8C80-8C8Z)
<b>FB32.2Y</b>	Other specified ischaemic infarction of muscle
<b>FB32.2Z</b>	Ischaemic infarction of muscle, unspecified
<b>FB32.3</b>	<b>Immobility syndrome</b>
<b>FB32.4</b>	<b>Contracture of muscle</b> <b>Exclusions:</b> Contracture of joint (FA34.3)
<b>FB32.5</b>	<b>Muscle strain or sprain</b> <b>Exclusions:</b> current injury - see injury of muscle by body region (Chapter 22)
<b>FB32.Y</b>	<b>Other specified disorders of muscles</b>
<b>FB33</b>	<b>Secondary disorders of muscle</b>
<b>Coding Note:</b>	Code also the causing condition  <b>Exclusions:</b> myopathy in: metabolic diseases (8C80-8C8Z)
<b>FB3Z</b>	<b>Disorders of muscles, unspecified</b>

Disorders of synovium or tendon (FB40-FB4Z)

This is a group of disorders which affect the synovial joint lining (synovium) and also tendons.

**FB40**

**Tenosynovitis**

**Exclusions:** soft tissue disorders related to use, overuse and pressure (FB50.1)

current injury - see injury of ligament or tendon by body region (Chapter 22)

**FB40.0** **Infectious tenosynovitis**

**FB40.1** **Plantar fasciitis**

**FB40.2** **Posterior tibial tendonitis**

**FB40.3** **Calcific tendinitis**

This is a disorder characterised by deposits of hydroxyapatite in any tendon of the body causing inflammation and pain.

**FB40.4** **Trigger finger**

This is a common disorder characterised by catching, snapping or locking of the involved finger flexor tendon, associated with dysfunction and pain.

**Inclusions:** Nodular tendinous disease

**FB40.5** **Radial styloid tenosynovitis**

Inflammation of the flexor and/or extensor tendon synovial sheaths in the hand and wrist that control movement of the thumb.

**FB40.Y** **Other specified tenosynovitis**

**FB40.Z** **Tenosynovitis, unspecified**

**FB41**

**Spontaneous rupture of synovium or tendon**

This is a spontaneous rupture to a fluid-filled sac containing viscous fluid which normally acts to decrease friction and also provides a cushion between bones and tendons and/or muscles around a joint.

**Coding Note:** Includes rupture that occurs when a normal force is applied to tissues that are inferred to have less than normal strength.

**Exclusions:** rupture where an abnormal force is applied to normal tissue - see injury of tendon by body region (Chapter 22)

rotator cuff syndrome (FB53.1)

**FB41.0** **Spontaneous rupture of popliteal cyst**

This is a rupture of the semimembranous or more rarely some other synovial bursa, or fluid filled sac, found behind the knee joint.

<b>FB41.1</b>	<b>Spontaneous rupture of synovium</b>
	This is a rupture to a fluid-filled sac containing viscous fluid which normally acts to decrease friction and also provides a cushion between bones and tendons and/or muscles around a joint.
	<b>Exclusions:</b> Spontaneous rupture of popliteal cyst (FB41.0)
<b>FB41.2</b>	<b>Spontaneous rupture of tendon</b>
<b>FB41.Y</b>	<b>Other specified spontaneous rupture of synovium or tendon</b>
<b>Coding Note:</b>	Includes rupture that occurs when a normal force is applied to tissues that are inferred to have less than normal strength.
<b>FB41.Z</b>	<b>Spontaneous rupture of synovium or tendon, unspecified</b>
<b>Coding Note:</b>	Includes rupture that occurs when a normal force is applied to tissues that are inferred to have less than normal strength.
<b>FB42</b>	<b>Certain specified disorders of synovium or tendon</b>
	<b>Exclusions:</b> Palmar fascial fibromatosis (FB51.0) tendinitis NOS (FB55) xanthomatosis localized to tendons (5C80.2)
<b>FB42.0</b>	<b>Acquired short Achilles tendon</b>
<b>FB42.1</b>	<b>Contracture of tendon sheath</b>
<b>FB42.2</b>	<b>Ganglion</b> This is a nodular tumour-like lesions or mucoid flesh, arising from tendon sheaths, ligaments, or joint capsule, especially of the hands, wrists, or feet. They are not true cysts as they lack epithelial wall. They are distinguished from synovial cysts by the lack of communication with a joint cavity or the synovial membrane.  <b>Inclusions:</b> Ganglion of tendon sheath <b>Exclusions:</b> ganglion in yaws (1C1D.1)
<b>FB42.3</b>	<b>Synovial hypertrophy, not elsewhere classified</b> This is an increase in synovial lining thickness which is not elsewhere classified.
<b>FB43</b>	<b>Secondary disorders of synovium or tendon</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB4Y</b>	<b>Other specified disorders of synovium or tendon</b>
<b>FB4Z</b>	<b>Disorders of synovium or tendon, unspecified</b>

## Miscellaneous specified soft tissue disorders (FB50-FB56.6)

This is a group of other disorders, which are not defined elsewhere, affecting tissues that connect, support, or surround other structures and organs of the body, not being bone.

### FB50

#### **Bursitis**

This is a disorder of inflammation of one or more bursae (small sacs) of synovial fluid in the body which usually results in pain.

**Exclusions:** Tibial collateral bursitis (FB54.2)

### FB50.0

#### **Infectious bursitis**

This is a disorder of inflammation of one or more bursae (small sacs) of synovial fluid in the body which usually results in pain and is caused by an infectious agent.

**Exclusions:** Tuberculous bursitis (1B12.4)

### FB50.1

#### **Bursitis related to use, overuse or pressure**

This is a disorder of inflammation of one or more bursae (small sacs) of synovial fluid in the body which usually results in pain and is caused by repetitive use, overuse and pressure irritation.

### FB50.2

#### **Synovial cyst of popliteal space**

This is a benign swelling of the semimembranous or more rarely some other synovial bursa found behind the knee joint.

**Exclusions:** Spontaneous rupture of popliteal cyst (FB41.0)

### FB50.3

#### **Calcium deposit in bursa**

**Exclusions:** Calcific tendinitis of shoulder (FB40.3)

### FB50.Y

#### **Other specified bursitis**

### FB50.Z

#### **Bursitis, unspecified**

### FB51

#### **Fibroblastic disorders**

### FB51.0

#### **Palmar fascial fibromatosis**

This is a fixed flexion contracture of the hand where the fingers bend towards the palm and cannot be fully extended (straightened).

**Inclusions:** Dupuytren disease of palm

### FB51.1

#### **Knuckle pads**

These are benign, asymptomatic, well-circumscribed, smooth, firm, skin-coloured papules, nodules, or plaques, located in the skin over the dorsal aspects of the metacarpophalangeal (MCP) and interphalangeal (IP) joints.

### FB51.2

#### **Fasciitis and fibromatosis**

### FB51.3

#### **Fibroblastic rheumatism**

<b>FB51.4</b>	<b>Retroperitoneal fibrosis</b> Retroperitoneal fibrosis (RPF) is a disease characterised by the development of extensive proliferation of fibrous tissue in the retroperitoneum, resulting in entrapment and obstruction of retroperitoneal structures, notably the ureters. RPF can be classified as primary (idiopathic) meaning that the cause is not known or secondary. But its association with various immune-related conditions and response to immunosuppression have led to speculation regarding an autoimmune aetiology of idiopathic RPF. One-third of the cases are secondary to malignancy, medication, trauma, or certain infections.
<b>FB51.40</b>	Primary retroperitoneal fibrosis This is the commonest form of retroperitoneal fibrosis. By definition, no associated trigger (e.g. drugs or malignancy) can be determined, although atherosclerosis of the abdominal aorta is often associated. It has been postulated that such atherosclerosis may be of aetiological significance in some cases.
<b>FB51.4Y</b>	Other specified retroperitoneal fibrosis
<b>FB51.4Z</b>	Retroperitoneal fibrosis, unspecified
<b>FB51.Y</b>	<b>Other specified fibroblastic disorders</b>
<b>FB51.Z</b>	<b>Fibroblastic disorders, unspecified</b>
<b>FB52</b>	<b>Soft tissue disorders in diseases classified elsewhere</b> This is a group of disorders affecting tissues that connect, support, or surround other structures and organs of the body, not being bone and occur in diseases classified elsewhere.
<b>Coding Note:</b>	Code also the causing condition
<b>FB53</b>	<b>Shoulder lesions</b> This is a group of disorders which are normally characterised with shoulder pain and reduced range of motion of the shoulder girdle.  <b>Exclusions:</b> Rotator cuff tendonitis (FB40.3) Shoulder-hand syndrome (MG30.04)
<b>FB53.0</b>	<b>Adhesive capsulitis of shoulder</b> This is a condition characterised by spontaneous onset of shoulder pain accompanied by progressive loss of active and passive ranges of motion.  <b>Inclusions:</b> Frozen shoulder
<b>FB53.1</b>	<b>Rotator cuff syndrome</b> <b>Exclusions:</b> Rotator cuff tendonitis (FB40.3)
<b>FB53.2</b>	<b>Impingement syndrome of shoulder</b> This is a clinical syndrome which occurs when the tendons of the rotator cuff muscles become irritated and inflamed as they pass through the subacromial space, the passage beneath the acromion. This can result in pain, weakness and loss of movement at the shoulder.

<b>FB53.Y</b>	<b>Other specified shoulder lesions</b>
<b>FB53.Z</b>	<b>Shoulder lesions, unspecified</b>
<b>FB54</b>	<b>Enthesopathies of lower limb</b>
	This is a group of disorders which refer to any abnormality of tendon and ligament insertion points of the leg. Abnormalities include inflammation and calcification.
	<b>Exclusions:</b> Bursitis related to use, overuse or pressure (FB50.1)
<b>FB54.0</b>	<b>Iliac crest spur</b>
	This is a disorder characterised by bony exostosis at iliac muscle origins.
<b>FB54.1</b>	<b>Iliotibial band syndrome</b>
	This is the most common running injury of the lateral side of the knee. It is a non-traumatic overuse injury caused by repeated flexion and extension of the knee that causes irritation in the structures around the knee causing knee pain.
<b>FB54.2</b>	<b>Tibial collateral bursitis</b>
<b>FB54.3</b>	<b>Calcaneal spur</b>
	This is a disorder characterised by a bone outgrowth located on the calcaneus (heel bone).
<b>FB54.4</b>	<b>Metatarsalgia</b>
	This is a condition characterised by pain and inflammation in the ball of your foot or at the metatarsal heads.
	<b>Exclusions:</b> Morton metatarsalgia (8C11.6) Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>FB54.Y</b>	<b>Other specified enthesopathies of lower limb</b>
<b>FB54.Z</b>	<b>Enthesopathies of lower limb, unspecified</b>
<b>FB55</b>	<b>Certain specified enthesopathies</b>
	<b>Exclusions:</b> Bursitis related to use, overuse or pressure (FB50.1) spinal enthesopathy (FA92.00) Osteophyte (FA37.0)
<b>FB55.0</b>	<b>Medial epicondylitis of elbow</b>
	This is a common upper extremity disorder which is characterised by degenerative changes in the musculotendonous region of the medial epicondyle, resulting from repetitive stress of flexion and extension movements of the wrist joint.
<b>FB55.1</b>	<b>Lateral epicondylitis of elbow</b>
	This is a common upper extremity disorder which is characterised by degenerative changes in the musculotendonous region of the lateral epicondyle, resulting from repetitive stress of flexion and extension movements of the wrist joint
	<b>Inclusions:</b> Tennis elbow

<b>FB55.2</b>	<b>Periarthritis of wrist</b> This disorder is characterised by inflammation of tissues around the joints of the wrist.
<b>FB55.Z</b>	<b>Enthesopathies, unspecified</b>
<b>FB56</b>	<b>Specified soft tissue disorders, not elsewhere classified</b> This is a group of other disorders, which are not classified elsewhere, affecting tissues that connect, support, or surround other structures and organs of the body, not being bone.  <b>Exclusions:</b> brachial radiculitis NOS (8B93) lumbosacral radiculitis NOS (8B93) Mononeuropathy (8C10-8C1Z) radiculitis NOS (8B93) Sciatica (ME84.3)
<b>FB56.0</b>	<b>Foreign body granuloma of soft tissue, not elsewhere classified</b>  <b>Exclusions:</b> Foreign body granuloma of skin (EH93.3)
<b>FB56.1</b>	<b>Residual foreign body in soft tissue</b>  <b>Exclusions:</b> Foreign body granuloma of skin (EH93.3) Foreign body granuloma of soft tissue, not elsewhere classified (FB56.0)
<b>FB56.2</b>	<b>Myalgia</b> This is a disorder characterised by pain in a muscle or group of muscles.  <b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>FB56.3</b>	<b>Hypertrophy of infrapatellar fat pad</b> This is a hypertrophy of an intracapsular but extrasynovial structure limited by the inferior pole of the patella superiorly, the joint capsule and patellar tendon anteriorly, the proximal tibia and deep infrapatellar bursa inferiorly, and the synovium-lined joint cavity posteriorly.
<b>FB56.4</b>	<b>Pain in limb</b>  <b>Exclusions:</b> Chronic primary limb pain (MG30.02) Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>FB56.6</b>	<b>Other specified soft tissue disorders</b>
<b>FB6Z</b>	<b>Soft tissue disorders, unspecified</b>

## Osteopathies or chondropathies (FB80-FB8Z)

**Coded Elsewhere:** Bone diseases with increased bone density (LD24.1)

- Bone diseases with disorganised development of skeletal components (LD24.2)
- Congenital vascular bone syndromes (LD26.6)
- Tuberculosis of bones or joints (1B12.40)
- Malignant otitis externa (AA02)

**FB80**

### **Certain specified disorders of bone density or structure**

**Exclusions:** Osteopoikilosis (LD24.11)  
Osteopetrosis (LD24.10)

**Coded Elsewhere:** Osteogenesis imperfecta (LD24.K0)

**FB80.0**

#### **Fibrous dysplasia of bone**

Fibrous dysplasia of bone is a congenital non-hereditary benign bone disease, where normal bone is replaced by a fibrous-like tissue with immature osteogenesis. Bone lesions are mono- or polyostotic and may be associated with bone pain and fragility, leading to fractures. In some patients or bone sites, they are hypertrophic, and responsible for neurological complications.

**FB80.1**

#### **Skeletal fluorosis**

**FB80.2**

#### **Osteitis condensans**

**FB80.3**

#### **Hyperostosis of skull**

**FB80.4**

#### **Osteosclerosis**

**FB80.5**

#### **Solitary bone cyst**

A solitary bone cyst is a benign non-epithelial bone cavity that is asymptomatic and that is found most commonly in the second decade of life by chance. The long bones are most often affected, but cases involving the jaw bone have been reported.

**Exclusions:** solitary cyst of jaw (DA05)

**FB80.6**

#### **Aneurysmal bone cyst**

**Exclusions:** aneurysmal cyst of jaw (DA05)

**FB80.7**

#### **Malunion of fracture**

**FB80.8**

#### **Nonunion of fracture**

**Exclusions:** Pseudarthrosis after fusion or arthrodesis (FC01.0)

**FB80.9**

#### **Delayed union of fracture**

**FB80.A**

#### **Stress fracture, not elsewhere classified**

**Exclusions:** stress fracture of vertebra (FA72.3)

**FB80.B**

#### **Pathological fracture**

**Exclusions:** Collapsed vertebra, not elsewhere classified (FA72.4)

<b>FB80.Y</b>	<b>Other specified disorders of bone density and structure</b>
<b>FB80.Z</b>	<b>Disorder of bone density and structure, unspecified</b>
<b>FB81</b>	<b>Osteonecrosis</b>
	Osteonecrosis is the medical term for death of bone tissue that occurs when the supply of blood to the bone is cut off for some reason. Doctors sometimes refer to the condition as avascular necrosis, aseptic necrosis or ischemic bone necrosis
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> avascular necrosis of bone
<b>FB81.0</b>	<b>Idiopathic aseptic osteonecrosis</b>
<b>FB81.1</b>	<b>Osteonecrosis due to dialysis</b>
<b>FB81.2</b>	<b>Drug-induced osteonecrosis</b> Alteration of the normal structure of orofacial tissues resulting from medicinal substances acting locally or systemically.
	<b>Inclusions:</b> Osteonecrosis due to chemical burn of oral mucosa
<b>FB81.3</b>	<b>Osteonecrosis due to trauma</b>
<b>FB81.4</b>	<b>Osteonecrosis due to haemoglobinopathy</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB81.5</b>	<b>Osteonecrosis due to ionizing radiation</b> Necrosis of bone attributable to ionizing radiation, most commonly seen affecting the mandible following radical radiotherapy for the treatment of head and neck cancer or the chest wall following radiotherapy for breast cancer.
	<b>Coded Elsewhere:</b> Osteoradionecrosis of jaw (DA06.0)
<b>FB81.6</b>	<b>Alcohol induced osteonecrosis</b>
<b>FB81.Y</b>	<b>Other specified osteonecrosis</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB81.Z</b>	<b>Osteonecrosis, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB82</b>	<b>Chondropathies</b>
	<b>Exclusions:</b> postprocedural chondropathies (FC01)
	<b>Coded Elsewhere:</b> Chondrodysplasia punctata (LD24.04)
<b>FB82.0</b>	<b>Chondromalacia</b>
<b>FB82.00</b>	Chondromalacia patellae A disease of the knee joint, caused by damage to the cartilage under the patella. This disease is characterised by pain in the front of the knee that worsens when walking up or down stairs. This disease may be associated with injury or overuse.
<b>FB82.0Y</b>	Other specified chondromalacia

<b>FB82.0Z</b>	Chondromalacia, unspecified
<b>FB82.1</b>	<p><b>Osteochondrosis or osteochondritis dissecans</b></p> <p>Note: Osteochondroses are typically referred to by eponyms. The most common eponyms are indexed to osteochondrosis with specification identified by the site and time in life.</p> <p><b>Coded Elsewhere:</b> Medial condensing osteitis of clavicle (LB72.Y) Idiopathic aseptic osteonecrosis of carpal lunate (FB81.0)</p>
<b>FB82.2</b>	<b>Slipped upper femoral epiphysis</b>
<b>FB82.3</b>	<p><b>Relapsing polychondritis</b></p> <p>Relapsing polychondritis is a multisystem inflammatory disease of unknown aetiology affecting the cartilage. The disease is characterised by intermittent or fluctuant inflammatory manifestations due to inflammation of the cartilaginous structures, resulting in tissue damage and tissue destruction. Chondritis of auricular, nasal, tracheal cartilage predominates in this disease, suggesting response to tissue-specific antigens such as collagen II and cartilage matrix protein (matrillin-1). In about one third of patients, RP is associated with vasculitis (from isolated cutaneous leucocytoclastic vasculitis to systemic polyangiitis) and autoimmune rheumatic diseases (mainly rheumatoid arthritis and systemic lupus erythematosus). Haematological malignant diseases, gastrointestinal disorders and endocrine diseases may also occur. Functional and anatomical evaluation for upper and lower airway disease is essential in evaluation and management of the disease.</p>
<b>FB82.Y</b>	<b>Other specified chondropathies</b>
<b>FB82.Z</b>	<b>Chondropathies, unspecified</b>
<b>FB83</b>	<p><b>Low bone mass disorders</b></p> <p><b>Coded Elsewhere:</b> Genetic bone diseases with decreased bone density (LD24.K)</p>
<b>FB83.0</b>	<b>Osteopenia</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB83.00</b>	Premenopausal idiopathic osteopenia
<b>FB83.01</b>	Postmenopausal osteopenia
<b>FB83.02</b>	Senile osteopenia
<b>Coding Note:</b>	Code also the causing condition
<b>FB83.03</b>	Osteopenia of disuse
<b>FB83.04</b>	Drug-induced osteopenia
<b>FB83.0Y</b>	Other specified osteopenia
<b>Coding Note:</b>	Code also the causing condition
<b>FB83.0Z</b>	Osteopenia, unspecified
<b>Coding Note:</b>	Code also the causing condition

<b>FB83.1</b>	<b>Osteoporosis</b>  <b>Coded Elsewhere:</b> Postoophorectomy osteoporosis (FC01.9) Osteoporosis in multiple myelomatosis (2A83.1)
<b>FB83.10</b>	Premenopausal idiopathic osteoporosis
<b>FB83.11</b>	Postmenopausal osteoporosis  Susceptibility to bone fracture secondary to a systemic decrease in bone mass and micro-architectural deterioration of bone tissue related to hormonal changes associated with menopause
<b>FB83.12</b>	Osteoporosis of disuse
<b>FB83.13</b>	Drug-induced osteoporosis
<b>FB83.14</b>	Osteoporosis due to malabsorption  <b>Coded Elsewhere:</b> Osteoporosis in atypical cystic fibrosis (CA25.1) Osteoporosis in classical cystic fibrosis (CA25.0) Osteoporosis in unspecified cystic fibrosis (CA25.Z)
<b>FB83.1Y</b>	Other specified osteoporosis
<b>FB83.1Z</b>	Osteoporosis, unspecified
<b>FB83.2</b>	<b>Adult osteomalacia</b>  A disease characterised by defects in bone mineralization and bone softening secondary to vitamin D deficiency.  <b>Exclusions:</b> renal osteodystrophy (GB61) osteomalacia: vitamin-D-resistant (5C64.3) infantile and juvenile osteomalacia (5B57.0) rickets (active) vitamin-D-resistant (5C64.3)  <b>Coded Elsewhere:</b> Puerperal osteomalacia (JB44.6)
<b>FB83.20</b>	Aluminium bone disease
<b>Coding Note:</b>	Code also the causing condition
<b>FB83.21</b>	Adult osteomalacia due to malnutrition  <b>Coding Note:</b> Code also the causing condition
<b>FB83.22</b>	Drug-induced adult osteomalacia
<b>FB83.2Y</b>	Other specified adult osteomalacia
<b>FB83.2Z</b>	Adult osteomalacia, unspecified
<b>FB84</b>	<b>Osteomyelitis or osteitis</b>  <b>Exclusions:</b> osteomyelitis jaw (DA06.0) osteomyelitis vertebra (FA90)
<b>FB84.0</b>	<b>Acute haematogenous osteomyelitis</b>

<b>FB84.1</b>	<b>Other acute osteomyelitis</b>
<b>FB84.2</b>	<b>Subacute osteomyelitis</b>
<b>FB84.3</b>	<b>Chronic multifocal osteomyelitis</b>
<b>FB84.4</b>	<b>Chronic osteomyelitis with draining sinus</b>
<b>FB84.5</b>	<b>Other chronic haematogenous osteomyelitis</b>
<b>FB84.Y</b>	<b>Other specified osteomyelitis or osteitis</b>
<b>FB84.Z</b>	<b>Osteomyelitis or osteitis, unspecified</b>

**FB85** **Paget disease of bone**

A disorder characterised by pathologically excessive resorption of bone by multinucleated osteoclasts and abnormal modelling of disorganised, woven bone by osteoblasts with resultant bone vascularization, weakness, enlargement and deformity.

**Inclusions:** Osteitis deformans

<b>FB85.0</b>	<b>Juvenile Paget disease</b>
<b>FB85.1</b>	<b>Paget disease of bone in neoplastic disease</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FB85.Y</b>	<b>Other specified Paget disease of bone</b>
<b>FB85.Z</b>	<b>Paget disease of bone, unspecified</b>

**FB86** **Disorders associated with bone growth**

<b>FB86.0</b>	<b>Epiphyseal arrest</b>
<b>FB86.1</b>	<b>Bone hyperplasias</b>
	<b>Coded Elsewhere:</b> Ankylosing hyperostosis (FA72.0)

<b>FB86.10</b>	Hypertrophic osteoarthropathy
	Hypertrophic osteoarthropathy (HOA) is a syndrome of clubbing of the digits, subperiosteal new bone formation (periostitis) affecting the long bones, and arthritis. The primary hereditary form is associated with mutations in the HPGD gene. The secondary form may be secondary to a number of systemic disorders, most commonly as a paraneoplastic phenomenon related to bronchial carcinoma.

**Exclusions:** Isolated congenital club finger (LB90.5)

<b>FB86.11</b>	Hypertrophy of bone
<b>FB86.1Y</b>	Other specified bone hyperplasias
<b>FB86.1Z</b>	Bone hyperplasias, unspecified
<b>FB86.2</b>	<b>Osteolysis</b>
<b>Coding Note:</b>	Code also the causing condition

<b>FB86.Y</b>	<b>Other specified disorders associated with bone growth</b>
<b>FB86.Z</b>	<b>Disorders associated with bone growth, unspecified</b>
<b>FB8Y</b>	<b>Other specified osteopathies or chondropathies</b>
<b>FB8Z</b>	<b>Osteopathies or chondropathies, unspecified</b>
<b>FC00</b>	<b>Certain specified acquired deformities of musculoskeletal system or connective tissue, not elsewhere classified</b>
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b> Dentofacial anomalies (DA0E) Spinal deformities (FA70) Structural developmental anomalies of the skeleton (LB70-LB9Z)
	acquired deformities of limbs (FA30-FA3Z) acquired absence of limbs (QF00) Postprocedural disorders of the musculoskeletal system (FC01) Acquired absence of organs (QF01)
<b>FC00.0</b>	<b>Acquired deformity of nose</b>
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b> Deviated nasal septum (CA0D)
<b>FC00.1</b>	<b>Acquired deformity of neck</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FC00.2</b>	<b>Acquired deformity of chest or rib</b>
<b>Coding Note:</b>	Code also the causing condition
<b>FC00.3</b>	<b>Acquired deformity of pelvis</b>
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b> Maternal care for known or suspected disproportion (JA83) Obstructed labour due to maternal pelvic abnormality (JB05) Obstructed labour due to deformed pelvis (JB05.0)
<b>FC00.4</b>	<b>Acquired deformity of trunk</b>
<b>FC00.Y</b>	<b>Acquired deformities of musculoskeletal system and connective tissue, not classified elsewhere, other specified sites</b>
<b>Coding Note:</b>	Code also the causing condition

**FC01**

**Postprocedural disorders of the musculoskeletal system**

- Exclusions:**
- Osteoporosis (FB83.1)
  - Presence of devices other than cardiac or vascular implants (QB51)
  - Arthropathy following intestinal bypass (FA11.0)
- Coded Elsewhere:**
- Osteonecrosis due to ionizing radiation (FB81.5)
  - Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)
  - Wear of articular bearing surface of joint prosthesis (FA35)
  - Post radiation lordosis (FA70.2)

**FC01.0**

**Pseudarthrosis after fusion or arthrodesis**

**FC01.1**

**Postlaminectomy syndrome, not elsewhere classified**

**FC01.2**

**Post radiation kyphosis**

**FC01.3**

**Postlaminectomy kyphosis**

**FC01.4**

**Postsurgical lordosis**

**FC01.5**

**Post radiation scoliosis**

**FC01.6**

**Fracture of bone following insertion of orthopaedic implant, joint prosthesis, or bone plate**

**FC01.7**

**Nonunion after arthrodesis**

**FC01.70**

**Nonunion after spinal arthrodesis**

- Inclusions:**
- nonunion after spinal fusion

**FC01.7Y**

**Nonunion after arthrodesis of other sites**

**FC01.8**

**Postsurgical osteolysis**

**FC01.9**

**Postoophorectomy osteoporosis**

osteoporosis occurring after oophorectomy

**FC01.A**

**Postsurgical malabsorption osteoporosis**

**FC0Y**

**Other specified diseases of the musculoskeletal system or connective tissue**

**FC0Z**

**Diseases of the musculoskeletal system or connective tissue, unspecified**

# CHAPTER 16

---

## Diseases of the genitourinary system

This chapter has 119 four-character categories.

Code range starts with GA00

Any disease characterised by pathological changes to the genitourinary system.

**Exclusions:** Injury, poisoning or certain other consequences of external causes (Chapter 22)

Endocrine, nutritional or metabolic diseases (Chapter 05)

Complications of pregnancy, childbirth and the puerperium (Chapter 18)

Certain infectious or parasitic diseases (Chapter 01)

**Coded Elsewhere:** Contact with health services for reasons associated with reproduction (QA20-QA4Z)

Predominantly sexually transmitted infections (1A60-1A9Z)

Symptoms, signs or clinical findings of the genitourinary system (MF30-MG0Y)

Female gonococcal pelvic inflammatory disease (1A71)

This chapter contains the following top level blocks:

- Diseases of the female genital system
- Diseases of the male genital system
- Disorders of breast
- Diseases of the urinary system
- Other conditions of the genitourinary system
- Postprocedural disorders of genitourinary system

## Diseases of the female genital system (GA00-GA6Z)

**Coded Elsewhere:** Certain specified disorders of genital development

Neoplasms of the female genital organs

Symptoms, signs or clinical findings involving the female genital system (MF30-MF3Y)

### Inflammatory disorders of the female genital tract (GA00-GA0Z)

**Exclusions:** those complicating: abortion or ectopic or molar pregnancy (JA00-JA0Z)

Infections of genitourinary tract in pregnancy (JA62)

Other infection during labour (JB0D)

Infections in the puerperium (JB40)

**Coded Elsewhere:** Endometriosis (GA10)

Adenomyosis (GA11)

### GA00

#### Vulvitis

**Exclusions:** senile (atrophic) vaginitis (GA30.2)

**Coded Elsewhere:** Irritant contact dermatitis of vulva (EK02.13)

Genital warts of vulva (1A95.1)

Tuberculous ulceration of vulva (1B12.5)

### GA00.0

#### Acute vulvitis

**Exclusions:** Streptococcal cellulitis of skin (1B70.1)

Staphylococcal cellulitis of skin (1B70.2)

### GA00.1

#### Subacute, chronic or recurrent vulvitis

### GA00.2

#### Abscess of vulva

A condition of the vulva, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by a focal accumulation of purulent material in the vulva. This condition may present with pain and swelling of the vulva, pain on sexual intercourse, or fever. Confirmation is by gynaecological examination.

### GA00.3

#### Genital ulcer of vulva

Ulceration of the vulva of unknown or uncertain aetiology but where a sexually transmitted infection, especially Herpes simplex, primary syphilis or chancroid, is suspected. This is a provisional diagnosis which should be amended once the cause of the ulceration is known.

**Coding Note:**

Code also the causing condition

### GA00.4

#### Vulvovaginal ulceration and inflammation

**Coded Elsewhere:** Vulvovaginal candidosis (1F23.10)

### GA00.40

Vulvovaginal ulceration

### GA00.4Y

Other specified vulvovaginal ulceration and inflammation

<b>GA00.4Z</b>	Vulvovaginal ulceration and inflammation, unspecified
<b>GA01</b>	<p><b>Inflammatory disorders of the uterus, except cervix</b></p> <p>A spectrum of inflammations involving the Uterus and the supporting tissues. It is usually caused by an ascending infection of organisms from the endocervix. Such inflammation can lead to functional impairment and infertility.</p>
<b>GA01.0</b>	<b>Acute inflammatory disease of uterus</b>
<b>GA01.00</b>	Acute endometritis
	A disease of the endometrium, caused by an infection with a bacterial or viral source. This condition is characterised by fever, lower abdominal pain, abnormal vaginal bleeding, or vaginal discharge. Confirmation is by a pelvic exam and identification of the bacteria or virus from a cervical swab, endometrial biopsy, or laparoscopy.
	<b>Coded Elsewhere:</b> Tuberculous endometritis (1B12.5)
<b>GA01.01</b>	Acute inflammatory disease of uterus with pyometra
<b>GA01.0Z</b>	Acute inflammatory disease of uterus, unspecified
<b>GA01.1</b>	<b>Chronic inflammatory disease of uterus</b>
	A condition characterised by inflammation of the uterus which lasts for more than 3 months.
<b>GA01.10</b>	Chronic endometritis
	<b>Coded Elsewhere:</b> Tuberculous endometritis (1B12.5)
<b>GA01.11</b>	Chronic inflammatory disease of uterus with pyometra
<b>GA01.1Z</b>	Chronic inflammatory disease of uterus, unspecified
<b>GA01.Y</b>	<b>Other specified inflammatory disorders of the uterus, except cervix</b>
<b>GA01.Z</b>	<b>Inflammatory disorders of the uterus, except cervix, unspecified</b>
<b>GA02</b>	<p><b>Vaginitis</b></p> <p><b>Coded Elsewhere:</b> Vulvovaginal ulceration and inflammation (GA00.4)</p> <p>Genital warts of vagina (1A95.1)</p>
<b>GA02.0</b>	<b>Acute vaginitis</b>
<b>Coding Note:</b>	Code also the causing condition
<b>GA02.1</b>	<b>Inflammatory vaginitis</b>
	Clinical syndrome characterised by diffuse exudative vaginitis, epithelial cell exfoliation and a profuse purulent vaginal discharge, associated with vulvovaginal burning or irritation and dyspareunia. Signs may include vulvovaginal erythema and ecchymotic spots.
<b>Coding Note:</b>	Code also the causing condition

- GA02.2 Subacute or chronic vaginitis**  
Chronic vulvovaginal candidiasis, marked by chronic irritative symptoms of vestibule, vulva and vagina, with burning replacing itching as the prominent symptom. Differential diagnosis with chronic atopic dermatitis or atrophic vulvovaginitis.
- GA02.3 Genital ulcer disease of vagina**
- GA02.Z Vaginitis, unspecified**
- GA03 Diseases of Bartholin gland**  
Any disease characterised by inflammation of the Bartholin gland.
- GA03.0 Abscess of Bartholin gland**  
A condition of the Bartholin gland, caused by an infection with a bacterial, viral, or fungal source. This condition is characterised by focal accumulation of purulent material in the Bartholin gland, located on either side of the vaginal opening. This condition may present with swelling on either side of the vagina, pain on sexual intercourse, or fever. Confirmation is by gynaecological examination.
- GA03.1 Cyst of Bartholin gland**  
A condition of the vagina, caused by growth of a flap of skin, occlusion of the Bartholin duct due to mucus, or infection. This condition is characterised by the accumulation of mucus or clear fluid in a closed sac-like structure that forms on (or from) one of the Bartholin glands or its ducts. This condition is commonly asymptomatic, but may become painful if the cyst becomes enlarged or infected.
- GA03.Y Other specified diseases of Bartholin gland**
- GA03.Z Diseases of Bartholin gland, unspecified**
- GA04 Cervicitis**  
*Coded Elsewhere:* Tuberculosis of cervix uteri (1B12.5)
- GA05 Female pelvic inflammatory diseases**  
*Coded Elsewhere:* Postprocedural acute female pelvic inflammatory disease (GC78)  
Secondary syphilitic female pelvic inflammatory disease (1A61.4)
- GA05.0 Acute female pelvic inflammatory disease**  
*Coded Elsewhere:* Tuberculous female pelvic inflammatory disease (1B12.5)
- GA05.1 Chronic pelvic inflammatory disease**  
*Coded Elsewhere:* Chlamydial female pelvic inflammatory disease (1A81.1)
- GA05.2 Female pelvic peritonitis, unspecified**  
This is an inflammation of the peritoneum, the thin tissue that lines the inner wall of the abdomen and covers most of the abdominal organs, unspecified.

<b>GA05.3</b>	<b>Tuboovarian abscess</b> End-stage process of acute pelvic inflammatory disease (PID), marked by pelvic mass palpable during bimanual examination. Usually bilateral but can be unilateral.
<b>GA05.Y</b>	<b>Other specified female pelvic inflammatory diseases</b>
<b>GA05.Z</b>	<b>Female pelvic inflammatory diseases, unspecified</b>
<b>GA06</b>	<b>Pelvic peritoneal adhesions of unknown or combined origin</b> A condition characterised by fibrous bands of scar tissue and abnormal connection between pelvic organs or tissues. This condition may also present with pelvic pain or bowel obstruction.
<b>GA07</b>	<b>Salpingitis and oophoritis</b> Inflammation of the fallopian tube, characterised by a typical inflammatory response (redness and oedema). It is usually manifested by lower abdominal pain and tenderness, fever, increased pulse rate, hypermenorrhoea and/or metrorrhagia. The disorder may resolve or result in fibrosis, hydrosalpinx, pyosalpinx, or cyst formation.  <i>Inclusions:</i> salpingo-oophoritis tubo-ovarian inflammatory disease  <i>Exclusions:</i> Salpingitis isthmica nodosa (GA17.4)  <i>Coded Elsewhere:</i> Tuberculous oophoritis or salpingitis (1B12.5) Chlamydial salpingitis (1A81.1)
<b>GA07.0</b>	<b>Acute salpingitis and oophoritis</b> <i>Coded Elsewhere:</i> Acute gonococcal salpingitis (1A71)
<b>GA07.1</b>	<b>Chronic salpingitis and oophoritis</b> <i>Coded Elsewhere:</i> Chronic gonococcal salpingitis (1A71)
<b>GA07.Z</b>	<b>Salpingitis and oophoritis, unspecified</b>
<b>GA0Z</b>	<b>Inflammatory disorders of the female genital tract, unspecified</b>
<b>GA10</b>	<b>Endometriosis</b> A condition of the uterus that is frequently idiopathic. This condition is characterised by ectopic growth and function of endometrial tissue outside the uterine cavity. This condition may be associated with remaining vestigial tissue from the wolffian or mullerian duct, or fragments endometrium refluxed backward into the peritoneal cavity during menstruation. This condition may also present with dysmenorrhoea, dyspareunia, nonmenstrual pelvic pain, infertility, alteration of menses, or may be asymptomatic. Confirmation is by laparoscopy and histological identification of ectopic fragments.  <i>Coded Elsewhere:</i> Salpingitis isthmica nodosa (GA17.4)
<b>GA10.B</b>	<b>Endometriosis of the reproductive system</b> <i>Exclusions:</i> Endometriosis of the uterus (GA11)
<b>GA10.B0</b>	Endometriosis of the uterosacral ligaments

<b>GA10.B1</b>	Endometriosis of the pelvic side wall
<b>GA10.B2</b>	Endometriosis of rectovaginal septum or vagina
<b>GA10.B3</b>	Endometriosis of fallopian tube
<b>GA10.B4</b>	Superficial ovarian endometriosis Endometriosis on the ovarian cortex, containing typical or subtle lesions.
<b>GA10.B5</b>	Deep ovarian endometriosis Ovarian endometriosis cyst containing dark stained blood (chocolate fluid) and lined by a pseudocyst wall covered by ectopic endometrium. This cyst can be subdivided according to its size in the following categories: less than 1 cm, 1-3 cm, > 3 cm
<b>GA10.BY</b>	Endometriosis of other sites of the reproductive system
<b>GA10.BZ</b>	Endometriosis of unspecified site of reproductive system
<b>GA10.C</b>	<b>Endometriosis of the digestive system</b>
<b>GA10.C0</b>	Endometriosis of the gallbladder
<b>GA10.C1</b>	Endometriosis of intestine Endometriosis situated inside the bowel wall at or below the subserosal level, excluding superficial serosal lesions that are still classified as peritoneal endometriosis. Mostly affecting rectosigmoid area, but can be found also in other parts of the bowel system.
<b>GA10.C2</b>	Endometriosis of pelvic peritoneum A condition that is frequently idiopathic. This condition is characterised by ectopic growth and function of endometrial tissue extending 5 millimetres or less under the visceral or parietal pelvic peritoneal surface and appearing as black-brown or light red-orange lesions. This condition may be associated with remaining vestigial tissue from the wolffian or mullerian duct, or fragments endometrium refluxed backward into the peritoneal cavity during menstruation. This condition may also present with dysmenorrhoea, dyspareunia, nonmenstrual pelvic pain, infertility, alteration of menses, or may be asymptomatic. Confirmation is by laparoscopy and histological identification of ectopic fragments.
<b>GA10.C3</b>	Peritoneal pockets due to endometriosis Peritoneal pockets usually observed in the cul-de-sac, may occur in other parts of the female pelvis, also known as Allen-Masters defect. Can be asymptomatic or harbour microscopic endometriosis.
<b>GA10.CY</b>	Endometriosis of other sites within the digestive system
<b>GA10.CZ</b>	Endometriosis of unspecified site within the digestive system
<b>GA10.D</b>	<b>Endometriosis of urinary system</b>
<b>GA10.D0</b>	Endometriosis of the bladder
<b>GA10.DY</b>	Endometriosis of other sites in the urinary system

<b>GA10.DZ</b>	Endometriosis of unspecified site in the urinary system
<b>GA10.E</b>	<b>Endometriosis of the circulatory system</b>
<b>GA10.F</b>	<b>Endometriosis of the nervous system</b>
<b>GA10.G</b>	<p><b>Thoracic endometriosis</b></p> <p>Thoracic endometriosis lesions can affect the diaphragm, pleura, lung and bronchi. There may be a greater affinity for the right hemi thorax, and the parenchyma is more commonly affected in the lower lobes. Macroscopically, the endometriotic implants appear as brown–yellow and sometimes red nodules surrounded by neovascularization. Symptoms include: dyspnea, shortness of breath, rapid heartbeat, coughing up blood and a variety of pain patterns to include scapula, chest, ipsilateral neck and shoulder, upper abdominal and epigastric. Thoracic endometriosis may present with catamenial pneumothorax (recurrent pneumothorax occurring within 72 hours of menstruation), haemoptysis in case of bronchial location, haemothorax, pericardial effusions. A diagnosis of thoracic endometriosis is simple when both endometrial stroma and gland are present. In cases of endometriosis with stroma only, a further classification of “aggregated pattern”, in which immunohistochemistry is ER-, PR- and CD10-positive might be necessary for diagnosis.</p>
	<p><b>Exclusions:</b> Endometriosis of the heart (GA10.E)</p>
<b>GA10.H</b>	<b>Endometriosis in cutaneous scar</b>
<b>GA10.J</b>	<b>Endometriosis-related adhesions</b>
<b>GA10.Y</b>	<b>Endometriosis of other specified sites</b>
<b>GA10.Z</b>	<b>Endometriosis of unspecified site</b>
<b>GA11</b>	<p><b>Adenomyosis</b></p> <p>A condition of the uterus characterised by endometrial tissue growth in the myometrium, hypertrophy of the myometrium, and heavy or prolonged menstrual bleeding, dysmenorrhoea, dyspareunia, bleeding between menstruation, or infertility; it can also be asymptomatic. Confirmation is by histopathology or ultrasound.</p>
	<p><b>Exclusions:</b> Leiomyoma of uterus (2E86.0)</p>

## Noninflammatory disorders of female genital tract (GA12-GA1Z)

Any disorder of the female genital tract, characterised by pathological changes, leading to noninflammatory effects.

**Coded Elsewhere:** Congenital abnormalities of vulva or perineum

- Congenital abnormalities of vagina
- Congenital abnormalities of cervix uteri
- Congenital abnormalities of uterus, except cervix
- Congenital abnormalities of fallopian tube
- Congenital abnormalities of ovary
- Congenital abnormalities of broad ligament
- Endometriosis (GA10)
- Adenomyosis (GA11)

### GA12

#### Dyspareunia

A symptom of the genital system affecting females, caused by physical determinants. This symptom is characterised by recurrent genital pain or discomfort that occurs before, during, or after sexual intercourse, or superficial or deep vaginal penetration that is related to an identifiable physical cause, not including lack of lubrication. Confirmation is by medical assessment of physical causes.

**Exclusions:** Sexual pain-penetration disorder (HA20)

### GA13

#### Acquired abnormalities of vulva or perineum

Any condition of the vulva and perineum, caused by determinants arising after birth. These conditions are characterised by a malfunction, malformation, or another anomaly of the vulva and perineum.

##### GA13.0 Polyp of vulva

##### GA13.1 Low grade squamous intraepithelial lesion of vulva

A condition of the vulva, characterised by lesion of the squamous vulvar intraepithelial cells, leading to unspecified grade or severity of dysplasia and varying degrees of atypia of the cells. This condition is associated with smoking and immunosuppression, or conditions such as human papillomavirus, chronic vulvar irritation, or herpes simplex virus type 2. Confirmation is by tissue biopsy.

**Exclusions:** Genital warts of vulva (1A95.1)

Squamous cell carcinoma of vulva (2C70.2)

High grade squamous intraepithelial lesion of vulva, HPV-associated (2E67.13)

Vulvar intraepithelial neoplasia, HPV-independent (2E67.12)

##### GA13.2 Hypertrophy of vulva

A condition of the vulva that is frequently idiopathic. This condition is characterised by enlargement or thickening of the tissues of all or part of the female external genitalia, such as the clitoris, labia, vestibule, or glands. This condition may also present with a patchy white discolouration, itching, pain or burning of the skin.

<b>GA13.3</b>	<b>Vulvar cyst</b> Closed, fluid filled sac located on or in the vulvar tissue.
<b>GA13.4</b>	<b>Labial agglutination</b> Sign of agglutination of labia minora and/or majora as a result of chronic vulvar inflammation from any cause, usually observed in prepubertal girls.
<b>GA13.5</b>	<b>Skene duct cyst</b> Cystic dilations of the Skene glands, typically located adjacent to the urethral meatus within the vulvar vestibule. Mostly small and often asymptomatic, they may enlarge urinary obstruction, requiring excision.
<b>GA13.6</b>	<b>Vulvar laceration</b> An injury to the vulva, caused by trauma due to childbirth, sexual abuse, or forceful impact. This injury is characterised by tearing of the skin, muscle, or other tissue in the vulvar area.
<b>GA13.7</b>	<b>Vulvar haematoma</b> An injury to the vulvar branches of the internal pudendal or inferior rectal arteries, caused by rupture and trauma due to childbirth, sexual abuse, or forceful impact. This injury is characterised by a localised collection of extravasated blood vessels and significant bruising. This injury may also present with an inability to urinate.
<b>GA13.Y</b>	<b>Other specified acquired abnormalities of vulva or perineum</b>
<b>GA13.Z</b>	<b>Acquired abnormalities of vulva or perineum, unspecified</b>
<b>GA14</b>	<b>Acquired abnormalities of vagina</b> Any condition of the vagina, caused by determinants arising after birth. These conditions are characterised by pathological changes to the vagina.  <b>Coded Elsewhere:</b> Postoperative adhesions of vagina (GC70) Prolapse of vaginal vault after hysterectomy (GC71)
<b>GA14.0</b>	<b>Polyp of vagina</b>
<b>GA14.1</b>	<b>Haematocolpos</b> A condition of the vagina, caused by an outflow vaginal obstruction. This condition is characterised by the presence of blood in the vagina.
<b>GA14.2</b>	<b>Vaginal foreign body</b> A condition of the vagina, caused by foreign bodies lodged into the vaginal canal. This condition is characterised by vaginitis, vaginal bleeding, foul-smelling and purulent vaginal discharge, abdominal pain, and supra-pubic pain. This condition may also present with dysuria or infection.
<b>GA14.3</b>	<b>Vaginal haematoma</b> A condition of the vagina, caused by trauma, commonly subsequent to childbirth, sexual abuse, or forceful impact. This condition is characterised by a localised collection of extravasated blood vessels and significant bruising. This condition may also present with pain, swelling, ecchymosis and urinary retention.

<b>GA14.5</b>	<b>Leukoplakia of vagina</b> A condition of the vagina, caused by hyperkeratinisation of epithelial cells due to human papillomavirus (HPV) infection, chronic trauma, radiotherapy, or premalignant/malignant lesions. This condition is characterised by white, whitish yellow, or grey plaque on the mucosal surfaces in the vagina.
<b>GA14.6</b>	<b>Low grade squamous intraepithelial lesion of vagina</b>
<b>GA14.Y</b>	<b>Other specified acquired abnormalities of vagina</b>
<b>GA14.Z</b>	<b>Acquired abnormalities of vagina, unspecified</b>
<b>GA15</b>	<b>Acquired abnormalities of cervix uteri</b>
<b>GA15.0</b>	<b>Polyp of cervix uteri</b>
<b>GA15.1</b>	<b>Erosion or ectropion of cervix uteri</b> A condition of the cervix uteri, caused by an increase in the total estrogen level in the body. This condition is characterised by protrusion and transformation of the endocervical columnar epithelium to stratified squamous epithelium on the cervix uteri. This condition may also present with non-purulent vaginal discharge, post-coital bleeding, or may be asymptomatic. <i>Exclusions:</i> Cervicitis (GA04)
<b>GA15.2</b>	<b>Nabothian cyst</b>
<b>GA15.3</b>	<b>Old laceration of cervix uteri</b> An injury of the cervix, caused by trauma subsequent to procedures that lacerate the cervix, such as vaginal delivery, induced abortion, or surgery. This condition is characterised by tearing of the cervix uteri tissue. <i>Exclusions:</i> Perineal laceration during delivery (JB09)
<b>GA15.4</b>	<b>Stricture or stenosis of cervix uteri</b> A condition of the cervix uteri, caused by inflammation, trauma, scarring, or atrophy. This condition is characterised by narrowing of the cervical ostium. <i>Exclusions:</i> Obstructed labour due to abnormality of maternal pelvic organs (JB05.5)
<b>GA15.5</b>	<b>Hypertrophic elongation of cervix uteri</b> A condition of the cervix uteri, caused by uterine prolapse. This condition is characterised by hypertrophy, hyperplasia, elongation or strain to the vaginal or supravaginal parts of the cervix uteri. This condition may also present with dyspareunia or infertility. Confirmation is by pelvic examination to differentiate between vaginal or supravaginal elongation.

<b>GA15.6</b>	<b>Incompetence of cervix uteri</b> A condition of the cervix uteri, caused by the weakness of the cervical tissue and intrauterine pressure as pregnancy progresses. This condition is characterised by dilation and effacement of the cervix before reaching a term pregnancy. This condition may lead to a miscarriage during the second trimester, or an early preterm birth during the third trimester.
	<p><b>Exclusions:</b> Fetus or newborn affected by incompetence of cervix uteri (KA01.0)</p> <p>Maternal care for cervical incompetence (JA84.3)</p>
<b>GA15.7</b>	<b>Low grade squamous intraepithelial lesion of cervix uteri</b> A condition of the cervix uteri caused by chronic infection. This condition is characterised by premalignant transformation and abnormal cell growth and behaviour of the cervical squamous epithelial tissue.
	<p><b>Exclusions:</b> Carcinoma in situ of cervix uteri (2E66)</p> <p>High grade squamous intraepithelial lesion of cervix uteri (2E66.2)</p> <p>Cervical Intraepithelial neoplasia grade III (2E66.2)</p> <p>Cervical Intraepithelial neoplasia grade II (2E66.2)</p>
<b>GA15.Y</b>	<b>Other specified acquired abnormalities of cervix uteri</b>
<b>GA15.Z</b>	<b>Acquired abnormalities of cervix uteri, unspecified</b>
<b>GA16</b>	<b>Acquired abnormalities of uterus, except cervix</b> Any condition of the uterus, caused by determinants arising after birth. These conditions are characterised by a malfunction, malformation, or another anomaly of the uterus (excluding the cervix).
	<p><b>Coded Elsewhere:</b> Adenomyosis (GA11)</p> <p>Leiomyoma of uterus (2E86.0)</p> <p>Acquired absence of the uterus (QF01.10)</p>
<b>GA16.0</b>	<b>Endometrial glandular hyperplasia</b> A condition of the uterus, caused by chronic, excess oestrogen stimulation due to obesity, anovulation, or oestrogen therapy. This condition is characterised by excessive proliferation of the endometrial gland cells and a greater gland-to-stroma ratio of endometrial cells. This condition may also present with abnormal uterine bleeding, particularly among postmenopausal women and premenopausal women of increasing age. Confirmation is by sampling endometrial tissue through biopsy or dilation and curettage.

<b>GA16.1</b>	<b>Malposition of uterus</b> A condition of the uterus, caused by weakened pelvic ligaments, enlargement of the uterus, scarred pelvic tissue from pregnancy, tumour, menopause, endometriosis, inflammation, or salpingitis. This condition is characterised by a deviation in the position of the uterus from normal.
	<b>Exclusions:</b> Obstructed labour due to abnormality of maternal pelvic organs (JB05.5)  Maternal care for other abnormalities of pelvic organs (JA84)
<b>GA16.2</b>	<b>Intrauterine synechiae</b> Intrauterine adhesions caused by pelvic inflammatory disease, uterine surgery, or complications related to spontaneous, incomplete or induced abortion. May be asymptomatic or associated with amenorrhea or light menstrual bleeding and subfertility.
<b>GA16.3</b>	<b>Haematometra</b> Presence of blood clots inside the uterus, usually caused by a uterine outflow obstruction.
	<b>Exclusions:</b> haematometra with haematocolpos (GA14.1)
<b>GA16.Y</b>	<b>Other specified acquired abnormalities of uterus, except cervix</b>
<b>GA16.Z</b>	<b>Acquired abnormalities of uterus, except cervix, unspecified</b>
<b>GA17</b>	<b>Acquired abnormalities of fallopian tube</b> A condition of the fallopian tube, caused by determinants arising after birth. This condition is characterised by a malfunction, malformation, or another anomaly.
<b>GA17.0</b>	<b>Acquired parafimbrial cyst of the fallopian tube</b> Cyst located on the fallopian tube at the outside of the fimbrial end.
<b>GA17.1</b>	<b>Fimbrial agglutination</b> Agglutination of fimbriae in the presence of an open or closed fallopian tube
<b>GA17.2</b>	<b>Hydrosalpinx</b> A condition of the fallopian tube, caused by a distal occlusion and the release of purulent material following infection. This condition is characterised by the presence of fluid inside the fallopian tube, and pelvic pressure, pelvic pain, or dyspareunia.
<b>GA17.3</b>	<b>Haematosalpinx</b> A condition of the Fallopian tube, caused by tubal pregnancy, endometriosis, tubal carcinoma, or cryptomenorrhoea. This condition is characterised by bleeding and the presence of blood clots inside the Fallopian tubes, and pelvic pain or uterine bleeding. Confirmation is by imaging.
	<b>Exclusions:</b> haematosalpinx with haematocolpos (GA14.1) haematosalpinx with haematometra (GA16.3)

GA17.4	<b>Salpingitis isthmica nodosa</b> A condition of the fallopian tube caused by infection or inflammation. This condition is characterised by bilateral, nodular thickening of the isthmic and proximal ampullary tunica muscularis. This condition may also present with infertility or ectopic pregnancy. Confirmation is by imaging.
GA17.Y	<b>Other specified acquired abnormalities of fallopian tube</b>
GA17.Z	<b>Acquired abnormalities of fallopian tube, unspecified</b>
<b>GA18</b>	<b>Acquired abnormalities of ovary</b> Any condition of the ovary, caused by determinants arising after birth. These conditions are characterised by a malfunction, malformation, or another anomaly of the ovary. <b>Coded Elsewhere:</b> Polycystic ovary (5A80.2) Cystic teratoma (2F32.0) Ovarian fibroma (2F32.1) Meigs' syndrome (2F32.2) Serous ovarian cystadenoma (2F32.3)
GA18.0	<b>Follicular cyst of ovary</b> A condition of the ovary, caused by a follicular growth or involution due to failure of ovulation. This condition is characterised by the non-neoplastic formation of closed sac-like structures filled with fluid on or in the ovary and lined by layers of granulosa cells. This condition is commonly asymptomatic, but may also present with pelvic pain, irregular menstrual bleeding, dyspareunia, nausea, vomiting, or urgency to urinate. Confirmation is by imaging. <b>Inclusions:</b> Cyst of graafian follicle
GA18.1	<b>Corpus luteum cyst</b> A condition affecting females, caused by the expansion of the corpus luteum with air, blood, or fluid in the ovary after ovulation of a follicle. This condition is characterised by a mass of up to 10 cm in diameter. This condition may also present with pelvic or abdominal pain, haemorrhage, or ovarian torsion.
GA18.2	<b>Theca lutein cyst</b> Least common of functional ovarian cysts, usually bilateral and coexistent with pregnancy, including molar pregnancies. May be quite large (up to 30 cm), are multicystic and disappear spontaneously.
GA18.4	<b>Para ovarian cyst</b>
GA18.5	<b>Torsion of ovary, ovarian pedicle or fallopian tube</b> A condition of the ovary, ovarian pedicle, and fallopian tube, caused by a benign ovarian cyst or ovarian hyperstimulation. This condition is characterised by the partial or complete rotation of the ovarian vascular pedicle and abdominal pain. Confirmation is by imaging.

<b>GA18.6</b>	<b>Other or unspecified ovarian cysts</b> Any collection of fluid, surrounded by a very thin wall, within an ovary, which is not classified elsewhere. This includes any ovarian follicle that is larger than about two centimetres in diameter.
	<b>Exclusions:</b> Polycystic ovary syndrome (5A80.1) ovarian cyst: developmental (LB45.2) ovarian cyst: neoplastic (2C73)
<b>GA18.7</b>	<b>Acquired atrophy of ovary or fallopian tube</b> A condition of the ovary and Fallopian tube, caused by determinants such as infection, chemotherapy or radiation therapy, or shock, arising after birth. This condition is characterised by the partial or complete decrease in size and function of the ovary and the Fallopian tube, premature menopause, fatigue, irregular menstruation, weight gain, and irritability. Confirmation is by identification of elevated levels of oestrogen and follicle stimulating hormone levels in a blood sample.
<b>GA18.Y</b>	<b>Other specified acquired abnormalities of ovary</b>
<b>GA18.Z</b>	<b>Acquired abnormalities of ovary, unspecified</b>
<b>GA19</b>	<b>Acquired abnormalities of broad ligament</b> <b>Coded Elsewhere:</b> Postprocedural pelvic peritoneal adhesions (GC73)
<b>GA19.0</b>	<b>Haematoma of broad ligament</b> A condition affecting females, caused by childbirth, trauma, or surgery. This condition is characterised by a tear in the upper vagina, cervix, or uterus that extends into uterine or vaginal arteries, bleeding (although not always with obvious vaginal bleeding), back pain, pressure in the rectoanal area, dizziness, hypotension, or anaemia. Confirmation is by rectovaginal exam to rule out clotting and expansion of haematoma.
<b>GA19.Y</b>	<b>Other specified acquired abnormalities of broad ligament</b>
<b>GA19.Z</b>	<b>Acquired abnormalities of broad ligament, unspecified</b>
<b>GA1Y</b>	<b>Other specified noninflammatory disorders of female genital tract</b>
<b>GA1Z</b>	<b>Noninflammatory disorders of female genital tract, unspecified</b>

Abnormal uterine or vaginal bleeding (GA20-GA2Z)

A condition of the genital system, caused by hormonal disturbances, weight changes, neoplasms, or use of pharmacological agents. This condition is characterised by irregular or excessive shedding of the uterine lining, or vaginal bleeding during or between menstrual cycles.

**Coded Elsewhere:** Postmenopausal uterine bleeding (GA30.1)  
Neonatal vaginal or uterine haemorrhage (KA83.9)

**GA20** **Menstrual cycle bleeding disorders**

<b>GA20.0</b>	<b>Amenorrhoea</b> A condition of the genital system, caused by hormonal or endocrine disturbances, absence of the uterus, pregnancy, lactation, abnormalities of the genital outflow tract, or failure of the ovaries to retain egg cells during the antenatal period. This condition is characterised by the absence of menstruation by age 16, or the termination of an established menstruation cycle for more than 3-9 months.
	<b>Exclusions:</b> Ovarian dysfunction (5A80)
	<b>Coded Elsewhere:</b> Amenorrhoea related to obstetric fistula (GC04.1Y)
<b>GA20.00</b>	Primary amenorrhoea No menses by age 14 in the absence of growth or development of secondary sexual characteristics; or no menses by age 16 regardless of the presence of normal growth and development of secondary sexual characteristics.
	<b>Coded Elsewhere:</b> 46,XX gonadal dysgenesis (LB45.1)
<b>GA20.01</b>	Secondary amenorrhoea In women who have menstruated previously, no menses for an interval of time equivalent to a total of at least 3 previous cycles, or 6 months
<b>Coding Note:</b>	Code also the causing condition
<b>GA20.02</b>	Lactational amenorrhoea A condition of the genital system affecting females, caused by hormonal disturbances associated with lactation. This condition is characterised by the termination of an established menstruation cycle for more than 3-9 months.
<b>GA20.0Y</b>	Other specified amenorrhoea
<b>GA20.0Z</b>	Amenorrhoea, unspecified
<b>GA20.1</b>	<b>Abnormal frequency of uterine bleeding</b> Any condition of the genital system affecting females, caused by hormonal disturbances. These conditions are characterised by menstrual bleeding episodes that occur with increased frequency or are delayed over several menstrual cycles (within 90 days).
<b>GA20.10</b>	Frequent menstrual bleeding A condition of the genital system affecting females, caused by hormonal change due to pharmacologic or nonpharmacologic agents. This condition is characterised by menstrual bleeding episodes that occur with increased frequency over several menstrual cycles (more than four episodes within 90 days).
<b>GA20.11</b>	Infrequent menstrual bleeding Menstruation with a frequency of 39 days or more
<b>GA20.1Z</b>	Abnormal frequency of uterine bleeding, unspecified
<b>GA20.2</b>	<b>Ovulation bleeding</b> A condition of the genital system affecting females, caused by natural and routine fluctuations in endocrine hormones. This condition is characterised by recurrent and cyclic bleeding of the uterine lining, occurring during the peri-ovulatory period.

- GA20.20** Intermenstrual bleeding  
A condition of the genital system affecting females, caused by a hormonal imbalance, use of an intrauterine device, pregnancy complications, uterine fibroids or polyps, infection, or cancer. This condition is characterised by vaginal bleeding between menstrual periods.
- GA20.2Y** Other specified ovulation bleeding
- GA20.2Z** Ovulation bleeding, unspecified
- GA20.3** **Abnormal regularity of uterine bleeding**  
A condition of the genital system affecting females, caused by hormonal disturbances. This condition is characterised by abnormal menstruation, with a between cycle variation of 2-20 days.
- GA20.4** **Abnormal duration of uterine bleeding**
- GA20.5** **Abnormal volume of uterine bleeding**
- GA20.50** Heavy menstrual bleeding  
Menstruation with heavy (> 80 ml) volume of monthly blood loss
- GA20.51** Light menstrual bleeding  
Menstruation with light (< 5 ml) volume of monthly blood loss
- GA20.5Z** Abnormal volume of uterine bleeding, unspecified
- GA20.Y** **Other specified menstrual cycle bleeding disorders**
- GA20.Z** **Menstrual cycle bleeding disorders, unspecified**
- GA21** **Nonmenstrual bleeding disorders**  
**Coded Elsewhere:** Postprocedural nonmenstrual uterine bleeding (GC77)
- GA21.0** **Postcoital or contact bleeding**  
A condition of the genital system, caused by infection, cervical ectropion, cervical or endometrial polyps, cancer, or trauma to the cervix or vagina. This condition is characterised by non-menstrual bleeding after sexual intercourse. Confirmation is by transvaginal imaging to identify any structural abnormalities.
- GA21.Y** **Other specified nonmenstrual bleeding disorders**
- GA21.Z** **Nonmenstrual bleeding disorders, unspecified**
- GA22** **Excessive menstruation with irregular cycle**  
*Inclusions:* Menometrorrhagia
- GA23** **Anovulatory bleeding**
- GA2Y** **Other specified abnormal uterine or vaginal bleeding**
- GA2Z** **Abnormal uterine or vaginal bleeding, unspecified**

**GA30**

**Menopausal or certain specified perimenopausal disorders**

Any disorder affecting females, characterised by pathological changes during the menopausal and perimenopausal periods.

**Coded Elsewhere:** Postprocedural ovarian failure (5D44)

Menopausal symptom or complaint (MF32)

**GA30.0**

**Menopause**

A condition affecting females, caused by the loss of ovarian follicular function and decline in circulating blood oestrogen levels. This condition is characterised by the cessation of menstruation, hot flushes, atrophic genital changes, psychophysiological effects, and bone loss. Confirmation is by taking a patient history to determine psychophysiological effects such as the presence of amenorrhoea, and identification of hypooestrogenaemia and elevated serum FSH levels in a blood sample.

**Coded Elsewhere:** Contact with health services for menopausal counselling (QA4B)

**GA30.00**

**Menopausal or female climacteric states**

Any condition of the genital system affecting females, caused by pathological changes associated with the perimenopausal period, such as the permanent cessation of menstruation and infertility.

**Coding Note:**

Includes: Symptoms such as flushing, sleeplessness, headache, lack of concentration, associated with menopause

**Exclusions:** States associated with artificial menopause (GA30.3)

**GA30.01**

**Menopausal transition**

A condition affecting females, caused by gradual loss of ovarian follicular function and decline in circulating blood estrogen levels. This condition is characterised by infrequent or irregular menstrual bleeding, alterations in the functioning of the ovary, and gradual atrophic genital changes, psychophysiological effects. Confirmation is by taking a patient history to determine psychophysiological effects.

**GA30.02**

**Excessive bleeding in the premenopausal period**

aka "menorrhagia", excessive uterine bleeding during MENSTRUATION

**GA30.0Y**

**Other specified menopause**

**GA30.0Z**

**Menopause, unspecified**

**GA30.1**

**Postmenopausal uterine bleeding**

A condition of the genital system, caused by polyps, endometrial atrophy, hyperplasia, or cancer. This condition is characterised by abnormal uterine bleeding subsequent to the completion of menopause.

**Exclusions:** that associated with artificial menopause (GA30.3)

<b>GA30.2</b>	<b>Postmenopausal atrophic vaginitis</b> A condition of the vagina, caused by decreased oestrogen levels during the menopausal period. This condition is characterised by inflammation of the vagina and outer urinary tract, thinning and drying of the vaginal tissues, decreased lubrication, vaginal burning or dryness, shortening and tightening of the vaginal canal, or urinary incontinence after menopause.
	<b><i>Exclusions:</i></b> States associated with artificial menopause (GA30.3)
<b>GA30.3</b>	<b>States associated with artificial menopause</b> Any condition caused by the artificial cessation of menstruation induced by surgical or pharmacological effects.
<b>GA30.4</b>	<b>Menopausal hot flush</b> A condition affecting females, caused by hormonal changes associated with menopause. This condition is characterised by recurrent and transient periods of flushing, sweating, and a systemic sensation of heat. This condition may also present with palpitations, anxiety, or periods of heat followed by chills.
<b>GA30.5</b>	<b>Menopausal osteoporosis</b>
<b>GA30.6</b>	<b>Premature ovarian failure</b> Menopause occurring spontaneously before 40 years of age, generally resulting in secondary amenorrhea although some women may exhibit intermittent ovarian function and ovulation, with a minority conceiving and delivering a pregnancy. POF/POI occurs mostly without a known cause, but can be caused by the following conditions: numerical and structural chromosomal abnormalities, Fragile X (FMR1) permutations, autoimmune disorders, radiation therapy, chemotherapy, galactosemia, and other rare enzyme defects or mutations. To be subdivided in 4 categories according to cause: congenital, acquired, iatrogenic and unknown  <b><i>Exclusions:</i></b> Isolated gonadotropin deficiency (5A61.0) Postprocedural ovarian failure (5D44)  <b><i>Coded Elsewhere:</i></b> Primary amenorrhoea (GA20.00) Secondary amenorrhoea (GA20.01)
<b>GA30.Y</b>	<b>Other specified menopausal and perimenopausal disorders</b>
<b>GA30.Z</b>	<b>Menopausal and perimenopausal disorders, unspecified</b>

**GA31**

**Female infertility**

Disease of the reproductive system defined by the failure to achieve a clinical pregnancy after 12 months or more of regular unprotected sexual intercourse.

**Inclusions:** inability to achieve a pregnancy

**Exclusions:** relative infertility (GA33)

Male infertility (GB04)

**Coded Elsewhere:** Contact with health services for preconception counselling (QA33)

Contact with health services for fertility preservation counselling (QA34)

Contact with health services by gestational carrier (QA35)

Female hypofertility in classical cystic fibrosis (CA25.0)

Female hypofertility in atypical cystic fibrosis (CA25.1)

Contact with health services for preimplantation genetic diagnosis (QA3Y)

Contact with health services for preimplantation genetic screening (QA3Y)

**GA31.0**

**Primary female infertility**

Infertility in a woman who has never had a clinical pregnancy

**GA31.00**

Primary female infertility of uterine origin

Female infertility caused by uterine abnormalities on the level of the endometrium or myometrium, with more detailed description classified elsewhere, i.e. under genitourinary infections, STDs and noninflammatory benign gynaecological disease

**Coding Note:**

Code also the causing condition

**GA31.01**

Primary female infertility of tubal origin

Female infertility caused by dysfunction of one or both fallopian tubes, usually related to pelvic adhesions or occurring after pelvic surgery, with or without hydrosalpinx

**Coding Note:**

Code also the causing condition

**GA31.0Y**

Primary female infertility of other specified origin

**GA31.0Z**

Primary female infertility of unspecified origin

**GA31.1**

**Secondary female infertility**

Infertility in a woman who has had at least one clinical pregnancy

**GA31.10**

Secondary female infertility of uterine origin

**GA31.11**

Secondary female infertility of tubal origin

**GA31.1Y**

Secondary female infertility of other specified origin

**GA31.1Z**

Secondary female infertility of unspecified origin

**GA31.Z**

**Female infertility without specification whether primary or secondary**

**GA32**

**Complications associated with medically assisted reproduction**

Any complication caused by or subsequent to any intervention used to achieve pregnancy by artificial or partially artificial means.

**GA32.0**

**Ovarian hyperstimulation syndrome**

A disease of the endocrine system, caused by elevated human chorionic gonadotropin hormone, commonly after the use of injectable fertility treatments. This disease is characterised by ovarian enlargement, and hemodynamic or metabolic complications. This disease may also present with abdominal pain, abdominal bloating, or weight gain depending on graded symptoms.

**Inclusions:** Hyperstimulation of ovaries associated with induced ovulation

**GA32.1**

**Bleeding after egg retrieval**

Significant bleeding after egg retrieval requiring hospitalization for blood transfusion, surgical intervention, clinical observation or other medical procedure

**GA32.2**

**Infection associated with medically assisted reproduction**

Significant genital or pelvic infection occurring after egg retrieval or other treatment with medically assisted reproduction

**GA32.3**

**Complications of attempted embryo transfer or medically assisted insemination**

Any complication caused by or subsequent to any attempted embryo transfer or medically assisted sperm insemination procedure.

**GA32.Y**

**Other specified complications associated with medically assisted reproduction**

**GA32.Z**

**Complications associated with medically assisted reproduction, unspecified**

**GA33**

**Recurrent pregnancy loss**

**Exclusions:** currently pregnant (Chapter 18)

with current abortion (JA00-JA0Z)

**GA34**

**Female pelvic pain associated with genital organs or menstrual cycle**

A symptom affecting females, characterised by pain in the pelvic region associated with any of the genital organs or the menstrual cycle.

**Exclusions:** Chronic primary visceral pain (MG30.00)

Chronic secondary visceral pain (MG30.4)

**Coded Elsewhere:** Interstitial cystitis (GC00.3)

**GA34.0**

**Pain related to vulva, vagina or pelvic floor**

A condition affecting females, characterised by any type of pain associated with the vulva, vagina, and pelvic floor tissues, either during sexual intercourse, physical activity, or rest.

**Exclusions:** Chronic primary visceral pain (MG30.00)

Chronic secondary visceral pain (MG30.4)

<b>GA34.00</b>	Vulval pain A symptom of vulval pain affecting females, caused by trauma, infection, injury, inflammation, or hypersensitivity of the nerve fibres. This symptom is characterised by any type of pain in the vulva, during sexual intercourse, physical activity, or rest.
	<b><i>Exclusions:</i></b> Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)
<b>GA34.01</b>	Perineal pain A symptom of perineal pain affecting females, caused by trauma, infection, injury, inflammation, or hypersensitivity of the nerve fibres. This symptom is characterised by any type of pain in the area between the posterior lip of the vaginal introitus and the anus, during sexual intercourse, physical activity, or rest.
	<b><i>Exclusions:</i></b> Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)
<b>GA34.02</b>	Vulvodynia Vulvodynia describes a chronic sensation of pain, burning or rawness of vulval skin which cannot be ascribed to any specific cause and persists for at least three months. Symptoms may be diffuse and unprovoked (dysaesthetic vulvodynia) or localised, usually to the vulval vestibule, and provoked by touch (vestibulodynia). Dysaesthetic vulvodynia characteristically occurs in postmenopausal women who are often not sexually active: pain is spontaneous and often occurs independently of touch. Vestibulodynia occurs typically in younger women and is characterised by vestibular tenderness to touch, erythema of the vestibular epithelium and secondary dyspareunia.
<b>GA34.0Y</b>	Other specified pain related to vulva, vagina or pelvic floor
<b>GA34.0Z</b>	Pain related to vulva, vagina or pelvic floor, unspecified
<b>GA34.1</b>	<b>Vaginal laxity</b>
<b>GA34.2</b>	<b>Female pelvic pain</b> Pain in the pelvic region in a female associated with any of the genital organs or the menstrual cycle.  <b><i>Exclusions:</i></b> Pain related to vulva, vagina or pelvic floor (GA34.0) Pelvic or perineal pain (MD81.11) Bladder pain (MF52) Chronic primary bladder pain syndrome (MG30.00) Sexual pain-penetration disorder (HA20) Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)  <b><i>Coded Elsewhere:</i></b> Vulvodynia (GA34.02) Chronic pelvic pain in females (MG30.00)

<b>GA34.20</b>	Cyclic pelvic pain A symptom affecting females, caused by gynaecological and physiological aspects associated with the menstrual cycle such as dysmenorrhoea or mittelschmetz. This symptom is characterised by recurrent pain in the pelvis, anterior abdominal wall, lower back, or buttocks, associated with a specific moment or period of time.
	<b>Exclusions:</b> Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)
<b>GA34.21</b>	Noncyclic pelvic pain A symptom affecting females, caused by gynaecological and physiological aspects not associated with the menstrual cycle. This symptom is characterised by chronic pelvic pain in the pelvis, anterior abdominal wall, lower back, or buttocks, not associated with a specific moment or period of time.
	<b>Exclusions:</b> Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)
<b>GA34.2Z</b>	Female pelvic pain, unspecified
<b>GA34.3</b>	<b>Dysmenorrhoea</b> A condition of the genital system affecting females, caused by endometriosis, adenomyosis, ovarian cysts, or may be idiopathic. This condition is characterised by cyclic pelvic pain preceding or accompanying menstruation that interferes with daily activities, lower, umbilical, or suprapubic abdominal pain, such as sharp, throbbing, burning, or shooting pains that may extend to the thighs and lower back.
<b>GA34.4</b>	<b>Premenstrual disturbances</b>
<b>GA34.40</b>	Premenstrual tension syndrome A syndrome affecting females that is frequently idiopathic. This syndrome is characterised by certain environmental, metabolic, or behavioural factors that occur during the luteal phase of the menstrual cycle, and leads to cyclic emotional, physical, or behavioural symptoms that interfere with an individual's lifestyle. Confirmation is by documentation of specific cyclic symptoms associated with the luteal and menstrual phases of the cycle (from a prospective symptom diary), and evidence of socioeconomic dysfunction.
	<b>Exclusions:</b> Premenstrual dysphoric disorder (GA34.41)
	<b>Coded Elsewhere:</b> Premenstrual symptom or complaint (MF33)

<b>GA34.41</b>	Premenstrual dysphoric disorder During a majority of menstrual cycles within the past year, a pattern of mood symptoms (depressed mood, irritability), somatic symptoms (lethargy, joint pain, overeating), or cognitive symptoms (concentration difficulties, forgetfulness) that begin several days before the onset of menses, start to improve within a few days after the onset of menses, and then become minimal or absent within approximately 1 week following the onset of menses. The temporal relationship of the symptoms and luteal and menstrual phases of the cycle should ideally be confirmed by a prospective symptom diary over at least two symptomatic menstrual cycles. The symptoms are severe enough to cause significant distress or significant impairment in personal, family, social, educational, occupational or other important areas of functioning and do not represent the exacerbation of a mental disorder.
	<b>Inclusions:</b> PMDD - [premenstrual dysphoric disorder]
	<b>Exclusions:</b> Premenstrual tension syndrome (GA34.40)
<b>GA34.4Y</b>	Other specified premenstrual disturbances
<b>GA34.4Z</b>	Premenstrual disturbances, unspecified
<b>GA34.5</b>	<b>Ovarian remnant syndrome</b> Chronic pelvic pain in a patient after bilateral salpingooophorectomy for severe endometriosis or PID, caused by residual ovarian cortical tissue left in situ after difficult dissection. Symptoms may include lateralizing pelvic pain, often cyclic and associated with genitourinary or gastrointestinal symptoms. Signs may include a tender mass in the lateral region of the pelvis.
<b>GA34.6</b>	<b>Female genital pain</b> A symptom of genital pain affecting females that is idiopathic. This symptom is characterised by any type of pain in the genital area tissues, during sexual intercourse, physical activity, or rest.
	<b>Exclusions:</b> Chronic primary visceral pain (MG30.00) Chronic secondary visceral pain (MG30.4)
<b>GA34.Y</b>	<b>Other specified female pelvic pain associated with genital organs or menstrual cycle</b>
<b>GA34.Z</b>	<b>Female pelvic pain associated with genital organs or menstrual cycle, unspecified</b>

Dermatoses of female genitalia (GA40-GA4Y)

**Coded Elsewhere:** Malignant neoplasms of vulva (2C70)

Carcinoma in situ of vulva (2E67.1)

Vulval melanotic macule (ED61.11)

Heterotopic sebaceous glands of vulva (ED91.0)

**GA40**

### **Inflammatory dermatoses of the vulva**

**Coded Elsewhere:** Dermatitis or eczema of female genitalia (EA87.1)

Lichen sclerosus of vulva (EB60.0)

Vulval psoriasis (EA90.53)

**GA41**

### **Ulcerative or erosive disorders of the vulva**

**Coded Elsewhere:** Genital ulcer of vulva (GA00.3)

Herpes simplex infection of vulva (1A94.0)

Erosive lichen planus of vulva or vagina (EA91.3)

Ulceration of vulva due to Behçet disease (4A62)

Vulval pemphigus (EB40.0Y)

Mucous membrane pemphigoid of vulval mucosa (EB41.1)

**GA41.0**

### **Vulval aphthosis**

Vulval aphthae are vulval ulcers not attributable to infection or other identifiable cause. They typically occur on the medial aspects of the labia minora in young females (second decade of life). They may be associated with fever and malaise or with oral aphthae.

**GA41.Y**

### **Other specified ulcerative or erosive disorders of the vulva**

**GA42**

### **Sensory disturbance of the vulva**

Disorders characterised by vulval pruritus, dysaesthesia or pain.

**Coded Elsewhere:** Lichen simplex of vulva (EA83.00)

Vulvodynia (GA34.02)

**GA42.0**

### **Vulval pruritus**

Intense itching of the external female genitalia.

**GA4Y**

### **Other specified dermatoses of female genitalia**

**GA6Y**

### **Other specified diseases of the female genital system**

**GA6Z**

### **Diseases of the female genital system, unspecified**

## Diseases of the male genital system (GA80-GB0Z)

Any disease characterised by pathological changes to the male genital system.

**Coded Elsewhere:** Neoplasms of the male genital organs

- Ejaculatory dysfunctions (HA03)
- Problems of male genital organs (MF40)
- Penoscrotodynia (EC92.0)
- Structural developmental anomalies of the male genital system (LB50-LB5Z)
- Symptoms, signs or clinical findings involving the male genital system (MF40-MF4Y)
- Herpes simplex infection of genitalia or urogenital tract (1A94.0)

## Dermatoses of male genitalia (GA80-GA81.Y)

**Coded Elsewhere:** Inflammatory dermatoses affecting the penis or scrotum

- Premalignant or malignant disorders of the penis or scrotum
- Balanoposthitis (GB06.0)

**GA80**

### **Ulcerative disorders of the penis or scrotum**

**Coded Elsewhere:** Herpes simplex infection of penis (1A94.0)

- Mucous membrane pemphigoid of penile mucosa (EB41.1)
- Ulceration of penis or scrotum due to Behçet disease (4A62)
- Necrotising fasciitis of the scrotum, penis or perineum (1B71.1)
- Amoebiasis of penis (1A36.1Y)

**GA80.0**

### **Aphthosis of penis or scrotum**

Genital aphthosis in men is a non-infective but often painful ulceration of penile, scrotal or perigenital skin. It may be associated with oral ulceration (orogenital aphthosis) or with Behçet disease but may occur on its own. Both genital and orogenital aphthosis may represent forms frustes of Behçet disease.

**Inclusions:** Genital aphthosis in the male

**GA80.1**

### **Ulcer of penis of uncertain nature**

**Exclusions:** Syphilitic chancre of penis (1A61.0)

- Penile chancroid (1A90)
- Herpetic ulcer of penis (1A94.0)
- Penile aphthosis (GA80.0)
- Ulceration of penis or scrotum due to Behçet disease (4A62)

**GA80.Y**

### **Other specified ulcerative disorders of penis and scrotum**

**GA81**

### **Miscellaneous dermatoses of male genitalia**

**Coded Elsewhere:** Lichen simplex of male genitalia (EA83.01)

Penile melanotic macule (ED61.10)

Heterotopic sebaceous glands of penis (ED91.0)

Angiokeratoma of the scrotum (EF20.1)

Burning scrotum (EC92.0)

Genitoperineal median raphe cyst (LB5Y)

**GA81.0**

### **Penoscrotal pruritus**

An intense itching sensation that produces the urge to rub or scratch the skin of the scrotum and/or base of the penis to obtain relief.

**GA81.Y**

### **Other specified dermatoses of male genitalia**

Diseases of prostate (GA90-GA91.Z)

**Coded Elsewhere:** Tuberculosis of prostate (1B12.5)

**GA90**

### **Hyperplasia of prostate**

A condition of the prostate, caused by an increased rate of cellular division of the glandular and stromal cells. This condition is characterised by enlargement of the prostatic tissue, dysuria, urinary urgency, nocturia, weak urine stream, straining while urinating, incomplete bladder emptying during urination, or increased frequency of urinary tract infection.

**Inclusions:** Adenofibromatous hypertrophy of prostate

**Exclusions:** Benign neoplasms of prostate (2F34)

**GA91**

### **Inflammatory and other diseases of prostate**

Any disease caused by obstruction of the prostate gland. These diseases are characterised by a build-up of secretions and inflammation of the prostate.

**Coded Elsewhere:** Gonococcal prostatitis (1A70.Y)

Prostatitis due to Trichomonas vaginalis (1A92)

**GA91.0**

### **Chronic prostatitis**

A condition caused by obstruction of the prostate glands. This condition is characterised by inflammation of the prostate gland, dysuria, pollakiuria, urinary urgency, genital pain, lower back pain, abdominal pain, and repeated bladder infections that last for at least three months.

**GA91.1**

### **Abscess of prostate**

A condition caused by infection with the gram-negative bacteria *Neisseria gonorrhoeae*, *Staphylococcus*, or *Escherichia coli*, or the gram-positive bacteria *Staphylococcus aureus* or *Mycobacterium tuberculosis*. This condition is characterised by a focal accumulation of purulent material and neutrophils within or on the prostatic tissue, dysuria, fever, and suprapubic pain. Confirmation is by a transrectal ultrasound to identify size and location of abscess, and a urine sample to identify leukocytes.

<b>GA91.2</b>	<b>Prostatocystitis</b> A condition characterised by inflammation of the bladder, bladder neck, prostate, and prostatic urethra.
<b>GA91.3</b>	<b>Calculus of prostate</b> A condition characterised by a small, solid calcification commonly composed of calcium carbonate or calcium phosphate that is formed in the prostate. This condition may be associated with diabetes mellitus, infection, cancer, iatrogenic factors, or may be idiopathic. Confirmation is by imaging.  <i>Inclusions:</i> Prostatolithiasis
<b>GA91.4</b>	<b>Haemorrhage of the prostate</b> A condition of the prostate, caused by ruptured vessel walls in the prostate. This condition is characterised by excessive loss of blood from the prostate.  <i>Inclusions:</i> Bleeding of prostate prostatic varicosis
<b>GA91.5</b>	<b>Atrophy of prostate</b> A condition of the prostate, caused by apoptosis of the cells due to diminished cellular proliferation, decreased cellular volume, decreased function, ischemia, malnutrition, disease, mutation, or hormonal changes. This condition is characterised by a partial or complete decrease in size and function of the prostatic tissue.
<b>GA91.6</b>	<b>Low grade intraepithelial lesion of prostate</b> A condition of the prostate, caused by an alteration or mutation in cell growth, or prostatic epithelial cells that are dividing more rapidly than normal epithelium. This condition is characterised by premalignant transformation and abnormal development of the prostatic epithelial tissue.  <i>Inclusions:</i> Low grade prostatic intraepithelial neoplasia <i>Exclusions:</i> high grade dysplasia of prostate (2E67.5) PIN III (2E67.5) high grade PIN (2E67.5)
<b>GA91.Y</b>	<b>Other specified inflammatory and other diseases of prostate</b>
<b>GA91.Z</b>	<b>Inflammatory and other diseases of prostate, unspecified</b>
<b>GB00</b>	<b>Hydrocele or spermatocele</b> A condition characterised by an accumulation of serous fluid in the tunica vaginalis testis or along the spermatic cord, and cystic swelling containing fluid and dead spermatozoa of the testicular epididymis, rete testis or efferent ductuli.  <i>Coded Elsewhere:</i> Congenital hydrocele (KC00)

<b>GB00.0</b>	<b>Encysted hydrocele</b> A condition of the testis, caused by inflammation or testicular epididymis, obstruction to the venous or lymphatic systems through the cord, or an abnormality during the antenatal period. This condition is characterised by a circumscribed accumulation of fluid in the tunica vaginalis testis or along the spermatic cord.
<b>GB00.1</b>	<b>Infected hydrocele</b>
<b>GB00.2</b>	<b>Spermatocele</b> A condition characterised by cystic swelling (containing fluid and dead spermatozoa) of the epididymis, rete testis, or efferent ductuli. This condition may be associated with obstruction of the epididymal ducts due to trauma, infection, or an inflammatory process.
	<b><i>Inclusions:</i></b> Encysted hydrocele (GB00.0) Infected hydrocele (GB00.1)
<b>GB00.Y</b>	<b>Other specified hydrocele or spermatocele</b>
<b>GB00.Z</b>	<b>Hydrocele or spermatocele, unspecified</b>
<b>GB01</b>	<b>Torsion of testis, epididymis or appendices</b> Any condition characterised by a partial or complete rotation and an occlusion to the venous or arterial blood supply of the testis, epididymis or testicular appendix.
<b>GB01.0</b>	<b>Torsion of testis</b> A condition of the testes, caused by determinants arising during the antenatal period, or exposure to cold temperatures. This condition is characterised by twisting of the spermatic cord, ischaemia of the testis, severe pain, tenderness, and decreased or absent cremasteric reflex. Confirmation is by imaging.
	<b><i>Inclusions:</i></b> Torsion of spermatic cord
<b>GB01.1</b>	<b>Torsion of epididymis</b> A condition of the epididymis, caused by determinants arising during the antenatal period. This condition is characterised by twisting of the epididymis around its axis and ischaemia, scrotal pain, or inflammation. This condition may also present with a thickened scrotal wall, a reactive hydrocele, and enlargement of the head of the epididymis. Confirmation is by imaging.
<b>GB01.2</b>	<b>Torsion of hydatids</b> A condition of the testicular appendix, caused by determinants arising during the antenatal period. This condition is characterised by twisting of the hydatid of Morgagni and pedunculated hydatid around its axis and ischaemia, testicular pain, scrotal oedema, and a palpable blue dot discolouration on the scrotum. Confirmation is by imaging.
<b>GB01.Z</b>	<b>Torsion of testis, epididymis or appendices, unspecified</b>

**GB02****Orchitis or epididymitis**

**Coded Elsewhere:** Orchitis due to mumps virus (1D80.1)

Gonococcal epididymitis (1A70.Y)

Gonococcal orchitis (1A70.Y)

Chlamydial epididymitis (1A81.1)

Chlamydial orchitis (1A81.1)

**GB02.0****Orchitis, epididymitis or epididymo-orchitis with abscess**

Inflammation of a testis and / or the epididymitis with an associated abscess, a collection of pus (neutrophils) that has accumulated within a tissue because of an inflammatory process in response to either an infectious process or other foreign materials.

**GB02.1****Orchitis, epididymitis or epididymo-orchitis without abscess**

Inflammation of a testis and / or the epididymitis without associated abscess, a collection of pus (neutrophils) that has accumulated within a tissue because of an inflammatory process in response to either an infectious process or other foreign materials.

**GB02.Y****Other specified orchitis or epididymitis****GB02.Z****Orchitis or epididymitis, unspecified****GB03****Atrophy of testis**

A condition of the testis, caused by apoptosis of the cells due to diminished cellular proliferation, decreased cellular volume, decreased function, ischemia, malnutrition, disease, infection, mutation, or hormonal changes. This condition is characterised by a partial or complete decrease in size and function of the testis tissue.

**GB04****Male infertility**

Any disorder of the reproductive system affecting males, characterised by dysfunctions in the ejection of semen or an abnormal absence in the measurable level of sperm in semen.

**Coded Elsewhere:** Male infertility in classical cystic fibrosis (CA25.0)

Male infertility in atypical cystic fibrosis (CA25.1)

**GB04.0****Azoospermia**

Any condition of the genital system affecting males, caused by obstruction of the reproductive tract, abnormal hormone levels, testicular failure, or inadequate production of spermatozoa. These conditions are characterised by the absence of a measurable level of sperm cells in semen, and very low levels of fertility. Confirmation is by the absence of spermatozoa in the sediment of a centrifuged sample of ejaculate.

**GB04.Y****Other specified male infertility****GB04.Z****Male infertility, unspecified**

**GB05****Redundant prepuce, phimosis or paraphimosis**

Several conditions of the foreskin, caused by abnormalities in the prepuce. This condition is characterised by redundant or tight foreskin and lack of retractability of the foreskin or the inability of the foreskin to be reduced.

**GB05.0****Redundant prepuce**

A condition of the foreskin, caused by determinants arising during the antenatal period. This condition is characterised by the presence of excess foreskin tissue.

**GB05.1****Frenulum breve**

A condition of the frenulum preputii penis, caused by determinants arising during the antenatal period. This condition is characterised by a short frenulum and restricted movement of the prepuce, leading to hindered penetration during sexual intercourse or pain and tearing.

**GB05.2****Phimosis**

A condition of the foreskin, caused by the improper development of the foreskin during the antenatal period, balanitis, lichen sclerosus, inflammation, infection, repeated catheterization, or forcible foreskin retraction. This condition is characterised by constriction of the preputial orifice and restricted movement of the prepuce over the glans. This condition may also present with difficulty urinating or dysfunctions during sexual intercourse.

**GB05.3****Paraphimosis**

A condition of the foreskin, caused by a narrow or inflamed foreskin, improper handling of foreskin, or retraction of the foreskin for an extended duration. This condition is characterised by an inability for the foreskin to return to its normal position after being retracted over the glans, pain, and inflammation, and may lead to gangrene.

**GB05.4****Adherent prepuce**

A condition in which the prepuce is adherent to the prepuce which makes it hard to retract the prepuce.

**GB05.Z****Redundant prepuce, phimosis or paraphimosis, unspecified****GB06****Certain specified disorders of penis**

**Exclusions:** Redundant prepuce, phimosis or paraphimosis (GB05)

**Coded Elsewhere:** Male erectile dysfunction (HA01.1)

**GB06.0****Balanoposthitis**

Inflammation of the foreskin and/or glans penis. It may be associated with specific disorders such as lichen planus, lichen sclerosus, reactive arthritis or contact dermatitis etc. but is most commonly "non-specific".

**GB06.01**

Irritant balanoposthitis

**GB06.02**

Balanoposthitis due to infection

**Coded Elsewhere:** Candida balanoposthitis (1F23.11)

<b>GB06.0Y</b>	Other specified forms of balanitis and balanoposthitis
<b>GB06.0Z</b>	Balanoposthitis, unspecified
<b>GB06.1</b>	<p><b>Priapism</b></p> <p>A condition of the penis, caused by acute leukaemia, sickle cell anaemia, infection, a penile or central nervous system lesion, or the use of certain pharmacological agents. This condition is characterised by prolonged or persistent painful penile erection lasting over four hours without physical or psychological sexual arousal.</p>
	<p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>Painful erection</li> </ul>
<b>GB06.2</b>	<p><b>Penile fibromatosis</b></p> <p>A condition characterised by induration of the corpora cavernosa of the penis producing a painful fibrous chordee within the soft tissue of the penis and inflammation of the tunica albuginea. This condition may be associated with trauma or injury to the penis. This condition may also present with pain during erection, erectile dysfunction, shortening, or abnormal curvature of the penis when erect. Confirmation is by ultrasonography.</p>
	<p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>Peyronie disease</li> <li>Plastic induration of penis</li> <li>Induratio penis plastica</li> </ul>
<b>GB06.3</b>	<p><b>Mondor disease of the penis</b></p> <p>A well-recognised usually benign and self-limiting entity occurring in sexually active men and presenting with a cord-like thickening of penile veins or lymphatics located around the coronal sulcus or, less commonly, along the dorsal vein of the penis. Infrequently it may be associated with non-sexual trauma or with hypercoagulable states.</p>
<b>GB06.4</b>	<p><b>Chronic penile oedema</b></p> <p>Chronic oedema localised to the penis. Proposed causes include chronic strangulation, low grade streptococcal infection with resultant irreversible lymphatic damage or primary hypoplastic lymphatics.</p>
<b>GB06.5</b>	<p><b>Sclerosing lymphangitis of penis</b></p> <p>This condition presents with a usually painless serpiginous cord-like swelling in the coronal sulcus of the penis. It is typically associated with vigorous sexual intercourse. It normally resolves within a period of weeks.</p>
<b>GB06.Y</b>	<b>Other specified disorders of penis</b>
<b>GB06.Z</b>	<b>Disorders of penis, unspecified</b>

**GB07****Inflammatory disorders of male genital organs, not elsewhere classified**

Any disorder of the male genital organs, characterised by pathological changes and inflammation of the tissue, not classified elsewhere.

- Exclusions:**
- Inflammation of penis (GB06)
  - Orchitis or epididymitis (GB02)
  - Epididymorchitis (GB02)

**GB07.0****Inflammatory disorders of seminal vesicle**

Any disorder of the seminal vesicle, characterised by pathological changes and inflammation of the tissue.

**Coded Elsewhere:** Tuberculosis of seminal vesicle (1B12.5)

**GB07.1****Inflammatory disorders of spermatic cord, tunica vaginalis or vas deferens**

Any disorder of the spermatic cord, tunica vaginalis and vas deferens, characterised by pathological changes and inflammation of the tissue.

**Coded Elsewhere:** Chylocele of tunica vaginalis in loiasis (1F66.0)

Chylocele of tunica vaginalis in filariasis due to Wuchereria bancrofti (1F66.30)

**GB07.2****Inflammatory disorders of scrotum**

Any disorder of the scrotum, caused by poor hygiene or chafing of the skin. This condition is characterised by superficial inflammation of the tissue.

- Exclusions:**
- Streptococcal cellulitis of skin (1B70.1)
  - Staphylococcal cellulitis of skin (1B70.2)

**GB07.Y****Other specified inflammatory disorders of male genital organs, not elsewhere classified****GB08****Vascular disorders of male genital organs**

Any disorder affecting the cardiovascular and genital systems, characterised by pathological changes to the blood vessels of the male genital organs.

**GB0Y****Other specified diseases of the male genital system****GB0Z****Diseases of the male genital system, unspecified**

## Disorders of breast (GB20-GB2Z)

Any disorder characterised by pathological changes to the breast or breast tissue.

**Exclusions:** Certain specified disorders of breast or lactation associated with childbirth (JB46)

**Coded Elsewhere:** Neoplasms of the breast

**GB20**

### **Benign breast disease**

Any disease affecting females, characterised by benign, noncancerous lesions in the breast, leading to pathological changes to (and discomfort of) the breast or breast tissue.

**Coded Elsewhere:** Breast abscess (GB21.0)

Disorders of breast augmentation (GC7A)

Disorders of breast reduction (GC79)

**GB20.0**

### **Fibrocystic change of breast**

A condition characterised by changes to the breast tissue leading to benign, noncancerous lesions in the breast. These conditions may be associated with small or large cyst formation, hyperplasia of the ductal epithelium, apocrine metaplasia of the ductal cells, papillomatosis, duct ectasia, sclerosing adenosis, or fibrosis of the stroma. This condition may also present with breast pain, thickening of breast tissue, or nipple discharge that worsen prior to menstruation, or may be asymptomatic. Confirmation is by clinical breast exam, followed by mammography or ultrasonography to distinguish between abnormal tissue.

**GB20.1**

### **Fibroadenosis of breast**

**Exclusions:** Fibroadenoma of breast (2F30.5)

**GB20.Y**

### **Other specified benign breast disease**

**GB20.Z**

### **Benign breast disease, unspecified**

**GB21**

### **Inflammatory disorders of breast**

Any disorder of the breast or breast tissue, characterised by inflammatory effects, pain, heat, redness, swelling, and loss of function.

**Coded Elsewhere:** Nonpurulent mastitis associated with childbirth (JB45.1)

Neonatal infectious mastitis (KA65.3)

**GB21.0**

### **Breast abscess**

A condition of the breast, caused by inflammation due to infection with a bacterial or parasitic host, or contact with other foreign materials. This condition is characterised by a focal accumulation of purulent material within or on the breast tissue.

**Coded Elsewhere:** Abscess of breast associated with childbirth (JB45.0)

**GB21.Y**

### **Other specified inflammatory disorders of breast**

**GB21.Z**

### **Inflammatory disorders of breast, unspecified**

**GB22****Hypertrophy of breast**

A condition affecting the breast, characterised by unilateral or bilateral enlargement or thickening of the connective tissues that exceeds 3% of the total body weight. This condition may be associated with increased histologic sensitivity to, or abnormally high levels of, prolactin, estrogen, and progesterone in the blood.

**GB23****Certain specified disorders of breast**

Any disorder of the breast or breast tissue, characterised by pathological changes, not classified elsewhere.

**Coded Elsewhere:** Other signs or symptoms in breast (MF3Y)

**GB23.0****Mammary duct ectasia**

A condition of the breast, caused by lipid and cellular debris or secretory (such as colostrum) stasis, or a nonspecific duct widening process. This condition is characterised by obstruction and subsequent dilation of the lactiferous duct, periductal inflammation, periductal fibrosis, nipple retraction, inversion, pain, or bloody discharge from the nipple.

**GB23.1****Fissure or fistula of nipple**

A condition characterised by the formation of a deep furrow or crack-like lesion on the nipple and an abnormal passage between the nipple and adjacent tissues or surfaces.

**GB23.2****Fat necrosis of breast**

A condition of the breast, caused by saponification of fat tissue, commonly subsequent to trauma or radiation therapy. This condition is characterised by damage, death, or inflammation of the fat tissue by blood and tissue digestive enzymes, and the development of scar tissue and lesions. Confirmation is by imaging of the breast and needle aspiration.

**GB23.3****Atrophy of breast**

A condition of the breast, caused by apoptosis of the cells commonly due to prolonged estrogen reduction, diminished cellular proliferation, decreased cellular volume, decreased function, ischaemia, malnutrition, disease, or mutation. This condition is characterised by a partial or complete decrease in size and function of the breast tissue.

**GB23.4****Galactorrhoea not associated with childbirth**

A condition of the breast, characterised by persistent and abnormal secretion of white discharge. In females, the secretions occur between intervals of neonate or infant nursing, or after the infant has stopped breastfeeding. In males and children, these secretions occur spontaneously. This condition is not associated with the physiological changes as part of pregnancy, childbirth, or the puerperium.

**GB23.5****Mastodynia**

The symptom of breast pain. This symptom may be classified as cyclic or non-cyclical depending on the clinical patterns.

**Exclusions:** Chronic pain (MG30)

**GB2Z****Disorders of breast, unspecified**

## Diseases of the urinary system (GB40-GC2Z)

Any disease characterised by pathological changes to the urinary system.

**Coded Elsewhere:** Neoplasms of the urinary system

Clinical findings on examination of urine, without diagnosis (MF90-MF9Y)

Structural developmental anomalies of the urinary system (LB30-LB3Z)

Symptoms, signs or clinical findings involving the urinary system (MF50-MF5Y)

Hypertensive renal disease (BA02)

### Glomerular diseases (GB40-GB4Z)

Any disease characterised by pathological changes to the glomerulus.

**Inclusions:** Hypertensive renal disease (BA02)

**Coded Elsewhere:** Clinical findings in specimens from the urinary system (MF80-MF8Z)

Symptomatic late syphilis of other sites (1A62.2)

Plasmodium malariae malaria with nephropathy (1F42.0)

Glomerular disorders in secondary systemic amyloidosis (5D00.1)

**GB40**

### Nephritic syndrome

Sudden onset of glomerular disease usually with severe (macroscopic/visible) haematuria accompanied by oliguria, elevated blood pressure, mild oedema and albuminuria or proteinuria usually of sub-nephrotic range. May be a cause of acute renal failure in which case the syndrome is termed rapidly progressive nephritis. Nephritic syndrome has many possible causes and is associated with renal light microscopic changes such hypercellularity, necrosis or thrombosis.

**Inclusions:** acute nephritis

**Exclusions:** Tubulo-interstitial nephritis, not specified as acute or chronic (GB54)

**GB41**

### Nephrotic syndrome

A condition characterised by severe proteinuria, greater than 3.5 g/day in an average adult. The substantial loss of protein in the urine results in hypoalbuminaemia and generalised oedema. There is also usually hyperlipidaemia. Other manifestations of glomerular disease may be present. There are many possible causes and renal histological appearances. Possible complications include vascular thrombosis, infections, malnutrition and renal failure.

**GB42****Persistent proteinuria or albuminuria**

Persistent albuminuria >3mg/mmol creatinine or >30mg/day is regarded as abnormal, indicative and often the first manifestation of chronic kidney disease (KDOQI, KDIGO). In surveillance for CKD in “at risk” patients such as diabetics, urinalysis for albuminuria is recommended by most clinical practice guidelines. This diagnosis does not refer to intermittent proteinuria as in orthostatic or exercise induced proteinuria, nor to non-albuminuric proteinuria such as Bence Jones (immunoglobulin light chain) proteinuria.

**Exclusions:**

- Orthostatic proteinuria (MF96.0)
- proteinuria NOS (MF96)
- Gestational proteinuria without hypertension (JA22.0)
- Bence Jones proteinuria (MF96.1)
- Nephrotic syndrome (GB41)
- albuminuria NOS (MF96)

**GB42.0****Albuminuria, Grade A2**

Presence of excessive albumin in the urine, indicating abnormal permeability glomerular filtration. Can be quantitated by either timed collections or spot urine samples with the concentration adjusted to the urine creatinine concentration to correct for variations in overall urine concentration. When persistent and of moderate or greater severity usually indicates overt glomerular disease such as caused by diabetic glomerulosclerosis, glomerulonephritis or amyloid.

**Coding Note:**

Code also the causing condition

**GB42.1****Albuminuria, Grade A3**

Presence of excessive albumin in the urine, indicating abnormal permeability glomerular filtration. Can be quantitated by either timed collections or spot urine samples with the concentration adjusted to the urine creatinine concentration to correct for variations in overall urine concentration. When persistent and of moderate or greater severity usually indicates overt glomerular disease such as caused by diabetic glomerulosclerosis, glomerulonephritis or amyloid.

**Coding Note:**

Code also the causing condition

**GB42.Y****Other specified persistent proteinuria or albuminuria****GB42.Z****Persistent proteinuria or albuminuria, unspecified****GB4Y****Other specified glomerular diseases****GB4Z****Glomerular diseases, unspecified**

## Renal tubulo-interstitial diseases (GB50-GB5Z)

Any disease characterised by pathological changes to the renal tubules and interstitial tissues.

**Exclusions:** pyeloureteritis cystica (GB90)

**Coded Elsewhere:** Renal tubulo-interstitial disorders due to toxoplasma gondii (1F57.Y)

Renal tubulo-interstitial disorders due to salmonella infection (1A09.Y)

**GB50**

### Acute tubulo-interstitial nephritis

A disease characterised by acute inflammation of, and damage to, tubules and the interstitium of the kidney, usually accompanied by acute renal failure (acute kidney injury). Histology shows acute inflammatory infiltrate in the interstitium with oedema and tubular cell necrosis, and often prominent eosinophils and plasma cells. Usually due to an allergic or immunological reaction to an identifiable allergen. Usually accompanied by acute renal failure which may be reversible if the allergen is withdrawn expeditiously with or without corticosteroid administration. Can lead to chronic tubulointerstitial nephritis, particularly if the allergen exposure is not short term. May be associated with other signs of an allergic reaction such as rash or fever.

**GB51**

### Acute pyelonephritis

Acute inflammation of the renal pelvis and parenchyma due to bacterial infection. One of the commonest bacterial infections of adult women. Symptoms include fever, loin (kidney) pain, nausea and vomiting. Co-incident symptoms of acute cystitis with dysuria, frequency and haematuria may occur. Renal failure is not a feature unless there is septicaemia, hypotension or hypovolemia.

**GB52**

### Acute tubular necrosis

Any condition of the kidney, caused by hypotension, hypoperfusion, ischaemia, hypoxia, or use of nephrotoxic drugs. These conditions are characterised by death of tubular epithelial cells and acute kidney injury. Confirmation is by identification of "muddy brown casts" of epithelial cells in a urine sample.

**Coding Note:**

Code also the causing condition

**GB53**

### Acute renal papillary necrosis

A condition of the kidney, caused by ischaemia, liver disease, or analgesic nephropathy. This condition is characterised by death of single or multiple renal papillae, haematuria, flank pain, and tissue fragments in the urine. This condition may also present with fever and chills.

**GB54**

### Tubulo-interstitial nephritis, not specified as acute or chronic

A disease characterised by inflammation of and damage to tubules or the interstitium of the kidney while sparing the glomeruli secondary to immune reaction or toxic agent.

**Exclusions:** calculous pyelonephritis (GB70)

**GB55****Chronic tubulo-interstitial nephritis**

A disease characterised by inflammation of and damage to tubules and/or the interstitium of the kidney, interstitial scarring, fibrosis and tubule atrophy resulting in progressive chronic renal insufficiency

**Coding Note:**

Code also the causing condition

**Exclusions:** calculous pyelonephritis (NFAD) (GB70)

**Coded Elsewhere:** Autosomal dominant polycystic kidney disease (GB81)

**GB55.0****Balkan nephropathy**

Balkan nephropathy is a form of interstitial nephritis characterised by a very localised geographic occurrence. It was first identified in the 1920s among several small, discrete communities along the Danube River and its major tributaries. Now thought to be due to chronic aristolochic acid ingestion (ingestion of Aristolochia clematitis seeds native to the Balkan region), though it has some differences from Chinese herbal nephropathy. This disease is characterised by renal insufficiency, proteinuria, tubulointerstitial nephritis, anaemia, weakness, copper discolouration of the skin, and may lead to end-stage renal disease within 5 years after onset.

**Inclusions:** Balkan endemic nephropathy

**GB55.1****Nephropathy induced by heavy metals**

A disease of the kidney, caused by exposure to heavy, nephrotoxic metals such as cadmium, lead, copper, and mercury. This disease is characterised by tubular damage, renal insufficiency, interstitial fibrosis, necrosis, or renal dysfunction. This disease may also present with hypertension, proteinuria, hyperuricaemia, aminoaciduria, or other symptoms characteristic of chronic kidney disease.

**GB55.2****Chronic urate nephropathy**

A condition characterised by deposition of urate crystals in the tubules and interstitium, partial or complete obstruction of the collecting ducts, renal pelvis, or ureter, hyperuricaemia disproportionate to the degree of renal insufficiency and decreased urate excretion. This condition may lead to inflammation, fibrosis, and renal failure.

**GB55.Y****Other specified chronic tubulo-interstitial nephritis****Coding Note:**

Code also the causing condition

**GB55.Z****Chronic tubulo-interstitial nephritis, unspecified****Coding Note:**

Code also the causing condition

**GB56****Obstructive or reflux nephropathy**

Distention of the pelvis and calices of the kidney with urine as a result of obstruction of the ureter or as a result of a vesicoureteral or vesicoureterorenal reflux of urine. Diffuse or focal cortical scarring and chronic tubulointerstitial nephritis may be present.

**Exclusions:** Calculus of kidney and ureter without hydronephrosis  
(GB70-GB7Z)

Obstructive pyelonephritis (GB55)

- GB56.0 Hydronephrosis with ureteropelvic junction obstruction**  
A condition caused by any obstruction in or stenosis of the ureteropelvic junction. This condition is characterised by distension of the pelvis and calyces of the kidney with a partial or complete obstructed flow of urine. This condition may present with flank pain, haematuria, pyuria, or hyperpyrexia.
- Exclusions:** Congenital ureteropelvic junction occlusion (QJCB) (LB31.8)  
Congenital hydronephrosis (LB31.0)
- GB56.1 Hydronephrosis with ureteral obstruction**  
Intrinsic stenosis or stricture or extrinsic obstruction of the ureter, except at the ureteropelvic junction or at the ureteral orifice, causing distension of the pelvis and calices of the kidney with urine.
- Exclusions:** Congenital hydronephrosis (LB31.0)
- GB56.2 Hydronephrosis with ureteral orifice obstruction**  
Dilatation of the renal pelvis and calyces associated with (and presumably due to) obstruction of the ureter at the insertion into the bladder and hence ascending back pressure.
- Exclusions:** with infection (GB58)
- GB56.3 Hydronephrosis due to bladder obstruction**  
A condition caused by an obstruction in the urinary bladder. It is characterised by distention of the pelvis and calices of one or both kidneys, and lack of free flow of urine from the kidney, and can lead to progressive atrophy of the kidney if untreated. The condition may also present with pain in the flank, haematuria, pyuria, or hyperpyrexia.
- GB56.4 Other or unspecified hydronephrosis**  
This refers to distension and dilation of the renal pelvis and calyces in situations other than those coded elsewhere or when no additional details are available.
- Exclusions:** Pyonephrosis (GB58)
- GB56.5 Hydronephrosis and reflux nephropathy with vesicoureteral or vesico-uretero-renal reflux**  
Distention of the pelvis and calices of the kidney with urine as a result of obstruction of the ureter not caused by strictures or stenoses of the ureter or by ureteral stones.
- Exclusions:** Congenital vesico-uretero-renal reflux (LB31.D)  
Congenital hydronephrosis (LB31.0)
- GB56.Y Other specified obstructive or reflux nephropathy**
- GB56.Z Obstructive or reflux nephropathy, unspecified**
- GB57 Nephrocalcinosis**  
A condition of the kidney, caused by previous inflammation or degeneration when accompanied by previous renal failure. This condition is characterised by renal lithiasis, or calcium-based deposition in the renal parenchyma. This condition may also present with infection, haematuria, anal colic, or decreased renal function. Confirmation is by abdominal medical imaging to determine location of deposits.

**GB58****Pyonephrosis**

A condition caused by complications subsequent to calyces, hydronephrosis, or pyelonephritis, or which may be idiopathic. This condition is characterised by a collection of pus in the renal pelvis, leading to distension of the kidney and possibly kidney failure.

**GB59****Renal or perinephric abscess**

A collection of purulent material in the kidney substance and/or around the kidneys. Usually due to bacterial infection. Minor: Origin can be haematogenous or ascending infection.

**GB5Y****Other specified renal tubulo-interstitial diseases**

**Coding Note:** Code also the causing condition

**GB5Z****Renal tubulo-interstitial diseases, unspecified**

**Coding Note:** Code also the causing condition

Kidney failure (GB60-GB6Z)

Inability of the kidneys to adequately filter the blood of waste products, with a lower than normal glomerular filtration rate (GFR). Can be abrupt and potentially reversible (acute kidney injury) or persistent due to irreversible kidney damage (chronic kidney disease).

**Exclusions:** Hypertensive renal disease (BA02)

**Coded Elsewhere:** Renal failure following abortion, ectopic or molar pregnancy (JA05.4)

Congenital renal failure (KC01)

**GB60****Acute kidney failure**

An increase in serum creatinine by 0.3 mg/dl or greater within 48 hours; or increase in serum creatinine by 1.5-fold or greater above baseline, which is known or presumed to have occurred within 7 days; or urine volume less than 0.5 ml/kg/h for 6 hours or more.

**Coding Note:** Code also the causing condition

**Inclusions:** nontraumatic acute kidney injury

**GB60.0****Acute kidney failure, stage 1**

Rate of change of serum creatinine: Increase 1.5-1.9 times baseline within 7 days OR increase by 0.3 mg/dl increase within 48 h OR Magnitude of urine output: <0.5 ml/kg/h for 6-12 hours

**Coding Note:** Code also the causing condition

**Inclusions:** Acute nontraumatic kidney injury, mild

**GB60.1****Acute kidney failure, stage 2**

Rate of change of serum creatinine: 2.0-2.9 times baseline OR Magnitude of urine output: <0.5 ml/kg/h for >= 12 hours

**Coding Note:** Code also the causing condition

**Inclusions:** Acute nontraumatic kidney injury, moderate

<b>GB60.2</b>	<b>Acute kidney failure, stage 3</b>
	Rate of change of serum creatinine: 3.0 times baseline OR increase to 4.0 mg/dl OR need for renal replacement therapy (i.e. dialysis) or for patients <18 years, decrease in GFR to <35 ml/min per 1.73 m <sup>2</sup> OR Magnitude of urine output: <0.3 ml/kg/h for 24 hours OR anuria for >= 12 hours
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> Acute nontraumatic kidney injury, severe
<b>GB60.Y</b>	<b>Other specified acute kidney failure</b>
<b>Coding Note:</b>	Code also the causing condition
<b>GB60.Z</b>	<b>Acute kidney failure, stage unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>GB61</b>	<b>Chronic kidney disease</b>
	GFR <60 or presence of kidney damage that is present for more than 3 months. Evidence of kidney damage can include structural abnormalities (imaging or histology), albuminuria above normal limits, urinary sediment abnormalities or electrolyte disturbances due to tubular disorders.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure Chronic renal insufficiency
	<b>Exclusions:</b> Hypertensive renal disease (BA02)
<b>GB61.0</b>	<b>Chronic kidney disease, stage 1</b>
	Kidney damage with normal or increased GFR (>90 ml/min/1.73m <sup>2</sup> )
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure, stage 1

<b>GB61.2</b>	<b>Chronic kidney disease, stage 3a</b>
	GFR 45-59 ml/min/1.63m <sup>2</sup>
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure, stage 3a
<b>GB61.3</b>	<b>Chronic kidney disease, stage 3b</b>
	GFR 30-44 ml/min/1.73m <sup>2</sup>
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure, stage 3b

<b>GB61.4</b>	<b>Chronic kidney disease, stage 4</b> GFR (15-29 ml/min/1.73m <sup>2</sup> )
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure, stage 4
<b>GB61.5</b>	<b>Chronic kidney disease, stage 5</b> Kidney failure, GFR < 15 ml/min/1.73m <sup>2</sup>
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> chronic renal failure, stage 5
	<b>Coded Elsewhere:</b> Albuminurica retinitis (9B65.Z)
<b>GB61.Z</b>	<b>Chronic kidney disease, stage unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>GB6Z</b>	<b>Kidney failure, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition

#### Urolithiasis (GB70-GB7Z)

A condition of the urinary system, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by the presence of calculi originating in the urinary system or which are located within the urinary system. Confirmation is by abdominal radiography, or intravenous pyelography.

<b>Exclusions:</b>	Hyperoxaluria (5C51.2) Hypercalciuria (MF98.0) Crystalluria (MF90-MF9Y) Cystinuria (5C60.2)
--------------------	--

#### **GB70** **Calculus of upper urinary tract**

A condition of the urinary system, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the upper urinary tract (renal papilla). This condition may present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.

<b>GB70.0</b>	<b>Calculus of kidney</b>
	A condition of the kidney, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by the urinary calculi located in the kidney, in renal calyces, or in the renal pelvis. This condition may present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.

<b>Inclusions:</b>	Renal calculus or stone Stone in kidney
--------------------	--

<b>GB70.00</b>	Staghorn calculus A condition of the kidney, characterised by large, branched, struvite or calcium carbonate apatite calculi within the renal pelvis and extending into one or more caliceal extensions, and fever, haematuria, or flank pain, leading to renal failure and life-threatening sepsis. This condition may be associated with urinary tract infection. Confirmation is by imaging of the abdominal region.
<b>GB70.0Y</b>	Other specified calculus of kidney
<b>GB70.0Z</b>	Calculus of kidney, unspecified
<b>GB70.1</b>	<p><b>Calculus of ureter</b></p> <p>A condition of the ureter, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the ureter, and may lead to renal colic. This condition may present with haematuria, dysuria, or pain in the flank, lower abdomen, groin, thighs, or genitalia. Confirmation is by abdominal radiography to determine the presence and location of calculi.</p> <p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>Ureteric stone</li> <li>Ureteral calculus or stone</li> <li>Stone in the ureter</li> </ul>
<b>GB70.Z</b>	<b>Calculus of upper urinary tract, unspecified</b>
<b>GB71</b>	<p><b>Calculus of lower urinary tract</b></p> <p>A condition of the urinary system, caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the lower urinary tract (urinary bladder and urethra). This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.</p> <p><b>Calculus in bladder</b></p> <p>A condition caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the bladder. This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography, to determine the presence and location of calculi.</p> <p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>Urinary bladder stone</li> </ul> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Calculus in a bowel segment for urinary diversion (e.g. neobladder, pouch) (NFBC) (GB71.2)</li> </ul>

<b>GB71.1</b>	<b>Calculus in urethra</b>
	A condition caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the urethra, where it may lead to renal colic. This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, groin, thighs, or genitalia. Confirmation is by abdominal radiography to determine the presence and location of calculi.
	<b><i>Inclusions:</i></b> Calculus of bowel segments for urinary diversion (GB71.2)
<b>GB71.2</b>	<b>Calculus of bowel segments for urinary diversion</b>
	A condition caused by dehydration, decreased urine volume or fluid flow rates, or increased excretion of minerals such as calcium, oxalate, magnesium, cystine, and phosphate. This condition is characterised by urinary calculi located in the bowel segment for urinary diversion (ileal neobladder, ileal conduit, ileocaecal pouch). This condition may also present with haematuria, dysuria, or pain in the flank, lower abdomen, or groin. Confirmation is by abdominal radiography to determine the presence and location of calculi.
<b>GB71.Z</b>	<b>Calculus of lower urinary tract, unspecified</b>
<b>GB7Z</b>	<b>Urolithiasis, unspecified</b>
 <b>Cystic or dysplastic kidney disease (GB80-GB8Z)</b>	
Any disease of the kidney, caused by determinants arising during the antenatal period or after birth. These diseases are characterised by pathological changes to one or both kidneys, and may manifest in other anatomical tissues.	
	<b><i>Coded Elsewhere:</i></b> Tuberous sclerosis (LD2D.2)
	Noonan syndrome (LD2F.15)
	Meckel-Gruber syndrome (LD2F.13)
	Asphyxiating thoracic dystrophy (LD24.B1)
	Multicystic renal dysplasia (LB30.9)
<b>GB80</b>	<b>Nonfamilial nongenetic cystic kidney disease</b>
	Diseases where there are developmental anatomical or pathological changes in the renal substance not occurring in a familial distribution and not known to have a mono-genetic cause.
	<b><i>Coded Elsewhere:</i></b> Medullary sponge kidney (LB30.8)
	Multicystic renal dysplasia (LB30.9)
<b>GB80.0</b>	<b>Simple renal cyst</b>
	A disease of the kidney, caused by obstruction of tubules, anaemia, or detachment of diverticula. This disease is characterised by the formation of thin-walled abnormal sacs filled with hypo-echogenic radiolucent fluid in the kidney. Confirmation is by imaging.
	<b><i>Inclusions:</i></b> Bosniak 1 cyst

<b>GB80.1</b>	<b>Complex renal cyst</b> Renal cyst with high attenuation or mixed contents, septate or thickened wall. May be subclassified by the Bosniak classification Bosniak 2-4 to indicate increasing likelihood of neoplasm.
<b>GB80.2</b>	<b>Subscapular or perirenal urinoma</b> A disease of the kidney, caused by urinary obstruction such as calices in the kidney or ureter, or a breach of the integrity of the pelvis. This disease is characterised by an encapsulated collection of urine located in a fat-lined sac around the kidneys or in the retroperitoneum. Confirmation is by imaging.
<b>GB80.Y</b>	<b>Other specified nonfamilial nongenetic cystic kidney disease</b>
<b>GB80.Z</b>	<b>Nonfamilial nongenetic cystic kidney disease, unspecified</b>
<b>GB81</b>	<b>Autosomal dominant polycystic kidney disease</b> Multiple cysts in both kidneys increasing in number and size from adolescence, associated with development of hypertension and chronic renal failure. Autosomal dominant familial pattern is usual and due to mutations on chromosomes 16 and 4. Non-renal manifestations can include cysts in the liver and less commonly pancreas. Cerebral arterial aneurysms with subarachnoid haemorrhage, and other non-renal vascular abnormalities can also occur.
<b>GB82</b>	<b>Autosomal dominant tubulointerstitial disease</b> Nonglomerular, autosomal dominant kidney diseases characterised by progressive tubulointerstitial fibrosis and progression to end-stage renal disease. Currently there are 4 known genetic defects - in uromodulin, mucin-1, renin and hepatocyte nuclear factor 1-beta. The last is associated with Maturity-Onset Diabetes of the Young (MODY) and thus is classified as MODY-5  <b>Coded Elsewhere:</b> Medullary sponge kidney (LB30.8) MODY 5 syndrome (5A13.6)
<b>GB83</b>	<b>Nephronophthisis</b> Autosomal recessive disease characterised by polyuria, polydipsia, enuresis and chronic kidney disease with end stage renal failure occurring between birth and late adolescence depending on the NPHP gene involved. Extra-renal manifestations occur with associated multisystem genetic disorders (e.g. Senior-Loken, Cogan, Joubert)
<b>GB8Y</b>	<b>Other specified cystic or dysplastic kidney disease</b>
<b>GB8Z</b>	<b>Cystic or dysplastic kidney disease, unspecified</b>

<b>GB90</b>	<b>Certain specified disorders of kidney or ureter</b> Any disorder characterised by pathological changes to the kidney or ureter.
<b>Coding Note:</b>	Code also the causing condition
<b>Exclusions:</b>	Urolithiasis (GB70-GB7Z)
<b>Coded Elsewhere:</b>	Macroscopic changes of size of the kidney (MF54) Ureteral fistula (GC04.2) Postinterventional ischemia or infarction of kidney (GC7B) Neonatal haemorrhage originating in kidney or bladder (KA83.6) Diabetic nephropathy (GB61.Z) Renal late syphilis (1A62.2Y) Disorders of kidney or ureter in tuberculosis (1B1Y)
<b>GB90.0</b>	<b>Nephroptosis</b> Enhanced mobility of the kidney, resulting in ptosis when the patient is upright. More common on the right, associated with a longer renal artery, and debatably associated with fibromuscular hyperplasia and hypertension.
<b>GB90.1</b>	<b>Hydroureter</b> A condition caused by obstruction, stricture, or stenosis of the ureter, which may be due to prostatic hypertrophy, carcinoma, retroperitoneal or pelvic neoplasms, calculi, or a congenital anomaly. This condition is characterised by distention of the ureter with urine.  <b>Exclusions:</b> Congenital primary megaureter (LB31.1)
<b>GB90.2</b>	<b>Ureteral kinking or deviation without obstruction</b> A condition characterised by a sharp twist, curve, or other deviation in the length of the ureter, but without an obstructed flow of urine.  <b>Inclusions:</b> Kinking of the ureter without hydronephrosis <b>Exclusions:</b> with infection (GB58) congenital ureteric stenosis (LB31.8)
<b>GB90.3</b>	<b>Ischaemia or infarction of kidney</b> <b>Exclusions:</b> Atherosclerosis of renal artery (BD40.2) Goldblatt kidney (BD40.2) Congenital renal artery stenosis (LA90.40)
<b>GB90.4</b>	<b>Renal tubular function disorders</b> Disorders primarily due to abnormalities of renal tubular resorption or secretion.  <b>Coded Elsewhere:</b> Cystinuria (5C60.2) Nephrogenic syndrome of inappropriate antidiuresis (5A60.20)

<b>GB90.40</b>	Hypotonia-cystinuria type 1 This is a rare syndrome including neonatal and infantile hypotonia and failure to thrive, cystinuria type 1, nephrolithiasis, growth retardation due to growth hormone deficiency, and minor facial dysmorphism due to a homozygous deletion of two contiguous genes on chromosome 2: SLC3A1 and PREP (2p21). <b>Coded Elsewhere:</b> Hypotonia-cystinuria syndrome (5C60.Y)
<b>GB90.41</b>	Pseudohypoaldosteronism type 1 Pseudohypoaldosteronism type 1 (PHA1) are rare forms of mineralocorticoid resistance. PHA1 presents in the newborn with renal salt wasting, failure to thrive and dehydration. Two clinical forms have been described: i) a renal form (renal PHA1) that improves with age and in which mineralocorticoid resistance is restricted to the kidney, and ii) a generalised severe form (generalised PHA1) that persists into adulthood and in which mineralocorticoid resistance is systemic and salt loss occurs in multiple organs. Inheritance can be autosomal recessive (arPHA1) which is more severe and persistent than the autosomal dominant form (AdPHA1)
<b>GB90.42</b>	Fanconi syndrome Disorder associated with generalised dysfunction of the proximal tubule expressed as amino-aciduria, low molecular weight proteinuria, polyuria with sodium and potassium wasting, hyper-phosphaturia (hence bone disease), renal tubular acidosis, glycosuria and hypercalciuria. <b>Coded Elsewhere:</b> Oculocerebrorenal syndrome (5C60.0)
<b>GB90.43</b>	Bartter syndrome Bartter syndrome is a genetic renal tubular disease characterised by the association of hypokalaemic alkalosis, increased levels of plasma renin and aldosterone, low blood pressure and vascular resistance to angiotensin II. Two forms of the disease can be distinguished according to clinical criteria: an antenatal or infantile Bartter syndrome (most patients with genotypes I, II and IV), characterised by polyhydramnios, premature delivery, polyuria, dehydration, hypercalciuria and nephrocalcinosis; and classical Bartter syndrome (mostly patients with genotype III, but also some type IV patients), manifesting as polyuria-polydipsia in infancy-childhood through to adulthood, dehydration and a variable delay in the height-weight growth curve.
<b>GB90.44</b>	Renal tubular acidosis Conditions characterised by failure of the kidney to excrete acids, or to lose bicarbonate into the urine, which causes the blood to become too acidic. Characteristically hyperchloremic acidosis (low anion gap metabolic acidosis). Has several forms and many causes. <b>Coded Elsewhere:</b> Osteopetrosis with renal tubular acidosis (LD24.10)
<b>GB90.45</b>	Renal glycosuria Glycosuria (glucose in the urine) at normal blood glucose levels due to inadequate renal tubular resorption. Can be due to above normal glomerular filtration as in pregnancy or occurs residual nephrons in renal failure, or reduced tubular resorption.

<b>GB90.46</b>	Tubular disorders of sodium or potassium transport Abnormalities of the renal tubules resorptive or secretory functions, inherited or acquired.
	<b>Exclusions:</b> Fanconi syndrome (GB90.42)
<b>GB90.47</b>	Aminoaciduria Conditions in which amino acids are found in the urine either due to over-production (high blood levels) or failure of tubular resorption
<b>GB90.48</b>	Disorders of calcium or phosphate excretion Conditions in which renal excretion of calcium and / or phosphate is deranged.  <b>Coded Elsewhere:</b> Pseudohypoparathyroidism (5A50.1) Hypophosphataemic rickets (5C63.22)
<b>GB90.49</b>	Renal hypocalciuria A condition of the kidney, caused by renal tubular retention, low dietary calcium intake, or abnormalities in calcium absorption, and which may be associated with thiazide diuretic intake, Gitelman's disease, or familial hypocalciuric hypercalcaemia. This condition is characterised by a decrease in the level of calcium in the urine.  <b>Coded Elsewhere:</b> Familial hypocalciuric hypercalcaemia (5A51.2) Acquired hypocalciuric hypercalcemia (5A51.Y)
<b>GB90.4A</b>	Nephrogenic diabetes insipidus Nephrogenic diabetes insipidus is a condition in which the kidney tubules respond poorly to pituitary secreted anti-diuretic hormone, resulting in a failure to concentrate the urine, and water loss. Polyuria with dilute urine and polydipsia (excessive thirst) are present. It can be congenital or acquired with many causes. The congenital forms may be attributed to vasopressin receptor or aquaporin-2 defects. They are characterised by polyuria with polydipsia, recurrent bouts of fever, constipation, and acute hypernatraemic dehydration after birth that may cause neurological sequelae.  <b>Exclusions:</b> Central diabetes insipidus (5A61.5)
<b>GB90.4Y</b>	Other specified renal tubular function disorders
<b>GB90.4Z</b>	Renal tubular function disorders, unspecified
<b>GB90.Y</b>	<b>Other specified disorders of kidney or ureter</b>
<b>Coding Note:</b>	Code also the causing condition

Certain specified diseases of urinary system (GC00-GC0Y)

**Exclusions:** Infections of genitourinary tract in pregnancy (JA62)  
Urolithiasis (GB70-GB7Z)

**Coded Elsewhere:** Urinary incontinence (MF50.2)  
Tuberculosis of kidney or ureter (1B12.5)  
Tuberculosis of bladder (1B12.5)

## GC00

### **Cystitis**

A condition of the bladder, caused by infection, reaction to pharmacological agents, exposure to radiation therapy, or potential irritants. This condition is characterised by inflammation of the urinary bladder, dysuria, pollakiuria, fever, or flank pain.

**Exclusions:** Prostatocystitis (GA91.2)

**Coded Elsewhere:** Infections of bladder in pregnancy (JA62.1)

## GC00.0

### **Trigonitis**

A condition of the bladder that is frequently idiopathic. This condition is characterised by inflammation of the nonkeratinizing squamous metaplasia in the trigone region of the bladder.

## GC00.1

### **Infectious cystitis**

Inflammation of the urinary bladder caused by microbes

**Exclusions:** tuberculous cystitis (NHEA) (1B12.5)  
bladder disorder in schistosomiasis [bilharziasis] (NHEB) (1F86.0)

## GC00.2

### **Contracted urinary bladder**

A condition characterised by inflammation of the urinary bladder that may lead to progressive shrinkage, fibrosis, contraction, and irreversible end-stage disease with high urination frequency.

## GC00.3

### **Interstitial cystitis**

A condition characterised by inflammation of the urinary bladder and ureters. This condition may be associated with a malformation of, or injury to, the bladder epithelium, infection with toxins, an autoimmune reaction, or an allergy. This condition may also present with Hunner ulcers diffuse glomerulations affecting all quadrants of the bladder mucosa, mild to severe chronic bladder pressure, bladder pain, urgency to urinate, and low volumes of urine.

## GC00.Y

### **Other specified cystitis**

## GC00.Z

### **Cystitis, unspecified**

**GC01**

**Other disorders of bladder**

Any disorder characterised by pathological changes to the urinary bladder.

**Exclusions:** Cystocele (GC40.0)

hernia or prolapse of bladder, female (GC40.0)

Calculus in bladder (GB71.0)

**Coded Elsewhere:** Bladder pain (MF52)

Neonatal haemorrhage originating in kidney or bladder  
(KA83.6)

**GC01.0**

**Bladder neck obstruction**

A condition of the bladder, caused by congenital or acquired abnormalities that impair the muscles that connect the bladder to the urethra. This condition is characterised by obstruction of the bladder neck and constricted opening during urination. This condition may also present with pelvic pain, pollakiuria, incontinence, or incomplete bladder emptying. Confirmation is by video urodynamics to observe the obstruction as the bladder fills and voids.

**GC01.1**

**Vesical fistula, not elsewhere classified**

A condition caused by medical intervention, trauma, inflammation, infection, cancer, or congenital factors. This condition is characterised by the formation of an abnormal passage between the urinary bladder and the skin, bowel, vagina, uterus, or rectum, and suprapubic pain, frequency, dysuria, or tenesmus.

**Coded Elsewhere:** Vesicovaginal fistula (GC04.10)

**GC01.2**

**Diverticulum of bladder**

A condition of the bladder, caused by congenital or acquired obstruction to the bladder outlet, a bladder dysfunction following a nerve injury, or a prior bladder surgery. This condition is characterised by balloon-like protrusions on the bladder lining, leading to an area of weakness in the bladder wall. This condition may be asymptomatic, or present with recurrent bladder infections, difficulty urinating, or abdominal fullness. Confirmation is by contrast radiography or cystoscopy.

**Exclusions:** Congenital diverticulum of urinary bladder (LB31.4)

Urachal diverticulum (LB03.0)

Hutch-diverticulum (LB31.4)

**GC01.3**

**Rupture of bladder, nontraumatic**

A condition of the bladder, caused by determinants not attributable to wound or injury. This condition is characterised by rupture of the bladder.

**GC01.4**

**Neuromuscular dysfunction of bladder, not elsewhere classified**

**Exclusions:** Functional urinary incontinence (MF50.23)

neurogenic bladder due to cauda equina syndrome (8B40)

due to spinal cord lesion (ND51)

Urinary incontinence associated with pelvic organ prolapse  
(GC40.5)

**GC01.Y**

**Other specified disorders of bladder**

GC01.Z	<b>Disorder of bladder, unspecified</b>
GC02	<p><b>Urethritis and urethral syndrome</b></p> <p>A condition of the urethra, caused by non-infectious factors such as trauma, allergies, anatomical malformations, or scarring and adhesions following a medical intervention. This condition is characterised by inflammation of the urethra, chronic recurrent urinary tract infections without bacterial growth, and pyuria.</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>urethrotrigonitis (GC00.0)</li> <li>urethritis in diseases with a predominantly sexual mode of transmission (1A60-1A9Z)</li> <li>Reiter disease (FA11.2)</li> </ul> <p><b>Coded Elsewhere:</b> Infections of urethra in pregnancy (JA62.2)</p>
GC02.0	<p><b>Urethral abscess</b></p> <p>A condition of the urethra, caused by an obstruction to the periurethral glands that is commonly the result of frequent infection. This condition is characterised by a focal accumulation of purulent material within or on the urethral tissue.</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Urethral caruncle (GC07)</li> </ul>
GC02.1	<p><b>Nonspecific urethritis</b></p> <p>Urethral inflammation for which a specific sexually transmitted infective cause, in particular gonococcal or chlamydial infection, has not been identified. It typically presents in males with dysuria, urethral discharge, itching or urinary urgency. It can occur following urinary tract infection or genital trauma. Historically, before chlamydia infection could be easily identified, chlamydial urethritis was labeled "non-specific".</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Chlamydial infection of lower genitourinary tract (1A81.0)</li> <li>Chlamydial urethritis (1A81.0)</li> <li>Gonococcal genitourinary infection (1A70)</li> </ul>
GC02.Y	<b>Other specified urethritis and urethral syndrome</b>
GC02.Z	<b>Urethritis and urethral syndrome, unspecified</b>
GC03	<p><b>Urethral stricture</b></p> <p>Stenosis of the urethra accompanied by fibrosis and scarring of the spongiosal body</p> <p><b>Coded Elsewhere:</b> Postprocedural urethral stricture (GC72)</p>
GC04	<p><b>Fistula of the genitourinary tract</b></p> <p>Any condition caused by trauma, medical intervention, infection, cancer, or congenital factors. This condition is characterised by the formation of an abnormal passage between any two locations within the genitourinary tract.</p> <p><b>Coded Elsewhere:</b> Fistula of intestinal segments used for urinary diversion (GC01.1)</p>

<b>GC04.0</b>	<b>Urethral fistula</b> A condition of the urethra, caused by surgery, infection, trauma, or congenital factors. This condition is characterised by the formation of an abnormal passage between the urethra and adjacent organs or surfaces.  <b>Coded Elsewhere:</b> Urethrovaginal fistula (GC04.14)
<b>GC04.1</b>	<b>Fistulae involving female genital tract</b> Any condition characterised by the formation of an abnormal passage between the genital tract and another organ, or between a genital organ and an adjacent organ or surface.
<b>GC04.10</b>	Vesicovaginal fistula A condition of the bladder and vagina, caused by and subsequent to childbirth, trauma, hysterectomy, medical intervention, infections, bladder calculi, endometriosis, cone biopsy, or congenital factors. This condition is characterised by the formation of an abnormal passage between the urinary bladder and the vagina, leading to the continuous involuntary discharge of urine into the vagina.  <b>Coded Elsewhere:</b> Vesicosigmoidovaginal fistula (GC04.12)
<b>GC04.11</b>	Fistula of small intestine to vagina  <b>Exclusions:</b> Obstetric Fistula (GC04.1)
<b>GC04.12</b>	Fistula of large intestine to vagina A condition of the large intestine and vagina, caused by damage to the tissue due to childbirth, an inflammatory bowel disease, radiation treatment, cancer, or a complication following pelvic surgery. This condition is characterised by the formation of an abnormal passage between any part of the large bowel and the vagina. This condition may also present with leakage of bowel contents (faeces or gas) through the vagina.  <b>Exclusions:</b> Obstetric Fistula (GC04.1)  <b>Coded Elsewhere:</b> Rectovaginal fistula (GC04.16)
<b>GC04.13</b>	Female genital tract-skin fistulae A condition of the genital system, caused by damage to the tissue between the genital tract and the skin. This condition is characterised by the formation of an abnormal passage between the genital tract and the skin.  <b>Exclusions:</b> Obstetric Fistula (GC04.1)
<b>GC04.14</b>	Urethrovaginal fistula This refers to the abnormal connection or passageway between the female urethra and the vagina without further specification.

<b>GC04.15</b>	Combined urethrovesicovaginal fistula A condition of the bladder, urethra, and vagina, caused by and subsequent to childbirth, trauma, hysterectomy, medical intervention, infection, bladder calculi, endometriosis, cone biopsy, or congenital factors. This condition is characterised by the formation of an abnormal passage between the urinary bladder, urethra, and the vagina, not otherwise specified.
	<b>Inclusions:</b> Urethrovesicovaginal fistula
<b>GC04.16</b>	Rectovaginal fistula A condition of the rectum and vagina, caused by childbirth, trauma, Crohn's disease, medical intervention, or infection. This condition is characterised by the formation of an abnormal passage between the rectum and the vagina, not otherwise specified.
<b>GC04.17</b>	Vesicouterine fistula with severe scar or extensive tissue loss This is a condition characterised by the presence of extensive amounts of fibrous tissue (fibrosis) that have replaced normal tissue associated with a vesicouterine fistula.
<b>GC04.18</b>	Other combined urinary fistula with severe scar or extensive tissue loss Any other condition characterised by the presence of extensive amounts of fibrous tissue (fibrosis) that have replaced normal tissue associated with any other abnormal connection or passageway between any two locations within the urinary tract which do not normally connect.
<b>GC04.19</b>	Combined urinary and rectal fistula including cloaca with severe scar or extensive tissue loss A condition characterised by the presence of extensive amounts of fibrous tissue (fibrosis) that have replaced normal tissue associated with an abnormal connection or passageway between the rectum, including cloaca, and a location within the urinary system.
<b>GC04.1A</b>	Vaginal stenosis or gynatresia related to obstetric fistula A condition of the vagina, caused by congenital or acquired factors. The congenital condition is caused by Mayer-Kustner-Hauser syndrome. The acquired condition is caused by severe or failed childbirth or medical intervention to repair a fistula. This condition is characterised by an abnormal narrowing and foreshortening of the vagina. Confirmation is by pelvic examination.
<b>GC04.1Y</b>	Other specified fistulae involving female genital tract
<b>GC04.1Z</b>	Fistulae involving female genital tract, unspecified
<b>GC04.2</b>	<b>Ureteral fistula</b> Abnormal passage or communication between the ureter and another body organ or cavity or the body surface.
<b>GC04.Y</b>	<b>Other specified fistula of the genitourinary tract</b>
<b>GC04.Z</b>	<b>Fistula of the genitourinary tract, unspecified</b>

**GC05****Prolapsed urethral mucosa**

A condition characterised by a circular protrusion of the distal urethra mucosa through the external urethral meatus. This condition may be associated with congenital or acquired abnormalities such as weakened pelvic floor structures, trauma, or separation of the longitudinal and circular-oblique smooth muscle layers. This condition is commonly asymptomatic in adolescents, or presents with vaginal bleeding and difficulty urinating in postmenopausal individuals.

**Inclusions:** prolapse of urethra

**Exclusions:** Female urethrocele (GC40.0)

**GC06****Urethral diverticulum**

A disease of the urethra, caused by an obstruction to the periurethral glands due to subsequent to frequent infection, or congenitally. This disease is characterised by a localised protrusion of the urethra into the anterior vaginal wall, consisting mostly of fibrous tissue. This disease may also present with urinary frequency, urgency, and dysuria. Confirmation is by imaging to determine the extent and location of the diverticulum.

**GC07****Urethral caruncle**

A condition characterised by small, focal, benign, pink or red polypoid masses of the distal urethral mucosa, which may become painful, bloody, and deep red in colour. This condition may be associated with urogenital atrophy due to estrogen deficiency, and may be aggravated by chronic irritation of urethral mucosa exposure. This condition typically affects postmenopausal women.

**GC08****Urinary tract infection, site not specified**

**Coded Elsewhere:** Urinary tract infection following delivery (JB40.3)

Neonatal urinary tract infection (KA65.2)

Pyuria associated with urinary tract infection (MF97)

**GC08.0****Urinary tract infection, site not specified, due to Escherichia coli****GC08.1****Urinary tract infection, site not specified, due to Klebsiella pneumoniae****GC08.2****Urinary tract infection, site not specified, due to Proteus**

A disease of the urinary tract, caused by an infection with the gram-negative bacteria Proteus. In females, this disease is characterised by dysuria, pyuria, or pollakiuria; in males, this disease may present with urethral discharge. Transmission is unknown. Confirmation is by identification of Proteus in a urinary sample.

**GC08.Y****Urinary tract infection, site not specified due to other agent****GC08.Z****Urinary tract infection, site and agent not specified****GC0Y****Other diseases of urinary system****GC2Z****Diseases of the urinary system, unspecified**

## Other conditions of the genitourinary system (GC40-GC51.Z)

Any disorder characterised by pathological changes to the genitourinary system.

### Female pelvic floor dysfunction (GC40-GC4Z)

Any condition affecting females, caused by an altered or lack of function of the female pelvic floor. These conditions are characterised by weakened or tightened pelvic floor muscles, or an impairment of the sacroiliac joint, lower back, coccyx, or hip joint.

**Coded Elsewhere:** Rectal prolapse (DB31.2)

**GC40**

#### **Pelvic organ prolapse**

The descent of one or more of the anterior vaginal wall, posterior vaginal wall, the uterus (cervix), or the apex of the vagina (vaginal vault) or cuff scar after hysterectomy.

**Exclusions:** Obstructed labour due to abnormality of maternal pelvic organs (JB05.5)

Maternal care for other abnormalities of gravid uterus (JA84)

**GC40.0**

#### **Prolapse of anterior vaginal wall**

**GC40.00**

Incomplete anterior vaginal wall prolapse

Most distal prolapse is 1cm or less proximal or distal to the hymen

**GC40.01**

Complete anterior vaginal wall prolapse

**GC40.0Z**

Prolapse of anterior vaginal wall, unspecified

**GC40.1**

#### **Prolapse of posterior vaginal wall**

**GC40.10**

Incomplete posterior vaginal wall prolapse

**GC40.11**

Complete posterior vaginal wall prolapse

**GC40.1Z**

Prolapse of posterior vaginal wall, unspecified

**GC40.2**

#### **Prolapse of the vaginal apex**

**GC40.20**

Incomplete apical vaginal wall prolapse

**GC40.21**

Complete apical vaginal wall prolapse

**GC40.2Z**

Prolapse of the vaginal apex, unspecified

**GC40.3**

**Uterovaginal prolapse**

<b>GC40.30</b>	<p>Incomplete uterovaginal prolapse</p> <p>A condition caused by weakness, damage, or stretching of the ligaments between the uterus and the vaginal wall, typically subsequent to childbirth. This condition is characterised by stage 1 descensus of the uterus into the vagina, leading to a bulge and distal prolapse greater than 1 centimetre above the hymen or stage 2 descensus with distal prolapse of 1 centimetre or less proximal or distal to the hymen. This condition may also present with urinary incontinence, sensation of heaviness in the pelvis, or difficulty urinating.</p>
	<p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Incomplete uterine prolapse with anterior vaginal wall prolapse (GC40.31)</li> <li>Incomplete uterine prolapse with posterior vaginal wall prolapse (GC40.32)</li> <li>Incomplete uterine prolapse with anterior and posterior vaginal wall prolapse (GC40.33)</li> </ul>
<b>GC40.31</b>	<p>Incomplete uterine prolapse with anterior vaginal wall prolapse</p> <p>A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of the bladder into the vagina due to tearing of the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia).</p>
<b>GC40.32</b>	<p>Incomplete uterine prolapse with posterior vaginal wall prolapse</p> <p>A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of the rectum into the vagina, due to a tear in the rectovaginal septum (which is normally a tough, fibrous, sheet-like divider between the rectum and vagina).</p>
<b>GC40.33</b>	<p>Incomplete uterine prolapse with anterior and posterior vaginal wall prolapse</p> <p>A condition characterised by the displacement of the uterus from its normal position into the vaginal area in association with herniation of both the bladder and the rectum into the vagina, due to tears in the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia) and in the rectovaginal septum, a tough, fibrous, sheet-like divider between the rectum and vagina.</p>
<b>GC40.34</b>	<p>Complete uterovaginal prolapse</p> <p>A condition caused by weakness, damage, or stretching of the ligaments between the uterus and the vaginal wall, typically subsequent to childbirth. This condition is characterised by stage 3 descensus of the uterus into the vagina, leading to a bulge and distal prolapse greater than 1 centimetre below the hymen or stage 4 descensus with complete eversion of the total length of the genital tract. This condition may also present with urinary incontinence, sensation of heaviness in the pelvis, or difficulty urinating.</p>
<b>GC40.35</b>	<p>Complete uterine prolapse with anterior vaginal wall prolapse</p> <p>A condition characterised by the displacement of the uterus from its normal position to at least one cm below the hymen, possibly up to complete eversion of the female genital tract, in association with herniation of the bladder into the vagina due to tearing of the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia).</p>

<b>GC40.36</b>	Complete uterine prolapse with posterior vaginal wall prolapse A condition characterised by the displacement of the uterus from its normal position to at least one cm below the hymen, possibly up to complete eversion of the female genital tract, in association with herniation of the rectum into the vagina, due to a tear in the rectovaginal septum (which is normally a tough, fibrous, sheet-like divider between the rectum and vagina).
<b>GC40.37</b>	Complete uterine prolapse with anterior and posterior vaginal wall prolapse A condition characterised by the displacement of the uterus from its normal position to at least one cm below the hymen, possibly up to complete eversion of the female genital tract, in association with herniation of both the bladder and the rectum into the vagina, due to tears in the tough fibrous wall between a woman's bladder and her vagina (the pubovesical fascia) and in the rectovaginal septum, a tough, fibrous, sheet-like divider between the rectum and vagina.
<b>GC40.3Z</b>	Uterovaginal prolapse, unspecified
<b>GC40.4</b>	<b>Pelvic floor muscle disruption</b> A condition caused by damage or trauma to the muscles of the pelvic floor. This condition is characterised by weakness and dysfunction of the muscle.
<b>GC40.40</b>	Levator avulsion from symphysis pubis A condition caused by damage or trauma to the pelvic floor, leading to the detachment of the levator ani muscle fibres from the symphysis pubis. This condition is characterised by weakness and dysfunction of the muscle.
<b>GC40.4Y</b>	Other specified pelvic floor muscle disruption
<b>GC40.4Z</b>	Pelvic floor muscle disruption, unspecified
<b>GC40.5</b>	<b>Urinary incontinence associated with pelvic organ prolapse</b> A condition of the urinary system, caused by the abnormal displacement of one or more pelvic organs. This condition is characterised by the involuntary loss of urine. Confirmation is by urinalysis.
<b>GC40.50</b>	Stress incontinence associated with pelvic organ prolapse A condition of the urinary system, caused by weakness of the pelvic floor muscles and an increase in intra-abdominal pressure, leading to pressure on the bladder. This condition is characterised by a shift in the position of the urethra allowing urine to pass easily, and urinary incontinence when coughing, laughing, sneezing, exercising, or other physical activities that increase intra-abdominal pressure.
<b>GC40.51</b>	Urge incontinence associated with pelvic organ prolapse A condition of the urinary system, caused by detrusor dysfunction. This condition is characterised by urinary incontinence that accompanies detrusor hyperreflexia when a specific bladder volume is reached, leakage of urine, lack of urge to urinate, or lack of awareness of bladder filling.

<b>GC40.52</b>	Mixed urinary incontinence associated with pelvic organ prolapse A condition of the urinary system, caused by detrusor overactivity and impaired urethral function. This condition is characterised by a mix of stress and urge incontinence symptoms including involuntary loss of urine, urinary urgency, urinary frequency, or urinary incontinence when coughing, laughing, sneezing, exercising, or other physical activities that increase intra-abdominal pressure.
<b>GC40.53</b>	Overflow incontinence associated with pelvic organ prolapse A condition of the urinary system, caused by the incomplete emptying of urine from the bladder and an acontractile detrusor muscle. This condition is characterised by urinary incontinence and leakage of urine in small volumes. This condition may be associated with obstruction, weak bladder muscles, injury, pharmacological use, diabetes mellitus, nerve damage or nervous system dysfunction.
<b>GC40.54</b>	Urinary incontinence, not otherwise specified with pelvic organ prolapse
<b>GC40.6</b>	<b>Functional bladder disorders associated with pelvic organ prolapse</b> Any condition characterised by urinary postponement, stress incontinence, urge incontinence, urinary urgency, or urinary incontinence, or dysfunctional urinary voiding. These conditions are associated with abnormal displacement of one or more pelvic organs.
	<b>Exclusions:</b> Diurnal enuresis (6C00.1) Enuresis (6C00) Nocturnal and diurnal enuresis (6C00.2) Nocturnal enuresis (6C00.0)
	<b>Coded Elsewhere:</b> Absent or diminished bladder sensation associated with pelvic organ prolapse (GC50.10)
<b>GC40.60</b>	Overactive bladder associated with pelvic organ prolapse A condition of the bladder, caused by impaired kidney function, dysfunctional or absent nerve innervation, involuntary contraction of the bladder muscles, diabetes, pharmacological use, or infection. This condition is characterised by a sudden urge to urinate, urinary frequency, and urge incontinence. This condition may also present with nocturia.
<b>GC40.6Y</b>	Other specified functional bladder disorders associated with pelvic organ prolapse
<b>GC40.6Z</b>	Functional bladder disorders associated with pelvic organ prolapse, unspecified
<b>GC40.Z</b>	<b>Pelvic organ prolapse, unspecified</b>
<b>GC41</b>	<b>Anorectal dysfunction associated with pelvic organ prolapse</b> Any condition characterised by abnormal or absent function of the anus and rectum and dysfunctional defecation or flatus. These conditions are associated with abnormal displacement of one or more pelvic organs.

**GC42**

**Sexual dysfunction associated with pelvic organ prolapse**

A condition affecting women, characterised by difficulties experienced in the sensations or function of the genital system during normal sexual activity. This condition is associated with abnormal displacement of the vagina, introitus, or pelvic floor tissues.

**GC42.0**

**Diminished sensation due to vaginal or introital laxity**

A condition characterised by decreased or absent feeling due to decreased muscle tone in the vaginal muscles or at the vaginal opening (introitus).

**GC42.1**

**Obstructed intercourse**

A condition of the genital system, caused by obstruction or blockage in the vaginal canal, or hypertonicity of the vaginal muscles. This condition is characterised by the inability to engage in vaginal sexual intercourse.

**GC4Z**

**Female pelvic floor dysfunction, unspecified**

**GC50**

**Functional bladder disorders, not otherwise specified**

Any other condition characterised by symptoms that include overactive bladder syndrome, voiding postponement, stress incontinence, giggle incontinence, and dysfunctional voiding in children, without further specification.

**Exclusions:** Diurnal enuresis (6C00.1)

Nocturnal and diurnal enuresis (6C00.2)

Enuresis (6C00)

Nocturnal enuresis (6C00.0)

**GC50.0**

**Overactive bladder**

A urological condition characterised by urgency and frequency, as well as the potential for nocturia, which may or may not be accompanied by incontinence.

**Exclusions:** Diurnal enuresis (6C00.1)

Nocturnal and diurnal enuresis (6C00.2)

Enuresis (6C00)

Nocturnal enuresis (6C00.0)

**Coded Elsewhere:** Overactive bladder associated with pelvic organ prolapse (GC40.60)

**GC50.1**

**Absent or diminished bladder sensation**

A condition of the bladder, caused by lack of muscle tone, dysfunctional or absent innervation, or chronic obstruction. This condition is characterised by a large, dilated bladder and incomplete bladder emptying.

**GC50.10**

Absent or diminished bladder sensation associated with pelvic organ prolapse

**GC50.1Y**

Other specified absent or diminished bladder sensation

**GC50.1Z**

Absent or diminished bladder sensation, unspecified

**GC50.Y**

**Other specified functional bladder disorders, not otherwise specified**

<b>GC50.Z</b>	<b>Functional bladder disorders, not otherwise specified, unspecified</b>
<b>GC51</b>	<b>Female Genital Mutilation</b>
	A condition caused by procedures or other interventions for non-medical purposes. This condition is characterised by the partial or total removal of the external female genitalia or other injury to the female genital organs.
	<b>Exclusions:</b>
	Traumatic amputation of entire vulva (NB93.24)
	Traumatic amputation of part of vulva (NB93.25)
<b>GC51.0</b>	<b>Female Genital Mutilation Type 1</b>
	Vulvar abnormality caused by partial or total removal of the clitoris and/or the prepuce (clitoridectomy).
<b>GC51.00</b>	Female Genital Mutilation Type 1a
	Removal of the clitoral hood or prepuce only.
<b>GC51.01</b>	Female Genital Mutilation Type 1b
	Removal of the clitoris with the prepuce.
<b>GC51.0Z</b>	Female Genital Mutilation Type 1, unspecified
<b>GC51.1</b>	<b>Female Genital Mutilation Type 2</b>
	Vulvar abnormality caused by partial or total removal of the clitoris and the labia minora, with or without excision of the labia majora (excision).
<b>GC51.10</b>	Female Genital Mutilation Type 2a
	Removal of the labia minora only.
<b>GC51.11</b>	Female Genital Mutilation Type 2b
	Partial or total removal of the clitoris and the labia minora.
<b>GC51.12</b>	Female Genital Mutilation Type 2c
	Partial or total removal of the clitoris, the labia minora and the labia majora.
<b>GC51.1Z</b>	Female Genital Mutilation Type 2, unspecified
<b>GC51.2</b>	<b>Female Genital Mutilation Type 3</b>
	Vulvar/vaginal abnormality caused by narrowing of the vaginal orifice with a covering seal, as a result from cutting and appositioning the labia minora and/or the labia majora, with or without excision of the clitoris (infibulation).
<b>GC51.20</b>	Female Genital Mutilation Type 3a
	Removal and apposition of the labia minora.
<b>GC51.21</b>	Female Genital Mutilation Type 3b
	Removal and apposition of the labia majora.
<b>GC51.2Z</b>	Female Genital Mutilation Type 3, unspecified

**GC51.3      Female Genital Mutilation Type 4**  
All other harmful procedures to the female genitalia for non-medical purposes, for example: pricking, piercing, incising, scraping and cauterization.

**GC51.Z      Female Genital Mutilation, unspecified**

### Postprocedural disorders of genitourinary system (GC70-GC7B)

Any disorder caused by or subsequent to any intervention of the genitourinary system.

**Exclusions:**      Irradiation cystitis (GC00)  
States associated with artificial menopause (GA30.3)

**Coded Elsewhere:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

**GC70      Postoperative adhesions of vagina**

A condition caused by or subsequent to any vaginal surgery or intervention. This condition is characterised by fibrous bands of scar tissue between the intravaginal tissues (intravaginal adhesions). This condition may also present with pelvic pain and dyspareunia.

**GC71      Prolapse of vaginal vault after hysterectomy**

A condition of the vagina, caused by or subsequent to hysterectomy. This condition is characterised by descensus of the vaginal vault that may also lead to weakening of the vaginal walls.

**GC72      Postprocedural urethral stricture**

Urethral stricture caused by catheterization, transurethral manipulations (e.g. transurethral resections), urethral instillations, or irradiation exposure

**GC73      Postprocedural pelvic peritoneal adhesions**

A condition caused by or subsequent to any pelvic intervention leading to damage and inflammation of the peritoneum. This condition is characterised by fibrous bands of scar tissue and abnormal connection between pelvic organs or tissues. This condition may also present with pelvic pain or bowel obstruction.

**Exclusions:**      Endometriosis (GA10)

**GC74      Malfunction or complication of external stoma of urinary tract**

A condition caused by a surgically created opening connecting the urinary tract to the external environment. This condition is characterised by dysfunction or decreased function of the incision.

**Exclusions:**      Postsurgical leak (NE81.3)

**GC75      Malfunction of the afferent segment of a continent urinary pouch**

A condition characterised by the dysfunction or lack of function of a surgically created urine reservoir within the body, specifically along the path by which urine enters the pouch.

**GC76**

**Malfunction of the efferent segment of a continent urinary pouch**

A condition characterised by the dysfunction or lack of function of a surgically created urine reservoir within the body, specifically along the path by which urine exits the pouch.

**GC77**

**Postprocedural nonmenstrual uterine bleeding**

Uterine bleeding occurring after procedure (i.e. uterine surgery, induced abortion, ...)

**GC78**

**Postprocedural acute female pelvic inflammatory disease**

**GC79**

**Disorders of breast reduction**

**GC7A**

**Disorders of breast augmentation**

A group of disorders that may arise in concert with or subsequent to the surgical placement of breast implants.

**GC7B**

**Postinterventional ischemia or infarction of kidney**

This refers to a restriction in blood supply to tissues of the kidney due to a health care intervention causing a shortage of oxygen and glucose needed for cellular metabolism resulting in the death of kidney tissue cells.

---

**GC8Y**

**Other specified diseases of the genitourinary system**

**GC8Z**

**Diseases of the genitourinary system, unspecified**

# CHAPTER 17

---

## Conditions related to sexual health

This chapter has 15 four-character categories.

Code range starts with HA00

**Coded Elsewhere:** Changes in female genital anatomy

Changes in male genital anatomy

Paraphilic disorders (6D30-6D3Z)

Adrenogenital disorders (5A71)

Predominantly sexually transmitted infections (1A60-1A9Z)

Contact with health services for contraceptive management (QA21)

This chapter contains the following top level blocks:

- Sexual dysfunctions
- Sexual pain disorders
- Gender incongruence
- Changes in female genital anatomy
- Changes in male genital anatomy

### Sexual dysfunctions (HA00-HA0Z)

Sexual Dysfunctions are syndromes that comprise the various ways in which adult people may have difficulty experiencing personally satisfying, non-coercive sexual activities. Sexual response is a complex interaction of psychological, interpersonal, social, cultural and physiological processes and one or more of these factors may affect any stage of the sexual response. In order to be considered a sexual dysfunction, the dysfunction must: 1) occur frequently, although it may be absent on some occasions; 2) have been present for at least several months; and 3) be associated with clinically significant distress.

**Coded Elsewhere:** Sexual dysfunction associated with pelvic organ prolapse (GC42)

**HA00**

#### **Hypoactive sexual desire dysfunction**

Hypoactive Sexual Desire Dysfunction is characterised by absence or marked reduction in desire or motivation to engage in sexual activity as manifested by any of the following: 1) reduced or absent spontaneous desire (sexual thoughts or fantasies); 2) reduced or absent responsive desire to erotic cues and stimulation; or 3) inability to sustain desire or interest in sexual activity once initiated. The pattern of diminished or absent spontaneous or responsive desire or inability to sustain desire or interest in sexual activity has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

- HA00.0      Hypoactive sexual desire dysfunction, lifelong, generalised**  
The person has always experienced hypoactive sexual desire dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA00.1      Hypoactive sexual desire dysfunction, lifelong, situational**  
The person has always experienced hypoactive sexual desire dysfunction, from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA00.2      Hypoactive sexual desire dysfunction, acquired, generalised**  
The onset of hypoactive sexual desire dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA00.3      Hypoactive sexual desire dysfunction, acquired, situational**  
The onset of hypoactive sexual desire dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA00.Z      Hypoactive sexual desire dysfunction, unspecified**
- HA01      Sexual arousal dysfunctions**  
Sexual arousal dysfunctions include difficulties with the physiological or the subjective aspects of sexual arousal.
- HA01.0      Female sexual arousal dysfunction**  
Female sexual arousal dysfunction is characterised by absence or marked reduction in response to sexual stimulation in women, as manifested by any of the following: 1) Absence or marked reduction in genital response, including vulvovaginal lubrication, engorgement of the genitalia, and sensitivity of the genitalia; 2) Absence or marked reduction in non-genital responses such as hardening of the nipples, flushing of the skin, increased heart rate, increased blood pressure, and increased respiration rate; 3) Absence or marked reduction in feelings of sexual arousal (sexual excitement and sexual pleasure) from any type of sexual stimulation. The absence or marked reduction in response to sexual stimulation occurs despite the desire for sexual activity and adequate sexual stimulation, has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.
- HA01.00      Female sexual arousal dysfunction, lifelong, generalised**  
The person has always experienced female sexual arousal dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

- HA01.01** Female sexual arousal dysfunction, lifelong, situational  
The person has always experienced female sexual arousal dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA01.02** Female sexual arousal dysfunction, acquired, generalised  
The onset of female sexual arousal dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA01.03** Female sexual arousal dysfunction, acquired, situational  
The onset of female sexual arousal dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA01.0Z** Female sexual arousal dysfunction, unspecified
- HA01.1** **Male erectile dysfunction**  
Male erectile dysfunction is characterised by inability or marked reduction in the ability in men to attain or sustain a penile erection of sufficient duration or rigidity to allow for sexual activity. The pattern of erectile difficulty occurs despite the desire for sexual activity and adequate sexual stimulation, has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.
- Coding Note:** Code also the causing condition
- HA01.10** Male erectile dysfunction, lifelong, generalised  
The person has always experienced male erectile dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA01.11** Male erectile dysfunction, lifelong, situational  
The person has always experienced male erectile dysfunction from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA01.12** Male erectile dysfunction, acquired, generalised  
The onset of male erectile dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA01.13** Male erectile dysfunction, acquired, situational  
The onset of male erectile dysfunction has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situation

<b>HA01.1Z</b>	Male erectile dysfunction, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>HA01.Y</b>	<b>Other specified sexual arousal dysfunctions</b>
<b>HA01.Z</b>	<b>Sexual arousal dysfunctions, unspecified</b>
<b>HA02</b>	<b>Orgasmic dysfunctions</b>
	Orgasmic dysfunctions refer to difficulties related to the subjective experience of orgasm.
<b>HA02.0</b>	<b>Anorgasmia</b>
	Anorgasmia is characterised by the absence or marked infrequency of the orgasm experience or markedly diminished intensity of orgasmic sensations. In women, this includes a marked delay in orgasm, which in men would be diagnosed as Male Delayed Ejaculation. The pattern of absence, delay, or diminished frequency or intensity of orgasm occurs despite adequate sexual stimulation, including the desire for sexual activity and orgasm, has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.
	<b>Inclusions:</b> Psychogenic anorgasmia
<b>HA02.00</b>	Anorgasmia, lifelong, generalised The person has always experienced anorgasmia from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.
<b>HA02.01</b>	Anorgasmia, lifelong, situational The person has always experienced anorgasmia from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
<b>HA02.02</b>	Anorgasmia, acquired, generalised The onset of anorgasmia has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.
<b>HA02.03</b>	Anorgasmia, acquired, situational The onset of anorgasmia has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
<b>HA02.0Z</b>	Anorgasmia, unspecified
<b>HA02.Y</b>	<b>Other specified orgasmic dysfunctions</b>
<b>HA02.Z</b>	<b>Orgasmic dysfunctions, unspecified</b>

**HA03**

### **Ejaculatory dysfunctions**

Ejaculatory dysfunctions refer to difficulties with ejaculation in men, including ejaculatory latencies that are experienced as too short (Male early ejaculation) or too long (Male delayed ejaculation).

**Coded Elsewhere:** Retrograde ejaculation (MF40.3)

**HA03.0**

#### **Male early ejaculation**

Male early ejaculation is characterised by ejaculation that occurs prior to or within a very short duration of the initiation of vaginal penetration or other relevant sexual stimulation, with no or little perceived control over ejaculation. The pattern of early ejaculation has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

**HA03.00**

##### Male early ejaculation, lifelong, generalised

The person has always experienced early ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA03.01**

##### Male early ejaculation, lifelong, situational

The person has always experienced early ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA03.02**

##### Male early ejaculation, acquired, generalised

The onset of early ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA03.03**

##### Male early ejaculation, acquired, situational

The onset of early ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA03.0Z**

##### Male early ejaculation, unspecified

**HA03.1**

#### **Male delayed ejaculation**

Male delayed ejaculation is characterised by an inability to achieve ejaculation or an excessive or increased latency of ejaculation, despite adequate sexual stimulation and the desire to ejaculate. The pattern of delayed ejaculation has occurred episodically or persistently over a period at least several months, and is associated with clinically significant distress.

**HA03.10**

##### Male delayed ejaculation, lifelong, generalised

The person has always experienced delayed ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

- HA03.11** Male delayed ejaculation, lifelong, situational  
The person has always experienced delayed ejaculation from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA03.12** Male delayed ejaculation, acquired, generalised  
The onset of delayed ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.
- HA03.13** Male delayed ejaculation, acquired, situational  
The onset of delayed ejaculation has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.
- HA03.1Z** Male delayed ejaculation, unspecified
- HA03.Y** **Other specified ejaculatory dysfunctions**
- HA03.Z** **Ejaculatory dysfunctions, unspecified**
- HA0Y** **Other specified sexual dysfunctions**
- HA0Z** **Sexual dysfunctions, unspecified**

## Sexual pain disorders (HA20-HA2Z)

Sexual pain disorders refer to marked and persistent or recurrent difficulties related to the experience of pain during sexual activity in adult people, which are not entirely attributable to an underlying medical condition, insufficient lubrication in women, age-related changes, or changes associated with menopause in women and are associated with clinically significant distress.

**Inclusions:** Psychogenic dyspareunia

**Coded Elsewhere:** Dyspareunia (GA12)

**HA20**

### **Sexual pain-penetration disorder**

Sexual pain-penetration disorder is characterised by at least one of the following: 1) marked and persistent or recurrent difficulties with penetration, including due to involuntary tightening or tautness of the pelvic floor muscles during attempted penetration; 2) marked and persistent or recurrent vulvovaginal or pelvic pain during penetration; 3) marked and persistent or recurrent fear or anxiety about vulvovaginal or pelvic pain in anticipation of, during, or as a result of penetration. The symptoms are recurrent during sexual interactions involving or potentially involving penetration, despite adequate sexual desire and stimulation, are not entirely attributable to a medical condition that adversely affects the pelvic area and results in genital and/or penetrative pain or to a mental disorder, are not entirely attributable to insufficient vaginal lubrication or post-menopausal/age-related changes, and are associated with clinically significant distress.

**Exclusions:** Dyspareunia (GA12)

Pain related to vulva, vagina or pelvic floor (GA34.0)

**HA20.0**

### **Sexual pain-penetration disorder, lifelong, generalised**

The person has always experienced genito-pelvic pain or penetration disorder from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA20.1**

### **Sexual pain-penetration disorder, lifelong, situational**

The person has always experienced genito-pelvic pain or penetration disorder from the time of initiation of relevant sexual activity and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA20.2**

### **Sexual pain-penetration disorder, acquired, generalised**

The onset of genito-pelvic pain or penetration disorder has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in all circumstances, including masturbation.

**HA20.3**

### **Sexual pain-penetration disorder, acquired, situational**

The onset of genito-pelvic pain or penetration disorder has followed a period of time during which the person did not experience it and the desired response is currently absent or diminished in some circumstances, with some partners, or in response to some stimuli, but not in other situations.

**HA20.Z**

### **Sexual pain-penetration disorder, unspecified**

**HA2Y**

### **Other specified sexual pain disorders**

HA2Z	<b>Sexual pain disorders, unspecified</b>
HA40	<b>Aetiological considerations in sexual dysfunctions and sexual pain disorders</b>
HA40.0	<b>Aetiological considerations associated with a medical condition, injury, or the effects of surgery or radiation treatment</b>  This category should be assigned when there is evidence that an underlying or co-occurring health condition, including hormonal, neurological, and vascular conditions, injuries, and consequences of surgical or radiation treatment is an important contributing factor to a Sexual Dysfunction or a Sexual Pain Disorder. In such cases, the diagnosis corresponding to the underlying or co-occurring health condition should also be assigned. However, underlying or contributory mental disorders should be noted using the qualifier 'Associated with psychological and behavioural factors, including mental disorders', rather than using with this category.
HA40.1	<b>Aetiological considerations associated with psychological or behavioural factors, including mental disorders</b>  This category should be assigned when psychological and behavioural factors or symptoms are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Examples include low self-esteem, negative attitudes toward sexual activity, adverse past sexual experiences, and behavioural patterns such as poor sleep hygiene and overwork. Depressive, anxiety, or cognitive symptoms as well as other symptoms of Mental, Behavioural, or Neurodevelopmental Disorders may also interfere with sexual functioning. If the symptoms reach the level of constituting a diagnosable Mental and Behavioural Disorder and the Sexual Dysfunction or Sexual Pain Disorder is an independent focus of clinical attention, this category should be used and the appropriate Mental and Behavioural Disorder diagnosis should also be assigned. However, underlying or contributory Disorders Due to Substance Use should be noted using the category 'Associated with use of psychoactive substance or medication', rather than using this category.
HA40.2	<b>Aetiological considerations associated with use of psychoactive substance or medication</b>  This category should be assigned when there is evidence that the direct physiological effects of a psychoactive substance or medication are an important contributing factor to the Sexual Dysfunction or Sexual Pain Disorder. Examples include selective serotonin reuptake inhibitors, histamine-2 receptor antagonists (e.g., cimetidine), alcohol, opioids, and amphetamines. If the diagnostic requirements for a Disorder Due to Substance Use are met, the appropriate Disorder Due to Substance Use diagnosis should also be assigned.
HA40.3	<b>Aetiological considerations associated with lack of knowledge or experience</b>  This category should be assigned when, in the clinician's judgment, the individual's lack of knowledge or experience of her or his own body, sexual functioning, and sexual response is an important contributing factor to the Sexual Dysfunction or Sexual Pain Disorder. This includes inaccurate information or myths about sexual functioning.

<b>HA40.4</b>	<b>Aetiological considerations associated with relationship factors</b> This category should be assigned when, in the clinician's judgment, relationship factors are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Examples include relationship conflict or lack of romantic attachment. This category may also be used when the Sexual Dysfunction or Sexual Pain Disorder is associated with a Sexual Dysfunction or Sexual Pain Disorder in the sexual partner.
<b>HA40.5</b>	<b>Aetiological considerations associated with cultural factors</b> This category should be assigned when, in the clinician's judgment, cultural factors are important contributing factors to the Sexual Dysfunction or Sexual Pain Disorder. Cultural factors may influence expectations or provoke inhibitions about the experience of sexual pleasure or other aspects of sexual activity. Other examples include strong culturally shared beliefs about sexual expression, for example a belief that loss of semen can lead to weakness, disease or death.
<b>HA40.Y</b>	<b>Other specified aetiological considerations in sexual dysfunctions and sexual pain disorders</b>

### Gender incongruence (HA60-HA6Z)

Gender incongruence is characterised by a marked and persistent incongruence between an individual's experienced gender and the assigned sex. Gender variant behaviour and preferences alone are not a basis for assigning the diagnoses in this group.

**Exclusions:** Paraphilic disorders (6D30-6D3Z)

**HA60**

#### **Gender incongruence of adolescence or adulthood**

Gender Incongruence of Adolescence and Adulthood is characterised by a marked and persistent incongruence between an individual's experienced gender and the assigned sex, which often leads to a desire to 'transition', in order to live and be accepted as a person of the experienced gender, through hormonal treatment, surgery or other health care services to make the individual's body align, as much as desired and to the extent possible, with the experienced gender. The diagnosis cannot be assigned prior the onset of puberty. Gender variant behaviour and preferences alone are not a basis for assigning the diagnosis.

**Exclusions:** Paraphilic disorders (6D30-6D3Z)

**HA61**

#### **Gender incongruence of childhood**

Gender incongruence of childhood is characterised by a marked incongruence between an individual's experienced/expressed gender and the assigned sex in pre-pubertal children. It includes a strong desire to be a different gender than the assigned sex; a strong dislike on the child's part of his or her sexual anatomy or anticipated secondary sex characteristics and/or a strong desire for the primary and/or anticipated secondary sex characteristics that match the experienced gender; and make-believe or fantasy play, toys, games, or activities and playmates that are typical of the experienced gender rather than the assigned sex. The incongruence must have persisted for about 2 years. Gender variant behaviour and preferences alone are not a basis for assigning the diagnosis.

**Exclusions:** Paraphilic disorders (6D30-6D3Z)

- HA6Z      Gender incongruence, unspecified**
- HA8Y      Other specified conditions related to sexual health**
- HA8Z      Conditions related to sexual health, unspecified**

# CHAPTER 18

---

## Pregnancy, childbirth or the puerperium

This chapter has 83 four-character categories.

Code range starts with JA00

A group of conditions characterised as occurring during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:** The codes included in this chapter are to be used for conditions related to or aggravated by the pregnancy, childbirth or by the puerperium (maternal causes or obstetric causes)

**Exclusions:** Postpartum necrosis of pituitary gland (5A61.0)  
Obstetrical tetanus (1C14)  
Injury, poisoning or certain other consequences of external causes (Chapter 22)

**Coded Elsewhere:** Gestational trophoblastic diseases  
Contact with health services for reasons associated with reproduction (QA20-QA4Z)

This chapter contains the following top level blocks:

- Abortive outcome of pregnancy
- Oedema, proteinuria, or hypertensive disorders in pregnancy, childbirth, or the puerperium
- Obstetric haemorrhage
- Certain specified maternal disorders predominantly related to pregnancy
- Maternal care related to the fetus, amniotic cavity or possible delivery problems
- Complications of labour or delivery
- Delivery
- Complications predominantly related to the puerperium
- Certain obstetric conditions, not elsewhere classified
- Gestational trophoblastic diseases

### Abortive outcome of pregnancy (JA00-JA0Z)

A group of conditions characterised by pregnancy which does not result in live offspring. These conditions include e.g. abortion, ectopic pregnancy or molar pregnancy.

**Exclusions:** Continuing pregnancy after abortion of one fetus or more (JA81.1)

**JA00**

**Abortion**

<b>JA00.0</b>	<b>Spontaneous abortion</b> Spontaneous abortion (also referred to as miscarriage) is a spontaneous loss of pregnancy (i.e. embryo or fetus) before 22 completed weeks of gestation. When information on gestational age is unavailable, use birthweight less than 500 grams as the criteria.  Spontaneous abortions (miscarriages) are distinct from cases of induced abortion.
<b>JA00.00</b>	Spontaneous abortion, incomplete, complicated by genital tract or pelvic infection A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by genital tract or pelvic infection. This condition is characterised by the incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.
<b>JA00.01</b>	Spontaneous abortion, incomplete, complicated by delayed or excessive haemorrhage A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by delayed or excessive bleeding. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.
<b>JA00.02</b>	Spontaneous abortion, incomplete, complicated by embolism A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence and complicated by embolism. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.
<b>JA00.03</b>	Spontaneous abortion, incomplete, with other or unspecified complications
<b>JA00.04</b>	Spontaneous abortion, incomplete, without complication A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence without any associated complications. This condition is characterised by incomplete passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.
<b>JA00.05</b>	Spontaneous abortion, complete or unspecified, complicated by genital tract or pelvic infection
<b>JA00.06</b>	Spontaneous abortion, complete or unspecified, complicated by delayed or excessive haemorrhage A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence, and complicated by delayed or excessive bleeding. This condition is characterised by non-induced embryonic or fetal death or passage of products of conception prior to 22 weeks' gestation or weighing less than 500 grams.

- JA00.07** Spontaneous abortion, complete or unspecified, complicated by embolism  
A condition caused by immunological factors, abnormal ovum or uterine body, maternal disease or infection, or cervical incompetence, and complicated by embolism. This condition is characterised by non-induced embryonic or fetal death or passage of products of conception prior to 22 weeks gestation or weighing less than 500 grams.
- JA00.08** Spontaneous abortion, complete or unspecified, with other or unspecified complications
- JA00.09** Spontaneous abortion, complete or unspecified, without complication
- JA00.1** **Induced abortion**  
Induced abortion (also referred to as Artificial termination of pregnancy) is a complete expulsion or extraction from a woman of an embryo or a fetus (irrespective of the duration of the pregnancy), following a deliberate interruption of an ongoing pregnancy by medical or surgical means, which is not intended to result in a live birth. Induced abortions are distinct from cases of spontaneous abortion and stillbirth.  
*Inclusions:* therapeutic abortion
- JA00.10** Induced abortion, incomplete, complicated by genital tract or pelvic infection
- JA00.11** Induced abortion, incomplete, complicated by delayed or excessive haemorrhage
- JA00.12** Induced abortion, incomplete, complicated by embolism
- JA00.13** Induced abortion, incomplete, with other or unspecified complications
- JA00.14** Induced abortion, incomplete, without complication
- JA00.15** Induced abortion, complete or unspecified, complicated by genital tract or pelvic infection
- JA00.16** Induced abortion, complete or unspecified, complicated by delayed or excessive haemorrhage  
A condition caused by surgical, pharmacological, mechanical, artificial, or other unspecified interventions and complicated by delayed or excessive bleeding. This condition is characterised by termination of pregnancy and intentional embryonic or fetal death with complete or unspecified expulsion of products of conception from the uterus before the fetus is viable.
- JA00.17** Induced abortion, complete or unspecified, complicated by embolism  
A condition caused by surgical, pharmacological, mechanical, artificial, or other unspecified interventions and complicated by embolism. This condition is characterised by termination of pregnancy and intentional embryonic or fetal death with complete or unspecified expulsion of products of conception from the uterus before the fetus is viable.
- JA00.18** Induced abortion, complete or unspecified, with other complication
- JA00.19** Induced abortion, complete or unspecified, without complication
- JA00.2** **Unspecified abortion**

- JA00.20** Unspecified abortion, incomplete, complicated by genital tract or pelvic infection
- JA00.21** Unspecified abortion, incomplete, complicated by delayed or excessive haemorrhage
- JA00.22** Unspecified abortion, incomplete, complicated by embolism
- JA00.23** Unspecified abortion, incomplete, with other or unspecified complications
- JA00.24** Unspecified abortion, incomplete, without complication
- JA00.25** Unspecified abortion, complete or unspecified, complicated by genital tract or pelvic infection
- JA00.26** Unspecified abortion, complete or unspecified, complicated by delayed or excessive haemorrhage
- JA00.27** Unspecified abortion, complete or unspecified, complicated by embolism
- JA00.28** Unspecified abortion, complete or unspecified, with other or unspecified complications
- JA00.29** Unspecified abortion, complete or unspecified, without complication
- JA00.3** **Failed attempted abortion**  
 Ongoing pregnancy after medical or surgical interventions which fail to terminate the pregnancy.  
**Inclusions:** failure of attempted induction of abortion  
**Exclusions:** incomplete abortion (JA00.1)
- JA00.30** Failed medical abortion, complicated by genital tract or pelvic infection  
 Medical interventions which fail to terminate the pregnancy and complicated by genital tract and pelvic infection
- JA00.31** Failed medical abortion, complicated by delayed or excessive haemorrhage  
 Medical interventions which fail to terminate the pregnancy and complicated by delayed or excessive haemorrhage
- JA00.32** Failed medical abortion, complicated by embolism  
 Medical interventions which fail to terminate the pregnancy and complicated by delayed or excessive haemorrhage
- JA00.33** Failed medical abortion, with other or unspecified complications  
 Medical interventions which fail to terminate the pregnancy and associated with other and unspecified complications.
- JA00.34** Failed medical abortion, without complication  
 Medical interventions which fail to terminate the pregnancy without any associated complications.
- JA00.35** Other or unspecified failed attempted abortion, complicated by genital tract or pelvic infection

**JA00.36** Other or unspecified failed attempted abortion, complicated by delayed or excessive haemorrhage

**JA00.37** Other or unspecified failed attempted abortion, complicated by embolism

**JA00.38** Other or unspecified failed attempted abortion, with other or unspecified complications

**JA00.39** Other or unspecified failed attempted abortion, without complication

**JA01**

**Ectopic pregnancy**

Any condition characterised by implantation of the embryo outside the endometrium and endometrial cavity during pregnancy.

*Inclusions:* ruptured ectopic pregnancy

**JA01.0**

**Abdominal pregnancy**

A condition characterised by implantation of the embryo within the peritoneal cavity during pregnancy.

*Exclusions:* Maternal care for viable fetus in abdominal pregnancy (JA86.6)

Delivery of viable fetus in abdominal pregnancy (JB23.3)

**JA01.1**

**Tubal pregnancy**

A condition characterised by implantation of the embryo within the fallopian tube (ampullary, isthmus, interstitium) during pregnancy.

*Inclusions:* Fallopian pregnancy

Tubal abortion

**JA01.2**

**Ovarian pregnancy**

A condition characterised by implantation of the embryo within the ovary during pregnancy.

**JA01.Y**

**Other specified ectopic pregnancy**

**JA01.Z**

**Ectopic pregnancy, unspecified**

**JA02**

**Molar pregnancy**

A condition caused by the over-production of cells arising into the placenta during pregnancy. This condition is characterised by a pregnancy with abnormal placental growth in which the chorionic villi become hydropic, trophoblast proliferation and invasion of the uterine tissue within 10-16 weeks after conception, and a placental mass.

*Exclusions:* malignant hydatidiform mole (2C75.0)

<b>JA02.0</b>	<b>Complete hydatidiform mole</b> A condition caused by the over-production of cells arising into the placenta during pregnancy. This condition is characterised by a pregnancy with abnormal placental growth in which the chorionic villi become hydropic, slight to severe trophoblast proliferation and invasion of the uterine tissue within 10-16 weeks after conception, a placental mass, 25-30% theca lutein cysts, 15-20% persistent trophoblastic disease, 50% uterine size for dates, and vaginal bleeding, nausea, or vomiting. This condition leads to an absent fetus.
	<b>Inclusions:</b> classical hydatidiform mole
<b>JA02.1</b>	<b>Incomplete or partial hydatidiform mole</b> A condition caused by the over-production of cells arising into the placenta during pregnancy. This condition is characterised by a pregnancy with abnormal placental growth in which the chorionic villi become hydropic, slight to moderate trophoblast proliferation and invasion of the uterine tissue within 10-16 weeks after conception, a placental mass, theca lutein cysts, 1-5% persistent trophoblastic disease, small uterine size for dates, and vaginal bleeding, nausea, or vomiting. This condition leads to some fetal development and a missed abortion.
<b>JA02.Y</b>	<b>Other specified molar pregnancy</b>
<b>JA02.Z</b>	<b>Molar pregnancy, unspecified</b>
<b>JA03</b>	<b>Missed abortion</b> A condition caused by genetic abnormality, abnormal cell division, or poor quality ovum or sperm. This condition is characterised by a failed pregnancy, immature fetal or embryonic death that is not expelled from the uterus for at least 8 weeks, and diminished uterine size. This condition may also present with maternal infection, blood clotting, fetal calcification, and resorption of conception products. Confirmation is by imaging.
	<b>Inclusions:</b> Early fetal death with retention of dead fetus
	<b>Exclusions:</b> Blighted ovum or nonhydatidiform mole (JA04) Molar pregnancy (JA02)
<b>JA04</b>	<b>Blighted ovum or nonhydatidiform mole</b> A condition caused by genetic abnormality, abnormal cell division, or poor quality ovum or sperm. This condition is characterised by a failed pregnancy, implantation of a fertilized egg without development into an embryo, haemorrhage into the decidua, and adjacent tissue necrosis.
	<b>Inclusions:</b> Pathological ovum
<b>JA05</b>	<b>Complications following abortion, ectopic or molar pregnancy</b> Any complication affecting pregnant females, caused by or subsequent to abortion, ectopic, and molar pregnancy.
<b>JA05.0</b>	<b>Genital tract or pelvic infection following abortion, ectopic or molar pregnancy</b>
	<b>Exclusions:</b> septic or septicopyaemic embolism (JA05.2) Urinary tract infection, site not specified (GC08)

- JA05.1**      **Delayed or excessive haemorrhage following abortion, ectopic or molar pregnancy**
- JA05.2**      **Embolism following abortion, ectopic or molar pregnancy**
- JA05.3**      **Shock following abortion, ectopic or molar pregnancy**
  - Exclusions:***    septic shock (JA05.0)
- JA05.4**      **Renal failure following abortion, ectopic or molar pregnancy**
- JA05.5**      **Metabolic disorders following abortion, ectopic or molar pregnancy**
- JA05.6**      **Damage to pelvic organs and tissues following abortion, ectopic or molar pregnancy**
- JA05.7**      **Other venous complications following abortion, ectopic or molar pregnancy**
- JA05.Y**      **Other specified complications following abortion, ectopic or molar pregnancy**
- JA05.Z**      **Complications following abortion, ectopic or molar pregnancy, unspecified**
- JA0Z**      **Abortive outcome of pregnancy, unspecified**

Oedema, proteinuria, or hypertensive disorders in pregnancy, childbirth, or the puerperium (JA20-JA2Z)

Any disorder affecting pregnant females, characterised by excessive systemic fluid build-up, excess serum proteins in the urine, and abnormally elevated blood pressure during pregnancy, childbirth, or the puerperium.

- JA20**      **Pre-existing hypertension complicating pregnancy, childbirth or the puerperium**
  - A condition affecting pregnant females, caused by previously diagnosed maternal hypertension. This condition is characterised by any complication during pregnancy, childbirth, and the puerperium as a result of a blood pressure reading above 140/90 mmHg prior to the 20th week of pregnancy, or persisting longer than 12 weeks postpartum. Confirmation is by sphygmomanometer.
  - Exclusions:***    Pre-eclampsia superimposed on chronic hypertension (JA21)
- JA20.0**      **Pre-existing essential hypertension complicating pregnancy, childbirth or the puerperium**
  - A condition affecting pregnant females, caused by previously diagnosed, or diagnosed within the first 20 weeks, hypertension. This condition is characterised by blood pressure of 140/90 mmHg or greater, leading to a complication during pregnancy, childbirth, and the puerperium. Confirmation is by sphygmomanometer.

- JA20.1 Pre-existing hypertensive heart disease complicating pregnancy, childbirth or the puerperium**  
A condition affecting pregnant females, caused by previously diagnosed, or diagnosed within the first 20 weeks, hypertension and associated heart disease. This condition is characterised by blood pressure of 140/90 mmHg or greater, leading to a complication during pregnancy, childbirth, and the puerperium. Confirmation is by sphygmomanometer.
- Inclusions:** Hypertensive heart disease specified as a reason for obstetric care during pregnancy, childbirth or the puerperium
- JA20.2 Pre-existing hypertensive renal disease complicating pregnancy, childbirth or the puerperium**  
A condition affecting pregnant females, caused by previously diagnosed, or diagnosed within the first 20 weeks, hypertension and associated renal disease. This condition is characterised by blood pressure of 140/90 mmHg or greater, leading to a complication during pregnancy, childbirth, and the puerperium. Confirmation is by sphygmomanometer.
- JA20.3 Pre-existing hypertensive heart and renal disease complicating pregnancy, childbirth or the puerperium**  
Blood pressure of 140 mm Hg or greater systolic and/or 90 mm Hg or greater diastolic diagnosed preconception or in the first 20 weeks of pregnancy with associated heart and renal disease
- Inclusions:** Hypertensive heart and renal disease specified as a reason for obstetric care during pregnancy, childbirth or the puerperium
- JA20.4 Pre-existing secondary hypertension complicating pregnancy, childbirth or the puerperium**  
A condition affecting pregnant females, caused by renal disease, endocrine disorders, or tumours. This condition is characterised by blood pressure greater than 140/90 mmHg prior to the 20th week of pregnancy, or persisting longer than 12 weeks postpartum, leading to a complication during pregnancy, childbirth, and the puerperium. Confirmation is by sphygmomanometer.
- Inclusions:** Secondary hypertension specified as a reason for obstetric care during pregnancy, childbirth or the puerperium
- JA20.Y Other specified pre-existing hypertension complicating pregnancy, childbirth or the puerperium**
- JA20.Z Pre-existing hypertension complicating pregnancy, childbirth or the puerperium, unspecified**

**JA21**

**Pre-eclampsia superimposed on chronic hypertension**

A condition affecting pregnant females over 20 weeks gestation. This condition is characterised by systolic blood pressure greater than 140mmHg and diastolic greater or equal to 90mmHg on two occasions 4 hours apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction in a female diagnosed with pre-existing hypertension.

**Inclusions:** Superimposed pre-eclampsia

**JA22**

**Gestational oedema or proteinuria without hypertension**

A condition affecting pregnant females, characterised by excessive systemic fluid build-up and serum proteins in the urine, without an abnormally elevated blood pressure induced by pregnancy.

**Inclusions:** Pregnancy-induced oedema and proteinuria without hypertension

**JA22.0**

**Gestational proteinuria without hypertension**

**JA22.1**

**Gestational oedema without hypertension**

**JA22.2**

**Gestational oedema with proteinuria without hypertension**

The accumulation of fluid and proteinuria due to the physiological alterations of pregnancy in the absence of hypertension

**JA23**

**Gestational hypertension**

A condition affecting pregnant females, characterised by systolic blood pressure greater than 140mmHg and/or a diastolic blood pressure greater or equal to 90mmHg on two occasions, 4 hours or more apart. Can be newly diagnosed after 20 weeks gestation or before 1 week postpartum. Confirmation is by measurement of blood pressure, liver and kidney functions test, and urine test.

**JA24**

**Pre-eclampsia**

This condition is characterised by systolic blood pressure greater than 140 mmHg and/or diastolic greater or equal to 90 mmHg on two occasions 4 hours or more apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction.

**Exclusions:** Pre-eclampsia superimposed on chronic hypertension (JA21)

**JA24.0**

**Mild to moderate pre-eclampsia**

This condition is characterised by systolic blood pressure greater than 140 mmHg and/or diastolic greater or equal to on two occasions 4 hours or more apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction.

<b>JA24.1</b>	<b>Severe pre-eclampsia</b> This condition is characterised by systolic blood pressure greater than 160 mmHg and/or diastolic greater or equal to 110 mmHg on two occasions 4 hours or more apart in the presence of either proteinuria or other new onset maternal organ dysfunction characterised by one thrombocytopenia, elevated serum creatinine or liver transaminases, or neurological conditions or fetal growth restriction.
<b>JA24.2</b>	<b>HELLP syndrome</b> severe preeclampsia associated with haemolysis, elevated liver enzymes, or low platelets
<b>JA24.Z</b>	<b>Pre-eclampsia, unspecified</b>
<b>JA25</b>	<p><b>Eclampsia</b> Any condition affecting pregnant females, characterised by seizure or convulsions newly arising in pregnancy. The condition is often associated with pregnancy-induced hypertension, convulsions, seizure, anxiety, epigastric pain, severe headache, blurred vision, proteinuria, and oedema that may occur during pregnancy, labour, or the puerperium.</p>
<b>JA25.0</b>	<b>Eclampsia in pregnancy</b> This condition is characterised by seizure or convulsions newly arising in pregnancy. The condition is often associated with pregnancy-induced hypertension, convulsions, seizure, anxiety, epigastric pain, severe headache, blurred vision, proteinuria, and oedema that occurs during pregnancy.
<b>JA25.1</b>	<b>Eclampsia in labour</b> This condition is characterised by seizure or convulsions newly arising in pregnancy. The condition is often associated with pregnancy-induced hypertension, convulsions, seizure, anxiety, epigastric pain, severe headache, blurred vision, proteinuria, and oedema that occurs during labour.
<b>JA25.2</b>	<b>Eclampsia in the puerperium</b> This condition is characterised by seizure or convulsions newly arising in pregnancy. The condition is often associated with pregnancy-induced hypertension, convulsions, seizure, anxiety, epigastric pain, severe headache, blurred vision, proteinuria, and oedema that occurs during the puerperium.
<b>JA25.3</b>	<b>Eclampsia, time period unspecified</b> Onset of convulsions in a woman with pre-eclampsia not attributable to other causes without a specific onset time.
<b>JA2Z</b>	<b>Oedema, proteinuria, or hypertensive disorders in pregnancy, childbirth, or the puerperium, unspecified</b>

### Obstetric haemorrhage (JA40-JA4Z)

<b>JA40</b>	<b>Haemorrhage in early pregnancy</b> <i>Exclusions:</i> Abortion outcome of pregnancy (JA00-JA0Z)
-------------	---

<b>JA40.0</b>	<b>Threatened abortion</b> A bloody vaginal discharge of bleeding appears through a closed cervical os during the first half of pregnancy.
	<i>Inclusions:</i> Haemorrhage specified as due to threatened abortion
<b>JA40.Y</b>	<b>Other specified haemorrhage in early pregnancy</b>
<b>JA40.Z</b>	<b>Haemorrhage in early pregnancy, unspecified</b>
<b>JA41</b>	<b>Antepartum haemorrhage</b> <i>Exclusions:</i> Haemorrhage in early pregnancy (JA40)
<b>JA41.0</b>	<b>Antepartum haemorrhage with coagulation defect</b>
<b>JA41.Y</b>	<b>Other specified antepartum haemorrhage</b>
<b>JA41.Z</b>	<b>Antepartum haemorrhage, unspecified</b>
<b>JA42</b>	<b>Intrapartum haemorrhage</b> <i>Exclusions:</i> Postpartum haemorrhage (JA43) Maternal care related to premature separation of placenta (JA8C) Antepartum haemorrhage (JA41) Maternal care related to placenta praevia or low lying placenta (JA8B)
<b>JA42.0</b>	<b>Intrapartum haemorrhage with coagulation defect</b> A condition affecting pregnant females, excluding those caused by abruptio placentae and placenta praevia. This condition is characterised by excessive loss of blood with difficulties in blood clotting factors, after 20 weeks gestation until labour and delivery.
<b>JA42.1</b>	<b>Intrapartum haemorrhage resulting from obstructed labour with uterine rupture</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JA42.2</b>	<b>Intrapartum haemorrhage resulting from obstructed labour without mention of uterine rupture</b> Labour and delivery complicated by intrapartum haemorrhage from obstructed labour due to not otherwise specified causes or without mention of uterine rupture
<b>Coding Note:</b>	Code also the causing condition
<b>JA42.Y</b>	<b>Other specified intrapartum haemorrhage</b>
<b>JA42.Z</b>	<b>Intrapartum haemorrhage, unspecified</b>
<b>JA43</b>	<b>Postpartum haemorrhage</b> <b>Coding Note:</b> Code also the causing condition <i>Inclusions:</i> haemorrhage after delivery of fetus or infant

<b>JA43.0</b>	<b>Third-stage haemorrhage</b>
	A condition characterised by excessive loss of blood during the third stage of labour for a vaginal delivery. This condition is caused by uterine atony, trauma, retained placenta, or coagulopathy.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> third-stage postpartum haemorrhage
<b>JA43.1</b>	<b>Other immediate postpartum haemorrhage</b>
	A condition characterised by excessive loss of blood within the first 24 hours after the completion of the third stage of labour for a vaginal delivery (more than 500 millilitres), or after a caesarean section (more than 1000 millilitres). This condition is caused by uterine atony, trauma, retained placenta, or coagulopathy.
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.2</b>	<b>Delayed or secondary postpartum haemorrhage</b>
	A condition characterised by excessive loss of blood between 24 hours and 12 weeks after delivery. This condition is caused by uterine atony, trauma, retained placenta, or coagulopathy.
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.3</b>	<b>Postpartum coagulation defects</b>
	A condition characterised by excessive loss of blood following a vaginal or caesarean section delivery. This condition is caused by coagulation defects during the postpartum period.
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.4</b>	<b>Postpartum haemorrhage following obstructed labour with uterine rupture</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.5</b>	<b>Postpartum haemorrhage following obstructed labour without mention of uterine rupture</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.Y</b>	<b>Other specified postpartum haemorrhage</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JA43.Z</b>	<b>Postpartum haemorrhage, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JA4Z</b>	<b>Obstetric haemorrhage, unspecified</b>

## Certain specified maternal disorders predominantly related to pregnancy (JA60-JA6Z)

A group of conditions of the mother which occur during the period of time from conception to delivery (pregnancy).

- Exclusions:** Maternal infectious diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium (JB63)  
Maternal care related to the fetus, amniotic cavity or possible delivery problems (JA80-JA8Z)  
Certain maternal diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium (JB64)

**Coded Elsewhere:** Pregnancy symptom or complaint (MF34)

<b>JA60</b>	<b>Excessive vomiting in pregnancy</b>
<b>JA60.0</b>	<b>Mild hyperemesis gravidarum</b> Vomiting occurring during pregnancy responsive to dietary modification and antiemetic treatment
	<b>Inclusions:</b> Hyperemesis gravidarum, mild or unspecified, starting before the end of the 22nd week of gestation <b>Exclusions:</b> Hyperemesis gravidarum with metabolic disturbance (JA60.1)
<b>JA60.1</b>	<b>Hyperemesis gravidarum with metabolic disturbance</b> Vomiting in pregnancy, not responsive to dietary modification and antiemetic treatment and associated with electrolyte disturbances and acid-base imbalance
<b>JA60.2</b>	<b>Late vomiting of pregnancy</b> Vomiting occurring after 22 completed weeks of gestation. <b>Inclusions:</b> Excessive vomiting starting after 22 completed weeks of gestation
<b>JA60.Y</b>	<b>Other specified excessive vomiting in pregnancy</b>
<b>JA60.Z</b>	<b>Excessive vomiting in pregnancy, unspecified</b>
<b>JA61</b>	<b>Venous complications in pregnancy</b>
	<b>Exclusions:</b> Complications following abortion, ectopic or molar pregnancy (JA05) obstetric pulmonary embolism (JB42.2) Venous complications in the puerperium (JB41)
<b>JA61.0</b>	<b>Varicose veins of lower extremity in pregnancy</b>
<b>JA61.1</b>	<b>Genital varices in pregnancy</b>
<b>JA61.2</b>	<b>Superficial thrombophlebitis in pregnancy</b> <b>Inclusions:</b> Thrombophlebitis of legs in pregnancy
<b>JA61.3</b>	<b>Deep phlebothrombosis in pregnancy</b>

- JA61.4      Haemorrhoids in pregnancy**  
A condition affecting females during pregnancy, caused by an increase in intra-abdominal pressure and hormonal changes during pregnancy. This condition is characterised by enlarged and varicosed haemorrhoidal veins in the anus and lower rectum. This condition may also present with itching, burning, painful swellings at the anus, dyschezia or rectal bleeding with bowel movements. Confirmation is by digital or visual examination with an anoscope, proctoscope, or sigmoidoscope of the anal canal and rectum to determine the presence of haemorrhoids.
- JA61.5      Cerebral venous thrombosis in pregnancy**  
*Inclusions:*      Cerebrovenous sinus thrombosis in pregnancy
- JA61.Y      Other specified venous complications in pregnancy**
- JA61.Z      Venous complications in pregnancy, unspecified**
- JA62      Infections of genitourinary tract in pregnancy**
- JA62.0      Infections of kidney in pregnancy**  
Kidney infections occurring during pregnancy
- JA62.1      Infections of bladder in pregnancy**  
Bladder infections occurring during pregnancy
- JA62.2      Infections of urethra in pregnancy**  
Urethra infections occurring during pregnancy
- JA62.3      Infections of other parts of urinary tract in pregnancy**  
Infections of urinary tract other than kidney, bladder and urethra occurring during pregnancy
- JA62.4      Infections of the genital tract in pregnancy**
- JA62.Y      Infections of genitourinary tract in pregnancy, other specified site**
- JA62.Z      Infection of genitourinary tract in pregnancy, site unspecified**
- JA63      Diabetes mellitus in pregnancy**  
A condition caused by dysfunctional maternal insulin receptors. This condition is characterised by glucose intolerance with onset or first recognition during pregnancy, with at least one of the following criteria met: fasting plasma glucose greater than or equal to 7.0 millimoles per litre (126 mg/dL); 2-hour plasma glucose greater than or equal to 11.1 millimoles per litre (200 mg/dL) following a 75 gram oral glucose load; random plasma glucose greater than or equal to 11.1 millimoles per litre (200 mg/dL). Confirmation is by an oral glucose tolerance test.
- JA63.0      Pre-existing type 1 diabetes mellitus in pregnancy**
- JA63.1      Pre-existing type 2 diabetes mellitus in pregnancy**

<b>JA63.2</b>	<b>Diabetes mellitus arising in pregnancy</b> Diabetes mellitus arising or diagnosed in pregnancy (per WHO criteria or other national criteria)-Gestational diabetes. Gestational diabetes mellitus is defined as any degree of glucose intolerance with onset or first recognition during pregnancy. The definition applies regardless of whether insulin or only diet modification is used for treatment or whether the condition persists after pregnancy.
<b>JA63.Y</b>	<b>Other specified diabetes mellitus in pregnancy</b>
<b>JA63.Z</b>	<b>Diabetes mellitus in pregnancy, unspecified</b>
<b>JA64</b>	<b>Malnutrition in pregnancy</b> A condition caused by ingestion of a diet in which the nutrients are lacking or are in excess.
<b>JA65</b>	<b>Maternal care for other conditions predominantly related to pregnancy</b> Any reason for encounter to assess (or care for) a mother for other conditions predominantly related to pregnancy.
<b>JA65.0</b>	<b>Liver disorders in pregnancy, childbirth or the puerperium</b> Any disorder affecting females, characterised by pathological changes to the liver that occur during pregnancy, childbirth, and the puerperium.  <b>Exclusions:</b> Hepatorenal syndrome following labour or delivery (JB44.4) Viral hepatitis (1E50-1E5Z)
	<b>Coded Elsewhere:</b> HELLP syndrome (JA24.2)
<b>JA65.1</b>	<b>Pregnancy dermatoses</b> A group of skin disorders which are specific to pregnancy.  <b>Coded Elsewhere:</b> Generalised pustular psoriasis of pregnancy (EA90.40)
<b>JA65.10</b>	Gestational pemphigoid Gestational pemphigoid (pemphigoid gestationis) is an autoimmune skin disease characterised by pruritic plaques and blister formation on the skin in association with pregnancy or the trophoblastic tumours, hydatiform mole and choriocarcinoma. The exact causes of the disease are unknown but the disease is mediated by auto-antibodies to the hemidesmosome component BP180/BPAg2/collagen XVII. The maternal antibodies may cause short lived disease in the neonate, neonatal pemphigoid gestationis.  This disease is not an infection with herpes virus despite its old name, herpes gestationis.  <b>Exclusions:</b> impetigo herpetiformis (EA90.40)

- JA65.11** Pruritus of pregnancy  
Pruritus in pregnancy can usually be attributed to a specific cause such as cholestasis, a pregnancy-specific dermatosis such as pruritic urticarial papules and plaques of pregnancy, or to exacerbation of a preexisting inflammatory dermatosis such as atopic eczema. Not uncommonly, however, a specific cause cannot be identified.  
**Coded Elsewhere:** Intrahepatic cholestasis of pregnancy (JA65.0)
- JA65.12** Polymorphic eruption of pregnancy  
Polymorphic eruption of pregnancy is a dermatosis which occurs almost exclusively in primigravidae or women with multiple pregnancy. It is associated with above average weight gain in pregnancy and it is thought that distension of abdominal skin is important in the pathogenesis: the precise mechanism is not understood. The eruption characteristically first appears in the third trimester of pregnancy as intensely itchy erythematous urticarial papules and plaques in and around the abdominal striae distensae. In some women it may then become more generalised. Onset is sometimes delayed until the immediate postpartum period. It does not usually recur in subsequent pregnancies.
- JA65.1Y** Other specified pregnancy dermatoses
- JA65.2** **Excessive weight gain in pregnancy**  
Any reason for encounter to assess (or care for) a mother for excessive weight gain during pregnancy.  
**Exclusions:** Gestational oedema without hypertension (JA22.1)
- JA65.3** **Low weight gain in pregnancy**  
Any reason for encounter to assess (or care for) a mother for low weight gain during pregnancy.
- JA65.4** **Pregnancy care of habitual aborter**  
Any reason for encounter to assess (or care for) a mother who has a history of habitual aborting.  
**Exclusions:** habitual aborter with current abortion (JA00-JA0Z)  
habitual aborter without current pregnancy (GA33)
- JA65.5** **Retained intrauterine contraceptive device in pregnancy**  
Any reason for encounter to assess (or care for) a mother with a retained intrauterine contraceptive device during pregnancy.  
**Exclusions:** Retained intrauterine device without injury or harm in non-pregnant uterus (QA21.60)
- JA65.6** **Maternal hypotension syndrome**  
Any reason for encounter to assess a mother for low blood pressure during pregnancy.  
**Inclusions:** Supine hypotensive syndrome

JA65.7	<b>Subluxation of symphysis pubis in pregnancy, childbirth or the puerperium</b> Any reason for encounter to assess (or care for) a mother for subluxation of pubis symphysis during pregnancy.
	<b>Exclusions:</b> traumatic separation of symphysis (pubis) during childbirth (JB0A.7)
JA65.Y	<b>Maternal care for other specified conditions predominantly related to pregnancy</b>
JA65.Z	<b>Maternal care for unspecified conditions predominantly related to pregnancy</b>
<b>JA66</b>	<p><b>Clinical findings on antenatal screening of mother</b> Any sign characterised by an abnormality detected during an antenatal screening of the mother.</p> <p><b>Exclusions:</b> Maternal care related to the fetus, amniotic cavity or possible delivery problems (JA80-JA8Z)</p>
JA66.0	<b>Abnormal haematological finding on antenatal screening of mother</b> A sign characterised by an abnormality detected by haematology during an antenatal screening of the mother.
JA66.1	<b>Abnormal biochemical finding on antenatal screening of mother</b> A sign characterised by an abnormality detected by biochemistry during an antenatal screening of the mother.
JA66.2	<b>Abnormal cytological finding on antenatal screening of mother</b> A sign characterised by an abnormality detected by cytology during an antenatal screening of the mother.
JA66.3	<b>Abnormal ultrasonic finding on antenatal screening of mother</b> A sign characterised by an abnormality detected by ultrasound during an antenatal screening of the mother.
JA66.4	<b>Abnormal radiological finding on antenatal screening of mother</b> A sign characterised by an abnormality detected by radiology during an antenatal screening of the mother.
JA66.5	<b>Abnormal chromosomal or genetic finding on antenatal screening of mother</b> A sign characterised by a chromosomal or genetic abnormality detected during an antenatal screening of the mother.
JA66.Y	<b>Other specified clinical findings on antenatal screening of mother</b>
JA66.Z	<b>Clinical findings on antenatal screening of mother, unspecified</b>

**JA67**

**Complications of anaesthesia during pregnancy**

**Exclusions:** Complications of anaesthesia during the puerperium (JB43)  
Complications of anaesthesia during labour or delivery (JB0C)  
complications of anaesthesia during: abortion or ectopic or  
molar pregnancy (JA00-JA0Z)

**JA67.0**

**Pulmonary complications of anaesthesia during pregnancy**

**JA67.1**

**Cardiac complications of anaesthesia during pregnancy**

**JA67.2**

**Central nervous system complications of anaesthesia during pregnancy**

**JA67.3**

**Toxic reaction to local anaesthesia during pregnancy**

A condition affecting females during pregnancy, caused by the properties or the concentration of the anaesthetic agent, or patient factors. This condition is characterised by a local or systemic toxic reaction leading to malfunctioning or failure of the neurovascular, central nervous, respiratory or cardiovascular systems with onset between 30 seconds and 60 minutes after administration of an anaesthetic.

**JA67.4**

**Spinal or epidural anaesthesia-induced headache during pregnancy**

A condition affecting females during pregnancy, caused by the administration of spinal and epidural anaesthesia. This condition is characterised by cephalgia during pregnancy.

**JA67.5**

**Failed or difficult intubation during pregnancy**

A condition affecting females during pregnancy, caused by physiological, pathophysiological, or psychological factors that aggravate the tissues necessary to secure the tube. This condition is characterised by a difficulty or inability to insert a tube into an external or internal orifice of the body during pregnancy.

**JA67.6**

**Awareness under general anaesthesia during pregnancy**

**JA67.Y**

**Other specified complications of anaesthesia during pregnancy**

**JA67.Z**

**Complications of anaesthesia during pregnancy, unspecified**

**JA6Z**

**Maternal disorders predominantly related to pregnancy, unspecified**

Maternal care related to the fetus, amniotic cavity or possible delivery problems (JA80-JA8Z)

A group of conditions characterised by the provision of health interventions to the mother due to conditions associated with the fetus, the amniotic cavity, or to issues associated with labour and delivery.

**JA80**

**Maternal care related to multiple gestation**

**Exclusions:** Maternal care related to complications specific to multiple gestation (JA81)

**JA80.0**

**Twin pregnancy**

JA82.Y	<b>Maternal care for known or suspected other specified malpresentation of fetus</b>
JA82.Z	<b>Maternal care for known or suspected malpresentation of fetus, unspecified</b>
<b>JA83</b>	<b>Maternal care for known or suspected disproportion</b>
	A condition characterised by the provision of health interventions to the mother due to the situation in which the head or body of the fetus is too large to fit through the pelvis of the mother.
	<b>Exclusions:</b> Obstructed labour due to maternal pelvic abnormality (JB05) Obstructed labour due to other causes (JB06)
<b>JA83.0</b>	<b>Maternal care for disproportion due to deformity of maternal pelvic bones</b>
<b>JA83.1</b>	<b>Maternal care for disproportion due to generally contracted pelvis</b>
<b>JA83.2</b>	<b>Maternal care for disproportion due to inlet contraction of pelvis</b>
<b>JA83.3</b>	<b>Maternal care for disproportion due to outlet contraction of pelvis</b>
<b>JA83.4</b>	<b>Maternal care for disproportion of mixed maternal and fetal origin</b>
<b>JA83.5</b>	<b>Maternal care for disproportion due to unusually large fetus</b>
<b>JA83.6</b>	<b>Maternal care for disproportion due to hydrocephalic fetus</b>
<b>JA83.Y</b>	<b>Maternal care for known or suspected other specified disproportion</b>
<b>JA83.Z</b>	<b>Maternal care for known or suspected disproportion, unspecified</b>
<b>JA84</b>	<b>Maternal care for known or suspected abnormality of pelvic organs</b>
	A condition characterised by the provision of health interventions to the mother due to some abnormality that is either suspected or known to be present in one or more of her pelvic organs.
	<b>Exclusions:</b> Obstructed labour due to maternal pelvic abnormality (JB05)
<b>JA84.0</b>	<b>Maternal care for congenital malformation of uterus</b>
	Care provided for the pregnant female necessary due to malformation of the pregnant female's uterus present at or before the time of birth.
<b>JA84.1</b>	<b>Maternal care for tumour of corpus uteri</b>
	Care provided for the pregnant female necessary due to the presence of a uterine tumour at the time of pregnancy.
	<b>Exclusions:</b> maternal care for tumour of cervix (JA84)
<b>JA84.2</b>	<b>Maternal care due to uterine scar from previous surgery</b>
	<b>Inclusions:</b> Maternal care for scar from prior uterine surgery
	<b>Exclusions:</b> Vaginal delivery following previous caesarean section (JB0D.6)
<b>JA84.3</b>	<b>Maternal care for cervical incompetence</b>

- JA84.4** **Maternal care for abnormality of vagina**  
Care provided for the pregnant female necessary due to some abnormality of the vagina.
- Exclusions:** maternal care for vaginal varices in pregnancy (JA61.1)
- JA84.5** **Maternal care for abnormality of vulva or perineum**  
**Exclusions:** maternal care for perineal and vulval varices in pregnancy (JA61.1)
- JA84.Y** **Maternal care for known or suspected other specified abnormality of pelvic organs**
- JA84.Z** **Maternal care for known or suspected abnormality of pelvic organs, unspecified**
- JA85** **Maternal care for known or suspected fetal abnormality or damage**  
A condition characterised by the provision of health interventions to the mother due to some abnormality or damage that is either suspected or known to be present in the fetus.
- Exclusions:** Maternal care for known or suspected disproportion (JA83)
- JA85.0** **Maternal care for known or suspected central nervous system malformation in fetus**  
**Exclusions:** Maternal care for known or suspected chromosomal abnormality in fetus (JA85.1)
- JA85.1** **Maternal care for known or suspected chromosomal abnormality in fetus**
- JA85.2** **Maternal care for known or suspected hereditary disease in fetus**  
**Exclusions:** Maternal care for known or suspected chromosomal abnormality in fetus (JA85.1)
- JA85.3** **Maternal care for known or suspected damage to fetus from viral disease in mother**
- JA85.Y** **Maternal care for known or suspected other specified fetal abnormality or damage**
- JA85.Z** **Maternal care for known or suspected fetal abnormality or damage, unspecified**
- JA86** **Maternal care for other known or suspected fetal problems**  
A condition characterised by the provision of health interventions to the mother due to any other issue that is either suspected or known to be present in the fetus.
- Exclusions:** Labour or delivery complicated by fetal distress (JB07)  
Placental transfusion syndromes (JA8A.0)
- JA86.0** **Maternal care for red cell antibodies**  
Maternal care for rhesus or other isoimmunization
- JA86.1** **Maternal care for hydrops fetalis**

- JA86.2** **Maternal care for signs of fetal hypoxia**
- JA86.3** **Maternal care for intrauterine death**
- Exclusions:** Missed abortion (JA03)
- JA86.4** **Maternal care for fetal growth restriction**
- JA86.5** **Maternal care for suspected macrosomia**
- Inclusions:** Maternal care for known or suspected large-for-dates
- JA86.6** **Maternal care for viable fetus in abdominal pregnancy**
- JA86.Y** **Maternal care for other specified fetal problems**
- JA86.Z** **Maternal care for other known or suspected fetal problems, unspecified**
- JA87** **Maternal care related to polyhydramnios**  
 Excessive amniotic fluid normally diagnosed on ultrasound either subjectively using either single deepest vertical pocket of greater or equal to 8 cm and/or amniotic fluid index greater or equal to 24 cm.
- Inclusions:** Hydramnios
- JA88** **Maternal care related to certain specified disorders of amniotic fluid or membranes**
- Exclusions:** Maternal care related to premature rupture of membranes (JA89)
- JA88.0** **Oligohydramnios**
- JA88.1** **Infection of amniotic sac or membranes**
- JA88.Y** **Other specified disorders of amniotic fluid and membranes**
- JA88.Z** **Disorders of amniotic fluid and membranes, unspecified**
- JA89** **Maternal care related to premature rupture of membranes**  
 Spontaneous rupture of fetal membranes before the onset of labour.
- JA89.0** **Premature rupture of membranes, onset of labour within 24 hours**
- JA89.1** **Premature rupture of membranes, onset of labour after 24 hours**
- Exclusions:** Premature rupture of membranes, labour delayed by therapy (JA89.2)
- JA89.2** **Premature rupture of membranes, labour delayed by therapy**
- JA89.3** **Preterm premature rupture of membranes**
- JA89.Y** **Other specified maternal care related to premature rupture of membranes**
- JA89.Z** **Maternal care related to premature rupture of membranes, unspecified**

**JA8A****Maternal care related to placental disorders**

- Exclusions:**
- Maternal care related to premature separation of placenta (JA8C)
  - Maternal care related to placenta praevia or low lying placenta (JA8B)
  - maternal care for poor fetal growth due to placental insufficiency (JA86.4)

**JA8A.0 Placental transfusion syndromes**

**JA8A.1 Malformation of placenta**

**JA8A.2 Morbidly adherent placenta**

**JA8A.Y Other specified maternal care related to placental disorders**

**JA8A.Z Maternal care related to placental disorders, unspecified**

**JA8B****Maternal care related to placenta praevia or low lying placenta**

A placenta that is implanted over or very near the internal cervical os--total, partial, marginal, low-lying placenta

**JA8B.0 Placenta praevia specified as without haemorrhage**

**Inclusions:** low implantation of placenta specified as without haemorrhage

**JA8B.1 Placenta praevia with haemorrhage**

**Exclusions:** labour and delivery complicated by haemorrhage from vasa praevia (JB08.3)

**JA8B.Z Maternal care related to placenta praevia or low lying placenta, unspecified**

**JA8C****Maternal care related to premature separation of placenta**

**JA8C.0 Premature separation of placenta with coagulation defect**

**JA8C.Y Other specified maternal care related to premature separation of placenta**

**JA8C.Z Maternal care related to premature separation of placenta, unspecified**

**JA8D****Maternal care related to false labour**

Contractions suggestive of labour but which do not lead to cervical dilatation.

**JA8D.0 False labour before 37 completed weeks of gestation**

**JA8D.1 False labour at or after 37 completed weeks of gestation**

**JA8D.Z Maternal care related to false labour, unspecified**

**JA8E****Maternal care related to prolonged pregnancy**

Pregnancy that has exceeded a duration of 42 weeks from the last menstrual period.

**Inclusions:** Post-term

**JA8Y**

**Maternal care related to other specified fetus, amniotic cavity or possible delivery problems**

**JA8Z**

**Maternal care related to unspecified fetus, amniotic cavity or possible delivery problems**

## Complications of labour or delivery (JB00-JB0Z)

Any complication characterised by the adverse evolution of a condition that arises during any one of the three stages of labour and delivery.

**JB00**

**Preterm labour or delivery**

A condition characterised by the onset of labour and delivery before 37 completed weeks.

Assign an additional extension code, if desired, for Duration of pregnancy.

**JB00.0**

**Preterm labour without delivery**

A condition characterised by the onset of labour before 37 completed weeks, without delivery.

**JB00.1**

**Preterm spontaneous labour with preterm delivery**

A condition characterised by the spontaneous onset of labour and delivery before 37 completed weeks.

**JB00.2**

**Preterm labour with term delivery**

A condition characterised by the spontaneous onset of labour before 37 completed weeks followed by a delivery after 39 weeks.

**JB00.3**

**Preterm delivery following iatrogenic induction of labour or caesarean section**

**JB00.Y**

**Other specified preterm labour or delivery**

**JB00.Z**

**Preterm labour or delivery, unspecified**

**JB01**

**Failed induction of labour**

A condition characterised by a failed attempt to stimulate contractions before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.0**

**Failed medical induction of labour**

A condition characterised by a failed attempt to stimulate contractions pharmacologically before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.1**

**Failed instrumental induction of labour**

A condition characterised by a failed attempt to instrumentally stimulate contractions before the spontaneous onset of labour. This condition may occur with or without ruptured membranes.

**JB01.Z**

**Failed induction of labour, unspecified**

**JB02**

**Abnormalities of forces of labour**

Any condition affecting pregnant females, characterised by an anomaly or dysfunction to the tissues or processes associated with the natural progression of labour. These conditions may lead to further complications during labour and childbirth.

**JB02.0**

**Primary uterine inertia**

A condition affecting pregnant females characterised by insufficiently strong or inappropriately coordinated rhythmic activity of the myometrium during labour to efface and dilate the cervix.

- Inclusions:**
- Primary hypotonic uterine dysfunction
  - Uterine inertia during latent phase of labour
  - Primary inadequate contractions

**JB02.1**

**Secondary uterine inertia**

A condition affecting pregnant females that is idiopathic. This condition is characterised by vigorous contractions that decrease in vigour due to exhaustion or dehydration of the individual. This condition leads to lack of labour progress.

- Inclusions:**
- Secondary hypotonic uterine dysfunction
  - Arrested active phase of labour

**JB02.2**

**Other uterine inertia**

A condition affecting pregnant females that is idiopathic. This condition is characterised by the absence of effective uterine contractions during labour and abnormal relaxation of the uterus during labour. This condition leads to lack of labour progress or uterine haemorrhage.

- Inclusions:**
- Atony of uterus, during labour
- Exclusions:**
- atony of uterus, postpartum (JA43.1)

**JB02.3**

**Precipitate labour**

A condition affecting pregnant females that is idiopathic. This condition is characterised by rapid labour and the lack of time for standard obstetric preparations or procedures leading to the delivery of the newborn. This condition leads to vaginal bleeding, frequent strong contractions, feelings of defecation, crowning of the fetus head at the vaginal introitus, or bulging of the amniotic sac.

**JB02.4**

**Hypertonic, incoordinate, or prolonged uterine contractions**

A condition affecting pregnant females that is idiopathic. This condition is characterised by uterine dysfunction leading to hypertonic, uncoordinated, and prolonged rhythmic activity of the myometrium during labour.

- Exclusions:**
- dystocia (fetal)(maternal) NOS (JB06)

**JB02.Y**

**Other specified abnormalities of forces of labour**

**JB02.Z**

**Abnormalities of forces of labour, unspecified**

**JB03**

**Long labour**

Any condition characterised by a longer than average parturition between the initiation of regular, rhythmic, and painful contractions and cervical dilation, to the delivery of the placenta.

**JB03.0**

**Prolonged first stage of labour**

The first stage of labour where cervical dilatation progresses less than 1 centimetre per hour for a minimum of 4 hours. Protracted descent is less than 1 centimetre per hour for nulliparas and less than 2 centimetre per hour for multiparas.

**JB03.1**

**Prolonged second stage of labour**

The fetus has not been delivered after the cervix has become fully dilated within 2 hours for a primipara, or 1 hour for a multipara. Presence of regional anaesthesia will add 1 hour.

**JB03.2**

**Delayed delivery of successive neonates**

A condition affecting pregnant females, characterised by the delayed spontaneous or caesarean section delivery of the successive neonates in a multiple delivery.

**JB03.Z**

**Long labour, unspecified**

**JB04**

**Obstructed labour due to malposition or malpresentation of fetus**

A condition affecting pregnant females, caused by the abnormal position of fetal head or the abnormal presentation of the fetus away from the fetal head in vertex.

**JB04.0**

**Obstructed labour due to incomplete rotation of fetal head**

**JB04.1**

**Obstructed labour due to breech presentation**

**JB04.2**

**Obstructed labour due to face presentation**

**JB04.3**

**Obstructed labour due to brow presentation**

**JB04.4**

**Obstructed labour due to shoulder presentation**

**Inclusions:** Prolapsed arm

**Exclusions:** Obstructed labour due to shoulder dystocia (JB06.0)  
impacted shoulders (JB06.0)

**JB04.5**

**Obstructed labour due to compound presentation**

**JB04.Y**

**Obstructed labour due to other malposition and malpresentation of fetus**

**JB04.Z**

**Obstructed labour due to malposition or malpresentation of fetus, unspecified**

**JB05**

**Obstructed labour due to maternal pelvic abnormality**

Obstructed labour means that, in spite of strong contractions of the uterus, the fetus cannot descend through the pelvis because there is an insurmountable barrier preventing its descent. Obstruction usually occurs at the pelvic brim, but occasionally it may occur in the cavity or at the outlet of the pelvis. Complications resulting from obstructed labour can be avoided if a woman in obstructed labour is identified early and appropriate action is taken.

<b>JB05.0</b>	<b>Obstructed labour due to deformed pelvis</b>
<b>JB05.1</b>	<b>Obstructed labour due to generally contracted pelvis</b>
<b>JB05.2</b>	<b>Obstructed labour due to pelvic inlet contraction</b>
<b>JB05.3</b>	<b>Obstructed labour due to pelvic outlet or mid-cavity contraction</b>
<b>JB05.4</b>	<b>Obstructed labour due to foetopelvic disproportion, unspecified</b>
	<b><i>Exclusions:</i></b> dystocia due to abnormality of fetus (JB06)
<b>JB05.5</b>	<b>Obstructed labour due to abnormality of maternal pelvic organs</b>
	<b><i>Inclusions:</i></b> Obstructed labour due to maternal care for known or suspected abnormality of pelvic organs
<b>JB05.Y</b>	<b>Obstructed labour due to other maternal pelvic abnormalities</b>
<b>JB05.Z</b>	<b>Obstructed labour due to maternal pelvic abnormality, unspecified</b>
<b>JB06</b>	<b>Obstructed labour due to other causes</b> Any other condition characterised by the inability of the presenting part of the fetus to progress into the birth canal for any reason.
<b>JB06.0</b>	<b>Obstructed labour due to shoulder dystocia</b>
	<b><i>Inclusions:</i></b> Impacted shoulders
<b>JB06.1</b>	<b>Obstructed labour due to locked twins</b>
<b>JB06.2</b>	<b>Obstructed labour due to unusually large fetus</b>
<b>JB06.3</b>	<b>Obstructed labour due to other abnormalities of fetus</b>
<b>JB06.Y</b>	<b>Obstructed labour due to other specified causes</b>
<b>JB06.Z</b>	<b>Obstructed labour due to unspecified causes</b>
<b>JB07</b>	<b>Labour or delivery complicated by fetal distress</b>
<b>JB07.0</b>	<b>Labour or delivery complicated by fetal heart rate anomaly</b> A condition characterised by an abnormal fetal heart rate. This condition leads to further difficulties and complications during labour and delivery. Confirmation is by Doppler ultrasound. <b><i>Exclusions:</i></b> Labour or delivery complicated by fetal heart rate anomaly with meconium in amniotic fluid (JB07)
<b>JB07.1</b>	<b>Labour or delivery complicated by meconium in amniotic fluid</b> A condition characterised by complications during labour and delivery that is caused by meconium in amniotic fluid. <b><i>Exclusions:</i></b> Labour or delivery complicated by fetal heart rate anomaly with meconium in amniotic fluid (JB07)

- JB07.2 Labour or delivery complicated by biochemical evidence of fetal stress**  
A condition characterised by complications during labour and delivery that is caused by biochemical evidence of fetal distress. Confirmation is by a fetal blood sample from a scalp prick through the open cervix during labour.
- JB07.Y Other specified labour or delivery complicated by fetal distress**
- JB07.Z Labour or delivery complicated by fetal distress, unspecified**
- JB08 Labour or delivery complicated by umbilical cord complications**
- JB08.0 Labour or delivery complicated by prolapse of cord**  
A condition characterised by complications during labour and delivery that is caused by umbilical cord prolapse.
- JB08.1 Labour or delivery complicated by cord around neck, with compression**  
A condition characterised by complications during labour and delivery that is caused by wrapping of the umbilical cord around the neck of the fetus, with compression.
- JB08.2 Labour or delivery complicated by short cord**  
A condition characterised by complications during labour and delivery that is caused by a short umbilical cord.
- JB08.3 Labour or delivery complicated by vasa praevia**  
A condition characterised by complications during labour and delivery that is caused when the umbilical vessels traverse the membranes of the internal cervical os.  
*Inclusions:* Haemorrhage from vasa praevia
- JB08.4 Labour or delivery complicated by vascular lesion of cord**  
A condition characterised by complications during labour and delivery that is caused by vascular lesion of the umbilical cord.
- JB08.5 Labour or delivery complicated by other cord entanglement, with compression**
- JB08.Y Labour and delivery complicated by other specified umbilical cord complications**
- JB08.Z Labour or delivery complicated by umbilical cord complications, unspecified**
- JB09 Perineal laceration during delivery**  
An injury characterised by a laceration to the maternal perineum during delivery.  
*Inclusions:* episiotomy extended by laceration
- JB09.0 First degree perineal laceration during delivery**  
Perineal lacerations involving the fourchette, perineal skin, and vaginal mucous membrane but not the underlying fascia and muscle.

<b>JB09.1</b>	<b>Second degree perineal laceration during delivery</b> Perineal lacerations involve, in addition, the fascia and muscles of the perineal body but not the anal sphincter.  <b>Exclusions:</b> that involving anal sphincter (JB09.2)
<b>JB09.2</b>	<b>Third degree perineal laceration during delivery</b> Perineal lacerations extending farther to involve the anal sphincter.  <b>Exclusions:</b> that involving anal or rectal mucosa (JB09.3)
<b>JB09.3</b>	<b>Fourth degree perineal laceration during delivery</b> Perineal lacerations extending through the rectum's mucosa to expose its lumen.
<b>JB09.Z</b>	<b>Perineal laceration during delivery, unspecified</b>
<b>JB0A</b>	<p><b>Certain specified obstetric trauma</b></p> <p>Any injury characterised by maternal trauma. These injuries are caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery.</p> <p><b>Coded Elsewhere:</b></p> <ul style="list-style-type: none"> <li>Vesicovaginal fistula (GC04.10)</li> <li>Urethrovaginal fistula (GC04.14)</li> <li>Combined urethrovesicovaginal fistula (GC04.15)</li> <li>Vesicouterine fistula with severe scar or extensive tissue loss (GC04.17)</li> <li>Other combined urinary fistula with severe scar or extensive tissue loss (GC04.18)</li> <li>Rectovaginal fistula (GC04.16)</li> <li>Combined urinary and rectal fistula including cloaca with severe scar or extensive tissue loss (GC04.19)</li> <li>Vaginal stenosis or gynatresia related to obstetric fistula (GC04.1A)</li> <li>Obstetric Fistula (GC04.1Z)</li> </ul>
<b>JB0A.0</b>	<b>Rupture of uterus before onset of labour</b> An injury characterised by rupture of the myometrial wall of the uterus before the onset of labour. This injury is caused by pregnancy. This injury presents with abdominal pain, haemorrhage, or hypovolemic shock in the mother, or late decelerations, reduced variability, tachycardia, or bradycardia in the fetus.
<b>JB0A.1</b>	<b>Rupture of uterus during labour</b> An injury characterised by rupture of the myometrial wall of the uterus during labour. This injury is caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery. This injury presents with abdominal pain, haemorrhage, or hypovolemic shock in the mother, or late decelerations, reduced variability, tachycardia, or bradycardia in the fetus.  <b>Inclusions:</b> Rupture of uterus not stated as occurring before onset of labour

- JB0A.2 Postpartum inversion of uterus**  
An injury characterised by uterine inversion and prolapse through the dilated cervix that occurs after the delivery of a neonate. This condition is caused by or subsequent to labour and delivery, commonly as a result of excessive fundal pressure or cord traction. This condition presents with postpartum haemorrhage.
- JB0A.3 Obstetric laceration of cervix**  
An injury characterised by a laceration to the cervix. This injury is caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery.
- JB0A.4 Obstetric high vaginal laceration**  
An injury characterised by a laceration in the upper third area of the vagina. This injury is caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery.
- Inclusions:** Laceration of vaginal wall without mention of perineal laceration  
high vaginal obstetrical instrument injury
- JB0A.5 Obstetric uterine laceration or tear**
- JB0A.6 Other obstetric injury to pelvic organs**  
Any injury characterised by damage to the maternal pelvic organs. These injuries are caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery.
- JB0A.7 Obstetric damage to pelvic joints or ligaments**  
An injury characterised by damage to the pelvic joints and ligaments. This injury is caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery.
- JB0A.8 Obstetric haematoma of pelvis**  
An injury characterised by a collection of extravasated blood trapped in the pelvic tissues. This injury is caused by or subsequent to the process of (or any intervention related to) pregnancy, or labour and delivery. This condition may also present with bruising or blood clots in the pelvic area.
- JB0A.Y Other specified obstetric trauma**
- JB0A.Z Obstetric trauma, unspecified**
- JB0B Retained placenta or membranes, without haemorrhage**  
A condition characterised by a placenta or membranes that have not been expelled from the uterus during the third stage of labour and up to 30 minutes following delivery, and without haemorrhage. This condition is caused by uterine atony, a trapped placenta, or a placenta accreta. This condition may lead to primary postpartum haemorrhage or infection.

<b>JB0B.0</b>	<b>Retained placenta without haemorrhage</b> A condition characterised by a placenta that has not been expelled from the uterus during the third stage of labour and up to 30 minutes following delivery, and without haemorrhage. This condition is caused by uterine atony, a trapped placenta, or a placenta accreta. This condition may lead to primary postpartum haemorrhage or infection.
<b>Coding Note:</b>	Code also the causing condition
<b>JB0B.1</b>	<b>Retained portions of placenta or membranes, without haemorrhage</b> A condition characterised by portions of a placenta and membranes that have not been expelled from the uterus during the third stage of labour and up to 30 minutes following delivery, and without haemorrhage. This condition is caused by uterine atony, a trapped placenta, or a placenta accreta. This condition may lead to primary postpartum haemorrhage or infection.
<b>Coding Note:</b>	Code also the causing condition
<b>JB0C</b>	<b>Complications of anaesthesia during labour or delivery</b> Any complication caused by or subsequent to any anaesthetic intervention used during labour and delivery.  <b>Inclusions:</b> maternal complications arising from the administration of a general or local anaesthetic, analgesic or other sedation during labour and delivery  <b>Exclusions:</b> Complications of anaesthesia during pregnancy (JA67) Complications of anaesthesia during the puerperium (JB43)
<b>JB0C.0</b>	<b>Aspiration pneumonitis due to anaesthesia during labour or delivery</b> Massive gastric inhalation causing pulmonary insufficiency from aspiration pneumonitis due to anaesthesia during labour and delivery.  <b>Inclusions:</b> Mendelson syndrome due to anaesthesia during labour and delivery
<b>JB0C.1</b>	<b>Other pulmonary complications of anaesthesia during labour or delivery</b>
<b>JB0C.2</b>	<b>Cardiac complications of anaesthesia during labour or delivery</b>
<b>JB0C.3</b>	<b>Central nervous system complications of anaesthesia during labour or delivery</b>
<b>JB0C.4</b>	<b>Toxic reaction to local anaesthesia during labour or delivery</b>
<b>JB0C.5</b>	<b>Spinal or epidural anaesthesia-induced headache during labour or delivery</b>
<b>JB0C.6</b>	<b>Other complications of spinal or epidural anaesthesia during labour or delivery</b>
<b>JB0C.7</b>	<b>Failed or difficult intubation during labour or delivery</b>
<b>JB0C.8</b>	<b>Awareness under general anaesthesia during labour or delivery</b>
<b>JB0C.Y</b>	<b>Other specified complications of anaesthesia during labour or delivery</b>
<b>JB0C.Z</b>	<b>Complications of anaesthesia during labour or delivery, unspecified</b>

<b>JB0D</b>	<b>Certain specified complications of labour or delivery, not elsewhere classified</b>
	<p><b>Exclusions:</b> Infections in the puerperium (JB40) Puerperal sepsis (JB40.0)</p>
<b>JB0D.0</b>	<b>Maternal distress during labour or delivery</b> A condition characterised by maternal anxiety, depression, or stress during labour and delivery.
<b>JB0D.1</b>	<b>Shock during or following labour or delivery</b> A syndrome characterised by systemic cellular hypoxia and organ dysfunction as a result of hypoperfusion following labour and delivery. This syndrome is caused by haemorrhage, vomiting, diarrhoea, inadequate fluid intake, or a systemic inflammatory response to bacteria, endotoxins, or exotoxins.
	<p><b>Inclusions:</b> Obstetric shock</p>
<b>JB0D.2</b>	<b>Pyrexia during labour, not elsewhere classified</b> A complication characterised by maternal fever during labour, and not elsewhere classified.
<b>JB0D.3</b>	<b>Other complications of obstetric surgery or procedures</b> Any complication caused by or subsequent to obstetric surgery and procedures, and not elsewhere classified.
	<p><b>Exclusions:</b> Infection of obstetric surgical wound (JB40.1) Haematoma of obstetric wound (JB44.2) Complications of anaesthesia during labour or delivery (JB0C) Disruption of perineal obstetric wound (JB44.1)</p>
<b>JB0D.4</b>	<b>Delayed delivery after artificial rupture of membranes</b> A complication characterised by a delayed neonatal delivery after the artificial rupture of the membranes.
<b>JB0D.5</b>	<b>Delayed delivery after spontaneous or unspecified rupture of membranes</b> A complication characterised by a delayed neonatal delivery after the spontaneous or unspecified rupture of the membranes.
	<p><b>Exclusions:</b> spontaneous premature rupture of membranes (JA89)</p>
<b>JB0D.6</b>	<b>Vaginal delivery following previous caesarean section</b>
<b>JB0D.7</b>	<b>Failed application of vacuum extractor or forceps, unspecified</b>
	<p><b>Inclusions:</b> Failed application of ventouse or forceps, with subsequent delivery by forceps or caesarean section respectively</p>
<b>JB0D.8</b>	<b>Failed trial of labour, unspecified</b>
<b>JB0D.Y</b>	<b>Other specified complications of labour or delivery, not elsewhere classified</b>
<b>JB0Y</b>	<b>Other specified complications of labour or delivery</b>

**JB0Z****Complications of labour or delivery, unspecified****Delivery (JB20-JB2Z)**

Birth of one or more neonates from the uterus either spontaneously, assisted, or by caesarean section.

**Exclusions:** Disorders of newborn related to length of gestation or fetal growth (KA20-KA2Z)

**JB20****Single spontaneous delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate from the uterus.

**Inclusions:** delivery in a completely normal case

**JB20.0****Spontaneous vertex delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate in vertex position from the uterus.

**JB20.1****Spontaneous breech delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by spontaneous parturition of a neonate in breech position from the uterus.

**JB20.Y****Single spontaneous delivery with other specified presentation****JB20.Z****Single spontaneous delivery, unspecified****JB21****Single delivery by forceps or vacuum extractor**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate from the uterus using forceps and vacuum extractor to assist the delivery.

**Exclusions:** Failed application of vacuum extractor or forceps, unspecified (JB0D.7)

**JB22****Single delivery by caesarean section**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a single neonate from the uterus by caesarean section.

**JB22.0****Delivery by elective caesarean section****JB22.1****Delivery by emergency caesarean section****JB22.2****Single delivery by caesarean hysterectomy**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate from the uterus by caesarean section followed by removal of the uterus.

**JB22.Z****Single delivery by caesarean section, unspecified**

**JB23**

**Other assisted single delivery**

**JB23.0**

**Breech extraction**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate in breech position from the uterus using breech extraction interventions or techniques to assist the delivery.

**JB23.1**

**Other assisted breech delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate in breech position from the uterus using other interventions or techniques to assist the delivery.

**JB23.2**

**Other manipulation-assisted delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate from the uterus using other manipulation-assisted interventions or techniques to assist the delivery.

**JB23.3**

**Delivery of viable fetus in abdominal pregnancy**

A condition caused by the development of a viable fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a viable neonate from the abdominal cavity, at the culmination of an abdominal pregnancy.

**JB23.4**

**Destructive operation for delivery**

A condition caused by the development of a fetus to the culmination of the pregnancy period. This condition is characterised by parturition of a neonate using destructive operation interventions or techniques to assist the delivery.

**JB23.Z**

**Other assisted single delivery, unspecified**

**JB24**

**Multiple delivery**

A condition caused by the development of more than one fetus to the culmination of the pregnancy period. This condition is characterised by parturition of more than one neonate from the uterus either spontaneously, assisted, or by caesarean section.

**JB24.0**

**Multiple delivery, all spontaneous**

A condition caused by the development of more than one fetus to the culmination of the pregnancy period. This condition is characterised by parturition of more than one neonate spontaneously from the uterus.

**JB24.1**

**Multiple delivery, all by forceps or vacuum extractor**

A condition caused by the development of more than one fetus to the culmination of the pregnancy period. This condition is characterised by parturition of more than one neonate from the uterus using forceps and vacuum extractor.

<b>JB24.2</b>	<b>Multiple delivery, all by caesarean section</b>
	A condition caused by the development of more than one fetus to the culmination of the pregnancy period. This condition is characterised by parturition of more than one neonate from the uterus by caesarean section.
<b>JB24.3</b>	<b>Multiple delivery by combination of methods with caesarean</b>
<b>JB24.Y</b>	<b>Other specified multiple delivery</b>
<b>JB24.Z</b>	<b>Multiple delivery, unspecified</b>
<b>JB2Z</b>	<b>Delivery, unspecified</b>

### Complications predominantly related to the puerperium (JB40-JB4Z)

A group of conditions characterised as any adverse evolution (complication) which may arise during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Exclusions:**      Obstetrical tetanus (1C14)

**Coded Elsewhere:** Postpartum symptom or complaint (MF35)

<b>JB40</b>	<b>Infections in the puerperium</b>
	<b>Exclusions:</b> infection during labour (JB0D)

<b>JB40.0</b>	<b>Puerperal sepsis</b>
	<b>Coding Note:</b> Any type of infection - bacterial, viral, fungal or protozoal, can cause sepsis and must be coded as well. When the site of infection is unknown, select a code for Infection of unspecified site by organism followed by the appropriate code for sepsis.

**Exclusions:**      Obstetric pyaemic or septic embolism (JB42.3)  
                          sepsis during labour (JB0D)

<b>JB40.1</b>	<b>Infection of obstetric surgical wound</b>
<b>JB40.2</b>	<b>Other infection of genital tract following delivery</b>
<b>JB40.3</b>	<b>Urinary tract infection following delivery</b>
<b>JB40.4</b>	<b>Pyrexia of unknown origin following delivery</b>

**Exclusions:**      puerperal fever (JB40.0)  
                          Pyrexia during labour, not elsewhere classified (JB0D.2)

<b>JB40.Y</b>	<b>Other specified infections in the puerperium</b>
<b>JB40.Z</b>	<b>Infections in the puerperium, unspecified</b>

<b>JB41</b>	<b>Venous complications in the puerperium</b>
	<b>Exclusions:</b> Venous complications in pregnancy (JA61) Obstetric embolism (JB42)

<b>JB41.0</b>	<b>Superficial thrombophlebitis in the puerperium</b>
---------------	---

- JB41.1 Deep phlebothrombosis in the puerperium**
  - JB41.2 Haemorrhoids in the puerperium**
  - JB41.3 Cerebral venous thrombosis in the puerperium**
  - JB41.Y Other specified venous complications in the puerperium**
  - JB41.Z Venous complications in the puerperium, unspecified**

JB42 Obstetric embolism

A condition characterised by the lodging of a blood clot, a fat globule or a gas bubble (embolus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Exclusions:** Embolism following abortion, ectopic or molar pregnancy (JA05.2)

- JB42.0 Obstetric air embolism

A condition characterised by the lodging of a gas bubble (air embolus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

- ## JB42-1 Amniotic fluid embolism

Amniotic fluid embolism is a rare obstetric emergency in which it is postulated that amniotic fluid, fetal cells, hair, or other debris enter the maternal circulation, causing cardiorespiratory collapse.

**Inclusions:** Anaphylactoid syndrome of pregnancy

- #### **JB42.2 Obstetric blood-clot embolism**

A condition characterised by the lodging of a blood clot (a specific type of embolus known as a thrombus) in the bloodstream, which can cause a blockage associated with the physiological and other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

- #### **JB42.3                    Obstetric pyaemic or septic embolism**

- ## **JB42.Y Other specified obstetric embolism**

- ## **JB42.Z              Obstetric embolism, unspecified**

**JB43****Complications of anaesthesia during the puerperium**

**Coding Note:** Maternal complications arising from the administration of a general or local anaesthetic, analgesic or other sedation during the puerperium

**Inclusions:** Complications of anaesthesia during pregnancy (JA67)  
Complications of anaesthesia during labour or delivery (JB0C)

**JB43.0** **Pulmonary complications of anaesthesia during the puerperium**

**JB43.1** **Cardiac complications of anaesthesia during the puerperium**

**JB43.2** **Central nervous system complications of anaesthesia during the puerperium**

**JB43.3** **Spinal or epidural anaesthesia-induced headache during the puerperium**

**JB43.4** **Other complications of spinal or epidural anaesthesia during the puerperium**

**JB43.5** **Failed or difficult intubation during the puerperium**

**JB43.6** **Awareness under general anaesthesia during the puerperium**

**JB43.Y** **Other specified complications of anaesthesia during the puerperium**

**Coding Note:** Maternal complications arising from the administration of a general or local anaesthetic, analgesic or other sedation during the puerperium

**JB43.Z** **Complications of anaesthesia during the puerperium, unspecified**

**Coding Note:** Maternal complications arising from the administration of a general or local anaesthetic, analgesic or other sedation during the puerperium

**JB44****Certain specified complications of the puerperium**

A group of conditions characterised as any adverse evolution (complication) which may arise during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium) which are not classified elsewhere.

**JB44.0** **Disruption of caesarean section wound**

**JB44.1** **Disruption of perineal obstetric wound**

**Inclusions:** Secondary perineal tear

**JB44.2** **Haematoma of obstetric wound**

**JB44.3** **Cardiomyopathy in the puerperium**

A group of diseases in which the dominant feature is the involvement of the cardiac muscle itself occurring in puerperium, the period of 6-8 weeks after giving birth. Cardiomyopathies are classified according to their predominant pathophysiological features or their etiological/pathological factors.

**JB44.4** **Postpartum acute renal failure**

**JB44.5** **Postpartum thyroiditis**

Postpartum thyroiditis (PPT) is the occurrence, in the postpartum period, of transient hyperthyroidism and/or transient hypothyroidism, with most women returning to the euthyroid state by 1 year postpartum.

<b>JB44.6</b>	<b>Puerperal osteomalacia</b>
<b>Coding Note:</b>	Code also the causing condition
<b>JB44.Y</b>	<b>Other specified complications of the puerperium</b>
<b>JB44.Z</b>	<b>Complications of the puerperium, unspecified</b>
<b>JB45</b>	<b>Infections of breast associated with childbirth</b>
<b>JB45.0</b>	<b>Abscess of breast associated with childbirth</b>
<b>JB45.1</b>	<b>Nonpurulent mastitis associated with childbirth</b>
<b>JB45.Y</b>	<b>Other specified infections of breast associated with childbirth</b>
<b>JB45.Z</b>	<b>Infections of breast associated with childbirth, unspecified</b>
<b>JB46</b>	<b>Certain specified disorders of breast or lactation associated with childbirth</b>
	<b>Coded Elsewhere:</b> Breast or lactation symptom or complaint (MF31)
<b>JB46.0</b>	<b>Retracted nipple associated with childbirth</b> A condition characterised as the abnormal inversion of a nipple that does not return to normal position even when stimulated that has occurred in association with childbirth.
<b>JB46.1</b>	<b>Cracked nipple associated with childbirth</b>
<b>JB46.2</b>	<b>Other or unspecified disorders of breast associated with childbirth</b>
<b>JB46.3</b>	<b>Agalactia</b> <i>Inclusions:</i> Failure of lactation Primary agalactia
<b>JB46.4</b>	<b>Hypogalactia</b> <i>Inclusions:</i> Insufficient milk supply Delayed milk supply
<b>JB46.5</b>	<b>Suppressed lactation</b>
<b>JB46.6</b>	<b>Galactorrhoea</b> Excessive or inappropriate lactation in females or males, and not necessarily related to pregnancy. Galactorrhoea can occur either unilaterally or bilaterally, and be profuse or sparse. Its most common cause is hyperprolactinemia. <i>Inclusions:</i> Oversupply of milk <i>Exclusions:</i> Galactorrhoea not associated with childbirth (GB23.4)
<b>JB46.7</b>	<b>Other or unspecified disorders of lactation</b>
<b>JB4Z</b>	<b>Complications predominantly related to the puerperium, unspecified</b>

## Certain obstetric conditions, not elsewhere classified (JB60-JB6Z)

Any condition characterised by an obstetric complication, condition, disease, or death during pregnancy, labour and delivery, or the puerperium that is not elsewhere classified.

**JB60**

### **Obstetric death of unspecified cause**

A condition characterised by maternal death during pregnancy or within 42 days following delivery. This death may be associated with physiological, obstetrical, or other changes or is provoked by interventions used during pregnancy, childbirth, or puerperium, but has no specified cause.

**JB61**

### **Death from any obstetric cause occurring more than 42 days but less than one year after delivery**

A condition characterised by maternal death between 43 days and one year following delivery. This death is caused by any physiological, obstetrical, or other changes or is provoked by interventions used during pregnancy, childbirth, or puerperium.

**Coding Note:** This category is to be used to indicate death from any obstetric cause (conditions in categories JA00-JB0Z; JB40-JB4Z and JB63-JB6Z), and occurring more than 42 days but less than one year after delivery.

**Exclusions:** Sequelae of complication of pregnancy, childbirth or the puerperium (JB65)

Death from sequelae of obstetric causes (JB62)

**JB61.0**

### **Death from direct obstetric cause occurring more than 42 days but less than one year after delivery**

Any condition directly resulting in death due to any cause associated with the physiological or other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:**

This category is to be used to indicate death from direct obstetric cause and occurring more than 42 days but less than one year after delivery.

**JB61.1**

### **Death from indirect obstetric cause occurring more than 42 days but less than one year after delivery**

Any condition indirectly resulting in death via an intermediate cause due to any issue associated with the physiological or other changes that occur during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**Coding Note:**

This category is to be used to indicate death from indirect obstetric cause and occurring more than 42 days but less than one year after delivery.

**JB61.Z**

### **Death from obstetric cause occurring more than 42 days but less than one year after delivery, unspecified whether direct or indirect**

**Coding Note:**

This category is to be used to indicate death from any obstetric cause (conditions in categories JA00-JB0Z; JB40-JB4Z and JB63-JB6Z), and occurring more than 42 days but less than one year after delivery.

**JB62**

**Death from sequelae of obstetric causes**

A secondary condition of pregnant females, caused by and subsequent to any complications during pregnancy, childbirth, or puerperium. This condition is characterised by maternal death.

**Inclusions:**      Death from any direct obstetric cause occurring one year or more after delivery

**JB62.0**

**Death from sequelae of direct obstetric cause**

Any condition directly resulting in death due to a pathological condition resulting from any adverse evolution (complication) which may arise associated with the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**JB62.1**

**Death from sequelae of indirect obstetric cause**

Any condition resulting in death via an intermediate cause due to a pathological condition resulting from any adverse evolution (complication) which may arise associated with the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the approximately six weeks after delivery during which the uterus returns to the original size (puerperium).

**JB62.Z**

**Death from sequelae of obstetric causes, unspecified**

**JB63**

**Maternal infectious diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium**

Maternal infectious and parasitic diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium

**Exclusions:**      Obstetrical tetanus (1C14)  
                        Laboratory evidence of human immunodeficiency virus (MA14.0)  
                        Asymptomatic human immunodeficiency virus infection (1C62.0)  
                        puerperal infection (JB40)  
                        Puerperal sepsis (JB40.0)  
                        when the reason for maternal care is that the disease is known or suspected to have affected the fetus (JA80-JA8Z)

**JB63.0**

**Tuberculosis complicating pregnancy, childbirth or the puerperium**

**JB63.00**

Tuberculous placenta

**JB63.0Y**

Other specified tuberculosis complicating pregnancy, childbirth or the puerperium

**JB63.0Z**

Tuberculosis complicating pregnancy, childbirth or the puerperium, unspecified

**JB63.1**

**Syphilis complicating pregnancy, childbirth or the puerperium**

Syphilis complicating pregnancy, childbirth or the puerperium

**JB63.2**

**Gonorrhoea complicating pregnancy, childbirth or the puerperium**

<b>JB63.3</b>	<b>Other infections with a predominantly sexual mode of transmission complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.4</b>	<b>Viral hepatitis complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.5</b>	<b>Other viral diseases complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.6</b>	<b>Protozoal diseases complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.60</b>	Malaria complicating pregnancy, childbirth, or the puerperium
<b>JB63.6Y</b>	Other specified protozoal diseases complicating pregnancy, childbirth or the puerperium
<b>JB63.6Z</b>	Protozoal diseases complicating pregnancy, childbirth or the puerperium, unspecified
<b>JB63.7</b>	<b>Human immunodeficiency disease complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.Y</b>	<b>Other specified maternal infectious diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium</b>
<b>JB63.Z</b>	<b>Maternal infectious diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium, unspecified</b>
<b>JB64</b>	<b>Certain maternal diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium</b>

**Coding Note:** This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.

**Exclusions:** when the reason for maternal care is that the condition is known or suspected to have affected the fetus (JA85)  
infectious and parasitic diseases (JB63)  
Injury, poisoning or certain other consequences of external causes (Chapter 22)

**Coded Elsewhere:** Mental or behavioural disorders associated with pregnancy, childbirth or the puerperium (6E20-6E2Z)  
Injury complicating pregnancy (ND56.9)

<b>JB64.0</b>	<b>Anaemia complicating pregnancy, childbirth or the puerperium</b> A condition of the circulatory system affecting pregnant females, characterised by a haemoglobin level below 11 grams per decilitre that complicates pregnancy, childbirth, or the puerperium.
---------------	---

**Coding Note:** This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.

<b>JB64.1</b>	<b>Other diseases of the blood or blood-forming organs or certain disorders involving the immune mechanism complicating pregnancy, childbirth or the puerperium</b> Any disease affecting pregnant females, characterised by pathological changes to the blood and blood-forming organs and pathological changes involving the immune mechanism that complicate pregnancy, childbirth, or the puerperium not classified elsewhere.
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Antepartum haemorrhage with coagulation defect (JA41.0) Intrapartum haemorrhage with coagulation defect (JA42.0)
<b>JB64.2</b>	<b>Endocrine, nutritional or metabolic diseases complicating pregnancy, childbirth or the puerperium</b> Any disease affecting pregnant females, characterised by endocrine, nutrition, or metabolic manifestations that complicate pregnancy, childbirth, or the puerperium.
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Malnutrition in pregnancy (JA64) Diabetes mellitus in pregnancy (JA63) Postpartum thyroiditis (JB44.5)
<b>JB64.3</b>	<b>Diseases of the nervous system complicating pregnancy, childbirth or the puerperium</b> Any disorder or disease of the nervous system affecting pregnant females leading to complications during pregnancy, childbirth, or puerperium.
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Mental or behavioural disorders associated with pregnancy, childbirth or the puerperium (6E20-6E2Z)
<b>JB64.4</b>	<b>Diseases of the circulatory system complicating pregnancy, childbirth or the puerperium</b>
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Obstetric embolism (JB42) venous complications and cerebrovenous sinus thrombosis in pregnancy (JA61) Venous complications in the puerperium (JB41) Oedema, proteinuria, or hypertensive disorders in pregnancy, childbirth, or the puerperium (JA20-JA2Z) Cardiomyopathy in the puerperium (JB44.3) Other venous complications following abortion, ectopic or molar pregnancy (JA05.7)

<b>JB64.5</b>	<b>Diseases of the respiratory system complicating pregnancy, childbirth or the puerperium</b>
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
<b>JB64.6</b>	<b>Diseases of the digestive system complicating pregnancy, childbirth or the puerperium</b>
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Liver disorders in pregnancy, childbirth or the puerperium (JA65.0)
<b>JB64.7</b>	<b>Diseases of the skin complicating pregnancy, childbirth or the puerperium</b>
	Diseases of the skin or subcutaneous tissue not specifically related to pregnancy but which contribute to increased morbidity during pregnancy, childbirth or the puerperium, for example genetic blistering disorders or lichen sclerosus.
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
	<b>Exclusions:</b> Herpes gestationis (JA65.10) Gestational pemphigoid (JA65.10) Polymorphic eruption of pregnancy (JA65.12) Pregnancy dermatoses (JA65.1) Pruritus of pregnancy (JA65.11)
<b>JB64.8</b>	<b>Congenital anomaly complicating pregnancy</b>
<b>JB64.Y</b>	<b>Other specified maternal diseases classifiable elsewhere but complicating pregnancy, childbirth or the puerperium</b>
<b>Coding Note:</b>	This category includes conditions which complicate the pregnant state, are aggravated by the pregnancy or are a main reason for obstetric care but no specific category exists in this chapter.
<b>JB65</b>	<b>Sequelae of complication of pregnancy, childbirth or the puerperium</b>
	A secondary condition that develops during the period of time from conception to delivery (pregnancy), during labour and delivery (childbirth) or during the six weeks following delivery (puerperium).
	<b>Exclusions:</b> Death from any obstetric cause occurring more than 42 days but less than one year after delivery (JB61) Death from sequelae of obstetric causes (JB62)
<b>JB6Y</b>	<b>Other specified obstetric conditions, not elsewhere classified</b>
<b>JB6Z</b>	<b>Unspecified obstetric condition</b>

# CHAPTER 19

---

## Certain conditions originating in the perinatal period

This chapter has 151 four-character categories.

Code range starts with KA00

This chapter includes conditions that have their origin in the perinatal period even though death or morbidity occurs later.

**Coding Note:** Conditions arising in the perinatal period, even though death or morbidity occurs later, should, as far as possible, be coded to chapter 19, which takes precedence over chapters containing codes for diseases by their anatomical site.

For children less than 28 days old, assume that a reported condition developed in the perinatal period, unless the duration is stated and the onset was after the first completed week of life.

- Exclusions:**
- Endocrine, nutritional or metabolic diseases (Chapter 05)
  - Congenital malformations, deformations and chromosomal abnormalities (Chapter 20)
  - Neoplasms (Chapter 02)
  - Injury, poisoning or certain other consequences of external causes (Chapter 22)
  - Congenital gonococcal infection (1A70-1A7Z)
  - Certain infectious or parasitic diseases - acquired after birth (Chapter 01)
  - Gastroenteritis or colitis of infectious origin (1A00-1A40.Z)
  - Hereditary haemolytic anaemia (3A10)
  - Transient hypogammaglobulinaemia of infancy (4A01.03)
  - Certain congenital diseases of the nervous system (Chapter 08)
  - congenital cardiomyopathy (BC43)
  - Paralytic ileus (DA93.0)
  - Pemphigus neonatorum (EA50)
  - Cradle cap (EH40.00)

This chapter contains the following top level blocks:

- Fetus or newborn affected by maternal factors or by complications of pregnancy, labour or delivery
- Disorders of newborn related to length of gestation or fetal growth
- Birth injury
- Infections of the fetus or newborn
- Haemorrhagic or haematological disorders of fetus or newborn

- Neurological disorders specific to the perinatal or neonatal period
- Respiratory disorders specific to the perinatal or neonatal period
- Cardiovascular disorders present in the perinatal or neonatal period
- Transitory endocrine or metabolic disorders specific to fetus or newborn
- Digestive system disorders of fetus or newborn
- Genitourinary system disorders specific to the perinatal or neonatal period
- Disorders involving the integument of fetus or newborn
- Disturbances of temperature regulation of newborn
- Certain disorders originating in the perinatal period

## Fetus or newborn affected by maternal factors or by complications of pregnancy, labour or delivery (KA00-KA0Z)

A group of conditions characterised by findings in the fetus or newborn due to conditions associated with the mother or by an adverse evolution (complication) which may arise associated with the time period from conception through childbirth.

**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**KA00**

### **Fetus or newborn affected by maternal conditions that may be unrelated to present pregnancy**

A group of conditions characterised by findings in the fetus or newborn due to conditions associated with the mother which are unrelated to the present pregnancy.

**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**Exclusions:** Fetus or newborn affected by maternal complications of pregnancy (KA01)

fetus and newborn affected by maternal endocrine and metabolic disorders (KB60-KB6Z)

Fetus or newborn affected by noxious influences transmitted via placenta or breast milk (KA06)

**KA00.0**

### **Fetus or newborn affected by maternal hypertensive disorders**

Maternal hypertensive disorders - chronic hypertension, preeclampsia-eclampsia, preeclampsia superimposed on chronic hypertension, and gestational hypertension.

**KA00.1**

### **Fetus or newborn affected by gestational oedema or proteinuria without hypertension**

**KA00.2**

### **Fetus or newborn affected by maternal renal or urinary tract diseases**

A group of conditions characterised by findings in the fetus or newborn due to conditions in the mother associated with the kidneys and urinary tract.

<b>KA00.3</b>	<b>Fetus or newborn affected by maternal infectious diseases</b> A condition affecting fetuses or newborns, that is (or suspected to be) caused by a maternal infection with a bacterial, viral, fungal, or parasitic source.
	<b><i>Inclusions:</i></b> Infections of the genital tract in pregnancy (JA62.4)
<b>KA00.4</b>	<b>Fetus or newborn affected by periodontal disease in mother</b>
<b>KA00.5</b>	<b>Fetus or newborn affected by maternal respiratory diseases</b>
<b>KA00.6</b>	<b>Fetus or newborn affected by maternal nutritional disorders</b> A group of conditions characterised by findings in the fetus or newborn due to conditions in the mother that are directly or indirectly associated with a lack of essential nutrients in the diet.
<b>KA00.60</b>	Fetus or newborn affected by maternal malnutrition
<b>KA00.61</b>	Fetus or newborn affected by maternal overweight or obesity
<b>KA00.6Y</b>	Other specified fetus or newborn affected by maternal nutritional disorders
<b>KA00.6Z</b>	Fetus or newborn affected by maternal nutritional disorders, unspecified
<b>KA00.7</b>	<b>Fetus or newborn affected by abnormal maternal chemistry</b>
<b>KA00.8</b>	<b>Fetus or newborn affected by maternal injury</b> A group of conditions characterised by findings in the fetus or newborn due to conditions in the mother resulting from physical damage or harm.
	<b><i>Inclusions:</i></b> Fetus or newborn affected by maternal injury, poisoning or certain other consequences of external causes
<b>KA00.9</b>	<b>Fetus or newborn affected by maternal chemotherapy</b>
<b>KA00.A</b>	<b>Fetus or newborn affected by surgical procedure on mother</b> A group of conditions characterised by findings in the fetus or newborn due to conditions in the mother resulting from surgical health intervention.
	<b><i>Exclusions:</i></b> damage to placenta from amniocentesis, caesarean section or surgical induction (KA02) Termination of pregnancy, affecting surviving fetus or newborn (KD3A) previous surgery to uterus or pelvic organs (KA05) Fetus or newborn affected by caesarean delivery (KA05.4)
<b>KA00.B</b>	<b>Fetus or newborn affected by maternal anaemia</b>
<b>KA00.Y</b>	<b>Fetus or newborn affected by other specified maternal condition that may be unrelated to present pregnancy</b>
<b>Coding Note:</b>	These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**KA00.Z Fetus or newborn affected by unspecified maternal condition that may be unrelated to present pregnancy**

**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**KA01**

**Fetus or newborn affected by maternal complications of pregnancy**

Any other condition characterised by findings in the fetus or newborn due to any condition of the mother due to an adverse evolution (complication) which may arise associated with the time period from conception through childbirth.

**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**KA01.0**

**Fetus or newborn affected by incompetence of cervix uteri**

Cervical incompetence refers to a weakness of the cervix and lower uterine segment, which can lead to recurrent second-trimester or early third-trimester loss of pregnancy due to an inability of the uterine cervix to retain a pregnancy until term. It is associated with a premature shortening of the cervix, dilatation, and opening of the cervical os during pregnancy. Ultrasound changes that suggest cervical incompetence include a cervical length < 1.5 cm, cervical width > 3 cm, and an expanded cervical canal > 8 mm.

**KA01.1**

**Fetus or newborn affected by premature rupture of membranes**

Preterm premature rupture of membranes (PPROM) refers to a patient who is at less than 37 weeks' gestation and has presented with a rupture of membranes prior to the onset of labour. Complications include pre-term delivery, ascending infection, umbilical cord prolapse, oligohydramnios, placental abruption, retained placenta, postpartum haemorrhage, or rupture of the vasa praevia.

**KA01.2**

**Fetus or newborn affected by oligohydramnios**

Oligohydramnios is defined as a decrease in the volume of amniotic fluid. It is diagnosed if the diameter of the largest amniotic fluid depot is < 2 cm, or if the amniotic fluid index (AFI) is < 5 cm.

**Exclusions:** Fetus or newborn affected by premature rupture of membranes (KA01.1)

**KA01.3**

**Fetus or newborn affected by polyhydramnios**

Polyhydramnios is defined as an abnormally large volume of amniotic fluid within the uterus. An amount of 2 L at term, any single pool >8cm or an amniotic fluid index (AFI) > 24 cm is considered to be polyhydramnios.

**Inclusions:** fetus or newborn affected by hydramnios

- KA01.4 Fetus or newborn affected by ectopic pregnancy**  
An ectopic pregnancy occurs when a pregnancy begins outside of the uterus. The most common site is within one of the fallopian tubes, although in rare cases, ectopic pregnancies can occur in the stomach region, cervix, or ovary. It is often caused by a condition that slows or blocks the movement of a fertilised egg through the fallopian tube to the uterus. Ectopic pregnancies cannot continue to term and the developing cells must be removed to prevent rupture of the ectopic area, which can lead to shock and danger the life of the mother.
- Inclusions:** Abdominal pregnancy affecting fetus or newborn
- KA01.5 Fetus or newborn affected by multiple pregnancy**  
A condition characterised by findings in the fetus or newborn due to any condition associated with the presence of a multiple pregnancy.
- KA01.6 Fetus or newborn affected by maternal death**  
A condition characterised by findings in the fetus or newborn due to death of the mother.
- KA01.7 Fetus or newborn affected by malpresentation before labour**  
Malpresentations are all presentations of the fetus other than the vertex, and includes breech, transverse, shoulder, compound, face, and brow presentations. They may pose risks to the fetus and mother and may necessitate operative vaginal or caesarean delivery, or other interventions to accomplish delivery. Breech presentation, the most common malpresentation, results when the fetal buttocks, legs, feet, or a combination of these presents first into the maternal pelvis.
- KA01.8 Fetus or newborn affected by maternal blood loss**
- KA01.Y Fetus or newborn affected by other specified maternal complication of pregnancy**
- Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
- KA01.Z Fetus or newborn affected by unspecified maternal complication of pregnancy**
- Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
- KA02 Fetus or newborn affected by complications of placenta**  
A group of conditions characterised by findings in the fetus or newborn due to an adverse evolution (complication) associated with the placenta, umbilical cord, or chorioamniotic membranes.
- Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

- KA02.0 Fetus or newborn affected by placenta praevia**  
Placenta praevia exists when the placenta lies wholly or in part in the lower segment of the uterus. Diagnosis has evolved from the clinical I-IV grading system, and is determined by ultrasonic imaging techniques relating the leading edge of the placenta to the cervical os. Grade I is a low lying placenta, Grade II is a placenta that meets the edge of the cervical os, Grade III is a placenta that partially covers the os, and Grade IV is a placenta that completely covers the os.
- KA02.1 Fetus or newborn affected by placental oedema or large placenta**  
A large placenta, also known as placentomegaly, is one that weighs > 750 g. Placentomegaly can be seen in the following conditions: fetal hydrops, maternal diabetes mellitus, Rh incompatibility, chronic infections (e.g. syphilis, cytomegalovirus), maternal anaemia, or acute placental oedema with acute chorioamnionitis.
- KA02.2 Fetus or newborn affected by placental infarction**  
Placental infarction is the formation of localised areas of ischemic villous necrosis, usually due to vasospasm of the maternal circulation. The affected regions of the placenta are incompetent, and lead to placental insufficiency if the infarcts are severe.
- KA02.3 Fetus or newborn affected by placental insufficiency or small placenta**  
Placental insufficiency is defined as the inability of the placenta to deliver a sufficient supply of oxygen and nutrients to the fetus, and therefore, is unable to sustain the growth of the developing baby until term. Placental insufficiency can result in intrauterine growth restriction (IUGR), pre-eclampsia, abruption, or preterm labour and delivery. A small placenta is defined as a placenta that weighs less than the lower limit of normal for the gestational period. A low placental weight can be the result of a maternal or fetal conditions. Among maternal conditions belong those causing underperfusion of the placenta, such as pre-eclampsia or maternal hypertension. Among fetal conditions belong fetal malformations or chromosomal anomalies.
- KA02.4 Fetus or newborn affected by placental transfusion syndromes**  
Twin-to-twin transfusion syndrome (TTTS) occurs in monozygotic twins while they are in the uterus. It occurs when blood travels from one twin to the other, and the twin that loses blood is the donor twin, while the twin that receives blood is the recipient twin. Depending on the severity of the transfusion, both infants may experience problems, such as anaemia, paleness, and dehydration in the donor twin, and redness and an increased blood pressure in the recipient twin.
- Inclusions:** Placental and cord abnormalities resulting in twin-to-twin or other transplacental transfusion
- KA02.Y Fetus or newborn affected by other specified complication of placenta**
- Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

<b>KA02.Z</b>	<b>Fetus or newborn affected by unspecified complication of placenta</b>
<b>Coding Note:</b>	These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
<b>KA03</b>	<b>Fetus or newborn affected by complications of umbilical cord</b>
<b>KA03.0</b>	<b>Fetus or newborn affected by prolapsed cord</b>  A prolapsed umbilical cord is when the cord enters the opening cervix and down into the birth canal during labour before the baby has left the uterus. The risk of prolapse is higher if the baby is lying in a transverse position, the mother has had more than one baby, an excess amount of amniotic fluid exists, there is preterm prelabour rupture of membranes, or if membranes are artificially ruptured.
<b>KA03.1</b>	<b>Fetus or newborn affected by other compression of umbilical cord</b>  A group of conditions characterised by findings in the fetus or newborn due obstruction of blood flow through the umbilical cord secondary to pressure from an external object or misalignment of the cord itself not classified elsewhere.  <b>Coded Elsewhere:</b> Fetus or newborn affected by umbilical cord-to-cord entanglements in monoamniotic twins (LB03.Y)  Fetus or newborn affected by umbilical cord knot (LB03.Y) Fetus or newborn affected by umbilical cord loop (LB03.Y)
<b>KA03.2</b>	<b>Fetus or newborn affected by abnormalities of umbilical cord length</b>
<b>KA03.20</b>	Fetus or newborn affected by short umbilical cord  An umbilical cord < 2 SD in length below mean for the gestational age. At term, this is < 35 cm. Often associated with fetal hypokinesia
<b>KA03.21</b>	Fetus or newborn affected by long umbilical cord  An umbilical cord > 2 SD in length above mean for the gestational age. At term, this is > 80 cm.
<b>KA03.2Y</b>	Other specified fetus or newborn affected by abnormalities of umbilical cord length
<b>KA03.2Z</b>	Fetus or newborn affected by abnormalities of umbilical cord length, unspecified
<b>KA03.3</b>	<b>Fetus or newborn affected by vasa praevia</b>  An obstetric complication characterised by fetal vessels crossing or running in close proximity to the internal orifice of the cervix (inner cervical os).  <b>Exclusions:</b> Fetal blood loss from vasa praevia (KA80.0)
<b>KA03.4</b>	<b>Fetus or newborn affected by traumatic injury of the umbilical cord</b>
<b>KA03.Y</b>	<b>Fetus or newborn affected by other specified complication of umbilical cord</b>
<b>KA03.Z</b>	<b>Fetus or newborn affected by unspecified complication of umbilical cord</b>
<b>KA04</b>	<b>Fetus or newborn affected by other abnormalities of membranes</b>

<b>KA04.0</b>	<b>Fetus or newborn affected by chorioamnionitis</b> Chorioamnionitis is an infection of the placental tissues and amniotic fluid. It can lead to bacteraemia in the mother, which is an infection of the blood, and this can cause preterm birth or infection in the newborn. Organisms which are usually responsible for chorioamnionitis include Escherichia coli (E. coli) and Group B streptococcus.
	<b><i>Inclusions:</i></b> Infections of the fetus or newborn (KA60-KA6Z)
<b>KA04.1</b>	<b>Fetus or newborn affected by amniotic band syndrome</b>
<b>KA04.Y</b>	<b>Fetus or newborn affected by other specified abnormality of membranes</b>
<b>KA04.Z</b>	<b>Fetus or newborn affected by unspecified abnormality of membranes</b>
<b>KA05</b>	<b>Fetus or newborn affected by certain complications of labour or delivery</b> A group of conditions characterised by findings in the fetus or newborn due to any other adverse evolution (complication) during labour and delivery.
	<b>Coding Note:</b> These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
<b>KA05.0</b>	<b>Fetus or newborn affected by breech delivery or extraction</b> Breech presentation refers to a fetus that is lying with its bottom downwards. There are three different types of breech presentation: breech with extended legs (frank), fully flexed legs (complete), or footling (incomplete) with one or both thighs extended. Breech presentation is associated with an increased risk of intrapartum trauma or asphyxia, and caesarean section is a common mode of delivery to reduce birth-related complications.
<b>KA05.1</b>	<b>Fetus or newborn affected by other malpresentation, malposition or disproportion during labour or delivery</b> A condition characterised by findings in the fetus or newborn due to abnormal positions of the vertex of the fetal head (malposition) or any presentation position of the fetus other than vertex of the fetal head, first (malpresentation) during labour and delivery.
<b>KA05.2</b>	<b>Fetus or newborn affected by forceps delivery</b> A condition characterised by findings in the fetus or newborn due to assisted birth in which intervention assistance is provided with smooth metal instruments curved to fit around the head (forceps).
<b>KA05.3</b>	<b>Fetus or newborn affected by delivery by vacuum extractor</b> A condition characterised by findings in the fetus or newborn due to assisted birth in which intervention assistance is provided with a soft or hard plastic or metal cup attached by a tube to a suction device that fits firmly onto the head and attaches with suction (vacuum extractor, ventouse).
	<b><i>Inclusions:</i></b> Fetus and newborn affected by delivery by ventouse

- KA05.4 Fetus or newborn affected by caesarean delivery**  
A condition characterised by findings in the fetus or newborn due to delivery via a surgical procedure in which one or more incisions are made through a mother's abdomen (laparotomy) and uterus (hysterotomy) to deliver one or more babies (Caesarean delivery).
- KA05.5 Fetus or newborn affected by precipitate delivery**  
A precipitate delivery is one that is < 3 hours and where contractions are unusually severe. It commonly occurs in multiparous women or when labour has been induced. Due to the force and speed of delivery, trauma may occur to the mother and newborn. The mother may suffer from haemorrhage, perineal laceration, infection, or uterine rupture, and the newborn may suffer from subdural hematoma, anoxia, or fractures.
- KA05.6 Fetus or newborn affected by abnormal uterine contractions**  
Abnormal uterine contractions can either be hypertonic or hypotonic. Hypertonic contractions are ones that occur more frequently and are marked by an increase in resting tone to more than 15 mm Hg. Hypotonic contractions are ones where the number of contractions is unusually low, the resting tone of the uterus is less than 10 mm Hg, and the strength of contractions is consistently < 26 mm Hg.
- KA05.7 Fetus or newborn affected by abnormality in fetal intrauterine heart rate or rhythm**
- KA05.70** Fetus and newborn affected by abnormality in fetal intrauterine heart rate or rhythm before onset of labour
- KA05.71** Fetus and newborn affected by abnormality in fetal intrauterine heart rate or rhythm during labour
- KA05.7Z** Fetus or newborn affected by abnormality in fetal intrauterine heart rate or rhythm, unspecified
- KA05.8 Meconium passage during delivery**  
Meconium passage by the fetus during labour and/or delivery process.  
**Exclusions:**      Neonatal aspiration of meconium (KB26.0)  
                        Meconium staining (KD38)
- KA05.Y Fetus or newborn affected or suspected to be affected by other specified complications of labour or delivery**  
**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
- KA05.Z Fetus or newborn affected or suspected to be affected by unspecified complications of labour or delivery**  
**Coding Note:** These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**KA06**

**Fetus or newborn affected by noxious influences transmitted via placenta or breast milk**

A group of conditions characterised by findings in the fetus or newborn due to the transmission of any harmful or poisonous substance to the fetus or newborn via the placenta or in breast milk.

**Coding Note:**

These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

**Inclusions:** nonteratogenic effects of substances transmitted via placenta

**Exclusions:** congenital malformations (Chapter 20)

Neonatal hyperbilirubinaemia due to drugs or toxins  
transmitted from mother (KA87.4)

**KA06.0**

**Fetus or newborn affected by maternal anaesthesia or analgesia in pregnancy, labour or delivery**

A condition characterised by findings in the fetus or newborn due to the transmission of anaesthesia or analgesia provided to the mother during the period of time between conception and childbirth.

**Inclusions:** Reactions and intoxications from maternal opiates and tranquillizers administered during labour and delivery

**KA06.1**

**Fetus or newborn affected by maternal use of tobacco**

A condition characterised by findings in the fetus or newborn due to the transmission of any substances derived from tobacco use by the mother to the fetus or newborn.

**Exclusions:** Exposure to tobacco smoke in the perinatal period (KD37)

**KA06.2**

**Fetus or newborn affected by maternal use of alcohol**

A condition characterised by findings in the fetus or newborn due to the transmission of any substances derived from alcohol use by the mother to the fetus or newborn.

**Exclusions:** Fetal alcohol syndrome (LD2F.00)

**KA06.3**

**Fetus or newborn affected by maternal use of drugs of addiction**

A condition characterised by findings in the fetus or newborn due to the transmission of any substances derived from other drug use by the mother to the fetus or newborn.

**Exclusions:** Fetus or newborn affected by maternal anaesthesia or analgesia in pregnancy, labour or delivery (KA06.0)

withdrawal symptoms from maternal use of drugs of addiction  
(KD35)

**KA06.4**

**Fetus or newborn affected by maternal use of nutritional chemical substances**

A condition characterised by findings in the fetus or newborn due to the transmission of any substances derived from nutritional chemical use by the mother to the fetus or newborn.

<b>KA06.5</b>	<b>Fetus or newborn affected by maternal exposure to environmental chemical substances</b> A condition characterised by findings in the fetus or newborn due to the transmission of any substances derived from exposure of the mother to environmental chemicals.
<b>KA06.Y</b>	<b>Fetus or newborn affected by other specified noxious influence transmitted via placenta or breast milk</b>
<b>Coding Note:</b>	These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
<b>KA06.Z</b>	<b>Fetus or newborn affected by unspecified noxious influence transmitted via placenta or breast milk</b>
<b>Coding Note:</b>	These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.
<b>KA07</b>	<b>Neonatal dermatoses due to maternal antibodies</b> A range of antibody-mediated neonatal skin disorders due to transplacental transfer of maternal antibodies to the fetus. The relevant autoimmune disorder may or may not be apparent in the mother.
<b>KA07.0</b>	<b>Neonatal lupus erythematosus</b> Neonatal lupus erythematosus results from trans-placental transfer of maternal antibodies, in particular anti-Ro/SSA and anti La/SSB. It manifests with an erythematous rash which may be obviously photosensitive and is closely associated with congenital heart block. The mother may have known lupus, especially subacute cutaneous lupus erythematosus, but she may be asymptomatic. The rash normally subsides within the first few months of life.
<b>KA07.1</b>	<b>Neonatal pemphigus</b> Neonatal pemphigus vulgaris is a short lived autoimmune skin disease arising as a result of transplacental transmission to the neonate of maternal antibodies. Neonatal pemphigus is characterised by blister formation on the skin and the mucous membranes mediated by auto-antibodies to the desmosome component desmoglein 3.
<b>KA07.Y</b>	<b>Other specified neonatal dermatoses due to maternal antibodies</b>
<b>KA0Z</b>	<b>Fetus or newborn affected by unspecified maternal factors or by complications of pregnancy, labour or delivery</b>
<b>Coding Note:</b>	These codes are for use when the listed maternal conditions are specified as the cause of confirmed morbidity or potential morbidity which have their origin in the perinatal period (before birth through the first 28 days after birth). Use additional code to identify the condition in the fetus or newborn.

## Disorders of newborn related to length of gestation or fetal growth (KA20-KA2Z)

A group of conditions related to the length of time that the fetus is carried inside the uterus and develops.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

### **KA20 Disorders of newborn related to slow fetal growth or fetal malnutrition**

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

#### **KA20.0 Small for gestational age**

Birth weight below – 2 standard deviations of the mean or below the 10th percentile according to local intrauterine growth charts

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**Inclusions:** Small-for-dates

#### **KA20.00 Small for gestational age, symmetrical**

Growth of the fetus is affected in early pregnancy and growth is slow throughout the duration of the pregnancy. The head circumference is proportional to the rest of the body. Birth weight is 2 standard deviations below the mean, or below the 10th percentile.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

#### **KA20.01 Small for gestational age, asymmetrical**

This growth restriction leads to a disparity in length and head circumference when compared to birth weight. This condition typically occurs in the third trimester.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

#### **KA20.0Z Small for gestational age, unspecified**

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

#### **KA20.1 Intrauterine growth restriction**

The fetus does not achieve its predicted genetic potential and infant, not light or small for gestational age, showing signs of fetal malnutrition.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

#### **KA20.10 Asymmetrical intrauterine growth restriction**

There is restriction of body weight followed by length with general head sparing. This condition occurs late in pregnancy and is caused by extrinsic factors. Fetal malnutrition leading to low ponderal index less than 2 (weight to length ratio) but weight not severe enough to qualify as small for gestational age.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

<b>KA20.11</b>	Symmetrical intrauterine growth restriction This condition begins earlier in pregnancy and there is a higher incidence of permanent neurologic sequela. It is often associated with either genetic abnormalities or fetal infection, especially 1st trimester viral infections.
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA20.12</b>	Intrauterine growth restriction associated with small for gestational age These infants are classified as small for gestational age but have also been subject to intrauterine growth restriction.
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA20.1Y</b>	Other specified intrauterine growth restriction
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA20.1Z</b>	Intrauterine growth restriction, unspecified
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA20.2</b>	<b>Fetal intrauterine malnutrition without mention of small for gestational age</b> Neonate, not light or small for gestational age, showing signs of fetal malnutrition, such as dry, peeling skin and loss of subcutaneous tissue
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
	<b>Exclusions:</b> fetal malnutrition with mention of: light for gestational age (KA21) fetal malnutrition with mention of: small for gestational age (KA20.0)
<b>KA20.Y</b>	<b>Other specified disorders of newborn related to slow fetal growth or fetal malnutrition</b>
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA20.Z</b>	<b>Disorders of newborn related to slow fetal growth or fetal malnutrition, unspecified</b>
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21**

**Disorders of newborn related to short gestation or low birth weight, not elsewhere classified**

Infants whose weight is appropriate for their gestational ages are termed appropriate for gestational age (AGA). Infants that are heavier than expected are large for gestational age (LGA). Conversely, those smaller than expected are considered small for gestational age (SGA).

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**Exclusions:** Disorders of newborn related to slow fetal growth or fetal malnutrition (KA20)

**KA21.0 Extremely low birth weight of newborn**

Newborn birth weight 999 g or less. Infants have increased morbidity including neurosensory disability, cerebral palsy, retinopathy of prematurity, deafness, pulmonary immaturity, chronic lung disease and subnormal cognitive function.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.00 Extremely low birth weight of newborn, 499g or less**

A paediatric condition in which the infant is born weighing 499 g or less.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.01 Extremely low birth weight of newborn, 500-749g**

A paediatric condition in which the infant is born weighing between 500 and 749 g.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.02 Extremely low birth weight of newborn, 750-999g**

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.0Z Extremely low birth weight of newborn, unspecified**

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.1 Very low birth weight of newborn**

A paediatric condition in which the infant is born weighing between 1000 and 1499 g.

**Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

**KA21.10 Very low birth weight of newborn, 1000-1249g**

A paediatric condition in which the infant is born weighing between 1000 and 1249 g.

**KA21.11 Very low birth weight of newborn, 1250-1499g**

A paediatric condition in which the infant is born weighing between 1250 and 1499 g.

- KA21.1Z** Very low birth weight of newborn, unspecified
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.2** **Low birth weight of newborn**
- A paediatric condition in which the infant is born weighing between 1500 and 2499 g.
- KA21.20** Low birth weight of newborn, 1500-1999g
- A paediatric condition in which the infant is born weighing between 1500 and 1999 g.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.21** Low birth weight of newborn, 2000-2499g
- A paediatric condition in which the infant is born weighing between 2000 and 2499 g.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.2Z** Low birth weight of newborn, unspecified
- KA21.3** **Extreme prematurity of newborn**
- Less than 28 completed weeks (less than 196 completed days) of gestation.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.30** Extreme prematurity of newborn, gestational age less than 22 completed weeks  
Extreme prematurity of newborn, gestational age less than 22 weeks, 0 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.31** Extreme prematurity of newborn, gestational age 22 completed weeks  
Extreme prematurity of newborn, gestational age 22 weeks, 0 days through 22 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.32** Extreme prematurity of newborn, gestational age 23 completed weeks  
Extreme prematurity of newborn, gestational age 23 weeks, 0 days through 23 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.33** Extreme prematurity of newborn, gestational age 24 completed weeks  
Extreme prematurity of newborn, gestational age 24 weeks, 0 days through 24 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

- KA21.34** Extreme prematurity of newborn, gestational age 25 completed weeks  
Extreme prematurity of newborn, gestational age 25 weeks, 0 days through 25 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.35** Extreme prematurity of newborn, gestational age 26 completed weeks  
Extreme prematurity of newborn, gestational age 26 weeks, 0 days through 26 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.36** Extreme prematurity of newborn, gestational age 27 completed weeks  
Extreme prematurity of newborn, gestational age 27 weeks, 0 days through 27 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.3Z** Extreme prematurity of newborn, unspecified
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.4** **Preterm newborn**  
Preterm: is less than 37 completed weeks (less than 259 days) of gestation.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment must be given to gestational age.
- KA21.40** Preterm newborn, gestational age 28 completed weeks  
Preterm newborn, gestational age 28 weeks, 0 days through 28 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.41** Preterm newborn, gestational age 29 completed weeks  
Preterm newborn, gestational age 29 weeks, 0 days through 29 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.42** Preterm newborn, gestational age 30 completed weeks  
Preterm newborn, gestational age 30 weeks, 0 days through 30 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.43** Preterm newborn, gestational age 31 completed weeks  
Preterm newborn, gestational age 31 weeks, 0 days through 31 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

- KA21.44** Preterm newborn, gestational age 32 completed weeks  
Preterm newborn, gestational age 32 weeks, 0 days through 32 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.45** Preterm newborn, gestational age 33 completed weeks  
Preterm newborn, gestational age 33 weeks, 0 days through 33 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.46** Preterm newborn, gestational age 34 completed weeks  
Preterm newborn, gestational age 34 weeks, 0 days through 34 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.47** Preterm newborn, gestational age 35 completed weeks  
Preterm newborn, gestational age 35 weeks, 0 days through 35 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.48** Preterm newborn, gestational age 36 completed weeks  
Preterm newborn, gestational age 36 weeks, 0 days through 36 weeks, 6 days
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA21.4Z** Preterm newborn, unspecified
- Coding Note:** When both birth weight and gestational age are available, priority of assignment must be given to gestational age.

- KA22** **Disorders of newborn related to long gestation or high birth weight**  
Usually implies gestation > 290 or 294 days (42 weeks); high birthweight = >4000g.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- KA22.0** **Exceptionally large newborn**  
An exceptionally large baby is defined as having a weight at birth of > 4500 g, regardless of gestational age at birth.
- Coding Note:** When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
- Exclusions:** Syndrome of infant of mother with gestational diabetes (KB60.0)  
Syndrome of infant of a diabetic mother, type 1 or 2, nongestational, insulin dependent (KB60.1)

<b>KA22.1</b>	<b>Large newborn for gestational age</b> A birth weight greater than the 90th percentile for gestational age or birth weight 4000-4499 g at term regardless of period of gestation.
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
	<b>Exclusions:</b> Syndrome of infant of mother with gestational diabetes (KB60.0)  Syndrome of infant of a diabetic mother, type 1 or 2, nongestational, insulin dependent (KB60.1)
<b>KA22.2</b>	<b>Post-term newborn</b> A condition of the newborn characterised by a gestational period that reached or exceeded 42 completed weeks (294 days or more) of gestation.
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
	<b>Exclusions:</b> Postmaturity syndrome (KA22.3)
<b>KA22.3</b>	<b>Postmaturity syndrome</b> Post-term infant with signs of dysmaturity including dry peeling wrinkled skin, yellow staining of the skin, long stained fingernails, abundant scalp hair, thin growth retarded body with long thin limbs and hyperalert behaviours.
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
	<b>Exclusions:</b> Post-term newborn (KA22.2)
<b>KA2Y</b>	<b>Other specified disorders of newborn related to length of gestation or fetal growth</b>
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.
<b>KA2Z</b>	<b>Disorders of newborn related to length of gestation or fetal growth, unspecified</b>
<b>Coding Note:</b>	When both birth weight and gestational age are available, priority of assignment should be given to birth weight.

## Birth injury (KA40-KA4Z)

A group of conditions characterised by the presence of damage of the tissues and organs of a newly delivered child due to physical pressure or injury during delivery.

<b>KA40</b>	<b>Birth injury to central nervous system</b> A condition characterised by the presence of damage to the central nervous system due to physical pressure or injury during delivery.
-------------	--

<b>KA40.0</b>	<b>Intracranial laceration or haemorrhage due to birth injury</b> A group of conditions characterised as a traumatic brain injury occurring when the tissue of the brain is mechanically cut or torn and bleeds in a newly delivered child due to physical pressure or injury during delivery.
	<b>Exclusions:</b> intracranial haemorrhage of fetus or newborn: due to anoxia, hypoxia, or ischaemia (KA82)
	Intracranial nontraumatic haemorrhage of fetus or newborn (KA82)
<b>KA40.00</b>	Subdural haemorrhage due to birth injury Haemorrhage into the subdural space (between the dura and the arachnoid) resulting from traumatic tearing of the bridging veins and venous sinuses due to rotational movement of the brain secondary to a traumatic delivery.
	<b>Exclusions:</b> subdural haemorrhage accompanying tentorial tear (KA40.05)
<b>KA40.01</b>	Cerebral haemorrhage due to birth injury Cerebral haemorrhage due to birth injury refers to haemorrhage occurring into the cerebral parenchyma as a result of birth trauma, and is commonly accompanied by extracerebral contusion and/or bleeding haemorrhage in the scalp. May have associated skull fracture(s).
<b>KA40.02</b>	Cerebellar haemorrhage due to birth injury Haemorrhage into the cerebellum, hemispheres or vermis, due to trauma. Occipitalocephalostasis with breech delivery is the most common cause of this injury.
<b>KA40.03</b>	Intraventricular haemorrhage due to birth injury Traumatic haemorrhage into the intraventricular space as the dominant lesion, usually in a term infant, a result of birth trauma. Usually seen in conjunction with other intracranial bleeding (parenchymal, subdural, subarachnoid) and can be seen in the term or preterm infant.
<b>KA40.04</b>	Subarachnoid haemorrhage due to birth injury Haemorrhage within the subarachnoid space (the area between the arachnoid membrane and the pia matter) due to either leakage from the leptomeningeal plexus or rupture of bridging veins within the subarachnoid space.
<b>KA40.05</b>	Tentorial tear due to birth injury Lacerations of tentorium cerebelli due to birth trauma, usually resulting in infratentorial haemorrhages; lesser degrees of tentorial injury most commonly associated with subdural bleeds.
<b>KA40.06</b>	Cerebellar contusion due to birth injury A bruise of the brain tissue. There is a punctuate haemorrhage which occurs in the long gyri.
<b>KA40.07</b>	Cerebral contusion due to birth injury A bruise of the brain tissue. Focal region of necrosis and haemorrhage, usually involving the cerebral cortex and subcortical white matter

- KA40.08** Extradural or epidural haemorrhage due to birth injury  
Haemorrhage in the plane between the skull bone and the periosteum on the inner surface of the skull from injury to the middle meningeal artery from birth trauma
- KA40.0Y** Other specified intracranial laceration or haemorrhage due to birth injury
- KA40.0Z** Intracranial laceration or haemorrhage due to birth injury, unspecified
- KA40.1** **Cerebral oedema due to birth injury**  
Cerebral oedema is an excessive accumulation of water in the intracellular or extracellular spaces of the brain. There is a breakdown of the tight endothelial junctions which make up the blood brain barrier.
- KA40.2** **Birth injury to spine or spinal cord**  
Injury to the spinal cord incurred during delivery from excessive traction or rotation, principally occurring during breech and rotational forceps during vertex deliveries
- KA40.3** **Birth injury to brainstem**  
Injury to the brain stem occurring during delivery due to excessive longitudinal traction especially when this traction is combined with flexion and torsion of the spine during delivery.
- Exclusions:** Fracture, dislocation or subluxation of spine due to birth injury (KA45.4)
- KA40.Y** Other specified birth injury to central nervous system
- KA40.Z** Birth injury to central nervous system, unspecified
- KA41** **Birth injury to eye**  
Ocular injuries due to birth trauma include lid lacerations, hyphema, rupture of Descemet's membrane of cornea, vitreous haemorrhage, corneal oedema, abrasions and lacerations, orbital haemorrhage and fractures, and intraocular haemorrhages.
- KA42** **Birth injury to scalp**  
A condition characterised by the presence of damage to the scalp due to physical pressure or injury during delivery.
- KA42.0** **Bruising of scalp due to birth injury**  
Erythema of the scalp occurring usually as a result of dystocia or application of forceps
- KA42.1** **Cephalohaematoma due to birth injury**  
Cephalhaematoma is a subperiosteal collection of blood caused by rupture of vessels beneath the periosteum and does not extend across the suture lines.
- KA42.2** **Chignon due to birth injury**  
Chignon is a temporary swelling (oedema of the scalp) secondary to the placement of a ventouse suction cup used in assisted vacuum deliveries. It usually disappears after several hours

- KA42.3 Monitoring injury of scalp of newborn**  
Injuries to the scalp from use of intrapartum fetal monitoring devices including injury following fetal blood sampling.
- KA42.4 Subgaleal epicranial subaponeurotic haemorrhage due to birth injury**  
Subgaleal haemorrhage is a collection of blood in the space between the epicranial aponeurosis of the scalp and the periosteum of the skull.
- KA42.Y Other specified birth injury to scalp**
- KA42.Z Birth injury to scalp, unspecified**
- KA43 Birth injury to skin or soft tissues**  
Superficial injury including abrasions, lacerations and ecchymoses sustained during birth to sites other than scalp face and external genitalia
- Exclusions:** Birth injury to scalp (KA42)
- KA43.0 Birth injury to sternocleidomastoid**  
Injury to the sternomastoid muscle due to birth usually presents with torticollis (tilt and rotation of head) and a firm, spindle-shaped, immobile mass in the midportion of sternomastoid muscle.
- KA43.1 Birth injury to external genitalia**  
Injuries of external genitalia such as oedema, ecchymoses, and haematomas of scrotum and labia majora, haematocoele, and trauma to the testes as a result of trauma during birth, especially after a breech delivery
- KA43.2 Subcutaneous fat necrosis due to birth injury**  
Subcutaneous fat necrosis is a rare acute transient hypodermatitis that develops within first weeks of life in term infants.
- Exclusions:** Subcutaneous fat necrosis of the newborn (KC22.0)
- KA43.3 Birth injury to face**  
Birth injuries to face include injuries sustained to nose (deviations, deformities, and septal damage), ears (abrasions, lacerations, deformities and haematomas).
- KA43.Y Other specified birth injury to skin or soft tissues**
- KA43.Z Birth injury to skin or soft tissues, unspecified**
- KA44 Birth injury to peripheral nervous system**  
A condition characterised by the presence of damage to the nerves and ganglia outside of the brain and spinal cord due to physical pressure or injury during delivery.
- KA44.0 Birth injury to cranial nerves**  
Birth injuries to the cranial nerves include contusion, avulsion, rupture, neuroma and praxis.

- KA44.00** Birth injury to facial nerve  
 Facial palsy involving both upper and lower halves of the face caused by traumatic compression of the facial nerve as it exits the stylomastoid foramen, or as it passes over the ramus of the mandible.
- KA44.0Y** Birth injury to other specified cranial nerve
- KA44.0Z** Birth injury to unspecified cranial nerve
- KA44.1** **Brachial plexus palsy in newborn**  
 Brachial plexus birth palsy occurs when the brachial plexus are damaged during birth. It occurs most typically during a difficult delivery.
- KA44.10** Erb paralysis  
 Erb paralysis is one of the most common brachial plexus birth palsies. The injury occurs in the upper brachial plexus nerves and affects the upper arm.
- KA44.11** Klumpke paralysis  
 Klumpke paralysis is a form of brachial plexus palsy that causes paralysis in the hand.
- KA44.1Z** Brachial plexus palsy in newborn, unspecified
- KA44.2** **Phrenic nerve paralysis due to birth injury**  
 Birth injury to the cervical roots 3 to 5 resulting in the paralysis of the ipsilateral diaphragm usually after a difficult breech delivery
- KA44.Y** **Birth injury to other specified peripheral nerve**
- KA44.Z** **Birth injury to unspecified peripheral nerve**
- KA45** **Birth injury to skeleton**  
 A condition characterised by the presence of damage to the skeleton due to physical pressure or injury during delivery.  
**Exclusions:** Birth injury to spine or spinal cord (KA40.2)
- KA45.0** **Fracture of skull due to birth injury**  
 Linear or depressed fractures of skull bones resulting from injury during birth, including those related to forceps and vacuum assisted delivery
- KA45.00** Linear skull fracture due to birth injury  
 Linear fractures of skull bones resulting from injury during birth, including those related to forceps and vacuum assisted delivery.
- KA45.01** Depressed skull fracture due to birth injury  
 Depressed fractures of skull bones resulting from injury during birth, including those related to forceps and vacuum assisted delivery
- KA45.0Y** Other specified fracture of skull due to birth injury
- KA45.0Z** Fracture of skull due to birth injury, unspecified

- KA45.1      Occipital osteodiastasis due to birth injury**  
Occipital osteodiastasis (OOD) is a form of birth injury characterised by a tear along the innominate (posterior occipital or supraoccipital-exoccipital) synchondrosis with separation of the occipital squama from the lateral or condylar parts of the occipital bone.
- KA45.2      Birth injury to facial bones**
- KA45.20     Mandibular bone fracture due to birth injury**
- KA45.21     Nasal bone fracture due to birth injury**
- KA45.2Y     Birth injury to other specified facial bones**
- KA45.2Z     Birth injury to facial bones, unspecified**
- KA45.3      Birth injury of thorax**  
Fracture of bones of the thorax including ribs, sternum due to birth injury.
- KA45.4      Fracture, dislocation or subluxation of spine due to birth injury**
- KA45.5      Fracture of clavicle due to birth injury**  
This is a greenstick fracture of the clavicle that may occur during the birthing process.
- KA45.6      Birth injury to long bones**
- KA45.Y       Other specified birth injury to skeleton**
- KA45.Z       Birth injury to skeleton, unspecified**
- KA46        Birth injury to other organs**  
A group of conditions characterised by the presence of damage of organs of a newly delivered child due to physical pressure or injury during delivery.
- KA46.0      Birth injury to liver**  
Rupture or subcapsular haemorrhage into the liver parenchyma as a result of birth trauma usually seen in large for gestational age infants, those with hepatomegaly, those born by breech delivery; may present as haemoperitoneum
- KA46.1      Birth injury to spleen**  
Rupture or subcapsular haemorrhage into spleen as a result of birth trauma; may present as haemoperitoneum  
*Inclusions:*      Rupture of spleen due to birth injury
- KA46.2      Adrenal haemorrhage due to birth injury**
- KA46.Y       Birth injury to other specified organ**
- KA46.Z       Birth injury, unspecified**

## Infections of the fetus or newborn (KA60-KA6Z)

- Inclusions:** infections acquired in utero or during birth
- Exclusions:** human immunodeficiency virus [HIV] disease (1C60-1C62.Z)  
Congenital pneumonia (KB24)  
congenital gonococcal infection (1A70-1A7Z)  
Asymptomatic human immunodeficiency virus infection (1C62.0)  
Gastroenteritis or colitis of infectious origin (1A00-1A40.Z)  
Laboratory evidence of human immunodeficiency virus (MA14.0)

**Coded Elsewhere:** Fetus or newborn affected by maternal infectious diseases (KA00.3)  
Congenital syphilis (1A60)

**KA60**

### Sepsis of fetus or newborn

- Coded Elsewhere:** Bacterial infection of fetus or newborn due to other and unspecified streptococci (KA61.Z)  
Bacterial infection of fetus or newborn due to other and unspecified staphylococci (KA61.Z)

**KA61**

### Other bacterial infections of the fetus or newborn

**Coding Note:** Code also the causing condition

- Coded Elsewhere:** Early congenital syphilis, latent (1A60.1)  
Early congenital syphilis, symptomatic (1A60.0)  
Neonatal necrotising fasciitis (1B71.2)  
Tetanus neonatorum (1C15)

**KA61.0**

### Congenital tuberculosis

A disease affecting infants, caused by an infection with the bacteria Mycobacterium tuberculosis in utero. Transmission is by vertical transmission.

**KA61.1**

### Neonatal listeriosis

A condition affecting fetuses or neonates, caused by an infection with the gram-positive bacteria Listeria. This condition is characterised by respiratory distress and shock in the neonate, by stillbirth, or by abortion. Transmission is by vertical transmission. Confirmation is by identification of Listeria in the neonate and mother.

**KA61.Z**

### Bacterial infection of the fetus or newborn, unspecified

**Coding Note:** Code also the causing condition

**KA62**

### Viral infection in the fetus or newborn

Any condition affecting fetuses or newborns, caused by an infection with a virus.

**KA62.0**

### Congenital Zika virus infection

- KA62.1 Congenital Epstein-Barr virus infection**  
There are several forms of Epstein–Barr virus infection. Infectious mononucleosis, nasopharyngeal carcinoma, and Burkitt's lymphoma can all be caused by the Epstein–Barr virus.
- KA62.2 Congenital Varicella Zoster virus infection**  
Transplacentally acquired Varicella zoster virus infection. Both the gestational age at the time of maternal infection and the time interval between maternal infection and birth have major influences on the clinical course.
- KA62.3 Congenital cytomegalovirus infection**  
A condition affecting neonates, caused by an infection with cytomegalovirus in utero. This condition is characterised by jaundice, low birth weight, splenomegaly, hepatomegaly, or pneumonia if symptoms develop shortly after birth, or may be asymptomatic. This condition commonly presents later in life with loss of hearing, loss of vision, or developmental disabilities. Transmission is by vertical transmission. Confirmation is by detection of cytomegalovirus in neonatal urine, saliva, blood, or other body tissues within 2-3 weeks of birth.
- KA62.4 Congenital echovirus infection**  
A disease affecting neonates, caused by an infection with enteric cytopathic human orphan (ECHO) virus in utero. This disease presents with various symptoms depending on the site of the infection, or may be asymptomatic. Transmission is by vertical transmission. Confirmation is by identification of ECHO virus in the neonate.
- KA62.5 Congenital enterovirus infection**  
Congenital viral infections with enteroviruses (including coxsackie viruses and ECHO viruses) are infectious embryofetopathies that have been reported to cause fetal malformations, acute systemic illness in the newborn and long-term neurodevelopmental abnormalities.
- KA62.6 Congenital human immunodeficiency virus infection**  
A disease affecting neonates, caused by an infection with human immunodeficiency virus in utero. Transmission is by vertical transmission. Confirmation is by identification of human immunodeficiency virus in the neonate.
- KA62.7 Congenital parvovirus syndrome**  
Fetal parvovirus syndrome is a fetopathy likely to occur when a pregnant woman is infected by parvovirus B19. Fetal parvovirus infection results in aplastic crisis. Anaemia induces a risk of hydrops and fetal death by cardiac failure in 10 to 20% of cases.
- KA62.8 Congenital rubella syndrome**  
A disease caused by an infection with the rubella virus in utero. This disease presents with symptoms depending on the timing of infection of the fetus and may present with birth defects (such as hearing loss), or intrauterine growth retardation. Transmission is by vertical transmission. Confirmation is by identification of rubella virus or detection of anti-rubella virus IgM antibodies in the neonate or infant.

<b>KA62.9</b>	<b>Congenital viral hepatitis</b> A disease of the liver affecting the neonate, caused by an infection with either hepatitis A, B, C, D, or E virus in utero. This disease is characterised by lethargy, jaundice, abdominal distention, failure to thrive, or clay coloured stools. Transmission is by vertical transmission. Confirmation is by identification of the hepatitis A, B, C, D, or E virus in a blood sample from the neonate.
<b>KA62.A</b>	<b>Perinatal Herpes simplex infection</b> Herpes simplex infection acquired during the perinatal period, normally from active herpes infection of the mother's genital tract, but may also be transmitted in utero.
<b>KA62.Y</b>	<b>Other specified viral infection in the fetus or newborn</b>
<b>KA62.Z</b>	<b>Viral infection in the fetus or newborn, unspecified</b>
<b>KA63</b>	<b>Fungal infection of fetus or newborn</b> Any condition affecting fetuses or newborns, caused by an infection with a fungal agent.
<b>KA63.0</b>	<b>Malassezia infection in newborn</b> A condition affecting newborns, caused by an infection with Malassezia that leads to a severe systemic inflammatory response. This condition is characterised by fever or respiratory distress. Confirmation is by identification of Malassezia in a blood sample.
<b>KA63.1</b>	<b>Neonatal aspergillosis</b> A disease affecting neonates, caused by an infection with the fungi Aspergillus. This disease presents with clinical symptoms depending on the site of infection. Transmission is by inhalation of Aspergillus spores, or direct contact. Confirmation is by identification of Aspergillus from affected sites.
<b>KA63.2</b>	<b>Neonatal candidosis</b> A condition affecting neonates, caused by an infection with the fungi Candida. This condition is characterised by apnoea, thrombocytopenia, or decreasing respiratory function or other symptoms depending on the site of infection. Transmission is vertical (from the mother to the baby). Confirmation is by identification of Candida in a blood or urine sample.
	<b>Coded Elsewhere:</b> Neonatal mucocutaneous candidosis (EH12)
<b>KA63.Y</b>	<b>Other specified fungal infection of fetus or newborn</b>
<b>KA63.Z</b>	<b>Fungal infection of fetus or newborn, unspecified</b>
<b>KA64</b>	<b>Parasitic diseases in the fetus or newborn</b> Any condition affecting fetuses or newborns, caused by an infection with a parasite.  <b>Exclusions:</b> Tetanus neonatorum (1C15) Congenital syphilis (1A60) Necrotising enterocolitis of newborn (KB88)

- KA64.0** **Congenital toxoplasmosis**  
A disease caused by an infection with the protozoan parasite *Toxoplasma gondii* in utero. This disease is characterised by chorioretinitis, hydrocephalus, intracranial calcifications, anaemia, or neurological deficits that develop after birth. This disease may present at birth with jaundice, premature birth, hepatosplenomegaly, myocarditis, pneumonitis, or rash. Transmission is by vertical transmission. In the fetus, confirmation is by identification of *Toxoplasma gondii* in amniotic fluid; in the neonate, confirmation is by identification of *Toxoplasma gondii* in body fluids or tissues, or detection of antibodies against *Toxoplasma gondii*.
- KA64.1** **Congenital falciparum malaria**  
A disease caused by an infection with the protozoan parasite *Plasmodium falciparum* in utero. This disease is characterised by fever, anaemia, splenomegaly, hepatomegaly, jaundice, regurgitation, diarrhoea, or poor feeding. This disease may also present with respiratory distress, drowsiness, or cyanosis. Transmission is by vertical transmission. Confirmation is by identification of the *Plasmodium falciparum* in a blood sample from the neonate.
- KA64.Y** **Other specified parasitic diseases in the fetus or newborn**
- KA64.Z** **Parasitic diseases in the fetus or newborn, unspecified**
- KA65** **Neonatal infections of certain specified sites**  
*Coded Elsewhere:* Neonatal tracheitis (KB25)  
Neonatal skin infection (EH10-EH1Z)
- KA65.0** **Neonatal conjunctivitis or dacryocystitis**  
This refers to inflammation of the conjunctiva (the outermost layer of the eye and the inner surface of the eyelids) and the inflammation of the nasolacrimal sac, frequently caused by nasolacrimal duct obstruction or infection.  
*Exclusions:* Gonococcal conjunctivitis (1A72.4)
- KA65.1** **Omphalitis of newborn**  
A disease of the umbilical cord affecting newborns, commonly caused by an infection with a bacterial source. This disease is characterised by purulent or foul-smelling discharge from the umbilicus or umbilical stump, periumbilical erythema, oedema, or tenderness. This disease may also present with fever, hypothermia, jaundice, tachycardia, hypotension, tachypnoea, respiratory distress, apnoea, or abdominal distention with absent bowel sounds. Transmission is by vertical transmission or iatrogenic transmission. Confirmation is by identification of the infectious agent.
- KA65.2** **Neonatal urinary tract infection**  
A condition of the urinary tract affecting neonates, commonly caused by an infection with a bacterial source. This condition is characterised by fever, pyuria, jaundice, poor appetite, diarrhoea, blood tinged stool, vomiting, or abdominal distention. This condition may also be asymptomatic. Transmission is by vertical transmission. Confirmation is by identification of the infectious agent in a urine sample.

KA65.3	<b>Neonatal infectious mastitis</b> A disease of the breasts in neonates, may be caused by a maternal infection with a bacterial source. This disease is characterised by swelling, erythema, warmth, tenderness, induration of the breast, or purulent discharge from the nipple. It is usually unilateral. This disease may also present with breast abscesses.
	<b>Exclusions:</b> Breast engorgement of newborn (KC41.0) noninfective mastitis of newborn (KC41.0)
	<b>Coded Elsewhere:</b> Neonatal staphylococcal mastitis (EH11) Neonatal streptococcal mastitis (EH11)
KA65.4	<b>Neonatal meningitis</b>
KA65.Y	<b>Neonatal infections of other specified sites</b>
KA6Y	<b>Other specified infections of the fetus or newborn</b>
KA6Z	<b>Infections of the fetus or newborn, unspecified</b>

### Haemorrhagic or haematological disorders of fetus or newborn (KA80-KA8Z)

A group of conditions occurring during the period of time around childbirth, especially the five months before and one month after birth which are associated with bleeding, the blood, and blood forming organs.

<b>Exclusions:</b>	Hereditary haemolytic anaemia (3A10) Gilbert syndrome (5C58.01) Congenital stenosis or stricture of bile ducts (LB20.22) Crigler-Najjar syndrome (5C58.00) Dubin-Johnson syndrome (5C58.02)
<b>Coded Elsewhere:</b>	Hereditary vitamin B12 deficiency anaemia (3A01.0) Neonatal vitamin B12 deficiency anaemia (3A01.1) Congenital or neonatal vitamin B12 deficiency anaemia (3A01.Z)
KA80	<b>Fetal blood loss</b>

Fetal blood loss is a loss of blood from the fetal circulation during pregnancy, labour, or delivery. Due to the small volume of fetal blood that is present, even a small loss can lead to anaemia or fetal death.

KA80.0	<b>Fetal blood loss from vasa praevia</b> In vasa praevia, the fetal blood vessels connecting the placenta and umbilical cord cross the internal cervical os, the entrance to the birth canal, underneath the fetus.
KA80.1	<b>Fetal blood loss from ruptured cord</b> The umbilical cord can rupture during labour and delivery and lead to fetal blood loss. Possible reasons include: traction on an abnormally short cord, a cord that is entangled around the fetus, a thin friable cord, or a cord with vascular abnormalities. Fetal blood loss can also occur following accidental cord puncture during amniocentesis or following in utero cordocentesis or transfusion.

- KA80.2 Fetal blood loss from placenta**  
Fetal blood loss can result from placental abruption, which is when the placenta separates from the uterine wall prior to delivery. Placental abruptions occur under conditions of maternal hypertension and drug use (e.g. cocaine), maternal vascular and collagen vascular disease, maternal clotting disorders, and following direct abdominal trauma. Fetal blood loss can also result from accidental incision of the placenta during a caesarean section.
- KA80.3 Haemorrhage into co-twin**  
Monozygous twins often share a placenta. Vascular anastomoses within the placenta allow for the transfer of blood between the two fetuses. In some cases, the flow is unbalanced and one fetus (larger, plethoric, and polycythaemic twin) has an overload of fluid, while the other (smaller, hydropic twin) becomes anaemic.
- KA80.4 Haemorrhage into maternal circulation**  
Fetal-maternal haemorrhage occurs when the trophoblastic lining of the placenta fails to act as a barrier and allows fetal blood cells to enter the maternal circulation.
- KA80.5 Fetal blood loss from cut end of co-twin cord**  
Sometimes the blood content of monozygotic twins differs considerably, which can occur when anastomoses exist. One twin loses blood through shunts, while the other gains a large quantity of blood. Therefore, following the delivery of one twin, the other may bleed through these anastomoses if the umbilical cord of the delivered twin is not immediately clamped.
- KA80.Y Other specified fetal blood loss**
- KA80.Z Fetal blood loss, unspecified**
- KA81 Umbilical haemorrhage of newborn**  
A condition characterised by bleeding from the umbilical cord stump of a newborn.  
**Exclusions:** omphalitis with mild haemorrhage (KA65.1)
- KA82 Intracranial nontraumatic haemorrhage of fetus or newborn**  
Intraventricular (nontraumatic) haemorrhage of the fetus and newborn is a condition characterised by bleeding within the skull of a newborn that is not due to injury causing physical damage.  
**Exclusions:** intracranial haemorrhage due to birth injury (KA40.0)  
Intracranial haemorrhage due to head trauma (NA00-NA0Z)
- KA82.0 Intraventricular nontraumatic haemorrhage, grade 1, of fetus or newborn**  
A condition characterised by bleeding into the subependymal region or germinal matrix of the ventricular system of the brain of a newborn that is not due to injury causing physical damage.

- KA82.1 Intraventricular nontraumatic haemorrhage, grade 2, of fetus or newborn**  
 Intraventricular (nontraumatic) haemorrhage, grade 2 is a condition of the fetus or newborn characterised by bleeding into the germinal matrix of the ventricular system with bleeding into the lateral ventricles of the brain without ventricular enlargement.
- Inclusions:** Subependymal haemorrhage with intraventricular extension without ventricular dilatation
- KA82.2 Intraventricular nontraumatic haemorrhage, grade 3, of fetus or newborn**  
 Intraventricular (nontraumatic) haemorrhage, grade 3, of the fetus and newborn located in the subependymal region with extension into the lateral ventricles, with ventricular enlargement.
- Inclusions:** Subependymal haemorrhage with both intraventricular and ventricular dilatation
- KA82.3 Intraventricular nontraumatic haemorrhage, grade 4, of fetus or newborn**
- KA82.4 Intracerebral nontraumatic haemorrhage of fetus or newborn**  
 A condition characterised by bleeding within the brain tissue of a fetus or newborn that is not due to injury causing physical damage.
- KA82.5 Subarachnoid nontraumatic haemorrhage of fetus or newborn**  
 A condition characterised by bleeding into the area between the arachnoid membrane and the pia mater (subarachnoid space) surrounding the brain of a fetus or newborn that is not due to injury causing physical damage.
- KA82.6 Cerebellar nontraumatic, hemispheres or vermis or posterior fossa haemorrhage of fetus or newborn**  
 A condition characterised by bleeding within the part of the intracranial cavity located between the foramen magnum and tentorium cerebelli (posterior fossa) including bleeding in tissue of the cerebellum or brain stem, of a fetus or newborn that is not due to injury causing physical damage.
- KA82.7 Subdural nontraumatic haemorrhage of fetus or newborn**
- KA82.Z Intracranial nontraumatic haemorrhage of fetus or newborn, unspecified**
- KA83 Certain specified neonatal haemorrhages**  
 Any other condition characterised by bleeding in a newborn.
- Exclusions:** Pulmonary haemorrhage originating in the perinatal period (KB28)  
 Fetal blood loss (KA80)
- KA83.0 Neonatal bleeding originating in the mouth, nose or pharynx**  
**Exclusions:** Neonatal haematemesis or melaena due to swallowed maternal blood (KB8A)

<b>KA83.1</b>	<b>Neonatal bleeding originating in the oesophagus, stomach, small or large intestine</b> Bleeding in the neonate that originates from the digestive system. Most common causes include enteritis, gastritis, milk protein allergies, intussusception, and/or erosions of mucosa.
	<p><b><i>Exclusions:</i></b>      Neonatal volvulus (LB18)                            Meckel diverticulum with complication (LB15.0)                            Neonatal haematemesis or melaena due to swallowed maternal blood (KB8A)</p>
<b>KA83.2</b>	<b>Neonatal rectal haemorrhage</b> A condition characterised by bleeding in the rectum of a newborn.
<b>KA83.3</b>	<b>Neonatal hepatic haemorrhage</b> Haemorrhage of the liver in the newborn.
<b>KA83.4</b>	<b>Neonatal haemorrhage originating in adrenal gland</b> A condition characterised by bleeding into the adrenal glands in a newborn.
<b>KA83.5</b>	<b>Neonatal haemorrhage originating in spleen</b>
<b>KA83.6</b>	<b>Neonatal haemorrhage originating in kidney or bladder</b>
<b>KA83.7</b>	<b>Neonatal haemorrhage originating in trachea or pulmonary parenchyma</b>
<b>KA83.8</b>	<b>Neonatal cutaneous haemorrhage</b> <p><b><i>Exclusions:</i></b>      Bruising of scalp due to birth injury (KA42.0)                            Cephalohaematoma due to birth injury (KA42.1)</p>
<b>KA83.9</b>	<b>Neonatal vaginal or uterine haemorrhage</b> A condition characterised by bleeding from the vagina of a newborn which is excessive or lasts longer than the first month of life.
	<p><b><i>Inclusions:</i></b>      Pseudomenses</p>
<b>KA83.A</b>	<b>Neonatal epistaxis</b> A condition characterised by bleeding from the nose of a newborn.
<b>KA84</b>	<b>Haemolytic disease of fetus or newborn</b> A paediatric alloimmune condition characterised by the break-down of red blood cells by IgG antibodies which are transmitted from mother to child via the placenta.
<b>KA84.0</b>	<b>Rh isoimmunization of fetus or newborn</b> A condition characterised by the transmission of antibodies from a mother to the child via the placenta against the Rhesus factor of blood. Such antibodies were developed in a Rhesus factor negative mother subsequent to exposure to Rhesus factor positive blood resulting in the break-down of the red blood cells of the fetus.
<b>KA84.1</b>	<b>Isoimmunization due to other red cell factors</b>

- KA84.2 ABO isoimmunization of fetus or newborn**  
A condition of the newborn characterized by the destruction of red blood cells initiated by the transmission of anti-A or anti-B antibodies from a mother to the child via the placenta against A or B antigens of the newborn's blood.
- KA84.3 Haemolytic anaemia due to other unclassified antibodies of fetus or newborn**
- KA84.4 Haemolytic disease due to disease of other neonatal organs**
- KA84.5 Neonatal haemolysis due to systemic bacterial infection with or without concomitant diffuse intravascular coagulation**
- KA84.Z Haemolytic disease of fetus or newborn, unspecified**
- KA85 Hydrops fetalis due to haemolytic disease**  
A fetal condition characterised by an accumulation of fluid or oedema in at least two fetal compartments, including subcutaneous compartments, the pleura, the pericardium, or the abdomen, due to the antibody-mediated break-down of fetal red blood cells.
- Exclusions:** Hydrops fetalis not due to haemolytic disease (KC41.1)
- KA85.0 Hydrops fetalis due to isoimmunization**  
A fetal condition characterised by an accumulation of fluid or oedema in at least two fetal compartments, including subcutaneous compartments, the pleura, the pericardium, or the abdomen, due to the transmission of IgG antibodies against the Rhesus factor of blood from the mother to the child via the placenta that break-down of the red blood cells of the fetus.
- KA85.Y Other specified hydrops fetalis due to haemolytic disease**
- KA85.Z Hydrops fetalis due to haemolytic disease, unspecified**
- KA86 Neonatal kernicterus**  
Kernicterus is a pathologic diagnosis of the neonate that is characterised by yellow staining of the basal ganglia following elevated bilirubin concentrations in the blood and/or a breech in the blood brain barrier more common in the premature infant or the sick term neonate. It is characterised later in infancy and childhood by hearing deficits, choreoathetosis, and varying degrees of cognitive deficit.
- Exclusions:** kernicterus due to inborn errors of metabolism (5C50-5C5Z)
- KA87 Neonatal hyperbilirubinaemia**  
A condition characterised as an increased level of bilirubin above 85 µmol/l (5 mg/dL) which manifests as yellowing of the eyes, skin, and other tissues of a newborn due to excessive break-down of red blood cells for any other reason not classified elsewhere.
- Exclusions:** jaundice due to isoimmunization (KA84.0)
- Coded Elsewhere:** Neonatal hyperbilirubinaemia due to red cell haemolysis with infection (KA6Y)

- KA87.0** **Neonatal hyperbilirubinaemia due to swallowed maternal blood**  
A condition characterised as an increased level of bilirubin above 85 umol/l (5 mg/dL) which manifests as yellowing of the eyes, skin, and other tissues of a newborn due to consumption by the newborn of blood from the mother.
- KA87.1** **Neonatal hyperbilirubinaemia due to enzymatic defect in bilirubin degradation**
- KA87.2** **Neonatal hyperbilirubinaemia due to breast milk inhibitor of bilirubin conjugation**  
A paediatric condition characterised by persistently increased level of bilirubin above 85 umol/l (5 mg/dL) manifesting as yellowing of the eyes, skin, and other tissues of a newborn due to any chemical substance that prevents or decreases the production of breast milk by the mother.
- KA87.3** **Neonatal hyperbilirubinaemia due to total parenteral nutrition**  
A paediatric condition characterised by persistently increased level of bilirubin above 85 umol/l (5 mg/dL) manifesting as yellowing of the eyes, skin, and other tissues of a newborn due to intravenous feeding which bypasses the normal processes of eating and digestion.
- KA87.4** **Neonatal hyperbilirubinaemia due to drugs or toxins transmitted from mother**
- KA87.5** **Neonatal hyperbilirubinaemia due to drugs or toxins given to newborn**
- KA87.6** **Neonatal hyperbilirubinaemia from other or unspecified hepatocellular damage**
- KA87.Y** **Other specified neonatal hyperbilirubinaemia**
- KA87.Z** **Neonatal hyperbilirubinaemia, unspecified**
- KA88** **Disseminated intravascular coagulation of fetus or newborn**  
Neonatal purpura fulminans is a potentially lethal disorder characterised by progressive haemorrhagic necrosis of the skin associated with cutaneous vascular thrombosis. It is usually due to a genetically transmitted thrombophilic disorder: most commonly homozygous deficiency of protein C or, less frequently, protein S.
- KA89** **Transient neonatal thrombocytopaenia**  
A rare paediatric condition characterised by a temporary relative decrease in the number of platelets in the blood associated with either increased destruction or decreased production of platelets in a newborn.
- KA89.0** **Thrombocytopaenia following systemic infection, including diffuse intravascular coagulation**
- KA89.Y** **Other specified transient neonatal thrombocytopaenia**
- KA89.Z** **Transient neonatal thrombocytopaenia, unspecified**
- KA8A** **Polycythaemia neonatorum**  
Polycythaemia of the neonate represents an excessive quality of circulating red blood cells due to excessive marrow production and haematocrits that exceed ~60%.

- KA8A.0** **Polycythaemia neonatorum due to placental insufficiency or fetal intrauterine growth restriction**
- KA8A.1** **Polycythaemia neonatorum due to twin to twin transfusion**
- KA8A.2** **Polycythaemia neonatorum due to inherited disorder of erythropoietin production**
- KA8A.3** **Polycythaemia neonatorum following umbilical cord transfusion or stripping at delivery**
- KA8A.4** **Polycythaemia neonatorum following blood transfusion**
- KA8A.Y** **Other specified polycythaemia neonatorum**
- KA8A.Z** **Polycythaemia neonatorum, unspecified**

**KA8B** **Anaemia of prematurity**

A paediatric condition characterised by a decrease in number of red blood cells (RBCs) or less than the normal quantity of haemoglobin in the blood of a newborn associated with the child being born prior to completing 37 weeks of gestation.

**KA8C** **Congenital hypoplastic anaemia**

A paediatric condition characterised by a decreased number of red blood cells (RBCs) or lower than the normal levels of haemoglobin in the blood of a newborn present at birth due to loss of blood from the circulatory system of the fetus.

**KA8D** **Transient neonatal neutropaenia**

Neonatal neutropaenia can be due to underproduction of the marrow (e.g. hypoxemia due to placental insufficiency, congenital viral disease) or excessive utilization of white blood cells (bacterial sepsis) or due to maternal transfer of antibodies to the fetus

**Coding Note:** Code also the causing condition

**KA8E** **Alloimmune neonatal neutropaenia**

Alloimmune neonatal neutropaenia (ANN) is a disease caused by the passive transfer of neutrophil specific maternal IgG antibodies across the placenta during pregnancy.

**KA8F** **Neonatal vitamin K deficiency**

There are 3 forms of vitamin K-deficiency bleeding (VKDB) of the newborn. Early VKDB (haemorrhagic disease of the newborn) that occurs at 1-14 days of age. The most common sites of bleeding are the gastrointestinal tract, mucosal and cutaneous tissue, the umbilical stump, and the post-circumcision site. Late VKDB most commonly occurs at 2-12 weeks of age, although cases can occur up to 6 months. The most common site of bleeding is intracranial, although cutaneous and gastrointestinal bleeding may be initial manifestation. The third form of VKDB occurs at birth or shortly thereafter. It is secondary to maternal intake of medications (warfarin, phenobarbital, phenytoin) that cross the placenta.

<b>KA8F.0</b>	<b>Diffuse bleeding diathesis due to vitamin K deficient haemorrhagic disease of fetus or newborn</b>
	Haemorrhagic disease of the newborn is a bleeding disorder of the newborn usually seen in the first week after life when vitamin K replacement is not provided to the newborn infant immediately after birth and is primarily characterised by gastrointestinal bleeding. The disorder can also be seen later in the newborn period in breast fed infants of vitamin K deficient mothers.
<b>KA8F.Y</b>	<b>Other specified neonatal vitamin K deficiency</b>
<b>KA8F.Z</b>	<b>Neonatal vitamin K deficiency, unspecified</b>
<b>KA8Y</b>	<b>Other specified haemorrhagic or haematological disorders of fetus or newborn</b>
<b>KA8Z</b>	<b>Haemorrhagic or haematological disorders of fetus or newborn, unspecified</b>

### Neurological disorders specific to the perinatal or neonatal period (KB00-KB0Z)

A group of paediatric conditions characterised by an abnormal change in the cerebral status of a newborn.

**Coded Elsewhere:** Brain cystic malformations (LA05.7)

Neurodevelopmental syndrome due to prenatal alcohol exposure (6A0Y)

#### **KB00** **Neonatal cerebral ischaemia**

A paediatric condition characterised by insufficient blood flow to the brain of a newborn to meet metabolic demand.

##### **KB00.0** **Perinatal arterial stroke**

##### **KB00.1** **Neonatal cerebral sinovenous thrombosis**

##### **KB00.Y** **Other specified neonatal cerebral ischaemia**

##### **KB00.Z** **Neonatal cerebral ischaemia, unspecified**

#### **KB01** **Periventricular cysts of newborn**

A paediatric condition characterised by the development of cysts around the brain ventricles in a newborn.

#### **KB02** **Neonatal cerebral leukomalacia**

A paediatric condition characterised by the death of small areas of brain tissue creating "holes" in the brain of a newborn.

**Exclusions:** Hypoxic-ischaemic encephalopathy (8B24)

#### **KB03** **Neonatal encephalopathy**

Encephalopathy is disorder of the brain. It may be the result of interference in the development of the brain, an infection or other condition in the neonate.

**Exclusions:** Hypoxic ischaemic encephalopathy of newborn (KB04)

**KB04****Hypoxic ischaemic encephalopathy of newborn**

Hypoxic ischaemic encephalopathy (HIE) is when a newborn's brain fails to receive a sufficient amount of oxygen or blood before and during birth that may lead to brain damage or death.

**KB05****Neonatal hydrocephalus**

**Exclusions:** Hydrocephalus due to congenital toxoplasmosis (KA64.0)

**Coded Elsewhere:** Congenital hydrocephalus (LA04)

**KB05.0****Neonatal obstructive hydrocephalus****KB05.Y****Other specified neonatal hydrocephalus****KB05.Z****Neonatal hydrocephalus, unspecified****KB06****Neonatal seizures**

A paediatric condition characterised by rapid and repeated muscle contraction and relaxation, resulting in an uncontrolled shaking of the body of a newborn.

**Exclusions:** Benign familial neonatal epilepsy (8A61.0)

Epilepsy due to prenatal or perinatal vascular insults (8A60.00)

**KB07****Compression of brain in neonate**

**Exclusions:** Crushing injury of brain (NA08.0)

**KB08****Disorders of muscle tone of newborn**

A group of paediatric conditions characterised by abnormal muscle tone in a newborn.

**KB08.0****Transient neonatal myasthenia gravis**

A paediatric condition characterised as a temporary autoimmune neuromuscular disease leading to fluctuating muscle weakness and fatigue in a newborn.

**KB08.1****Congenital hypertonia**

A paediatric condition characterised by abnormally increased muscle tone that is present at birth in a newborn.

**KB08.2****Congenital hypotonia**

A paediatric condition characterised by abnormally decreased muscle tone that is present at birth in a newborn.

**Inclusions:** Nonspecific floppy baby syndrome

**KB08.Y****Other specified disorders of muscle tone of newborn****KB08.Z****Disorders of muscle tone of newborn, unspecified****KB0Y****Other specified neurological disorders specific to the perinatal or neonatal period****KB0Z****Neurological disorders specific to the perinatal or neonatal period, unspecified**

## Respiratory disorders specific to the perinatal or neonatal period (KB20-KB2Z)

A group of conditions occurring during the period of time around childbirth, especially the five months before and one month after birth which are associated with the cardiovascular or respiratory systems.

**Coded Elsewhere:** Choanal atresia (LA70.2)

Congenital hypoplasia of lung (LA75.2)

Primary central sleep apnoea of infancy (7A40.1)

Primary central sleep apnoea of prematurity (7A40.2)

Late acquired pneumonia (CA40.Y)

### KB20

#### Intrauterine hypoxia

Intrauterine hypoxia occurs when the fetus is deprived of an adequate supply of oxygen. This may occur with prolapse or occlusion of the umbilical cord, placental infarction and maternal smoking. This can lead to damage of the central nervous system and neonatal encephalopathy, which increases the risk of mortality.

**Inclusions:** intrauterine distress

**Exclusions:** Intracranial nontraumatic haemorrhage of fetus or newborn (KA82)

Hypoxic ischaemic encephalopathy of newborn (KB04)

Metabolic acidosis in newborn (KB22)

Late metabolic acidosis of newborn (KB63.0)

### KB20.0

#### Intrauterine hypoxia first noted before onset of labour

A condition characterised by deprivation of an adequate supply of oxygen to the fetus during the gestation period which is diagnosed prior to the onset of labour.

### KB20.1

#### Intrauterine hypoxia first noted during labour or delivery

A condition characterised by deprivation of an adequate supply of oxygen to the fetus diagnosed immediately prior to or during labour and delivery.

### KB20.Z

#### Intrauterine hypoxia, unspecified

### KB21

#### Birth asphyxia

**Coding Note:** This category is not to be used for low Apgar score without mention of asphyxia or other respiratory problems.

**Exclusions:** intrauterine hypoxia or asphyxia (KB20)

### KB21.0

#### Severe birth asphyxia

Pulse less than 100 per minute at birth and falling or steady, respiration absent or gasping, colour poor, tone absent.

### KB21.1

#### Mild and moderate birth asphyxia

Normal respiration not established within one minute, but heart rate 100 or above, some muscle tone present, some response to stimulation.

### KB21.Z

#### Birth asphyxia, unspecified

**Coding Note:** This category is not to be used for low Apgar score without mention of asphyxia or other respiratory problems.

**KB22****Metabolic acidaemia in newborn**

Metabolic acidaemia represents an increase in hydrogen ion concentration, usually due to the production of lactic acid following hypoxia or ischemia induced anaerobic metabolism. Acidaemia can also result from inborn errors of metabolism, and disorders of the kidney and liver.

**KB23****Respiratory distress of newborn**

A condition characterised by developmental insufficiency of surfactant associated proteins or surfactant production and structural immaturity in the lungs.

**Exclusions:** Respiratory failure of newborn (KB2D)

**KB23.0****Respiratory distress syndrome of newborn**

Respiratory distress syndrome (RDS) is an acute illness, usually of preterm infants, due to pulmonary surfactant deficiency, developing within 4-6 hours of birth, and is characterised by respiratory distress (tachypnoea, intercostal and sternal retractions, expiratory grunt, and cyanosis) with abnormal chest radiograph showing diffuse reticulogranular densities and air bronchograms, evidence of reduced lung compliance and functional residual capacity, evidence of abnormal gas exchange (hypoxaemia, hypercapnia, cyanosis) of sufficient severity to require oxygen and/or continuous or intermittent positive pressure ventilatory support for more than 24 hours.

**KB23.00**

Respiratory distress syndrome of the newborn, altered by maternal corticosteroid therapy

**KB23.01**

Respiratory distress syndrome of the newborn, altered by pulmonary surfactant replacement therapy

**KB23.02**

Respiratory distress syndrome of the newborn, altered by maternal corticosteroid therapy or pulmonary surfactant replacement therapy

**KB23.0Y**

Other specified respiratory distress syndrome of newborn

**KB23.0Z**

Respiratory distress syndrome of newborn, unspecified

**KB23.1****Transient tachypnoea of newborn**

Transient tachypnoea of newborn is usually a benign self-limiting illness of term and near-term infants demonstrating increased respiratory rate and requiring supplementary oxygen after birth.

**KB23.2****Respiratory instability of prematurity**

Infant within the neonatal period who requires continued respiratory life support, including positive pressure ventilation and/or prolonged oxygen therapy, without a clear pathologic diagnosis. This may be caused by inadequate respiratory muscle strength, excessive chest wall compliance, and/or inadequate CNS respiratory drive.

**KB23.Y**

Other specified respiratory distress of newborn

**KB23.Z**

Respiratory distress of newborn, unspecified

**KB24****Congenital pneumonia**

Congenital pneumonia is an acute respiratory infection contracted prenatally or during the intrapartum period that is caused by a virus, bacteria, or fungi.

**Inclusions:** infective pneumonia acquired in utero or during birth

**Exclusions:** Neonatal aspiration syndromes (KB26)

Pneumonitis (CA70-CA7Z)

**KB25****Neonatal tracheitis**

A disease of the trachea in neonates, caused by an infection with a bacterial, viral, or fungal source. This disease is characterised by stridor, or increased respiratory effort. Transmission is commonly by inhalation of the infectious agent. Confirmation is by direct laryngoscopy.

**KB26****Neonatal aspiration syndromes**

Aspiration of meconium, blood, amniotic fluids and gastric contents in a neonate resulting in clinical symptoms from airway obstruction (atelectasis, air trapping and air leaks), parenchymal injury (pneumonitis), right-to-left shunting, and ventilation-perfusion mismatch.

**KB26.0****Neonatal aspiration of meconium**

Meconium Aspiration Syndrome (MAS) is defined as respiratory distress in an infant born through meconium-stained amniotic fluid with roentgenographic findings consistent with MAS and whose symptoms could not be otherwise explained.

**Exclusions:** Meconium passage during delivery (KA05.8)

Meconium staining (KD38)

**KB26.1****Neonatal aspiration of amniotic fluid or mucus**

Clinical symptoms of Neonatal aspiration syndrome due to inhalation of amniotic fluid

**KB26.2****Neonatal aspiration of blood**

Clinical symptoms of Neonatal aspiration syndrome due to inhalation of blood usually during birth process, or through aspiration of gastrointestinal bleeding.

**KB26.3****Neonatal aspiration of milk or regurgitated food**

Clinical symptoms of Neonatal aspiration syndrome due to aspiration of acidic gastric content and/or milk.

**KB26.Y****Other specified neonatal aspiration syndromes****KB26.Z****Neonatal aspiration syndromes, unspecified****KB27****Pulmonary air leak or related conditions originating in the perinatal period**

Clinical syndrome due to free air from rupture of overdistended alveoli tracking into pulmonary interstitium, mediastinum, pleural cavity or subcutaneous tissues.

- KB27.0 Interstitial emphysema originating in the perinatal period**  
Escape of air into the interstitium, lymphatics and venous circulation of the lungs resulting from rupture of small airways associated with a characteristic cystic appearance on chest X-ray, almost exclusively seen in preterm infants receiving mechanical ventilation
- KB27.1 Pneumothorax originating in the perinatal period**  
Abnormal presence of air or other gas in the pleural cavity, usually secondary to tracking of free air from pulmonary interstitial emphysema, or rupture of subpleural blebs.
- KB27.2 Pneumomediastinum originating in the perinatal period**  
Presence of air in the mediastinum usually from tracking of free air from ruptured alveolar ducts along the perivascular sheaths of pulmonary blood vessels, or rupture of subpleural bleb
- KB27.3 Pneumopericardium originating in the perinatal period**  
Presence of air in the pericardial cavity usually from tracking of free air from ruptured alveolar ducts along the perivascular sheaths of pulmonary blood vessels, or rupture of subpleural bleb
- KB27.4 Pneumoperitoneum, originating in the perinatal period, due to primary pulmonary air leak syndromes**
- KB27.Y Other specified pulmonary air leak or related conditions originating in the perinatal period**
- KB27.Z Pulmonary air leak or related conditions originating in the perinatal period, unspecified**
- KB28 Pulmonary haemorrhage originating in the perinatal period**  
A condition characterised by bleeding from the lung which begins during the period of time around childbirth, especially the five months before and one month after birth.
- Exclusions:** Acute idiopathic pulmonary haemorrhage in infants over 28 days of age (MD24)
- KB28.0 Tracheobronchial haemorrhage originating in the perinatal period**  
A condition characterised by bleeding from the trachea or bronchi which begins during the period of time around childbirth, especially the five months before and one month after birth.
- KB28.1 Traumatic pulmonary haemorrhage originating in the perinatal period**  
Pulmonary haemorrhage in neonate as a result of trauma, generally from a respiratory suction catheter following deep suctioning.
- KB28.Y Other specified pulmonary haemorrhage originating in the perinatal period**
- KB28.Z Pulmonary haemorrhage originating in the perinatal period, unspecified**

**KB29****Chronic respiratory disease originating in the perinatal period**

A group of conditions associated with the respiratory system which begin during the period of time around childbirth, especially the five months before and one month after birth, and which lasts for at least 3 months.

**KB29.0****Bronchopulmonary dysplasia originating in the perinatal period**

Chronic lung disease requiring treatment with oxygen for at least 28 days and with a spectrum of severity from mild to severe, that predominantly affects premature infants.

**KB29.Y****Other specified chronic respiratory disease originating in the perinatal period****KB29.Z****Chronic respiratory disease originating in the perinatal period, unspecified****KB2A****Apnoea of newborn**

Any condition characterised by suspension of external breathing in a newborn (premature or term) which is not classified elsewhere

**KB2A.0****Central neonatal apnoea**

Central apnoea is a cessation of airflow > 20 seconds with loss of all respiratory effort. It is due to immaturity of the brainstem to control respiration. It is found in many premature infants and generally resolves by 36 weeks of age.

**KB2A.1****Obstructive neonatal apnoea**

Apnoea that occurs secondary to diminished airway airflow from an obstruction in the airway from the nose and mouth, tongue, hypopharynx, epiglottis, vocal cords or subglottic region. This is characterised by initial increased work of breathing and rapid progression to cyanosis.

**KB2A.2****Mixed neonatal apnoea**

A combination of central apnoea and obstructive apnoea. Most apnoea of prematurity is of the mixed variety, and most often resolves by 36 weeks of age.

**KB2A.3****Apnoea of newborn, due to neurologic injury****KB2A.Y****Other specified apnoea of newborn****KB2A.Z****Apnoea of newborn, unspecified****KB2B****Primary atelectasis of newborn**

Failure of the lungs to expand after birth, as in stillborn infants or in liveborn infants who die before respiration is established

**Inclusions:** Primary failure to expand terminal respiratory units

**KB2C****Cyanotic attacks of newborn**

Sudden attacks of cyanosis, lasting from a few moments up to half an hour, in an infant whose colour was previously normal, and whose colour returns to normal in atmospheric air after the attack

**Exclusions:** Apnoea of newborn (KB2A)

**KB2D****Respiratory failure of newborn**

Acute or chronic respiratory failure in a newborn. Neonates in acute respiratory failure require respiratory support.

**KB2E****Respiratory arrest of newborn****KB2F****Congenital lung or lobar atelectasis**

Collapsed lobe or lobes of the lung that is present at birth and is due to narrowing of the airway, kinking of the airway, compression from a mass in the airway or other congenital abnormality.

**KB2G****Tracheal haemorrhage of newborn due to airway trauma**

Trauma from suction catheters, endotracheal tubes, bronchoscopes that results in tracheal haemorrhage in the newborn.

**KB2H****Acquired vocal cord paralysis in newborn**

Acquired vocal cord paralysis may result from birth trauma, result of the extracorporeal membrane oxygenation cannulation, thoracic surgery, or some infections. Unilateral vocal cord paralysis is more common and the left vocal cord is most frequently involved.

**KB2J****Airway obstruction in the neonate due to airway abnormality**

**Coded Elsewhere:** Congenital macroglossia (LA31.0)

Congenital micrognathia (DA0E.00)

**KB2J.0****Hypotonia of hypopharynx in neonate**

Poor muscle tone of the hypopharynx.

**KB2J.1****Hypopharyngeal mass in neonate****KB2J.2****Tracheo-bronchial malacia in neonate**

Tracheomalacia is a condition characterised by flaccidity of the tracheal support cartilage causing weakness of the tracheobronchial tree and tracheal collapse.

**KB2J.Y****Other specified airway obstruction in the neonate due to airway abnormality****KB2J.Z****Airway obstruction in the neonate due to airway abnormality, unspecified****KB2K****Pulmonary cysts in newborn****KB2K.0****Acquired pulmonary cysts in newborn**

Cysts occurring as a result of infection or trauma from mechanical ventilation resulting in pulmonary interstitial emphysema.

**KB2K.Z****Pulmonary cysts in newborn, unspecified****KB2Y****Other specified respiratory disorders specific to the perinatal or neonatal period****KB2Z****Respiratory disorders specific to the perinatal or neonatal period, unspecified**

## Cardiovascular disorders present in the perinatal or neonatal period (KB40-KB4Z)

A group of conditions which begin during the period of time around childbirth, especially the five months before and one month after birth which are associated with the cardiovascular systems.

**Exclusions:** congenital malformations of the heart and circulatory system (LA80-LA8Z)

**Coded Elsewhere:** Patent arterial duct (LA8B.4)

**KB40**

### **Neonatal cardiac failure**

Cardiac failure originating in the neonatal period

**KB40.0**

### **Neonatal cardiac failure due to pulmonary overperfusion**

Neonatal cardiac failure due to pulmonary overperfusion

**KB40.1**

### **Neonatal cardiac failure due to decreased left ventricular output**

**KB40.Y**

### **Other specified neonatal cardiac failure**

**KB40.Z**

### **Neonatal cardiac failure, unspecified**

**KB41**

### **Cardiac arrhythmias in the neonate**

Abnormal electrical rhythm, both tachyarrhythmias and bradyarrhythmias, in neonate

**KB42**

### **Persistent pulmonary hypertension of the newborn**

Persistent pulmonary hypertension of the newborn is a cardiopulmonary disorder characterised by systemic arterial hypoxemia secondary to pulmonary hypertension and extrapulmonary right-to-left shunting across the foramen ovale and ductus arteriosus.

**KB44**

### **Transient myocardial ischaemia of newborn**

A paediatric condition characterised by an imbalance between the oxygen supply and demand of the heart muscle (myocardium) in a newborn.

**KB45**

### **Neonatal hypertension**

Hypertension is defined by a systolic blood pressure in a neonate which is >95th percentile for age and sex on 3 separate occasions

**KB46**

### **Neonatal hypotension**

Mean Arterial Blood Pressure below gestational age in weeks (corresponds with 10th centile for birth weight and postnatal age 1) or below 30 mmHg as hypotension.

**KB47**

### **Benign or innocent cardiac murmurs in newborn**

A paediatric condition characterised by heart sounds that are produced as a result of turbulent blood flow that is sufficient to produce audible noise primarily due to physiologic conditions outside the heart, as opposed to structural defects in the heart itself in a newborn.

**KB48**

**Patent arterial duct of prematurity**

Patent arterial duct associated with the child being born prior to completing 37 weeks of gestation, in the absence of ductal-dependent congenital heart disease.

**KB4Y**

**Other specified cardiovascular disorders present in the perinatal or neonatal period**

**KB4Z**

**Cardiovascular disorders present in the perinatal or neonatal period, unspecified**

**Transitory endocrine or metabolic disorders specific to fetus or newborn (KB60-KB6Z)**

A group of paediatric conditions in which there is a temporary disorder in a newborn or infant associated with changes in hormone production or utilization (endocrine system) or when abnormal chemical reactions in the body disrupt the normal processes of enzyme catalyzed reactions within tissue cells (metabolism), such as getting or making energy from consumed food.

**KB60**

**Transitory disorders of carbohydrate metabolism specific to fetus or newborn**

A group of paediatric conditions in which there is a temporary disorder in a newborn or infant associated with abnormal chemical reactions in the body disrupting the process of getting or making energy from consumed carbohydrates.

**KB60.0**

**Syndrome of infant of mother with gestational diabetes**

Describes the range of effects on the infant born to a woman with gestational diabetes (onset or first recognition of carbohydrate intolerance of variable severity in pregnancy). Common neonatal effects include macrosomia, intrauterine growth restriction, birth injuries, congenital anomalies, hypoglycaemia, respiratory distress, and hypertrophic cardiomyopathy.

**KB60.1**

**Syndrome of infant of a diabetic mother, type 1 or 2, nongestational, insulin dependent**

Describes the range of effects on the infant born to a woman with pregestational diabetes mellitus (type 1 or type 2). Common neonatal effects include macrosomia, intrauterine growth restriction, birth injuries, congenital anomalies, hypoglycaemia, respiratory distress, caudal regression syndrome and hypertrophic cardiomyopathy.

**KB60.2**

**Neonatal diabetes mellitus**

Neonatal diabetes mellitus (NDM) is a monogenic form of diabetes that occurs in the first 6 months of life. It is a rare condition occurring in only one in 100,000 to 500,000 live births. Infants with NDM do not produce enough insulin, leading to an increase in blood glucose. NDM can be mistaken for the much more common type 1 diabetes, but type 1 diabetes usually occurs later than the first 6 months of life. In about half of those with NDM, the condition is lifelong and is called permanent neonatal diabetes mellitus (PNDM). In the rest of those with NDM, the condition is transient and disappears during infancy but can reappear later in life; this type of NDM is called transient neonatal diabetes mellitus (TNDM).

- KB60.20** Transient neonatal diabetes mellitus  
 Transient neonatal diabetes mellitus (TNDM) is a developmental disorder of insulin production that resolves postnatally within the first year of life. Intrauterine growth restriction is usually present. TNDM infants develop diabetes in the first few weeks of life but may go into remission in a few months, with possible relapse to a permanent diabetes state usually around adolescence or as adults. The pancreatic dysfunction in this condition may be maintained throughout life, with relapse initiated at times of metabolic stress such as puberty or pregnancy.
- KB60.2Y** Other specified neonatal diabetes mellitus
- KB60.2Z** Neonatal diabetes mellitus, unspecified
- KB60.3** **Neonatal hyperglycaemia**
- KB60.30** Neonatal hyperglycaemia due to insulin deficiency
- KB60.31** Neonatal hyperglycaemia due to iatrogenic intravenous therapy
- KB60.3Y** Other specified neonatal hyperglycaemia
- KB60.3Z** Neonatal hyperglycaemia, unspecified
- KB60.4** **Neonatal hypoglycaemia**
- KB60.40** Transient hyperinsulinaemic neonatal hypoglycaemia  
 This refers to transient above normal level of insulin in the blood, and an abnormally diminished content of glucose in the blood, of a newborn.
- KB60.41** Transitory iatrogenic neonatal hypoglycaemia  
 A condition associated with hypoglycemia as a result of therapeutic intervention. Often occurs with insulin therapy, but may also result from inadequate provision of glucose.
- KB60.42** Other transitory neonatal hypoglycaemia
- KB60.4Y** Other specified neonatal hypoglycaemia
- KB60.4Z** Neonatal hypoglycaemia, unspecified
- KB60.Y** **Other specified transitory disorders of carbohydrate metabolism specific to fetus or newborn**
- KB60.Z** **Transitory disorders of carbohydrate metabolism specific to fetus or newborn, unspecified**
- KB61** **Transitory neonatal disorders of calcium or magnesium metabolism**  
 A group of paediatric conditions in which there is a temporary disorder in a newborn associated with abnormal chemical reactions in the body disrupting the normal processes of enzyme catalyzed reactions to utilize calcium and magnesium for other body functions.

<b>KB61.0</b>	<b>Neonatal hypomagnesaemia</b> Defined as serum magnesium levels less than 0.66 mmol/L (1.6 mg/L) in neonates. Symptoms usually do not develop until serum Magnesium (Mg) levels fall below 0.49 mmol/L (1.2 mg/L). This is usually transient but can cause symptoms similar to those of hypocalcaemia.
<b>KB61.1</b>	<b>Neonatal tetany without calcium or magnesium deficiency</b> Features of tetany (hyperexcitability, hyperreflexia, spasms and laryngospasm) not accompanied by low calcium or magnesium levels
<b>KB61.2</b>	<b>Neonatal hypocalcaemia</b> Hypocalcaemia is a common metabolic problem in newborns. In the neonate, hypocalcaemia is defined by birth weight (BW) categories. In infants with BW greater than 1500 g, hypocalcaemia is defined as a total serum calcium (Ca) concentration less than 8 mg/dL (2 mmol/L) or an ionized fraction of less than 4.4 mg/dL (1.1 mmol/L). In very low birth weight premature infants (BW<1500 g), hypocalcaemia is defined as a total serum Ca concentration less than 7 mg/dL (1.75 mmol/L) or an ionized fraction of less than 4 mg/dL (1 mmol/L). Aetiologies of early hypocalcaemia (occurs in the first two to three days after birth) include prematurity, maternal diabetes, birth asphyxia, and intrauterine growth. Causes of late hypocalcaemia (usually occurs at the end of the first week of life) include hypoparathyroidism and high phosphate intake. Most infants with hypocalcaemia are asymptomatic. If symptomatic, neuromuscular irritability is the most common sign with jitteriness and muscle jerking. Less common findings include seizures, and rarely laryngospasm, wheezing, or vomiting.
	<b>Exclusions:</b> Transitory neonatal hypoparathyroidism (KB64)
<b>KB61.3</b>	<b>Neonatal osteopenia</b> Metabolic bone disease is a common complication in very low birthweight (VLBW) preterm infants. The smallest, sickest infants are at greatest risk. Progressive osteopenia with demineralized bones and, occasionally, pathologic fractures may develop. The major cause is inadequate intake of calcium and phosphorus to meet the requirements for growth. Poor intake of vitamin D is an additional risk factor. Contributing factors include prolonged parenteral nutrition, vitamin D and calcium malabsorption, intake of unsupplemented human milk, immobilization, and urinary calcium losses from long-term diuretic use.
<b>KB61.Y</b>	<b>Other specified transitory neonatal disorders of calcium or magnesium metabolism</b>
<b>KB61.Z</b>	<b>Transitory neonatal disorders of calcium or magnesium metabolism, unspecified</b>
<b>KB62</b>	<b>Transitory neonatal disorders of thyroid function</b> A group of paediatric conditions in which there is a temporary disorder in a newborn or infant associated with the thyroid.  <b>Exclusions:</b> Pendred syndrome (5A00.02) Congenital hypothyroidism (5A00.0) dyshormogenetic goitre (5A00.00) <b>Coded Elsewhere:</b> Transient congenital hypothyroidism (5A00.03)

- KB62.0 Transitory neonatal hyperthyroidism**  
A paediatric condition characterised by a temporarily abnormally increased level of thyroid hormones (triiodothyronine (T3) and thyroxine (T4)) in the blood of a newborn.
- Inclusions:** Neonatal thyrotoxicosis
- KB62.1 Other transitory neonatal disorders of thyroid function, not elsewhere classified**  
Any other paediatric condition characterised by abnormal or absent function of the thyroid gland in a newborn.
- Inclusions:** Transitory neonatal hypothyroidism
- KB62.2 Transient hyperthyrotropinaemia**  
Transient hyperthyrotropinaemia is characterised by elevated thyroid-stimulating hormone (TSH) and normal thyroxine (FT4) levels with the elevated TSH levels eventually normalising.
- KB62.3 Transient hypothyroxinaemia**  
Transient hypothyroxinaemia is characterised by low thyroxine (T4, T3 and FT4) levels but normal level of thyroid-stimulating hormone (TSH), and is seen in preterm infants, usually those born before 30 weeks of gestational age.
- KB62.Y Other specified transitory neonatal disorders of thyroid function**
- KB62.Z Transitory neonatal disorders of thyroid function, unspecified**
- KB63 Certain specified transitory neonatal electrolyte or metabolic disturbances**  
A group of paediatric conditions in which there is a temporary abnormality in the normal processes of enzyme catalyzed reactions within tissue cells (metabolism) or with the levels of minerals in the blood or other body fluids.
- KB63.0 Late metabolic acidosis of newborn**  
Mild to moderate metabolic acidosis occurring between 1 to 3 weeks of age in otherwise healthy premature infants fed cow's milk and accompanied by poor growth. This is thought to be due to excessive protein content of the milk.
- KB63.1 Dehydration of newborn**  
A paediatric condition characterised by excessive loss of body water in a newborn.
- KB63.2 Disturbances of sodium balance of newborn**  
A paediatric condition characterised by abnormally high or low levels of sodium in the blood in a newborn, when the normal range is defined as 135 to 150 mEq/L.
- KB63.20 Hyponatremia of newborn**  
Hyponatremia is defined as serum sodium less than 130 mmol/L
- KB63.21 Hypernatremia of newborn**  
Hypernatremia is defined as serum sodium greater than 145 mmol/L.

<b>KB63.2Y</b>	Other specified disturbances of sodium balance of newborn
<b>KB63.2Z</b>	Disturbances of sodium balance of newborn, unspecified
<b>KB63.3</b>	<b>Disturbances of potassium balance of newborn</b> A paediatric condition characterised by abnormally high or low levels of potassium in the blood in a newborn, when the normal range is defined as 3.5 to 5.5 mmol/L.
<b>KB63.30</b>	Hypokalaemia of newborn Hypokalaemia is defined as serum potassium less than 3.5 mmol/L.
<b>KB63.31</b>	Hyperkalaemia of newborn Hyperkalaemia is defined as serum potassium greater than 5.5 mmol/L.
<b>KB63.3Y</b>	Other specified disturbances of potassium balance of newborn
<b>KB63.3Z</b>	Disturbances of potassium balance of newborn, unspecified
<b>KB63.4</b>	<b>Transitory tyrosinaemia of newborn</b> Clinically asymptomatic elevated blood tyrosine level caused by late fetal maturation of 4-hydroxyphenylpyruvate dioxygenase, usually detected on newborn bloodspot screening. Most commonly seen in premature infants receiving milk formulae with high protein content. Generally considered benign and resolves by 4-6 weeks of age.
<b>KB63.5</b>	<b>Metabolic bone disease of prematurity</b> A paediatric condition characterised by bone abnormalities in a newborn due to abnormalities of minerals such as calcium, phosphorus, magnesium or vitamin D associated with the child being born prior to completing 37 weeks of gestation.
<b>KB64</b>	<b>Transitory neonatal hypoparathyroidism</b> Defined as hypocalcaemia, hyperphosphatemia and low serum parathyroid hormone that improves spontaneously but may last from weeks to months.
<b>KB6Z</b>	<b>Transitory endocrine or metabolic disorders specific to fetus or newborn, unspecified</b>

## Digestive system disorders of fetus or newborn (KB80-KB8Z)

**Coded Elsewhere:** Hirschsprung disease (LB16.1)

Meconium ileus in unspecified cystic fibrosis (CA25.Z)

<b>KB80</b>	<b>Gastro-oesophageal reflux disease in newborn</b> A condition which develops when the reflux of stomach contents causes the newborn to vomit with associated discomfort, difficulty feeding and/or weight loss.
-------------	--

<b>KB81</b>	<b>Oesophagitis in newborn</b> Oesophagitis is inflammation of the oesophagus. If left untreated, this condition can cause ulcers or scarring of the oesophagus.
-------------	---

- KB81.0      Neonatal eosinophilic oesophagitis**  
Eosinophilic oesophagitis is an inflammatory condition, possibly caused by food allergy, in which the wall of the oesophagus becomes filled with a large number of eosinophils. It can be confused with acid reflux disease but it can be differentiated if neonate does not respond to anti-reflux medications.
- KB81.Y      Other specified oesophagitis in newborn**
- KB81.Z      Oesophagitis in newborn, unspecified**
- KB82      Prenatal gastric perforation**  
Prenatal gastric perforation is a perforation or hole of the wall of the stomach that occurs while the baby is in utero. This is a rare and life-threatening condition in a neonate.
- KB83      Postnatal gastric perforation**  
Postnatal gastric perforation is a spontaneous or traumatic penetration or hole of the wall of the stomach that occurs after birth. This is a rare and life-threatening condition in a neonate.
- KB84      Postnatal isolated ileal perforation**  
Post natal bowel perforation, generally in the terminal ileum. Can be confused with necrotizing enterocolitis, but generally occurs earlier (2-5 days of age) and does not involve extensive bowel necrosis.
- KB85      Prenatal intrauterine intestinal perforation**  
In-utero or prenatal bowel perforation results in a chemical peritonitis (meconium peritonitis) from peritoneal leakage of sterile meconium. Meconium peritonitis results from prenatal intestinal perforation nearly always involving the small bowel.  
**Exclusions:**      Meconium ileus with perforation (KB87.4)
- KB85.0      Prenatal intrauterine intestinal perforation due to in utero volvulus**
- KB85.1      Prenatal intrauterine intestinal perforation due to intestinal atresia or stenosis**
- KB85.2      Prenatal intrauterine intestinal perforation due to intraluminal obstruction**
- KB85.Y      Other specified prenatal intrauterine intestinal perforation**
- KB85.Z      Prenatal intrauterine intestinal perforation, unspecified**
- KB86      Postnatal intestinal perforation**  
Postnatal intestinal perforation is a complete penetration of wall of the large or small intestine, often resulting in the leakage of luminal contents into the abdominal cavity.
- KB86.0      Postnatal intestinal perforation due to drugs**
- KB86.1      Postnatal intestinal perforation due to in utero volvulus**
- KB86.2      Postnatal intestinal perforation due to intestinal atresia or stenosis**
- KB86.3      Postnatal intestinal perforation due to intraluminal obstruction**

<b>KB86.Y</b>	<b>Other specified postnatal intestinal perforation</b>
<b>KB86.Z</b>	<b>Postnatal intestinal perforation, unspecified</b>
<b>KB87</b>	<b>Intestinal obstruction of newborn</b>
	Any other impairment, arrest, or reversal of the normal flow of intestinal toward the anal canal in a newborn
<b>KB87.0</b>	<b>Intestinal obstruction due to inspissated milk</b>
	Mechanical intestinal obstruction in premature infants due to hard milk curds formed when high-energy formula or powdered milk is fed in the presence of reduced intestinal motility and increased absorption of water from the colon. The site of obstruction is the terminal ileum, the ileocaecal valve, or the colon. The manifestations include constipation, abdominal distension, and vomiting (progressively bilious or faecal).
<b>KB87.1</b>	<b>Meconium plug without ileus</b>
	Meconium plug, also referred to as functional immaturity of the colon, is an obstruction in the newborn colon. It is usually a transient disorder of the newborn and is characterised by delayed passage of meconium and intestinal dilatation.
<b>KB87.2</b>	<b>Meconium ileus without perforation</b>
	The meconium sometimes becomes thickened and congested in the terminal ileum, a condition known as meconium ileus. Meconium ileus is among the most common causes of intestinal obstruction in the newborn, accounting for 9-33% of neonatal intestinal obstructions. A symptom of both Hirschsprung's disease and cystic fibrosis is the failure to pass meconium. Some babies have a blockage in their colon that may look like meconium ileus (a meconium plug), and they have small left colon syndrome. This means the last part of their colon is smaller than normal.
<b>KB87.3</b>	<b>Transitory ileus of newborn</b>
	Transient intestinal obstruction of functional rather than anatomical origin which is not uncommon in the first few days of life. As surgery may be strongly contraindicated in this group, the differential diagnosis is extremely important.
	<b>Exclusions:</b> Hirschsprung disease (LB16.1)
<b>KB87.4</b>	<b>Meconium ileus with perforation</b>
	Complicated meconium ileus with bowel perforation with varying degrees of meconium peritonitis.
<b>KB87.Y</b>	<b>Other specified intestinal obstruction of newborn</b>
<b>KB87.Z</b>	<b>Intestinal obstruction of newborn, unspecified</b>

**KB88****Necrotising enterocolitis of newborn**

This is a fulminating disease of neonates in which there is extensive mucosal ulceration, pseudomembrane formation, submucosal haemorrhage, and necrosis usually of the right colon, caecum, terminal ileum, and appendix (ENTEROCOLITIS), possibly due to perinatal intestinal ischemia and bacterial invasion. The entire colon, small intestine, stomach, and oesophagus may also be affected. Most infants are premature or suffer from respiratory distress syndrome, sepsis, or hypoxia. Symptoms (apparent during the first few weeks of life) include abdominal distension, bilious vomiting, and melaena; there may be apnoea, lethargy, temperature instability, tachycardia, tachypnoea, and a fall in blood pressure. The disorder may progress to perforation and peritonitis.

**KB88.0      Necrotising enterocolitis of newborn, Stage 1A & B****KB88.1      Necrotising enterocolitis of newborn, Stage 2A & B****KB88.2      Necrotising enterocolitis of newborn, Stage 3A****KB88.3      Necrotising enterocolitis of newborn, Stage 3B****KB88.Y      Other specified necrotising enterocolitis of newborn****KB88.Z      Necrotising enterocolitis of newborn, unspecified****KB89****Neonatal malabsorption syndromes**

**Coded Elsewhere:** Glucose or galactose intolerance of newborn (5C51.42)

Hereditary fructose intolerance (5C51.50)

**KB89.0      Neonatal malabsorption due to endocrine secreting tumour****KB89.1      Short bowel syndrome in neonate**

Short bowel syndrome in neonate is a condition originating in the perinatal period in which nutrients are not properly absorbed due to either surgical removal of a large portion of the small intestine or rarely due to the complete dysfunction of a large segment of small intestine.

**Exclusions:**      Congenital short bowel (LB15.2)

**KB89.Y      Other specified neonatal malabsorption syndromes****KB89.Z      Neonatal malabsorption syndromes, unspecified****KB8A****Neonatal haematemesis or melaena due to swallowed maternal blood**

A less serious, self-limiting case of haematemesis and melena which can occur in newborns two to three days after delivery, due to swallowed maternal blood.

**KB8B****Neonatal peritonitis**

Neonatal peritonitis may be bacterial or chemical in origin. The majority of cases of bacterial peritonitis are due to intestinal perforations, ruptured omphaloceles, or ischemic intestinal necrosis. Although most babies had peritonitis secondary to intestinal perforation subsequent to intestinal obstruction, many instances are unexplained perforation, possibly secondary to defects in the intestinal musculature or visceral ischemia. The less common chemical peritonitis is due to prenatal intestinal perforation with extrusion of sterile meconium into the peritoneal cavity. The two types may coexist if an antenatal perforation remains open after birth, allowing bacterial contamination of the previously sterile peritoneum.

**KB8C****Noninfectious neonatal diarrhoea**

Non-infectious causes of diarrhoea in neonates. Childhood diarrhoea is most often caused by infection. Much less often, however, it is due to other causes - e.g., malabsorption or dietary intolerance, endocrine abnormalities, hormone-secreting tumours, pancreatic and liver dysfunction. Non-infectious causes of diarrhoea may have other systemic signs and symptoms. Neonates are at particular risk of dehydration and malnutrition.

**KB8Y****Other specified digestive system disorders of fetus or newborn****KB8Z****Digestive system disorders of fetus or newborn, unspecified****Genitourinary system disorders specific to the perinatal or neonatal period (KC00-KC0Z)**

A group of conditions occurring during the period of time around childbirth, especially the five months before and one month after birth which are associated with the genitourinary system.

**KC00****Congenital hydrocele**

A paediatric condition characterised by the buildup of watery fluid around one or both testicles of a newborn that is present at birth.

**KC01****Congenital renal failure**

A severe irreversible decline in the ability of kidneys to remove wastes, concentrate urine, and maintain electrolyte balance; blood pressure; and calcium metabolism which existed at, or often before, birth.

**Inclusions:** Uraemia of newborn

**KC0Y****Other specified genitourinary system disorders specific to the perinatal or neonatal period****KC0Z****Genitourinary system disorders specific to the perinatal or neonatal period, unspecified****Disorders involving the integument of fetus or newborn (KC20-KC9Z)**

**Coded Elsewhere:** Neonatal dermatoses due to maternal antibodies (KA07)

**KC20****Conditions involving the umbilical cord**

- KC20.0      Delayed separation of umbilical cord**
- KC20.1      Umbilical cutis or polyp of newborn**  
An umbilical cord polyp is a congenital lesion resulting from persistence of the omphalomesenteric duct. It originates from either the omphalomesenteric duct or from urachal remnants. The polyp may contain intestinal mucosa.
- KC20.2      Umbilical granuloma of newborn**
- KC20.Y      Other specified conditions involving the umbilical cord**
- KC20.Z      Conditions involving the umbilical cord, unspecified**
- KC21      Inflammatory dermatoses of the newborn**  
A range of inflammatory skin disorders presenting in the neonatal period.
- KC21.0      Neonatal acne**  
Acne presenting at birth or shortly afterwards, generally with predominantly comedonal lesions of the cheeks and a paucity of inflammatory lesions. It is thought to be due to hyperactivity of the sebaceous glands stimulated by neonatal androgens from the testes in boys and adrenals in girls.
- KC21.1      Neonatal toxic erythema**  
Neonatal toxic erythema is a common rash in neonates, appearing in up to half of newborns carried to term, usually between day 2-5 after birth; it does not occur outside the neonatal period and typically resolves within first two weeks of life. It is characterised by blotchy erythema with crops of evanescent small white or yellow papules or pustules. It is a benign condition and is thought to cause no discomfort to the baby.  
*Inclusions:*      Neonatal erythema toxicum
- KC21.2      Perianal dermatitis of the newborn**  
Perianal dermatitis of the newborn presents with perianal erythema during the first week of life, which in more severe forms may progress to oedema and superficial erosion of perianal skin. Although it usually occurs alone, perianal dermatitis may sometimes be associated with primary irritant napkin dermatitis. It is commoner in infants receiving cow's milk formulations than in breast-fed infants; it is assumed that it represents an irritant response to faecal constituents.
- KC21.Y      Other specified inflammatory dermatoses of the newborn**
- KC22      Neonatal disorders of subcutaneous fat**
- Coding Note:** Code also the causing condition
- KC22.0      Subcutaneous fat necrosis of the newborn**  
*Exclusions:*      Subcutaneous fat necrosis due to birth injury (KA43.2)

<b>KC22.1</b>	<b>Cold panniculitis of the newborn</b> Cold panniculitis resulting either from exposure of neonates to low environmental temperature or from local application of cold objects (e.g. ice packs for management of neonatal supraventricular tachycardia). The newborn are particularly susceptible as a result of a high saturated/unsaturated fat ratio in subcutaneous fat with a consequent elevation of the freezing point of fat.
<b>KC22.2</b>	<b>Sclerema neonatorum</b> Sclerema neonatorum is an uncommon condition which typically affects gravely ill, preterm neonates in the first week of life. It manifests as a diffuse hardening of skin and subcutaneous adipose tissue such that the skin cannot be pitted or picked up and pinched into a fold. Histologically there is minimal inflammation without fat necrosis. It is associated with a high mortality.
<b>KC22.Y</b>	<b>Other specified neonatal disorders of subcutaneous fat</b>
<b>Coding Note:</b>	Code also the causing condition
<b>KC22.Z</b>	<b>Neonatal disorders of subcutaneous fat, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>KC23</b>	<b>Neonatal disorders of the oral mucosa</b>
<b>KC24</b>	<b>Neonatal nutritional disorders affecting the skin</b> A range of nutritional disorders presenting in the neonatal period with skin manifestations. They may result from inadequate maternal nutrition or from problems with neonatal absorption of minerals such as zinc.  <b>Coding Note:</b> Code also the causing condition

Skin disorders associated with prematurity (KC30-KC3Y)

<b>KC30</b>	<b>Skin fragility of prematurity</b> <b>Coding Note:</b> Code also the causing condition
<b>KC31</b>	<b>Congenital erosive or vesicular dermatosis healing with reticulated supple scarring</b> A rare condition reported principally in premature neonates characterised by extensive erosions, vesicles, ulcerations and crusts affecting up to 75% of the body surface. The cause is unknown and the skin heals rapidly leaving faint reticulate scars.  <b>Coding Note:</b> Code also the causing condition
<b>KC3Y</b>	<b>Other specified skin disorders associated with prematurity</b> <b>Coding Note:</b> Code also the causing condition

**KC40**

**Miscellaneous skin disorders in the neonate**

**Coded Elsewhere:** Neonatal miliaria (EE02.0)

Disseminated intravascular coagulation of fetus or newborn  
(KA88)

Neonatal graft-versus-host disease (4B24.Y)

**KC40.0**

**Congenital sucking blisters**

**KC40.1**

**Neonatal milia**

**KC40.Y**

**Other specified skin disorders in the neonate**

**KC41**

**Miscellaneous specified conditions of integument specific to fetus or newborn**

**KC41.0**

**Breast engorgement of newborn**

A paediatric condition characterised by the painful overfilling of the breasts of a newborn with milk.

**KC41.1**

**Hydrops fetalis not due to haemolytic disease**

A fetal condition characterised by an accumulation of fluid or oedema in at least two fetal compartments, including subcutaneous compartments, the pleura, the pericardium, or the abdomen that is not due to the breakdown of red blood cells.

**KC41.Y**

**Other specified conditions of integument specific to fetus and newborn**

Iatrogenic injuries involving the skin of the neonate (KC50-KC7Y)

**Postnatal iatrogenic skin injury (KC50-KC5Z)**

Injuries resulting from perinatal and postnatal medical procedures

**KC50**

**Neonatal phototherapy burn**

Burn resulting from phototherapy administered to neonate, usually for the treatment of neonatal jaundice.

**KC5Y**

**Other specified postnatal iatrogenic skin injury**

**KC5Z**

**Postnatal iatrogenic skin injury, unspecified**

**KC7Y**

**Other specified iatrogenic injuries involving the skin of the neonate**

**KC9Z**

**Disorders involving the integument of fetus or newborn, unspecified**

## Disturbances of temperature regulation of newborn (KD10-KD1Z)

Normal temperature of newborn is 36.5 degrees C (S.D. = 0.6 degrees C). Temperature above 38.0 and below 36.0 may be regarded as unusual and called hyper- or hypothermia.

**KD10**

### **Environmental hyperthermia of newborn**

A paediatric condition characterised by a core body temperature above 37.5 degrees C (99.5 degrees F) in a newborn due to exposure of the newborn to prolonged or extremely high environmental temperature.

**KD11**

### **Fever of newborn**

**KD12**

### **Hypothermia of newborn**

Core body temperature of a newborn below -1SD (36.0 degrees C) compared with mean temperature (36.5 degrees of C).

**KD12.0**

### **Neonatal cold injury syndrome**

Neonatal cold injury syndrome is characterised by a core body temperature below 35°C (95°F) due to exposure of the newborn to prolonged or extremely low environmental temperatures. Clinically it is characterised by coldness to touch, apathy, immobility, decreased urine output and refusal of food. In addition oedema and redness of the extremities, especially the hands, feet, and face, are observed. It is commonly fatal and survivors may have evidence of brain damage.

**KD12.Y**

### **Other specified hypothermia of newborn**

**KD12.Z**

### **Hypothermia of newborn, unspecified**

**KD1Y**

### **Other specified disturbances of temperature regulation of newborn**

**KD1Z**

### **Disturbances of temperature regulation of newborn, unspecified**

## Certain disorders originating in the perinatal period (KD30-KD3Y)

A group of any other paediatric conditions that occur during the period of time around childbirth, especially the five months before and one month after birth.

**Coded Elsewhere:** Abnormal findings on neonatal screening (MG71.0)

Excessive crying of infant (MG44.0)

**KD30**

### **Birth depression**

A condition characterised by cardiorespiratory and neurological depression in a newborn.

**Coding Note:** Code also the causing condition

**KD30.0**

### **Birth depression with 5 minute Apgar score 0-3**

A condition characterised by cardiorespiratory and neurological depression, defined as an Apgar score between 0 to 3 at 5 minutes following birth.

- KD30.1** **Birth depression with 5 minute Apgar score 4-6**  
A condition characterised by cardiorespiratory and neurological depression, defined as an Apgar score between 4 and 6 at 5 minutes following birth.
- KD30.2** **Birth depression with associated metabolic acidaemia of cord blood**
- KD30.Z** **Birth depression, unspecified**
- Coding Note:** Code also the causing condition
- KD31** **Wide cranial sutures of newborn**  
A paediatric condition characterised by abnormally large separation between the bones of the skull of a newborn.
- KD32** **Feeding problems of newborn**  
A lack of interest in feeding or a problem receiving the proper amount of nutrition in a newborn.  
**Exclusions:** Avoidant-restrictive food intake disorder (6B83)
- KD32.0** **Slow feeding of newborn**  
A paediatric condition characterised by a newborn who requires more than approximately 45 minutes per feeding.
- KD32.1** **Underfeeding of newborn**  
A paediatric condition characterised by a newborn who consumes less than average for their age and weight and who seems hungry and unsatisfied after feeding, is fussy or cries a lot, does not produce several wet and soiled diapers each day, and who does not gain weight.
- KD32.2** **Overfeeding of newborn**  
A paediatric condition characterised by a newborn who consumes too much food and has subsequent excessive vomiting or weight gain beyond normal averages.
- KD32.3** **Neonatal difficulty in feeding at breast**  
A paediatric condition characterised by a newborn who has difficulty breastfeeding associated with problematic latching on to the breast, poor sucking reflex, structural anomalies, or other issues.
- KD32.4** **Failure to thrive in newborn**  
When newborn's current weight or rate of weight gain is significantly below that of other newborns of similar age and gender.
- KD32.Y** **Other specified feeding problems of newborn**
- KD32.Z** **Feeding problems of newborn, unspecified**
- KD33** **Jittery baby, not elsewhere classified**  
Jitteriness can occur on the first day of life. It can be caused by hypoglycaemia, hypocalcaemia, drug withdrawal, or other conditions.

**KD34**

### **Reactions or intoxications due to drugs administered to fetus or newborn**

A group of paediatric substance-induced conditions associated with health interventions applied to a fetus or newborn using pharmaceutical products.

**Exclusions:** Withdrawal symptoms from therapeutic use of drugs in newborn (KD36)

Neonatal hyperbilirubinaemia due to drugs or toxins transmitted from mother (KA87.4)

reactions and intoxications from maternal opiates, tranquillizers and other medication (KA06.0)

Neonatal withdrawal syndrome from maternal use of drugs of addiction (KD35)

Neonatal hyperbilirubinaemia due to drugs or toxins given to newborn (KA87.5)

**KD35**

### **Neonatal withdrawal syndrome from maternal use of drugs of addiction**

Intrauterine exposure to addictive drugs can lead to neonatal withdrawal symptoms. Withdrawal symptoms are usually neurological, preventing normal autonomic function. The clinical presentation of drug withdrawal is variable and dependent on several factors, such as, the type and dose of drug used and rate of metabolism and excretion of the mother and infant.

**Inclusions:** Drug withdrawal syndrome in infant of dependent mother  
Neonatal abstinence syndrome

**Exclusions:** Fetus or newborn affected by maternal anaesthesia or analgesia in pregnancy, labour or delivery (KA06.0)

**KD36**

### **Withdrawal symptoms from therapeutic use of drugs in newborn**

A paediatric condition characterised by the presence of symptoms due to drug withdrawal in a newborn.

**KD37**

### **Exposure to tobacco smoke in the perinatal period**

Exposure to tobacco smoke in the perinatal period, both directly or through second hand smoke, can lead to: low birth weight, preterm delivery, Sudden Infant Death Syndrome (SIDS or cot death), spontaneous abortion, or intrauterine growth retardation.

**Exclusions:** Fetus or newborn affected by maternal use of tobacco (KA06.1)

**KD38**

### **Meconium staining**

Green or yellowish appearing amniotic fluid, indicating presence of meconium. The newborn's skin, nail beds or the umbilical cord may be stained.

**Exclusions:** Neonatal aspiration of meconium (KB26.0)  
Meconium passage during delivery (KA05.8)

**KD39**

**Complications of intrauterine procedures, not elsewhere classified**

A group of conditions characterised as an unfavourable evolution of a condition (complication) due to a health intervention applied inside of the uterus.

**Exclusions:**      fetus and newborn affected by placental separation and haemorrhage due to intrauterine procedures (KA02)

**KD39.0**

**Fetus or newborn affected by amniocentesis**

Amniocentesis involves extracting a small sample of amniotic fluid surrounding the fetus. Risks include miscarriage or injury if the needle comes into contact with the fetus or placenta.

**KD39.1**

**Fetus or newborn affected by chorionic villous sampling**

Chorionic villus sampling (CVS) is a procedure where a small sample of the placenta is removed, either through the cervix or abdomen. Risks when performing CVS include: injury to the fetus or mother from the needle, infection to the mother from a punctured bowel or contaminated skin, or Rhesus sensitisation. Injury or infection can lead to miscarriage, although this is rare.

**KD39.2**

**Fetus or newborn affected by fetal blood sampling**

Fetal blood sampling involves extracting a sample of fetal blood from the umbilical cord using a needle and an ultrasound as a guide. It is used to detect fetal abnormalities and is generally performed after the completion of 18 weeks of gestation. Risks to the fetus and newborn include: miscarriage, bleeding from the needle entry site, uterine infection and temporary slowing of the baby's heart rate following the procedure.

**Inclusions:**      Fetus or newborn affected by cordocentesis

**KD39.3**

**Fetus or newborn affected by complications of fetal surgery**

A condition in the fetus due to an unfavourable evolution of a condition (complication) associated with a surgical health intervention applied to the fetus.

**KD39.4**

**Fetus or newborn affected by complications of intrauterine fetal surgery**

Fetal surgery is the surgical treatment of a fetus still present in the uterus. It is performed when the fetus is suffering from a birth defect and is not expected to survive the delivery or live long after birth. It allows for the fetus to survive to birth, so that further corrective surgery can then be performed. Fetal surgery can be done in the following ways: fetoscopic surgery by using a fibrooptic scope to enter the uterus through small surgical openings, open fetal surgery by performing a hysterotomy which is an opening of the uterus, or radiofrequency ablation which cuts off the blood supply to a tumour.

**KD39.Y**

**Other specified complications of intrauterine procedures, not elsewhere classified**

**KD39.Z**

**Complications of intrauterine procedures, not elsewhere classified, unspecified**

**KD3A**

### **Termination of pregnancy, affecting surviving fetus or newborn**

Termination of pregnancy (TOP) refers to a medically directed miscarriage, and this can be performed using pharmacological or surgical methods.

**Inclusions:** termination of pregnancy (affecting mother) (JA00.1)

**KD3B**

### **Fetal death, cause not specified**

Fetal death is death of a fetus prior to its complete expulsion or extraction from a woman, irrespective of the duration of pregnancy. Fetal death may be diagnosed in utero by absence of fetal heart sounds, confirmed by imaging techniques where available, or after delivery by absence of signs of life after the complete expulsion or extraction from the woman.

Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.

**Coding Note:** Not to be used for the underlying cause of death of live births.

Not to be used for the underlying cause of fetal death, if any other cause of fetal mortality is known.

**Inclusions:**

- stillbirth NOS
- stillborn NOS
- osteopiedion fetus
- lithopedion fetus
- fetus maceration
- calcified fetus

**KD3B.0**

### **Antepartum fetal death**

Antepartum fetal death is a fetal death before the onset of labour. If vital status of the fetus at the onset of labour is unknown, consider it was antepartum if there is presence of signs of maceration at the time of delivery.

Macerated stillbirth - is the complete expulsion or extraction from a woman of a fetus following a fetal death at 22 or more completed weeks of gestation; or if gestational age is not available with a birthweight of 500g or more with skin showing signs of maceration.

Antepartum stillbirth - is the complete expulsion or extraction from a woman of a fetus following an antepartum fetal death at 22 or more completed weeks of gestation; or if gestational age is not available with a birthweight of 500 grams or more.

**Coding Note:** Not to be used for the underlying cause of death of live births.

Not to be used for the underlying cause of fetal death, if any other cause of fetal mortality is known.

**Inclusions:**

- macerated stillbirth
- antepartum stillbirth

<b>KD3B.1</b>	<b>Intrapartum fetal death</b> Intrapartum fetal death is a fetal death during labour. If vital status of the fetus at the onset of labour is unknown, consider it was intrapartum if there is fresh skin appearance or no signs of maceration at the time of delivery.  Intrapartum stillbirth - is the complete expulsion or extraction from a woman of a fetus following an intrapartum fetal death at 22 or more completed weeks of gestation; or if gestational age is not available with a birthweight of 500 grams or more.
<b>Coding Note:</b>	Not to be used for the underlying cause of death of live births.  Not to be used for the underlying cause of fetal death, if any other cause of fetal mortality is known.
	<b>Inclusions:</b> intrapartum stillbirth fresh stillbirth
<b>KD3B.Z</b>	<b>Unspecified time of fetal death, cause not specified</b>
<b>Coding Note:</b>	Not to be used for the underlying cause of death of live births.  Not to be used for the underlying cause of fetal death, if any other cause of fetal mortality is known.
<b>KD3C</b>	<b>Vomiting in newborn</b> A paediatric condition characterised by the forceful expulsion of the contents of the stomach through the mouth and sometimes the nose of a newborn.
<b>KD3C.0</b>	<b>Bilious vomiting of newborn</b>
<b>KD3C.Y</b>	<b>Other specified vomiting in newborn</b>
<b>KD3C.Z</b>	<b>Vomiting in newborn, unspecified</b>
<b>KD3Y</b>	<b>Other specified disorders originating in the perinatal period</b>

---

<b>KD5Z</b>	<b>Conditions originating in the perinatal or neonatal period, unspecified</b>
<b>Coding Note:</b>	Conditions arising in the perinatal period, even though death or morbidity occurs later, should, as far as possible, be coded to chapter 19, which takes precedence over chapters containing codes for diseases by their anatomical site.  For children less than 28 days old, assume that a reported condition developed in the perinatal period, unless the duration is stated and the onset was after the first completed week of life.

# CHAPTER 20

---

## Developmental anomalies

This chapter has 221 four-character categories.

Code range starts with LA00

This chapter includes conditions caused by failure of a particular body site or body system to develop correctly during the antenatal period.

**Exclusions:** Inborn errors of metabolism (5C50-5C5Z)

This chapter contains the following top level blocks:

- Structural developmental anomalies primarily affecting one body system
- Multiple developmental anomalies or syndromes
- Chromosomal anomalies, excluding gene mutations

### Structural developmental anomalies primarily affecting one body system (LA00-LD0Z)

A deformation established before birth of an anatomical structure.

#### Structural developmental anomalies of the nervous system (LA00-LA0Z)

Any condition caused by failure of the nervous system to correctly develop during the antenatal period.

**LA00**

#### Anencephaly or similar anomalies

A malformation of the nervous system caused by the failure of neuropore closure. Infants are born with intact spinal cord, cerebellum, and brainstem, but lack formation of neural structures above this level. The skull is only partially formed but the eyes are usually normal.

**LA00.0**

#### Anencephaly

Anencephaly is a neural tube defect, characterised by the total or partial absence of the cranial vault and the covering skin, the brain being missing or reduced to a small mass. Most cases are stillborn, although some infants have been reported to survive for a few hours. In most cases autopsy findings reveal absence of adrenal glands. Anencephaly is likely to be multifactorial, the result of gene-environment interactions. Familial cases with a seemingly autosomal recessive mode of inheritance have been described but most cases are sporadic. Folic acid and zinc deficiencies, as well as maternal obesity, have been shown to be risk factors.

<b>LA00.00</b>	Craniorachischisis A condition caused by failure of the neural tube to close completely during the antenatal period. This condition is characterised by complete absence of the skull, extensive defects in the vertebrae and skin, and absence of the brain.
<b>LA00.0Y</b>	Other specified anencephaly
<b>LA00.0Z</b>	Anencephaly, unspecified
<b>LA00.1</b>	<b>Iniencephaly</b> Iniencephaly is a rare form of neural tube defect in which a malformation of the cervico-occipital junction is associated with a malformation of the central nervous system. The cardinal features are occipital bone defect, partial or total absence of cervicothoracic vertebrae, fetal retroflexion of the head and characteristic absence of the neck. It is associated with malformations of the central nervous (spina bifida and/or anencephaly), gastrointestinal (omphalocele) and cardiovascular systems.
<b>LA00.2</b>	<b>Acephaly</b>
<b>LA00.3</b>	<b>Amyelencephaly</b> Amyelencephaly is the absence of both the brain and spinal cord.
<b>LA00.Y</b>	<b>Other specified anencephaly or similar anomalies</b>
<b>LA00.Z</b>	<b>Anencephaly or similar anomalies, unspecified</b>
<b>LA01</b>	<b>Cephalocele</b> A condition caused by failure of the skull to correctly close during the antenatal period. This condition is characterised by herniation of the meninges. This condition may present with herniation of brain, or developmental delay. Confirmation is through observation of herniated meninges by imaging.
<b>LA02</b>	<b>Spina bifida</b> Spina bifida is the most common of a group of birth defects called neural tube defects. Spina bifida affects the backbone and, sometimes, the spinal cord. Aperta spina bifida defines the dorsal malclosure of vertebrae, associated with various degrees of spine defects. A pocket of skin may form, containing meninges (meningocele) or spinal cord and meninges (myelomeningocele). Different subtypes are distinguished according to the location of the defect. Consequences are paraplegia (paralysed lower limbs), hydrocephaly, Chiari malformation (result of the attached spine during life in utero), urinary and anorectal incontinence. The intensity of signs varies greatly with the level and extent of the lesion.  <b>Inclusions:</b> Rachischisis Spinal dysraphism  <b>Exclusions:</b> Arnold-Chiari malformation type I (LA07.4) Arnold-Chiari malformation type II (LA03) Occult spinal dysraphism (LB73.0)

<b>LA02.0</b>	<b>Spina bifida cystica</b> A condition caused by failure of the neural tube to correctly develop during the antenatal period. This condition is characterised by nerve damage and the presence of meningoceles on the back. This condition may present with physical or mental impairment.
<b>LA02.00</b>	Myelomeningocele with hydrocephalus A condition caused by failure of the neural tube to correctly develop during the antenatal period. This condition is characterised by nerve damage and hydrocephalus. This condition may also present with syringomyelia, hip dislocation, headache, nausea, vomiting, blurry vision, balance problems, bladder control problems, meningitis, or mental impairment.
<b>LA02.01</b>	Myelomeningocele without hydrocephalus A condition caused by failure of the neural tube to close completely during fetal development. This condition is characterised by nerve damage. This condition may also present with syringomyelia, hip dislocation, headache, nausea, vomiting, blurry vision, balance problems, bladder control problems, meningitis, or mental impairment.
<b>LA02.02</b>	Myelocystocele A condition caused by failure of the neural tube to close completely during fetal development. The condition is characterised by skin covered lumbosacral masses, an arachnoid lined meningocele that is directly continuous with the spinal subarachnoid space, and a low lying hydromyelic spinal cord that traverses the meningocele and expands into a large terminal cyst. This condition can present with neural damage and consequent impairment of function below the site of the myelocystocele.
<b>LA02.0Y</b>	Other specified spina bifida cystica
<b>LA02.0Z</b>	Spina bifida cystica, unspecified
<b>LA02.1</b>	<b>Spina bifida aperta</b> A condition caused by failure of the neural tube to correctly develop during the antenatal period. This condition is characterised by nerve damage originating from a known location in the spine, signified by the presence of a meningocele or myelomeningocele. This condition may present with physical or mental impairment.
<b>LA02.Y</b>	Other specified spina bifida
<b>LA02.Z</b>	Spina bifida, unspecified

**LA03****Arnold-Chiari malformation type II**

A condition caused by failure of the brain and spinal cord to correctly develop during the antenatal period. This condition is characterised by extension of both cerebellar and brain stem tissue into the foramen magnum. This condition may present with partial or complete absence of the cerebellar vermis, myelomeningocele, neck pain, balance problems, muscle weakness, limb numbness, dizziness, vision problems, difficulty swallowing, ringing in the ears, hearing loss, vomiting, insomnia, depression, or impairment of motor skills.

**Inclusions:** Arnold-Chiari malformation type I (LA07.4)

**LA04****Congenital hydrocephalus**

A disease caused by failure of the brain to correctly develop during the antenatal period. This condition is characterised by a rapid increase in head circumference or an unusually large head size due to excessive accumulation of cerebrospinal fluid in the brain. This condition may also present with vomiting, sleepiness, irritability, downward deviation of the eyes, or seizures. Confirmation is through observation of cerebrospinal fluid within cerebral ventricles by imaging.

**Inclusions:** Hydrocephalus in newborn

**Exclusions:** Myelomeningocele with hydrocephalus (LA02.00)

Hydrocephalus due to congenital toxoplasmosis (KA64.0)

Arnold-Chiari malformation type I (LA07.4)

Arnold-Chiari malformation type II (LA03)

**LA04.0****Hydrocephalus with stenosis of the aqueduct of Sylvius**

Hydrocephalus with stenosis of aqueduct of Sylvius (HSAS) or Bickers-Adams syndrome is characterised by the association of hydrocephaly, severe intellectual deficit, spasticity and adducted thumbs, and is part of the L1 syndrome (see this term).

**Inclusions:** Stenosis of the aqueduct of Sylvius

**LA04.Y****Other specified congenital hydrocephalus****LA04.Z****Congenital hydrocephalus, unspecified****LA05****Cerebral structural developmental anomalies**

Any condition caused by failure of the brain to correctly develop during the antenatal period.

**Exclusions:** Encephalocele (LA01)

**LA05.0****Microcephaly**

A condition caused by failure of the head to correctly develop during the antenatal period. This condition is characterised by a head size that is significantly smaller than normal for their age and sex. This condition may also present with developmental delays, difficulties with balance and coordination, short stature, hyperactivity, mental retardation, seizures, or other neurological abnormalities.

**Coding Note:**

Code also the causing condition

**Inclusions:** Micrencephaly

**Exclusions:** Syndromes with microcephaly as a major feature (LD20.2)

- LA05.1      Megalencephaly**  
A condition caused by failure of the brain to correctly develop during the antenatal period. This condition is characterised by increased size or weight of an otherwise correctly formed brain. This condition may also present with seizures, motor deficits, mental retardation and mild cognitive impairment.
- LA05.2      Holoprosencephaly**  
Holoprosencephaly is a brain malformation resulting from incomplete cleavage of the prosencephalon, occurring between the 18th and the 28th day of gestation and affecting both the forebrain and the face. In most of the cases, facial anomalies are observed: cyclopia, proboscis and median or bilateral cleft lip/palate in severe forms, and ocular hypotelorism or solitary median maxillary central incisor in minor forms. These latter midline defects can occur without the cerebral malformations (microforms). Children with HPE have many medical problems: developmental delay and feeding difficulties, epilepsy, and instability of temperature, heart rate and respiration. Endocrine disorders like diabetes insipidus, adrenal hypoplasia, hypogonadism, thyroid hypoplasia and growth hormone deficiency are frequent.
- Coded Elsewhere:** Cyclopia (LA10.Y)
- LA05.3      Corpus callosum agenesis**  
Corpus callosum agenesis is the most common brain malformation and is characterised by total or partial absence of the main interhemispheric commissure, the corpus callosum.
- LA05.4      Arrhinencephaly**  
A condition caused by failure of the olfactory organs to correctly develop during the antenatal period. This condition is characterised by absence of the olfactory bulbs and tracts.
- LA05.5      Abnormal neuronal migration**  
Any condition caused by abnormal migration of neuronal cells during the antenatal period. These conditions may present with poor muscle tone and motor function, seizures, developmental delays, mental retardation, failure to grow and thrive, difficulties with feeding, swelling in the extremities or microcephaly.
- Exclusions:** Lissencephaly (LD20.1)
- LA05.50     Polymicrogyria**  
Polymicrogyria (PMG) is a cerebral cortical malformation characterised by excessive cortical folding and by shallow sulci. Microscopic examination reveals abnormal cortical layering. Topographic distribution of PMG is variable, but bilateral symmetrical perisylvian PMG (BPP) is the most frequent form. PMG is manifested by mild intellectual deficit, epilepsy, and pseudobulbar palsy, which causes difficulties with speech learning and feeding. The severity of PMG is highly dependent on the location and size of the affected area.
- LA05.51     Cortical dysplasia**  
A condition caused by failure of the cortex to correctly develop during the antenatal period, or by trauma. This condition is characterised by epileptic seizures. This condition may also present with learning impairments.

<b>LA05.5Y</b>	Other specified abnormal neuronal migration
<b>LA05.5Z</b>	Abnormal neuronal migration, unspecified
<b>LA05.6</b>	<b>Encephaloclastic disorders</b>
<b>LA05.60</b>	<p>Porencephaly</p> <p>Porencephaly is characterised by a circumscribed intracerebral cavity of variable size that may be bordered by abnormal polymicrogyric grey matter. In extreme cases, this cavity may result in a communication between the pial surface and the ventricle; this is termed schizencephaly.</p>
<b>LA05.61</b>	<p>Schizencephaly</p> <p>Schizencephaly is a rare congenital cerebral malformation characterised by the presence of linear clefts in one or both hemispheres of the brain, extending from the lateral ventricles to the pial surface of the cortex, and that lead to a variety of neurological symptoms such as epilepsy, motor deficits, and psychomotor retardation.</p>
<b>LA05.62</b>	<p>Hydranencephaly</p> <p>A condition caused by failure of the cerebral hemispheres to develop during the antenatal period. This condition is characterised by a lack of a forebrain upon imaging. This condition may present with visual impairment, lack of growth, deafness, blindness, spastic quadripareisis, or intellectual deficits.</p>
<b>LA05.6Y</b>	Other specified encephaloclastic disorders
<b>LA05.6Z</b>	Encephaloclastic disorders, unspecified
<b>LA05.7</b>	<b>Brain cystic malformations</b>
	<p>A disease caused by expansion of the roof plate of the brain vesicle, or by extraaxial structures such as an arachnoid membrane or migrating ependymal cells. This disease is characterised by the presence of fluid filled cysts in the brain. This disease may present with asymmetry of the skull, brain compression, raised intracranial pressure, hydrocephalus, bleeding or seizures. This disease may also be asymptomatic. Confirmation is through observation of intracerebral cysts by imaging.</p>
	<p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Acquired porencephalic cysts (8E40)</li> <li>Dandy-Walker malformation with hydrocephalus (LA06.0)</li> <li>Dandy-Walker malformation without hydrocephalus (LA06.0)</li> </ul>
	<p><b>Coded Elsewhere:</b> Intracranial arachnoid cyst (8D67)</p>
<b>LA05.8</b>	<b>Colpocephaly</b>
	<p>A condition caused by the white matter in the posterior cerebrum failing to develop or thicken during the antenatal period. This condition is characterised by the occipital horns – the posterior or rear portion of the lateral ventricles (cavities) of the brain – being larger than normal.</p>
	<p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Porencephaly (LA05.60)</li> <li>stenosis of interventricular foramen (ME93)</li> </ul>
<b>LA05.Y</b>	<b>Other specified cerebral structural developmental anomalies</b>

LA05.Z	<b>Cerebral structural developmental anomalies, unspecified</b>
LA06	<p><b>Cerebellar structural developmental anomalies</b></p> <p>Any condition caused by failure of the brain to correctly develop during the antenatal period.</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Arnold-Chiari malformation type I (LA07.4)</li> <li>Arnold-Chiari malformation type II (LA03)</li> </ul>
LA06.0	<p><b>Dandy-Walker malformation</b></p> <p>Dandy-Walker malformation is the association of three signs: hydrocephalus, partial or complete absence of the cerebellar vermis, and posterior fossa cyst contiguous with the fourth ventricle.</p>
LA06.1	<p><b>Hypoplasia or agenesis of cerebellar hemispheres</b></p> <p>Cerebellar hypoplasia corresponds to underdevelopment of cerebellar structures that can involve the vermis and/or the cerebellar hemispheres from partial to total agenesis. It has been described in the context of various clinical entities: chromosomal anomalies, in utero exposure to toxins and infectious agents, metabolic disorders (disorders of glycosylation and CoQ10 deficiencies), and a wide variety of rare genetic neurological diseases. It can be confined to the cerebellum, or affect other CNS structures: the midbrain (molar tooth syndromes), pons and medulla (ponto-cerebellar hypoplasia), cerebral cortex (lissencephaly cerebellar hypoplasia syndromes).</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>PHACE syndrome (LD2F.1)</li> </ul>
LA06.2	<p><b>Focal cerebellar dysplasia</b></p> <p>A condition caused by failure of the cerebellum to correctly develop during the antenatal period. This condition may present with hypotonia, facial deformities, abnormalities in eyes or in ocular motricity, cognitive deficiencies, or motor dysfunction. Confirmation is through observation of a malformed cerebellum by imaging.</p>
LA06.Y	<b>Other specified cerebellar structural developmental anomalies</b>
LA06.Z	<b>Cerebellar structural developmental anomalies, unspecified</b>
LA07	<p><b>Structural developmental anomalies of the neureneric canal, spinal cord or vertebral column</b></p> <p>Any condition caused by failure of the neureneric canal, spinal cord and vertebral column to correctly develop during the antenatal period.</p> <p><b>Coded Elsewhere:</b> Occult spinal dysraphism (LB73.0)</p>
LA07.0	<p><b>Primary tethered cord syndrome</b></p> <p>A condition caused by failure of the spinal cord to correctly develop during the antenatal period. This condition is characterised by tethering of the spinal cord to the spinal canal. This condition may present with lower back skin appendages, radicular pain, weakness, asymmetric hyporeflexia, spasticity, sensory changes, bowel or bladder dysfunction, or motor dysfunction. Confirmation is through observation of a tethered spinal cord by imaging.</p>

<b>LA07.1</b>	<b>Diastematomyelia</b> A condition caused by failure of the spinal cord during the antenatal period. This condition is characterised by separation of the spinal cord into two parts by a rigid or fibrous septum. This condition may present with misformed vertebrae, pain, weakness, impaired gait, sensory changes in the legs, or sphincter disturbance. Confirmation is through observation of a septum-bifurcated spinal cord by imaging.
	<b>Inclusions:</b> Split cord malformation
<b>LA07.2</b>	<b>Amyelia</b> A condition caused by malformation of the spinal cord during the antenatal period. This condition is characterised by absence of sections of the spinal cord.
	<b>Inclusions:</b> Spinal cord agenesis
<b>LA07.3</b>	<b>Primary syringomyelia or hydromyelia</b> A condition caused by failure of the spinal canal to correctly develop during the antenatal period. This condition is characterised by a cavity within the spinal cord in which cerebrospinal fluid can accumulate. Confirmation is through observation of a fluid filled cavity within the spinal cord by imaging.
	<b>Exclusions:</b> Syringomyelia due to certain specified cause (8D66.1)
<b>LA07.4</b>	<b>Arnold-Chiari malformation type I</b> A condition caused by failure of the cerebellum to correctly develop during the antenatal period. This condition is characterised by extension of the cerebellar tonsils into the foramen magnum, without involving the brain stem. This condition may present as asymptomatic. Confirmation is through observation of the cerebellar tonsil extension by imaging.
	<b>Exclusions:</b> Arnold-Chiari malformation type II (LA03)
<b>LA07.Y</b>	<b>Other specified structural developmental anomalies of the neureneric canal, spinal cord or vertebral column</b>
<b>LA07.Z</b>	<b>Structural developmental anomalies of the neureneric canal, spinal cord or vertebral column, unspecified</b>
<b>LA0Y</b>	<b>Other specified structural developmental anomalies of the nervous system</b>
<b>LA0Z</b>	<b>Structural developmental anomalies of the nervous system, unspecified</b>

Structural developmental anomalies of the eye, eyelid or lacrimal apparatus (LA10-LA1Z)

Any condition caused by failure of the eye, eyelid and lacrimal apparatus to correctly develop during the antenatal period.

<b>LA10</b>	<b>Structural developmental anomalies of ocular globes</b> Any condition caused by failure of the ocular globes to correctly develop during the antenatal period.
	<b>Exclusions:</b> Holoprosencephaly with cyclopia or synophthalmia (LA05.2)

<b>LA10.0</b>	<b>Microphtalmos</b>
	<b><i>Inclusions:</i></b>
	Dysplasia of eye
	Hypoplasia of eye
	Rudimentary eye
<b>LA10.1</b>	<b>Clinical anophthalmos</b>
	This refers to the clinical absence of one or both eyes. Both the globe (human eye) and the ocular tissue are missing from the orbit. The absence of the eye will cause a small bony orbit, a constricted mucosal socket, short eyelids, reduced palpebral fissure and malar prominence. Genetic mutations, chromosomal abnormalities, and prenatal environment can all cause anophthalmia. Anophthalmia is an extremely rare disease and is mostly rooted in genetic abnormalities.
	<b><i>Inclusions:</i></b>
	Agenesis of eye
	Aplasia of eye
<b>LA10.2</b>	<b>Buphthalmos</b>
	A condition characterised by enlargement of the globe of the eye.
<b>LA10.3</b>	<b>Congenital macrophtalmos</b>
	A condition caused by failure of the eye to develop correctly during the antenatal period. This condition is characterised by enlargement of the globe of the eye.
	<b><i>Exclusions:</i></b>
	macrophtalmos in congenital glaucoma (9C61.4)
<b>LA10.Y</b>	<b>Other specified structural developmental anomalies of ocular globes</b>
<b>LA10.Z</b>	<b>Structural developmental anomalies of ocular globes, unspecified</b>
<b>LA11</b>	<b>Structural developmental anomalies of the anterior segment of eye</b>
	Any condition caused by failure of the anterior segment of the eye to correctly develop during the antenatal period.
	<b><i>Coded Elsewhere:</i></b> Developmental glaucoma (9C61.4)
<b>LA11.0</b>	<b>Blue sclera</b>
	A condition of the eye, characterised by transparency of the sclera such that the blue uvea is visible.
<b>LA11.1</b>	<b>Structural developmental anomalies of cornea</b>
	Any condition caused by failure of the cornea to correctly develop during the antenatal period.
	<b><i>Coded Elsewhere:</i></b> Corneal staphyloma (9A78.51)
<b>LA11.2</b>	<b>Anterior segment dysgenesis</b>
	A condition caused by failure of the anterior structures of the eye to correctly develop during the antenatal period. This condition may present with iris hypoplasia, irregular and misplaced pupils, hazy corneas, or attachments of the iris to the cornea.

<b>LA11.3</b>	<b>Aniridia</b> Aniridia is a congenital ocular malformation characterised by the complete or partial absence of the iris. It can be isolated or part of a syndrome (isolated and syndromic aniridia).
<b>LA11.4</b>	<b>Coloboma of iris</b> A disease of the eye, caused by trauma or congenital genetic mutation. This disease is characterised by notches or gaps in iris.
<b>LA11.5</b>	<b>Congenital corneal opacity</b> A condition caused by failure of the cornea to correctly develop during the antenatal period. This condition is characterised by opacity of the cornea.  <b>Coded Elsewhere:</b> Peters anomaly (9C61.42) Congenital hereditary endothelial dystrophy type 2 (9A70.0)
<b>LA11.6</b>	<b>Structural disorders of the pupil</b>
<b>LA11.60</b>	Irregular pupil of the eye
<b>LA11.61</b>	Iridoschisis
<b>LA11.62</b>	Anomalies of pupillary function This is a group of conditions associated with pupillary function which is to regulate the amount of light that enters the eye controlled by the muscular structures of the iris.  <b>Coded Elsewhere:</b> Congenital mydriasis (9B01.3)
<b>LA11.6Y</b>	Other specified structural disorders of the pupil
<b>LA11.6Z</b>	Structural disorders of the pupil, unspecified
<b>LA11.Y</b>	<b>Other specified structural developmental anomalies of the anterior segment of eye</b>
<b>LA11.Z</b>	<b>Structural developmental anomalies of the anterior segment of eye, unspecified</b>
<b>LA12</b>	<b>Structural developmental anomalies of lens or zonula</b> Any condition caused by failure of the lens and zonula to correctly develop during the antenatal period.
<b>LA12.0</b>	<b>Coloboma of lens</b>
<b>LA12.1</b>	<b>Congenital cataract</b> Partial or complete opacity on or in the lens or capsule of one or both eyes, impairing vision or causing blindness; typically diagnosed at birth
<b>LA12.2</b>	<b>Congenital aphakia</b> Congenital primary aphakia is a developmental eye defect characterised by an absence of the lens, and can be associated with variable secondary ocular defects (including aplasia/dysplasia of the anterior segment of the eye, microphthalmia, and in some cases absence of the iris, retinal dysplasia, or sclerocornea).

LA12.3	<b>Spherophakia</b> A disease of the eye, caused by homozygous mutations in the LTBP2 gene (isolated spherophakia), or by other genetic mutations. This disease is characterised by small, spherical lenses. This disease can also present with lenticular myopia, glaucoma, or sublation of the lens into the vitreous cavity.
LA12.Y	<b>Other specified structural developmental anomalies of lens or zonula</b>
LA12.Z	<b>Structural developmental anomalies of lens or zonula, unspecified</b>
<b>LA13</b>	<b>Structural developmental anomalies of the posterior segment of eye</b> Any condition caused by failure of the posterior segment of the eye to correctly develop during the antenatal period. These conditions are characterised by clinical, functional, or morphological changes to the posterior segment of the eye.  <b>Coded Elsewhere:</b> Juvenile retinoschisis (9B73.11) Optic nerve hypoplasia or aplasia (LA13.7Z)
LA13.0	<b>Congenital anomalies of the vitreous</b> <b>Coded Elsewhere:</b> Congenital vitreoretinal dysplasia (LA13.3) Persistent hyperplastic primary vitreous (LA13.Y)
LA13.1	<b>Coloboma of choroid or retina</b> A condition of the eye characterised by absence of the retina in the lower inside corner of the eye.
LA13.2	<b>Coloboma of macula</b> A disease caused by malformation of the macula due to retinal inflammation during the antenatal period or by congenital genetic mutation. This disease is characterised by a clearly delineated defect in the macula.
LA13.3	<b>Congenital vitreoretinal dysplasia</b> Any disease caused by the maldevelopment of the vitreous and retina.  <b>Coded Elsewhere:</b> Incontinentia pigmenti (LD27.00) Walker Warburg syndrome (8C70.6) Norrie disease (LD21.Y)
LA13.5	<b>Congenital retinal aneurysm</b>
LA13.6	<b>Congenital malformations of choroid</b> These are single or multiple defects of the morphogenesis of the choroid, the vascular layer of the eye, identifiable at birth or during the intrauterine life.
LA13.7	<b>Congenital malformation of optic disc</b>
LA13.70	Isolated optic nerve hypoplasia
LA13.71	Optic nerve aplasia
LA13.72	Congenitally elevated optic disc

<b>LA13.73</b>	Optic disc dysplasia deformed optic discs that fail to conform to any recognizable diagnostic category
<b>LA13.74</b>	Megalopapilla
<b>LA13.76</b>	Coloboma of optic disc Congenital abnormal optic disc appearance due to incomplete coaptation of the proximal end of the embryonic fissure in ocular development
<b>LA13.7Y</b>	Other specified congenital malformation of optic disc
<b>LA13.7Z</b>	Congenital malformation of optic disc, unspecified
<b>LA13.8</b>	<b>Certain congenital malformations of posterior segment of eye</b> <b>Coded Elsewhere:</b> Coloboma of choroid or retina (LA13.1)
<b>LA13.80</b>	Anastomosis of retinal or choroidal vessels
<b>LA13.Y</b>	<b>Other specified structural developmental anomalies of the posterior segment of eye</b>
<b>LA13.Z</b>	<b>Structural developmental anomalies of the posterior segment of eye, unspecified</b>
<b>LA14</b>	<b>Structural developmental anomalies of eyelid, lacrimal apparatus or orbit</b> Any condition caused by failure of the eyelid lacrimal apparatus and orbit to correctly develop during the antenatal period. <b>Exclusions:</b> cryptophthalmos NOS (LA10.0)
<b>LA14.0</b>	<b>Structural developmental anomalies of eyelids</b>
<b>Coding Note:</b>	Code also any associated syndrome
<b>LA14.00</b>	Palpebral cleft or coloboma
<b>LA14.01</b>	Cryptophthalmia Isolated cryptophthalmia is a congenital abnormality in which the eyelids are absent and skin covers the ocular bulb, which is often microphthalmic.
<b>LA14.02</b>	Congenital entropion
<b>LA14.03</b>	Congenital ectropion
<b>LA14.04</b>	Congenital ptosis Congenital ptosis is characterised by superior eyelid drop present at birth.
<b>LA14.05</b>	Congenital eyelid retraction
<b>LA14.06</b>	Epibulbar choristoma

- LA14.07** Ankyloblepharon filiforme adnatum  
 Isolated ankyloblepharon filiforme adnatum is characterised by the presence of single or multiple thin bands of connective tissue between the upper and lower eyelids, preventing full opening of the eye.
- LA14.0Y** Other specified structural developmental anomalies of eyelids
- Coding Note:** Code also any associated syndrome
- LA14.1** **Structural developmental anomalies of lacrimal apparatus**  
 This refers to structural developmental anomalies of the physiologic system containing the orbital structures for tear production and drainage.
- LA14.10** Aplasia of lacrimal or salivary glands
- LA14.11** Agenesis of lacrimal ducts  
 Isolated congenital alacrima is characterised by deficient lacrimation (ranging from a complete absence of tears to hyposecretion of tears) that is present from birth.  
**Inclusions:** Absence of punctum lacrimale
- LA14.12** Congenital dacryocele
- LA14.13** Congenital agenesis of lacrimal punctum
- LA14.14** Congenital stenosis or stricture of lacrimal duct
- LA14.1Y** Other specified structural developmental anomalies of lacrimal apparatus
- LA14.1Z** Structural developmental anomalies of lacrimal apparatus, unspecified
- LA14.2** **Structural developmental anomalies of orbit**  
 Any condition caused by failure of the orbit to correctly develop during the antenatal period.
- LA14.Y** **Other specified structural developmental anomalies of eyelid, lacrimal apparatus or orbit**
- LA14.Z** **Structural developmental anomalies of eyelid, lacrimal apparatus or orbit, unspecified**
- LA1Y** **Other specified structural developmental anomalies of the eye, eyelid or lacrimal apparatus**
- LA1Z** **Structural developmental anomalies of the eye, eyelid or lacrimal apparatus, unspecified**

Structural developmental anomalies of the ear (LA20-LA2Z)

Any condition caused by failure of the ear to correctly develop during the antenatal period.

- LA20** **Structural anomaly of eustachian apparatus**

**LA21****Minor anomalies of pinnae**

Any condition caused by failure of the pinna to correctly develop during the antenatal period. These conditions are characterised by asymptomatic abnormalities of the visible part of the ear.

**LA21.0****Macrotia**

- 1) Median longitudinal ear length greater than 2 SD above the mean and median ear width greater than 2 SD above the mean (objective).
- 2) Apparent increase in length and width of the pinna (subjective).

**LA21.1****Protruding ear****LA21.2****Low-set ear**

The upper third of the pinna is not above a plane defined by the lateral canthi and the maximum convexity of the occiput.

**Exclusions:** cervical auricle (LA23)

**LA21.3****Misshapen ear**

A condition caused by the malformation of the ear during the antenatal period.

**Exclusions:** Acquired deformity of pinna (AA41)

**LA21.Y****Other specified minor anomalies of pinnae****LA21.Z****Minor anomalies of pinnae, unspecified****LA22****Structural developmental anomalies of ear causing hearing impairment**

Any condition caused by the failure of the ear to correctly develop during the antenatal period. These conditions are characterised by hearing impairment.

**LA22.0****Microtia**

Microtia is a congenital malformation of variable severity of the external and middle ear. Both hereditary factors (evidence for familial craniofacial microsomia and patterns suggestive of multifactorial inheritance)

and vascular accidents are involved in the etiology of the disease. Specific causative factors also can include maternal rubella during the first trimester of pregnancy. Microtia commonly involves the external canal and middle ear; hence, hearing can be affected. Microtia may present within a spectrum of branchial arch defects (hemifacial microsomia, craniofacial microsomia) or may manifest as an independent malformation. The microtic auricle consists of a disorganised remnant of cartilage attached to a variable amount of soft tissue lobule.

**LA22.1****Anotia**

Complete absence of any auricular structures.

**LA22.2****Aplasia or hypoplasia of external auditory canal**

**Exclusions:** Microtia (LA22.0)  
Anotia (LA22.1)

- LA22.3** **Structural developmental anomalies of ear ossicles**  
Any condition caused by failure of the ear ossicles to correctly develop during the antenatal period.
- LA22.4** **Structural developmental anomalies of inner ear**  
Any condition caused by failure of the inner ear to correctly develop during the antenatal period.
- LA22.Y** **Other specified structural developmental anomalies of ear causing hearing impairment**
- LA22.Z** **Structural developmental anomalies of ear causing hearing impairment, unspecified**
- LA23** **Otocephaly**  
Malplacement of the external ears with or without fusion microstomia, and persistence of the buccopharyngeal membrane likely being secondary effects of absence or hypoplasia of the mandibular arch.
- LA24** **Accessory auricle**  
A condition caused by development of an auricular appendage during the antenatal period.
- LA2Y** **Other specified structural developmental anomalies of the ear**
- LA2Z** **Structural developmental anomalies of the ear, unspecified**

Structural developmental anomalies of the face, mouth or teeth (LA30-LA5Z)  
Any condition caused by failure of the face, mouth and teeth to correctly develop during the antenatal period.

- Coded Elsewhere:** Dermoid cyst (LC40)  
Congenital micrognathia (DA0E.00)
- LA30** **Structural developmental anomalies of teeth and periodontal tissues**  
**Coded Elsewhere:** Disturbances in tooth formation (DA07.3)  
Root anomaly (DA07.4)  
Disturbances in tooth eruption (DA07.6)  
Anomalies of tooth position (DA0E.3)

- LA30.0** **Anodontia**  
Anodontia is a genetic disorder commonly defined as the absence of all teeth, affecting both temporary and permanent dentitions, and is extremely rarely encountered in a pure form without any associated abnormalities. Rare but more common than complete anodontia is hypodontia.

<b>LA30.1</b>	<b>Hypodontia</b> Hypodontia presents as a lack of one or a few (less than 6) permanent teeth, without any systemic disorders.
	<b>Inclusions:</b> Congenital absence of one tooth
<b>LA30.2</b>	<b>Oligodontia</b> A genetic condition characterised by the development of fewer than the normal number of teeth. The diagnosis of Oligodontia is usually made in cases in which more than six teeth are missing.
<b>LA30.3</b>	<b>Hyperdontia</b> Hyperdontia is the condition of having supernumerary teeth, or teeth which appear in addition to the regular number of teeth.
	<b>Inclusions:</b> Supplementary teeth Supernumerary teeth distomolar Fourth molar Mesiodens Paramolar
<b>LA30.4</b>	<b>Abnormalities of size or form of teeth</b> A group of conditions characterised by abnormal size and form of teeth.
<b>LA30.5</b>	<b>Anomalies in tooth resorption or loss</b> <b>Coded Elsewhere:</b> Pathological resorption of teeth (DA08.14)
<b>LA30.50</b>	Early exfoliation of teeth
<b>LA30.51</b>	Late exfoliation of teeth
<b>LA30.5Y</b>	Other specified anomalies in tooth resorption or loss
<b>LA30.5Z</b>	Anomalies in tooth resorption or loss, unspecified
<b>LA30.6</b>	<b>Amelogenesis imperfecta</b> Amelogenesis imperfecta presents with a rare abnormal formation of the enamel or external layer of the crown of teeth. Amelogenesis imperfecta is due to the malfunction of the proteins in the enamel: ameloblastin, enamelin, tuftelin and amelogenin. People afflicted with amelogenesis imperfecta have teeth with abnormal colour: yellow, brown or grey; this disorder can afflict any number of teeth of both dentitions. The teeth have a higher risk for dental cavities and are hypersensitive to temperature changes as well as rapid attrition, excessive calculus deposition, and gingival hyperplasia.
<b>LA30.7</b>	<b>Dentine dysplasia</b>
<b>LA30.8</b>	<b>Dentinogenesis imperfecta</b>
<b>LA30.9</b>	<b>Odontogenesis imperfecta</b>

<b>LA30.Y</b>	<b>Other specified structural developmental anomalies of teeth and periodontal tissues</b>
<b>LA30.Z</b>	<b>Structural developmental anomalies of teeth and periodontal tissues, unspecified</b>
<b>LA31</b>	<b>Structural developmental anomalies of mouth or tongue</b>
	Embryo fetal anomalies affecting structure of maxillo-labial or mandibular tissues or the tongue.
<b>LA31.0</b>	<b>Congenital macroglossia</b>
	A condition caused by failure of the tongue to correctly develop during the antenatal period. This condition is characterised by a larger than normal tongue.
<b>LA31.1</b>	<b>Hypoglossia or aglossia</b>
	Isolated aglossia and hypoglossia are terms covering the spectrum from partial to total absence of the tongue. These congenital malformations have been classified as part of the group of oromandibular-limb hypogenesis syndromes (OLHS).
<b>LA31.2</b>	<b>Ankyloglossia</b>
	A condition of the tongue, caused by short, tight, lingual frenulum or fusion of the tongue to the floor of the mouth. This condition is characterised by difficulty in speech articulation due to limitation or restriction in tongue movement.
	<i>Inclusions:</i> Tongue tie
<b>LA31.3</b>	<b>Macrostomia</b>
	Congenital macrostomia or transverse facial cleft is a rare congenital craniofacial anomaly. It is usually associated with deformities of other structures developed from the first and second branchial arches and is thought to be part of the manifestations of hemifacial microsomia, the second most common congenital craniofacial anomaly.
	<i>Inclusions:</i> Transverse facial cleft
<b>LA31.4</b>	<b>Microstomia</b>
	A condition of the mouth, caused by congenital genetic mutation, burns, or injury. This condition is characterised by reduction in the size of the oral aperture with or without involvement of the entire oral cavity.
<b>LA31.Y</b>	<b>Other specified structural developmental anomalies of mouth or tongue</b>
<b>LA31.Z</b>	<b>Structural developmental anomalies of mouth or tongue, unspecified</b>

## Clefts of lip, alveolus or palate (LA40-LA4Z)

A condition caused by failure of the structures of the mouth to correctly develop during the antenatal period. This condition is characterised by a fissure extending across the upper lip, nasal base, alveolar ridge or the palate. This condition may present with disruption of sucking or swallowing in neonates, recurrent otitis, transmission hypoacusia, or abnormalities of the maxillary lateral incisor.

**LA40**

### **Cleft lip**

Isolated cleft lip is a fissure type embryopathy extending from the upper lip to the nasal base.

**Exclusions:** Cleft lip and alveolus (LA41)

**LA40.0**

### **Cleft lip, unilateral**

**Exclusions:** Cleft lip and alveolus (LA41)

**LA40.1**

### **Cleft lip, bilateral**

A condition caused by failure of the upper lip to correctly develop during the antenatal period. This condition is characterised by two fissures in the upper lip and a collapsed and stretched nose through one side of the upper lip. This condition may present with disruption of sucking or swallowing in neonates.

**Exclusions:** Cleft lip and alveolus (LA41)

**LA40.2**

### **Cleft lip, median**

**Exclusions:** Cleft lip and alveolus (LA41)

**LA40.Z**

### **Cleft lip, unspecified**

**LA41**

### **Cleft lip and alveolus**

Cleft lip and alveolus is a fissure type embryopathy that involves the upper lip, nasal base and alveolar ridge in variable degrees.

**LA41.0**

### **Cleft lip and alveolus, unilateral**

**LA41.1**

### **Cleft lip and alveolus, bilateral**

**LA41.Z**

### **Cleft lip and alveolus, unspecified**

**LA42**

### **Cleft palate**

Cleft palate is a fissure type embryopathy that affects the soft and hard palate to varying degrees.

**LA42.0**

### **Cleft hard palate**

A condition caused by failure of the palate to correctly develop during the antenatal period. This condition is characterised by a fissure extending across the palate, including the bony portion of the palate. This condition may present with disruption of sucking or swallowing in neonates.

**LA42.1**

### **Cleft soft palate**

Cleft velum is a fissure type embryopathy that affects in varying degrees the soft palate.

<b>LA42.2</b>	<b>Cleft uvula</b> Bifid uvula is a fissure type embryopathy affecting the uvula at the back of the soft palate.
<b>LA42.Z</b>	<b>Cleft palate, unspecified</b>
<b>LA4Y</b>	<b>Other specified clefts of lip, alveolus or palate</b>
<b>LA4Z</b>	<b>Clefts of lip, alveolus or palate, unspecified</b>
<b>LA50</b>	<b>Congenital velopharyngeal incompetence</b> A condition caused by failure of the velum to correctly develop during the antenatal period. This condition is characterised by improper closing of the velopharyngeal sphincter, nasal speech, and difficulties in pronouncing certain letters or words.
<b>LA51</b>	<b>Facial clefts</b> Any condition caused by failure of the structures of the face to correctly develop during the antenatal period. These conditions are characterised by a partition in bone, soft tissue, or skin of the face.  <b>Exclusions:</b> Frontofacionasal dysostosis (LD25.3) Frontonasal dysplasia (LD25.3)
<b>LA52</b>	<b>Facial asymmetry</b> A condition caused by failure of the face to develop symmetrically during the antenatal period.
<b>LA53</b>	<b>Macrocheilia</b> A condition characterised by above normal lip volume. This condition may present with difficulties in speaking, drinking, salivary control, or mastication.
<b>LA54</b>	<b>Microcheilia</b> A condition caused by failure of the lips to develop correctly during the antenatal period. This condition is characterised by below normal lip size.
<b>LA55</b>	<b>Compression facies</b> A disease caused by neurovascular compression of the facial nerve. This disease is characterised by facial spasm, and abnormal facial expression.
<b>LA56</b>	<b>Pierre Robin syndrome</b> Pierre-Robin syndrome (or Pierre-Robin sequence) is characterised by triad of orofacial morphological anomalies consisting of retrognathia, glossoptosis and a posterior median velopatatal cleft. This condition is referred to as a sequence because the posterior cleft palate is a secondary defect associated with abnormal mandibular development: mandibular hypoplasia occurring early in gestation causes the tongue to be maintained high-up in the oral cavity, preventing fusion of the palatal shelves.
<b>LA5Y</b>	<b>Other specified structural developmental anomalies of the face</b>
<b>LA5Z</b>	<b>Structural developmental anomalies of the face, unspecified</b>

Structural developmental anomalies of the neck (LA60-LA6Z)

Any condition caused by failure of the neck to correctly develop during the antenatal period.

**Coded Elsewhere:** Thyroglossal cyst (DA05.Y)

**LA60**

**Webbed neck**

A condition caused by failure of the tissues of the neck to correctly develop during the antenatal period. This condition is characterised by a broad neck due to lateral folds of skin. This condition may present with limited range of motion of the neck.

**Inclusions:** Pterygium colli

**LA61**

**Congenital sternomastoid tumour**

**LA62**

**Congenital torticollis**

**LA6Y**

**Other specified structural developmental anomalies of the neck**

**LA6Z**

**Structural developmental anomalies of the neck, unspecified**

Structural developmental anomalies of the respiratory system (LA70-LA7Z)

**LA70**

**Structural developmental anomalies of the nose or cavum**

Any condition caused by failure of the nose and cavum to correctly develop during the antenatal period.

**LA70.0**

**Arrhinia**

Also called nasal agenesis, it is a very rare anomaly in which external nose does not develop and the nasal cavity is totally or partially obliterated.

**LA70.1**

**Bifid nose**

Isolated bifid nose is defined as a median cleft of the nose due to fusion anomalies of the medial nasal processes, that may involve the nasal tip only, or the nose on its length. Bifid nose may also be seen in multiple malformation syndromes like frontonasal dysplasia.

**LA70.2**

**Choanal atresia**

Any condition in neonates, caused by failure of the nose to correctly develop during the antenatal period. This condition is characterised by narrowing or blockage of the nasal airway by tissue. This condition may also present with chest retraction unless child is breathing through mouth or crying, difficulty breathing, cyanosis, and inability to nurse and breathe at same time.

**LA70.3**

**Congenital perforated nasal septum**

A condition caused by trauma during birth or by failure of the nasal septum to correctly develop during the antenatal period. This condition is characterised by the presence of a hole in the nasal septum.

**LA70.Y**

**Other specified structural developmental anomalies of the nose or cavum**

**LA70.Z**

**Structural developmental anomalies of the nose or cavum, unspecified**

**LA71**

### **Structural developmental anomalies of larynx**

Any condition caused by failure of the larynx to correctly develop during the antenatal period.

**Coded Elsewhere:** Airway obstruction in the neonate due to airway abnormality (KB2J)

Laryngeal lymphatic malformation (LA90.12)

**LA71.0**

#### **Congenital laryngomalacia**

A condition caused by failure of the larynx to correctly develop during the antenatal period. This disease is characterised by collapse of the supraglottic structures into the airway during the inspiratory phase of respiration, resulting in inspiratory stridor. This disease may also present with regurgitation, emesis, cough, choking, slow feedings, weight loss, failure to thrive, tachypnoea, suprasternal and substernal retractions, cyanosis, pectus excavatum, or obstructive sleep apnoea. Confirmation is through verification of supraglottic collapse by flexible laryngoscopy.

**LA71.1**

#### **Laryngocele**

A condition of the larynx, characterised by an abnormal saccular dilatation of the appendix of the laryngeal ventricle of Morgagni. This condition may also present with cough, hoarseness, stridor, sore throat, or swelling of the neck. Alternatively this condition may be asymptomatic.

**LA71.2**

#### **Laryngeal hypoplasia**

A condition caused by failure of the pharynx and larynx to correctly develop during the antenatal period. This condition is characterised by a narrowed airway and protrusion of intestines through the belly button. This condition may also present with high pitched voice, spinal curvature, or learning difficulties.

**LA71.3**

#### **Congenital subglottic stenosis**

A condition caused by failure of the tracheal rings to correctly develop during the antenatal period. This condition is characterised by inspiratory stridor. This condition may also present with shortness of breath, difficulty feeding, or failure to thrive. Confirmation is through observation of the stenosis by flexible laryngoscopy.

**LA71.Y**

#### **Other specified structural developmental anomalies of larynx**

**LA71.Z**

#### **Structural developmental anomalies of larynx, unspecified**

**LA72**

### **Laryngotracheo-oesophageal cleft**

A laryngo-tracheo-oesophageal cleft (LC) is a congenital malformation characterised by an abnormal, posterior, sagittal communication between the larynx and the pharynx, possibly extending downward between the trachea and the oesophagus. Five types of laryngo-tracheo-oesophageal cleft have been described based on the downward extension of the cleft, which typically correlates with the severity of symptoms: Type 0 laryngo-tracheo-oesophageal cleft to Type 4 laryngo-tracheo-oesophageal cleft (see these terms).

**LA73**

### **Structural developmental anomalies of trachea**

**Coded Elsewhere:** Congenital tracheobronchomegaly (CA27.1)

- LA73.0      Congenital stenosis of trachea**  
Tracheal stenosis is a fixed intrinsic narrowing of the trachea. The narrowing can be localised to a short or long tracheal segment, often due to a complete tracheal ring. Alternatively, the tracheal lumen may become progressively narrow caudally.  
**Inclusions:**                  Atresia of trachea
- LA73.1      Congenital tracheomalacia**  
Congenital tracheomalacia is a relatively uncommon anomaly that results from an intrinsic weakness of the cartilaginous support of the trachea such that it is prone to collapse especially during expiration.
- LA73.Y      Other specified structural developmental anomalies of trachea**
- LA73.Z      Structural developmental anomalies of trachea, unspecified**
- LA74      Structural developmental anomalies of bronchi**  
This refers to the structural developmental anomalies of the passage of airway in the respiratory tract that conducts air into the lungs.
- LA74.0      Congenital stenosis or atresia of bronchus**  
A condition caused by interruption of a lobar, segmental, or subsegmental bronchus with peripheral mucus impaction, during the antenatal period. This condition is characterised by hyperinflation of the blocked section of lung. This condition may present with respiratory distress, infiltrative pneumonia, or emphysema.
- LA74.1      Congenital bronchomalacia**  
Bronchus characterised by excessive dynamic collapse
- LA74.Y      Other specified structural developmental anomalies of bronchi**
- LA74.Z      Structural developmental anomalies of bronchi, unspecified**
- LA75      Structural developmental anomalies of lungs**  
Any condition caused by failure of the lungs to correctly develop during the antenatal period.
- LA75.0      Accessory lobe of lung**  
An extra lobe of lung beyond the 3 on the right and the 2 on the left
- LA75.1      Agenesis of lung**  
This refers to the absence or rudimentary residua of an undeveloped lung.
- LA75.2      Congenital hypoplasia of lung**
- LA75.3      Congenital hyperplasia of lung**

- LA75.4      Congenital pulmonary airway malformations**  
A disease caused by failure of the bronchial structure to correctly develop during the antenatal period. This disease may present with severe respiratory distress in the newborn period, acute respiratory distress or infection later in life, or may be asymptomatic. This disease can be distinguished from other lesions and normal lung by polypoid projections of the mucosa, an increase in smooth muscle and elastic tissue within the cyst walls, an absence of cartilage in the cystic parenchyma, mucous secreting cells, and the absence of inflammation.
- Inclusions:**      Congenital honeycomb lung  
                        Congenital polycystic disease of lung
- Exclusions:**      Cystic lung disease, acquired or unspecified (CB40)
- LA75.5      Congenital lobar emphysema**  
Congenital lobar emphysema is a developmental lung anomaly characterised by over distension of the affected lobe and leading to compression and displacement of adjacent normal lung tissue and mediastinum. In the majority of cases, symptoms appear during the neonatal period or in early childhood. Clinically, children present with signs of respiratory distress, frequently occurring with a lower respiratory tract infection that aggravates air trapping and renders the patient symptomatic.
- LA75.6      Congenital sequestration of lung**  
A medical condition wherein a piece of tissue that ultimately develops into lung tissue is not attached to the pulmonary arterial blood supply, as is the case in normally developing lung. As a result, this sequestered tissue is not connected to the normal bronchial airway. With intralobar sequestration, the lung tissue lies within the same visceral pleura as the lobe in which it occurs. With extralobar sequestrations, an accessory lung is contained within its own pleura
- LA75.Y      Other specified structural developmental anomalies of lungs**
- LA75.Z      Structural developmental anomalies of lungs, unspecified**
- LA76      Structural developmental anomalies of pleura**  
Anomalies of the lining of the lung (visceral pleura) and thoracic cavity (parietal pleura)
- LA77      Congenital cyst of mediastinum**  
A condition caused by failure of the anterior intestine or coelomic cavity to correctly develop during the antenatal period. This condition may be asymptomatic or may present with adjacent organ compression. Confirmation is observation of the cysts by imaging.
- LA7Y      Other specified structural developmental anomalies of the respiratory system**
- LA7Z      Structural developmental anomalies of the respiratory system, unspecified**

Structural developmental anomalies of the circulatory system (LA80-LA9Z)

## Structural developmental anomaly of heart or great vessels (LA80-LA8Z)

A congenital malformation of the heart and/or great vessels or an acquired abnormality unique to the congenitally malformed heart.

**Coded Elsewhere:** Congenital great vessel related acquired abnormality (BD52.6)

Congenital cardiac tumor, not otherwise specified (2F9Y)

**LA80**

### Anomalous position-orientation of heart

A congenital cardiovascular finding or malformation in which there is an abnormality of the position or orientation of heart.

**LA80.0**

#### **Laevocardia**

A congenital cardiovascular finding in which the heart is predominantly to the left of the thoracic midline.

**Coding Note:** This term should be coded only in the context of complex heart disease. This is independent of the orientation of the cardiac apex.

**LA80.1**

#### **Dextrocardia**

A congenital cardiovascular malformation in which the heart is predominantly to the right of the thoracic midline. This is independent of the orientation of the cardiac apex.

**Exclusions:**

Isomerism of left atrial appendages (LA80-LA8Z)

Isomerism of right atrial appendages (LA80-LA8Z)

Total mirror imagery (LA82)

**LA80.2**

#### **Mesocardia**

A congenital cardiovascular malformation in which the heart is central or midline within the thorax.

**LA80.3**

#### **Extrathoracic heart**

A congenital cardiovascular malformation in which the heart is at least partially outside of the thorax.

**LA80.Y**

#### **Other specified anomalous position-orientation of heart**

**LA80.Z**

#### **Anomalous position-orientation of heart, unspecified**

**LA81**

### **Abnormal ventricular relationships**

A congenital cardiovascular malformation in which the ventricular positions relative to each other or their laterality (sidedness) are abnormal.

**LA82**

### **Total mirror imagery**

A congenital malformation in which there is complete mirror-imaged arrangement of the internal organs along the left-right axis of the body.

**Inclusions:** Situs inversus totalis

**Exclusions:** dextrocardia NOS (LA80.1)

laevocardia (LA80.0)

Primary ciliary dyskinesia, Kartagener type (LA75)

Kartagener triad (LA75)

**LA83**

### **Right isomerism**

A congenital cardiovascular malformation that is a variant of heterotaxy syndrome in which some paired structures on opposite sides of the left-right axis of the body are symmetrical mirror images of each other, and have the morphology of the normal right-sided structures.

**LA84**

### **Left isomerism**

A congenital cardiovascular malformation that is a variant of an heterotaxy syndrome in which some paired structures on opposite sides of the left-right axis of the body are symmetrical mirror images of each other, and have the morphology of the normal left-sided structures.

**LA85**

### **Congenital anomaly of an atrioventricular or ventriculo-arterial connection**

A congenital cardiovascular malformation in which one or more of the following connections is abnormal 1) the morphologically right atrium to the morphologically right ventricle, 2) the morphologically left atrium to the morphologically left ventricle, 3) the morphologically right ventricle to the pulmonary trunk, 4) the morphologically left ventricle to the aorta.

This excludes codes for hearts with a univentricular atrioventricular connection (mitral atresia, tricuspid atresia and double inlet ventricle), as these are listed under Functionally Univentricular Heart.

**Exclusions:** Functionally univentricular heart (LA89)

**LA85.0**

### **Discordant atrioventricular connections**

A congenital cardiovascular malformation in which the morphologically right atrium connects to the morphologically left ventricle and the morphologically left atrium connects to the morphologically right ventricle.

**LA85.00**

### **Congenitally corrected transposition of great arteries**

A congenital cardiac malformation in which the morphologically right atrium connects to the morphologically left ventricle, the morphologically left atrium connects to the morphologically right ventricle, the morphologically right ventricle connects to the aorta, and the morphologically left ventricle connects to the pulmonary trunk.

**Inclusions:** corrected transposition

**LA85.0Y**

### **Other specified discordant atrioventricular connections**

- LA85.0Z** Discordant atrioventricular connections, unspecified
- LA85.1** **Transposition of the great arteries**  
A congenital cardiovascular malformation in which the morphologically right ventricle or its remnant connects to the aorta and the morphologically left ventricle or its remnant connects to the pulmonary trunk.
- LA85.2** **Double outlet right ventricle**  
A congenital cardiovascular malformation in which both great arteries arise entirely or predominantly from the morphologically right ventricle.
- LA85.20** Double outlet right ventricle with subpulmonary ventricular septal defect, transposition type  
A congenital cardiovascular malformation that is a variant of double outlet right ventricle with concordant atrioventricular connections that is associated with a subpulmonary ventricular septal defect (includes Taussig-Bing heart).
- LA85.21** Double outlet right ventricle with non-committed ventricular septal defect  
A congenital cardiovascular malformation that is a variant of double outlet right ventricle with concordant atrioventricular connections that is associated with ventricular septal defect that is remote from the ventricular outflow tracts and usually within the inlet or trabecular muscular septum.
- LA85.22** Double outlet right ventricle with subaortic or doubly committed ventricular septal defect without pulmonary stenosis, ventricular septal defect type  
A congenital cardiovascular malformation that is a variant of double outlet right ventricle with concordant atrioventricular connections, a subaortic or doubly-committed (with absence or deficiency of the conal septum) ventricular septal defect, and unobstructed pulmonary outflow tract.
- LA85.23** Double outlet right ventricle with subaortic or doubly committed ventricular septal defect and pulmonary stenosis, Fallot type  
A congenital cardiovascular malformation that is a variant of double outlet right ventricle with concordant atrioventricular connections, a subaortic or doubly-committed (with absence or deficiency of the conal septum) ventricular septal defect, and pulmonary outflow tract obstruction.
- LA85.2Y** Other specified double outlet right ventricle
- LA85.2Z** Double outlet right ventricle, unspecified
- LA85.3** **Double outlet left ventricle**  
A congenital cardiovascular malformation in which both great arteries arise entirely or predominantly from the morphologically left ventricle.
- LA85.4** **Common arterial trunk**  
A congenital cardiovascular malformation in which a single arterial trunk arises from the heart, giving origin sequentially to the coronary arteries, one or more pulmonary arteries, and the systemic arterial circulation.
- Inclusions:**
- persistent truncus arteriosus
  - truncus arteriosus

<b>LA85.40</b>	Common arterial trunk with aortic dominance A congenital cardiovascular malformation in which a common arterial trunk is associated with an unobstructed aortic arch.
<b>LA85.41</b>	Common arterial trunk with pulmonary dominance and interrupted aortic arch A congenital cardiovascular malformation in which a common arterial trunk is associated with an interrupted aortic arch.
<b>LA85.4Y</b>	Other specified common arterial trunk
<b>LA85.4Z</b>	Common arterial trunk, unspecified
<b>LA85.Y</b>	<b>Other specified congenital anomaly of an atrioventricular or ventriculo-arterial connection</b>
<b>LA85.Z</b>	<b>Congenital anomaly of an atrioventricular or ventriculo-arterial connection, unspecified</b>

## LA86

### **Congenital anomaly of mediastinal vein**

A congenital cardiovascular malformation in which there is an abnormality of a mediastinal vein including but not limited to: pulmonary veins, caval veins, coronary sinus, hepatic veins connecting to the heart, brachiocephalic veins, azygos veins, and/or levo-atrial cardinal veins.

## LA86.0

### **Left superior caval vein**

A congenital cardiovascular malformation in which there is a left superior caval vein (superior vena cava).

**Coding Note:** Unless the code for absent right superior caval vein is used, this term assumes that a right superior caval vein is present and, therefore, there are bilateral superior caval veins with or without a bridging vein.

## LA86.1

### **Unroofed coronary sinus**

A congenital cardiovascular malformation in which there is direct communication between the left atrium and the coronary sinus.

Additional information: this term includes partial and complete unroofing of the coronary sinus in the presence or absence of an interatrial communication. If an interatrial communication is present through the coronary sinus orifice then also select the term 'Interatrial communication through coronary sinus orifice'. If a left superior caval vein (superior vena cava) is present then one should also select the term for 'Left superior caval vein (superior vena cava) to left-sided atrium'.

**Coding Note:** If an interatrial communication is present through the coronary sinus orifice code also interatrial communication through coronary sinus orifice. If a left superior caval vein (superior vena cava) is present code also left superior caval vein (superior vena cava) to left-sided atrium.

## LA86.2

### **Anomalous pulmonary venous connection**

A congenital cardiovascular malformation in which one or more pulmonary vein does not connect normally to the morphologically left atrium.

- LA86.20** Total anomalous pulmonary venous connection  
A congenital cardiovascular malformation in which none of the pulmonary veins connect to the morphologically left atrium.
- LA86.21** Partial anomalous pulmonary venous connection  
A congenital cardiovascular malformation in which one or more (but not all) of the pulmonary veins connect anomalously to the right atrium or to one or more of its venous tributaries and the remaining pulmonary veins connect to the left atrium.
- LA86.22** Scimitar syndrome  
A congenital cardiopulmonary malformation with “partial anomalous pulmonary venous connection of Scimitar type” and one or more of the following: hypoplasia of the right lung with bronchial anomalies, dextrocardia, hypoplasia of the right pulmonary artery, lobar lung sequestration, and anomalous systemic arterial supply to the lower lobe of the right lung directly from the aorta or its main branches.
- LA86.2Y** Other specified anomalous pulmonary venous connection
- LA86.2Z** Anomalous pulmonary venous connection, unspecified
- LA86.3** **Congenital pulmonary venous stenosis or hypoplasia**  
A congenital cardiovascular malformation with a pathologic narrowing of one or more pulmonary veins including diffuse hypoplasia, long segment focal/tubular stenosis and/or discrete stenosis.
- LA86.Y** Other specified congenital anomaly of mediastinal vein
- LA86.Z** Congenital anomaly of mediastinal vein, unspecified
- LA87** **Congenital anomaly of an atrioventricular valve or atrioventricular septum**  
A congenital cardiovascular malformation in which there is an abnormality of the atrioventricular valve or atrioventricular septum.
- LA87.0** **Congenital anomaly of tricuspid valve**  
A congenital cardiovascular malformation in which there is an abnormality of the tricuspid valve.  
**Inclusions:** congenital anomaly of tricuspid subvalvular apparatus  
**Exclusions:** Tricuspid atresia (LA89.1)
- LA87.00** Congenital tricuspid regurgitation  
A congenital cardiovascular finding in which there is backward flow through the tricuspid valve.
- LA87.01** Congenital tricuspid valvar stenosis  
A congenital cardiovascular malformation of the tricuspid valve in which there is narrowing or stricture (obstruction to flow).

<b>LA87.02</b>	Dysplasia of tricuspid valve A congenital cardiovascular malformation of the tricuspid valve, commonly consisting of leaflet thickening and restricted mobility, with normally hinged leaflets.
<b>Coding Note:</b>	This diagnosis is not used for patients with Ebstein malformation of tricuspid valve, which is characterised by abnormally hinged tricuspid valve.
	<b>Exclusions:</b> Ebstein malformation of tricuspid valve (LA87.03)
<b>LA87.03</b>	Ebstein malformation of tricuspid valve A congenital cardiovascular malformation of the tricuspid valve and right ventricle that is characterised by incomplete delamination of the septal and inferior (posterior) tricuspid valvar leaflets from the myocardium of the right ventricle, and varying degrees of downward (apical) rotational displacement of the functional annulus.  Additional information: associated cardiac anomalies include an interatrial communication, the presence of accessory conduction pathways and varying degrees of right ventricular outflow tract obstruction, including pulmonary atresia. In the setting of discordant atrioventricular and ventriculo-arterial connections ['Congenitally corrected transposition of great arteries'], 'Ebstein malformation of tricuspid valve' may be present.
<b>LA87.0Y</b>	Other specified congenital anomaly of tricuspid valve
<b>LA87.0Z</b>	Congenital anomaly of tricuspid valve, unspecified
<b>LA87.1</b>	<b>Congenital anomaly of mitral valve</b> A congenital cardiac malformation in which there is an abnormality of the mitral valve.  <b>Exclusions:</b> Mitral atresia (LA89.2)
<b>LA87.10</b>	Congenital mitral regurgitation A congenital cardiovascular finding in which there is backward flow through the mitral valve.
<b>LA87.11</b>	Congenital mitral valvar stenosis A congenital cardiovascular malformation of the mitral valve in which there is narrowing or stricture of the valvar orifice (obstruction to flow).
<b>LA87.12</b>	Dysplasia of mitral valve A congenital cardiac malformation that includes any structural abnormality of the mitral valvar leaflet(s), commonly consisting of leaflet thickening and restricted mobility.
<b>LA87.13</b>	Congenital anomaly of mitral subvalvar apparatus A congenital cardiac malformation in which the mitral chords, chordal attachments, or papillary muscles are abnormal.
<b>LA87.1Y</b>	Other specified congenital anomaly of mitral valve
<b>LA87.1Z</b>	Congenital anomaly of mitral valve, unspecified

- LA87.3 Common atrioventricular junction without an atrioventricular septal defect**  
A congenital cardiac malformation in which there is a common atrioventricular junction without any communication at the level of the atrioventricular septum.  
Additional information: this code should be used when there is a trifoliate left atrioventricular valve in the setting of a common atrioventricular junction with evidence of obliteration of the atrioventricular septal defect by valve or subvalvar tissue. This should be distinguished from a 'True cleft of anterior mitral leaflet', without evidence of a common atrioventricular junction. Additional defects in the atrial or ventricular septums that do not involve the atrioventricular septum are not excluded by this term and should be coded separately.
- LA87.4 Common atrioventricular junction with atrioventricular septal defect**  
*Inclusions:*      AVC - [atrioventricular canal]
- LA87.40 Atrioventricular septal defect with communication at the atrial level only**  
A congenital cardiac malformation that is a variant of an atrioventricular septal defect (atrioventricular canal defect) with an interatrial communication just above the atrioventricular valve, no interventricular communication just below the atrioventricular valve, separate right and left atrioventricular valvar orifices, and varying degrees of malformation of the left sided component of the common atrioventricular valve.  
Additional information: the bridging leaflets of the common atrioventricular valve are bound down to the crest of the scooped out ventricular septum so that the potential for shunting through the atrioventricular septal defect is possible only at the atrial level and not at the ventricular level.
- LA87.41 Atrioventricular septal defect with communication at the ventricular level only**  
A congenital cardiac malformation that is a variant of an atrioventricular septal defect (atrioventricular canal defect) with an interventricular communication just below the atrioventricular valve, no interatrial communication just above the atrioventricular valve, separate right and left atrioventricular valvar orifices, and varying degrees of malformation of the left sided component of the common atrioventricular valve.  
Additional information: the bridging leaflets of the common atrioventricular valve are bound to the atrial septum so that the potential for shunting through the atrioventricular septal defect is possible only at the ventricular level and not at the atrial level.
- LA87.42 Atrioventricular septal defect with communication at atrial level and restrictive communication at ventricular level**  
A congenital cardiac malformation that is a variant of an atrioventricular septal defect (atrioventricular canal defect) with an interatrial communication immediately above the atrioventricular valve, and a restrictive interventricular communication immediately below the atrioventricular valve.

- LA87.43** Atrioventricular septal defect with communication at atrial level and unrestrictive communication at ventricular level  
A congenital cardiac malformation that is a variant of an atrioventricular septal defect (atrioventricular canal defect) with an interatrial communication just above the atrioventricular valve, an interventricular communication just below the atrioventricular valve, and varying degrees of malformation of the left ventricular component of the common atrioventricular valve.  
Additional information: there is unrestrictive interventricular communication (no interventricular pressure gradient) and the bridging leaflets usually float to varying extent within the atrioventricular septal defect.
- LA87.44** Atrioventricular septal defect with ventricular imbalance  
A congenital cardiac malformation that is a variant of an atrioventricular septal defect (atrioventricular canal defect) with one ventricle significantly larger than the other.  
Additional information: unbalanced ventricular size and unbalanced relation of the common atrioventricular valve to the ventricles are to be distinguished by coding unbalanced ventricular size as 'Atrioventricular septal defect with ventricular imbalance' and the unbalanced relation of the common atrioventricular valve to the ventricles should also be coded as 'Common atrioventricular valve with unbalanced commitment of valve to ventricles'.
- LA87.45** Atrioventricular septal defect and tetralogy of Fallot  
A congenital cardiac malformation with both an atrioventricular septal defect (atrioventricular canal defect) and tetralogy of Fallot.  
Additional information: tetralogy of Fallot with atrioventricular septal defect (common atrioventricular canal defect) is always the complete form (unrestrictive interventricular component) and very few or no attachments of the superior bridging leaflet to the crest of ventricular septum.
- LA87.4Y** Other specified common atrioventricular junction with atrioventricular septal defect
- LA87.4Z** Common atrioventricular junction with atrioventricular septal defect, unspecified
- LA87.Y** **Other specified congenital anomaly of an atrioventricular valve or atrioventricular septum**
- LA87.Z** **Congenital anomaly of an atrioventricular valve or atrioventricular septum, unspecified**
- LA88** **Congenital anomaly of a ventricle or the ventricular septum**  
A congenital cardiac malformation in which there is an abnormality of a ventricle and/or the ventricular septum. The ventricles include the ventricular inlet, ventricular body and ventricular outflow tract.

- LA88.0      Congenital right ventricular outflow tract obstruction**  
A congenital cardiovascular condition in which the flow through the right ventricular outflow tract (proximal to the valve[s] guarding the outflow from the right ventricle) is blocked or impeded.  
Additional information: this code should not be used for obstruction immediately under the arterial valve(s) because specific codes exist for these entities, such as congenital subpulmonary and subaortic stenosis.
- LA88.1      Double chambered right ventricle**  
A congenital cardiovascular malformation in which the right ventricle is divided into two chambers, one inferior including the inlet and trabecular portions of the right ventricle and one superior including the trabecular portion and infundibulum.  
Additional information: Double chamber right ventricle is often associated with one or several closing ventricular septal defects. In some cases, the ventricular septal defect is already closed. Double chamber right ventricle is differentiated from the rare isolated infundibular stenosis that develops more superiorly.
- LA88.2      Tetralogy of Fallot**  
A group of congenital cardiovascular malformations with biventricular atrioventricular alignments or connections characterised by anterosuperior deviation of the conal or outlet septum or its fibrous remnant, narrowing or atresia of the pulmonary outflow, a ventricular septal defect of the malalignment type, and biventricular origin of the aorta.  
Additional information: tetralogy of Fallot will always have a ventricular septal defect, narrowing or atresia of the pulmonary outflow, aortic override, and most often right ventricular hypertrophy.
- LA88.20     Tetralogy of Fallot with absent pulmonary valve syndrome**  
A congenital cardiovascular malformation that is a variant of tetralogy of Fallot in which the ventriculo-arterial junction of the right ventricle with the pulmonary trunk features an atypical valve with absent or rudimentary leaflets (cusps) that do not coapt.  
Additional information: in its usual form there is dilatation of the pulmonary trunk and central right and left pulmonary arteries, which when extreme, is associated with abnormal arborization of lobar and segmental pulmonary artery branches and with compression of the trachea and mainstem bronchi, often with tracheobronchomalacia. The physiologic consequence is usually a combination of variable degrees of both stenosis and regurgitation of the pulmonary valve.
- LA88.21     Tetralogy of Fallot with pulmonary atresia**  
A congenital cardiovascular malformation that is a variant of tetralogy of Fallot in which there is no direct communication between the right ventricle and the pulmonary arterial tree.
- Exclusions:***      Tetralogy of Fallot with pulmonary atresia and systemic-to-pulmonary collateral artery (LA88.22)

- LA88.22**      Tetralogy of Fallot with pulmonary atresia and systemic-to-pulmonary collateral artery  
A congenital cardiovascular malformation that is a variant of tetralogy of Fallot in which there is no direct communication between the right ventricle and the pulmonary arterial tree and there are collateral blood vessels between the systemic and pulmonary arteries.
- Coding Note:** This morphological abnormality usually is an integral part of other congenital cardiovascular anomalies and does not need to be coded separately. It should be coded as secondary to an accompanying congenital cardiovascular anomaly if the left ventricular hypoplasia is not considered an integral and understood part of the primary congenital cardiovascular diagnosis such as hypoplastic left heart syndrome.
- LA88.2Y**      Other specified tetralogy of Fallot
- LA88.2Z**      Tetralogy of Fallot, unspecified
- LA88.3**      **Congenital left ventricular outflow tract obstruction**  
A congenital cardiac condition in which the flow through the left ventricular outflow tract (proximal to the valve[s] guarding the outflow from the left ventricle) is blocked or impeded.  
This code should not be used for obstruction immediately under the arterial valve such as subaortic stenosis due to fibromuscular shelf or tunnel.
- LA88.4**      **Ventricular septal defect**  
A congenital cardiac malformation in which there is a hole or pathway between the ventricular chambers.
- LA88.40**      Trabecular muscular ventricular septal defect  
A congenital cardiac malformation in which there is a ventricular septal defect within the trabeculated component of the ventricular septum.  
Additional information: the codes specifying defects within the trabecular part of the ventricular septum should not be used to code inlet or outlet muscular defects, as there are specific codes for these entities.

**LA88.41****Perimembranous central ventricular septal defect**

A congenital cardiovascular malformation in which there is a ventricular septal defect that 1) occupies the space that is usually closed by the interventricular part of the membranous septum, 2) is usually adjacent to the area of fibrous continuity between the leaflets of an atrioventricular valve and an arterial valve, 3) is adjacent to an area of mitral-tricuspid fibrous continuity, and 4) is located at the center of the base of the ventricular mass.

Additional information: This code is used by some as synonymous with the perimembranous, conoventricular, Type II, or the paramembranous defects. Although best used to describe the perimembranous defect that opens centrally at the base of the right ventricle, this term might be used to code perimembranous defects with inlet or outlet extension. It is recommended, however, that the more precise terms be used whenever possible for coding the latter lesions. It should also not be used to code an inlet ventricular septal defect, or the so-called atrioventricular canal ventricular septal defect. More specific terms exist for coding these entities. It is used by some to describe an isolated perimembranous ventricular septal defect without extension, although it is unlikely that perimembranous defects exist in the absence of deficiency of their muscular perimeter. The conoventricular ventricular septal defect with malalignment should be coded as an outlet defect, as should the perimembranous defect opening to the outlet of the right ventricle. Such defects can also extend to become doubly committed and juxta-arterial (conal septal hypoplasia) when there is also fibrous continuity between the leaflets of the arterial valves or when there is a common arterial valve. Specific codes exist for these variants, which ideally should not be coded using this term.

**Coding Note:**

Although best used to describe the perimembranous defect that opens centrally at the base of the right ventricle, this term might be used to code perimembranous defects with inlet or outlet extension. It is recommended, however, that the more precise terms be used whenever possible for coding the latter lesions. This code is used by some as synonymous with the perimembranous, conoventricular, Type II, or the paramembranous defects. It should not be used to code an inlet VSD, or the so-called atrioventricular canal VSD. More specific terms exist for coding these entities. It is used by some to describe an isolated perimembranous VSD without extension, although it is unlikely that perimembranous defects exist in the absence of deficiency of their muscular perimeter. The conoventricular VSD with malalignment should be coded as an outlet defect, as should the perimembranous defect opening to the outlet of the right ventricle. All perimembranous defects, nonetheless, have part of their margins made up of fibrous continuity either between the leaflets of an atrioventricular and an arterial valve or, in the setting of double outlet right ventricle or overriding of the tricuspid valve, by fibrous continuity between the leaflets of the mitral and tricuspid valves. Such defects can also extend to become doubly committed and juxta-arterial (conal septal hypoplasia) when there is also fibrous continuity between the leaflets of the arterial valves or when there is a common arterial valve. Specific codes exist for these variants, which ideally should not be coded using this term.

<b>LA88.42</b>	Ventricular septal defect haemodynamically insignificant A congenital cardiac malformation in which there is one or more small, clinically insignificant ventricular septal defect(s) in the absence of flow-related cardiac chamber dilation or abnormal elevation of pulmonary arterial pressure.  Additional information: though restrictive ventricular septal defect is listed as a synonym of haemodynamically insignificant VSD, it should be recognised that some pressure restrictive ventricular septal defects will lead to flow-related chamber dilation, and thus would be haemodynamically significant. In such instances, the term haemodynamically insignificant ventricular septal defect should not be coded.
<b>LA88.4Y</b>	Other specified ventricular septal defect
<b>LA88.4Z</b>	Ventricular septal defect, unspecified
<b>LA88.Y</b>	<b>Other specified congenital anomaly of a ventricle or the ventricular septum</b>
<b>LA88.Z</b>	<b>Congenital anomaly of a ventricle or the ventricular septum, unspecified</b>
<b>LA89</b>	<p><b>Functionally univentricular heart</b></p> <p>The term “functionally univentricular heart” describes a spectrum of congenital cardiovascular malformations in which the ventricular mass may not readily lend itself to partitioning that commits one ventricular pump to the systemic circulation, and another to the pulmonary circulation.</p> <p>Additional information: a heart may be functionally univentricular because of its anatomy or because of the lack of feasibility or lack of advisability of surgically partitioning the ventricular mass. Common lesions in this category typically include double inlet right ventricle (DIRV), double inlet left ventricle (DILV), tricuspid atresia, mitral atresia, and hypoplastic left heart syndrome. Other lesions which sometimes may be considered to be a functionally univentricular heart include complex forms of atrioventricular septal defect, double outlet right ventricle, congenitally corrected transposition, pulmonary atresia with intact ventricular septum, and other cardiovascular malformations. Specific diagnostic codes should be used whenever possible, and not the term “functionally univentricular heart”.</p>
<b>LA89.0</b>	<p><b>Double inlet atrioventricular connection</b></p> <p>A congenital cardiovascular malformation with a univentricular atrioventricular connection wherein both atria connect to one ventricle either via two separate atrioventricular valves or a common atrioventricular valve, such that all or nearly all of the total atrioventricular junctional (annular) area is committed to one ventricular chamber.</p>
<b>LA89.1</b>	<p><b>Tricuspid atresia</b></p> <p>A congenital cardiovascular malformation with absence of the tricuspid valvar annulus (connection/junction) or an imperforate tricuspid valve.</p>
<b>LA89.2</b>	<p><b>Mitral atresia</b></p> <p>A congenital cardiovascular malformation with absence of the mitral valvar annulus (connection/junction) or an imperforate mitral valve.</p>

<b>LA89.3</b>	<b>Hypoplastic left heart syndrome</b> A spectrum of congenital cardiovascular malformations with normally aligned great arteries without a common atrioventricular junction, characterised by underdevelopment of the left heart with significant hypoplasia of the left ventricle including atresia, stenosis, or hypoplasia of the aortic or mitral valve, or both valves, and hypoplasia of the ascending aorta and aortic arch.
<b>LA89.Y</b>	<b>Other specified functionally univentricular heart</b>
<b>LA89.Z</b>	<b>Functionally univentricular heart, unspecified</b>
<b>LA8A</b>	<p><b>Congenital anomaly of a ventriculo-arterial valve or adjacent regions</b> A congenital cardiovascular malformation of a ventriculo-arterial valve or its immediate subvalvar and supravalvar regions.</p> <p><b>Exclusions:</b> Common arterial trunk (LA85.4)</p>
<b>LA8A.0</b>	<p><b>Congenital anomaly of pulmonary valve</b> A congenital malformation of the heart where the pulmonary valve is abnormal.</p>
<b>LA8A.00</b>	<p>Congenital pulmonary valvar stenosis A congenital cardiovascular malformation of the pulmonary valve in which there is narrowing or stricture causing obstruction to flow. Additional information: congenital pulmonary valvar stenosis ranges from critical neonatal pulmonic valve stenosis with hypoplasia of the right ventricle to valvar pulmonary stenosis in the infant, child, or adult.</p>
<b>LA8A.01</b>	<p>Congenital pulmonary regurgitation Congenital cardiovascular malformation of the pulmonary valve allowing backward flow into the ventricle. Congenital pulmonary valve regurgitation may be due to primary annular dilation, prolapse and leaflet underdevelopment.</p>
<b>LA8A.0Y</b>	Other specified congenital anomaly of pulmonary valve
<b>LA8A.0Z</b>	Congenital anomaly of pulmonary valve, unspecified
<b>LA8A.1</b>	<p><b>Congenital pulmonary atresia</b> A congenital cardiovascular malformation in which there is no opening between any ventricle and the pulmonary arterial tree.</p> <p><b>Exclusions:</b> Tetralogy of Fallot with pulmonary atresia (LA88.21)</p>

- LA8A.10** Pulmonary atresia with intact ventricular septum  
A congenital cardiovascular malformation in which there are normally aligned great arteries, no opening between the morphologically right ventricle and the pulmonary trunk, and no ventricular level communication.  
Additional information: pulmonary atresia with intact ventricular septum is a duct-dependent congenital malformation that forms a spectrum of lesions including atresia of the pulmonary valve, a varying degree of right ventricle and tricuspid valve hypoplasia, and anomalies of the coronary circulation. A right ventricular dependent coronary artery circulation is present when coronary artery fistulas are associated with a proximal coronary artery stenosis. Associated Ebstein anomaly of the tricuspid valve can be present.
- LA8A.1Y** Other specified congenital pulmonary atresia
- LA8A.1Z** Congenital pulmonary atresia, unspecified
- LA8A.2** **Congenital anomaly of aortic valve**  
A congenital cardiovascular malformation where the aortic valve is abnormal.
- LA8A.20** Congenital aortic valvar stenosis  
A congenital cardiovascular malformation of the aortic valve in which there is narrowing or stricture (obstruction to flow).  
Additional information: 'Congenital aortic valvar stenosis' arises most commonly as a result of partial or complete fusion of one or more commissures, or is due to dysplasia of one or more aortic cusps. These congenital malformations of the aortic valve may not be initially obstructive but may become stenotic later in life due to leaflet thickening, poor relative growth and/or calcification. It is not until the congenitally malformed aortic valve is or becomes stenotic that this term should be used.
- Exclusions:** Congenital subaortic stenosis (LA8A.5)  
that in hypoplastic left heart syndrome (LA89.3)
- LA8A.21** Congenital aortic regurgitation  
Congenital cardiovascular malformation of the aortic valve allowing backward flow into the ventricle.  
Additional information: congenital aortic regurgitation is rare as an isolated entity. Aortic regurgitation is more commonly seen with other associated congenital cardiac anomalies.
- LA8A.22** Bicuspid aortic valve  
A congenital abnormality of the heart where the aortic valve has two commissures and two separate leaflets because of fusion or absence of one of the commissures

<b>LA8A.23</b>	Aortic valvar atresia A congenital cardiovascular malformation in which there is no orifice of the aortic valve.  Additional information: aortic valvar atresia will most often not be coded independently, as it is frequently included within the 'Hypoplastic left heart syndrome' code as part of this spectrum of cardiovascular malformations. However, there is a small subset of patients with aortic valve atresia who have a well developed left ventricle and mitral valve and a large ventricular septal defect (nonrestrictive or restrictive).
<b>Coding Note:</b>	Aortic valve atresia will most often be coded under the hypoplastic left heart syndrome/complex diagnostic codes since it most often occurs as part of a spectrum of cardiovascular malformations. However, there is a small subset of patients with aortic valve atresia who have a well developed left ventricle and mitral valve and a large ventricular septal defect (nonrestrictive or restrictive).
<b>LA8A.24</b>	Unicuspid aortic valve A congenital cardiovascular malformation in which the aortic valve has a single commissure and a single or functionally single leaflet (cusp)
<b>LA8A.2Y</b>	Other specified congenital anomaly of aortic valve
<b>LA8A.2Z</b>	Congenital anomaly of aortic valve, unspecified
<b>LA8A.3</b>	<b>Congenital supravalvar aortic stenosis</b> A congenital cardiovascular malformation with narrowing of the aorta at the level of the sinotubular junction which may extend into the ascending aorta.  Additional information: 'Congenital supravalvar aortic stenosis' is described as three forms: an hourglass deformity, a fibrous membrane, and a diffuse narrowing of the ascending aorta. Supravalvar aortic stenosis may involve the coronary artery ostia, and the aortic leaflets may be tethered. The coronary arteries can become tortuous and dilated due to elevated pressures and early atherosclerosis may ensue.
	<b>Exclusions:</b> Congenital aortic valvar stenosis (LA8A.20)
<b>LA8A.4</b>	<b>Aneurysm of aortic sinus of Valsalva</b> A congenital cardiovascular malformation in which there is dilation of one or more sinuses of Valsalva.  Additional information: the sinus of Valsalva is defined as that portion of the aortic root between the aortic root annulus and the sinotubular junction. Sinus of Valsalva aneurysm most commonly originates from the right sinus, less commonly from the non-coronary sinus and rarely from the left sinus (<5%). The aneurysm may rupture into an adjacent chamber or site (right atrium, right ventricle, left atrium, left ventricle, pulmonary artery, pericardium) and in this case should be coded specifically ('Ruptured aortic sinus of Valsalva aneurysm'). This is to be distinguished from aortic root dilation associated with connective tissue disorders and aortopathies.
<b>LA8A.5</b>	<b>Congenital subaortic stenosis</b> <b>Exclusions:</b> Subaortic stenosis due to fibromuscular tunnel (LA8A) Subaortic stenosis due to fibromuscular shelf (LA8A)

<b>LA8A.6</b>	<b>Congenital subpulmonary stenosis</b> A congenital cardiovascular malformation associated with narrowing within the outflow tract supporting the pulmonary valve.  Additional information: subvalvar (infundibular) pulmonary stenosis is a narrowing of the outflow tract of the ventricle immediately below the pulmonic valve. This term should preferably be used in the setting of abnormal ventriculo-arterial connections, such as double outlet ventricle. Although subvalvar pulmonary stenosis is a type of right ventricular outflow tract obstruction if the ventriculo-arterial connections are normal, in this setting 'Congenital right ventricular outflow tract obstruction' should be used. Subvalvar pulmonary stenosis is also a type of left ventricular outflow tract obstruction in the setting of discordant ventriculo-arterial connections; this term should be used when the obstruction is only apparent immediately below the pulmonary valve, otherwise the term 'Congenital left ventricular outflow tract obstruction' should be used
	<b><i>Exclusions:</i></b> Double chambered right ventricle (LA88.1)
<b>LA8A.Y</b>	<b>Other specified congenital anomaly of a ventriculo-arterial valve or adjacent regions</b>
<b>LA8A.Z</b>	<b>Congenital anomaly of a ventriculo-arterial valve or adjacent regions, unspecified</b>
<b>LA8B</b>	<b>Congenital anomaly of great arteries including arterial duct</b> A congenital cardiovascular malformation of the great arteries (aorta, pulmonary trunk [main pulmonary artery], branch pulmonary arteries) or the arterial duct (ductus arteriosus).  <b><i>Exclusions:</i></b> Common arterial trunk (LA85.4)
<b>LA8B.0</b>	<b>Congenital aortopulmonary window</b> A congenital cardiovascular malformation in which there is side-to-side continuity of the lumens of the ascending aorta and pulmonary trunk in association with separate aortic and pulmonary valves or their atretic remnants.  Additional information: side-to-side continuity of the lumens of the aorta and pulmonary arterial tree, which is distinguished from common arterial trunk (truncus arteriosus) by the presence of two arterial valves or their atretic remnants, and involvement of the pulmonary trunk (main pulmonary artery).  <b><i>Inclusions:</i></b> Aortic septal defect Aortopulmonary window
<b>LA8B.1</b>	<b>Congenital anomaly of pulmonary arterial tree</b> A congenital cardiovascular malformation of the pulmonary trunk (main pulmonary artery) and/or branch pulmonary arteries (right, left, and ramifications).  <b><i>Inclusions:</i></b> Aberrant pulmonary artery Anomaly of pulmonary artery
<b>LA8B.2</b>	<b>Congenital anomaly of aorta or its branches</b> A congenital cardiovascular malformation of the aorta and/or its branches.

<b>LA8B.21</b>	<p>Coarctation of aorta</p> <p>A congenital cardiovascular malformation in which there is a discrete luminal narrowing of the junction between the aortic arch and the descending aorta.</p> <p>Additional information: 'Coarctation of the aorta' generally indicates a narrowing of the descending thoracic aorta just distal to the left subclavian artery. However, the term may also be accurately used to refer to a region of narrowing anywhere in the thoracic or abdominal aorta.</p>
<b>LA8B.22</b>	<p>Interrupted aortic arch</p> <p>A congenital cardiovascular malformation in which there is an absence of luminal continuity between the ascending and descending aorta.</p> <p>Additional information: this includes luminal atresia with discontinuity between the aortic segments and also luminal atresia with fibrous continuity between the aortic segments. Interrupted aortic arch is defined as the loss of luminal continuity between the ascending and descending aorta. In most cases, blood flow to the descending thoracic aorta is through a patent arterial duct, and there is a large ventricular septal defect. Arch interruption is further defined by site of interruption.</p> <p>In type A, interruption is distal to the left subclavian artery; in type B, interruption is between the left carotid and left subclavian arteries; and in type C, interruption occurs between the innominate and left carotid arteries.</p>
<b>LA8B.23</b>	<p>Congenital anomaly of descending thoracic or abdominal aorta</p> <p>A congenital cardiovascular malformation of the aorta distal to the aortic arch</p> <p><b>Coded Elsewhere:</b> Descending thoracic or abdominal aortic coarctation (LA8B.21)</p> <ul style="list-style-type: none"> <li>Coarctation of the descending thoracic aorta (LA8B.21)</li> <li>Coarctation of the abdominal aorta (LA8B.21)</li> </ul>
<b>LA8B.24</b>	<p>Congenital anomaly of aortic arch branch</p> <p>A congenital cardiovascular malformation of one or more branches of the aortic arch (innominate, carotid, or subclavian arteries).</p>
<b>LA8B.2Y</b>	Other specified congenital anomaly of aorta or its branches
<b>LA8B.2Z</b>	Congenital anomaly of aorta or its branches, unspecified
<b>LA8B.3</b>	<p><b>Tracheo-oesophageal compressive syndrome</b></p> <p>A congenital cardiovascular malformation which causes compression of the trachea and/or the oesophagus.</p>
<b>LA8B.4</b>	<p><b>Patent arterial duct</b></p> <p>A congenital cardiovascular finding in which the arterial duct (ductus arteriosus) is open beyond the normal age of spontaneous closure.</p> <p><b>Inclusions:</b> bilateral arterial ducts</p> <p><b>Coded Elsewhere:</b> Patent arterial duct of prematurity (KB48)</p>
<b>LA8B.Y</b>	Other specified congenital anomaly of great arteries including arterial duct
<b>LA8B.Z</b>	Congenital anomaly of great arteries including arterial duct, unspecified

**LA8C****Congenital anomaly of coronary artery**

A congenital cardiovascular malformation of a coronary artery. This includes absence of a coronary, anomalous origin or course, dilation or stenosis, and fistulas.

Additional information: congenital anomalies of the coronary venous system should not be included here but rather under 'Congenital anomaly of mediastinal systemic vein'.

**LA8C.0****Anomalous origin of coronary artery from pulmonary arterial tree**

A congenital cardiovascular malformation in which a coronary artery origin is the pulmonary trunk or one of its branches. Although the most common of these malformations involves the left coronary artery arising from the pulmonary trunk (main pulmonary artery) rather than from the aorta, occasionally the right coronary artery, the circumflex, or both coronary arteries may arise from any of the central pulmonary arteries.

**LA8C.1****Anomalous aortic origin or course of coronary artery**

A congenital cardiovascular malformation in which the origin and/or course of a coronary artery is abnormal.

This is where coronary "anomalies" in the presence of discordant ventriculo-arterial connections should be coded.

**LA8C.2****Congenital coronary arterial fistula**

A congenital cardiovascular malformation in which a coronary artery communicates, through an anomalous channel, with a cardiac chamber or with any segment of the systemic or pulmonary circulation.

Additional information: this communication may be simple and direct or may be tortuous and dilated. In order of frequency the involved coronary artery is the right, the left and, rarely, both coronary arteries. Occasionally multiple fistulas are present.

**Inclusions:** congenital coronary fistula to pulmonary artery

**Exclusions:** anomalous origin of coronary artery from pulmonary arterial tree (LA8C.0)

**LA8C.Y****Other specified congenital anomaly of coronary artery****LA8C.Z****Congenital anomaly of coronary artery, unspecified****LA8D****Congenital pericardial anomaly**

A congenital cardiovascular malformation in which there is a structural and/or functional abnormality of the pericardium.

**LA8E****Congenital anomaly of atrial septum**

A congenital cardiovascular malformation in which there is an abnormality of the atrial septum.

<b>LA8E.0</b>	<b>Patent oval foramen</b> A congenital cardiovascular finding in which there is a small interatrial communication (or potential communication) confined to the region of the oval fossa (fossa ovalis) characterised by no deficiency of the primary atrial septum (septum primum) and a normal limbus with no deficiency of the septum secundum (superior interatrial fold).
<b>LA8E.1</b>	<b>Atrial septal defect within oval fossa</b> A congenital cardiovascular malformation in which there is an interatrial communication confined to the region of the oval fossa (fossa ovalis), most commonly due to a deficiency of the primary atrial septum (septum primum) but deficiency of the septum secundum (superior interatrial fold) may also contribute.
<b>LA8E.2</b>	<b>Sinus venosus defect</b> A congenital cardiovascular malformation in which there is a caval vein (vena cava) and/or pulmonary vein (or veins) that overrides the atrial septum or the septum secundum (superior interatrial fold) producing an interatrial or anomalous veno-atrial communication.  Additional information: although the term sinus venosus atrial septal defect is commonly used, the lesion is more properly termed a sinus venosus communication because, while it functions as an interatrial communication, this lesion is not a defect of the atrial septum.
<b>LA8E.3</b>	<b>Interatrial communication through coronary sinus orifice</b> A congenital cardiovascular malformation in which there is a communication between the left atrium and the coronary sinus allowing interatrial communication through the coronary sinus ostium.  Additional information: 'Interatrial communication through coronary sinus orifice' may or may not be associated with a persistent left superior caval vein (superior vena cava). This occurs in the absence of the coronary sinus (total unroofing of the coronary sinus) or partial unroofing of the coronary sinus.
<b>LA8E.Y</b>	<b>Other specified congenital anomaly of atrial septum</b>
<b>LA8E.Z</b>	<b>Congenital anomaly of atrial septum, unspecified</b>
<b>LA8F</b>	<b>Congenital anomaly of right atrium</b> A congenital cardiovascular malformation in which there is an abnormality of the right atrium.
<b>LA8G</b>	<b>Congenital anomaly of left atrium</b> A congenital cardiovascular malformation in which there is an abnormality of the left atrium.

<b>LA8G.0</b>	<b>Divided left atrium</b> A congenital cardiac malformation in which there is a partition that divides the left atrium into a posterosuperior chamber that receives some or all of the pulmonary veins and an antero-inferior chamber that communicates with the left atrial appendage and atrioventricular junction (usually the mitral valve).  Additional information: in differentiating 'Divided left atrium' from 'Congenital supravalvar or intravalvar mitral ring', in the latter, the antero-inferior compartment contains only the mitral valvar orifice.
<b>LA8G.Y</b>	<b>Other specified congenital anomaly of left atrium</b>
<b>LA8G.Z</b>	<b>Congenital anomaly of left atrium, unspecified</b>
<b>LA8Y</b>	<b>Other specified structural developmental anomaly of heart or great vessels</b>
<b>LA8Z</b>	<b>Structural developmental anomaly of heart or great vessels, unspecified</b>
<b>LA90</b>	<b>Structural developmental anomalies of the peripheral vascular system</b>  <b>Exclusions:</b> Congenital anomaly of coronary artery (LA8C) Congenital anomaly of pulmonary arterial tree (LA8B.1) haemangioma and lymphangioma (2E81) Congenital retinal aneurysm (LA13.5)
<b>LA90.0</b>	<b>Capillary malformations</b> This is a vascular anomaly consisting of superficial and deep dilated capillaries in the skin which produce a reddish to purplish discolouration of the skin.  <b>Exclusions:</b> Macrocephaly - Cutis Marmorata Telangiectatica Congenita (LD2F.1)  <b>Coded Elsewhere:</b> Developmental capillary vascular malformations of the skin (LC50)
<b>LA90.00</b>	Hereditary haemorrhagic telangiectasia Rendu-Osler-Weber disease, also called hereditary haemorrhagic telangiectasia (HHT), is a genetic disorder of angiogenesis leading to arteriovenous dilatations: cutaneo-mucosal haemorrhagic telangiectasias and visceral shunting.
<b>LA90.0Y</b>	Other specified capillary malformations
<b>LA90.0Z</b>	Capillary malformations, unspecified
<b>LA90.1</b>	<b>Lymphatic malformations</b> Lymphatic malformations (LM), formerly referred to by the term lymphangioma, are malformations of the lymphatic system which result in obstructed lymphatic drainage. There are two types of LM: macrocystic LM (including cystic hygroma/lymphangioma) and tissue-infiltrating microcystic LM (lymphangioma circumspectum). The macro and microcystic forms of LM may occur in association.  <b>Coded Elsewhere:</b> Primary lymphoedema (BD93.0)

<b>LA90.10</b>	Macrocystic lymphatic malformation A condition caused by failure of the lymphatic system to correctly develop during the antenatal period. This condition is characterised by large, soft, smooth clear masses under normal or bluish skin. This condition may be associated with cellulitis, bleeding within the malformation, pain, or leakage of lymphatic fluid internally.
<b>LA90.11</b>	Microcystic lymphatic malformation Microcystic lymphatic malformations consist of clusters of dilated lymphatic vessels which have developed without connection to the systemic lymphatic circulation. They present with grouped clear or haemorrhagic vesicles anywhere on the skin or mucous membrane.
	<b>Inclusions:</b> Lymphangioma circumspectum
	<b>Exclusions:</b> Circumscribed lymphatic malformation (LA90.10)
<b>LA90.12</b>	Lymphatic malformations of certain specified sites
<b>LA90.13</b>	Cystic hygroma in fetus Development abnormalities of the lymphoid system that occur at sites of lymphatic-venous connection, most commonly in the posterior neck but may be anterior and may extend into chest. Frequently associated with karyotypic abnormalities, various malformation syndromes, and several teratogenic agents. When diagnosed prenatally, the overall prognosis is poor. Cystic hygroma diagnosed after birth is usually associated with a good prognosis.
<b>LA90.1Y</b>	Other specified lymphatic malformations
<b>LA90.1Z</b>	Lymphatic malformations, unspecified
<b>LA90.2</b>	<b>Peripheral venous malformations</b>
	<b>Coded Elsewhere:</b> Developmental venous malformations involving the skin (LC51) Blue rubber bleb naevus syndrome (LC51)
<b>LA90.20</b>	Vein of Galen aneurysm Vein of Galen aneurysmal malformation (VGAM) is a congenital vascular malformation characterised by dilation of the embryonic precursor of the vein of Galen. It is a sporadic lesion that occurs during embryogenesis. Cardiac insufficiency of variable severity is the principle manifestation that leads to detection of the malformation in newborns.
<b>LA90.21</b>	Congenital portosystemic shunt
<b>LA90.2Y</b>	Other specified peripheral venous malformations
<b>LA90.2Z</b>	Peripheral venous malformations, unspecified

<b>LA90.3</b>	<b>Peripheral arteriovenous malformations</b> This is a peripheral, abnormal connection between arteries and veins, bypassing the capillary system. This vascular anomaly is widely known because of its occurrence in the central nervous system, but can appear in any location.  <b>Inclusions:</b> congenital arteriovenous varices NOS <b>Exclusions:</b> acquired arteriovenous aneurysm (BD52.1) <b>Coded Elsewhere:</b> Arteriovenous malformation of cerebral vessels (8B22.40)
<b>LA90.30</b>	Portal vein-hepatic artery fistula
<b>LA90.31</b>	Arteriovenous malformation of precerebral vessels
<b>LA90.32</b>	Uterine arteriovenous malformations
<b>LA90.3Y</b>	Other specified peripheral arteriovenous malformations
<b>LA90.3Z</b>	Peripheral arteriovenous malformations, unspecified
<b>LA90.4</b>	<b>Peripheral arterial malformations</b> This is a peripheral lesion with a direct connection between an artery and a vein, without an intervening capillary bed, but with an interposed nidus of dysplastic vascular channels in between.  <b>Coded Elsewhere:</b> Hereditary cerebrovascular diseases (8B22.C)
<b>LA90.40</b>	Congenital renal artery stenosis This is the congenital narrowing of the renal artery, most often caused by atherosclerosis or fibromuscular dysplasia. This narrowing of the renal artery can impede blood flow to the target kidney.
<b>LA90.41</b>	Congenital precerebral nonruptured aneurysm
<b>LA90.42</b>	Congenital cerebral nonruptured aneurysm This is a cerebrovascular disorder in which weakness in the wall of a cerebral artery or vein causes a localised dilation or ballooning of the blood vessel (nonruptured).  <b>Coded Elsewhere:</b> Familial cerebral saccular aneurysm (8B22.6)
<b>LA90.4Y</b>	Other specified peripheral arterial malformations
<b>LA90.4Z</b>	Peripheral arterial malformations, unspecified
<b>LA90.5</b>	<b>Pulmonary arteriovenous fistula</b> A congenital cardiovascular malformation in which there is an abnormal, direct connection between a pulmonary artery and pulmonary vein or left atrium without an intervening capillary bed.
<b>LA90.Y</b>	<b>Other specified structural developmental anomalies of the peripheral vascular system</b>
<b>LA90.Z</b>	<b>Structural developmental anomalies of the peripheral vascular system, unspecified</b>

**LA9Y**      **Other specified structural developmental anomalies of the circulatory system**

**LA9Z**      **Structural developmental anomalies of the circulatory system, unspecified**

Structural developmental anomalies of the diaphragm, abdominal wall or umbilical cord (LB00-LB0Z)

Any condition caused by failure of the diaphragm, abdominal wall or umbilical cord to correctly develop during the antenatal period.

**Exclusions:**      Prune belly syndrome (LD2F.10)

**LB00**      **Structural developmental anomalies of diaphragm**

**LB00.0**      **Congenital diaphragmatic hernia**

Congenital diaphragmatic hernia is a posterolateral defect of the diaphragm that allows passage of abdominal viscera into the thorax, leading to respiratory insufficiency and persistent pulmonary hypertension with high mortality.

**Exclusions:**      Congenital hiatus hernia (LB13.1)

**LB00.1**      **Absence of diaphragm**

**LB00.Y**      **Other specified structural developmental anomalies of diaphragm**

**LB00.Z**      **Structural developmental anomalies of diaphragm, unspecified**

**LB01**      **Omphalocele**

Omphalocele is an embryopathy classified in the group of abdominal celosomias and is characterised by a large hernia of the abdominal wall, centred on the umbilical cord, in which the protruding viscera are protected by a sac.

**Exclusions:**      Umbilical hernia (DD53)

**LB02**      **Gastroschisis**

Gastroschisis is a congenital abdominal wall defect characterised by viscera protruding, without a covering sac, from the fetal abdomen on the right lateral base of the umbilicus.

**LB03**      **Structural developmental anomalies of umbilical cord**

Any condition caused by failure of the umbilical cord to correctly develop during the antenatal period.

**Coded Elsewhere:** Umbilical cord haemangioma (2E81.00)

Fetus or newborn affected by short umbilical cord (KA03.20)

Fetus or newborn affected by long umbilical cord (KA03.21)

Developmental anomalies of the umbilicus (EC50)

**LB03.0**      **Allantoic duct remnants or cysts**

Any condition caused by failure of the umbilical cord to correctly develop during the antenatal period. These conditions are characterised by cysts or remnants of allantoic tissue within the umbilical cord, the umbilicus, or the urachus.

<b>LB03.1</b>	<b>Single umbilical cord artery</b>
	A single umbilical artery arising from either the allantoic arterial system (Type I) or vitelline artery (Type II). It has been associated with renal anomalies.
<b>LB03.Y</b>	<b>Other specified structural developmental anomalies of umbilical cord</b>
<b>LB03.Z</b>	<b>Structural developmental anomalies of umbilical cord, unspecified</b>
<b>LB0Y</b>	<b>Other specified structural developmental anomalies of the diaphragm, abdominal wall or umbilical cord</b>
<b>LB0Z</b>	<b>Structural developmental anomalies of the diaphragm, abdominal wall or umbilical cord, unspecified</b>

Structural developmental anomalies of the digestive tract (LB10-LB1Z)

Any condition caused by failure of the digestive tract to correctly develop during the antenatal period.

**Coded Elsewhere:** Genetic or developmental disorders involving lips or oral mucosa (DA02.0)

<b>LB10</b>	<b>Structural developmental anomalies of salivary glands or ducts</b>
	Any condition caused by failure of the salivary glands and ducts to correctly develop during the antenatal period.

<b>LB11</b>	<b>Congenital diverticulum of pharynx</b>
	A condition caused by failure of the pharynx to correctly develop during the antenatal period. This condition may present with difficulty swallowing, or may be asymptomatic. Confirmation is through observation of a diverted pharynx by imaging.

**Exclusions:** pharyngeal pouch syndrome (LD44.N0)

<b>LB12</b>	<b>Structural developmental anomalies of oesophagus</b>
	Any congenital defect of oesophagus that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some become evident later.

**Coded Elsewhere:** Bronchopulmonary foregut malformation (LA74.Y)

<b>LB12.0</b>	<b>Congenital oesophageal web or ring</b>
	A rare form of incomplete oesophageal obstruction due to a developmental defect of the primitive foregut that presents as a mucosal lesion forming an incomplete diaphragm. Symptoms (apparent from birth) include dysphagia, regurgitation, and choking.

**Exclusions:** Oesophageal web (DA20.2)

<b>LB12.1</b>	<b>Atresia of oesophagus</b> Oesophageal atresia encompasses a group of congenital anomalies with an interruption in the continuity of the oesophagus, with or without persistent communication with the trachea. In 86% of cases there is a distal tracheoesophageal fistula, in 7% of cases there is no fistulous connection, while in 4% of cases there is a tracheoesophageal fistula without atresia. The remaining cases are made up of patients with OA with proximal, or both proximal and distal, tracheoesophageal fistula.
	<b>Coded Elsewhere:</b> Laryngotracheooesophageal cleft (LA72)
<b>LB12.10</b>	Atresia of oesophagus with oesophagobronchial fistula
<b>LB12.1Y</b>	Other specified atresia of oesophagus
<b>LB12.1Z</b>	Atresia of oesophagus, unspecified
<b>LB12.2</b>	<b>Oesophageal fistula without atresia</b> This is a birth defect (congenital anomaly) of oesophagus, and one type of EA/TEF, namely isolated "H"-shaped atresia. Tracheoesophageal fistula in which there is no oesophageal atresia because the oesophagus is continuous to the stomach. Fistula is present between the oesophagus and the trachea. Incidence of TE fistula without atresia varies between 1-11% of oesophageal malformations.
<b>LB12.3</b>	<b>Congenital stenosis or stricture of oesophagus</b> A form of incomplete oesophageal obstruction due to a developmental defect of the primitive foregut. Abnormal narrowing of the oesophagus occurs most often at the junction of the middle and lower thirds. Clinical manifestations, apparent 2 to 3 weeks after birth, include dysphagia and progressive vomiting.
<b>LB12.4</b>	<b>Congenital diverticulum of oesophagus</b> A very rare congenital diverticulum which is typically located just above the cricopharyngeal junction. It is usually asymptomatic unless complicated by an inflammatory process. If the diverticulum compresses the trachea or is associated with oesophageal stenosis or fistula, the symptoms of stridor, progressive dysphagia, respiratory distress, severe choking, and regurgitation may be present from birth.  <b>Inclusions:</b> Congenital oesophageal pouch oesophageal pouch  <b>Exclusions:</b> Diverticulum of oesophagus, acquired (DA20.1)
<b>LB12.5</b>	<b>Congenital dilatation of oesophagus</b> This is a congenital abnormal enlargement of the lower portion of the oesophagus, as seen in patients with achalasia.
<b>LB12.Y</b>	<b>Other specified structural developmental anomalies of oesophagus</b>
<b>LB12.Z</b>	<b>Structural developmental anomalies of oesophagus, unspecified</b>

**LB13****Structural developmental anomalies of stomach**

Any congenital defect of stomach that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some become evident later.

**Coded Elsewhere:** Gastric volvulus (DA40.2)

**LB13.0****Congenital hypertrophic pyloric stenosis**

A not uncommon congenital malformation of the stomach of unknown cause in which there is hypertrophy and hyperplasia of the circular muscle of the pylorus. Symptoms of gastric outlet obstruction usually appear between the third and sixth weeks of life. The anomaly is manifested by intermittent vomiting (which increases in frequency and becomes projectile), regurgitation, weight loss, dehydration, electrolyte imbalance, sometimes a small palpable pyloric mass, and visible peristaltic contractions across the epigastrium; there may also be jaundice. Some cases appear to be familial (possibly of autosomal dominant inheritance).

**LB13.1****Congenital hiatus hernia**

Congenital diaphragmatic hernia is an embryopathy which is defined by the absence of development of all or part of the diaphragmatic dome that results in the presence of abdominal viscera in the thorax, with compression of the homolateral lung and impaired development of the contralateral lung.

**Inclusions:** Congenital displacement of cardia through oesophageal hiatus

**Exclusions:** Congenital diaphragmatic hernia (LB00.0)

Diaphragmatic hernia (DD50.0)

**LB13.2****Congenital antral web****LB13.Y****Other specified structural developmental anomalies of stomach****LB13.Z****Structural developmental anomalies of stomach, unspecified****LB14****Structural developmental anomalies of duodenum**

Any congenital defect of duodenum that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some become evident later.

**LB15****Structural developmental anomalies of small intestine**

Congenital gross anatomical structural defect of small intestine that results from interference with the normal growth and differentiation of the fetus, which may be inherited genetically, acquired during gestation, or inflicted during parturition.

<b>LB15.0</b>	<b>Meckel diverticulum</b> A congenital abnormality characterised by the outpouching or sac formation in the ileum. It is a remnant of the embryonic yolk sac in which the vitelline duct failed to close. During early gestation, the omphalomesenteric or vitelline duct connects the fetal yolk sac to the primitive gut. By 7-8 weeks of gestation, this duct is normally completely obliterated. A Meckel diverticulum results when this structure fails to resorb completely.
<b>LB15.1</b>	<b>Atresia of small intestine</b> Jejunoileal atresias and stenoses are major causes of neonatal intestinal obstruction. Atresia refers to a congenital obstruction with complete occlusion of the intestinal lumen. It accounts for 95% of obstructions. Four types of jejunoileal atresias are described. They can range from having a small area of blockage or web to missing large sections of the intestines.  Intestinal atresia is one of the most frequent causes of bowel obstruction in the newborn. The ileal atresia is more common than jejunal atresia, and multiple foci are more common than isolated atresia. The most accepted theory regarding the etiology of jejunoileal atresia is that of an intrauterine vascular accident resulting in necrosis of the affected segment.  Stenosis, on the other hand, refers to a partial occlusion with incomplete obstruction and accounts for the remaining 5% of cases. A stenosis has an intact mesentery and is a localised narrowing of the bowel. No loss of continuity of the lumen exists.  <i>Inclusions:</i> Congenital absence of small intestine Congenital stenosis of small intestine
<b>LB15.2</b>	<b>Congenital short bowel</b> Short bowel syndrome is a condition in which nutrients are not properly absorbed due to a congenital defect where a large part of the small intestine is missing.
<b>LB15.3</b>	<b>Congenital diverticulitis of small intestine</b> This refers to a clinical entity characterised by the presence of sac-like congenital herniations in the wall of the small intestine, in which the pouches of small intestine (diverticula) become infected or inflamed.
<b>LB15.4</b>	<b>Congenital diverticulosis of small intestine</b> This refers to a condition characterised by the presence of congenital multiple sack-like mucosal herniations called diverticula through weak points in the wall or lining of the small intestine. Most people with diverticulosis do not have any discomfort or symptoms. However, some people may experience pain or discomfort in the abdomen, bloating, and bleeding.
<b>LB15.5</b>	<b>Congenital diverticulum of small intestine</b> This refers to a morphological condition in which there is single small congenital pouch in the lining of the small intestine, bulging outward through a weak spot.
<b>LB15.Y</b>	<b>Other specified structural developmental anomalies of small intestine</b>
<b>LB15.Z</b>	<b>Structural developmental anomalies of small intestine, unspecified</b>

**LB16****Structural developmental anomalies of large intestine**

Any congenital defect of large intestine that results from interference with the normal growth and differentiation of the fetus. Such defects can arise at any stage of embryonic development, vary greatly in type and severity, and are caused by a wide variety of determining factors, including genetic mutations, chromosomal aberrations, teratogenic agents, and environmental factors. Most developmental defects are apparent at birth, especially any structural malformation, but some become evident later.

- Exclusions:**
- Congenital atresia of rectum (LB17)
  - Persistent cloaca (LB17.2)
  - Congenital atresia of anus (LB17)

**Coded Elsewhere:** Meconium ileus without perforation (KB87.2)

**LB16.0****Congenital absence, atresia or stenosis of large intestine**

Colonic atresia is a congenital intestinal malformation resulting in a non-latent segment of the colon and characterised by lower intestinal obstruction manifesting with abdominal distention and failure to pass meconium in newborns.

- Exclusions:**
- Congenital atresia of rectum (LB17)
  - Congenital absence of rectum (LB17)

**LB16.1****Hirschsprung disease**

This is a developmental anomaly affecting the intestinal tract characterised by congenital absence of myenteric ganglion cells (aganglionosis) in a segment of the large bowel. Due to the absence of intrinsic innervation of the muscle layers of the affected segment, there is a loss of motor function. This results in an abnormally large or dilated colon (congenital megacolon) with intestinal occlusion or constipation. This condition becomes evident shortly after birth.

**LB16.2****Immature ganglionosis of large intestine**

When the number of ganglion cells is normal but the ganglion cells are prominently immature, the disease is referred to as immature ganglionosis or immaturity of ganglia.

**LB16.3****Congenital hypoganglionosis of large intestine**

The number and size of ganglion cells are small at birth. The size of ganglion cells tends to increase over time, but because their numbers do not increase the symptoms of dysmotility do not improve.

Source: <http://www.ncbi.nlm.nih.gov/pubmed/17161202>

- Exclusions:**
- Acquired hypoganglionosis of large intestine (DB32.3)

**LB16.Y****Other specified structural developmental anomalies of large intestine****LB16.Z****Structural developmental anomalies of large intestine, unspecified****LB17****Structural developmental anomalies of anal canal**

- LB17.0 Anorectal malformations**
- Anorectal malformations (ARMs) are birth defects (due to alterations in embryo development of hindgut or proctodeum) where the anus and rectum (the lower end of the digestive tract) do not develop properly. They occur in approximately 1 in 5000 live births. These comprise a wide spectrum of diseases, which can affect boys and girls, and involve the distal anus and rectum as well as the urinary and genital tracts. Several abnormalities can occur, including the following: A membrane may be present over the anal opening; The rectum may not connect to the anus (imperforate anus); The rectum may connect to a part of the urinary tract or the reproductive system through an abnormal passage called a fistula. The classification of ARMs is mainly based on the position of the rectal pouch relative to the puborectal sling, the presence or absence of fistulas, and the types and locations of the fistulas. The following classification is according to the level of the atretic rectal cul-de-sac with respect to the pubococcygeal line (the radiological landmark for the upper border of the levator ani muscle).
- LB17.1 Ectopic anus**
- While children with imperforate or obviously mislocated anus are identified in the newborn period, some children with a very mild abnormality may escape identification until after the newborn period. This mild mislocation of the anus has been termed anterior ectopic anus. Anterior ectopic anus is different from imperforate anus with perineal fistula in that the anal opening is usually of normal size, and only mildly misplaced. Most of these children come to medical attention due to severe constipation.
- LB17.2 Persistent cloaca**
- A congenital anomaly in which the intestinal, urinary, and reproductive ducts open into a common cavity, a result of the failure of the urorectal septum to form during prenatal development. They occur exclusively in girls and comprise the most complex defect in the spectrum of anorectal malformations.
- LB17.3 Cloacal exstrophy**
- Rare and complex anorectal and genitourinary malformation in which rectum, vagina and urinary tract share a common everted orifice, accompanied by an omphalocele and an imperforate anus.
- Exstrophy of the cloaca is a well-known malformation that includes the persistence and the exstrophy of a cloaca that receives ureters, ileum and a rudimentary hindgut. Cloacal exstrophy is a severe birth defect wherein much of the abdominal organs (the bladder and intestines) are exposed. It often causes the splitting of both male and female genitalia (specifically, the penis and clitoris respectively), and the anus is occasionally sealed.
- LB17.4 Perineal groove**
- The perineal groove describes a normal vestibule but with a groove extending from the vestibule to the anus, which is both normal sized and positioned.
- LB17.Y Other specified structural developmental anomalies of anal canal**
- LB17.Z Structural developmental anomalies of anal canal, unspecified**

**LB18****Congenital anomalies of intestinal fixation**

A condition caused by failure of the intestines to correctly develop during the antenatal period. This condition may present with intermittent abdominal pain, vomiting, or diarrhoea. Confirmation is through observation of intestinal rotation by imaging.

**LB1Y****Other specified structural developmental anomalies of the digestive tract****LB1Z****Structural developmental anomalies of the digestive tract, unspecified**

Structural developmental anomalies of the liver, biliary tract, pancreas or spleen (LB20-LB2Z)

Any condition caused by failure of the liver, biliary tract, pancreas and spleen to correctly develop during the antenatal period.

**LB20****Structural developmental anomalies of gallbladder, bile ducts or liver**

Any condition caused by failure of the gallbladder, bile ducts and liver to correctly develop during the antenatal period.

**LB20.0****Structural developmental anomalies of liver**

**Exclusions:** Non-alcoholic fatty liver disease (DB92)

**Coded Elsewhere:** Biliary atresia (LB20.21)

**LB20.00**

Fibropolycystic liver disease

**Coded Elsewhere:** Choledochal cyst (LB20.20)

**LB20.0Y**

Other specified structural developmental anomalies of liver

**LB20.0Z**

Structural developmental anomalies of liver, unspecified

**LB20.1****Structural developmental anomalies of gallbladder****LB20.10**

Agenesis, aplasia or hypoplasia of gallbladder

**LB20.1Y**

Other specified structural developmental anomalies of gallbladder

**LB20.1Z**

Structural developmental anomalies of gallbladder, unspecified

**LB20.2****Structural developmental anomalies of bile ducts**

**Coded Elsewhere:** Congenital bronchobiliary fistula (LA74.Y)

**LB20.20**

Choledochal cyst

**Inclusions:** Congenital bile duct dilatation

**LB20.21**

Biliary atresia

Biliary atresia is a rare disease characterised by an inflammatory biliary obstruction of unknown origin that presents in the neonatal period. It is the most frequent surgical cause of cholestatic jaundice in this age group. Untreated, this condition leads to cirrhosis and death within the first years of life.

**LB20.22**

Congenital stenosis or stricture of bile ducts

<b>LB20.23</b>	Structural developmental anomalies of cystic duct
<b>LB20.24</b>	Accessory bile duct
<b>LB20.2Y</b>	Other specified structural developmental anomalies of bile ducts
<b>LB20.2Z</b>	Structural developmental anomalies of bile ducts, unspecified
<b>LB20.Y</b>	<b>Other specified structural developmental anomalies of gallbladder, bile ducts or liver</b>
<b>LB20.Z</b>	<b>Structural developmental anomalies of gallbladder, bile ducts or liver, unspecified</b>
<b>LB21</b>	<b>Structural developmental anomalies of pancreas</b>
<b>LB21.0</b>	<b>Annular pancreas</b> Annular pancreas is a distinct form of duodenal atresia in which the head of the pancreas forms a ring around the second portion of the duodenum. During the neonatal period, the clinical picture is dominated by epigastric distension with vomiting, which is nonbilious as the obstruction is usually supra-vaterian. Chromosomal abnormalities are present in one-third of cases of annular pancreas, with trisomy 21 (followed by trisomy 18 and 13) being the most frequently detected anomaly. Annular pancreas is an embryopathy resulting from an anomaly occurring early (towards the fourth week) in development.
<b>LB21.1</b>	<b>Pancreas divisum</b> This is a congenital anomaly in the anatomy of the ducts of the pancreas in which a single pancreatic duct is not formed, but rather remains as two distinct dorsal and ventral ducts.
<b>LB21.2</b>	<b>Accessory pancreas</b> Accessory pancreas is an asymptomatic embryopathy characterised by the presence of pancreatic tissue in other sites of the body such as the splenic pedicle, gonadic pedicles, intestinal mesentery, duodenum wall, upper jejunum, or, more rarely, the gastric wall, ileum, gallbladder or spleen.
<b>LB21.3</b>	<b>Agenesis-aplasia of pancreas</b> This refers to the failure of an organ to develop during embryonic growth and development due to the absence of primordial tissue of the pancreas.
<b>LB21.4</b>	<b>Partial agenesis of pancreas</b> Partial agenesis of the pancreas is characterised by the congenital absence of a critical mass of pancreatic tissue. The severity of the disease depends on the amount of functional pancreatic tissue present. Pancreatic agenesis is commonly associated with other malformations, in particular pancreaticobiliary duct anomalies, leading to acute or chronic pancreatitis, hyperglycaemia (50% of cases), or, more rarely, polysplenia.
<b>LB21.5</b>	<b>Hypoplasia of pancreas</b>
<b>LB21.Y</b>	<b>Other specified structural developmental anomalies of pancreas</b>
<b>LB21.Z</b>	<b>Structural developmental anomalies of pancreas, unspecified</b>

**LB22** **Structural developmental anomalies of spleen**  
Any condition caused by failure of the spleen to correctly develop during the antenatal period.

**Exclusions:** isomerism of atrial appendages (with asplenia or polysplenia) (LA80-LA8Z)

**LB22.0** **Congenital asplenia**  
A condition caused by failure of the spleen to develop during the antenatal period. This condition may present with pneumococcal sepsis. Confirmation is through verification of no spleen by imaging.

**LB22.1** **Polysplenia**  
A condition caused by the development of supernumerary spleens during the antenatal period. This condition may present with cardiac defects, anomalies in abdominal organs, or may be asymptomatic.

**LB22.2** **Ectopic spleen**

**LB22.Y** **Other specified structural developmental anomalies of spleen**

**LB22.Z** **Structural developmental anomalies of spleen, unspecified**

**LB2Y** **Other specified structural developmental anomalies of the liver, biliary tract, pancreas or spleen**

**LB2Z** **Structural developmental anomalies of the liver, biliary tract, pancreas or spleen, unspecified**

## Structural developmental anomalies of the urinary system (LB30-LB32)

Any condition caused by failure of the urinary system to correctly develop during the antenatal period.

LB30	<b>Structural developmental anomalies of kidneys</b> Any condition caused by failure of the kidneys to correctly develop during the antenatal period.
LB30.0	<b>Renal agenesis or other reduction defects of kidney</b> A series of conditions resulting in reduced kidney function including a congenital absence of both kidneys
LB30.00	Renal agenesis A condition where one or both kidneys does not form (or develop) in utero.
LB30.0Y	Other specified renal agenesis or other reduction defects of kidney
LB30.0Z	Renal agenesis or other reduction defects of kidney, unspecified
LB30.1	<b>Renal dysplasia</b> A condition characterised by abnormal development of one or both kidneys. <b>Exclusions:</b> Autosomal dominant polycystic kidney disease (GB81)

- LB30.2**      **Congenital single renal cyst**  
A single cyst in a kidney, noted in utero or from birth. No other structural abnormality of the kidney or urinary tract noted.
- LB30.3**      **Renal tubular dysgenesis**  
Abnormal renal development and kidney formation secondary to an underlying condition or exposure.
- LB30.4**      **Oligomeganephronia**  
Oligomeganephronic renal hypoplasia is a severe developmental defect of both kidneys characterised by a reduced number of nephrons (the functional unit of the kidney), hypertrophic glomeruli with diameters twice the normal size, hypertrophic tubules and thickening of Bowman's capsule, occurring in the absence of a urinary tract malformation.
- LB30.5**      **Accessory kidney**
- LB30.6**      **Fusion anomaly of kidneys**  
The embryological, incomplete fusion of renal lobules and/or kidneys
- LB30.60**      Lobulated kidney  
Any condition caused by incomplete fusion of the developing renal lobules during the antenatal period. This condition may be asymptomatic.
- LB30.61**      Fused pelvic kidney  
A condition caused by failure of the kidneys to correctly develop during the antenatal period. This condition is characterised by the presence of a single kidney, along the midline of the body. This condition may present with kidney stones, hydronephrosis, kidney infection, haematuria, or may be asymptomatic. Confirmation is through observation of a fused kidney by imaging.
- LB30.62**      Horseshoe kidney  
Horseshoe kidney is the most frequent renal fusion anomaly and is characterised by the union of the inferior poles of the two kidneys through an isthmus. Horseshoe kidney is in fact an anatomical anomaly rather than a disease, but it does lead to predisposition to certain conditions such as hydronephrosis, nephrolithiasis or pyelonephritis. One third of individuals with horseshoe kidney are asymptomatic, with the anomaly being discovered fortuitously during a radiological examination. Urogenital or renal vessel anomalies may be associated with the condition. For cases requiring treatment, various therapeutic approaches are available and choice of treatment depends on the associated pathology.
- LB30.6Y**      Other specified fusion anomaly of kidneys
- LB30.6Z**      Fusion anomaly of kidneys, unspecified

- LB30.7      Ectopic or pelvic kidney**  
A birth defect characterised by an abnormally positioned kidney; may be asymptomatic or result in urine blockage, infection or kidney stones  
**Inclusions:**            Congenital displaced kidney  
                                  Malrotation of kidney
- LB30.8      Medullary sponge kidney**  
A condition characterised by cystic or saccular dilatations of the medullary collecting ducts seen with radiocontrast filling. A predisposition to stones and associated often with renal tubular acidosis. There is no clear genetic predisposition.
- LB30.9      Multicystic renal dysplasia**  
A condition characterised by abnormal development of the kidney, specifically in which the abnormal kidney does not form a reniform structure but rather, a collection of non-communicating cysts, with no renal functional tissue.
- LB30.Y      Other specified structural developmental anomalies of kidneys**
- LB30.Z      Structural developmental anomalies of kidneys, unspecified**
- LB31      Structural developmental anomalies of urinary tract**  
Any condition caused by failure of the urinary tract to correctly develop during the antenatal period.  
**Coded Elsewhere:** Allantoic duct remnants or cysts (LB03.0)  
                                  Persistent urogenital sinus (LB42.Y)
- LB31.0      Congenital hydronephrosis**  
Congenital hydronephrosis is a renal urinary disease characterised by distension and dilation of the renal pelvis and calyces secondary to various congenital obstructive malformations of the kidneys and urinary tract that can evolve to renal atrophy.
- LB31.1      Congenital primary megaureter**  
Congenital primary megaureter is an idiopathic condition in which the bladder and bladder outlet are normal but the ureter is dilated to some extent. It may be obstructed, refluxing or unobstructed and not refluxing.
- LB31.2      Fetal lower urinary tract obstruction**  
A disease caused by partial or complete obstruction of the urethra, during the antenatal period. This disease can present with enlarged bladder, oligohydramnios, or pulmonary hypoplasia. Confirmation is through observation of the obstruction by imaging.

- LB31.3      Exstrophy of urinary bladder**  
Bladder exstrophy (or classic bladder exstrophy) is a congenital genitourinary malformation belonging to the spectrum of the exstrophy-epispadias complex and is characterised by an evaginated bladder plate, epispadias and an anterior defect of the pelvis, pelvic floor and abdominal wall.
- Inclusions:**      Ectopia vesicae  
                          Extroversion of bladder
- LB31.4      Congenital diverticulum of urinary bladder**  
A condition caused by failure of the bladder to correctly develop. This condition is characterised by weakness in the bladder wall through which some of the lining of the bladder protrudes. This condition may present with urinary tract infections, difficulty voiding, or abdominal fullness. This condition may also be asymptomatic.
- LB31.5      Duplication of urethra**  
A condition caused by failure of the urethra to correctly develop during the antenatal period. This condition is characterised by the presence of a second passage from the bladder. This condition may present with double urinary stream, urination from the anus, or may be asymptomatic. Confirmation is through observation of a second urethra by imaging.
- LB31.6      Congenital megalourethra**  
A condition caused by failure of the penile corpora cavernosa and spongiosa to correctly develop during the antenatal period. This condition is characterised by dilatation of the penile urethra. This condition may present with poor stream, swelling of the penis, megacystis, oligohydramnios, renal failure, or pulmonary hypoplasia.
- LB31.7      Megacystis-megaureter**  
Megacystic-megaureter syndrome describes the presence of a massive primary non-obstructive vesicoureteral reflux and a large capacity, smooth, thin walled bladder due to the continual recycling of refluxed urine. Recurrent urinary infections are commonly associated with this condition.
- LB31.8      Atresia or stenosis of ureter**  
A condition caused by blockage or narrowing of the ureter due to failure to correctly develop during the antenatal period. This condition may present with bladder outlet obstruction, low amniotic fluid volume, pulmonary hypoplasia, megacystis, hydronephrosis, or renal dysplasia.
- LB31.9      Agenesis of ureter**  
A condition caused by failure of the ureter to develop during the antenatal period. Confirmation verification that one or more ureters are missing by imaging.
- Inclusions:**      Absent ureter

<b>LB31.A</b>	<b>Duplication of ureter</b> A condition caused by failure of the ureter to correctly develop during the antenatal period, resulting in incorrect connection of the ureter to the kidney. This condition may present with ureteroureteral reflux, or ureteropelvic junction obstruction of the lower pole of the kidney in the case of incomplete duplication. Complete duplication may present with vesicoureteral reflux, ectopic ureterocele, or ectopic ureteral insertion. Confirmation is through observation of two ureters on one side by imaging.
	<b>Inclusions:</b> Double ureter Accessory ureter
<b>LB31.B</b>	<b>Malposition of ureter</b> A condition caused by failure of the ureter to correctly develop during the antenatal period, resulting in partial or complete duplication of the ureter. This condition may present with hydronephrosis, urinary tract infection, or incontinence in females. Confirmation is through observation of an incorrectly positioned ureter by imaging.
<b>LB31.C</b>	<b>Congenital absence of bladder or urethra</b> Any condition caused by failure of both the bladder and the urethra to develop during the antenatal period. This condition may result in fetal death, or sepsis and severe complications in cases of live births.
<b>LB31.D</b>	<b>Congenital vesico-uretero-renal reflux</b> A condition caused by failure of the ureter to develop correctly during the antenatal period. This condition may present with urinary tract infection, or may be asymptomatic.
<b>LB31.Y</b>	<b>Other specified structural developmental anomalies of urinary tract</b>
<b>LB31.Z</b>	<b>Structural developmental anomalies of urinary tract, unspecified</b>
<b>LB3Y</b>	<b>Other specified structural developmental anomalies of the urinary system</b>
<b>LB3Z</b>	<b>Structural developmental anomalies of the urinary system, unspecified</b>

Structural developmental anomalies of the female genital system (LB40-LB4Z)

**Exclusions:** Disorders of sex development leading to sexual ambiguity (LD2A)

<b>LB40</b>	<b>Structural developmental anomalies of vulva</b> A deformation established before birth of an anatomical structure of the vulva.
-------------	---

<b>LB40.0</b>	<b>Absence of vulva</b> This is a birth defect or congenital abnormality of the female genitourinary system that manifests itself in the absence of the vulva.
<b>LB40.1</b>	<b>Embryonic cyst of vulva</b> Remnant tissue from embryological development of the pelvic organs presenting as a closed fluid sac in or on the tissue of the vulva.

<b>LB40.2</b>	<b>Fusion of labia</b> A condition of the labia commonly affecting females between 6 months and 6 years of age, caused by skin irritation during infancy. This condition is characterised by the sealing of the labia minor (usually completely) due to a thin membrane that seals the entrance to the vagina, leaving a very small gap for urination.
<b>LB40.Y</b>	<b>Other specified structural developmental anomalies of vulva</b>
<b>LB40.Z</b>	<b>Structural developmental anomalies of vulva, unspecified</b>
<b>LB41</b>	<b>Structural developmental anomalies of clitoris</b> A deformation established before birth of an anatomical structure of the clitoris.
<b>LB41.0</b>	<b>Agenesis of clitoris</b>
<b>LB41.1</b>	<b>Duplication of clitoris</b> An anatomical anomaly present at birth in which there are two clitoral structures present.
<b>LB41.2</b>	<b>Clitoromegaly</b>
<b>LB41.Y</b>	<b>Other specified structural developmental anomalies of clitoris</b>
<b>LB41.Z</b>	<b>Structural developmental anomalies of clitoris, unspecified</b>
<b>LB42</b>	<b>Structural developmental anomalies of vagina</b> A deformation established before birth of an anatomical structure of the vagina.
<b>LB42.0</b>	<b>Absence of vagina</b> A condition of the genitourinary system affecting females, caused by an abnormality arising during the antenatal period. This condition is characterised by vaginal agenesis.
<b>LB42.1</b>	<b>Septate vagina</b> A condition of the genitourinary system affecting females, caused by the absence of Mullerian duct fusion during the antenatal period. This condition is characterised by a transverse or longitudinal septum, partitioning the vagina into two parts. This condition may also present with dyspareunia, abnormal vaginal bleeding, or is asymptomatic. Confirmation is by imaging. <b>Exclusions:</b> doubling of vagina with doubling of uterus and cervix (LB44.3)
<b>LB42.2</b>	<b>Congenital rectovaginal fistula</b> A condition of the genitourinary system affecting females, caused by an abnormality arising during the antenatal period. This condition is characterised by the formation of an abnormal passage between the rectum and the vagina. <b>Exclusions:</b> Persistent cloaca (LB17.2)

- LB42.3 Tight hymenal ring**  
A condition of the vagina, caused by determinants arising during the antenatal period. This condition is characterised by tightening of the hymen and stenosis of the external opening of the vagina, and dyspareunia.
- Inclusions:** Rigid hymen  
Tight introitus
- Exclusions:** Imperforate hymen (LB42.4)
- LB42.4 Imperforate hymen**  
A condition in which the hymen, the membrane that surrounds or partially covers the external vaginal opening, is harder than normal or is complete and sealed without any opening into the vaginal vault.
- LB42.5 Stricture or atresia of vagina**  
A condition of the vagina, caused by an abnormality arising during the antenatal period. This condition is characterised by stenosis and occlusion of the vaginal opening.
- Exclusions:** Postoperative adhesions of vagina (GC70)
- LB42.Y Other specified structural developmental anomalies of vagina**
- LB42.Z Structural developmental anomalies of vagina, unspecified**
- LB43 Structural developmental anomalies of cervix uteri**
- LB43.0 Embryonic cyst of cervix**  
A condition of the cervix, caused by a cluster of cells that have formed a closed sac or structures left behind from development during the antenatal period. This condition is characterised by air, fluid, or semi-solid material surrounded by a distinct membrane of cells with abnormal appearance and behaviour.
- LB43.1 Agenesis or aplasia of cervix**  
A condition of the cervix, caused by the absence of primordial tissue development during the antenatal period. This condition is characterised by improper or lack of development of the cervix.
- LB43.Y Other specified structural developmental anomalies of cervix uteri**
- LB43.Z Structural developmental anomalies of cervix uteri, unspecified**
- LB44 Structural developmental anomalies of uterus, except cervix**
- LB44.0 Agenesis or aplasia of uterine body**  
A condition of the uterus, caused by the absence of primordial tissue development during the antenatal period. This condition is characterised by improper or lack of development of the uterine body.
- LB44.1 Hypoplasia of uterus**

- LB44.2      Unicornuate uterus**  
A uterine malformation where the uterus is formed from one only of the paired Müllerian ducts while the other Müllerian duct does not develop or develops only in a rudimentary fashion.
- LB44.3      Bicornuate uterus**  
A condition of the uterus, caused by malformation in the development of the uterus during the antenatal period. This condition is characterised by a uterus with a bifurcated cephalo, and a unitary caudal part. Confirmation is by imaging.
- LB44.4      Septate uterus**  
Longitudinal septum in uterus, subclassified as complete or partial
- LB44.5      Congenital fistulae between uterus and digestive and urinary tracts**  
A condition caused by abnormal tissue development during the antenatal period. This condition is characterised by the formation of an abnormal passage between the uterus, digestive, and urinary tracts.
- LB44.6      Uterovaginal malformation due to diethylstilbestrol syndrome**  
Fetal diethylstilbestrol syndrome is characterised by a group of symptoms likely to occur in children and grandchildren of a woman who was treated while pregnant with diethylstilbestrol (DES). The drug is a synthetic nonsteroidal oestrogen, used in the US until 1971 and in Europe until 1978 to try and prevent miscarriage, premature delivery, and other pregnancy complications. It has been estimated that 25% of female fetuses exposed to DES in utero during the first trimester have subsequently developed genital tract anomalies including vaginal adenosis, cervical malformations, vaginal septae, uterine cavity anomalies, or fallopian tube anomalies causing subsequent fertility problems.
- LB44.Y      Other specified structural developmental anomalies of uterus, except cervix**
- LB44.Z      Structural developmental anomalies of uterus, except cervix, unspecified**
- LB45      Structural developmental anomalies of ovaries, fallopian tubes or broad ligaments**
- LB45.0      Congenital absence of ovary**  
A condition of the ovary, caused by determinants arising during the antenatal period. This condition is characterised by a female born with fewer than two ovaries.  
**Exclusions:**      Turner syndrome (LD50.0)
- LB45.1      46,XX gonadal dysgenesis**  
Karyotype 46 XX; Gonads: gonadal dysgenesis (streak gonads); Phenotype female with symptoms like primary amenorrhea, hypergonadotropic hypogonadism, normal stature and no other abnormalities.
- LB45.2      Developmental ovarian cyst**  
A condition in which an individual is born with a benign, functional cyst, or cysts, on one or more ovaries which result from enlargement of otherwise normal follicles during third trimester or early neonatal period.

- LB45.3 Congenital torsion of ovary**  
A condition of the ovary, caused by determinants arising during the antenatal period. This condition is characterised by a partial or complete rotation of the ovary, an occlusion to the venous or arterial blood supply of the ovary, severe lower abdominal pain that may radiate to the back, pelvis and thigh, and nausea, vomiting, diarrhoea or constipation.
- LB45.4 Accessory ovary**  
A condition of the ovary, caused by determinants arising during the antenatal period. This condition is characterised by excess ovarian tissue situated near an anatomically correct ovary, which may or may not be connected to the original ovarian tissue.
- LB45.5 Congenital absence of fallopian tube**  
A condition of the fallopian tube, caused by determinants arising during the antenatal period. This condition is characterised by a female born with fewer than two fallopian tubes.
- LB45.6 Atresia of fallopian tube**  
A condition of the fallopian tube, caused by determinants arising during the antenatal period. This condition is characterised by unilateral or bilateral closure or absence of the fallopian tube(s), commonly within the proximal isthmic or proximal ampillary segments.
- LB45.7 Accessory fallopian tube**  
A condition of the fallopian tube, caused by determinants arising during the antenatal period. This condition is characterised by the duplication of one or more fallopian tubes, commonly attached to the ampillary segment.
- LB45.8 Embryonic cyst of fallopian tube**  
A condition of the Fallopian tube, caused by the overgrowth of pelvic tissue during the antenatal period. This condition is characterised by air, fluid, or semi-solid material surrounded by a distinct membrane of cells with abnormal appearance and behaviour.  
*Inclusions:* Fimbrial cyst
- LB45.9 Embryonic cyst of broad ligament**  
Remnant tissue from embryological development of the development of the pelvic organs presenting as a closed fluid sac on the broad ligament.  
*Inclusions:* epoophoron cyst  
parovarian cyst
- LB45.Y Other specified structural developmental anomalies of ovaries, fallopian tubes or broad ligaments**
- LB45.Z Structural developmental anomalies of ovaries, fallopian tubes or broad ligaments, unspecified**
- LB4Y Other specified structural developmental anomalies of the female genital system**

**LB4Z****Structural developmental anomalies of the female genital system, unspecified**

Structural developmental anomalies of the male genital system (LB50-LB5Z)

Any condition affecting the male genital system, caused by determinants arising during the antenatal period. These conditions are characterised by structural developmental anomalies.

**Exclusions:** Disorders of sex development leading to sexual ambiguity (LD2A)

**LB50****Micropenis or penis agenesis**

A condition caused by reduced androgen production during the antenatal period. This condition is characterised by an absent, or unusually small penis. Confirmation is by measuring the length of a dorsal erectile penis.

**LB51****Anorchia or microorchidia**

A disorder affecting males, caused by an abnormality occurring in sex development during the antenatal period. This disorder is characterised by individuals who are born with absence of the testes, or with testes that are deficient in size and function. Confirmation is by physical examination, identification of low testosterone levels but elevated follicle stimulating hormone and luteinizing hormone levels in a blood sample, or imaging.

**Coded Elsewhere:** Testicular agenesis (LD2A.2)

**LB52****Cryptorchidism**

A disorder affecting males, caused by an abnormality occurring in sex development during the antenatal period. This disorder is characterised by the absence of one or both testes from the scrotum. This disorder may also present with reduced fertility, psychological implications, or increased risk of testicular germ cell tumours. Confirmation is by imaging, karyotyping, or identification of male sex hormones in a blood sample.

**Exclusions:** Retractile testis migrans (MF42)

**LB52.0****Ectopic testis**

A condition of the testis, caused by determinants arising during the antenatal period. This condition is characterised by the abnormal location of the testis away from the normal line of descent such as in the superficial inguinal pouch, perineal, abdominal, pelvic, crural, penile or femoral positions, and with normal testis and spermatic cord anatomy. Confirmation is by diagnostic laparoscopy to rule out an intra-abdominal, inguinal or absent/vanishing testis.

**LB52.1****Undescended testicle, unilateral**

The situation in which one of the two testicles in a male has not transitioned from the abdomen, and therefore appears absent from the scrotum.

**LB52.2****Undescended testicle, bilateral**

The situation in which both testicles in a male have not transitioned from the abdomen, and therefore appear absent from the scrotum.

**LB52.Y****Other specified cryptorchidism**

<b>LB52.Z</b>	<b>Cryptorchidism, unspecified</b>
<b>LB53</b>	<b>Hypospadias</b> Any condition of the urethra affecting males, caused by determinants arising during the antenatal period. These conditions are characterised by a malformation of the urethra and an abnormally placed urinary meatus. <b>Exclusions:</b> Epispadias (LB55)
<b>LB53.0</b>	<b>Hypospadias, balanic</b> A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and an abnormally placed urinary meatus that opens at the site of the frenulum. This condition may also present with an incomplete foreskin that forms a hood.
<b>LB53.00</b>	<b>Hypospadias, coronal</b> A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis, leading to an abnormally placed urinary meatus that opens in the ventral portion of the coronal sulcus. This condition may also present with an incomplete foreskin that forms a hood.
<b>LB53.01</b>	<b>Hypospadias, glandular</b> A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis, leading to an abnormally placed urinary meatus that opens at the site of the frenulum. This condition may also present with an incomplete foreskin that forms a hood.
<b>LB53.0Y</b>	<b>Other specified hypospadias, balanic</b>
<b>LB53.0Z</b>	<b>Hypospadias, balanic, unspecified</b>
<b>LB53.1</b>	<b>Hypospadias, penile</b> A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis and an abnormally placed urinary meatus that opens along the shaft of the penis. This condition may also present with an incomplete foreskin that forms a hood.
<b>LB53.2</b>	<b>Hypospadias, penoscrotal</b> A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis, leading to an abnormally placed urinary meatus that opens where the shaft of the penis meets the scrotum. This condition may also present with an incomplete foreskin that forms a hood.

- LB53.3 Hypospadias, scrotal**  
A condition caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis, leading to an abnormally placed urinary meatus that opens on the scrotum. This condition may also present with an incomplete foreskin that forms a hood.
- LB53.4 Hypospadias, perineal**  
A condition of the urethra affecting males, caused by determinants arising during the antenatal period. This condition is characterised by a malformation of the urethra and the ventral side of the penis and an abnormally placed urinary meatus that opens in the perineum. This condition may also present with an incomplete foreskin that forms a hood.
- LB53.Y Other specified hypospadias**
- LB53.Z Hypospadias, unspecified**
- LB54 Congenital chordee**  
A condition caused by the development of fibrous bands of tissue along the corpus spongiosum and shortening of the ventral skin during the antenatal period. This condition is characterised by ventral or dorsal curvature of the head of the penis at the junction with the shaft, most apparent during erection. This condition may also present with hypospadias.
- LB55 Epispadias**  
Epispadias is a congenital genitourinary malformation belonging to the spectrum of the exstrophy-epispadias complex and is characterised in males by an ectopic meatus or a mucosal strip in place of the urethra on the penile dorsum and in females by bifid clitoris and a variable cleft of the urethra.
- Exclusions:**      Hypospadias (LB53)
- LB56 Bifid scrotum**  
A condition caused by failure of the scrotum to correctly develop during the antenatal period resulting in incomplete fusion of the labioscrotal folds. This condition is characterised by a deep midline cleft in the scrotum. This condition may be asymptomatic.
- LB57 Agenesis of vas deferens**  
A condition of the vas deferens affecting males, caused by determinants arising during the antenatal period. This condition is characterised by the unilateral or bilateral absence of the vas deferens, azoospermia, and infertility.
- LB58 Polyorchidism**  
A condition of the testes, caused by determinants arising during the antenatal period. This condition is characterised by the presence of more than two testicles. Confirmation is by imaging.

**LB59**

**Hypoplasia of testis or scrotum**

A condition caused by incomplete development of the testis and scrotum during the antenatal period. This condition is characterised by a decrease or destruction in the number or size of cells testis and scrotal tissue.

**LB5Y**

**Other specified structural developmental anomalies of the male genital system**

**LB5Z**

**Structural developmental anomalies of the male genital system, unspecified**

Structural developmental anomalies of the breast (LB60-LB6Z)

A deformation established before birth of an anatomical structure of the breast or breast tissue.

**LB60**

**Breast aplasia**

A condition caused by failure of the breast to develop during the antenatal period. This condition is characterised by a total lack of breast tissue. This condition may also present with absence of the nipple or pectoral muscle.

**LB61**

**Absent nipple**

A condition caused by failure of the nipple to develop during the antenatal period. This condition is characterised by a total lack of a nipple. This condition may also present with absence of the breast or pectoral muscle.

**LB62**

**Supernumerary breasts**

A condition caused by failure of the breasts to correctly develop during the antenatal period. This condition is characterised by supernumerary breasts, with or without nipples. This condition may be asymptomatic.

**LB63**

**Accessory nipple**

A condition caused by development of supernumerary nipples during the antenatal period. This condition is characterised by the presence of nipples or nipple-like structures additional to the normal two. This condition may be asymptomatic.

**Inclusions:**              Supernumerary nipple

**LB6Y**

**Other specified structural developmental anomalies of the breast**

**LB6Z**

**Structural developmental anomalies of the breast, unspecified**

Structural developmental anomalies of the skeleton (LB70-LB9Z)

A deformation established before birth of an anatomical structure of one or more bones.

**LB70**

**Structural developmental anomalies of cranium**

Any condition caused by failure of the cranium to correctly develop during the antenatal period.

**Coded Elsewhere:** Wide cranial sutures of newborn (KD31)

<b>LB70.0</b>	<b>Craniosynostosis</b>
	Craniosynostosis consists of premature fusion of one or more cranial sutures, resulting in an abnormal head shape. It can be divided in several subgroups; the major different types are primary vs secondary craniosynostosis and isolated vs syndromic craniosynostosis.
	<b>Inclusions:</b> Imperfect fusion of skull
<b>LB70.00</b>	<b>Plagiocephaly</b>
	Isolated synostotic plagiocephaly is a form of nonsyndromic craniosynostosis characterised by premature fusion of one coronal or lambdoid suture leading to skull deformity and facial asymmetry.
<b>LB70.0Y</b>	<b>Other specified craniosynostosis</b>
<b>LB70.0Z</b>	<b>Craniosynostosis, unspecified</b>
<b>LB70.1</b>	<b>Wormian bones</b>
	Also known as intrasutural bone, is an additional bony segment interlocked in an existing cranial suture. A special form: Interparietal bone or Inca bone is an interlocked irregular isolated bone at the lambdoid suture. Although harmless it may be associated with craniofacial and other syndromes.
<b>LB70.2</b>	<b>J-shaped sella turcica</b>
<b>LB70.3</b>	<b>Macrocephaly</b>
	A condition characterised by above normal head size.
<b>Coding Note:</b>	Code also the causing condition
<b>LB70.Y</b>	<b>Other specified structural developmental anomalies of cranium</b>
<b>LB70.Z</b>	<b>Structural developmental anomalies of cranium, unspecified</b>
<b>LB71</b>	<b>Structural developmental anomalies of facial bones</b>
	Any condition caused by failure of the facial bones to correctly develop during the antenatal period.
	<b>Exclusions:</b> Facial clefts (LA51) Otomandibular dysplasia (LD2F.16) Agnathia (LA30-LA5Z) Micrognathia (DA0E.00)
<b>LB71.0</b>	<b>Hypotelorism</b>
	A condition caused by failure of the facial bones to correctly develop during the antenatal period. This condition is characterised by lower than normal distance between the eyes.
<b>LB71.1</b>	<b>Hypertelorism</b>
	A condition caused by failure of the facial bones to correctly develop during the antenatal period. This condition is characterised by higher than normal distance between the eyes.

<b>LB71.Y</b>	<b>Other specified structural developmental anomalies of facial bones</b>
<b>LB71.Z</b>	<b>Structural developmental anomalies of facial bones, unspecified</b>
<b>LB72</b>	<b>Structural developmental anomalies of shoulder girdle</b> Any condition caused by failure of the shoulder girdle to correctly develop during the antenatal period.
<b>LB72.0</b>	<b>Cervical rib</b>
<b>LB72.1</b>	<b>Sprengel deformity</b> A condition caused by failure of the pectoral girdle to correctly develop during the antenatal period. This condition is characterised by abnormal descent, and altered position and anatomy of the scapula. This condition may present with muscle hypoplasia.
<b>LB72.2</b>	<b>Deformation of scapula</b>
<b>LB72.Y</b>	<b>Other specified structural developmental anomalies of shoulder girdle</b>
<b>LB72.Z</b>	<b>Structural developmental anomalies of shoulder girdle, unspecified</b>
<b>LB73</b>	<b>Structural developmental anomalies of spine or bony thorax</b> Any condition caused by failure of the spine or bony thorax to correctly develop during the antenatal period.
<b>LB73.0</b>	<b>Occult spinal dysraphism</b> <p><b>Inclusions:</b></p> <ul style="list-style-type: none"> <li>Spina bifida occulta</li> <li>Cryptomerorachischisis</li> </ul> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>meningocele (spinal) (LA02)</li> <li>Spina bifida aperta (LA02.1)</li> <li>Spina bifida cystica (LA02.0)</li> </ul>
<b>LB73.1</b>	<b>Structural developmental anomalies of chest wall</b> Any condition caused by failure of the chest wall to correctly develop during the antenatal period.
<b>LB73.10</b>	<b>Poland syndrome</b> Poland syndrome is characterised by a unilateral absence or hypoplasia of the pectoralis major muscle (most frequently involving the sternocostal portion), and a variable degree of ipsilateral hand anomalies, including symbrachydactyly.
<b>LB73.11</b>	<b>Bifid rib</b>
<b>LB73.12</b>	<b>Accessory rib</b> A condition caused by failure of the ribs to correctly develop during the antenatal period. This condition is characterised by a supernumerary rib arising from a cervical or lumbar vertebra. This condition may present with thoracic outlet syndrome, or may be asymptomatic.

- LB73.13** Structural developmental anomalies of sternum  
Any condition caused by failure of the sternum to correctly develop during the antenatal period.
- LB73.1Y** Other specified structural developmental anomalies of chest wall
- LB73.1Z** Structural developmental anomalies of chest wall, unspecified
- LB73.2** **Structural developmental anomalies of spine**  
Any condition caused by failure of the spine to correctly develop during the antenatal period.
- LB73.20** Klippel-Feil anomaly  
Klippel-Feil syndrome is characterised by improper segmentation of cervical segments resulting in congenitally fused cervical vertebrae.  
*Inclusions:* Cervical fusion syndrome
- LB73.21** Occipitalisation of atlas  
A condition caused by failure of the atlas and occiput to correctly develop during the antenatal period. This condition is characterised by fusion of the atlas to the base of the occiput. This condition may present with headache, suboccipital stiffness, restricted motion, or dizziness. Confirmation is through observation of the fusion by imaging.
- LB73.22** Atlanto-axial instability or subluxation  
A condition caused by bony or ligamentous abnormality of the upper spinal column. This condition is characterised by excessive movement at the junction between C1 and C2 vertebrae. This condition may present with impaired rotation of the neck, neurological difficulties, or may be asymptomatic.
- LB73.23** Aplasia or hypoplasia of the odontoid process of axis
- LB73.24** Segmentation anomalies of vertebrae  
Any condition caused by failure of the vertebrae to correctly develop during the antenatal period. These conditions are characterised by an abnormal number of fully developed vertebrae. Confirmation is through verification of absent or improperly formed vertebrae by imaging.
- LB73.25** Congenital scoliosis due to congenital bony malformation  
A condition caused by malformation of the ribs or spine. This condition is characterised by abnormal curving of the spine.  
*Exclusions:* congenital scoliosis NOS (LB73.2)
- LB73.26** Sacralisation of the last lumbar vertebra
- LB73.27** Lumbarisation of the first sacral vertebra
- LB73.28** Sacrum agenesis or hypoplasia

<b>LB73.29</b>	Caudal appendage A condition caused by development of a malformation on the lower back during the antenatal period. This condition is characterised by a cutaneous protrusion superior to the buttocks. This condition may be associated with occult spinal dysraphism.  <b>Exclusions:</b> Caudal regression sequence (LD2F.1)
<b>LB73.2A</b>	Congenital spondylolisthesis A condition caused by vertebral malformation, which allows the vertebra to slip forward over the sacrum. This condition may present with lower back pain, or may be asymptomatic.  <b>Exclusions:</b> acquired spondylolisthesis (FA84) acquired spondylolysis (FA81)
<b>LB73.2Y</b>	Other specified structural developmental anomalies of spine
<b>LB73.2Z</b>	Structural developmental anomalies of spine, unspecified
<b>LB73.Y</b>	<b>Other specified structural developmental anomalies of spine or bony thorax</b>
<b>LB73.Z</b>	<b>Structural developmental anomalies of spine or bony thorax, unspecified</b>
<b>LB74</b>	<b>Structural developmental anomalies of pelvic girdle</b> Any condition caused by failure of the pelvic girdle to correctly develop during the antenatal period.  <b>Exclusions:</b> Clicking hip (ME80)
<b>LB74.0</b>	<b>Developmental dysplasia of hip</b> A condition caused by failure of the hip to correctly develop during the antenatal period. This condition is characterised by slippage of the hip from the socket. This condition may present with outward turning of the leg, reduced movement on one side of the body, shortness of one leg, uneven skin folds on thigh or buttocks, walking difficulties, or inward rounding of the lower back.
<b>LB74.1</b>	<b>Congenital subluxation of hip</b>
<b>LB74.2</b>	<b>Unstable hip</b> A condition caused by failure of the hip joint to correctly develop during the antenatal period. This condition is characterised by looseness of the hip joint. This condition may present with dislocation, multidirectional intra-operative instability, abductor insufficiency, or neuromuscular disability.
<b>LB74.3</b>	<b>Congenital coxa vara</b> A condition caused by failure of the hip joint to correctly develop during the antenatal period. This condition is characterised by a decrease in the femoral neck-shaft angle. This condition may present with a shortened leg, or a limp.
<b>LB74.4</b>	<b>Congenital coxa valga</b> A condition caused by failure of the hip joint to correctly develop during the antenatal period. This condition is characterised by an increase in the femoral neck-shaft angle.

- LB74.5** **Wide symphysis pubis**
- LB74.Y** **Other specified structural developmental anomalies of pelvic girdle**
- LB74.Z** **Structural developmental anomalies of pelvic girdle, unspecified**
- LB75** **Brachydactyly**  
Brachydactyly ('short digits') is a general term that refers to disproportionately short fingers and toes, and forms part of the group of limb malformations characterised by bone dysostosis. The various types of isolated brachydactyly are rare, except for types A3 and D.
- LB75.0** **Brachydactyly of fingers**  
A condition caused by failure of the fingers to correctly develop during the antenatal period. This condition is characterised by below normal finger length.
- LB75.1** **Brachydactyly of toes**  
A condition caused by failure of the toes to correctly develop during the antenatal period. This condition is characterised by below normal toe length.
- LB75.2** **Sybrachydactyly of hands or feet**  
A condition caused by failure of the digits to correctly develop during the antenatal period. This condition is characterised by short digits, which may be webbed. This condition may also present with missing digits, shortened metacarpals, or short limb sections.
- LB75.Y** **Other specified brachydactyly**
- LB75.Z** **Brachydactyly, unspecified**
- LB76** **Triphalangeal thumb**  
A condition caused by failure of the thumb to correctly develop during the antenatal period. This condition is characterised by a long, finger-like thumb with three phalanges instead of two. Isolated triphalangeal thumbs may be associated with genetic abnormality in the 7q36 region.
- LB77** **Hyperphalangy**  
Hyperphalangy is a congenital, non-syndromic limb malformation characterized by the presence of an accessory phalanx between metacarpal/metatarsal and proximal phalanx, or between any two other phalanges of a digit, excluding the thumb. Hyperphalangy is almost always bilateral and patients present no more than five digits and no other skeletal anomalies.
- LB78** **Polydactyly**  
Any condition caused by development of supernumerary fingers during the antenatal period.
- LB78.0** **Polydactyly of the thumb**  
A condition caused by development of supernumerary thumbs during the antenatal period.

<b>LB78.1</b>	<b>Polysyndactyly</b> Polysyndactyly is a form of preaxial polydactyly of fingers characterised by the presence of a thumb showing the mildest degree of duplication, being broad, bifid or with radially deviated distal phalanx. Syndactyly of various degrees of third-and-fourth fingers is occasionally present. Two forms have been characterised: unilateral and bilateral.
<b>LB78.2</b>	<b>Postaxial polydactyly of fingers</b> A condition caused by development of supernumerary fingers during the antenatal period. This condition is characterised by fifth digit duplications.
<b>LB78.3</b>	<b>Polydactyly of toes</b> Any condition caused by development of supernumerary toes during the antenatal period.
<b>LB78.Y</b>	<b>Other specified polydactyly</b>
<b>LB78.Z</b>	<b>Polydactyly, unspecified</b>
<b>LB79</b>	<b>Syndactyly</b> A condition caused by failure of the longitudinal interdigital necrosis that normally separates the digits during the antenatal period. This condition is characterised by the presence of two or more digits that are fused together. <i>Coded Elsewhere:</i> Polysyndactyly (LB78.1)
<b>LB79.0</b>	<b>Fused fingers</b> <i>Inclusions:</i> complex syndactyly of fingers with synostosis
<b>LB79.1</b>	<b>Webbed fingers</b> A condition caused by failure of the longitudinal interdigital necrosis that normally separates the fingers to during the antenatal period. This condition is characterised by the presence of two or more fingers that are fused together. <i>Inclusions:</i> Simple syndactyly of fingers without synostosis
<b>LB79.2</b>	<b>Fused toes</b> <i>Inclusions:</i> Complex syndactyly of toes with synostosis
<b>LB79.3</b>	<b>Webbed toes</b> A condition caused by failure of the longitudinal interdigital necrosis that normally separates the toes during the antenatal period. This condition is characterised by the presence of two or more toes that are fused together. <i>Inclusions:</i> Simple syndactyly of toes without synostosis
<b>LB79.Y</b>	<b>Other specified syndactyly</b>
<b>LB79.Z</b>	<b>Syndactyly, unspecified</b>

## Congenital deformities of fingers or toes (LB80-LB81.Z)

<b>LB80</b>	<b>Congenital deformities of fingers</b> Any condition caused by failure of the fingers to develop correctly during the antenatal period.  <b>Inclusions:</b> Congenital deformities of hand
<b>LB80.0</b>	<b>Clinodactyly of fingers</b> A condition caused by failure of the fifth finger to correctly develop during the antenatal period. This condition is characterised by bending of the fifth finger towards the fourth.
<b>LB80.2</b>	<b>Radial deviation of fingers</b>
<b>LB80.Y</b>	<b>Other specified congenital deformities of fingers</b>
<b>LB80.Z</b>	<b>Congenital deformities of fingers, unspecified</b>
<b>LB81</b>	<b>Congenital deformities of toes</b> <b>Coded Elsewhere:</b> Congenital hammer toe (LB98.5)
<b>LB81.0</b>	<b>Clinodactyly of toes</b>
<b>LB81.Y</b>	<b>Other specified congenital deformities of toes</b>
<b>LB81.Z</b>	<b>Congenital deformities of toes, unspecified</b>
<b>LB90</b>	<b>Joint formation defects</b> Any condition of the skeletal system, caused by failure of joints to correctly develop during the antenatal period.
<b>LB90.0</b>	<b>Humero-radio-ulnar synostosis</b> A condition caused by failure of the arm bones to correctly develop during the antenatal period. This condition is characterised by direct fusion of the humerus to the ulnar and radial bones of the arm, and consequent inability to straighten the elbow joint. This condition may be associated with thalidomide embryopathy. Confirmation is through observation of humero-radio-ulnar fusion by imaging.
<b>LB90.1</b>	<b>Humero-radial synostosis</b>
<b>LB90.2</b>	<b>Humero-ulnar synostosis</b> A condition caused by failure of the arm bones to correctly develop during the antenatal period. This condition is characterised by direct fusion of the humerus and radial bones of the arm, and consequent inability to straighten the elbow joint. Confirmation is through observation of humero-ulnar fusion by imaging.
<b>LB90.3</b>	<b>Radio-ulnar synostosis</b> A condition caused by failure of the arm bones to correctly develop during the antenatal period. This condition is characterised by direct fusion of the ulnar and radial bones of the arm, and consequent limitation of rotational movement of the forearm. Confirmation is through observation of radio ulnar fusion by imaging.

<b>LB90.4</b>	<b>Madelung deformity</b> Madelung disease, or deformity is a predominantly bilateral wrist anomaly characterised by shortened and bowed radii and long ulnae leading to dorsal dislocation of the distal ulna and limited mobility of the wrist and elbow.
<b>LB90.5</b>	<b>Congenital digital clubbing</b> Isolated congenital digital clubbing is a rare genodermatosis disorder characterised by enlargement of the terminal segments of fingers and toes with thickened nails without any other abnormality.
<b>LB90.6</b>	<b>Tibio-fibular synostosis</b>
<b>LB90.7</b>	<b>Cubitus valgus</b>
<b>LB90.8</b>	<b>Cubitus varus</b>
<b>LB90.Y</b>	<b>Other specified joint formation defects</b>
<b>LB90.Z</b>	<b>Joint formation defects, unspecified</b>
<b>LB91</b>	<b>Congenital shoulder dislocation</b>
<b>LB92</b>	<b>Congenital elbow dislocation</b>
<b>LB93</b>	<b>Congenital knee dislocation</b> A condition characterised by hyperextension of the knee joint.
<b>LB93.0</b>	<b>Congenital genu recurvatum</b>
<b>LB93.1</b>	<b>Congenital genu flexum</b>
<b>LB93.Y</b>	<b>Other specified congenital knee dislocation</b>
<b>LB93.Z</b>	<b>Congenital knee dislocation, unspecified</b>
<b>LB94</b>	<b>Congenital patella dislocation</b>
<b>LB95</b>	<b>Patella aplasia or hypoplasia</b> Isolated patella aplasia-hypoplasia is an extremely rare genetic condition characterised by congenital absence or marked reduction of the patellar bone. This condition may present with discomfort or abnormal gait. Confirmation is through verification of the reduced or absent patella by imaging
<b>LB96</b>	<b>Congenital bowing of long bones</b> Congenital bowing of long bones is a congenital condition described by the presence of symmetric or asymmetric angular deformity and shortening of the long bones, particularly the femurs, tibiae and ulnae.
<b>LB96.0</b>	<b>Congenital bowing of femur</b> A condition caused by failure of the femur to develop correctly during the antenatal period. This condition is characterised by abnormal angling of the femur. Confirmation is through observation of the bowed femur by imaging.

<b>LB96.1</b>	<b>Congenital bowing of tibia</b> A condition caused by failure of the tibia to develop correctly during the antenatal period. This condition is characterised by abnormal angling of the tibia. Confirmation is through observation of the bowed tibia by imaging.
<b>LB96.Y</b>	<b>Other specified congenital bowing of long bones</b>
<b>LB96.Z</b>	<b>Congenital bowing of long bones, unspecified</b>
<b>LB97</b>	<p><b>Limb overgrowth</b> Disproportionately long or asymmetric upper limbs</p> <p><b>Exclusions:</b> Hemihypertrophy (LD2C)</p>
<b>LB97.0</b>	<b>Macroductyly of fingers</b> A condition caused by failure of the fingers to correctly develop during the antenatal period. This condition is characterised by overgrowth of bone and soft tissue, resulting in larger than normal fingers. This condition may be asymptomatic.
<b>LB97.1</b>	<b>Macroductyly of toes</b>
<b>LB97.2</b>	<b>Upper limb hypertrophy</b>
<b>LB97.3</b>	<b>Lower limb hypertrophy</b>
<b>LB97.Y</b>	<b>Other specified limb overgrowth</b>
<b>LB97.Z</b>	<b>Limb overgrowth, unspecified</b>
<b>LB98</b>	<p><b>Congenital deformities of feet</b> Any condition caused by malformation of the foot during the antenatal period.</p>
<b>LB98.0</b>	<b>Congenital varus deformities of feet</b> Any condition caused by failure of the bones of the foot to correctly develop during the antenatal period. These conditions are characterised by twisting of parts of the foot inward from the centre of the body.
<b>LB98.00</b>	Talipes equinovarus A condition characterised by a foot that is fixated in adduction, in supination, and in varus. This condition may be associated with intrauterine position, genetic mutation, or can be idiopathic.
<b>LB98.01</b>	Talipes calcaneovarus
<b>LB98.02</b>	Metatarsus varus A condition characterised by medial rotation of the cuneiform bones at the midtarsal joint, with associated medial deviation of the metatarsal, resulting in adduction and supination of the forefoot.
<b>LB98.0Y</b>	Other specified congenital varus deformities of feet
<b>LB98.0Z</b>	Congenital varus deformities of feet, unspecified

- LB98.1**      **Congenital pes planus**  
Any condition caused by failure of the foot to correctly develop during the antenatal period. These conditions are characterised by severe rigid flat foot deformity.  
*Inclusions:*            congenital flat foot
- LB98.2**      **Congenital valgus deformities of feet**  
Any condition caused by failure of the bones of the foot to correctly develop during the antenatal period. These conditions are characterised by twisting of parts of the foot outward from the centre of the body.
- LB98.20**     Congenital hallux valgus  
A condition caused by failure of the hallux to correctly develop during the antenatal period. This condition is characterised by angling of the hallux medial to the metatarsophalangeal joint.
- LB98.21**     Metatarsus valgus  
A condition caused by failure of the bones of the foot to correctly develop during the antenatal period. This condition is characterised by rotation of the forepart of the foot outward from the midline of the body.
- LB98.22**     Talipes calcaneovalgus  
A condition caused by tightness of the muscles of the foot due to resting of the foot in a turned up position during the antenatal period. This condition is characterised by a foot that is turned upwards towards the shin.
- LB98.2Y**      Other specified congenital valgus deformities of feet
- LB98.2Z**      Congenital valgus deformities of feet, unspecified
- LB98.3**      **Congenital pes cavus**  
A condition characterised by a high arch of the foot that does not flatten with weight bearing.
- LB98.4**      **Congenital vertical talus**  
Isolated congenital vertical talus is a rare pedal deformity recognizable at birth by a dislocation of the talonavicular joint, resulting in a characteristic radiographic near-vertical orientation of the talus.
- LB98.5**      **Congenital hammer toe**  
A condition characterised by angling downwards of the toe.
- LB98.Y**      **Other specified congenital deformities of feet**
- LB98.Z**      **Congenital deformities of feet, unspecified**
- LB99**      **Reduction defects of upper limb**  
Any condition caused by the failure of an upper limb to correctly develop during the antenatal period. These conditions are characterised by reduction in size or absence of the limb.

- LB99.0      Amelia of upper limb**  
A condition caused by the failure of an upper limb to develop during the antenatal period. This condition is characterised by absence of the upper limb.
- LB99.1      Humeral agenesis or hypoplasia**
- LB99.2      Radial hemimelia**  
Radial hemimelia is a congenital longitudinal deficiency of the radius bone of the forearm characterised by partial or total absence of the radius.  
*Inclusions:*            Radial clubhand
- LB99.3      Ulnar hemimelia**  
Ulnar hemimelia is a congenital ulnar deficiency of the forearm characterised by complete or partial absence of the ulna bone.
- LB99.4      Congenital absence of upper arm or forearm with hand present**  
A condition caused by the failure of the upper arm and forearm to develop during the antenatal period, but with the hand present. This condition is characterised by direct connection of the hand to the shoulder.
- LB99.5      Congenital absence of both forearm and hand**  
A condition caused by the failure of the forearm and hand to develop during the antenatal period.
- LB99.6      Acheiria**  
A condition caused by failure of one or both hands to develop during the antenatal period.
- LB99.7      Adactyly of hands**  
A condition caused by failure of the digits on the hand to correctly develop during the antenatal period. This condition is characterised by absence of digits on the hand.
- LB99.8      Split hand**  
A condition caused by malformation of the hand during the antenatal period. This condition is characterised by a deep median cleft of the hand due to the absence of the central rays.
- LB99.Y      Other specified reduction defects of upper limb**
- LB99.Z      Reduction defects of upper limb, unspecified**
- LB9A      Reduction defects of lower limb**  
Any condition caused by the failure of a lower limb to correctly develop during the antenatal period. These conditions are characterised by reduction in size or absence of the limb.
- LB9A.0      Amelia of lower limb**

- LB9A.1** **Tibial hemimelia**  
Tibial hemimelia is a rare congenital anomaly characterised by deficiency of the tibia with a relatively intact fibula.
- LB9A.2** **Fibular hemimelia**  
Fibular hemimelia is a congenital longitudinal limb deficiency characterised by complete or partial absence of the fibula bone.
- LB9A.3** **Congenital absence of thigh or lower leg with foot present**  
Any condition caused by the failure of the thigh and lower leg to develop during the antenatal period. These conditions are characterised by direct connection of the foot to the hip.
- LB9A.4** **Apodia**  
A condition caused by failure of the foot to develop during the antenatal period.
- LB9A.5** **Adactyly of feet**  
A condition caused by failure of the digits on the foot to correctly develop during the antenatal period. This condition is characterised by absence of digits on the foot.
- LB9A.6** **Split foot**  
A condition caused by malformation of the foot during the antenatal period. This condition is characterised by a deep median cleft of the foot due to the absence of the central rays.
- LB9A.7** **Congenital absence of both lower leg and foot**  
Any condition caused by the failure of the lower leg and foot to develop during the antenatal period.
- LB9A.8** **Femoral agenesis or hypoplasia**  
Femoral agenesis/hypoplasia is a rare malformation of variable severity ranging from mild hypoplasia to complete absence of the femur.
- LB9A.Y** **Other specified reduction defects of lower limb**
- LB9A.Z** **Reduction defects of lower limb, unspecified**
- LB9B** **Reduction defects of upper and lower limbs**
- LB9Y** **Other specified structural developmental anomalies of the skeleton**
- LB9Z** **Structural developmental anomalies of the skeleton, unspecified**

Structural developmental anomalies of the skin (LC00-LC7Z)

A deformation established before birth of an anatomical structure of the skin.

- Exclusions:**
- pilonidal cyst or sinus (EG63)
  - Congenital erythropoietic porphyria (5C58.12)
  - Acrodermatitis enteropathica (5C64.20)

## Developmental hamartomata of the epidermis and epidermal appendages (LC00-LC0Y)

Keratinocytic, pilosebaceous, eccrine, apocrine and other complex hamartomatous malformations of the skin.

<b>LC00</b>	<b>Keratinocytic epidermal hamartoma</b> Keratinocytic epidermal hamartoma or epidermal naevus is a congenital hamartomatous epidermal malformation composed of keratinocytes. It is thought to arise as a result of somatic mutation: early embryonic mutations can give rise to extensive systematised naevi, though typically epidermal naevi are localised linear papillomatous or verrucous plaques. Histologically they exhibit acanthosis, papillomatosis and acanthosis. <b>Coded Elsewhere:</b> Linear porokeratosis (ED52)
<b>LC00.0</b>	<b>Epidermal naevus</b>
<b>LC00.Y</b>	<b>Other specified keratinocytic epidermal hamartoma</b>
<b>LC00.Z</b>	<b>Keratinocytic epidermal hamartoma, unspecified</b>
<b>LC01</b>	<b>Pilosebaceous hamartoma</b> Hamartomatous malformation involving elements originating from the developing pilosebaceous follicle.
<b>LC02</b>	<b>Complex epidermal hamartoma</b> Hamartomatous malformation composed of elements deriving from several components of the developing epidermis and epidermal appendages.
<b>LC0Y</b>	<b>Other specified developmental hamartomata of the epidermis and epidermal appendages</b>

## Developmental anomalies of skin pigmentation (LC10-LC1Y)

Hamartomatous cutaneous malformations involving melanocytes including congenital pigmented naevi.

**Coded Elsewhere:** Congenital melanocytic naevus (2F20.2)

Familial multiple café-au-lait macules (EC23.0)

**LC10**

### **Dermal melanocytosis**

The presence at birth of functional melanocytes within the dermis. Most commonly this is as a result of incomplete migration of melanocytes to the epidermis as in lumbosacral dermal melanocytosis (Mongolian spot). Less commonly it is due to circumscribed hamartomatous proliferation of melanocytes in the dermis (e.g. Naevus of Ota).

**Coded Elsewhere:** Phakomatosis caesioflammea (LD2D.Y)

Phakomatosis caesiomarmorata (LD2D.Y)

**LC1Y**

### **Other specified developmental anomalies of skin pigmentation**

## Hamartomata derived from dermal connective tissue (LC20-LC2Y)

Hamartomatous malformations of dermal collagen and elastin.

**LC20**

### **Connective tissue hamartoma**

**Inclusions:** Connective tissue naevus

**LC2Y**

### **Other specified hamartomata derived from dermal connective tissue**

## Developmental defects of hair or nails (LC30-LC31)

**LC30**

### **Developmental defects of hair or hair growth**

**LC31**

### **Developmental defects of the nail apparatus**

Congenital malformations of the nail apparatus.

**Inclusions:** congenital abnormalities of the nails

**LC40**

### **Dermoid cyst**

**Coded Elsewhere:** Dermoid cyst of eyelid (2F36.4)

## Developmental anomalies of cutaneous vasculature (LC50-LC5Z)

Congenital vascular malformations affecting the skin

**LC50**

### **Developmental capillary vascular malformations of the skin**

**Coded Elsewhere:** Phakomatosis pigmentovascularis (LD2D.Y)

<b>LC50.0</b>	<b>Salmon patch</b> A common skin condition of neonates, characterised by flat, deep-pink localised areas of capillary dilation that occur predominantly on the back of the neck, lower occiput, upper eyelids, upper lip, and bridge of the nose. The areas disappear permanently by about 2 years of age.
<b>LC50.1</b>	<b>Port-wine stain</b> A port-wine stain is defined as a macular telangiectatic area of skin which is present at birth and does not spontaneously involute. Port-wine stains may be localised or extensive and they are often associated with an underlying disorder.  <i>Coded Elsewhere:</i> Sturge-Weber syndrome (LD23)
<b>LC50.Y</b>	<b>Other specified cutaneous capillary vascular malformation</b>
<b>LC51</b>	<b>Developmental venous malformations involving the skin</b> Certain genetically-determined syndromes presenting with venous anomalies in the skin
<b>LC52</b>	<b>Complex or combined developmental vascular malformations involving the skin</b>  <i>Coded Elsewhere:</i> Angio-osteohypertrophic syndrome (LD26.60) Cobb syndrome (LA90.3Y) Maffucci syndrome (LD2F.1Y)
<b>LC5Y</b>	<b>Other specified developmental anomalies of cutaneous vasculature</b>
<b>LC5Z</b>	<b>Developmental anomalies of cutaneous vasculature, unspecified</b>

### Congenital anomalies of skin development (LC60-LC60)

<b>Coded Elsewhere:</b>	Focal dermal hypoplasia (LD27.0Y) Beckwith-Wiedemann syndrome (LD2C)
<b>LC60</b>	<b>Aplasia cutis congenita</b> Congenital absence of skin. The commonest form presents as a defect limited to the scalp. It is also a component of a number of genetic syndromes.
<b>LC7Y</b>	<b>Other specified structural developmental anomalies of the skin</b>
<b>LC7Z</b>	<b>Structural developmental anomalies of the skin, unspecified</b>

### Structural developmental anomalies of the adrenal glands (LC80-LC8Z)

A deformation established before birth of an anatomical structure of the adrenal glands.

<b>Exclusions:</b>	Congenital adrenal hyperplasia (5A71.01)
<b>LC80</b>	<b>Congenital adrenal hypoplasia</b>
	<i>Coded Elsewhere:</i> Congenital adrenocortical insufficiency (5A74.Y)

<b>LC8Y</b>	<b>Other specified structural developmental anomalies of the adrenal glands</b>
<b>LC8Z</b>	<b>Structural developmental anomalies of the adrenal glands, unspecified</b>
<b>LD0Y</b>	<b>Other specified structural developmental anomalies primarily affecting one body system</b>
<b>LD0Z</b>	<b>Structural developmental anomalies primarily affecting one body system, unspecified</b>

## Multiple developmental anomalies or syndromes (LD20-LD2Z)

Complex developmental anomalies involving more than one body system

<b>LD20</b>	<b>Syndromes with central nervous system anomalies as a major feature</b>
	<b><i>Inclusions:</i></b> Meckel syndrome (LD2F.13)
<b>LD20.0</b>	<b>Syndromes with cerebellar anomalies as a major feature</b>
	<b><i>Coded Elsewhere:</i></b> Dysplastic cerebellar gangliocytoma (2A00.21)
<b>LD20.00</b>	Joubert syndrome Joubert syndrome is a genetic midbrain-hindbrain malformation syndrome characterised by congenital malformation of the brainstem and agenesis or hypoplasia of the cerebellar vermis leading to an abnormal respiratory pattern, nystagmus, hypotonia, ataxia, and delay in achieving motor milestones. <b><i>Coded Elsewhere:</i></b> Oral-facial-digital syndrome type 6 (LD25.00)
<b>LD20.01</b>	Pontocerebellar hypoplasia Nonsyndromic pontocerebellar hypoplasias are a rare heterogeneous group of diseases characterised by hypoplasia and atrophy and/or early neurodegeneration of the cerebellum and pons. Eight subtypes named type 1-8 have been described, generally inherited in an autosomal recessive pattern.
<b>LD20.0Y</b>	Other specified syndromes with cerebellar anomalies as a major feature
<b>LD20.0Z</b>	Syndromes with cerebellar anomalies as a major feature, unspecified
<b>LD20.1</b>	<b>Syndromes with lissencephaly as a major feature</b> The term lissencephaly covers a group of rare malformations sharing the common feature of anomalies in the appearance of brain convolutions (characterised by simplification or absence of folding) associated with abnormal organisation of the cortical layers as a result of neuronal migration defects during embryogenesis. Children with lissencephaly have feeding and swallowing problems, muscle tone anomalies (early hypotonia and subsequently limb hypertonia), seizures (in particular, infantile spasms) and severe psychomotor retardation. Two large groups can be distinguished: classical lissencephaly (and its variants) and cobblestone lissencephaly. <b><i>Inclusions:</i></b> Agyria Pachygyria

- LD20.2      Syndromes with microcephaly as a major feature**  
 Developmental syndromes in which an abnormally small head size is a significant feature.
- LD20.3      Syndromes with holoprosencephaly as a major feature**  
 Any syndrome caused by failure of the prosencephalon to divide in two during the antenatal period. These syndromes may present with closely spaced eyes, cyclopia, flat nasal bridge, single maxillary central incisor, small head size, and clefts of the lip and palate.  
*Coded Elsewhere:* Arrhinencephaly (LA05.4)
- LD20.4      Syndromes with brain calcifications as a major feature**  
 A group of rare familial syndromes characterised by abnormal calcification of cerebral tissue and typically first manifesting in adult life with any of a wide range of neuropsychiatric disorders.
- LD20.Y      Other specified syndromes with central nervous system anomalies as a major feature**
- LD20.Z      Syndromes with central nervous system anomalies as a major feature, unspecified**
- LD21      Syndromes with eye anomalies as a major feature**  
 Any syndrome caused by failure of one or both eyes to correctly develop during the antenatal period.  
**Exclusions:** Septo-optic dysplasia (5A61.0)  
 Cat-eye syndrome (LD41.P)  
 Aicardi syndrome (LD20)  
 Papilorenal syndrome (LA13.7)  
 WAGR syndrome (LD2A)
- LD21.0      Syndromes with microphthalmia as a major feature**  
 Syndromes in which abnormally small eyes form an important component.
- LD21.Y      Other specified syndromes with eye anomalies as a major feature**
- LD21.Z      Syndromes with eye anomalies as a major feature, unspecified**
- LD22      Syndromes with dental anomalies as a major feature**  
*Coded Elsewhere:* Amelogenesis imperfecta (LA30.6)  
 Dentine dysplasia (LA30.7)  
 Dentinogenesis imperfecta (LA30.8)
- LD23      Syndromes with vascular anomalies as a major feature**  
*Coded Elsewhere:* Angio-osteohypertrophic syndrome (LD26.60)  
 Primary lymphoedema (BD93.0)  
 Cutis marmorata telangiectatica congenita (LC52)

**LD24**

**Syndromes with skeletal anomalies as a major feature**

**Coded Elsewhere:** Progressive osseous heteroplasia (FB31.0)

Fibrodysplasia ossificans progressiva (FB31.1)

Osteolysis syndromes (FB86.2)

Calcification or ossification of muscles of genetic origin  
(FB31.Z)

**LD24.0**

**Syndromes with micromelia**

Syndromes in which abnormally short limbs are a major feature

**LD24.00**

Achondroplasia

Achondroplasia is the most frequent form of chondrodysplasia and is a type of dwarfism characterised by short limbs, hyperlordosis, short hands, and macrocephaly with high forehead and saddle nose, with normal intellectual development.

**LD24.01**

Hypochondroplasia

Hypochondroplasia is a skeletal dysplasia characterised by disproportionate short stature, mild lumbar lordosis and limited extension of the elbow joints.

**LD24.02**

Thanatophoric dysplasia

Thanatophoric Dysplasia is a severe skeletal disorder that is lethal in the neonatal period. Two clinically defined TD subtypes have been classified: type I (TDI), characterised by micromelia with bowed femurs and, occasionally, by the presence of cloverleaf skull deformity of varying severity and type II (TDII), characterised by micromelia with straight femurs and a moderate to severe cloverleaf skull deformity.

**LD24.03**

Diastrophic dysplasia

Diastrophic dwarfism is a rare autosomal recessive disorder marked by short stature with short extremities (final adult height is 120cm +/- 10cm), and joint malformations leading to multiple joint contractures (principally involving the shoulders, elbows, interphalangeal joints and hips)

**LD24.04**

Chondrodysplasia punctata

**LD24.0Y**

Other specified syndromes with micromelia

**LD24.0Z**

Syndromes with micromelia, unspecified

**LD24.1**

**Bone diseases with increased bone density**

**Coded Elsewhere:** Pycnodysostosis (5C56.Y)

Buschke-Ollendorff syndrome (EC4Y)

<b>LD24.10</b>	Osteopetrosis Osteopetrosis ('marble bone disease') is a descriptive term that refers to a group of rare, heritable disorders of the skeleton characterised by increased bone density on radiographs. Osteopetrotic conditions vary greatly in their presentation and severity, ranging from neonatal onset with life-threatening complications such as bone marrow failure (as in classical or 'malignant' autosomal recessive osteopetrosis) to the incidental finding of osteopetrosis on radiographs (e.g. osteopoikilosis).
	<b>Coded Elsewhere:</b> OL-EDA-ID syndrome (LD27.0Y)
	Osteopetrosis - hypogammaglobulinaemia (4A01.0Y)
<b>LD24.11</b>	Osteopoikilosis
<b>LD24.1Y</b>	Other specified bone diseases with increased bone density
<b>LD24.1Z</b>	Bone diseases with increased bone density, unspecified
<b>LD24.2</b>	<b>Bone diseases with disorganised development of skeletal components</b>
	<b>Coded Elsewhere:</b> Osteogenesis imperfecta (LD24.K0)
	Enchondromatosis (2E83.Z)
	X-linked cutis laxa (LD28.2)
	Maffucci syndrome (LD2F.1Y)
	Inherited bone dysplasia (FB80.Y)
<b>LD24.20</b>	Multiple osteochondromas
	<b>Inclusions:</b> Diaphyseal aclasis
<b>LD24.21</b>	Exostoses with anetodermia and brachydactyly type E
<b>LD24.22</b>	Cherubism Cherubism is a benign fibro-osseous hereditary disorder of childhood, limited to the lower half of the face, the maxilla and particularly the mandible, with bilateral painless swelling of jaws (giving the so-called cherubic look) associated with multicystic bone tumours and eyes-to-heaven appearance. Dentition is also abnormal at the sites concerned: tooth agenesis, noneruption, displacement, root resorption and malocclusions are common.
<b>LD24.23</b>	Yunis-Varon disease A disease caused by failure of multiple body systems to correctly develop during the antenatal period, due to mutation of the FIG4 gene. This disease is characterised by cleidocranial dysplasia, digital anomalies, and severe neurological involvement.
<b>LD24.2Y</b>	Other specified bone diseases with disorganised development of skeletal components
<b>LD24.2Z</b>	Bone diseases with disorganised development of skeletal components, unspecified

<b>LD24.3</b>	<b>Spondyloepiphyseal or spondyloepimetaphyseal dysplasias</b> Spondyloepiphyseal dysplasias (SED) are a heterogeneous group of congenital chondrodysplasias that specifically affect epiphyses and vertebrae. Their most frequent form is characterised by small neonatal size of ovoid vertebrae and overall late growth of bones, more marked in the femoral heads, with a slightly irregular metaphyseal limit. Other clinical forms have been described, some of which were dominant and more or less severe with metaphyseal lesions, while others were recessive and included nephrotic syndrome, lymphopenia, and immune disorders (immune bone dysplasia).
<b>LD24.4</b>	<b>Spondylometaphyseal dysplasias</b> Spondylometaphyseal dysplasias are a heterogeneous group of disorders associated with walking and growth disturbances that become evident during the second year of life. The disorders are characterised by platyspondyly (flattened vertebrae) and marked hip and knee metaphyseal lesions. The different forms of spondylometaphyseal dysplasia are distinguished by the localization and severity of involvement of the affected metaphyses.
<b>LD24.5</b>	<b>Spondylodysplastic dysplasias</b>
<b>LD24.50</b>	Achondrogenesis
<b>LD24.51</b>	Hypochondrogenesis A condition caused by failure of the skeletal system to correctly develop during the antenatal period, due to mutation of the COL2A1 gene. This condition is characterised by a small body, short limbs, underdeveloped lungs, flat and oval-shaped face, hypertelorism, micrognathia, enlarged abdomen, and ossification in the spine and pelvis. This condition may also present with a cleft palate.
<b>LD24.5Y</b>	Other specified spondylodysplastic dysplasias
<b>LD24.5Z</b>	Spondylodysplastic dysplasias, unspecified
<b>LD24.6</b>	<b>Multiple epiphyseal dysplasia or pseudoachondroplasia</b>
<b>LD24.60</b>	Pseudoachondroplasia Pseudoachondroplasia is a chondrodysplasia characterised by severe growth deficiency and deformations such as bow legs and hyperlordosis.
<b>LD24.61</b>	Multiple epiphyseal dysplasias Multiple epiphyseal dysplasias (MED/EDMs) are characterised by epiphyseal anomalies causing joint pain early in life, recurrent osteochondritis and early arthrosis. The EDMs are a heterogeneous group of diseases with variable expression classed as MED/EDMs 1-6.
	<b>Coded Elsewhere:</b> Wolcott-Rallison syndrome (5A13.6)
<b>LD24.6Y</b>	Other specified multiple epiphyseal dysplasia or pseudoachondroplasia
<b>LD24.6Z</b>	Multiple epiphyseal dysplasia or pseudoachondroplasia, unspecified

<b>LD24.7</b>	<b>Multiple metaphyseal dysplasias</b>
	<b><i>Exclusions:</i></b> Pyle disease (LD24.1)
	<b><i>Coded Elsewhere:</i></b> Cartilage-hair hypoplasia (LD27.0Y) Metaphyseal dysostosis - intellectual deficit - conductive deafness (LD2H.Y)
<b>LD24.8</b>	<b>Acromelic dysplasias</b>
	<b><i>Coded Elsewhere:</i></b> Microspherophakia or Weill Marchesani Syndrome (9C61.42) Trichorhinophalangeal syndrome type 1 and 3 (LD27.0Y)
<b>LD24.80</b>	Langer-Giedion syndrome  Langer-Giedion syndrome or trichorhinophalangeal syndrome type 2 is a chromosomal anomaly syndrome characterised by the association of intellectual deficit and numerous other anomalies including redundant skin, multiple cartilaginous exostoses, characteristic facies and cone-shaped phalangeal epiphyses.
<b>LD24.8Y</b>	Other specified acromelic dysplasias
<b>LD24.8Z</b>	Acromelic dysplasias, unspecified
<b>LD24.9</b>	<b>Acromesomelic dysplasias</b>  A group of rare disorders characterised by shortening of the bones of the forearms, lower legs, hands and feet.  <b><i>Exclusions:</i></b> Sensenbrenner syndrome (LD27.0)
<b>LD24.A</b>	<b>Mesomelic or rhizomesomelic dysplasias</b>
<b>LD24.B</b>	<b>Short rib syndromes</b>  <b><i>Exclusions:</i></b> Oral-facial-digital syndrome type 4 (LD25.00) <b><i>Coded Elsewhere:</i></b> Chondroectodermal dysplasia (LD27.0Y)
<b>LD24.B0</b>	Short rib-polydactyly syndrome  Short rib-polydactyly syndromes are a group of bone malformations characterised by a narrow thorax and polydactyly (usually preaxial). Prevalence as a group is unknown. The group is heterogeneous and includes Jeune syndrome and Ellis-Van Creveld syndrome, neither of which are lethal, together with lethal chondrodysplasias: Saldino-Noonan (type 1), Majewski (type 2), Verma-Naumoff (type 3) and Beemer-Langer (type 4).
<b>LD24.B1</b>	Asphyxiating thoracic dystrophy  Asphyxiating thoracic dystrophy, also called Jeune syndrome, is a short-rib dysplasia characterised by a narrow thorax, short limbs and radiological skeletal abnormalities including "trident" aspect of the acetabula and metaphyseal changes.
<b>LD24.BY</b>	Other specified short rib syndromes
<b>LD24.BZ</b>	Short rib syndromes, unspecified

<b>LD24.C</b>	<b>Bent bone dysplasias</b> Any syndromes are characterised by poor mineralization of the skull, craniosynostosis, hypoplastic pubis and clavicles, osteopenia, bent long bones, low-set ears, hypertelorism, midface hypoplasia, prematurely erupted fetal teeth, and micrognathia. These syndromes may be associated with mutation of the FGFR2 gene.  <b>Coded Elsewhere:</b> Campomelic dysplasia (LD2A.Y) Juvenile osteochondrosis of tibia or fibula (FB82.1)
<b>LD24.D</b>	<b>Slender bone dysplasias</b> Any syndrome characterised by dwarfism, thin bones, multiple fractures, and prenatal or early postnatal death.  <b>Coded Elsewhere:</b> IMAGe syndrome (5A74.Y)
<b>LD24.E</b>	<b>Bone dysplasias with multiple joint dislocations</b> Any syndrome characterised by malformation of the musculoskeletal system during the antenatal period, which includes the dislocations of multiple joints.
<b>LD24.F</b>	<b>Progressive ossification of skin, skeletal muscle, fascia, tendons or ligaments</b> <b>Coded Elsewhere:</b> Progressive osseous heteroplasia (FB31.0) Fibrodysplasia ossificans progressiva (FB31.1)
<b>LD24.G</b>	<b>Syndromic craniosynostoses</b> Any syndrome caused by premature fusing of sections of the infant skull. These syndromes are characterised by disfiguring compensatory growth of the skull. These syndromes may also present with frequent worsening morning headache, recurrent vomiting, cephalocranial disproportion, raised intracranial pressure, optic atrophy, blindness, or developmental delay.  <b>Exclusions:</b> Sensenbrenner syndrome (LD27.0) Shprintzen-Goldberg craniosynostosis syndrome (LD28.0) Craniotelencephalic dysplasia (LD20.1)  <b>Coded Elsewhere:</b> Craniofrontonasal dysplasia (LD25.3)
<b>LD24.G0</b>	Pfeiffer syndrome Pfeiffer syndrome (associated with mutations in the FGFR1 and 2 gene) is a syndromic form of craniosynostosis characterised by the association of craniosynostosis. Often pansynostosis. Severe midface hypoplasia. Broad and deviated thumbs and big toes, and partial syndactyly of the fingers and toes. Hydrocephaly may be found occasionally, along with severe ocular proptosis, ankylosed elbows.  <b>Exclusions:</b> Pfeiffer disease (1D81.0)
<b>LD24.G1</b>	Crouzon disease Crouzon disease is a form of syndromic craniosynostosis characterised by craniosynostosis and facial hypoplasia.

<b>LD24.G2</b>	Apert syndrome Apert syndrome is a syndromic craniosynostosis associated with mutations in the FGFR2 gene and characterised by premature closure of coronal suture and a later onset of pansynostosis. Pathognomonic is an osseous and membranous syndactyly of at least Digitus II-IV (fingers and toes). High incidence of midface hypoplasia with orbital and facial stenosis, cleft palate, vertebral fusion. Mental deficits in 30%.
<b>LD24.GY</b>	Other specified syndromic craniosynostoses
<b>LD24.GZ</b>	Syndromic craniosynostoses, unspecified
<b>LD24.H</b>	<b>Dysostoses with predominant vertebral and costal involvement</b> Any syndrome characterised by malformation of the musculoskeletal system during the antenatal period, which includes dysgenesis of the vertebrae and intercostal cartilage.  <b>Exclusions:</b> Spondylocostal dysostosis - anal and genitourinary malformations (LD2F.1)
<b>LD24.J</b>	<b>Patellar dysostoses</b> Any syndrome characterised by malformation of the patella during the antenatal period.
<b>LD24.J0</b>	Nail-patella syndrome Nail patella syndrome is a hereditary osteo-onychodysplasia characterised by nail dysplasia with triangular lunula, hypoplastic or absent patellas, iliac exostoses ('iliac horns') and dysplastic elbows.
<b>LD24.JY</b>	Other specified patellar dysostoses
<b>LD24.JZ</b>	Patellar dysostoses, unspecified
<b>LD24.K</b>	<b>Genetic bone diseases with decreased bone density</b> <b>Coded Elsewhere:</b> Ehlers-Danlos-osteogenesis imperfecta syndrome (LD28.1Y)
<b>LD24.K0</b>	Osteogenesis imperfecta Osteogenesis imperfecta (OI) comprises a heterogeneous group of genetic disorders characterised by increased bone fragility, low bone mass, and susceptibility to bone fractures with variable severity. The most clinically relevant characteristic of all types of OI is bone fragility, which manifests as multiple spontaneous fractures.  <b>Inclusions:</b> Fragilitas ossium Osteopsathyrosis
<b>LD24.KY</b>	Other specified genetic bone diseases with decreased bone density
<b>LD24.KZ</b>	Genetic bone diseases with decreased bone density, unspecified
<b>LD24.Y</b>	<b>Other specified syndromes with skeletal anomalies as a major feature</b>
<b>LD24.Z</b>	<b>Syndromes with skeletal anomalies as a major feature, unspecified</b>

<b>LD25</b>	<b>Syndromes with face or limb anomalies as a major feature</b>
	<b><i>Exclusions:</i></b> Freeman-Sheldon syndrome (LD26.4)
<b>LD25.0</b>	<b>Oromandibular-limb anomaly syndrome</b> A syndrome caused by failure of the face and limbs to correctly develop during the antenatal period. This syndrome is characterised by malformations of the tongue, mandible, and limbs.
	<b><i>Exclusions:</i></b> Ectrodactyly - cleft palate (LD2F.1) Ectrodactyly - ectodermal dysplasia - cleft lip or palate (LD27.0)
<b>LD25.00</b>	<b>Oral-facial-digital syndrome</b> A condition caused by failure of the head and digits to correctly develop during the antenatal period. This condition may be associated with cleft or lobed tongue, noncancerous tumours or nodules of the tongue, abnormal shape or number of teeth, cleft palate, hyperplastic frenula of the lip or gums, cleft lip, hypertelorism, wide nose with broad, flat nasal bridge, syndactyly, brachydactyly, clinodactyly, polydactyly, polycystic kidney disease, neurological problems, bone abnormalities, vision loss, or heart defects.
<b>LD25.0Y</b>	Other specified oromandibular-limb anomaly syndrome
<b>LD25.0Z</b>	Oromandibular-limb anomaly syndrome, unspecified
<b>LD25.1</b>	<b>Fronto-otopalatodigital syndromes</b>
<b>LD25.2</b>	<b>Acrofacial dysostoses</b> Any syndrome caused by failure of the face and limbs to correctly develop during the antenatal period.
<b>LD25.3</b>	<b>Craniofacial dysostoses</b> Syndromes caused by abnormal development of skull and facial bones. They may present with acrocephaly, exophthalmos, hypertelorism, strabismus, parrot-beaked nose, or hypoplastic maxilla. Non-syndromic craniosynostosis, which is predominantly sporadic, is coded elsewhere.
	<b><i>Exclusions:</i></b> Acrofacial dysostosis, Nager type (LD25.2) Postaxial acrofacial dysostosis (LD25.2) Acrofacial dysostosis, Weyers type (LD25.2) Frontometaphyseal dysplasia (LD25.1) Craniosynostosis (LB70.0)
<b>LD25.Y</b>	<b>Other specified syndromes with face or limb anomalies as a major feature</b>
<b>LD25.Z</b>	<b>Syndromes with face or limb anomalies as a major feature, unspecified</b>
<b>LD26</b>	<b>Syndromes with limb anomalies as a major feature</b>
<b>LD26.0</b>	<b>Combined reduction defects of upper and lower limbs</b>

<b>LD26.1</b>	<b>Complex brachydactylies</b> A disease caused by failure of the digits to correctly develop during the antenatal period. This disease is characterised by multiple digits of below normal length. This condition may be associated with mutation in the GDF5 gene.  <b>Exclusions:</b> Catel-Manzke syndrome (LD2F.1)
<b>LD26.2</b>	<b>Syndromes with limb duplication, polydactyly, syndactyly or triphalangism</b> Any syndrome caused by failure of the limbs to correctly develop during the antenatal period. These syndromes are characterised by supernumerary limbs or digits, fused digits, or supernumerary phalanges.  <b>Exclusions:</b> Townes-Brocks syndrome (LD2F.1)
<b>LD26.3</b>	<b>Syndromes with synostoses of limbs</b>
<b>LD26.4</b>	<b>Arthrogryposis syndromes</b> Any syndrome caused by failure of elastic tissue to correctly develop during the antenatal period. These syndromes are characterised by the presence of multiple joint contractures, where elastic tissues are replaced by inelastic tissues, which results in fixation of the joint.  <b>Exclusions:</b> Arthrogryposis due to muscular dystrophy (8C70)
<b>LD26.40</b>	Multiple pterygium syndrome
<b>LD26.41</b>	Arthrogryposis multiplex congenita Arthrogryposis multiplex congenita, comprises nonprogressive congenital conditions characterised by multiple joint contractures. The term is currently used in connection with a very heterogeneous group of disorders that all include multiple congenital joint contractures. The major cause of arthrogryposis is fetal akinesia due to fetal abnormalities (e.g. neurogenic, muscle, or connective tissue abnormalities; mechanical limitations to movement) or maternal disorders (e.g. infection, drugs, trauma, other maternal illnesses). Generalised fetal akinesia can also lead to polyhydramnios, pulmonary hypoplasia, micrognathia, ocular hypertelorism, and short umbilical cord. Lack of fetal movement causes extra connective tissue to develop around the joint, limiting movement and further aggravating the joint contracture.  <b>Exclusions:</b> COFS syndrome (LD2B) Arthrogryposis multiplex congenita - lissencephaly (LD2F.1) <b>Coded Elsewhere:</b> Arthrogryposis - renal dysfunction - cholestasis (5C58.0Y)
<b>LD26.4Y</b>	Other specified arthrogryposis syndromes
<b>LD26.4Z</b>	Arthrogryposis syndromes, unspecified
<b>LD26.5</b>	<b>Constriction rings</b> A condition caused by entangling of fibrous bands of the amniotic sac around a developing fetus. This condition may present with circular indentation around a digit or limb, swelling, restriction of the lymphatic or venous flow, limb development defects, or in utero amputation.
<b>LD26.6</b>	<b>Congenital vascular bone syndromes</b>

<b>LD26.60</b>	Angio-osteohypertrophic syndrome Angio-osteohypertrophic (AOH) syndrome is a congenital vascular bone syndrome characterised by the presence of vascular malformations in a limb resulting in limb overgrowth. Depending on whether the malformations are slow flow venous or fast flow arteriovenous the syndrome may be divided into two subtypes, Klippel-Trénaunay and Parkes-Weber syndromes respectively. Some cases of the latter are associated with mutations in the RASA1 gene.
<b>LD26.6Y</b>	Other specified congenital vascular bone syndromes
<b>LD26.6Z</b>	Congenital vascular bone syndromes, unspecified
<b>LD26.Y</b>	<b>Other specified syndromes with limb anomalies as a major feature</b>
<b>LD26.Z</b>	<b>Syndromes with limb anomalies as a major feature, unspecified</b>
<b>LD27</b>	<b>Syndromes with skin or mucosal anomalies as a major feature</b>
	<b>Coded Elsewhere:</b> Acrodermatitis enteropathica (5C64.20)
	Non-syndromic ichthyosis (EC20.0)
	Pseudoxanthoma elasticum (EC40)
	Xeroderma pigmentosum-Cockayne syndrome complex (LD2B)
	Hereditary ichthyosis (EC20.Y)
	Palmoplantar keratoderma – oral leukokeratosis – oesophageal carcinoma (EC20.31)
<b>LD27.0</b>	<b>Ectodermal dysplasia syndromes</b>
	Ectodermal dysplasias (EDs) are a heterogeneous group of disorders characterised by developmental dystrophies of ectodermal structures, such as hypohidrosis, hypotrichosis, onychodysplasia and hypodontia or anodontia. More than 160 clinically and genetically distinct hereditary ectodermal dysplasias have been catalogued.
	<b>Coded Elsewhere:</b> Langer-Giedion syndrome (LD24.80)
	Oral-facial-digital syndrome (LD25.00)
	Solitary median maxillary central incisor syndrome (LA30.Y)
	Rothmund-Thomson syndrome (LD2B)
	Hallermann-Streiff-François syndrome (LD2B)
	Keratitis – ichthyosis – deafness syndrome (LD27.2)
	Papillon-Lefèvre syndrome (EC20.30)
	Cataract – hypertrichosis – intellectual deficit (LD27.3)
	Hypomelanosis of Ito (EC23.2Y)
	Ectodermal dysplasia – skin fragility syndrome (EC30)
	Dyskeratosis congenita (3A70.0)

- LD27.00** Incontinentia pigmenti  
Incontinentia pigmenti is an X-linked dominant gene disorder due to abnormalities of the NF-kappa-B (NEMO) gene on chromosome Xq28. It is lethal in male fetuses but the presence of a normal second X chromosome in females results in a mosaicism which is compatible with life. Affected females present in infancy with skin blisters in linear arrays (Blaschko lines) typically on the scalp and limbs. Within the first few months of life these are succeeded by warty changes and hyperpigmentation. These tend to resolve over time, often leaving atrophic streaks. Associated features include abnormal dentition, ocular defects and a variety of neurological complications.
- LD27.01** Cronkhite-Canada syndrome  
Cronkhite-Canada syndrome (CCS) is a sporadically occurring, noninherited disorder of generalised gastrointestinal polyps (hamartomas), cutaneous pigmentation, alopecia, and onychodystrophy. The possibility of progression to cancer is considered to be low. Chronic diarrhea and protein-losing enteropathy are often observed.
- LD27.02** Hypohidrotic ectodermal dysplasia  
Hypohidrotic ectodermal dysplasia is a genetic disorder of ectoderm development characterised by malformation of ectodermal structures such as skin, hair, teeth and sweat glands. It comprises three clinically almost indistinguishable subtypes with impaired sweating as the key symptom: Christ-Siemens-Touraine syndrome (X-linked), autosomal recessive and autosomal dominant hypohidrotic ectodermal dysplasia, as well as a fourth rare subtype with immunodeficiency as the key symptom.
- LD27.03** Hidrotic ectodermal dysplasia, Clouston type  
Clouston syndrome (or hidrotic ectodermal dysplasia) is an inherited disorder characterised by the clinical triad of nail dystrophy, alopecia, and palmoplantar hyperkeratosis.
- LD27.0Y** Other specified ectodermal dysplasia syndromes
- LD27.1** **Xeroderma pigmentosum**  
Xeroderma pigmentosum (XP) is a rare genodermatosis characterised by extreme sensitivity to ultraviolet (UV)-induced changes in the skin and eyes, and multiple skin cancers. It is subdivided into 8 complementation groups, according to the affected gene: XPA to XPG, and XP variant (XPV). The severity of the clinical manifestations and the age of onset are extremely variable and are in part dependent on exposure to sunlight and the complementation group.  
**Coded Elsewhere:** Xeroderma pigmentosum variant (LD27.Y)
- LD27.2** **Syndromic ichthyosis**  
Hereditary disorders in which ichthyosis is associated with significant other abnormalities.  
**Coded Elsewhere:** Sjögren-Larsson syndrome (5C52.03)

LD27.3	<b>Genetic syndromes with hypertrichosis</b> Genetic syndromes in which excessive non-androgen-dependent hair growth is associated with other abnormalities.

	<b>Coded Elsewhere:</b> Aortic aneurysm syndrome, Loeys-Dietz type (BD50.Z) Ectopia lentis syndrome (LA12.Y)
<b>LD28.00</b>	Congenital contractual arachnodactyly Congenital contractual arachnodactyly (CCA, Beals syndrome) is a connective tissue disorder characterised by multiple flexion contractures, arachnodactyly, severe kyphoscoliosis, abnormal pinnae and muscular hypoplasia. Although the clinical features can be similar to Marfan syndrome (MFS), multiple joint contractures (especially of the elbow, knee, and finger joints), and crumpled ears in the absence of significant aortic root dilatation are characteristic of Beals syndrome and rarely found in MFS.
<b>LD28.01</b>	Marfan syndrome Marfan syndrome is a systemic disease of connective tissue characterised by a variable combination of cardiovascular, musculo-skeletal, ophthalmic and pulmonary manifestations. Cardiovascular involvement is characterised by 1) progressive dilation of the aorta accompanied by an increased risk of aortic dissection, which affects prognosis and 2) mitral insufficiency. Skeletal involvement is often the first sign of the disease and can include dolichostenomelia, large size, arachnodactyly, joint hypermobility, scoliotic deformations, acetabulum protrusion, thoracic deformity, dolichocephaly of the anteroposterior axis, micrognathism or malar hypoplasia. Ophthalmic involvement results in axile myopia, which can lead to retinal detachment and lens displacement.
<b>LD28.0Y</b>	Other specified Marfan syndrome or Marfan-related disorders
<b>LD28.0Z</b>	Marfan syndrome or Marfan-related disorders, unspecified

<b>LD28.1</b>	<b>Ehlers-Danlos syndrome</b> Ehlers-Danlos syndrome (EDS) is a heterogeneous group of inherited disorders of connective tissue, principally collagen, that range in severity from mild joint hypermobility to life-threatening fragility of soft tissue and vasculature.
<b>LD28.10</b>	Ehlers-Danlos syndrome, classical type Ehlers-Danlos syndrome, classic type is a type of Ehlers-Danlos syndromes (EDS), a heterogeneous group of hereditary connective tissue diseases characterised by joint hyperlaxity, cutaneous hyperelasticity and tissue fragility, and is characterised by the following major clinical diagnostic criteria: hyperextensible skin, atrophic cutaneous scars due to tissue fragility and joint hyperlaxity.
<b>LD28.1Y</b>	Other specified types of Ehlers-Danlos syndrome
<b>LD28.2</b>	<b>Genetically-determined cutis laxa</b>
<b>LD28.Y</b>	<b>Other specified syndromes with connective tissue involvement as a major feature</b>

<b>LD29</b>	<p><b>Syndromes with obesity as a major feature</b></p> <p><b>Exclusions:</b> WAGR syndrome (LD2A) Fragile X syndrome (LD55)</p> <p><b>Coded Elsewhere:</b> Prader-Willi syndrome (LD90.3) Alström syndrome (LD2H.Y) Cohen syndrome (LD90.Y) Sotos syndrome (LD2C) Weaver syndrome (LD2C) Beckwith-Wiedemann syndrome (LD2C)</p>
<b>LD2A</b>	<p><b>Malformative disorders of sex development</b></p> <p>Any condition caused by failure of the genitals to correctly develop during the antenatal period.</p> <p><b>Exclusions:</b> pseudohermaphroditism: female, with adrenocortical disorder (5A71)</p> <p><b>Coded Elsewhere:</b> Chimaera 46, XX, 46, XY (LD56) 46,XX disorders of sex development induced by androgens of maternal origin (5A71.1) Congenital adrenal hyperplasia (5A71.01)</p>
<b>LD2A.0</b>	<b>Ovotesticular disorder of sex development</b> Ovotesticular disorder of sex development, formerly called true hermaphroditism, is a rare cause of genital ambiguity characterised by the presence of ovarian and testicular tissue in an individual, leading to development of both male and female structures.

<b>LD2A.1</b>	<b>46,XY gonadal dysgenesis</b> This is any congenital developmental disorder of the reproductive system characterised by a progressive loss of primordial germ cells on the developing gonads of an embryo.
<b>LD2A.2</b>	<b>Testicular agenesis</b> A rare 46,XY disorder of gonadal development characterized by congenital complete absence of testicular tissue in an individual with an otherwise male phenotype and normal karyotype. In addition, a small penis is a frequent finding in anorchid patients. Typical hormonal characteristics are elevated basal levels of gonadotropins (especially FSH (follicle-stimulating hormone), low concentration of testosterone, and lack of increase of plasma testosterone in response to hCG (human chorionic gonadotropin) administration. The GnRH (gonadotropin-releasing hormone) stimulation test induces a prolonged increase in FSH and LH (luteinizing hormone) levels.
<b>LD2A.3</b>	<b>46,XY disorder of sex development due to a defect in testosterone metabolism</b> <b><i>Inclusions:</i></b> Congenital adrenal hyperplasia (5A71.01) <b><i>Coded Elsewhere:</i></b> Smith-Lemli-Opitz syndrome (5C52.10)
<b>LD2A.4</b>	<b>46,XY disorder of sex development due to androgen resistance</b> Androgen insensitivity syndrome (AIS) is a disorder of sex development (DSD) characterised by the presence of female external genitalia, ambiguous genitalia or variable defects in virilization in a 46,XY individual with absent or partial responsiveness to age-appropriate levels of androgens. It comprises two clinical subgroups: complete AIS (CAIS) and partial AIS (PAIS).

**LD2D.0****Peutz-Jeghers syndrome**

Peutz-Jeghers syndrome (PJS) is an autosomal dominant inherited disorder characterised by intestinal hamartomatous polyps in association with a distinct pattern of skin and mucosal macular melanin deposition. Patients have an increased risk of developing intestinal cancer.

**LD2D.1****Neurofibromatoses**

The neurofibromatoses (NF) are related genetic disorders which affect bone, soft tissue, skin and nervous system. In NF type 1 neurofibromas develop in the skin and elsewhere: these can cause problems as a result of their visibility in the skin, compression of vital internal structures or from malignant degeneration. Neuromas of the acoustic nerve are the predominant problem in NF type 2.

<b>LD2D.10</b>	Neurofibromatosis type 1 Neurofibromatosis type 1 (NF1) is an inherited, multi-system, neurocutaneous disorder that predisposes to the development of benign and malignant tumours. Two of the following criteria are required to diagnose NF1: six or more café au lait patches, neurofibromas, i.e. peripheral nerve sheath tumours manifesting as cutaneous, sub-cutaneous or plexiform lesions, skin-fold freckling, two or more iris Lisch nodules, an optic pathway glioma, a specific bony dysplasia (thinning of the long bone cortex, sphenoid wing dysplasia), an affected first-degree relative.
	<b>Inclusions:</b> von Recklinghausen disease
<b>LD2D.11</b>	Neurofibromatosis type 2 Neurofibromatosis type 2 (NF2) is a tumour-prone disorder characterised by the development of multiple schwannomas and meningiomas.

<b>LD2D.1Y</b>	Other specified neurofibromatoses
<b>LD2D.1Z</b>	Neurofibromatosis, unspecified
<b>LD2D.2</b>	<b>Tuberous sclerosis</b> A disease caused by a dominant mutation of 9q34 (TSC1) or 16p13 (TSC2). This disease may present with facial angiofibromas, Koenen tumours, fibrous plaques on the forehead and scalp, renal angiomyolipomas, subependymal nodules, multiple cortical tubers or retinal hamartoma, epilepsy, or mental retardation.
	<b>Inclusions:</b> Bourneville disease
	<b>Coded Elsewhere:</b> Autosomal dominant polycystic kidney disease type 1 with tuberous sclerosis (LD2F.1Y)
<b>LD2D.3</b>	<b>Gardner syndrome</b> Gardner syndrome develops adenomatous polyps throughout the gastrointestinal tract, accompanied by extracolonic manifestations, including periampullary adenomas, papillary carcinoma of the thyroid, hepatoblastoma, osteomas of the mandible and skull, epidermal cysts, and desmoid tumours. Gardner syndrome is a term used to refer to patients in whom these extraintestinal features are unusually prominent.
<b>LD2D.4</b>	<b>Gorlin syndrome</b> Gorlin syndrome, also known as naevoid basal cell carcinoma syndrome (NBCCS), is a hereditary condition characterised by a wide range of developmental abnormalities (odontogenic keratocysts of the jaws, hyperkeratosis of palms and soles, skeletal abnormalities, intracranial ectopic calcifications, and facial dysmorphisms) and a predisposition to develop malignant neoplasms (such as multiple basal cell carcinomas or medulloblastoma), and benign neoplasms in the jaw, heart, or ovaries.
	<b>Inclusions:</b> Naevoid basal cell carcinoma syndrome
<b>LD2D.Y</b>	<b>Other specified phakomatoses or hamartoneoplastic syndromes</b>
<b>LD2D.Z</b>	<b>Phakomatoses or hamartoneoplastic syndromes, unspecified</b>

- Coded Elsewhere:** Uterovaginal malformation due to diethylstilbestrol syndrome (LB44.6)

<b>LD2F.00</b>	Fetal alcohol syndrome  Fetal alcohol syndrome is a malformation syndrome caused by maternal consumption of alcohol during pregnancy. It is characterised by prenatal and/or postnatal growth deficiency (weight and/or height <10th percentile); a unique cluster of minor facial anomalies (short palpebral fissures, flat and smooth philtrum, and thin upper lip) that presents across all ethnic groups is identifiable at birth, and does not diminish with age. Affected children present severe central nervous system abnormalities including: microcephaly, cognitive and behavioural impairment (intellectual disability, deficit in general cognition, learning and language, executive function, visual-spatial processing, memory, and attention).  <b>Coded Elsewhere:</b> Neurodevelopmental syndrome due to prenatal alcohol exposure (6A0Y)
<b>LD2F.01</b>	Fetal hydantoin syndrome  Fetal hydantoin syndrome is a fetopathy likely to occur when a pregnant woman takes the anticonvulsant drug phenytoin (diphenylhydantoin) for epileptic seizures. In utero exposure to this drug may result in a characteristic dysmorphic syndrome in the newborn, including low-set hair, short neck with pterygium colli, small nose, deep nasal bridge, epicanthus, hypertelorism, large mouth, malformed ears, hypoplastic distal phalanges of the fingers and toes and finger-like thumbs. These dysmorphic features are often associated with growth retardation and delayed psychomotor development. The mechanism underlying these anomalies has been shown to depend on maternal genetic characteristics, i.e. on maternal capacity to detoxify intermediate metabolites of phenytoin.
<b>LD2F.02</b>	Embryofetopathy due to oral anticoagulant therapy  A condition caused by exposure of the embryo or fetus to anticoagulants during the antenatal period. This disease may present with optic nerve anomaly, optic atrophy, anomaly of the papilla, blindness, or choanal atresia.
<b>LD2F.03</b>	Fetal Valproate Spectrum Disorder  Fetal valproate spectrum disorder (FVSD) and Fetal valproate syndrome (FVS) describe the range of signs and symptoms which occur as a consequence of exposure to sodium valproate or valproic acid in the womb. A wide range of physical anomalies occur at increased frequency, including spina bifida, major and minor limb abnormalities, oral clefting, cardiac defects, hypospadias, and joint laxity. A characteristic pattern of facial dysmorphism is frequently present, especially notable in early childhood. Neurodevelopmental problems including reduced IQ, poorer language and motor development, increased rates of autistic spectrum disorder and attention deficit hyperactivity disorder are observed in up to 40% of those exposed. Vision problems such as myopia and astigmatism are also common. Risks are dose dependent and the impact on the brain may be seen at lower doses than those required for physical development alterations.

Encephalocranioscutaneous lipomatosis (EF02.1)  
Dahlberg-Borer-Newcomer syndrome (LD27.0Y)

- LD2F.10** Prune belly syndrome  
A syndrome characterised by cryptorchidism, urinary tract defects, and poor development of the abdominal muscles causing the skin on the abdomen to wrinkle.
- LD2F.11** VATER association  
VACTERL/VATER is an association of congenital malformations typically characterised by the presence of at least three of the following: vertebral defects, anal atresia, cardiac defects, tracheo-oesophageal fistula, renal anomalies, and limb abnormalities.
- LD2F.12** Sirenomelia  
Sirenomelia is a rare lethal malformation characterised by severe anomalies of the caudal part of the fetus that include a single lower limb, with various degrees of involvement ranging from single to separate femurs in the same skin shaft, presence of two feet (sympode mermaid) or one foot (monopode mermaid), to absence of both feet (ectromelic mermaid). Urogenital anomalies are also present and include bilateral renal agenesis, absence of outflow tract and absence of external genitalia. Imperforate anus and sacro-coccygeal agenesis have also been reported. Together these malformations comprise the extreme form of the caudal regression sequence.
- LD2F.13** Meckel-Gruber syndrome  
Meckel syndrome (MKS) is a monogenic disease characterised by a combination of renal cysts and variably associated features, including developmental anomalies of the central nervous system (usually occipital encephalocele), hepatic ductal dysplasia and cysts, and polydactyly, and a lethal course, with death occurring in the perinatal period.
- LD2F.14** MURCS association  
MURCS association, which stands for Müllerian duct aplasia (MU), congenital renal dysplasia (R), cervical somite anomalies (CS), is the atypical (or type II) form of Mayer-Rokitansky-Küster-Hauser syndrome, characterised by utero-vaginal atresia in otherwise normal females as well associated kidney and skeletal abnormalities and hearing problems.
- LD2F.15** Noonan syndrome  
Noonan Syndrome is characterised by short stature, facial dysmorphism and congenital heart defects. The main facial features of NS are hypertelorism with down-slanting palpebral fissures, ptosis and low-set posteriorly rotated ears with a thickened helix. The cardiovascular defects most commonly associated with this condition are pulmonary stenosis and hypertrophic cardiomyopathy. Other associated features are webbed neck, chest deformity, mild intellectual deficit, cryptorchidism, poor feeding in infancy, bleeding tendency and lymphatic dysplasia. The syndrome is transmitted as an autosomal dominant trait.

- LD2F.16** Otomandibular dysplasia  
Any condition characterised by malformation of facial bones and muscles. These conditions may present with eyes that slant downward, sparse eyelashes, eyelid coloboma, hearing loss, underdeveloped or absent vertebrae, or cleft palate.
- LD2F.1Y** Other specified syndromes with multiple structural anomalies, not of environmental origin
- LD2F.1Z** Syndromes with multiple structural anomalies, not of environmental origin, unspecified

Infantile Bartter syndrome with deafness (GB90.43)

<b>LD2H.0</b>	<b>Fraser syndrome</b>
	Fraser syndrome is a rare syndrome characterised by cryptophthalmos and syndactyly and associated with a wide variety of other anomalies including: middle and outer ear malformations; high-arched palate; cleavage along the midplane of nares and tongue; hypertelorism; laryngeal stenosis; wide separation of symphysis pubis; displacement of umbilicus and nipples; absent or multicystic kidneys; bicornuate uterus, malformed Fallopian tubes, fusion of labia and enlargement of clitoris in girls; and undescended testes and small penis with hypospadias in boys.
<b>LD2H.1</b>	<b>Neuropathy with hearing impairment</b>
	Neuropathy with hearing impairment is characterised by the association of sensorineural hearing impairment and peripheral demyelinating and predominantly sensory neuropathy.
<b>LD2H.2</b>	<b>Progressive deafness with stapes fixation</b>
<b>LD2H.3</b>	<b>Waardenburg-Shah syndrome</b>
	In this syndrome the phenotype includes not only the classical features of Waardenburg syndrome but also Hirschsprung disease. It may be caused by mutations in SOX10, EDN3 or EDNRB genes.
<b>LD2H.4</b>	<b>Usher syndrome</b>
	Usher syndrome is the most common cause of hereditary combined deafness-blindness, and is characterised by the association of sensorineural deafness (usually congenital) with retinitis pigmentosa and progressive vision loss.
<b>LD2H.Y</b>	<b>Other specified syndromic genetic deafness</b>
<b>LD2H.Z</b>	<b>Syndromic genetic deafness, unspecified</b>
<b>LD2Y</b>	<b>Other specified multiple developmental anomalies or syndromes</b>
<b>LD2Z</b>	<b>Multiple developmental anomalies or syndromes, unspecified</b>

Chromosomal anomalies, excluding gene mutations (LD40-LD7Z)

Any disease caused by alteration of the number or structure of chromosomes.

<b>LD40</b>	<b>Complete trisomies of the autosomes</b>
	Any disease caused by the presence of one extra autosome, for a total of three. Confirmation is through observation of a supernumerary autosome by karyotyping.

<b>LD40.0</b>	<b>Complete trisomy 21</b>
	Trisomy 21 is a chromosomal abnormality, characterised by the presence of a third (partial or total) copy of chromosome 21, which clinical manifestations include variable intellectual deficiency, muscular hypotonia and joint laxity, often associated with facial dysmorphism and variable malformations (essentially heart and digestive) and a risk of complications (epilepsy, leukemia, auto-immune and endocrine pathologies, earlier aging and Alzheimer disease).
	<b>Inclusions:</b> Down syndrome
	<b>Coded Elsewhere:</b> Keratoconus in Down syndrome (9A78.50)
<b>LD40.1</b>	<b>Complete trisomy 13</b>
	Trisomy 13 is a chromosomal anomaly caused by the presence of an extra chromosome 13 and is characterised by brain malformations (holoprosencephaly), facial dysmorphism, ocular anomalies, postaxial polydactyly, visceral malformations (cardiopathy) and severe psychomotor retardation.
	<b>Inclusions:</b> Patau syndrome
<b>LD40.2</b>	<b>Complete trisomy 18</b>
	Trisomy 18 is a chromosomal abnormality associated with the presence of an extra chromosome 18 and characterised by growth delay, dolichocephaly, a characteristic facies, limb anomalies and visceral malformations.

<b>LD42</b>	<b>Polyploidies</b>
	Any disease caused by one or more additional sets of chromosomes. Non-mosaic versions of these diseases are characterised by gross fetal malformation or death of the fetus. Confirmation is through observation of supernumerary sets of chromosomes by karyotyping.
<b>LD42.0</b>	<b>Triploidy</b>
	A disease caused by one additional set of chromosomes, for a total of 69 chromosomes. Triploidy can present with albuminuria, oedema, or hypertension in the mother. The fetus may present with microcephaly and a placenta that is enlarged and filled with cysts in the case of extra maternally inherited chromosomes, while extra paternally inherited chromosomes cause severe growth problems, an enlarged head, and a small placenta that does not have cysts. Non-mosaic triploidy is highly lethal, and is rarely observed in live births. Confirmation is through observation of an additional set of chromosomes by karyotyping.

<b>LD42.1</b>	<b>Tetraploidy</b>
	A disease caused by two additional sets of chromosomes, for a total of 92 chromosomes. This disease commonly results in spontaneous abortion during the first trimester. Live births of tetraploidy individuals are very rare. These cases are characterised by facial dysmorphism, severely delayed growth and developmental delay. Confirmation is through observation of two additional sets of chromosomes by karyotyping.
<b>LD42.Y</b>	<b>Other specified polyploidies</b>
<b>LD42.Z</b>	<b>Polyploidies, unspecified</b>
<b>LD43</b>	<b>Complete monosomies of the autosomes</b>
<b>LD43.0</b>	<b>Complete monosomy of autosome</b>
<b>LD43.1</b>	<b>Mosaic monosomy of autosome</b>
	Any disease caused by embryonic fusion or loss of an autosome early in embryonic development, resulting in a subset of cells in the body having only one of a pair of autosomes.
<b>LD43.Y</b>	<b>Other specified complete monosomies of the autosomes</b>
<b>LD43.Z</b>	<b>Complete monosomies of the autosomes, unspecified</b>

<b>LD44.G</b>	<b>Deletions of chromosome 16</b>
<b>LD44.G0</b>	Deletions of the long arm of chromosome 16
<b>LD44.G1</b>	Deletions of the short arm of chromosome 16 <b>Coded Elsewhere:</b> Autosomal dominant polycystic kidney disease type 1 with tuberous sclerosis (LD2F.1Y) Alpha thalassaemia - intellectual deficit syndrome (3A50.1)
<b>LD44.GY</b>	Other specified deletions of chromosome 16
<b>LD44.GZ</b>	Deletions of chromosome 16, unspecified
<b>LD44.H</b>	<b>Deletions of chromosome 17</b>
<b>LD44.H0</b>	Deletions of the long arm of chromosome 17

<b>LD44.H1</b>	Deletions of the short arm of chromosome 17  <b>Coded Elsewhere:</b> Miller-Dieker syndrome (LD20.1)
<b>LD44.HY</b>	Other specified deletions of chromosome 17
<b>LD44.HZ</b>	Deletions of chromosome 17, unspecified
<b>LD44.J</b>	<b>Deletions of chromosome 18</b>
<b>LD44.J0</b>	Deletions of the long arm of chromosome 18
<b>LD44.J1</b>	Deletions of the short arm of chromosome 18
<b>LD44.JY</b>	Other specified deletions of chromosome 18
<b>LD44.JZ</b>	Deletions of chromosome 18, unspecified
<b>LD44.K</b>	<b>Deletions of chromosome 19</b>
<b>LD44.K0</b>	Deletions of the long arm of chromosome 19
<b>LD44.K1</b>	Deletions of the short arm of chromosome 19
<b>LD44.KY</b>	Other specified deletions of chromosome 19
<b>LD44.KZ</b>	Deletions of chromosome 19, unspecified
<b>LD44.L</b>	<b>Deletions of chromosome 20</b>
<b>LD44.L0</b>	Deletions of the long arm of chromosome 20
<b>LD44.L1</b>	Deletions of the short arm of chromosome 20
<b>LD44.LY</b>	Other specified deletions of chromosome 20
<b>LD44.LZ</b>	Deletions of chromosome 20, unspecified
<b>LD44.M</b>	<b>Deletions of chromosome 21</b>
<b>LD44.N</b>	<b>Deletions of chromosome 22</b>
<b>LD44.N0</b>	CATCH 22 phenotype  Monosomy 22q11 (DiGeorge Velocardiofacial syndrome, DGS/VCF) syndrome is a chromosomal anomaly characterised by the association of several variable malformations: hypoplastic thymus and parathyroid glands, congenital conotruncal heart defects, a subtle but characteristic facial dysmorphism, cleft palate or velar insufficiency, and learning difficulties.
	<b>Inclusions:</b> Pharyngeal pouch syndrome DiGeorge syndrome Velocardiofacial syndrome
<b>LD44.NY</b>	Other specified deletions of chromosome 22
<b>LD44.NZ</b>	Deletions of chromosome 22, unspecified
<b>LD44.P</b>	<b>Deletions with other complex rearrangements</b>

<b>LD44.Y</b>	<b>Other specified deletions of the autosomes</b>
<b>LD44.Z</b>	<b>Deletions of the autosomes, unspecified</b>
<b>LD45</b>	<p><b>Uniparental disomies</b></p> <p>Any disease caused by the inheritance of two homologous copies of a chromosome from one parent, and none from the other parent. Confirmation is by observation of identical chromosomes pairs by genetic testing.</p>
<b>LD45.0</b>	<p><b>Uniparental disomies of maternal origin</b></p> <p>Any disease characterised by the inheritance of two homologous copies of a chromosome from the mother, and none from the father. Confirmation is by observation of identical chromosome pairs, and matching to a maternal chromosome, by genetic testing.</p>
<b>LD45.1</b>	<p><b>Uniparental disomies of paternal origin</b></p> <p>Any disease caused by the inheritance of two homologous copies of a chromosome from the father, and none from the mother. Confirmation is by observation of identical chromosome pairs, and matching to a paternal chromosome, by genetic testing.</p>
<b>LD45.Y</b>	<b>Other specified uniparental disomies</b>
<b>LD45.Z</b>	<b>Uniparental disomies, unspecified</b>
<b>LD46</b>	<p><b>Imprinting errors</b></p>
<b>LD46.0</b>	<b>Maternal imprinting error</b>
<b>LD46.1</b>	<b>Paternal imprinting error</b>
<b>LD46.Y</b>	<b>Other specified imprinting errors</b>
<b>LD46.Z</b>	<b>Imprinting errors, unspecified</b>
<b>LD47</b>	<p><b>Balanced rearrangements or structural rearrangements</b></p> <p>A condition caused by translocation or other structural rearrangement of genomic material between chromosomes demonstrating no net gain or loss of genomic material, in an individual displaying no phenotype. Confirmation is through observation of a balanced event by genetic testing.</p>
<b>LD47.0</b>	<p><b>Balanced translocation and insertion in normal individual</b></p> <p>A condition caused by translocation of genetic material between chromosomes with no net gain or loss of genetic material, in an individual demonstrating no abnormalities. Confirmation is through observation of a balanced translocation and insertion by genetic testing.</p>
<b>LD47.1</b>	<p><b>Chromosome inversion in normal individual</b></p> <p>Any disease caused by inversion of genetic material on a chromosome, in an individual demonstrating no abnormalities. Confirmation is through observation of a chromosomal inversion by genetic testing.</p>

<b>LD47.2</b>	<b>Balanced autosomal rearrangement in abnormal individual</b> Any disease caused by alteration of autosome structure with no net gain or loss of genetic material, in an individual demonstrating abnormalities. Confirmation is through observation of a balanced chromosomal rearrangement by genetic testing.
<b>LD47.3</b>	<b>Balanced sex or autosomal rearrangement in abnormal individual</b> Any disease caused by alteration of chromosomal structure with no net gain or loss of genetic material, in an individual demonstrating abnormalities. Confirmation is through observation of a balanced chromosomal rearrangement by genetic testing.
<b>LD47.4</b>	<b>Autosomal fragile site</b> Any disease caused by presence of a fragile site on an autosome. These diseases may present as asymptomatic. Confirmation is through observation of a fragile site by genetic testing.
<b>LD47.Y</b>	<b>Other specified balanced rearrangements or structural rearrangements</b>
<b>LD47.Z</b>	<b>Balanced rearrangements or structural rearrangements, unspecified</b>

#### Sex chromosome anomalies (LD50-LD5Z)

Any disease caused by change in the number or structure of the X or Y chromosome. Confirmation is by observation of a chromosomal anomaly by genetic testing.

<b>LD50</b>	<b>Number anomalies of chromosome X</b>
<b>LD50.0</b>	<b>Turner syndrome</b> Karyotype missing one X chromosome (45,X0 or 45,X0/46,XX mosaicism); gonads: ovaries (streak); phenotype female with short stature, amenorrhea (hypergonadotropic hypogonadism), absence of sexual development, webbed neck, low set ears, posterior hairline, widely-spaced nipples, short fourth metacarpals, and increased carrying angle at the elbow (cubitus valgus). Often associated with renal, cardiac and ocular abnormalities. <i>Inclusions:</i> Monosomy X <i>Exclusions:</i> Noonan syndrome (LD2F.15)
<b>LD50.00</b>	Karyotype 45, X A disease affecting females, caused by absence of one of the two X chromosomes. This disease may present with short stature, extra folds of skin on the neck, a low hairline at the back of the neck, puffiness or swelling of the hands and feet, skeletal abnormalities, ovarian hypofunction or premature ovarian failure, kidney problems, or heart defects. Confirmation is through observation of only one X chromosome by karyotyping.

- LD50.01** Karyotype 46, X iso Xq  
A disease affecting females, caused by one of the two X chromosomes consisting of two q arms, which are structurally identical and contain the same genes. This disease may present with short stature, extra folds of skin on the neck, a low hairline at the back of the neck, puffiness or swelling of the hands and feet, skeletal abnormalities, ovarian hypofunction or premature ovarian failure, kidney problems, or heart defects. This disease may be differentiated from classical Turner Syndrome by a near complete lack of gonadal development, resulting in a lack of menstruation or breast development. Confirmation is through observation of an iso Xq chromosome by karyotyping.
- LD50.02** Karyotype 46, X with abnormal sex chromosome, except iso Xq
- LD50.03** Mosaicism, 45, X, 46, XX or XY  
A disease caused by embryonic fusion, or by the loss of one of the sex chromosomes from a cell early in embryonic development; Gonadal status: normal or variable abnormalities of sexual anatomy, maturation or function. Phenotype: normal, or abnormal sexual development.
- LD50.04** Mosaicism, 45, X or other cell line with abnormal sex chromosome  
A disease caused by embryonic fusion or the structural mutation of a sex chromosome early in embryonic development, resulting in a subset of cells in the body having one normal copy of the X chromosome and one abnormal sex chromosome. This disease may present with short stature, sexual organ dysfunction, or may be asymptomatic.
- LD50.1** **Karyotype 47,XXX**  
Trisomy X is a sex chromosome anomaly with a variable phenotype caused by the presence of an extra X chromosome in females (47,XXX instead of 46,XX). Most individuals are only mildly affected or asymptomatic, the most common physical features including tall stature, epicanthal folds, hypotonia and clinodactyly, with seizures, renal and genitourinary abnormalities, and premature ovarian failure being also associated findings.
- LD50.2** **Mosaicism, lines with various numbers of X chromosomes**  
A disease caused by embryonic fusion or gain or loss of X chromosomes early in embryonic development, resulting in a subset of cells in the body having an abnormal number of X chromosomes. This disease may present with abnormal height, genitourinary abnormalities, or may be asymptomatic.
- LD50.3** **Klinefelter syndrome**  
Klinefelter syndrome defines a group of chromosomal disorders in which there is at least one extra X chromosome compared with the normal 46,XY male karyotype. The effects on physical features and on physical and cognitive development increase with the number of extra X's, and each extra X is associated with an intelligence quotient (IQ) decrease of approximately 15-16 points, with language most affected, particularly expressive language skills.

<b>LD50.30</b>	Klinefelter syndrome with karyotype 47,XXY, regular Karyotype 47 XXY; gonads: testes (hypogonadism) small and firm with decreased spermatogenesis ; phenotype male with associated congenital abnormalities (decreased virilization due to decreased testosterone production, long arms and legs, short trunk, psychosocial problems).
<b>LD50.31</b>	Klinefelter syndrome, male with more than two X chromosomes A disease affecting males, caused by the presence of more than two X chromosomes in each cell. This disease is characterised by impaired sexual development, intellectual disability, distinctive facial features, skeletal abnormalities, poor coordination, and severe problems with speech. This disease may be differentiated from classic Klinefelter syndrome by increased severity of symptoms. Confirmation is through observation of more than two X chromosomes by karyotyping.
<b>LD50.3Y</b>	Other specified Klinefelter syndrome
<b>LD50.3Z</b>	Klinefelter syndrome, unspecified
<b>LD50.Y</b>	<b>Other specified number anomalies of chromosome X</b>
<b>LD50.Z</b>	<b>Number anomalies of chromosome X, unspecified</b>
<b>LD51</b>	<b>Structural anomalies of chromosome X, excluding Turner syndrome</b>
<b>LD52</b>	<b>Number anomalies of chromosome Y</b>
<b>LD52.0</b>	<b>Male with 46,XX karyotype</b> A disease affecting males, characterised by hypergonadotropic hypogonadism, testosterone deficiency, and infertility. This condition may also present with hypospadias. This disease may be associated with abnormal crossing over of the sex chromosomes during meiosis in the father, resulting in the SRY gene being present on one or both copies of the X chromosome.
<b>LD52.1</b>	<b>Male with double or multiple Y</b> A condition affecting males, caused by the presence of supernumerary Y chromosomes. This condition is asymptomatic. Confirmation is through observation of supernumerary Y chromosomes by karyotyping.
<b>LD52.Y</b>	<b>Other specified number anomalies of chromosome Y</b>
<b>LD52.Z</b>	<b>Number anomalies of chromosome Y, unspecified</b>
<b>LD53</b>	<b>Structural anomalies of chromosome Y</b> <b>Coded Elsewhere:</b> Chromosome Y deletion (5A81.1)
<b>LD54</b>	<b>Male with sex chromosome mosaicism</b> Any disease affecting males, caused by embryonic fusion or gain or loss of a sex chromosome early in embryonic development, resulting in a subset of cells in the body having an abnormal number of sex chromosomes. These diseases may present with deficiencies in testosterone, abnormalities of sexual development, or infertility.

**LD55****Fragile X chromosome**

Fragile X syndrome is a rare genetic disease associated with mild to severe intellectual deficit that may be associated with behavioural disorders and characteristic physical features.

*Inclusions:*                   Fragile X syndrome

**LD56****Chimaera 46, XX, 46, XY**

A disease caused by XX and XY embryonic fusion or two distinct loss events of a sex chromosome from an XXY embryo early in development. This results in a subset of cells in the body having an XX karyotype, while other cells demonstrate an XY karyotype. This disease may present with abnormal genital development.

**LD56.0****Androgenetic chimaera****LD56.1****Gynogenetic chimaera****LD56.Y****Other specified chimaera 46, XX, 46, XY****LD56.Z****Chimaera 46, XX, 46, XY, unspecified****LD5Y****Other specified sex chromosome anomalies****LD5Z****Sex chromosome anomalies, unspecified****LD7Y****Other specified chromosomal anomalies, excluding gene mutations****LD7Z****Chromosomal anomalies, excluding gene mutations, unspecified**

**Conditions with disorders of intellectual development as a relevant clinical feature**

**Coded Elsewhere:** Lesch-Nyhan syndrome (5C55.01)

Hydrocephalus with stenosis of the aqueduct of Sylvius  
(LA04.0)

Pelizaeus-Merzbacher disease (8A44.0)

Hereditary sensory and autonomic neuropathy type IV  
(8C21.2)

Joubert syndrome (LD20.00)

Phenylketonuria (5C50.0)

Tyrosinaemia type 2 (5C50.12)

Carbamoylphosphate synthetase deficiency (5C50.A1)

Carnosinaemia (5C50.F1)

Homocarnosinosis (5C50.F2)

Syndromes with lissencephaly as a major feature (LD20.1)

Sjögren-Larsson syndrome (5C52.03)

Polymicrogyria (LA05.50)

Porencephaly (LA05.60)

Pyruvate dehydrogenase complex deficiency (5C53.02)

Brain-lung-thyroid syndrome (CB04.5)

Metachromatic leukodystrophy (5C56.02)

Neuronal ceroid lipofuscinosis (5C56.1)

Mucopolysaccharidosis type 2 (5C56.31)

Mucopolysaccharidosis type 6 (5C56.33)

Oculocerebrorenal syndrome (5C60.0)

CATCH 22 phenotype (LD44.N0)

Langer-Giedion syndrome (LD24.80)

Crigler-Najjar syndrome (5C58.00)

Fragile X chromosome (LD55)

Incontinentia pigmenti (LD27.00)

Tuberous sclerosis (LD2D.2)

Noonan syndrome (LD2F.15)

Congenital rubella syndrome (KA62.8)

Congenital cytomegalovirus infection (KA62.3)

Complete trisomy 21 (LD40.0)

Klinefelter syndrome, male with more than two X chromosomes (LD50.31)

Intellectual disability – enteropathy – deafness – neuropathy – ichthyosis – keratoderma syndrome (LD2H.Y)

Microcephaly - deafness - intellectual disability (LD2H.Y)

Schizophrenia - intellectual disability - deafness - retinitis (LD2H.Y)

Corneal anaesthesia - deafness - intellectual disability  
(LD2H.Y)  
Ataxia - deafness - intellectual disability syndrome (LD2H.Y)  
Retinitis pigmentosa - intellectual disability - deafness -  
hypogenitalism (LD2H.Y)

- LD90.0 Angelman syndrome**  
Angelman syndrome is a neurogenetic disorder characterised by severe intellectual deficit and distinct facial dysmorphic (microcephaly, macrostomia, maxillary hypoplasia, prognathia), behavioural (outbursts of laughter with hand flapping, a happy demeanour, hyperactivity without aggression, short attention span, excitability and sleeping problems with decreased need to sleep, increased sensitivity to heat, attraction to and fascination with water), and neurological features (a puppet-like gait, ataxia and epileptic seizures).
- LD90.1 Early-onset parkinsonism - intellectual deficit**  
Early-onset parkinsonism with intellectual deficit is a basal ganglia disorder characterised by parkinsonian-type symptoms (postural changes, tremor, rigidity), megalencephaly and variable intellectual deficit. Other signs are frontal bossing, persistent frontal lobe reflexes, strabismus and seizures.
- LD90.2 Pelizaeus-Merzbacher-like disease**  
Pelizaeus-Merzbacher-like disease (PMLD) is an autosomal recessive leukodystrophy sharing identical clinical and radiological features as X-linked Pelizaeus-Merzbacher disease (PMD).
- LD90.3 Prader-Willi syndrome**  
Prader-Willi syndrome is a rare genetic disorder characterised by hypothalamic-pituitary abnormalities with severe hypotonia during the neonatal period and first two years of life and the onset of hyperphagia with a risk of morbid obesity during infancy and adulthood, learning difficulties and behavioural problems or severe psychiatric problems.
- LD90.4 Rett syndrome**  
A condition in which apparently normal early development is followed by partial or complete loss of speech and of skills in locomotion and use of hands, together with deceleration in head growth, usually with an onset between seven and 24 months of age. Loss of purposive hand movements, hand-wringing stereotypies, and hyperventilation are characteristic. Social and play development are arrested but social interest tends to be maintained. Trunk ataxia and apraxia start to develop by age four years and choreoathetoid movements frequently follow. Severe mental retardation almost invariably results.
- LD90.Y Other specified conditions with disorders of intellectual development as a relevant clinical feature**
- LD90.Z Conditions with disorders of intellectual development as a relevant clinical feature, unspecified**
- LD9Y Other specified developmental anomalies**
- LD9Z Developmental anomalies, unspecified**

# CHAPTER 21

---

## Symptoms, signs or clinical findings, not elsewhere classified

This chapter has 311 four-character categories.

Code range starts with MA00

Clinical findings include those found using physical, laboratory and imaging techniques.

Diseases can manifest in many ways and in different body systems. Such specific manifestations may be a reason for treatment or encounter, with or without identifying or addressing the underlying condition.

Categories in this chapter include the less well-defined conditions and symptoms that, without the necessary study of the case to establish a final diagnosis, could be designated 'not otherwise specified', 'unknown aetiology' or 'transient'.

The conditions and signs or symptoms included in this chapter consist of:

- cases for which no more specific diagnosis can be made even after all the facts bearing on the case have been investigated
- signs or symptoms existing at the time of initial encounter that proved to be transient and whose causes could not be determined;
- provisional diagnoses in a patient who failed to return for further investigation or care;
- cases referred elsewhere for investigation or treatment before the diagnosis was made;
- cases in which a more precise diagnosis was not available for any other reason;
- certain symptoms, for which supplementary information is provided, that represent important problems in medical care in their own right.

These categories should be used in conjunction with a code from another chapter that identifies the underlying condition.

**Exclusions:** Certain conditions originating in the perinatal period (Chapter 19)

Clinical findings on antenatal screening of mother (JA66)

This chapter contains the following top level blocks:

- Symptoms of blood, blood-forming organs, or the immune system
- Symptoms, signs or clinical findings of blood, blood-forming organs, or the immune system
- Symptoms, signs or clinical findings of endocrine, nutritional or metabolic diseases
- Symptoms, signs or clinical findings of speech or voice
- Mental or behavioural symptoms, signs or clinical findings
- Symptoms, signs or clinical findings of the nervous system
- Symptoms, signs or clinical findings of the visual system
- Symptoms, signs or clinical findings of ear or mastoid process
- Symptoms, signs or clinical findings of the circulatory system

- Symptoms, signs or clinical findings of the respiratory system
- Symptoms, signs or clinical findings of the digestive system or abdomen
- Symptoms, signs or clinical findings involving the skin
- Symptoms, signs or clinical findings of the musculoskeletal system
- Symptoms, signs or clinical findings of the genitourinary system
- General symptoms, signs or clinical findings
- Ill-defined and unknown causes of mortality

Symptoms of blood, blood-forming organs, or the immune system (MA00-MA0Y)

**Coded Elsewhere:** Fear of haematological disease (MG24.2)

**MA00 Symptom or complaint of the blood**

**MA01 Enlarged lymph nodes**

Enlarged lymph node is called lymphadenopathy which means the abnormal enlargement of lymph nodes.

**Inclusions:** Lymphadenopathy

**Exclusions:** Chronic lymphadenitis (BD90.2)

Nonspecific mesenteric lymphadenitis (BD90.1)

lymphadenitis NOS (BD90)

**MA01.0 Localised lymph node enlargement**

**MA01.1 Generalised lymph node enlargement**

**Exclusions:** Human immunodeficiency virus disease associated with generalised lymphadenopathy (1C62.0)

**MA01.Z Enlarged lymph nodes, unspecified**

**MA0Y Other specified symptoms of blood, blood-forming organs, or the immune system**

Symptoms, signs or clinical findings of blood, blood-forming organs, or the immune system (MA10-MA3Y)

Clinical findings in blood, blood-forming organs, or the immune system (MA10-MA1Y)

**Exclusions:** abnormalities of coagulation (3B10-3B4Z)

abnormalities of lipids (5C80-5C8Z)

Thrombocytopenia (3B64)

Abnormal haematological finding on antenatal screening of mother (JA66.0)

Haemorrhagic or haematological disorders of fetus or newborn (KA80-KA8Z)

**MA10 Abnormal serum enzyme levels**

<b>MA10.0</b>	<b>Elevation of levels of transaminase or lactic acid dehydrogenase</b>
<b>MA10.1</b>	<b>Abnormal levels of other specified serum enzymes</b>
<b>MA10.2</b>	<b>Abnormal level of unspecified serum enzyme</b>
<b>MA11</b>	<b>Clinical findings of hormones in blood, blood-forming organs, or the immune system</b>
<b>MA12</b>	<b>Clinical findings of drugs, medicaments and biological substances in blood, blood-forming organs, or the immune system</b>
<b>MA12.0</b>	<b>Finding of opiate drug in blood</b>
<b>MA12.1</b>	<b>Finding of cocaine in blood</b>
<b>MA12.2</b>	<b>Finding of hallucinogen in blood</b>
<b>MA12.3</b>	<b>Finding of psychotropic drug in blood</b>
<b>MA12.4</b>	<b>Finding of steroid agent in blood</b>
<b>MA12.Y</b>	<b>Other specified clinical findings of drugs, medicaments and biological substances in blood, blood-forming organs, or the immune system</b>
<b>MA13</b>	<b>Clinical findings of substances chiefly nonmedicinal as to source in blood, blood-forming organs, or the immune system</b>
<b>MA13.0</b>	<b>Finding of abnormal level of heavy metals in blood</b>
<b>MA13.00</b>	Abnormal level of lead in blood Abnormal level of lead in blood in those who have been exposed to lead and who require management.  <b>Exclusions:</b> Harmful effects of or exposure to noxious substances, Substances chiefly nonmedicinal as to source, Metals (NE61)
<b>MA13.0Y</b>	Finding of abnormal level of other specified heavy metals in blood
<b>MA13.1</b>	<b>Finding of alcohol in blood</b>
<b>MA13.Y</b>	<b>Abnormal level of other specified substances chiefly nonmedicinal as to source in blood, blood-forming organs and the immune system</b>
<b>MA14</b>	<b>Immunological findings in blood, blood-forming organs, or the immune system</b>
<b>MA14.0</b>	<b>Laboratory evidence of human immunodeficiency virus</b>  <b>Exclusions:</b> Human immunodeficiency disease complicating pregnancy, childbirth or the puerperium (JB63.7)  Human immunodeficiency virus disease (1C60-1C62.Z)  Asymptomatic human immunodeficiency virus infection (1C62.0)
<b>MA14.1</b>	<b>Certain specified immunological findings</b>

<b>MA14.10</b>	Abnormal reaction to tuberculin test
<b>MA14.11</b>	Anticitrullinated protein antibody negative
<b>MA14.12</b>	Anticitrullinated protein antibody positive
<b>MA14.13</b>	Anti-nuclear antibody negative
<b>MA14.14</b>	Anti-nuclear antibody positive
<b>MA14.15</b>	Elevated C-reactive protein
<b>MA14.16</b>	False-positive serological test for syphilis <i>Inclusions:</i> False-positive Wassermann reaction
<b>MA14.17</b>	Human leukocyte antigen negative
<b>MA14.18</b>	Human leukocyte antigen positive <i>Inclusions:</i> HLA B-27
<b>MA14.19</b>	Neural autoantibody negative
<b>MA14.1A</b>	Neural autoantibody positive
<b>MA14.1B</b>	Prostate specific antigen positive
<b>MA14.1C</b>	Raised antibody titre <i>Exclusions:</i> isoimmunization, in pregnancy affecting fetus or newborn (KA84)
<b>MA14.1D</b>	Rheumatoid factor negative
<b>MA14.1E</b>	Rheumatoid factor positive
<b>MA14.Y</b>	<b>Other specified immunological findings in blood, blood-forming organs, or the immune system</b>
<b>MA15</b>	<b>Microbiological findings in blood, blood-forming organs, or the immune system</b>
<b>MA15.0</b>	<b>Bacteraemia</b> The presence of bacteria in the blood. A positive blood culture without signs of infection. <i>Exclusions:</i> Bacterial infection of unspecified site (1C41) Sepsis (1G40-1G41)
<b>MA15.1</b>	<b>Fungaemia</b>
<b>MA15.Y</b>	<b>Other specified microbiological findings in blood, blood-forming organs, or the immune system</b>
<b>MA16</b>	<b>Cytological findings in blood, blood-forming organs, or the immune system</b>

<b>MA16.0</b>	<b>Abnormality of red blood cells</b>
	<b><i>Exclusions:</i></b>
	Polycythaemia neonatorum (KA8A)
	polycythaemia: NOS (3A80-3A8Z)
	polycythaemia: benign (familial) (3A80.0)
	anaemias (3A00-3A9Z)
	Polycythaemia vera (2A20.4)
	Acquired polycythaemia (3A81)
<b>MA16.00</b>	Haemolysis, not elsewhere classified
	<b><i>Exclusions:</i></b>
	Postpartum coagulation defects (JA43.3)
	Delayed or excessive haemorrhage following abortion, ectopic or molar pregnancy (JA05.1)
	Intrapartum haemorrhage with coagulation defect (JA42.0)
	HELLP syndrome (JA24.2)
	Neonatal haemolysis due to systemic bacterial infection with or without concomitant diffuse intravascular coagulation (KA84.5)
<b>MA16.0Y</b>	Other specified abnormality of red blood cells
<b>MA16.0Z</b>	Abnormality of red blood cells, unspecified
<b>MA16.1</b>	<b>Abnormality of white blood cells</b>
	<b><i>Exclusions:</i></b>
	Neutrophilia (4B00.1)
<b>MA16.10</b>	Decreased white blood cell count
<b>MA16.11</b>	Elevated white blood cell count
<b>MA16.1Z</b>	Abnormality of white blood cells, unspecified
<b>MA16.Y</b>	<b>Other specified cytological findings in blood, blood-forming organs, or the immune system</b>
<b>MA16.Z</b>	<b>Cytological findings in blood, blood-forming organs, or the immune system, unspecified</b>
<b>MA17</b>	<b>Histological findings in blood, blood-forming organs, or the immune system</b>

<b>MA18</b>	<b>Certain clinical findings of blood chemistry</b>
	<p><b>Exclusions:</b> specific findings indicating disorder of: carbohydrate metabolism (5C51)</p> <p>specific findings indicating disorder of: amino-acid metabolism (5C50)</p> <p>specific findings indicating disorder of: lipid metabolism (5C52)</p> <p>asymptomatic hyperuricaemia (5C55)</p> <p>abnormality of fluid, electrolyte or acid-base balance (5C70-5C7Z)</p> <p>Neonatal hypoglycaemia (KB60.4)</p>
<b>MA18.0</b>	<b>Elevated blood glucose level</b>
	<p><b>Exclusions:</b> Diabetes mellitus in pregnancy (JA63)</p> <p>Syndrome of infant of mother with gestational diabetes (KB60.0)</p> <p>Postprocedural hypoinsulinaemia (5D41)</p> <p>Syndrome of infant of a diabetic mother, type 1 or 2, nongestational, insulin dependent (KB60.1)</p> <p>Neonatal diabetes mellitus (KB60.2)</p>
	<b>Coded Elsewhere:</b> Neonatal hyperglycaemia (KB60.3)
<b>MA18.00</b>	Abnormal glucose tolerance test Greater than normal levels of glucose found in laboratory examination of the blood to check how the body breaks down (metabolizes) blood sugar. Positive findings may indicate diabetes or Cushing diseases, among other things.
<b>MA18.0Y</b>	Other specified elevated blood glucose level
<b>MA18.0Z</b>	Elevated blood glucose level, unspecified
<b>MA18.1</b>	<b>Abnormal level of blood mineral</b>
	<p><b>Inclusions:</b> Abnormal blood level of mineral NEC</p> <p><b>Exclusions:</b> nutritional mineral deficiency (5B5K)</p> <p>Neonatal hypomagnesaemia (KB61.0)</p>
<b>MA18.2</b>	<b>Abnormal arterial blood-gas level</b>
<b>MA18.3</b>	<b>Abnormal coagulation profile</b>
<b>MA18.4</b>	<b>Low haemoglobin</b>
	<p><b>Exclusions:</b> Low affinity haemoglobin (3A51.8)</p>
<b>MA18.Y</b>	<b>Other specified abnormal findings of blood chemistry</b>
<b>MA18.Z</b>	<b>Abnormal findings of blood chemistry, unspecified</b>

<b>MA19</b>	<b>Certain abnormalities of plasma proteins</b>
	<b><i>Exclusions:</i></b> Disorders of plasma-protein metabolism, not elsewhere classified (5D00-5D0Y)
<b>MA19.0</b>	<b>Abnormality of albumin</b>
<b>MA19.1</b>	<b>Abnormality of alphafetoprotein</b>
<b>MA19.2</b>	<b>Abnormality of globulin</b>
<b>MA19.Y</b>	<b>Abnormalities of other specified plasma proteins</b>
<b>MA19.Z</b>	<b>Abnormalities of unspecified plasma proteins</b>
<b>MA1A</b>	<b>Elevated erythrocyte sedimentation rate or abnormality of plasma viscosity</b>
<b>MA1A.0</b>	<b>Elevated erythrocyte sedimentation rate</b>
<b>MA1A.1</b>	<b>Abnormal plasma viscosity</b>
<b>MA1Y</b>	<b>Other specified clinical findings in blood, blood-forming organs, or the immune system</b>
<hr/>	
<b>MA3Y</b>	<b>Other specified symptoms, signs or clinical findings of blood, blood-forming organs, or the immune system</b>
	Symptoms, signs or clinical findings of endocrine, nutritional or metabolic diseases (MA50-MA6Y)
	<b><i>Coded Elsewhere:</i></b> Symptoms of endocrine, nutritional or metabolic diseases
	Results of function studies of the endocrine, nutritional or metabolic diseases (MA50-MA51)
<b>MA50</b>	<b>Abnormal results of thyroid function studies</b>
<b>MA51</b>	<b>Abnormal results of other endocrine function studies</b>
	<b><i>Exclusions:</i></b> Abnormal glucose tolerance test (MA18.00)
<hr/>	
<b>MA6Y</b>	<b>Other specified symptoms, signs or clinical findings of endocrine, nutritional or metabolic diseases</b>

## Symptoms, signs or clinical findings of speech or voice (MA80-MB0Y)

Symptoms or signs involving speech or voice (MA80-MA8Y)

**Coded Elsewhere:** Echolalia (MB23.9)

**MA80**

### **Speech disturbances**

Speech disturbances, not classified elsewhere include dysphasia and aphasia, dysarthria and anarthria, and other speech disturbances.

**Exclusions:** Developmental speech or language disorders (6A01)

Autism spectrum disorder (6A02)

Speech dysfluency (MA81)

**Coded Elsewhere:** Mutism (MB23.D)

**MA80.0**

### **Aphasia**

**Exclusions:** Developmental speech or language disorders (6A01)

**MA80.1**

### **Dysphasia**

A cognitive disorder marked by an impaired ability to comprehend or express language in its written or spoken form. This condition is caused by diseases which affect the language areas of the dominant hemisphere. Clinical features are used to classify the various subtypes of this condition.

**Exclusions:** progressive isolated aphasia (8E40-8E4Y)

Developmental speech or language disorders (6A01)

**MA80.2**

### **Dysarthria**

**Exclusions:** Developmental speech or language disorders (6A01)

**MA80.20**

Anarthria

**MA80.2Y**

Other specified dysarthria

**MA80.2Z**

Dysarthria, unspecified

**MA80.Y**

### **Other specified speech disturbances**

**MA80.Z**

### **Speech disturbances, unspecified**

**MA81**

### **Speech dysfluency**

Speech dysfluency is characterised by the frequent or pervasive disruption of the rhythmic flow of speech that arises subsequent to the developmental period (i.e., adult onset) and is outside the limits of normal variation and results in reduced intelligibility and significantly affects communication. It can involve repetitions of sounds, syllables or words, prolongations, word breaks, blockage of production, excessive use of interjections, and rapid short bursts of speech.

***Inclusions:***

- Developmental language disorder (6A01.2)
- Developmental speech or language disorders (6A01)
- Developmental speech fluency disorder (6A01.1)
- Dysarthria (MA80.2)
- Selective mutism (6B06)
- childhood onset stammering (6A01.1)
- childhood onset stuttering (6A01.1)
- childhood onset cluttering (6A01.1)
- childhood-onset speech fluency disorder (6A01.1)

**MA82**

### **Voice disturbances**

Voice disturbances include dysphonia, aphonia, hypernasality and hyponasality, and other voice disturbances.

**MA82.0**

#### **Aphonia**

Aphonia is the inability to produce voice. It is considered more severe than dysphonia. Like dysphonia, aphonia can be caused by voice strain or overuse, injury, by structural laryngeal anomalies or by dystonic neurological disorders.

***Inclusions:***

- Loss of voice

***Exclusions:***

- Dissociative disorders (6B60-6B6Z)

**MA82.1**

#### **Dysphonia**

Difficulty and/or pain in phonation or speaking.

***Exclusions:***

- Developmental speech or language disorders (6A01)
- Developmental speech fluency disorder (6A01.1)

**MA82.10**

Hoarseness

**MA82.1Y**

Other specified dysphonia

**MA82.1Z**

Dysphonia, unspecified

**MA82.2**

#### **Nasality**

Nasality (or resonance) refers to the quality of the voice that is determined by the balance of sound vibration in the oral, nasal, and pharyngeal cavities during speech. Abnormal resonance can occur when there is obstruction in one of the cavities, causing hyponasality, or when there is velopharyngeal dysfunction, causing hypernasality. This category should only be assigned when hyponasality or hypernasality is outside the limits of normal variation and results in reduced intelligibility and significantly affects communication.

<b>MA82.Y</b>	<b>Other specified voice disturbances</b>
<b>MA82.Z</b>	<b>Voice disturbances, unspecified</b>
<b>MA8Y</b>	<b>Other specified symptoms or signs involving speech or voice</b>

---

<b>MB0Y</b>	<b>Other specified symptoms, signs or clinical findings of speech or voice</b>
-------------	--

Mental or behavioural symptoms, signs or clinical findings (MB20-MB2Y)

<b>MB20</b>	<b>Symptoms, signs or clinical findings involving consciousness</b>
Symptoms, signs, and clinical findings indicative of a disturbance in the state or quality of awareness of oneself and the environment, alertness, or clarity of the wakeful state.	

<b>Exclusions:</b>	newborn uremic coma (KC01)
	Delirium (6D70)
	Psychomotor retardation (MB23.N)

<b>MB20.0</b>	<b>Stupor</b>
Total or nearly total lack of spontaneous movement and marked decrease in reactivity to environment.	
<b>Inclusions:</b> Semicoma	
<b>Exclusions:</b> Catatonia (6A40-6A4Z)	
Delirium (6D70)	

<b>MB20.1</b>	<b>Coma</b>
Acute state lasting more than one hour and usually less than a month. The comatose patient is unresponsive, lying with their eyes closed and cannot be aroused even by vigorous and noxious stimuli. Motor responses to noxious stimulation are limited to reflexive behaviour. Etiologies include but are not limited to traumatic, anoxic, infectious, neoplastic, vascular, inflammatory and metabolic brain injuries.	

**Coding Note:** Code also the causing condition

<b>Exclusions:</b>	Diabetic coma (5A23)
	Hepatic coma (DB99.5)
	Neonatal coma (KB03)
	Nondiabetic hypoglycaemic coma (5A41)
	chronic uremic coma (GB61)

<b>MB20.2</b>	<b>Clouding of consciousness</b> An impairment in the clarity of consciousness characterised by impaired ability to comprehend aspects of the environment or the self in relation to the environment, inattention, and abnormalities in thought processes, comprehension. It is typically accompanied by subjective experience of mental clouding described as feeling 'foggy'. Clouding of consciousness is a common form of cognitive disturbance in Delirium, but it is not synonymous with Delirium because Delirium includes additional diagnostic requirements.
	<b><i>Exclusions:</i></b> Delirium (6D70)
<b>MB20.Y</b>	<b>Other specified symptoms, signs or clinical findings involving consciousness</b>
<b>MB21</b>	<b>Symptoms, signs or clinical findings involving cognition</b> Symptoms, signs, and clinical findings indicative of a disturbance in mental abilities and processes related to attention, memory, judgment, reasoning, problem solving, decision making, or comprehension, or the integration of these functions. <b><i>Coded Elsewhere:</i></b> Symbolic dysfunctions (MB4B)
<b>MB21.0</b>	<b>Age-associated cognitive decline</b> A normative (non-pathological) deterioration of higher cortical functions such as thinking, reasoning, comprehension, calculation, learning, language, and judgment.
<b>MB21.1</b>	<b>Amnesia</b> An inability to recall past experiences, especially where recall is to be expected. <b><i>Exclusions:</i></b> Dissociative disorders (6B60-6B6Z)
<b>MB21.10</b>	<b>Anterograde amnesia</b> An inability to recall past experiences, especially where recall is to be expected, occurring after an event (psychological or physical) presumed to be responsible for the amnesia.
<b>MB21.11</b>	<b>Retrograde amnesia</b> An inability to recall past experiences, especially where recall is to be expected, preceding an event (psychological or physical) presumed to be responsible for the amnesia.
<b>MB21.12</b>	<b>Transient global amnesia</b> A time-limited episode (lasting up to two days) of short-term memory loss without other signs or symptoms of neurological impairment.
<b>MB21.1Y</b>	<b>Other specified amnesia</b>
<b>MB21.1Z</b>	<b>Amnesia, unspecified</b>
<b>MB21.2</b>	<b>Anosognosia</b> A lack of awareness or failure to recognize one's own illness, symptoms, or functional deficits, considered to be an aspect of the illness.

<b>MB21.3</b>	<b>Confabulation</b> The filling of memory gaps with fabricated, distorted, or misinterpreted memories about oneself or the world, without the conscious intention to deceive.
<b>MB21.4</b>	<b>Disorientation</b> Impairment in or loss of awareness of the position of the self in relation to place, time, situation, or other persons. In severe cases, the sense of personal identity may also be lost.
<b>MB21.5</b>	<b>Distractibility</b> Difficulty focusing on tasks; attention is easily diverted by extraneous stimuli.
<b>MB21.6</b>	<b>Impaired abstract thinking</b> The inability to use concepts and to make and understand generalizations, such as the identifying the properties or pattern shared by a variety of specific items or events.
<b>MB21.7</b>	<b>Impaired executive functioning</b> Impairment in higher-level cognitive abilities, such as planning, sequencing, concept formation, abstracting, and decision-making.
<b>MB21.8</b>	<b>Impaired judgment</b> Deficit in the capacity to make sound, reasoned, and responsible decisions.
<b>MB21.9</b>	<b>Perseveration</b> Persistent repetition of previously used words, phrases, or details that are not responsive to the demands of the situation.
<b>MB21.A</b>	<b>Poor concentration</b> Difficulty focusing attention and sustaining the mental energy necessary to accomplish a task or goal.
<b>MB21.B</b>	<b>Racing thoughts</b> Subjective perception of accelerated thought processes.
<b>MB21.Y</b>	<b>Other specified symptoms and signs involving cognition</b>
<b>MB21.Z</b>	<b>Symptoms and signs involving cognition, unspecified</b>
<b>MB22</b>	<b>Symptoms or signs involving motivation or energy</b> Symptoms and signs involving motivation (the process that initiates, guides, and maintains goal-oriented behaviours) or energy (the strength and vitality required for sustained physical or mental activity). <b>Coded Elsewhere:</b> Fatigue (MG22)
<b>MB22.0</b>	<b>Avolition</b> A general lack of drive, or lack of motivation to pursue meaningful goals (e.g., as evidenced by limited participation in work, school, or socializing with others).

<b>MB22.1</b>	<b>Decreased libido</b> Decreased sexual desire or sexual activity compared with the patient's usual levels of sexual interest and functioning.
<b>MB22.2</b>	<b>Demoralization</b> Loss of confidence in one's ability to cope, with associated feelings of helplessness, hopelessness, and discouragement.
<b>MB22.3</b>	<b>Hopelessness</b> Little or no belief in a positive future.
<b>MB22.4</b>	<b>Increased energy</b> Increased physical or mental resources for activity, typically characterised by increased capacity for work and greater efficiency in responding to stimuli.
<b>MB22.5</b>	<b>Increased goal-directed activity</b> Increased planning of and participation in multiple activities (e.g. sexual, occupational, political, religious), compared to the individual's typical level of activity.
<b>MB22.6</b>	<b>Increased libido</b> Increased sexual desire or sexual activity compared with the patient's usual levels of sexual interest and functioning.
<b>MB22.7</b>	<b>Tiredness</b> Feeling of reduced alertness and an accompanying decrease in mental acuity, in some cases resulting in an impulse or tendency to fall asleep.
<b>MB22.Y</b>	<b>Other specified symptoms and signs involving motivation or energy</b>
<b>MB22.Z</b>	<b>Symptoms or signs involving motivation or energy, unspecified</b>
<b>MB23</b>	<b>Symptoms or signs involving appearance or behaviour</b> <b>Coded Elsewhere:</b> Speech dysfluency (MA81)
<b>MB23.0</b>	<b>Aggressive behaviour</b> Actions intended to threaten or hurt another person or to damage property that may be physical, verbal, or symbolic (e.g., acting against the other person's interests). Aggressive behaviour may be appropriate and self-protective, or inappropriate, hostile, and destructive.
<b>MB23.1</b>	<b>Antisocial behaviour</b> Behaviour in which the basic rights of others or major age-appropriate societal norms, rules, or laws, are violated.
<b>MB23.2</b>	<b>Avoidance behaviour</b> The act of keeping away from circumstances, situations, or stimuli that cause anxiety or other negative emotions in the individual.
<b>MB23.3</b>	<b>Bradyphrenia</b> Slowness of thoughts or fatigability of initiative

<b>MB23.4</b>	<b>Compulsions</b> Repetitive behaviours or rituals (e.g., washing, checking) or mental acts (e.g., repeating words silently) that the individual feels driven to perform in response to an obsession, according to rigid rules, or to achieve a sense of 'completeness'.  <b>Exclusions:</b> Obsessive-compulsive disorder (6B20)
<b>MB23.5</b>	<b>Coprolalia</b> Involuntary swearing or the involuntary utterance of obscene words or socially inappropriate and derogatory remarks, often in Tourette syndrome.  <b>Exclusions:</b> Tourette syndrome (8A05.00)
<b>MB23.6</b>	<b>Disorganized behaviour</b> Behaviour including posture, gait, and other activity that is unpredictable or not goal-directed (e.g., shouting at strangers on the street).
<b>MB23.7</b>	<b>Disheveled appearance</b> Untidy or unkempt appearance reflecting a lack of attention to one or more aspects of hygiene, grooming, or dress.
<b>MB23.8</b>	<b>Disruptive behaviour</b> Behaviour that causes disorder and turmoil in others or one's environment (e.g., angry outbursts, arguments, disobedience).  <b>Exclusions:</b> Disruptive behaviour or dissocial disorders (6C90-6C9Z)
<b>MB23.9</b>	<b>Echolalia</b> The automatic repetition of vocalizations, words, or phrases uttered by another person, which may be immediate or delayed (e.g., repetition of phrases earlier heard on television), without meaningful communicative function. Echolalia is a common feature of communication abnormalities in Autism spectrum disorder, but may also occur in other Mental, behavioural or neurodevelopmental disorders and certain neurological conditions, among children with severe visual impairment, and occasionally in typically developing children. Echolalia does not include repetition as a normal feature of language acquisition in early childhood development.  <b>Exclusions:</b> Autism spectrum disorder (6A02) Developmental language disorder (6A01.2)
<b>MB23.A</b>	<b>Excessive crying of child, adolescent, or adult</b> Episodes of crying for several hours a day for more than several days a week for several weeks in an otherwise healthy child, adolescent, or adult.
<b>MB23.C</b>	<b>Increased sociability</b> Decrease or loss of normal social inhibitions manifested in increased impulses to be with and talk to other people, including overfamiliarity, compared to the individual's typical level of activity.
<b>MB23.D</b>	<b>Mutism</b> A lack of verbal output that may be generalised or restricted to specific situations.  <b>Coded Elsewhere:</b> Akinetic mutism (MB21.Y)

<b>MB23.E</b>	<b>Non-suicidal self-injury</b> Intentional self-inflicted injury to the body, most commonly cutting, scraping, burning, biting, or hitting, with the expectation that the injury will lead to only minor physical harm.
<b>MB23.F</b>	<b>Odd or peculiar appearance</b> Grooming, clothing, or other aspects of personal appearance that are eccentric, unusual, or peculiar, and inconsistent with cultural or subcultural norms.
<b>MB23.G</b>	<b>Odd or peculiar behaviour</b> Behaviour including posture and gait that is eccentric, unusual, or peculiar, and is inconsistent with cultural or subcultural norms.
<b>MB23.H</b>	<b>Panic attack</b> A discrete episode of intense fear or apprehension accompanied by the rapid and concurrent onset of a number of characteristic symptoms. These symptoms may include, but are not limited to, palpitations or increased heart rate, sweating, trembling, sensations of shortness of breath, feelings of choking, chest pain, nausea or abdominal distress, feelings of dizziness or lightheadedness, chills or hot flushes, tingling or lack of sensation in extremities (i.e., paresthesias), depersonalization or derealization, fear of losing control or going mad, and fear of imminent death. Panic attacks can appear out of the blue or can be triggered by particular situations.  <b>Exclusions:</b> Panic disorder (6B01) recurrent panic attacks (6B01)
<b>MB23.J</b>	<b>Poor personal hygiene</b> Unwillingness or inability to maintain a level of personal cleanliness that is in keeping with the standards of the person's culture, society, or setting, such as not washing or brushing one's teeth.
<b>MB23.K</b>	<b>Poverty of speech</b> A general lack of the unprompted content and elaboration normally seen in speech that is attributed to poverty of thought. It is one of the negative symptoms of Schizophrenia.
<b>MB23.L</b>	<b>Pressured speech</b> Speech in which the person feels undue pressure to get the words out. The person's speech is usually rapid, loud, and emphatic and may be difficult or impossible to interrupt. Frequently, the person talks without any social stimulation and may continue to talk even though no one is listening.  <b>Exclusions:</b> Schizophrenia or other primary psychotic disorders (6A20-6A2Z)  Bipolar or related disorders (6A60-6A6Z)
<b>MB23.M</b>	<b>Psychomotor agitation</b> Excessive motor activity, usually manifested by purposeless behaviours such as fidgeting, shifting, fiddling, inability to sit or stand still, wringing of the hands, etc.

<b>MB23.N</b>	<b>Psychomotor retardation</b> A visible generalised slowing of movements and speech.  <b>Exclusions:</b> Stupor (MB20.0)
<b>MB23.Q</b>	<b>Social withdrawal</b> Retreat from relationships and other social interactions
<b>MB23.R</b>	<b>Suicide attempt</b> A specific episode of self-harming behaviour undertaken with the conscious intention of ending one's life.
<b>MB23.S</b>	<b>Suicidal behaviour</b> Concrete actions, such as buying a gun or stockpiling medication, that are taken in preparation for fulfilling a wish to end one's life but that do not constitute an actual suicide attempt.
<b>MB23.Y</b>	<b>Other specified symptoms and signs involving appearance and behaviour</b>
<b>MB23.Z</b>	<b>Symptoms and signs involving appearance and behaviour, unspecified</b>
<b>MB24</b>	<b>Symptoms or signs involving mood or affect</b> Symptoms and signs involving the regulation and expression of emotions or feeling states.
<b>MB24.0</b>	<b>Ambivalence</b> Conflicting ideas, wishes, or feelings toward a person, thing or situation that are distressing and may create difficulties in making decisions.
<b>MB24.1</b>	<b>Anger</b> An emotional state related to one's psychological interpretation of having been threatened that may range in intensity from mild irritation to intense fury and rage.
<b>MB24.2</b>	<b>Anhedonia</b> Inability to experience pleasure from normally pleasurable activities.
<b>MB24.3</b>	<b>Anxiety</b> Apprehensiveness or anticipation of future danger or misfortune accompanied by a feeling of worry, distress, or somatic symptoms of tension. The focus of anticipated danger may be internal or external.  <b>Inclusions:</b> Nervous tension
<b>MB24.4</b>	<b>Apathy</b> A reduction or lack of feeling, emotion, interest, or concern; a state of indifference.
<b>MB24.5</b>	<b>Depressed mood</b> Negative affective state characterised by low mood, sadness, emptiness, hopelessness, or dejection  <b>Exclusions:</b> Mood disorders (6A60-6A8Z)  Low self-esteem (MB28.9)

<b>MB24.6</b>	<b>Disturbance of affect</b> A disturbance in the expression or outward manifestation of mood.
<b>MB24.60</b>	Constricted affect A marked reduction in the expressive range and intensity of affect, but less than is observed in Blunted affect.
<b>MB24.61</b>	Blunted affect A severe reduction in the expressive range and intensity of affect, but less than is observed in Flat affect.
<b>MB24.62</b>	Flat affect Absence or near absence of any sign of affective expression.
<b>MB24.63</b>	Labile affect Marked variability in emotional expression, with repeated, rapid, and abrupt shifts.
<b>MB24.64</b>	Inappropriate affect Affective expression that is discordant with the content of the person's speech or ideation, or incompatible with the demands of a particular situation.
<b>MB24.6Y</b>	Other specified disturbance of affect
<b>MB24.6Z</b>	Disturbance of affect, unspecified
<b>MB24.7</b>	<b>Dysphoria</b> An unpleasant mood state, which can include feelings of depression, anxiety, discontent, irritability, and unhappiness
<b>MB24.8</b>	<b>Elevated mood</b> A positive mood state typically characterised by increased energy and self-esteem which may be out of proportion to the individual's life circumstances.
<b>MB24.9</b>	<b>Euphoria</b> An exaggerated feeling of physical and emotional well-being and vitality.
<b>MB24.A</b>	<b>Fear</b> An emotional response to perceived imminent threat or danger associated with urges to flee or fight.
<b>MB24.B</b>	<b>Feelings of guilt</b> Remorse related to past events or one's past actions (or inaction), thoughts, or desires.
<b>MB24.C</b>	<b>Irritability</b> A mood state characterised by being easily annoyed and provoked to anger, out of proportion to the circumstances.

<b>MB24.D</b>	<b>Leaden paralysis</b> A feeling that one's arms or legs are as heavy as lead, associated with a form of depression that also commonly includes overeating and oversleeping.
<b>MB24.E</b>	<b>Mental rumination</b> Mental preoccupation with negative events, personal characteristics, or failures.
<b>MB24.F</b>	<b>Restlessness</b> A feeling of being unable to keep still.
<b>MB24.G</b>	<b>Tantrum</b> An emotional outburst, usually among children or those in emotional distress, that is typically characterised by stubbornness, crying, screaming, defiance, anger, a resistance to attempts at pacification, and in some cases hitting or other violent behaviour.
<b>MB24.H</b>	<b>Worry</b> Unpleasant thoughts that are difficult to control, related to anticipated potential negative events.
<b>MB24.Y</b>	<b>Other specified symptoms and signs involving mood or affect</b>
<b>MB24.Z</b>	<b>Symptoms and signs involving mood or affect, unspecified</b>
<b>MB25</b>	<b>Symptoms or signs involving form of thought</b> Symptoms and signs involving the logical sequence and coherence of thought, typically manifest in speech, including thought disorder (circumstantiality, tangentiality, disorganised thinking and incoherence), flight of ideas, neologisms, and thought blocking.
<b>MB25.0</b>	<b>Symptoms and signs of thought disorder</b> Disturbances in the associative thought process typically manifest in speech or writing that range from circumstantiality to incoherence. These may be indicative of Schizophrenia and other primary psychotic disorders but can also occur in other mental disorders (e.g., Delirium).
<b>MB25.00</b>	<b>Circumstantiality</b> A relatively mild disturbance in the associative thought process typically manifest in speech or writing characterised by delay in getting to the point because of the interpolation of unnecessary details and irrelevant parenthetical remarks.
<b>MB25.01</b>	<b>Tangentiality</b> A disturbance in the associative thought process typically manifest in speech in which the person tends to digress readily from the topic under discussion to other topics through associations without ever returning to the original topic.

<b>MB25.02</b>	Disorganised thinking A disturbance in the associative thought process typically manifested in speech in which the person shifts suddenly from one topic to another that is unrelated or minimally related to the first. The individual gives no indication of being aware of the disconnectedness or illogicality of their thinking.
<b>MB25.03</b>	Incoherence Speech or thinking that is so disorganized that it is essentially incomprehensible to others.
<b>MB25.0Y</b>	Other specified symptoms and signs of thought disorder
<b>MB25.0Z</b>	Symptoms and signs of thought disorder, unspecified
<b>MB25.1</b>	<p><b>Flight of ideas</b> A nearly continuous flow of thoughts, usually manifested in speech, with rapid changes from topic to topic that are often based on understandable associations, distracting stimuli, or plays on words. In severe cases, the changes may be so rapid that speech is disorganized and incoherent.</p>
<b>MB25.2</b>	<p><b>Neologisms</b> The invention of new words that have meaning only to the person using them. May also include the use of existing words in ways that are inconsistent with their common meaning.</p>
<b>MB25.3</b>	<p><b>Thought blocking</b> A phenomenon usually manifested by the person's speech being suddenly interrupted by silences, experienced as a quick and total emptying of the mind.</p>
<b>MB25.Y</b>	Other specified symptoms and signs of form of thought
<b>MB25.Z</b>	Symptoms and signs of form of thought, unspecified
<b>MB26</b>	<p><b>Symptoms or signs involving content of thought</b> Symptoms and signs involving content of thought include delusions, experiences of influence, passivity, and control, grandiosity, homicidal ideation, identity disturbance, obsessions, overvalued ideas, paranoid ideation, referential thinking, suspiciousness, and suicidal ideation.</p>
<b>MB26.0</b>	<p><b>Delusion</b> A belief that is demonstrably untrue or not shared by others, usually based on incorrect inference about external reality. The belief is firmly held with conviction and is not, or is only briefly, susceptible to modification by experience or evidence that contradicts it. The belief is not ordinarily accepted by other members or the person's culture or subculture (i.e., it is not an article of religious faith).</p>
<b>MB26.00</b>	<p>Bizarre delusion A delusion that involves a phenomenon that would be regarded as physically impossible within the person's cultural context.</p>

<b>MB26.01</b>	Delusion of being controlled A delusion that involves an external force or person controlling one's feelings, impulses, thoughts, or behaviour.
	<b><i>Exclusions:</i></b> Experiences of influence, passivity, and control (MB26.1)
<b>MB26.02</b>	Delusion of guilt A delusion involving exaggerated or inappropriate responsibility, need for punishment or retribution, or disproportionate consequences of one's actions, such as that a minor error in the past will lead to disaster, that the person has committed a sin or horrible crime and should be punished severely, or that the person is responsible for a horrible outcome with which there can be no possible connection.
<b>MB26.03</b>	Delusion of reference A delusion that events, objects, or other people in the person's immediate environment have a particular and unusual personal significance, usually of a negative or pejorative nature.
<b>MB26.04</b>	Erotomaniac delusion A delusion that another person, usually of higher status, is in love with the individual.
<b>MB26.05</b>	Grandiose delusion A delusion of inflated worth, power, knowledge, identity, or special relationship to a deity or famous person.
	<b><i>Exclusions:</i></b> Grandiosity (MB26.2)
<b>MB26.06</b>	Jealous delusion A delusion that one's sexual partner is unfaithful.
<b>MB26.07</b>	Persecutory delusion A delusion in which the central theme is that one (or someone to whom one is close) is being attacked, mocked, harassed, cheated, conspired against, or persecuted.
<b>MB26.08</b>	Religious delusion A delusion involving religious or spiritual themes or subject matter that other members of the person's religious group do not accept as possible.
<b>MB26.09</b>	Somatic delusion A delusion involving the functioning or appearance of one's body, including of having a serious disease.
	<b><i>Coded Elsewhere:</i></b> Olfactory reference disorder (6B22)
<b>MB26.0A</b>	Nihilistic delusion A delusion that the self, part of the self, part of the body, other persons, or the whole world has ceased to exist.

<b>MB26.0B</b>	Misidentification delusion A delusion that people in one's environment, which may include family members and loved ones, are imposters or actors or are otherwise not who they seem to be.
<b>MB26.0C</b>	Delusion of impoverishment A delusional conviction that one is currently destitute or soon will be, or that one does not have the necessary financial resources to live on, in spite of evidence to the contrary.
<b>MB26.0Y</b>	Other specified delusion
<b>MB26.0Z</b>	Delusion, unspecified
<b>MB26.1</b>	<b>Experiences of influence, passivity, and control</b> The experience that one's feelings, impulses, thoughts, bodily functions, or behaviour are under the control of another person or other external force instead of under one's own control. These experiences may or may not be accompanied by a delusional belief that provides an explanation for the subjective experience. <b>Exclusions:</b> Delusion of being controlled (MB26.01)
<b>MB26.10</b>	Thought broadcasting The experience that one's thoughts are accessible by others so that others know what one is thinking.
<b>MB26.11</b>	Thought insertion The experience that certain thoughts are being placed in one's mind by others.
<b>MB26.12</b>	Thought withdrawal The experience that one's thoughts are being removed by an outside person or force.
<b>MB26.1Y</b>	Other specified experiences of influence, passivity, and control
<b>MB26.1Z</b>	Experiences of influence, passivity, and control, unspecified
<b>MB26.2</b>	<b>Grandiosity</b> Exaggerated self-esteem or an unrealistic belief in one's superiority, importance, capacities, or identity. <b>Exclusions:</b> Grandiose delusion (MB26.05)
<b>MB26.3</b>	<b>Homicidal ideation</b> Thoughts, ideas, or ruminations about killing another person, which range from vague ideas of revenge to detailed and fully formulated plans but do not include actual homicidal attempts.
<b>MB26.4</b>	<b>Identity disturbance</b> Distortion or inconsistency in the sense or view of sameness and historical continuity of one's self.

<b>MB26.5</b>	<b>Obsessions</b> Repetitive and persistent thoughts (e.g., of contamination), images (e.g., of violent scenes), or impulses/urges (e.g., to stab someone) that are experienced as intrusive, unwanted, and are commonly associated with anxiety.
<b>MB26.6</b>	<b>Overvalued ideas</b> Unreasonable and sustained beliefs that are maintained with less than delusional intensity (i.e., the person is able to acknowledge the possibility that the belief may not be true). An alternative use of this term is to refer to conventional or plausible thoughts (e.g., religious concepts, political ideas, or excessively idealistic beliefs) that are held with such a level of intensity so that the person's life is taken up by them.  <b>Exclusions:</b> Delusion (MB26.0) Grandiosity (MB26.2) Paranoid ideation (MB26.7) Referential thinking (MB26.8)
<b>MB26.7</b>	<b>Paranoid ideation</b> Ideation, not held with delusional intensity, involving suspiciousness or beliefs of being harassed, persecuted, or unfairly treated by others.  <b>Exclusions:</b> Persecutory delusion (MB26.07)
<b>MB26.8</b>	<b>Referential thinking</b> Ideation, not held with delusional intensity, that random or coincidental events are of particular and unusual significance to the person.  <b>Exclusions:</b> Delusion of reference (MB26.03)
<b>MB26.9</b>	<b>Suspiciousness</b> The behaviour of others is viewed with anxiety, mistrust, or hostility and perceived as potentially threatening.
<b>MB26.A</b>	<b>Suicidal ideation</b> Thoughts, ideas, or ruminations about the possibility of ending one's life, ranging from thinking that one would be better off dead to formulation of elaborate plans.  <b>Exclusions:</b> Suicide attempt (MB23.R) Personal history of self-harm (QC4B)
<b>MB26.Y</b>	<b>Other specified symptoms or signs involving content of thought</b>
<b>MB26.Z</b>	<b>Symptoms or signs involving content of thought, unspecified</b>
<b>MB27</b>	<b>Symptoms or signs involving perceptual disturbance</b> Symptoms and signs involving a disruption in sensory perception, including depersonalization, derealization, and hallucinations in any modality.  <b>Exclusions:</b> disturbances of skin sensation (MB40.5)

<b>MB27.0</b>	<b>Depersonalisation</b> Experiencing the self as strange or unreal, or feeling detached from, or as though one were an outside observer of, one's thoughts, feelings, sensations, body, or actions. Depersonalization may take the form of emotional and/or physical numbing, a sense of watching oneself from a distance or 'being in a play', or perceptual alterations (e.g., a distorted sense of time).
<b>MB27.1</b>	<b>Derealisation</b> Experiencing other persons, objects, or the world as strange or unreal (e.g., dreamlike, distant, foggy, lifeless, colourless, or visually distorted) or feeling detached from one's surroundings.
<b>MB27.2</b>	<b>Hallucinations</b> Sensory perceptions of any modality occurring in the absence of the appropriate (external) stimulus. The person may or may not have insight into the unreal nature of the perception.
<b>MB27.20</b>	Auditory hallucinations Hallucinations involving the perception of sound, most frequently of voices but sometimes of clicks or other noises, that are not restricted to the period of awakening or the onset of sleep.
<b>MB27.21</b>	Gustatory hallucinations Hallucinations of taste in the absence of an actual external stimulus.
<b>MB27.22</b>	Hypnopompic hallucinations Hallucinations that occur during the period of awakening, most commonly of the visual, tactile or auditory modality.
<b>MB27.23</b>	Hypnagogic hallucinations Hallucinations that occur at the onset of sleep, most commonly of the visual, tactile or auditory modality.
<b>MB27.24</b>	Olfactory hallucinations Hallucinations involving the perception of odour (e.g., of burning rubber, decaying fish, orange peel) in the absence of an actual external stimulus.
<b>MB27.25</b>	Somatic hallucinations Hallucinations involving the perception of an unusual physical state or event within the body, such as an electrical impulse running down one's arms or an object inside one's chest.
<b>MB27.26</b>	Tactile hallucinations Hallucinations involving the perception of being touched (e.g., feeling like bugs are crawling on the skin, pins being stuck into one's finger) that are not restricted to the period of awakening or the onset of sleep.

<b>MB27.27</b>	Visual hallucinations Hallucinations involving sight in the absence of an actual visual stimulus that are not restricted to the period of awakening or the onset of sleep. Visual hallucinations may involve formed images, such as of people, or of unformed images, such as flashes of light. Visual hallucinations must be distinguished from illusions, which are visual misperceptions of real external stimuli.
	<b>Coded Elsewhere:</b> Visual release hallucinations (9D56)
<b>MB27.2Y</b>	Other specified hallucinations
<b>MB27.2Z</b>	Hallucinations, unspecified
<b>MB27.3</b>	<b>Disturbance of body image</b> Excessively negative, distorted, or inaccurate perception of one's own body or parts of it.
<b>MB27.4</b>	<b>Illusions</b> A misinterpretation of a true sensation (e.g., hearing voices in the sound of running water, the perception of figures in shadows).  <b>Exclusions:</b> Visual illusions (9D54)
<b>MB27.Y</b>	<b>Other specified symptoms and signs of perceptual disturbance</b>
<b>MB27.Z</b>	<b>Symptoms and signs of perceptual disturbance, unspecified</b>
<b>MB28</b>	<b>Symptoms or signs related to personality features</b> Symptoms and signs involving the characteristics or qualities possessed by a person that uniquely influence his or her cognition, motivations, and behaviours in various situations.
<b>MB28.0</b>	<b>Attention seeking</b> A tendency to engage in behaviour designed to attract notice and to make oneself the focus of others' attention.
<b>MB28.1</b>	<b>Callousness</b> Lack of concern for the feelings or problems of others; a lack of guilt or remorse about the negative or harmful effects of one's actions on others.
<b>MB28.2</b>	<b>Eccentricity</b> A tendency toward appearance or behaviour that is odd, unusual, peculiar, or unconventional, and is inconsistent with cultural or subcultural norms.
<b>MB28.3</b>	<b>Entitlement</b> The belief that one is inherently deserving of privileges or special treatment.
<b>MB28.4</b>	<b>Hostility</b> A tendency to experience persistent or frequent angry feelings, especially in response to minor slights and insults, and to adopt an unfriendly or threatening attitude in interactions with others.

<b>MB28.5</b>	<b>Impulsivity</b> A tendency to act on the spur of the moment in response to immediate stimuli, characterised by lack of deliberation and failure to consider risks and consequences before acting. Impulsivity may reflect a desire for immediate rewards or an inability to delay gratification.
<b>MB28.6</b>	<b>Indecisiveness</b> A tendency to have difficulty making decisions or committing to a course of action.
<b>MB28.7</b>	<b>Irresponsibility</b> A pattern of disregard for and failure to honour obligations or commitments; a lack of respect for and follow-through on agreements or promises; carelessness with others' property.
<b>MB28.8</b>	<b>Low frustration tolerance</b> Diminished ability to regulate one's emotions and behaviour in response to frustrating circumstances.
<b>MB28.9</b>	<b>Low self-esteem</b> Low appraisal of one's self-worth.
<b>MB28.A</b>	<b>Negative affectivity</b> A tendency to experience a broad range of distressing emotions, e.g. anxiety, anger, irritability, depression, and other negative emotional states, often in response to even relatively minor actual or perceived stressors.  <i>Inclusions:</i> negative emotionality proneness to negative emotional states
<b>MB28.B</b>	<b>Negativism</b> A tendency to oppose or resist suggestions or advice, or to resist stubbornly for no apparent reason.
<b>MB28.C</b>	<b>Perfectionism</b> An inclination to demand flawlessness of oneself or others and setting excessively high standards.
<b>MB28.D</b>	<b>Pessimism</b> An inclination to emphasize adverse aspects, conditions, and possibilities, or to expect the worst possible outcome.
<b>MB28.E</b>	<b>Recklessness</b> A tendency to engage in behaviour that potentially endangers a person's physical health, safety, or life.
<b>MB28.F</b>	<b>Sensation seeking</b> An inclination to search for experiences and feelings that are varied, novel, complex, and intense.

<b>MB28.G</b>	<b>Stubbornness</b> A steadfast adherence to an opinion, purpose, or course of action in spite of reason, arguments, or persuasion.
<b>MB28.H</b>	<b>Submissiveness</b> A tendency to adapt one's behaviour to the actual or perceived interests and desires of others even when doing so is antithetical to one's own interests, needs, or desires.
<b>MB28.Y</b>	<b>Other specified symptoms and signs related to personality features</b>
<b>MB28.Z</b>	<b>Symptoms and signs related to personality features, unspecified</b>
<b>MB29</b>	<b>Symptoms or signs involving eating and related behaviour</b> <p>Symptoms and signs related to disturbances in the regulation or form of eating behaviour that are not developmentally appropriate or culturally sanctioned, including avoidant or restrictive eating, binge eating, decreased appetite, eating of non-nutritive substances, increased appetite, purging behaviour, and rumination-regurgitation.</p> <p><b>Coded Elsewhere:</b> Decreased appetite (MG43.8)</p> <ul style="list-style-type: none"> <li>Excessive weight gain (MG43.6)</li> <li>Excessive weight loss (MG43.5)</li> <li>Increased appetite (MG43.9)</li> <li>Overeating (MG43.1)</li> </ul>
<b>MB29.0</b>	<b>Avoidant or restrictive eating</b> <p>Acceptance of only a limited diet, which may be defined in terms of a specific dietary composition or sensory features of food, that is inconsistent with cultural or subcultural norms.</p> <p><b>Exclusions:</b> Avoidant-restrictive food intake disorder (6B83)</p>
<b>MB29.1</b>	<b>Binge eating</b> <p>An episode in which an individual eats notably more than usual and feels that she or he is unable to stop or limit the amount or type of food eaten.</p> <p><b>Exclusions:</b> Bulimia Nervosa (6B81) Binge eating disorder (6B82)</p>
<b>MB29.2</b>	<b>Eating of non-nutritive substances</b> <p>Consumption of non-food objects and materials (e.g., clay, soil, chalk, plaster, plastic, metal and paper) or raw food ingredients (e.g., large quantities of salt or corn flour).</p> <p><b>Exclusions:</b> Pica (6B84)</p>

<b>MB29.3</b>	<b>Purging behaviour</b> Behaviour aimed at the removal of ingested food from the body with the specific intention to lose weight or prevent weight gain (e.g., self-induced vomiting, laxative abuse, or the use of enemas).
	<b><i>Exclusions:</i></b> Bulimia Nervosa (6B81) Anorexia Nervosa (6B80)
<b>MB29.4</b>	<b>Rumination-regurgitation</b> Rechewing of previously swallowed food that has been brought back to the mouth through regurgitation, which may then be reswallowed or spat out.
	<b><i>Exclusions:</i></b> Rumination-regurgitation disorder (6B85) Bulimia Nervosa (6B81) Anorexia Nervosa (6B80)
<b>MB29.Y</b>	<b>Other specified symptoms and signs involving eating and related behaviour</b>
<b>MB29.Z</b>	<b>Symptoms and signs involving eating and related behaviour, unspecified</b>
<b>MB2A</b>	<b>Symptoms or signs involving elimination</b> Symptoms and signs involving the behavioural components of defecation (soiling, faecal elimination) and urination.
<b>MB2A.0</b>	<b>Soiling</b> The passage of faeces in clothing, bed, or other inappropriate places in an individual who has reached a developmental age where faecal continence is ordinarily expected.
	<b><i>Exclusions:</i></b> Encopresis (6C01)
<b>MB2A.1</b>	<b>Wetting</b> The voiding of urine into clothes or bed, which may occur during the day or night in an individual who has reached a developmental age where urinary continence is ordinarily expected.
	<b><i>Exclusions:</i></b> Enuresis (6C00)
<b>MB2A.Y</b>	<b>Other specified symptoms and signs involving elimination</b>
<b>MB2A.Z</b>	<b>Symptoms and signs involving elimination, unspecified</b>
<b>MB2Y</b>	<b>Other specified mental or behavioural symptoms, signs or clinical findings</b>

## Symptoms, signs or clinical findings of the nervous system (MB40-MB9Y)

Symptoms or signs involving the nervous system (MB40-MB6Y)

**Coded Elsewhere:** Fear of neurological disease (MG24.9)

Symptom or complaint of a body part (ME86)

Age-associated cognitive decline (MB21.0)

Speech disturbances (MA80)

Types of seizures (8A68)

Fear of cancer of neurological system (MG24.0Y)

**MB40**

### **Sensation disturbance**

**MB40.0** **Asomatognosia**

**MB40.1** **Allodynia**

Pain due to a normally non-painful stimulus

**MB40.2** **Anacusis**

**MB40.3** **Anaesthesia of skin**

Partial or complete loss of sensation affecting the skin, most commonly affecting a circumscribed area and resulting from sensory nerve damage as from injury or leprosy.

**Inclusions:** Numbness of skin

**MB40.4** **Tingling fingers or feet or toes**

**MB40.5** **Hyperaesthesia**

Increased sensibility to stimuli of sense

**MB40.6** **Dysesthesia**

**MB40.7** **Acroparaesthesia**

Severe pain in the extremities

**MB40.8** **Analgesia**

**MB40.9** **Neurological neglect syndrome**

**MB40.Y** **Other specified sensation disturbance**

**MB40.Z** **Sensation disturbance, unspecified**

**MB41**

### **Disturbances of smell and taste**

Disturbances of smell and taste include anosmia, parosmia, parageusia, and other disturbances of smell and taste.

**MB41.0** **Anosmia**

**MB41.1** **Parosmia**

<b>MB41.2</b>	<b>Dysgeusia</b> A disorder characterised by an alteration of the sense of taste
	<b>Inclusions:</b> cacogeusia ageusia
<b>MB41.3</b>	<b>Hyposmia</b> Decreased ability to smell
<b>MB41.Y</b>	<b>Other specified disturbances of smell and taste</b>
<b>MB41.Z</b>	<b>Disturbances of smell and taste, unspecified</b>
<b>MB42</b>	<b>Phonophobia</b> Hypersensitivity to sounds
<b>MB43</b>	<b>Dyssomnia</b> Difficulties to fall asleep, or to remain sleeping
<b>MB44</b>	<b>Abnormalities of gait and mobility</b> Abnormalities of gait and mobility include ataxic gait, paralytic gait, difficulty in walking, immobility, and other abnormalities of gait and mobility.
	<b>Inclusions:</b> Immobility syndrome (FB32.3) Ataxia, unspecified (MB45.0) Hereditary ataxia (8A03.1) ataxia, locomotor (syphilitic) (1A62.01)
<b>MB44.0</b>	<b>Ataxic gait</b>
	<b>Inclusions:</b> Staggering gait
<b>MB44.1</b>	<b>Paralytic gait</b> A collection of gait abnormalities due to affected motor control, sensory feedback, and muscle strength.
	<b>Inclusions:</b> Spastic gait
<b>MB44.2</b>	<b>Difficulty in walking</b>
<b>MB44.3</b>	<b>Immobility</b>
	<b>Inclusions:</b> Bedfast Chairfast
	<b>Exclusions:</b> Catatonia (6A40-6A4Z) Psychomotor retardation (5C50.B)
<b>MB44.Y</b>	<b>Other specified abnormalities of gait and mobility</b>
<b>MB44.Z</b>	<b>Abnormalities of gait and mobility, unspecified</b>

**MB45****Lack of coordination**

Other lack of coordination is a lack of coordination other than abnormal involuntary movements and abnormalities of gait and mobility.

- Exclusions:**
- Vertigo (MB48.0)
  - Hereditary ataxia (8A03.1)
  - Ataxic gait (MB44.0)

**MB45.0 Ataxia, unspecified****MB45.1 Automatism**

Repetitive unconscious gestures such as lip smacking, chewing or swallowing

**MB45.2 Atonia**

Loss of muscle tone

**MB45.3 Head drop****MB45.4 Intention tremor**

Cerebellar tremor characterised by a broad course and low frequency

**MB45.Y Other specified lack of coordination****MB45.Z Lack of coordination, unspecified****MB46****Abnormal involuntary movements**

Abnormal involuntary movements include abnormal head movements, tremor, cramp, spasm, fasciculation, and other abnormal involuntary movements

- Exclusions:**
- Movement disorders (8A00-8A0Z)
  - Stereotyped movement disorder (6A06)
  - Tic disorders (8A05)
  - Essential tremor or related tremors (8A04.1)
  - Intention tremor (MB45.4)

**Coded Elsewhere:** Tremor due to certain specified central nervous system diseases (8A04.33)

**MB46.0 Asterixis****MB46.1 Abnormal head movements****MB46.2 Athetosis**

Twisting and writhing movements

**MB46.3 Drop attack**

A sudden spontaneous fall while standing and recovery within seconds or minutes

**MB46.4 Titubation**

Head tremor of cerebellar origin

**MB46.5 Shuddering**

<b>MB46.Y</b>	<b>Other specified abnormal involuntary movements</b>
<b>MB46.Z</b>	<b>Abnormal involuntary movements, unspecified</b>
<b>MB47</b>	<b>Abnormality of tonus and reflex</b>
<b>MB47.0</b>	<b>Abnormal reflex</b>
	<b><i>Exclusions:</i></b> vasovagal reaction or syncope (MG45) hyperactive gag reflex (CA00-CA0Z) abnormal pupillary reflex (LA11.62)
<b>MB47.1</b>	<b>Abnormal posture</b>
<b>MB47.2</b>	<b>Clonus</b> A series of involuntary muscle contractions and relaxations
<b>MB47.3</b>	<b>Cramp or spasm</b>
	<b><i>Exclusions:</i></b> Infantile spasms (8A62.0) carpopedal spasm (MB47.D)
<b>MB47.4</b>	<b>Dystonia</b> Sustained muscle contraction, involuntary movements that can lead to fixed abnormal postures
<b>MB47.5</b>	<b>Fasciculation</b>
<b>MB47.6</b>	<b>Meningismus</b>
<b>MB47.7</b>	<b>Muscle fibrillation</b> An involuntary muscle contraction and relaxation in a muscle fiber
<b>MB47.8</b>	<b>Muscular hypertonia</b> <b>Coded Elsewhere:</b> Congenital hypertonia (KB08.1)
<b>MB47.9</b>	<b>Myotonia</b> Slow relaxation of the muscles after voluntary contraction
<b>MB47.A</b>	<b>Ophthalmoparesis</b> Paresis of one or more extraocular muscles
<b>MB47.B</b>	<b>Opisthotonos</b> Arching position of the body due spasm of the axial muscles along the spinal column

<b>MB47.C</b>	<b>Tendency to fall</b>
	<p><b>Inclusions:</b> Tendency to fall because of old age or other unclear health problems</p> <p><b>Exclusions:</b> falls causing injury (Chapter 22) Dizziness and giddiness (MB48) Syncope and collapse (MG45) Difficulty in walking (MB44.2) accidents (Chapter 23)</p>
<b>MB47.D</b>	<b>Tetany</b>
	<p><b>Exclusions:</b> Parathyroid tetany (5A50) post-thyroidectomy tetany (5D42)</p> <p><b>Coded Elsewhere:</b> Neonatal tetany without calcium or magnesium deficiency (KB61.1)</p>
<b>MB47.Y</b>	<b>Other specified abnormality of tonus and reflex</b>
<b>MB47.Z</b>	<b>Abnormality of tonus and reflex, unspecified</b>
<b>MB48</b>	<b>Dizziness and giddiness</b> An imprecise term which may refer to a sense of spatial disorientation, motion of the environment, or lightheadedness.
	<p><b>Exclusions:</b> Vertiginous syndromes (AB31.7)</p>
<b>MB48.0</b>	<b>Vertigo</b>
	<p><b>Coded Elsewhere:</b> Other peripheral vertigo (AB34.1) Epidemic vertigo (1C8Y)</p>
<b>MB48.00</b>	Vertigo of central origin Central vertigo is usually a result of an abnormal processing of the vestibular sensory input by the central nervous system due to either a disruption of central integrators (i.e. brain stem, cerebellum) or a sensory information mismatch (i.e. from the cortex). Lesions that affect the vestibular nerve or root entry zone (i.e. cerebellopontine angle [CPA] lesions) result in imbalance by affecting primary vestibular sensory information
	<p><b>Inclusions:</b> Central positional nystagmus</p>
<b>MB48.0Y</b>	Other specified vertigo
<b>MB48.0Z</b>	Vertigo, unspecified
<b>MB48.1</b>	<b>Disorder of equilibrium</b>
<b>MB48.2</b>	<b>Exertional dizziness</b>
<b>MB48.3</b>	<b>Light-headedness</b>
<b>MB48.4</b>	<b>Presyncope</b>

<b>MB48.Y</b>	<b>Other specified dizziness and giddiness</b>
<b>MB48.Z</b>	<b>Dizziness and giddiness, unspecified</b>
<b>MB49</b>	<p><b>Aura</b>  Reversible visual and/or sensory symptoms prior to a seizure (few seconds) or migraine with aura (20 minutes)</p>
<b>MB4A</b>	<b>Apraxia</b>
<b>MB4B</b>	<p><b>Symbolic dysfunctions</b></p> <p><b>Exclusions:</b> Developmental learning disorder (6A03)</p> <p><b>Coded Elsewhere:</b> Echolalia (MB23.9)</p>
<b>MB4B.0</b>	<p><b>Dyslexia and alexia</b>  Dyslexia and alexia refer to the loss, usually in adulthood, of a previous ability to read fluently and to accurately comprehend written material that is inconsistent with general level of intellectual functioning and is acquired after the developmental period in individuals who had previously attained these skills, such as due to a stroke or other brain injury.</p> <p><b>Exclusions:</b> Developmental learning disorder (6A03)</p> <p><b>Coded Elsewhere:</b> Alexia (9D92)</p>
<b>MB4B.1</b>	<p><b>Agnosia</b>  Agnosia refers to the inability to recognize objects, shapes, people, sounds, or smells, which occurs despite otherwise normal functioning of the specific sense and is not accounted for by memory impairment.</p>
<b>MB4B.2</b>	<p><b>Acalculia</b>  Acalculia refers to the loss, usually in adulthood, of a previous ability to perform simple mathematical calculations that is inconsistent with general level of intellectual functioning and is acquired after the developmental period in individuals who had previously attained these skills, such as due to a stroke or other brain injury.</p> <p><b>Exclusions:</b> Developmental learning disorder (6A03)</p>
<b>MB4B.3</b>	<p><b>Agraphia</b>  Agraphia refers to the loss, usually in adulthood, of a previous ability to write that is inconsistent with general level of intellectual functioning and is acquired after the developmental period in individuals who had previously attained these skills, such as due to a stroke or other brain injury.</p> <p><b>Exclusions:</b> Developmental learning disorder (6A03)</p>
<b>MB4B.4</b>	<p><b>Anomia</b>  Acquired difficulty in retrieving previously used vocabulary, particularly nouns and verbs.</p>

<b>MB4B.5</b>	<b>Dyscalculia</b> Dyscalculia refers to acquired difficulty with performing simple mathematical calculations that is inconsistent with general level of intellectual functioning, with onset after the developmental period in individuals who had previously attained these skills, such as due to a stroke or other brain injury.
	<b><i>Exclusions:</i></b> Developmental learning disorder (6A03)
<b>MB4B.Y</b>	<b>Other specified symbolic dysfunctions</b>
<b>MB4B.Z</b>	<b>Symbolic dysfunctions, unspecified</b>
<b>MB4C</b>	<b>Gerstmann syndrome</b> Gerstmann syndrome is a very rare neurological disorder characterised by the specific association of acalculia, finger agnosia, left-right disorientation, and agraphia, which is supposed to be secondary to a focal subcortical white matter damage in the parietal lobe.
	<b><i>Exclusions:</i></b> Gerstmann-Straussler-Scheinker syndrome (8E02.1)
<b>MB4D</b>	<b>Headache, not elsewhere classified</b> Headache with characteristic features suggesting that it is a unique diagnostic entity, a finding or complaint, but not fulfilling criteria for any of the headache disorders described above.
	<b><i>Exclusions:</i></b> Trigeminal neuralgia (8B82.0) Atypical facial pain (8A85) Acute headache, not elsewhere classified (MG31.1) Chronic secondary headache or orofacial pain (MG30.6)

## Paralytic symptoms (MB50-MB5Z)

	<b>Coding Note:</b> For primary coding, the following categories are to be used only when the relevant paralytic syndrome (complete) (incomplete) is reported without further specification, or is stated to be old or longstanding but of unspecified cause.
<b>MB50</b>	<b>Tetraplegia</b>
	<b>Coding Note:</b> Code also the causing condition
	<b><i>Inclusions:</i></b> Quadriplegia
<b>MB50.0</b>	<b>Flaccid tetraplegia</b> This is a severe or complete loss of motor function in all four limbs with limp and relaxed muscles.
	<b>Coding Note:</b> Code also the causing condition
<b>MB50.1</b>	<b>Spastic tetraplegia</b> This is a severe or complete loss of motor function in all four limbs with involuntary contractions.
	<b>Coding Note:</b> Code also the causing condition

**MB50.Z** **Tetraplegia, unspecified**

**Coding Note:** Code also the causing condition

**MB51** **Diplegia of upper extremities**

This is a loss of motor control in both arms.

**Coding Note:** Code also the causing condition

**Inclusions:** paralysis of both upper limbs  
Paralysis of both arms

**MB51.0** **Flaccid diplegia of upper extremities**

**MB51.1** **Spastic diplegia of upper extremities**

**MB51.Z** **Diplegia of upper extremities, unspecified**

**Coding Note:** Code also the causing condition

**MB52** **Diplegia of lower extremities**

**Coding Note:** Code also the causing condition

**MB53** **Hemiplegia**

This is a severe or complete loss of motor function on one side of the body.

**Coding Note:** Code also the causing condition

**Exclusions:** congenital cerebral palsy (8D20-8D2Z)  
spastic hemiplegic cerebral palsy (8D20.0)

**MB53.0** **Alternating hemiplegia**

**Coding Note:** Code also the causing condition

**MB53.1** **Flaccid hemiplegia**

This is a severe or complete loss of motor function on one side of the body with limp and relaxed muscles.

**Coding Note:** Code also the causing condition

**MB53.2** **Spastic hemiplegia**

This is a severe or complete loss of motor function on one side of the body with involuntary contractions.

**Coding Note:** Code also the causing condition

**MB53.Z** **Hemiplegia, unspecified**

**Coding Note:** Code also the causing condition

**MB54** **Monoplegia of upper extremity**

This is a loss of motor control in one arm.

**Coding Note:** Code also the causing condition

**Inclusions:** paralysis of upper limb  
Paralysis of arm

<b>MB54.0</b>	<b>Flaccid monoplegia of upper extremity</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB54.1</b>	<b>Spastic monoplegia of upper extremity</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB54.Z</b>	<b>Monoplegia of upper extremity, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB55</b>	<b>Monoplegia of lower extremity</b>
	This is a loss of motor control in one leg.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b>
	paralysis of lower limb
	Paralysis of leg
<b>MB55.0</b>	<b>Flaccid monoplegia of lower extremity</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB55.1</b>	<b>Spastic monoplegia of lower extremity</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB55.Z</b>	<b>Monoplegia of lower extremity, unspecified</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB56</b>	<b>Paraplegia</b>
<b>Coding Note:</b>	Code also the causing condition
<b>MB57</b>	<b>Functional level of injury of spinal cord</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.0</b>	<b>Functional level of injury of cervical spinal cord</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.1</b>	<b>Functional level of injury of thoracic spinal cord</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.2</b>	<b>Functional level of injury of lumbar spinal cord</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.3</b>	<b>Functional level of injury of spinal cord, sacrum</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.Y</b>	<b>Other specified functional level of injury of spinal cord</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.
<b>MB57.Z</b>	<b>Functional level of injury of spinal cord, unspecified</b>
<b>Coding Note:</b>	These codes are not to be used alone. Code first injury or condition.

**MB5Y****Other specified paralytic symptoms****Coding Note:**

For primary coding, the following categories are to be used only when the relevant paralytic syndrome (complete) (incomplete) is reported without further specification, or is stated to be old or longstanding but of unspecified cause.

**MB5Z****Paralytic symptoms, unspecified****Coding Note:**

For primary coding, the following categories are to be used only when the relevant paralytic syndrome (complete) (incomplete) is reported without further specification, or is stated to be old or longstanding but of unspecified cause.

**MB60****Sleepalking****MB6Y****Other specified symptoms or signs involving the nervous system**

Clinical findings in the nervous system (MB70-MB7Y)

**MB70****Clinical findings in cerebrospinal fluid****MB70.0****Abnormal level of enzymes in cerebrospinal fluid****MB70.1****Abnormal level of hormones in cerebrospinal fluid****MB70.2****Abnormal level of drugs, medicaments and biological substances in cerebrospinal fluid****MB70.3****Abnormal level of substances chiefly nonmedicinal as to source in cerebrospinal fluid****MB70.4****Abnormal immunological findings in cerebrospinal fluid****MB70.5****Abnormal microbiological findings in cerebrospinal fluid****MB70.6****Abnormal cytological findings in cerebrospinal fluid****MB70.7****Abnormal histological findings in cerebrospinal fluid****MB70.8****Other abnormal findings in cerebrospinal fluid****MB70.Y****Other specified clinical findings in cerebrospinal fluid****MB70.Z****Clinical findings in cerebrospinal fluid, unspecified****MB71****Clinical findings on diagnostic imaging of central nervous system**

Clinical findings on diagnostic imaging of central nervous system is findings on diagnostic imaging of the brain or the spinal cord which don't appear in normal status of the body. Diagnostic imaging refers to technologies that doctors use to look inside body for clues about a medical condition. X-rays, CT scans, nuclear medicine scans, MRI scans and ultrasound are all types of diagnostic imaging.

**MB71.0****Intracranial space-occupying lesion****MB71.Y****Other specified clinical findings on diagnostic imaging of central nervous system****MB71.Z****Clinical findings on diagnostic imaging of central nervous system, unspecified**

**MB72**

**Results of function studies of the nervous system**

**MB7Y**

**Other specified clinical findings in the nervous system**

**MB9Y**

**Other specified symptoms, signs or clinical findings of the nervous system**

Symptoms, signs or clinical findings of the visual system (MC10-MC2Y)

Symptoms or signs involving the visual system (MC10-MC1Y)

**Coded Elsewhere:** Fear of eye disease (MG24.4)

Ophthalmoparesis (MB47.A)

**MC10**

**Eye appearance abnormal**

**MC11**

**Eye sensation abnormal**

**MC12**

**Chronic enlargement of lacrimal gland**

**MC13**

**Epiphora**

This is overflow of tears onto the face. A clinical sign or condition that constitutes insufficient tear film drainage from the eyes in that tears will drain down the face rather than through the nasolacrimal system.

**MC14**

**Eye discharge**

**MC15**

**Red eye**

**MC16**

**Pallor conjunctiva**

**MC17**

**Icteric sclera**

**MC18**

**Ocular pain**

**Exclusions:** Chronic primary headache or orofacial pain (MG30.03)

Chronic secondary headache or orofacial pain (MG30.6)

**MC19**

**Quadrantanopia**

**MC1A**

**Visual floaters**

Floater are dark spots or shapes that seem to float in front of the retinal image.

**MC1B**

**Symptom or complaint of the eyelid**

**MC1C**

**Symptom or complaint of glasses**

**MC1D**

**Symptom or complaint of contact lens**

**MC1Y**

**Other specified symptoms or signs involving the visual system**

**MC20**

**Clinical findings of the visual system**

<b>MC20.0</b>	<b>Staphyloma</b> This is an abnormal protrusion of the uveal tissue through a weak point in the eyeball. The protrusion is generally black in colour, due to the inner layers of the eye. It occurs due to weakening of outer layer of eye (cornea or sclera) by an inflammatory or degenerative condition. It may be of 5 types, depending on the location on the eye ball (bulbus oculi).
<b>MC20.1</b>	<b>Small drusen of the macula</b>
<b>MC20.2</b>	<b>Hypopyon</b> Hypopyon is inflammatory cells in the anterior chamber of eye. It is a leukocytic exudate, seen in the anterior chamber, usually accompanied by redness of the conjunctiva and the underlying episclera. It is a sign of inflammation of the anterior uvea and iris, i.e. iritis, which is a form of anterior uveitis. The exudate settles at the bottom due to gravity.
<b>MC20.Y</b>	<b>Other specified clinical findings of the visual system</b>
<b>MC21</b>	<b>Impairment of electrophysiological functions</b>
<b>MC21.0</b>	<b>Profound impairment of electrooculogram</b>
<b>MC21.1</b>	<b>Normal electroretinogram</b> An Electro-Retinogram records retinal action potentials in response to various visual stimuli.
<b>MC21.Y</b>	<b>Other specified impairment of electrophysiological functions</b>
<b>MC21.Z</b>	<b>Impairment of electrophysiological functions, unspecified</b>
<b>MC2Y</b>	<b>Other specified symptoms, signs or clinical findings of the visual system</b>

Symptoms, signs or clinical findings of ear or mastoid process (MC40-MC6Y)

Symptoms or signs involving the ear or mastoid process (MC40-MC4Y)

**Coded Elsewhere:** Otalgia or effusion of ear (AB70)

**MC40** **Plugged feeling ear**

**MC41** **Tinnitus**

A nonspecific symptom of hearing disorder characterised by the sensation of buzzing, ringing, clicking, pulsations, and other noises in the ear in the absence of appropriate corresponding external stimuli and in the absence of what the examiner can hear with a stethoscope.

**MC4Y** **Other specified symptoms or signs involving the ear or mastoid process**

---

MC6Y	<b>Other specified symptoms, signs or clinical findings of ear or mastoid process</b>
------	---

## Symptoms, signs or clinical findings of the circulatory system (MC80-MC9Y)

Symptoms or signs involving the circulatory system (MC80-MC8Y)

**Coded Elsewhere:** Ankle oedema (MG29.00)

Fear of cardiovascular disease (MG24.7)

Fear of heart disease (MG24.5)

Fear of hypertension (MG24.6)

MC80	<b>Abnormal blood-pressure reading, without diagnosis</b>
Abnormal blood-pressure reading, without diagnosis is a reading of blood pressure which is higher than normal blood pressure or lower than normal blood pressure, without diagnosis.	

**MC80.0      Elevated blood-pressure reading, without diagnosis of hypertension**

**Coding Note:** This category is to be used to record an episode of elevated blood pressure in a patient in whom no formal diagnosis of hypertension has been made, or as an isolated incidental finding.

**MC80.00      White coat hypertension**

Persistently elevated office blood pressure readings with persistently normal out-of-the-office readings.

**MC80.01      Combined diastolic and systolic elevated blood pressure reading without diagnosis of hypertension**

**MC80.02      Diastolic elevated blood pressure reading without diagnosis of hypertension**

**MC80.03      Systolic elevated blood pressure reading without diagnosis of hypertension**

**MC80.0Y      Other specified elevated blood-pressure reading, without diagnosis of hypertension**

**Coding Note:** This category is to be used to record an episode of elevated blood pressure in a patient in whom no formal diagnosis of hypertension has been made, or as an isolated incidental finding.

**MC80.0Z      Elevated blood-pressure reading, without diagnosis of hypertension, unspecified**

**Coding Note:** This category is to be used to record an episode of elevated blood pressure in a patient in whom no formal diagnosis of hypertension has been made, or as an isolated incidental finding.

**MC80.1      Nonspecific low blood-pressure reading**

**Exclusions:** Maternal hypotension syndrome (JA65.6)  
Orthostatic hypotension (BA21)

**MC80.Y      Other specified abnormal blood-pressure reading, without diagnosis**

**MC80.Z**      **Abnormal blood-pressure reading, without diagnosis, unspecified**

**MC81**

**Abnormalities of heart beat**

Abnormalities of heart beat is arrhythmia which is any disorder of the heart rate or rhythm. It means that the heart beats too quickly, too slowly or with an irregular pattern.

**Exclusions:**      specified arrhythmias (BC60-BC9Z)

Cardiovascular disorders present in the perinatal or neonatal period (KB40-KB4Z)

**MC81.0**      **Tachycardia, unspecified**

**MC81.1**      **Bradycardia, unspecified**

**MC81.2**      **Palpitations**

**Inclusions:**      Awareness of heart beat

**MC81.3**      **Paroxysmal tachycardia**

**Exclusions:**      complicating, abortion or ectopic or molar pregnancy (JA05)

**Coded Elsewhere:** Re-entry ventricular arrhythmia (BC71.2)

**MC81.4**      **Pulseless electrical activity, not elsewhere classified**

**MC81.Y**      **Other specified abnormalities of heart beat**

**MC81.Z**      **Abnormalities of heart beat, unspecified**

**MC82**

**Cardiac arrest**

A sudden, sometimes temporary, cessation of heart function resulting in hemodynamic collapse.

**Exclusions:**      complicating abortion or ectopic or molar pregnancy (JA05)

Cardiogenic shock (MG40.0)

**MC82.0**      **Ventricular tachycardia and fibrillation cardiac arrest**

Discoordinated or rapid ventricular depolarization resulting in hemodynamic collapse.

**MC82.1**      **Bradycardic cardiac arrest**

Slow escape rhythm associated with hemodynamic collapse.

**MC82.2**      **Asystolic cardiac arrest**

Absence of electrical activity of the heart resulting in hemodynamic collapse.

**MC82.3**      **Cardiac arrest with pulseless electrical activity**

Electrical activation of the heart without mechanical activation resulting in hemodynamic collapse.

**MC82.4**      **Cardiopulmonary arrest**

**MC82.Z**      **Cardiac arrest, unspecified**

**MC83**

**Cardiac murmurs and other cardiac sounds**

Cardiac murmurs are blowing, whooshing, or rasping sounds heard during a heartbeat. Other cardiac sounds are sounds heard from heart other than cardiac murmurs.

**Exclusions:** Cardiovascular disorders present in the perinatal or neonatal period (KB40-KB4Z)

**MC83.0**

**Benign and innocent cardiac murmurs**

**Coded Elsewhere:** Benign or innocent cardiac murmurs in newborn (KB47)

**MC83.1**

**Other cardiac sounds**

**MC83.Z**

**Cardiac murmurs and sounds, unspecified**

**MC84**

**Cardiovascular pain**

**Exclusions:** Chronic secondary visceral pain (MG30.4)

**MC85**

**Gangrene**

Gangrene, not elsewhere classified is the death of tissues in the body which happens when a part of the body loses its blood supply.

**Exclusions:** Pyoderma gangrenosum (EB21)

Gas gangrene (1C16)

Polymicrobial necrotising fasciitis (1B71.1)

**MC86**

**Precordial pain**

**Exclusions:** Chronic secondary visceral pain (MG30.4)

**MC87**

**Pressure or tightness of heart**

**MC88**

**Prominent veins**

**MC8Y**

**Other specified symptoms or signs involving the circulatory system**

**MC90**

**Clinical findings on diagnostic imaging of heart or coronary circulation**

**Exclusions:** Long QT syndrome (BC65.0)

**MC91**

**Results of function studies of the circulatory system**

**Exclusions:** Long QT syndrome (BC65.0)

**MC9Y**

**Other specified symptoms, signs or clinical findings of the circulatory system**

## Symptoms, signs or clinical findings of the respiratory system (MD10-MD6Y)

### Symptoms or signs involving the respiratory system (MD10-MD3Y)

**Coded Elsewhere:** Fear of respiratory disease (MG24.A)

Acute life threatening episode (MG44.Y)

#### MD10

##### **Abnormal sputum**

This category includes the abnormalities of quantity, colour and odor in sputum which may suggest an aetiology. Patients with chronic bronchitis typically expectorate small quantities of mucoid yellow material. A foul or fetid odor should suggest infection from anaerobic organisms, usually in cases of lung abscess. Occasionally, greatly excessive amounts of sputum or "bronchorrhoea" is associated with bronchioloalveolar carcinoma.

**Exclusions:** blood-stained sputum (MD22)

#### MD11

##### **Abnormalities of breathing**

Abnormalities of breathing includes dyspnoea, stridor, wheezing, periodic breathing, hyperventilation, mouth breathing, hiccup, sneezing, and other abnormalities of breathing.

**Exclusions:** Respiratory distress of newborn (KB23)

Respiratory failure of newborn (KB2D)

Respiratory arrest (MD33)

Adult acute respiratory distress syndrome (CB00)

#### MD11.0

##### **Apnoea**

**Exclusions:** Apnoea of newborn (KB2A)

Sleep-related breathing disorders (7A40-7A4Z)

#### MD11.1

##### **Asphyxia**

Asphyxia is a life-threatening condition in which oxygen is prevented from reaching the tissues by obstruction of or damage to any part of the respiratory system. More generally the term indicates all the conditions generating impaired or impeded breathing.

**Exclusions:** asphyxia due to foreign body in respiratory tract (ND72)

asphyxia due to carbon monoxide (NE61)

asphyxia due to traumatic (Chapter 22)

**Coded Elsewhere:** Intrauterine hypoxia (KB20)

Birth asphyxia (KB21)

#### MD11.2

##### **Ataxic breathing**

An irregular breathing pattern that usually progresses to complete apnoea.

#### MD11.3

##### **Breath holding**

- MD11.4 Sleep related Cheyne-Stokes respiration**  
Periodic breathing, a variant of Cheyne-Stokes respiration, is characterised by regular, recurrent cycles of changing tidal volumes in which the lowest tidal volume is less than half the maximal tidal volume in that cycle. It is the most frequent abnormal respiratory pattern directly related to stroke rather than underlying systemic disease, occurring in approximately 25 percent of patients. Periodic breathing may be more common among patients with subarachnoid haemorrhage.
- Exclusions:** Central sleep apnea with Cheyne-Stokes breathing (7A40.3)
- MD11.5 Dyspnoea**  
Dyspnoea is used to describe perceptions of difficulty or distress related to breathing and is recognised as symptomatic of disease when it occurs under inappropriate circumstances. Dyspnoea is a presenting complaint of patients with a wide variety of medical diseases by multiple mechanisms.  
Dyspnoea is considered acute when it lasts from hours up to 3 weeks, subacute from 3 weeks up to 8 weeks, and chronic dyspnoea lasts more than 8 weeks.
- Exclusions:** Transient tachypnoea of newborn (KB23.1)
- MD11.6 Hiccough**  
Hiccough are repeated involuntary spasms of the diaphragm followed by sudden closure of the glottis, which checks the inflow of air and causes the characteristic sound. Transient episodes are very common. Persistent (> 2 days) and intractable (> 1 mo) Hiccough are uncommon but quite distressing.
- MD11.7 Hyperventilation**  
Hyperventilation refers to an increase in the rate of alveolar ventilation that is excessive for the rate of metabolic carbon dioxide production, resulting in a decrease in arterial PCO<sub>2</sub> to below the normal range of 37 to 43 mm Hg. Hyperventilation should be distinguished from tachypnoea, an increase in respiratory frequency, and from hyperpnea, an increase in minute volume of ventilation.
- MD11.8 Mouth breathing**  
Breathing through mouth. Nasal obstruction may also necessitate mouth breathing, which itself can precipitate obstructive apnoea. Breathing through the mouth may also increase risk for OSA by its effect on the tongue. The tongue forms the anterior wall of the oropharynx; both the supine posture and opening of the mouth tend to displace it posteriorly and encourage airway closure.
- Exclusions:** Dry mouth (DA02.1)
- MD11.80 Stertor**  
Stertor is a heavy snoring or gasping sound on inspiration occurring in coma or deep sleep that may be caused by partial obstruction of airway, choanal stenosis, enlarged tonsils and/or adenoids, and redundant upper airway tissues.
- MD11.8Y Other specified mouth breathing**
- MD11.8Z Mouth breathing, unspecified**
- MD11.9 Nasal congestion**

**MD11.A** **Sneezing**  
Sneezing is one of the most fundamental airway reflexes, which is characterised by a deep preparatory inspiration followed by an abrupt increase in subglottic pressure reflecting a forceful, active expiration rather similar to coughing. Chemical or physical stimuli to the nasal mucosa may initiate potent respiratory and cardiovascular reflexes via stimulation of trigeminal nerves. Mild stimuli result in sneezing and nasal hypersecretion. These reflex responses protect the lower airways from inhalation of physical and chemical irritants.

**MD11.B** **Stridor**  
Stridor or a low-pitched, focal inspiratory wheeze usually heard over the neck is a manifestation of upper airway obstruction and should result in an expedited evaluation of the patient as it can precede complete upper airway obstruction and respiratory failure.

**Exclusions:** laryngismus (stridulus) (CA0H.4)  
congenital laryngeal stridor (KB20-KB2Z)

**MD11.C** **Wheezing**  
Continuous adventitious sounds that are high-pitched are called wheezes. Wheezes originate in airways narrowed by spasm, thickening of the mucosa, or luminal obstruction.

**MD11.D** **Yawning**

**MD11.Y** **Other specified abnormalities of breathing**

**MD11.Z** **Abnormalities of breathing, unspecified**

**MD12** **Cough**  
Cough is an important natural defensive mechanism and protective reflex for clearing the upper and lower airways of excessive secretions such as mucus and inhaled particles. Cough is a common symptom of most respiratory disorders and may be indicative of trivial to very serious airway or lung pathology.

**Exclusions:** cough with haemorrhage (MD22)

## Haemorrhage from respiratory passages (MD20-MD2Z)

Haemorrhage from respiratory passages is the bleeding from upper respiratory tract or lower respiratory tract. The major passages and structures of the upper respiratory tract include the nose or nostrils, nasal cavity, mouth, pharynx, and larynx. The major passages and structures of the lower respiratory tract include the trachea and within the lungs, the bronchi, bronchioles, and alveoli.

**Exclusions:** Pulmonary haemorrhage originating in the perinatal period (KB28)

**MD20** **Epistaxis**

Bleeding from the nose

**Inclusions:** Nosebleed  
Haemorrhage from nose

**Coded Elsewhere:** Neonatal epistaxis (KA83.A)

**MD21**

### **Haemorrhage from throat**

Haemorrhage from throat is the bleeding from throat. Throat is a tube that carries food to oesophagus and air to windpipe and larynx.

**Exclusions:** Haemoptysis (MD22)

**MD22**

### **Haemoptysis**

Expectoration or spitting of blood originating from any part of the respiratory tract, usually from haemorrhage in the lung parenchyma and the bronchial arteries.

**Inclusions:** Blood-stained sputum

Cough with haemorrhage

**MD23**

### **Haemorrhage from other sites in respiratory passages**

**Exclusions:** Pulmonary haemorrhage originating in the perinatal period (KB28)

**Coded Elsewhere:** Neonatal haemorrhage originating in trachea or pulmonary parenchyma (KA83.7)

**MD24**

### **Acute idiopathic pulmonary haemorrhage in infants over 28 days of age**

**Exclusions:** Von Willebrand disease (3B12)

**MD2Z**

### **Haemorrhage from respiratory passages, unspecified**

**MD30**

### **Pain in throat or chest**

Pain in throat and chest means having pain sensation in throat or chest. Throat is a tube that carries food to oesophagus and air to windpipe and larynx. The technical name for throat is pharynx.

**Exclusions:** Cervical spine pain (ME84.0)  
acute sore throat NOS (CA02)  
pain in breast (GB23.5)  
Epidemic myalgia (1D83)  
Dysphagia (MD93)  
Chronic primary chest pain syndrome (MG30.00)  
Chronic primary visceral pain (MG30.00)  
Chronic secondary visceral pain (MG30.4)

**Coded Elsewhere:** Pain in throat (MD36.0)

Precordial pain (MC86)

Musculoskeletal chest pain (ME81)

<b>MD30.0</b>	<b>Chest pain on breathing</b>
	Pleuritic chest pain is a type of pain that is caused by problems with the thin layers of tissue that surround the lungs (called the “pleura”). This type of pain feels like a sharp, stabbing chest pain, and it gets worse when you breathe in. Pleuritic chest pain can be caused by the following problems: pneumothorax, pleural effusion, pleuritis, empyema, pericarditis.
	<b>Inclusions:</b> Painful respiration
	<b>Exclusions:</b> Pleurisy (MD31)
	Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)
<b>MD30.1</b>	<b>Other chest pain</b>
	<b>Exclusions:</b> Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)
<b>MD30.Z</b>	<b>Chest pain, unspecified</b>
<b>MD31</b>	<b>Pleurisy</b>
	Pleurisy or Pleuritis is the medical term for inflammation of the pleura. The most common cause of pleuritis is infection, but it can also be caused by lupus, rheumatoid arthritis, and certain medicines. Pleurisy or pleuritis usually accumulates exudative pleural effusions.
	<b>Exclusions:</b> pleurisy with effusion (CB27)
<b>MD32</b>	<b>Rules</b>
<b>MD33</b>	<b>Respiratory arrest</b>
	Arrest of spontaneous breathing.
	<b>Coded Elsewhere:</b> Respiratory arrest of newborn (KB2E)
<b>MD34</b>	<b>Symptom or complaint of the nose</b>
<b>MD35</b>	<b>Symptom or complaint of the sinus</b>
<b>MD36</b>	<b>Symptom or complaint of the throat</b>
<b>MD36.0</b>	<b>Pain in throat</b>
	Pain in throat means having pain sensation in throat. Throat is a tube that carries food to oesophagus and air to windpipe and larynx.
	<b>Exclusions:</b> Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)
<b>MD36.Y</b>	<b>Other specified symptom or complaint of the throat</b>
<b>MD36.Z</b>	<b>Symptom or complaint of the throat, unspecified</b>
<b>MD3Y</b>	<b>Other specified symptoms or signs involving the respiratory system</b>

Clinical findings in the respiratory system (MD40-MD4Y)

<b>MD40</b>	<b>Clinical findings in specimens from respiratory organs and thorax</b> <b>Exclusions:</b> Haemoptysis (MD22)
<b>MD40.0</b>	<b>Abnormal level of enzymes in specimens from respiratory organs and thorax</b>
<b>MD40.1</b>	<b>Abnormal level of hormones in specimens from respiratory organs and thorax</b>
<b>MD40.2</b>	<b>Abnormal level of drugs, medicaments and biological substances in specimens from respiratory organs and thorax</b>
<b>MD40.3</b>	<b>Abnormal level of substances chiefly nonmedicinal as to source in specimens from respiratory organs and thorax</b>
<b>MD40.4</b>	<b>Abnormal immunological findings in specimens from respiratory organs and thorax</b>
<b>MD40.5</b>	<b>Abnormal microbiological findings in specimens from respiratory organs and thorax</b>
<b>MD40.50</b>	Positive culture from nose
<b>MD40.51</b>	Positive sputum culture
<b>MD40.52</b>	Positive throat culture
<b>MD40.5Y</b>	Other specified abnormal microbiological findings in specimens from respiratory organs and thorax
<b>MD40.5Z</b>	Abnormal microbiological findings in specimens from respiratory organs and thorax, unspecified
<b>MD40.6</b>	<b>Abnormal cytological findings in specimens from respiratory organs and thorax</b>
<b>MD40.7</b>	<b>Abnormal histological findings in specimens from respiratory organs and thorax</b>
<b>MD40.Y</b>	<b>Other specified clinical findings in specimens from respiratory organs and thorax</b>
<b>MD41</b>	<b>Clinical findings on diagnostic imaging of lung</b> Clinical findings on diagnostic imaging of lung is findings on diagnostic imaging of the lung which don't appear in normal status of the body. Diagnostic imaging refers to technologies that doctors use to look inside body for clues about a medical condition. X-rays, CT scans, nuclear medicine scans, MRI scans and ultrasound are all types of diagnostic imaging.
<b>MD42</b>	<b>Results of function studies of the respiratory system</b>
<b>MD4Y</b>	<b>Other specified clinical findings in the respiratory system</b>
<b>MD6Y</b>	<b>Other specified symptoms, signs or clinical findings of the respiratory system</b>

## Symptoms, signs or clinical findings of the digestive system or abdomen (MD80-ME4Y)

Symptoms or signs involving the digestive system or abdomen (MD80-ME1Y)

- Exclusions:**
- pylorospasm congenital or infantile (LB13.0)
  - Intestinal obstruction of newborn (KB87)
  - gastrointestinal haemorrhage newborn (KA83.1)
  - Symptoms, signs or clinical findings involving the male genital system (MF40-MF4Y)
  - Symptoms, signs or clinical findings involving the urinary system (MF50-MF5Y)
  - Symptoms, signs or clinical findings involving the female genital system (MF30-MF3Y)

**Coded Elsewhere:** Fear of digestive disease (MG24.3)

<b>MD80</b>	<b>Symptoms or signs of the orofacial complex</b>
<b>MD80.0</b>	<b>Symptom or complaint of the teeth or gum</b>
<b>MD80.1</b>	<b>Symptom or complaint of the mouth, tongue or lip</b>
<b>MD80.Y</b>	<b>Other specified symptoms or signs of the orofacial complex</b>
<b>MD81</b>	<b>Abdominal or pelvic pain</b>
	Pain, an unpleasant distress sensation occurring in varying degrees of severity, received by nerve ending in the abdominal and pelvic region.
	<b>Exclusions:</b>
	Spinal pain (ME84)
	Flatulence and related conditions (ME08)
	renal colic (MF56)
	Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)
<b>MD81.0</b>	<b>Abdominal tenderness</b>
<b>MD81.1</b>	<b>Localised abdominal pain</b>
	<b>Exclusions:</b>
	Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)
<b>MD81.10</b>	Pain localised to upper abdomen
	Pain, an unpleasant distress sensation, which is localised to upper part of abdomen.
	<b>Inclusions:</b>
	Epigastric pain
	<b>Exclusions:</b>
	Functional dyspepsia (DD90.3)
	Chronic primary visceral pain (MG30.00)
	Chronic secondary visceral pain (MG30.4)

- MD81.11** Pelvic or perineal pain  
 Pain, an unpleasant distress sensation, which occurs in the pelvic and perineal region.
- Exclusions:**
- Female pelvic pain associated with genital organs or menstrual cycle (GA34)
  - Chronic primary bladder pain syndrome (MG30.00)
  - Bladder pain (MF52)
  - Sexual pain-penetration disorder (HA20)
  - Chronic primary visceral pain (MG30.00)
  - Chronic secondary visceral pain (MG30.4)
- Coded Elsewhere:** Perineal pain (GA34.01)  
 Pelvic floor tension myalgia (GA34.0Y)
- MD81.12** Pain localised to other parts of lower abdomen  
 Pain, an unpleasant distress sensation, which is localised to other part of lower abdomen than the pelvic or perineal region.
- Exclusions:**
- Pelvic or perineal pain (MD81.11)
  - Chronic primary visceral pain (MG30.00)
  - Chronic secondary visceral pain (MG30.4)
- MD81.1Z** Localised abdominal pain, unspecified
- MD81.2** **Generalised abdominal pain**  
 Pain, an unpleasant distress sensation occurring in varying degrees of severity, or cramps, spasmodic contraction causing severe pain in the abdominal area in general.
- Exclusions:**
- Chronic primary visceral pain (MG30.00)
  - Chronic secondary visceral pain (MG30.4)
- MD81.3** **Acute abdomen**  
 A clinical syndrome with acute abdominal pain that is severe, and rapid onset. Acute abdomen may be caused by a variety of disorders, injuries, or diseases
- MD81.4** **Other and unspecified abdominal pain**
- Exclusions:**
- Infantile colic (DD93.1)
  - Chronic primary abdominal pain syndrome (MG30.00)
  - Chronic primary visceral pain (MG30.00)
  - Chronic secondary visceral pain (MG30.4)
- MD82** **Intra-abdominal or pelvic swelling, mass or lump**  
 This refers to the presence of abdominal or pelvic wall swelling, mass or tumour in the abdominal and pelvic regions. These mass or tumours can be recognised by visual examination and/or palpation.
- Exclusions:**
- Abdominal distension (ME01)
  - Ascites (ME04)

## Symptoms related to the upper gastrointestinal tract (MD90-MD9Y)

Clinical symptoms presumed to be arising from disorders/diseases of upper GI tract.

**Coded Elsewhere:** Haematemesis (ME24.A5)

### MD90

#### Nausea or vomiting

Nausea is the feeling of having an urge to vomit. Vomiting is forcing the contents of the stomach up through the oesophagus and out of the mouth.

- Exclusions:**
- haematemesis neonatal (KB8A)
  - Functional nausea or vomiting (DD90.4)
  - psychogenic vomiting (8A80.4)

### MD90.0

#### Nausea

### MD90.1

#### Vomiting

- Coded Elsewhere:**
- Vomiting following gastrointestinal surgery (DE10)
  - Excessive vomiting in pregnancy (JA60)
  - Vomiting in newborn (KD3C)

### MD91

#### Belching

The liberation of gas in the upper gastrointestinal tract via the oesophagus through the mouth.

- Exclusions:**
- Functional belching disorders (DD90.5)

### MD92

#### Dyspepsia

A condition characterised by upper abdominal symptoms that suggest indigestion (painful, difficult, or disturbed digestion), which may include pain or discomfort of upper abdomen, bloating, feeling of fullness with very little intake of food, nausea and vomiting, heartburn, loss of appetite.

- Exclusions:**
- Functional dyspepsia (DD90.3)

### MD93

#### Dysphagia

Difficulty in swallowing which may result from neuromuscular disorder or mechanical obstruction. Dysphagia is classified into two distinct types: oropharyngeal dysphagia due to malfunction of the pharynx and upper oesophageal sphincter; and oesophageal dysphagia due to malfunction of the oesophagus.

- Inclusions:**
- Difficulty in swallowing

- Exclusions:**
- Functional swallowing disorder (DD90.1)

### MD94

#### Halitosis

Halitosis is an oral health condition in which one's mouth emits a foul odour. There are many causes of halitosis such as poor oral hygiene, tobacco and/or alcohol, and possibly a medical condition such as respiratory and digestive tract disorders.

**MD95**

### **Heartburn**

Substernal pain or burning sensation, usually associated with regurgitation of gastric juice into the oesophagus.

- Exclusions:**
- Functional dyspepsia (DD90.3)
  - Pain in throat or chest (MD30)
  - Functional heartburn (DD90.2)

**MD9Y**

### **Other specified symptoms related to the upper gastrointestinal tract**

Symptoms related to the lower gastrointestinal tract or abdomen (ME00-ME0Y)

**Exclusions:** Abdominal or pelvic pain (MD81)

**Coded Elsewhere:** Haematochezia (ME24.A3)

- Haemorrhage of anus and rectum (ME24.A1)
- Meconium ileus without perforation (KB87.2)
- Melaena (ME24.A4)

**ME00**

### **Abdominal compartment syndrome**

Abdominal compartment syndrome is a condition of organ dysfunction caused by increased intra-abdominal pressure (intra-abdominal hypertension), possibly due to intra-abdominal haemorrhage, retroperitoneal haematoma, or intestinal oedema, often occurred after surgical intervention or trauma, or often associated with septic condition. The importance of this clinical entity was recognised recently in the end of the 20th Century. Usually the abdominal distension due to primary ischaemic bowel injury was excluded from this clinical entity.

**ME01**

### **Abdominal distension**

This is a condition in which the abdomen feels full and tight because of swelling of the abdomen, usually due to an increased amount of intestinal gas, but occurs sometimes when fluid, substances or mass are accumulating or expanding in the abdomen.

**ME02**

### **Abdominal rigidity**

Abdominal rigidity is stiffness of the muscles in the belly area, which can be felt when touched or pressed.

**Exclusions:** that with severe abdominal pain (MD81.3)

**ME03**

### **Abnormal bowel sounds**

Bowel sounds are caused by the products of digestion as they move through the lower gastrointestinal tract, usually heard on auscultation. Abnormal bowel sounds are reduced or increased bowel sounds which provide valuable information about the disorders of bowel movement.

**ME03.0** **Hyperactive bowel sounds**

**ME03.1** **Absent bowel sounds**

**ME03.Z** **Abnormal bowel sounds, unspecified**

**ME04**

**Ascites**

Accumulation or retention of free fluid in the abdominal peritoneal cavity between the tissues lining the abdomen and abdominal organs. The fluid may be serous, haemorrhagic, or the result of inflammation or tumour metastasis to the peritoneum.

**ME04.0**

**Fluid in peritoneal cavity**

**Exclusions:** Malignant ascites (2D91)

**ME04.Y**

**Other specified ascites**

**ME04.Z**

**Ascites, unspecified**

**ME05**

**Change in bowel habit**

Bowel habits are the time, size, amount, consistency and frequency of bowel movements throughout the day. A change in bowel habits is any alteration in regular bowel habits.

**Exclusions:** Functional diarrhoea (DD91.2)

**ME05.0**

**Constipation**

Constipation is an acute or chronic condition in which bowel movements occur less often than usual or consist of hard, dry stools that are often painful or difficult to pass. Here constipation other than specifically described elsewhere, such as in motility disorders of intestine or in functional bowel diseases, is described.

**Inclusions:** faecal impaction

**Exclusions:** Functional constipation (DD91.1)

Functional constipation of infants, toddlers or children (DD93)

Atonic constipation (DD91.1)

Slow transit constipation (DB32.1)

Neurogenic constipation (DD91.1)

Spastic constipation (DD91.1)

**ME05.1**

**Diarrhoea**

Diarrhoea is an acute or chronic condition in which there is an increased frequency or decreased consistency of bowel movements, usually with excessive and frequent evacuation of watery faeces. Here diarrhoea other than specifically described elsewhere, such as in motility disorders of intestine or in functional bowel diseases, is described.

**Inclusions:** frequent/loose bowel movements

watery stools

**Exclusions:** Melaena (ME24.A4)

Change in faeces or bowel movements (ME00-ME0Y)

Functional diarrhoea (DD91.2)

infectious diarrhoea (1A00-1A40.Z)

**Coded Elsewhere:** Noninfectious neonatal diarrhoea (KB8C)

**ME05.Z**

**Other and unspecified change in bowel habit**

<b>ME06</b>	<b>Chronic enteritis of uncertain aetiology</b>
	<b><i>Exclusions:</i></b> Gastroenteritis or colitis of infectious origin (1A00-1A40.Z)
<b>ME07</b>	<b>Faecal incontinence</b>
	Failure of voluntary control of the anal sphincters, with involuntary passage of faeces and flatus.
	<b><i>Exclusions:</i></b> Functional faecal incontinence (DD92.0) Nonretentive faecal incontinence in children (DD93) nonorganic encopresis (6C01)
<b>ME07.0</b>	<b>Faecal smearing</b>
<b>ME07.1</b>	<b>Incomplete defaecation</b>
	<b><i>Exclusions:</i></b> Constipation (ME05.0)
<b>ME07.2</b>	<b>Faecal urgency</b>
<b>ME07.Y</b>	<b>Other specified faecal incontinence</b>
<b>ME07.Z</b>	<b>Faecal incontinence, unspecified</b>
<b>ME08</b>	<b>Flatulence and related conditions</b>
	Production or presence of gas in the gastrointestinal tract which may be expelled through the anus and other conditions associated with the production or presence of gas in the GI tract.
<b>ME09</b>	<b>Rectal tenesmus</b>
	A symptom, where there is a feeling of constantly needing to pass stools, despite an empty colon.
<b>ME0A</b>	<b>Visible peristalsis</b>
	The wavelike increased peristaltic motions of the intestines by which contents are forced onward toward the opening in such a way that they become visible through the abdominal walls by visual examination.
<b>ME0B</b>	<b>Problems with defaecation, not otherwise specified</b>
	<b><i>Exclusions:</i></b> Incomplete defaecation (ME07.1) Functional constipation (DD91.1) Functional defaecation disorders (DD92.2)
<b>ME0Y</b>	<b>Other specified symptoms related to the lower gastrointestinal tract or abdomen</b>
<b>ME10</b>	<b>Abnormalities related to hepatobiliary system</b>
<b>ME10.0</b>	<b>Hepatomegaly or splenomegaly</b>
	Hepatomegaly is swelling of the liver beyond its normal size and splenomegaly is an enlargement of the spleen beyond its normal size.
<b>ME10.00</b>	Hepatomegaly, not elsewhere classified

<b>ME10.01</b>	Splenomegaly, not elsewhere classified This refers to swelling of the spleen beyond its normal size, not elsewhere described.
	<b>Exclusions:</b> Hypersplenism (3B81.B)
<b>ME10.02</b>	Hepatomegaly with splenomegaly This refers to swelling of the liver and spleen beyond its normal size, not elsewhere described.
<b>ME10.1</b>	<b>Unspecified jaundice</b> A clinical manifestation of hyperbilirubinemia of unspecified origin, characterised by the yellowish staining of the skin; mucus membranes and sclera.
	<b>Exclusions:</b> neonatal jaundice (KA87)
<b>ME1Y</b>	<b>Other specified symptoms or signs involving the digestive system or abdomen</b>

Clinical findings in the digestive system (ME20-ME2Y)

<b>ME20</b>	<b>Clinical findings in specimens from digestive organs or abdominal cavity</b>  <b>Exclusions:</b> Other faecal abnormalities (ME00-ME0Y)
<b>ME20.0</b>	<b>Abnormal level of enzymes in specimens from digestive organs or abdominal cavity</b>
<b>ME20.1</b>	<b>Abnormal level of hormones in specimens from digestive organs or abdominal cavity</b>
<b>ME20.2</b>	<b>Abnormal level of drugs, medicaments or biological substances in specimens from digestive organs of abdominal cavity</b>
<b>ME20.3</b>	<b>Abnormal level of substances chiefly nonmedicinal as to source in specimens from digestive organs and abdominal cavity</b>
<b>ME20.4</b>	<b>Abnormal immunological findings in specimens from digestive organs and abdominal cavity</b>
<b>ME20.5</b>	<b>Abnormal microbiological findings in specimens from digestive organs and abdominal cavity</b>
<b>ME20.6</b>	<b>Abnormal cytological findings in specimens from digestive organs and abdominal cavity</b>
<b>ME20.7</b>	<b>Abnormal histological findings in specimens from digestive organs and abdominal cavity</b>
<b>ME20.Y</b>	<b>Other specified clinical findings in specimens from digestive organs or abdominal cavity</b>
<b>ME20.Z</b>	<b>Clinical findings in specimens from digestive organs or abdominal cavity, unspecified</b>
<b>ME21</b>	<b>Clinical findings on diagnostic imaging of liver or biliary tract</b>

<b>ME22</b>	<b>Clinical findings on diagnostic imaging of digestive tract</b>
<b>ME23</b>	<b>Results of function studies of the digestive system</b>
<b>ME24</b>	<b>Clinical manifestations of the digestive system</b>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.0</b>	<p><b>Digestive system abscess</b></p> <p>This is a clinical form of sign indicating the presence of abscess in digestive system. This category will be used for postcoordination codes as complications of underlying illness.</p>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.1</b>	<p><b>Digestive system fistula</b></p> <p>This is a clinical form of sign indicating the presence of fistula in the digestive tract. This category will be used for postcoordination codes as complications of underlying illness.</p>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.2</b>	<p><b>Digestive system obstruction</b></p> <p>This is a clinical form of a sign indicating obstruction of digestive tract. This category will be used for postcoordination codes as complications of underlying illness.</p>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.3</b>	<p><b>Digestive system perforation</b></p> <p>This is a clinical form of sign indicating perforation of digestive tract. This category will be used for postcoordination codes as complications of underlying illness.</p>
<b>Coding Note:</b>	Code also the causing condition
	<p><b>Coded Elsewhere:</b> Prenatal gastric perforation (KB82)</p> <p>Postnatal gastric perforation (KB83)</p> <p>Postnatal intestinal perforation (KB86)</p> <p>Prenatal intrauterine intestinal perforation (KB85)</p>
<b>ME24.30</b>	<p>Perforation of small intestine</p> <p>Small intestinal perforation is a complete penetration of the wall of small intestine, often resulting in the leakage of small intestinal contents into the abdominal cavity.</p>
	<p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Primary ulcer of small intestine (DA94.0)</li> <li>Diverticulitis of small intestine (DC70)</li> <li>perforation due to Crohn disease (DD70.1)</li> <li>perforation due to obstruction (DA91)</li> <li>perforation due to malignant neoplasm ()</li> </ul>
	<p><b>Coded Elsewhere:</b> Postnatal isolated ileal perforation (KB84)</p> <p>Injury of small intestine (NB91.7)</p> <p>Laceration of small intestine (NB91.71)</p>

<b>ME24.31</b>	Perforation of large intestine Perforation of large intestine is a complete penetration of the colonic wall, often resulting in the leakage of luminal contents into the abdominal cavity. Perforation of large intestine results in the potential for bacterial contamination of the abdominal cavity and peritonitis.
	<b>Exclusions:</b> Diverticular disease of large intestine (DC80-DC82.Z) Ulcerative colitis (DD71) Crohn disease (DD70) Neoplasms of the large intestine ()
	<b>Coded Elsewhere:</b> Injury of colon (NB91.8)
<b>ME24.35</b>	Perforation of gallbladder or bile ducts This is perforation in the small organ that aids mainly in fat digestion and concentrates bile produced by the liver and in any of a number of long tube-like structures that carry bile.
	<b>Inclusions:</b> Rupture of cystic duct or gallbladder Rupture of gallbladder or bile duct
<b>ME24.3Y</b>	Digestive system perforation of other specified site
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.3Z</b>	Digestive system perforation of unspecified site
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.4</b>	<b>Digestive system stenosis</b> This is a clinical form of sign indicating stenosis of digestive tract. This category will be used for postcoordination codes as complications of underlying illness.
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.5</b>	<b>Digestive system ulcer</b>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.6</b>	<b>Digestive system dilatation</b> This is a clinical form of sign indicating the excess dilatation of lumen in the digestive tract. This category will be used for postcoordination codes as complications of underlying illness.
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.7</b>	<b>Digestive system incarceration</b> This is a clinical form of sign indicating the presence of incarceration in the digestive tract. This category is to be used for postcoordination codes particularly in case of haemorrhoids and hernia as complications of underlying illness.
<b>Coding Note:</b>	Code also the causing condition

<b>ME24.8</b>	<b>Digestive system strangulation or gangrene</b> This is a clinical form of sign indicating the presence of strangulation and/or gangrene in the digestive tract. This category is to be used for postcoordination codes particularly in case of mechanical bowel obstruction and hernia as complications of underlying illness.
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.9</b>	<b>Gastrointestinal bleeding</b>
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.90</b>	Acute gastrointestinal bleeding, not elsewhere classified
<b>ME24.91</b>	Chronic gastrointestinal bleeding, not elsewhere classified
<b>ME24.9Z</b>	Gastrointestinal bleeding, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>ME24.A</b>	<b>Other digestive system haemorrhage, not elsewhere classified</b>
	<b>Coded Elsewhere:</b> Neonatal bleeding originating in the mouth, nose or pharynx (KA83.0)
	Neonatal bleeding originating in the oesophagus, stomach, small or large intestine (KA83.1)
<b>ME24.A0</b>	Obscure gastrointestinal bleeding Obscure gastrointestinal bleeding (OGIB) is defined as gastrointestinal bleeding with no source identified at upper and lower endoscopy. Despite a thorough endoscopic examination, the origin of the blood loss remains unexplained and observed for further bleeding.
<b>ME24.A1</b>	Haemorrhage of anus and rectum Bleeding from anus and anal canal. The bleeding due to specific diseases classified elsewhere (haemorrhoid, cancer, infection etc) is excluded from here. <b>Coded Elsewhere:</b> Neonatal rectal haemorrhage (KA83.2)
<b>ME24.A2</b>	Oesophageal haemorrhage
<b>ME24.A3</b>	Haematochezia Haematochezia is the passage of fresh blood through the anus, usually in or with stools (contrast with melena). Haematochezia is commonly associated with lower gastrointestinal bleeding.
<b>ME24.A4</b>	Melaena It is bloody stools that indicate bleeding from vascular system in the digestive tract. It is also described as black, tarry, and foul-smelling stools or red/maroon-coloured stools that contain degraded blood.
	<b>Exclusions:</b> occult blood in faeces (ME00-ME0Y)

<b>ME24.A5</b>	Haematemesis Vomiting of blood that is either fresh bright red, or older "coffee-ground" in character. Vomiting blood is a regurgitation of blood through the upper gastrointestinal tract and it generally indicates bleeding of the upper gastrointestinal tract.
	<b>Coded Elsewhere:</b> Neonatal haematemesis or melaena due to swallowed maternal blood (KB8A)
<b>ME24.A6</b>	Positive occult blood in stool Positive tests (positive stool) determined by faecal occult blood testing (FOBT), which aims to detect subtle blood loss in the gastrointestinal tract. Positive occult blood in stool may suggest gastrointestinal bleeding and warrant further investigation, especially for malignancy.
<b>ME24.Y</b>	<b>Other specified clinical manifestations of the digestive system</b>

**Coding Note:** Code also the causing condition

**ME2Y      Other specified clinical findings in the digestive system**

---

**ME4Y      Other specified symptoms, signs or clinical findings of the digestive system or abdomen**

Symptoms, signs or clinical findings involving the skin (ME60-ME6Y)

Symptoms or signs involving the skin (ME60-ME6Y)

This category allows the capture of imprecise data where a more specific diagnosis cannot be made or to supplement information about a specific diagnosis.

<b>ME60</b>	<b>Skin lesion of uncertain or unspecified nature</b> To be used where there is either significant uncertainty or alternatively no information as to the nature of a circumscribed skin lesion. This is of particular importance with regard to whether or not the lesion may be malignant.
<b>ME60.0</b>	<b>Skin lesion of uncertain nature</b> This denotes the presence of a skin lesion but uncertainty as to its nature. No inference as to whether the lesion might be of serious significance (e.g. suspected skin cancer) is made.
<b>ME60.1</b>	<b>Pigmented skin lesion of uncertain nature</b> This denotes the presence of a pigmented skin lesion but uncertainty as to its nature. No inference as to whether the lesion might be of serious significance (e.g. suspected skin cancer) is made.
<b>ME60.2</b>	<b>Ulcer of skin of uncertain nature</b> This denotes the presence of a skin ulcer but uncertainty as to its nature. No inference as to whether the ulcer might be of serious significance (e.g. suspected skin cancer) is made.

- ME60.3** **Keratosis of skin of uncertain or unspecified nature**
- ME60.Z** **Skin lesion of unspecified nature**
- ME61** **Subcutaneous swelling, mass or lump of uncertain or unspecified nature**  
One or more localised subcutaneous soft tissue masses of undetermined or unspecified nature
- Exclusions:** localized adiposity (5B80.1)  
mass and lump: breast (MF30)  
enlarged lymph nodes (MA01)  
mass and lump: intra-abdominal or pelvic (MD82)  
oedema (MG29)  
swelling (of): intra-abdominal or pelvic (MD82)  
swelling (of): joint (FA36)
- ME62** **Acute skin eruption of uncertain or unspecified nature**  
A provisional diagnosis for an acute skin eruption of less than six weeks' duration of unknown, uncertain or unspecified nature.
- Exclusions:** Drug eruptions (EH60-EH6Z)
- ME62.0** **Acute erythematous skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists predominantly of diffuse cutaneous erythema. A classical cause is scarlet fever but reactions to other bacterial toxins, drugs and certain foods or acute graft-versus-host disease may present with a similar picture.
- ME62.1** **Acute purpuric skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists predominantly of disseminated purpura. Potential causes are numerous and include thrombocytopenia, coagulopathies, vasculitides and sepsis.
- ME62.2** **Acute urticarial skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists of urticaria-like papules and plaques. Drugs are a common precipitant.
- ME62.3** **Acute maculopapular skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists of multiple macules and papules. Viral infections and drugs are common precipitants.

- ME62.4 Acute papular skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists of multiple skin papules. A wide variety of infectious and inflammatory skin disorders may present in this way. Examples include guttate psoriasis, lichen planus, pityriasis lichenoides, insect bites, scabies and secondary syphilis.
- ME62.5 Acute exudative skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and in which exudation and crusting are prominent features. Common causes are infected eczema, acute allergic contact dermatitis and impetigo.
- ME62.6 Acute blistering skin eruption**  
A provisional diagnosis for an acute blistering skin eruption of unknown or uncertain nature. Examples include vesicular dermatitis of the hands and feet (pompholyx), acute phototoxic reactions, especially to contact with plants (phytophotodermatitis), sunburn and immunobullous disorders such as bullous pemphigoid.
- ME62.7 Acute desquamating skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and in which desquamation (shedding of skin scales) is a prominent feature. This is seen characteristically in the later stages of many acute viral exanthemata but may also be seen in drug reactions and in unstable and erythrodermic psoriasis.
- ME62.8 Acute discoid or annular skin eruption**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists of multiple circular or ring-shaped patches and plaques. Although infection due to dermatophyte infection (tinea or ringworm) can produce this pattern, many other skin disorders may have a discoid or annular configuration: these are frequently misdiagnosed as tinea. Common examples include atopic eczema, nummular dermatitis and psoriasis.
- ME62.9 Acute excoriation of skin**  
A provisional diagnosis for a skin eruption of unknown or uncertain nature which arises abruptly and consists of multiple excoriations. In the majority of cases the excoriation is secondary to intense pruritus arising either from an underlying systemic disorder such as cholestatic jaundice or from a pruritic skin disease such as eczema. In some cases, however, psychogenic factors may be responsible.
- ME62.Y Other specified acute skin eruption of uncertain or unspecified nature**
- ME63 Chronic skin disorder of uncertain or unspecified nature**  
A provisional diagnosis for a chronic skin disorder (of at least six weeks' duration) of unknown, uncertain or unspecified nature.

- ME63.0      Chronic erythematous skin disorder**  
A provisional diagnosis for a chronic skin disorder of unknown or uncertain nature in which widespread confluent erythema is the predominant feature. Examples include generalised atopic eczema, erythrodermic psoriasis, pityriasis rubra pilaris and Sézary syndrome.
- ME63.1      Chronic urticarial skin disorder**  
A provisional diagnosis for a rash consisting of persistent urticated papules and plaques for which a more precise diagnosis has not been or cannot be made. Diagnoses which should be considered include immunobullous disorders, urticarial vasculitis and drug reactions.
- ME63.2      Chronic papular skin disorder**  
A provisional diagnosis for a chronic skin disorder of unknown, uncertain or unspecified nature and characterised by the presence of multiple skin papules.
- ME63.3      Chronic blistering skin disorder**  
A provisional diagnosis for a chronic blistering skin disorder of unknown or uncertain nature. Examples include chronic vesicular dermatitis of the hands and feet, epidermolysis bullosa and immunobullous disorders such as bullous pemphigoid.
- ME63.4      Chronic scaling or hyperkeratotic skin disorder**  
A provisional diagnosis for a chronic skin disorder of unknown or uncertain nature in which scaling and hyperkeratosis are prominent features. Examples include psoriasis, ichthyoses, small plaque parapsoriasis and mycosis fungoides.
- ME63.5      Chronic lichenified skin disorder**  
A provisional diagnosis for a chronic skin disorder of unknown or uncertain nature in which lichenification is the prominent feature. Examples include chronic eczema, lichen simplex and lichen planus.
- ME63.6      Chronic discoid or annular skin disorder**  
A provisional diagnosis for a chronic skin disorder of unknown or uncertain nature consisting of multiple circular or ring-shaped patches and plaques. Although infection due to dermatophyte infection (tinea or ringworm) can produce this pattern, many other skin disorders may have a discoid or annular configuration: these are frequently misdiagnosed as tinea. Common examples include atopic eczema, nummular dermatitis and psoriasis.
- ME63.7      Chronic excoriation of skin**  
A provisional diagnosis for a chronic skin disorder of unknown or uncertain nature characterised by the presence of multiple excoriations. In some cases the excoriation is secondary to intense pruritus arising either from an underlying systemic disorder such as uraemia or from a pruritic skin disease such as eczema. In many cases, however, psychogenic factors may be responsible.

**ME64**

**Non-specific cutaneous vascular signs**

Changes perceptible in the skin as a result of alterations in blood composition, blood flow or blood vessel integrity. They may be due to local factors or may indicate underlying disorders such as anaemia, hypovolaemia, fever, hypoxia or defective clotting.

**ME64.0**

**Erythema**

Redness of skin due to the presence of increased amounts of oxygenated haemoglobin within dilated skin capillaries. It may be due to localised or generalised inflammatory processes but may result from increased cutaneous blood flow following exertion or associated with pyrexia.

**ME64.1**

**Cyanosis**

A blue-purple discolouration of the skin due to the presence of increased amounts of deoxygenated blood in skin blood vessels.

**Exclusions:** acrocyanosis (EG00)

cyanotic attacks of newborn (KB2C)

**ME64.2**

**Pallor**

Paleness of the skin such as may ensue from severe anaemia or from hypovolaemic shock.

**ME64.3**

**Petechiae**

Petechiae result from focal leakage of blood from dermal capillaries into the adjacent dermal connective tissue. They present as multiple pin-point non-blanching red or purple macules. The many underlying causes range from the innocuous (e.g. coughing or straining) to life-threatening conditions (e.g. meningococcal septicaemia).

**Coded Elsewhere:** Neonatal cutaneous haemorrhage (KA83.8)

**ME64.4**

**Flushing**

Paroxysmal vasodilatation of skin capillaries.

**ME65**

**Disturbances of skin sensation of unspecified aetiology**

A group of cutaneous symptoms for which it is frequently impossible to identify a precise cause.

**Coded Elsewhere:** Anaesthesia of skin (MB40.3)

Tactile hallucinations (MB27.26)

**ME65.0**

**Burning of skin**

A burning sensation in the skin which usually arises without obvious explanation.

**ME65.1**

**Itching of skin**

The sensation of itch in the skin. For persistent itch of unknown cause the term "Pruritus of unknown cause" should be used.

**ME65.2**

**Pain or tenderness of skin**

**Exclusions:** Chronic pain (MG30)

<b>ME65.3</b>	<b>Stinging of skin</b> An unpleasant sensation such as may be provoked by stinging nettles but which can be set off in some individuals by a wide variety of topical preparations or stimuli which are otherwise well tolerated by most people.
<b>ME65.4</b>	<b>Tingling of skin</b> A prickling sensation in the skin which may result from external factors such as rain falling on the skin or may be due to transient or permanent peripheral nerve damage.
<b>ME65.Y</b>	<b>Other specified disturbance of skin sensation</b>
<b>ME66</b>	<b>Miscellaneous non-specific skin-related symptoms and signs</b> Other specified skin changes which cannot be more precisely defined. <b>Coded Elsewhere:</b> Abnormal skin pigmentation (ED64)
<b>ME66.0</b>	<b>Abnormal sensitivity to light or UV radiation of uncertain or unspecified nature</b> <b>Inclusions:</b> Photosensitivity
<b>ME66.1</b>	<b>Changes in skin texture</b> Alterations in skin texture of unspecified cause.
<b>ME66.2</b>	<b>Excess and redundant skin</b> A condition which typically occurs in formerly grossly obese individuals following massive weight loss, as following bariatric surgery or severe calorie restriction.
<b>ME66.3</b>	<b>Symptom or complaint relating to hair or scalp</b> A very non-specific term to indicate an actual or perceived problem affecting the hair or the scalp which cannot be more precisely coded elsewhere.
<b>ME66.4</b>	<b>Symptom or complaint relating to nails</b> A very non-specific term to indicate an actual or perceived problem affecting the finger- or toenails which cannot be more precisely coded elsewhere.
<b>ME66.5</b>	<b>Complaint of abnormal sweating</b> Complaint that sweating is abnormal (most commonly that it is increased) without sufficient evidence to make a specific diagnosis.
<b>ME66.6</b>	<b>Rash</b> A non-specific term indicating the presence of an acquired skin disturbance to be used only when no more precise information is available. <b>Exclusions:</b> Acute skin eruption of uncertain or unspecified nature (ME62) Chronic skin disorder of uncertain or unspecified nature (ME63)

<b>ME66.60</b>	Rash localised A very non-specific term to denote a localised acquired visible alteration of the skin from normal in situations where a more precise description or diagnosis cannot be made. If a diagnosis cannot be made then a choice from the classes Acute skin eruption of uncertain or unspecified nature and Chronic skin disorder of uncertain or unspecified nature is preferred.
	<b><i>Exclusions:</i></b> Drug eruptions (EH60-EH6Z)
<b>ME66.61</b>	Rash generalised A very non-specific term to denote a widespread acquired visible alteration of the skin from normal in situations where a more precise description or diagnosis cannot be made. If a diagnosis cannot be made then a choice from the classes Acute skin eruption of uncertain or unspecified nature and Chronic skin disorder of uncertain or unspecified nature is preferred.
	<b><i>Exclusions:</i></b> Drug eruptions (EH60-EH6Z)
<b>ME66.6Y</b>	Other specified rash
<b>ME66.6Z</b>	Rash, unspecified
<b>ME66.Y</b>	<b>Other specified skin changes</b>
<b>ME67</b>	<b>Skin disorder of uncertain or unspecified nature</b> A category to enable the presence of a skin disorder to be recorded without making assumptions as to the precise nature of the disorder in question.
<b>ME6Y</b>	<b>Other specified symptoms or signs involving the skin</b>

### Symptoms, signs or clinical findings of the musculoskeletal system (ME80-MF1Y)

Symptoms or signs of the musculoskeletal system (ME80-ME8Y)

**Coded Elsewhere:** Abnormality of tonus and reflex (MB47)

- Constitutional tall stature (5B12)
- Fear of musculoskeletal disease (MG24.8)
- Myalgia (FB56.2)
- Osteonecrosis (FB81)
- Osteophyte (FA37.0)
- Short stature, not elsewhere classified (5B11)

### **ME80** **Clicking hip**

***Exclusions:*** Structural developmental anomalies of pelvic girdle (LB74)

**ME81**

**Musculoskeletal chest pain**

- Exclusions:**
- Other chest pain (MD30.1)
  - Costochondritis (FB82)
  - Tietze syndrome (FB82)
  - Chronic primary musculoskeletal pain (MG30.02)
  - Chronic secondary musculoskeletal pain (MG30.3)

**ME81.0**

**Intercostal pain**

- Exclusions:**
- Chronic primary musculoskeletal pain (MG30.02)
  - Chronic secondary musculoskeletal pain (MG30.3)

**ME81.Y**

**Other specified musculoskeletal chest pain**

**ME81.Z**

**Musculoskeletal chest pain, unspecified**

**ME82**

**Pain in joint**

Arthralgia secondary to inflammation, cartilage degeneration, crystal deposition, infection, and trauma not detailed in or used in conjunction with other condition.

- Exclusions:**
- Chronic primary musculoskeletal pain (MG30.02)
  - Chronic secondary musculoskeletal pain (MG30.3)

**ME83**

**Rheumatism, unspecified**

This is a group of disorders marked by inflammation or pain in the connective tissue structures of the body and is considered unspecified.

- Exclusions:**
- Chronic primary musculoskeletal pain (MG30.02)
  - Chronic secondary musculoskeletal pain (MG30.3)

**ME84**

**Spinal pain**

This is a condition characterised by pain felt in the back that usually originates from the muscles, nerves, bones, joints or other structures in the spine.

- Exclusions:**
- Symptom or complaint of the back (ME86.2)
  - Chronic secondary musculoskeletal pain (MG30.3)
  - Chronic neuropathic pain (MG30.5)

**ME84.0**

**Cervical spine pain**

This is a condition which is usually characterised by pain or discomfort in the neck region and can be caused by numerous spinal problems. It may be a feature of virtually every disorder and disease that occurs above the shoulder blades.

**Coding Note:**

Code also the causing condition

**Inclusions:**

cervicalgia

**Exclusions:**

cervical disc degeneration (FA80)

Chronic primary cervical pain (MG30.02)

Chronic secondary musculoskeletal pain (MG30.3)

Chronic neuropathic pain (MG30.5)

<b>ME84.1</b>	<b>Thoracic spine pain</b>
	This is a group of conditions characterised by pain perceived anywhere in the region bounded superiorly by a transverse line through the tip of the spinous process of T1, inferiorly by a transverse line through the tip of the spinous process of T12, and laterally by vertical lines tangential to the most lateral margins of the erector spinae muscles.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b>
	Chronic primary thoracic pain (MG30.02)
	Chronic secondary musculoskeletal pain (MG30.3)
	Chronic neuropathic pain (MG30.5)
<b>ME84.2</b>	<b>Low back pain</b>
	This is a condition which is defined as pain and discomfort, localised below the costal margin and above the inferior gluteal folds, with or without leg pain.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b>
	Lumbago NOS
	Loin pain
	<b>Exclusions:</b>
	Degenerative condition of spine (FA80-FA8Z)
	Chronic primary low back pain (MG30.02)
	Chronic secondary musculoskeletal pain (MG30.3)
	Chronic neuropathic pain (MG30.5)
<b>ME84.20</b>	Lumbago with sciatica
	<b>Exclusions:</b>
	that due to intervertebral disc disorder (FA80-FA8Z)
	Chronic primary musculoskeletal pain (MG30.02)
	Chronic secondary musculoskeletal pain (MG30.3)
	Chronic neuropathic pain (MG30.5)
<b>ME84.2Y</b>	Other specified low back pain
<b>Coding Note:</b>	Code also the causing condition
<b>ME84.2Z</b>	Low back pain, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>ME84.3</b>	<b>Sciatica</b>
	<b>Exclusions:</b>
	Degenerative condition of spine (FA80-FA8Z)
	Lesion of sciatic nerve (8C11.0)
	Lumbago with sciatica (ME84.20)
	Chronic neuropathic pain (MG30.5)
<b>ME84.Z</b>	<b>Spinal pain, unspecified</b>

<b>ME85</b>	<b>Stiffness of joint</b> Lack of range of motion of a joint secondary to pain, disease process or congenital malformation not detailed in or used in conjunction with other codes.
<b>ME86</b>	<b>Symptom or complaint of a body part</b>
<b>ME86.0</b>	<b>Symptom or complaint of the ankle</b>
	<b><i>Exclusions:</i></b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.1</b>	<b>Symptom or complaint of the arm</b>
	<b><i>Exclusions:</i></b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.2</b>	<b>Symptom or complaint of the back</b>
	<b><i>Exclusions:</i></b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.20</b>	Back syndrome without radiating pain <b><i>Exclusions:</i></b> Spondylolysis (FA81) Spondylolisthesis (FA84) Atlanto-axial instability or subluxation (LB73.22) Subluxation complex (ME93) Torticollis (FA71) Spinal enthesitis (FA92.00) Axial spondyloarthritis (FA92.0) Myelopathy (8B42) Spondylopathies (FB00-FB0Z) Intervertebral disc degeneration (FA80) Localised central endplate defect (FA85.10) Spinal instabilities (FB10) Strain or sprain of lumbar spine (NB53.5) Chronic primary musculoskeletal pain (MG30.02)
<b>ME86.21</b>	Back syndrome with radiating pain <b><i>Exclusions:</i></b> Spondylolysis (FA81) Low back pain (ME84.2) Sciatica (ME84.3) Intervertebral disc degeneration (FA80) Chronic primary musculoskeletal pain (MG30.02)
<b>ME86.22</b>	Symptom or complaint of the low back <b><i>Exclusions:</i></b> Chronic primary musculoskeletal pain (MG30.02)

<b>ME86.2Y</b>	Other specified symptom or complaint of the back
<b>ME86.2Z</b>	Symptom or complaint of the back, unspecified
<b>ME86.3</b>	<b>Symptom or complaint of the chest</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.4</b>	<b>Symptom or complaint of the elbow</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.5</b>	<b>Symptom or complaint of the flank or axilla</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.6</b>	<b>Symptom or complaint of the foot or toe</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.7</b>	<b>Symptom or complaint of the hand or finger</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.8</b>	<b>Symptom or complaint of the hip</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.9</b>	<b>Symptom or complaint of the jaw</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.A</b>	<b>Symptom or complaint of the knee</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.B</b>	<b>Symptom or complaint of the leg or thigh</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.C</b>	<b>Symptom or complaint of the neck</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.D</b>	<b>Symptom or complaint of the shoulder</b>
	<b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)

<b>ME86.D0</b>	Shoulder syndrome A shoulder syndrome is defined by shoulder pain with one or more of the following problems: limitations of movement, local tenderness, crepitus or periarticular calcification in imaging.
	<b>Exclusions:</b> Arthropathies (FA00-FA5Z) Shoulder lesions (FB53) Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.DY</b>	Other specified symptom or complaint of the shoulder
<b>ME86.DZ</b>	Symptom or complaint of the shoulder, unspecified
<b>ME86.E</b>	<b>Symptom or complaint of the wrist</b> <b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.F</b>	<b>Symptom or complaint of joint, not otherwise specified</b> <b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.G</b>	<b>Symptom or complaint of muscle, not otherwise specified</b> <b>Exclusions:</b> Chronic primary musculoskeletal pain (MG30.02) Chronic secondary musculoskeletal pain (MG30.3)
<b>ME86.Y</b>	<b>Problem of other specified body part</b>
<b>ME86.Z</b>	<b>Problem of unspecified body part</b>
<b>ME8Y</b>	<b>Other specified symptoms or signs of the musculoskeletal system</b>

Clinical findings in the musculoskeletal system (ME90-ME9Y)

<b>ME90</b>	<b>Clinical findings on diagnostic imaging of skull and head</b> <b>Exclusions:</b> Intracranial space-occupying lesion (MB71.0)
<b>ME91</b>	<b>Clinical findings on diagnostic imaging of limbs</b>
<b>ME92</b>	<b>Clinical findings on diagnostic imaging of other parts of musculoskeletal system</b> <b>Exclusions:</b> Clinical findings on diagnostic imaging of skull and head (ME90)
<b>ME92.0</b>	<b>Wedging of vertebra</b>
<b>ME92.1</b>	<b>Bony erosion</b>
<b>ME92.Y</b>	<b>Other specified clinical findings on diagnostic imaging of other parts of musculoskeletal system</b>

**ME92.Z** Clinical findings on diagnostic imaging of other parts of musculoskeletal system, unspecified

**ME93** Biomechanical lesions, not elsewhere classified

**Coding Note:** This category should not be used if the condition can be classified elsewhere.

**ME93.0** Segmental and somatic dysfunction

**ME93.1** Subluxation stenosis of neural canal

**ME93.2** Osseous stenosis of neural canal

**ME93.3** Connective tissue stenosis of neural canal

**ME93.4** Intervertebral disc stenosis of neural canal

**ME93.40** Intervertebral disc stenosis of neural canal, head region

**ME93.41** Intervertebral disc stenosis of neural canal, cervical region

**ME93.42** Intervertebral disc stenosis of neural canal, thoracic region

**ME93.43** Intervertebral disc stenosis of neural canal, lumbar region

**ME93.44** Intervertebral disc stenosis of neural canal, sacral region

**ME93.45** Intervertebral disc stenosis of neural canal, pelvic region

**ME93.46** Intervertebral disc stenosis of neural canal, lower extremity

**ME93.47** Intervertebral disc stenosis of neural canal, upper extremity

**ME93.48** Intervertebral disc stenosis of neural canal, rib cage

**ME93.4Y** Other specified intervertebral disc stenosis of neural canal

**ME93.4Z** Intervertebral disc stenosis of neural canal, unspecified

**ME93.5** Osseous and subluxation stenosis of intervertebral foramina

**ME93.6** Connective tissue and disc stenosis of intervertebral foramina

**ME93.Y** Other specified biomechanical lesions, not elsewhere classified

**Coding Note:** This category should not be used if the condition can be classified elsewhere.

**ME93.Z** Biomechanical lesions, unspecified

**Coding Note:** This category should not be used if the condition can be classified elsewhere.

**ME9Y** Other specified clinical findings in the musculoskeletal system

---

**MF1Y** Other specified symptoms, signs or clinical findings of the musculoskeletal system

## Symptoms, signs or clinical findings of the genitourinary system (MF30-MG0Y)

Symptoms, signs or clinical findings involving the female genital system (MF30-MF3Y)

**Coded Elsewhere:** Fear of complications of pregnancy (MG24.D)

Fear of female genital or breast disease (MG24.F)

Fear of sexually transmitted disease female (MG24.E)

Menstrual cycle bleeding disorders (GA20)

Breast engorgement of newborn (KC41.0)

**MF30      Breast lump or mass female**

**MF31      Breast or lactation symptom or complaint**

**MF32      Menopausal symptom or complaint**

**Coded Elsewhere:** Postmenopausal atrophic vaginitis (GA30.2)

Menopausal hot flush (GA30.4)

**MF33      Premenstrual symptom or complaint**

A symptom of premenstrual syndrome affecting females that is idiopathic. This symptom is characterised by cyclic emotional, physical, or behavioural symptoms such as mood alterations, psychological changes, fluid retention, neurologic changes, gastrointestinal changes, pelvic heaviness, or dermatological changes affecting women in the luteal phase of the menstrual cycle that interfere with an individual's lifestyle.

**MF34      Pregnancy symptom or complaint**

**MF35      Postpartum symptom or complaint**

**MF36      Other symptom or complaint of vagina**

**MF37      Symptom or complaint of female nipple**

**MF38      Symptom or complaint of female pelvis**

**MF39      Symptom or complaint of the vulva**

**MF3A      Vaginal discharge**

**MF3Y      Other specified symptoms, signs or clinical findings involving the female genital system**

Symptoms, signs or clinical findings involving the male genital system (MF40-MF4Y)

**Coded Elsewhere:** Fear of genital disease male (MG24.H)

Fear of sexually transmitted disease male (MG24.G)

Male infertility (GB04)

Fear of sexual dysfunction male (MG24.Y)

**MF40**

**Problems of male genital organs**

A group of disorders associated with the male genital organs occurring in diseases more specifically classified elsewhere.

**MF40.0 Symptom or complaint of the penis**

**MF40.00** Pain in penis

**Exclusions:** Chronic secondary visceral pain (MG30.4)

Chronic primary visceral pain (MG30.00)

**MF40.0Y** Other specified symptom or complaint of the penis

**MF40.0Z** Symptom or complaint of the penis, unspecified

**MF40.1 Problems of the prostate**

A group of disorders associated with the prostate occurring in diseases more specifically classified elsewhere.

**MF40.2 Symptom or complaint of the scrotum or testis**

**Coded Elsewhere:** Pain in scrotum (GB0Y)

**MF40.20** Acute scrotal pain

**Exclusions:** Torsion of testis (GB01.0)

Torsion of epididymis (GB01.1)

Torsion of hydatids (GB01.2)

Orchitis (GB02)

**MF40.21** Testicular pain

**Exclusions:** Chronic primary visceral pain (MG30.00)

Chronic secondary visceral pain (MG30.4)

**MF40.2Y** Other specified symptom or complaint of the scrotum or testis

**MF40.2Z** Symptom or complaint of the scrotum or testis, unspecified

**MF40.3 Retrograde ejaculation**

Retrograde Ejaculation is a condition in which semen that is normally ejaculated via the urethra is redirected to the urinary bladder. Retrograde Ejaculation is typically accompanied by subjective orgasm, though the man may notice that release of semen is limited or absent. Retrograde Ejaculation most commonly occurs as a complication of transurethral prostatic resection, but may also be caused by other surgery of the pelvic area, nervous system dysfunction, or use of pharmacological agents. Confirmation is by identification of spermatozoa in a urine sample.

<b>MF40.Y</b>	<b>Other specified problems of male genital organs</b>
<b>MF40.Z</b>	<b>Problems of male genital organs, unspecified</b>
<b>MF41</b>	<b>Symptom or complaint of male sexual function</b>
<b>MF42</b>	<b>Retractile testis migrans</b>
	A retractile testicle is one that may move back and forth between the scrotum and the groin. For most boys, the problem resolves sometime before or during puberty.
<b>MF4Y</b>	<b>Other specified symptoms, signs or clinical findings involving the male genital system</b>

Symptoms, signs or clinical findings involving the urinary system (MF50-MF5Y)

**Coded Elsewhere:** Fear of urinary disease (MG24.C)

<b>MF50</b>	<b>Abnormal micturition</b>
<b>MF50.0</b>	<b>Frequent micturition</b> Needing to urinate more often than normal.  <b>Exclusions:</b> Pollakiuria (MF50.1)
<b>MF50.1</b>	<b>Pollakiuria</b>
<b>MF50.2</b>	<b>Urinary incontinence</b> Any condition of the urinary system, caused by determinants arising during the antenatal period or after birth, leading to loss of voluntary control or support of the urethra. These conditions are characterised by involuntary leakage of large amounts of urine, in association with uninhibited contractions of the detrusor muscle and the inability to control urination.  <b>Exclusions:</b> haematuria: recurrent and persistent (GB40-GB4Z) haematuria with specified morphological lesion (GB40-GB4Z) proteinuria NOS (MF96) haematuria NOS (MF50.4) Diurnal enuresis (6C00.1) Enuresis (6C00) Nocturnal and diurnal enuresis (6C00.2) Nocturnal enuresis (6C00.0)
<b>MF50.20</b>	Stress incontinence Urinary incontinence due to diminished urethral pressure in straining or coughing.

**Coding Note:** Code also the causing condition

**Exclusions:** Stress incontinence associated with pelvic organ prolapse (GC40.50)

<b>MF50.21</b>	Urge Incontinence This is a form of urinary incontinence characterised by the involuntary loss of urine occurring for no apparent reason while feeling urinary urgency, a sudden need or urge to urinate.  <b>Exclusions:</b> Urge incontinence associated with pelvic organ prolapse (GC40.51)
<b>MF50.22</b>	Mixed incontinence
<b>MF50.23</b>	Functional urinary incontinence Urinary incontinence due to cognitive impairment, or severe physical disability or immobility  <b>Exclusions:</b> Stress incontinence (MF50.20)
<b>MF50.24</b>	Reflex incontinence Urinary incontinence that accompanies detrusor hyperreflexia
<b>MF50.2Y</b>	Other specified urinary incontinence
<b>MF50.2Z</b>	Urinary incontinence, unspecified
<b>MF50.3</b>	<b>Retention of urine</b> Incomplete emptying of the bladder
<b>MF50.4</b>	<b>Haematuria</b>  <b>Exclusions:</b> recurrent or persistent haematuria (GB40-GB4Z)
<b>MF50.40</b>	Macroscopic haematuria
<b>MF50.41</b>	Microscopic haematuria
<b>MF50.4Z</b>	Haematuria, unspecified
<b>MF50.5</b>	<b>Extravasation of urine</b>
<b>MF50.6</b>	<b>Other difficulties with micturition</b>
<b>MF50.60</b>	Hesitancy of micturition Difficulty in beginning the flow of urine or maintaining a urinary stream
<b>MF50.61</b>	Poor urinary stream A reduced, slow or weak stream of urine
<b>MF50.62</b>	Splitting of urinary stream A condition where the urine stream splits into two or more different directions
<b>MF50.63</b>	Urgency of urination A sudden and strong urge to urinate along with discomfort in the bladder
<b>MF50.64</b>	Feeling of incomplete bladder emptying A sensation that the bladder is not empty after voiding.

**MF50.65** Straining to void  
The need to strain or push in order to empty the bladder

**MF50.6Y** Other specified difficulties with micturition

**MF50.6Z** Difficulties with micturition, unspecified

**MF50.7** **Dysuria**  
painful urination

**Inclusions:** Strangury

**MF50.8** **Vesical tenesmus**  
ineffective and painful straining for urination

**MF50.Y** **Other specified abnormal micturition**

**MF50.Z** **Abnormal micturition, unspecified**

### **MF51** **Anuria or oliguria**

Anuria means nonpassage of urine, in practice is defined as passage of less than 50 millilitres of urine in a day. Oliguria is the low output of urine. It is clinically classified as an output below 300-500ml/day.

**Exclusions:** Maternal care for other conditions predominantly related to pregnancy (JA65)

### **MF52** **Bladder pain**

Complaint of suprapubic or retropubic pain, pressure, or discomfort, related to the bladder, and usually increasing with bladder filling. It may persist or be relieved after voiding.

**Exclusions:** Chronic primary bladder pain syndrome (MG30.00)  
Chronic primary visceral pain (MG30.00)  
Chronic secondary visceral pain (MG30.4)

### **MF53** **Extrarenal uraemia**

**Inclusions:** Prerenal uraemia

### **MF54** **Macroscopic changes of size of the kidney**

Any condition characterised by alterations in the size of the kidney, observable by the unaided eye.

<b>MF54.0</b>	<b>Smooth contracted kidney</b> A condition of the kidney, caused by an overgrowth of abnormal fibrous tissue and ischaemic atrophy. This condition is characterised by a small, granular, and smooth kidney.
	<b><i>Exclusions:</i></b> Small kidney (MF54.2) diffuse sclerosing glomerulonephritis (GB61) contracted kidney due to hypertension (BA02) hypertensive nephrosclerosis (arteriolar)(arteriosclerotic) (BA02)
<b>MF54.1</b>	<b>Irregularly contracted kidney</b> A kidney with deep cortical indentations or scars large enough to be perceived or examined by the naked eye
<b>MF54.2</b>	<b>Small kidney</b> A condition characterised by a kidney smaller in size and weight than the average (less than 11 centimetres long, 5-7.5 centimetres wide, 2.5 centimetres thick, and weighing less than 120 grams).
<b>MF54.Y</b>	<b>Other specified macroscopic changes of size of the kidney</b>
<b>MF54.Z</b>	<b>Macroscopic changes of size of the kidney, unspecified</b>
<b>MF55</b>	<b>Polyuria</b> Polyuria is a condition defined as excessive or abnormally large production or passage of urine.
<b>MF56</b>	<b>Renal colic</b> A severe paroxysmal pain in the flank radiating to the groin, scrotum or labia, caused by blockage of the renal pelvis or ureter most commonly by a renal stone. May be associated with nausea and vomiting.
<b>MF57</b>	<b>Symptom or complaint of bladder</b>
<b>MF58</b>	<b>Urethral discharge</b> <b><i>Inclusions:</i></b> Urethrorrhoea Penile discharge
<b>MF59</b>	<b>Urinary symptom or complaint</b>
<b>MF5Y</b>	<b>Other specified symptoms, signs or clinical findings involving the urinary system</b>

Clinical findings in specimens from female genital organs (MF60-MF6Z)

**Exclusions:** Low grade squamous intraepithelial lesion of vulva (GA13.1)

Carcinoma in situ of other or unspecified genital organs (2E67)

Low grade squamous intraepithelial lesion of cervix uteri (GA15.7)

**MF60** **Abnormal level of enzymes in specimens from female genital organs**

**MF61** **Abnormal level of hormones in specimens from female genital organs**

**MF62** **Abnormal level of drugs, medicaments and biological substances in specimens from female genital organs**

**MF63** **Abnormal level of substances chiefly nonmedicinal as to source in specimens from female genital organs**

**MF64** **Abnormal immunological findings in specimens from female genital organs**

**MF65** **Abnormal microbiological findings in specimens from female genital organs**

**MF66** **Abnormal cytological findings in specimens from female genital organs**

**MF66.0** **Abnormal cervix smear**

**MF66.Y** **Other specified abnormal cytological findings in specimens from female genital organs**

**MF66.Z** **Abnormal cytological findings in specimens from female genital organs, unspecified**

**MF67** **Abnormal histological findings in specimens from female genital organs**

**MF68** **Abnormal chromosomal findings in specimens from female genital organs**

**MF6Y** **Other specified clinical findings in specimens from female genital organs**

**MF6Z** **Clinical findings in specimens from female genital organs, unspecified**

Clinical findings in specimens from male genital organs (MF70-MF7Z)

**Exclusions:** Oligospermia (GB04)

Azoospermia (GB04.0)

**MF70** **Abnormal level of enzymes in specimens from male genital organs**

**MF71** **Abnormal level of hormones in specimens from male genital organs**

**MF72** **Abnormal level of drugs, medicaments and biological substances in specimens from male genital organs**

- MF73**      **Abnormal level of substances chiefly nonmedicinal as to source in specimens from male genital organs**
- MF74**      **Abnormal immunological findings in specimens from male genital organs**
- MF75**      **Abnormal microbiological findings in specimens from male genital organs**  
**Exclusions:**      Prostate specific antigen positive (MA14.1B)
- MF76**      **Abnormal cytological findings in specimens from male genital organs**
- MF77**      **Abnormal histological findings in specimens from male genital organs**
- MF78**      **Abnormal chromosomal findings in specimens from male genital organs**
- MF7Y**      **Other specified clinical findings in specimens from male genital organs**
- MF7Z**      **Clinical findings in specimens from male genital organs, unspecified**

Clinical findings in specimens from the urinary system (MF80-MF8Z)

- MF80**      **Diffuse mesangial sclerosis**  
Diffuse mesangial sclerosis is a histological appearance which is characterised by diffuse thickening of basement membrane and massive enlargement of mesangial areas leading to contraction and sclerosis of the glomerular capillary tuft. It may be seen in children with early onset steroid resistant nephrotic syndrome due to a variety of genetic abnormalities, either as an isolated renal disease or as part of a multi-organ syndrome.
- MF81**      **Fibronectin glomerulopathy**  
Fibronectin glomerulopathy is a rare hereditary kidney disease in which fibronectin (FN1) deposits are seen in the mesangium and subendothelial space. The clinical picture is characterised by proteinuria, type IV renal tubular acidosis, microscopic haematuria and hypertension that may lead to end-stage renal failure in the second to sixth decade of life. This disease may be associated with mutations in the FN1 gene.
- MF82**      **Lipoprotein glomerulopathy**  
Characteristic lipoprotein thrombi are found in the glomerulus in this genetically determined disease mainly found in East Asia.
- MF83**      **Diabetic glomerular changes**  
Diabetic glomerulosclerosis involves diffuse thickening of the basement membrane progressing to diffuse mesangial expansion (diffuse diabetic glomerulosclerosis) with in some cases matrix occupying the capillary lumen to form Kimmelstiel Wilson nodules (nodular glomerulosclerosis)

**Coding Note:** Code also the causing condition

**MF84**

### **Pauci-immune proliferative glomerulonephritis**

A focal and segmental necrotising glomerulonephritis with no immune deposits (“pauci-immune”). Typical of glomerular involvement in anti-neutrophil cytoplasmic antibody (ANCA) mediated vasculitis – microscopic polyangiitis and Wegener’s granulomatosis. Most but not all patients have circulation ANCA when there is active disease.

**MF85**

### **Anti-glomerular basement membrane antibody mediated disease**

Anti-GBM mediated glomerulonephritis is an aggressive focal and segmental proliferative glomerular disease characterised by linear staining of the glomerular basement membrane for immunoglobulins, particularly IgG and IgM. Crescentic change is often associated and circulating anti-bodies to glomerular basement membrane are found in active disease. The renal syndrome is often acute nephritis with rapid renal functional decline (rapidly progressive nephritis) and if associated with respiratory involvement (haemoptysis, respiratory failure) the couple is termed “Goodpasture's syndrome”.

**Inclusions:** Goodpasture syndrome

**MF8Y**

### **Other specified clinical findings in specimens from the urinary system**

**MF8Z**

### **Clinical findings in specimens from the urinary system, unspecified**

Clinical findings on examination of urine, without diagnosis (MF90-MF9Y)

**Coding Note:** This category is to be assigned when no underlying or determining condition is identified.

**Exclusions:** Specific findings indicating disorder of amino-acid metabolism (5C50)  
Specific findings indicating disorder of carbohydrate metabolism (5C51)  
Clinical findings on antenatal screening of mother (JA66)

**MF90**

### **Acetonuria**

Acetonuria is a medical condition in which acetone is present in the urine.

**Inclusions:** Ketonuria

**MF91**

### **Bilirubinuria**

Bilirubinuria means the presence of any bile pigment in the urine.

**MF92**

### **Chyluria**

Chyluria, also called chylous urine, is a medical condition involving the presence of chyle in the urine stream, which results in urine appearing milky white.

**Exclusions:** Filarial chyluria (1F66)

**MF93**

### **Glycosuria**

**Coded Elsewhere:** Renal glycosuria (GB90.45)

**MF94****Haemoglobinuria**

The presence of free haemoglobin in the urine, indicating haemolysis of erythrocytes within the vascular system. After saturating the haemoglobin-binding proteins (haptoglobins), free haemoglobin begins to appear in the urine.

**Exclusions:** Marchiafava-Micheli syndrome (3A21.0)

**MF95****Myoglobinuria**

Myoglobinuria is the presence of myoglobin in the urine usually as result of rhabdomyolysis. Any process that interferes with the storage or use of energy by muscle cells can lead to myoglobinuria. When excreted into the urine, myoglobin can precipitate, causing tubular obstruction and acute kidney injury. The most common causes of myoglobinuria in adults are trauma, alcohol and drug abuse, usually in relation to muscle necrosis from prolonged immobilization and pressure by the body weight. Prolonged ethanol consumption and seizure activity, similar to excessive physical activity, can produce an imbalance between muscle energy consumption and production, resulting in muscle destruction.

**MF96****Proteinuria**

Excessive serum proteins in the urine, such as in renal disease when albumin is the main protein, but also may be due to other proteins such as immunoglobulin light chains in plasma cell dyscrasia such as multiple myeloma.

**Exclusions:** Persistent proteinuria or albuminuria (GB42)

**Coded Elsewhere:** Gestational proteinuria without hypertension (JA22.0)

Gestational oedema with proteinuria without hypertension  
(JA22.2)

**MF96.0****Orthostatic proteinuria**

A condition characterised by an elevated protein excretion while in the upright position and normal protein excretion in a supine or recumbent position.

**MF96.1****Bence Jones proteinuria**

A condition characterised by the presence of a monoclonal globulin protein or immunoglobulin light chain (Bence Jones protein) in the urine. Originally detected by precipitating at 56 and dissolving again at 100 degrees centigrade (Henry Bence Jones 1813-1873) they are now detected by urinary electrophoresis or light chain assay.

**MF96.Y****Other specified proteinuria****MF96.Z****Proteinuria, unspecified****MF97****Pyuria**

Pyuria is a urinary condition that is characterized by an elevated number of white blood cells in the urine. Doctors define a high number as at least 10 white blood cells per cubic millimeter ( $\text{mm}^3$ ) of centrifuged urine. Pyuria can cause the urine to look cloudy or as if it contains pus.

**MF98****Abnormal levels of serum electrolytes in the urine**

**Coded Elsewhere:** Hyperphosphaturia (GB90.48)

<b>MF98.0</b>	<b>Hypercalciuria</b>
<b>MF98.1</b>	<b>Hyperkaluria</b>
<b>MF98.2</b>	<b>Hypermagnesuria</b>
<b>MF98.3</b>	<b>Hypocalciuria</b>
<b>MF98.4</b>	<b>Hypokaluria</b>
<b>MF98.5</b>	<b>Hypomagnesuria</b>
<b>MF98.6</b>	<b>Hypophosphaturia</b>
<b>MF98.Y</b>	<b>Other specified abnormal levels of serum electrolytes in the urine</b>
<b>MF98.Z</b>	<b>Abnormal levels of serum electrolytes in the urine, unspecified</b>

**MF99      Elevated urine levels of drugs, medicaments and biological substances**

Elevated urine levels of drugs, medicaments and biological substances mean that the levels of drugs, medicaments, and biological substances have elevated on the urine examination.

**MF9A      Abnormal urine levels of substances chiefly nonmedicinal as to source**

**MF9B      Abnormal findings on microbiological examination of urine**

**MF9C      Abnormal findings on cytological and histological examination of urine**

**MF9Y      Other specified clinical findings on examination of urine, without diagnosis**

**Coding Note:** This category is to be assigned when no underlying or determining condition is identified.

**MG00      Clinical findings on diagnostic imaging of breast**

Clinical findings on diagnostic imaging of breast is findings on diagnostic imaging of the breast which don't appear in normal status of the body. Diagnostic imaging refers to technologies that doctors use to look inside body for clues about a medical condition. X-rays, CT scans, nuclear medicine scans, MRI scans and ultrasound are all types of diagnostic imaging.

**MG01      Clinical findings on diagnostic imaging of urinary organs**

**Inclusions:**      hypertrophy of kidney (GB90)

**MG02      Results of kidney function studies**

**Inclusions:**      Abnormal renal function test

**MG0Y      Other specified symptoms, signs or clinical findings of the genitourinary system**

## General symptoms, signs or clinical findings (MG20-MG9Y)

### General symptoms (MG20-MG4Y)

**Coded Elsewhere:** Enlarged lymph nodes (MA01)

Symptom or complaint of a body part (ME86)

**MG20**

#### **Cachexia**

Cachexia is a pathological generalised loss of body mass with reduction of the storage fat deposits, structural fat and musculature that can be accompanied by gradual loss of function of organs.

**Inclusions:** Human immunodeficiency virus disease associated with wasting syndrome (1C62.3)

Malignant neoplasms of ill-defined or unspecified primary sites (2D40-2D4Z)

nutritional marasmus (5B51)

**MG20.0**

#### **Malignant cachexia**

**MG20.Z**

#### **Cachexia, unspecified**

**MG21**

#### **Chills**

**MG22**

#### **Fatigue**

A feeling of exhaustion, lethargy, or decreased energy, usually experienced as a weakening or depletion of one's physical or mental resource and characterised by a decreased capacity for work and reduced efficiency in responding to stimuli. Fatigue is normal following a period of exertion, mental or physical, but sometimes may occur in the absence of such exertion as a symptom of health conditions.

**Inclusions:** General physical deterioration

Lethargy

**Exclusions:** Combat fatigue (QE84)

Exhaustion due to exposure (NF07.2)

heat exhaustion (NF01)

Bodily distress disorder (6C20)

Depressive disorders (6A70-6A7Z)

Sleep-wake disorders (Chapter 07)

Bipolar or related disorders (6A60-6A6Z)

senile fatigue (MG2A)

Chronic fatigue syndrome (8E49)

Myalgic encephalomyelitis (8E49)

Postviral fatigue syndrome (8E49)

pregnancy-related exhaustion and fatigue (JA65)

**MG23**

#### **Fear of death or dying**

<b>MG24</b>	<b>Fear of disease</b>
	<p><b>Exclusions:</b> Bodily distress disorder (6C20) Hypochondriasis (6B23)</p>
	<p><b>Coded Elsewhere:</b> Fear of ear disease (MC4Y) Fear of skin disease (ME66.Y) Fear of sexual dysfunction female (MF3Y)</p>
<b>MG24.0</b>	<b>Fear of cancer</b>
<b>MG24.00</b>	<p>Fear of cancer of digestive system This refers to worrying about having a cancer of the digestive system.</p>
<b>MG24.01</b>	Fear of breast cancer female

<b>MG24.B</b>	<p><b>Fear of endocrine, metabolic or nutritional disease</b> <i>Coded Elsewhere:</i> Fear of cancer of endocrine system (MG24.0Y)</p>
<b>MG24.C</b>	<p><b>Fear of urinary disease</b> <i>Coded Elsewhere:</i> Fear of cancer of urinary system (MG24.0Y)</p>

<b>MG24.D</b>	<b>Fear of complications of pregnancy</b>
<b>MG24.E</b>	<b>Fear of sexually transmitted disease female</b>
<b>MG24.F</b>	<b>Fear of female genital or breast disease</b> <i>Coded Elsewhere:</i> Fear of breast cancer female (MG24.01) Fear of genital cancer female (MG24.0Y)
<b>MG24.G</b>	<b>Fear of sexually transmitted disease male</b>
<b>MG24.H</b>	<b>Fear of genital disease male</b> <i>Coded Elsewhere:</i> Fear of genital cancer male (MG24.02)
<b>MG24.J</b>	<b>Fear of mental disorder</b>
<b>MG24.Y</b>	<b>Fear of other specified disease</b>
<b>MG24.Z</b>	<b>Fear of disease, unspecified</b>
<b>MG25</b>	<b>Feeling ill</b> <i>Inclusions:</i> malaise
<b>MG26</b>	<b>Fever of other or unknown origin</b> An abnormal elevation of body temperature of unknown origin, often as a result of a pathologic process.  <i>Exclusions:</i> fever of unknown origin in newborn (KD10-KD1Z) Malignant hyperthermia due to anaesthesia (NE86) <i>Coded Elsewhere:</i> Pyrexia of unknown origin following delivery (JB40.4) Pyrexia during labour, not elsewhere classified (JB0D.2) Fever of newborn (KD11)
<b>MG27</b>	<b>Haemorrhage, not elsewhere classified</b> Bleeding or escape of blood from a vessel.  <i>Exclusions:</i> Obstetric haemorrhage (JA40-JA4Z) Haemorrhage or haematoma complicating a procedure, not elsewhere classified (NE81.0) Fetal blood loss (KA80) Certain specified neonatal haemorrhages (KA83)
<b>MG28</b>	<b>Hypothermia, not associated with low environmental temperature</b> <i>Exclusions:</i> hypothermia NOS (NF02) hypothermia low environmental temperature (NF02) <i>Coded Elsewhere:</i> Hypothermia of newborn (KD12)

**MG29**

**Oedema**

Abnormal fluid accumulation in tissues or body cavities not coded elsewhere.

**Exclusions:** oedema of pharynx (CA00-CA0Z)

oedema of nasopharynx (CA00-CA0Z)

Pulmonary oedema (CB01)

Ascites (ME04)

hydrops fetalis NOS (KC41.1)

angioneurotic oedema (EB04)

Cerebral oedema due to birth injury (KA40.1)

hereditary oedema (4A00.14)

Oedema of larynx (CA0H.3)

malnutrition (5B50-5B7Z)

hydrothorax (CB27)

**Coded Elsewhere:** Gestational oedema without hypertension (JA22.1)

Gestational oedema with proteinuria without hypertension  
(JA22.2)

**MG29.0**

**Localised oedema**

**Coded Elsewhere:** Swollen tongue (MD80.1)

**MG29.00**

Ankle oedema

**MG29.01**

Oedema of legs

**MG29.02**

Pitting of lip

**MG29.0Y**

Other specified localised oedema

**MG29.1**

**Generalised oedema**

**MG29.10**

Oedema due to increased capillary pressure

Increased capillary pressure increases the leakage of fluid from the vascular compartment to the interstitial tissues, resulting in oedema. Causes include impaired or obstructed venous return (fluid overload, venous thrombosis, right heart failure, venous compression from tumour tissue), increased blood flow (physiological response to heat exposure, arteriovenous malformations, disturbed cutaneous vasomotor control due to drug or autonomic neuropathy), or reduced plasma oncotic pressure due to hypoproteinaemia.

**Coded Elsewhere:** Fluid overload with oedema (5C78)

**MG29.1Y**

Other specified generalised oedema

**MG29.2**

**Infectious oedema**

**MG29.3**

Pitting oedema

**MG29.Z**

Oedema, unspecified

**MG2A**

**Ageing associated decline in intrinsic capacity**

**Inclusions:** senescence without mention of psychosis

**Exclusions:** Senile dementia (6D80-6D8Z)

**Pain (MG30-MG3Z)**

**Inclusions:** pain not referable to any one organ or body region

**Exclusions:** Headache disorders (8A80-8A8Z)

Abdominal or pelvic pain (MD81)

Breast pain (GB23.5)

Pain in joint (ME82)

Pain in eye (MC18)

Ear pain (AB70.2)

Pain in chest (MD30)

Pelvic or perineal pain (MD81.11)

Pain in shoulder (ME82)

Spinal pain (ME84)

Pain in tooth, toothache (DA0A)

Renal colic (MF56)

Pain in throat (MD36.0)

Low back pain (ME84.2)

Pain in limb (FB56.4)

Pain disorders (8E43)

**MG30**

**Chronic pain**

Pain is an unpleasant sensory and emotional experience associated with, or resembling that associated with, actual or potential tissue damage. Chronic pain is pain that persists or recurs for longer than 3 months. Chronic pain is multifactorial: biological, psychological and social factors contribute to the pain syndrome.

**Coding Note:** This code should be used if a pain condition persists or recurs for longer than 3 months.

**Exclusions:** Acute pain (MG31)

<b>MG30.0</b>	<b>Chronic primary pain</b> Chronic primary pain is chronic pain in one or more anatomical regions that is characterised by significant emotional distress (anxiety, anger/frustration or depressed mood) or functional disability (interference in daily life activities and reduced participation in social roles). Chronic primary pain is multifactorial: biological, psychological and social factors contribute to the pain syndrome. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms.
<b>Coding Note:</b>	Other chronic pain diagnoses to be considered are chronic cancer-related pain, chronic postsurgical or posttraumatic pain, chronic neuropathic pain, chronic secondary headache or orofacial pain, chronic secondary visceral pain and chronic secondary musculoskeletal pain.
<b>Exclusions:</b>	Acute pain (MG31)
<b>Coded Elsewhere:</b>	Painful bruising syndrome (ED02)

  

<b>MG30.00</b>	Chronic primary visceral pain Chronic primary visceral pain is chronic pain localized in the thoracic, abdominal or pelvic region, and is associated with significant emotional distress or functional disability. The distinct anatomical location is compatible with typical referral pain patterns from specific internal organs. The symptoms are not better explained by a diagnosis of chronic secondary visceral pain. Chronic primary visceral pain is multifactorial: biological, psychological and social factors contribute to the pain syndrome. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms.
<b>Exclusions:</b>	Chronic abdominal pain NOS (MD81.4)
<b>Coded Elsewhere:</b>	Penoscrotodynia (EC92.0) Vulvodynia (GA34.02) Irritable bowel syndrome (DD91.0) Functional gallbladder disorder (DD94) Functional sphincter of Oddi disorder (DD95) Functional abdominal pain in children (DD93.Y) Functional biliary sphincter of Oddi disorder (DD95) Functional pancreatic sphincter of Oddi disorder (DD95) Abdominal pain-related functional GI disorders in children (DD93.Y) Vulval dysaesthesia syndrome (GA34.02)

<b>MG30.01</b>	Chronic widespread pain  Chronic widespread pain (CWP) is diffuse pain in at least 4 of 5 body regions and is associated with significant emotional distress (anxiety, anger/frustration or depressed mood) or functional disability (interference in daily life activities and reduced participation in social roles). CWP is multifactorial: biological, psychological and social factors contribute to the pain syndrome. The diagnosis is appropriate when the pain is not directly attributable to a nociceptive process in these regions and there are features consistent with nociceptive pain and identified psychological and social contributors.
	<b><i>Exclusions:</i></b> Acute pain (MG31)
<b>MG30.02</b>	Chronic primary musculoskeletal pain  Chronic primary musculoskeletal pain is chronic pain in the muscles, bones, joints or tendons that is characterised by significant emotional distress (anxiety, anger/frustration or depressed mood) or functional disability (interference in daily life activities and reduced participation in social roles). Chronic primary musculoskeletal pain is multifactorial: biological, psychological and social factors contribute to the pain syndrome. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms. Other chronic musculoskeletal pain diagnoses to be considered are those listed under chronic secondary musculoskeletal pain.
	<b><i>Exclusions:</i></b> Acute pain (MG31)
<b>MG30.03</b>	Chronic primary headache or orofacial pain  Chronic primary headache or orofacial pain is defined as headache or orofacial pain that occurs on at least 50% of the days during at least 3 months. It is characterised by significant emotional distress (anxiety, anger/frustration or depressed mood) or functional disability (interference in daily life activities, reduced participation in social roles). Chronic primary headache or orofacial pain is multifactorial: biological, psychological and social factors contribute to the pain syndrome. The diagnosis is appropriate independently of identified biological or psychological contributors unless another diagnosis would better account for the presenting symptoms. The duration of pain per day is at least 2 hours.
	<b><i>Exclusions:</i></b> Headache disorders (8A80-8A8Z)  <b><i>Coded Elsewhere:</i></b> Chronic migraine (8A80.2) Burning mouth syndrome (DA0F.0) Chronic tension-type headache (8A81.2) Chronic cluster headache (8A82) Hemicrania continua (8A82)

<b>MG30.04</b>	Complex regional pain syndrome  Complex regional pain syndrome (CRPS) is a chronic pain condition in an extremity with a variable course over time. It is characterized by continuing regional pain (not in a specific nerve territory or dermatome), usually with distal predominance or distal-to-proximal gradient. It typically arises after tissue trauma and is seemingly disproportionate in magnitude or duration to the usual course of pain after such tissue trauma.  CRPS is characterized by signs indicating autonomic and neuro-inflammatory changes in the affected body region varying between patients and over time. Often, CRPS is accompanied by significant emotional distress or functional disability. CRPS is multifactorial.
<b>MG30.0Y</b>	Other specified chronic primary pain
<b>Coding Note:</b>	Other chronic pain diagnoses to be considered are chronic cancer-related pain, chronic postsurgical or posttraumatic pain, chronic neuropathic pain, chronic secondary headache or orofacial pain, chronic secondary visceral pain and chronic secondary musculoskeletal pain.
<b>MG30.0Z</b>	Chronic primary pain, unspecified
<b>Coding Note:</b>	Other chronic pain diagnoses to be considered are chronic cancer-related pain, chronic postsurgical or posttraumatic pain, chronic neuropathic pain, chronic secondary headache or orofacial pain, chronic secondary visceral pain and chronic secondary musculoskeletal pain.
<b>MG30.1</b>	<b>Chronic cancer related pain</b>  Chronic cancer-related pain is pain caused by the primary cancer itself or metastases (chronic cancer pain) or its treatment (chronic post-cancer treatment pain). It is distinct from pain caused by co-morbid disease [1-3]. It should be highly probable that the pain is due to cancer or its treatment; if its genesis is vague, consider using codes in the section of Primary pain.
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.10</b>	Chronic cancer pain  Chronic cancer pain is chronic pain caused by the primary cancer or metastases. It should be highly probable that the pain is due to cancer; if its genesis is vague, consider using codes in the section of chronic primary pain.
<b>Coding Note:</b>	Code also the causing condition

<b>MG30.11</b>	<p>Chronic post cancer treatment pain</p> <p>Chronic post-cancer treatment pain is pain caused by any treatment given to treat the primary tumour or metastases. The most common forms are:</p> <ul style="list-style-type: none"> <li>(i) Chronic painful chemotherapy-induced polyneuropathy (CIPN): chronic peripheral neuropathic pain caused by oral or intravenous chemotherapy.</li> <li>(ii) Chronic post-radiotherapy pain: chronic pain caused by delayed local damage to the nervous system in the field of radiotherapy. It is distinct from pain caused by tumour recurrence or co-morbid disease.</li> </ul> <p>Other treatments include surgery and hormonal therapy.</p> <p><b>Diagnostic Criteria</b></p> <p>Conditions A to C are fulfilled:</p> <p>A. Chronic pain (persistent or recurrent for longer than 3 months) is present and characterised by all of the following:</p> <ul style="list-style-type: none"> <li>A1 History of treatment with neurotoxic chemotherapy or radiotherapy or any treatment given to treat the primary tumour or metastases</li> <li>A2 It is likely that the pain is caused by the cancer treatment.</li> </ul> <p>B. One of the following applies:</p> <ul style="list-style-type: none"> <li>B1 An active or recurrent tumour or metastases have been specifically excluded on radiological investigation.</li> <li>B2 If an active or a recurrent tumor or metastases are present, the pain is not better accounted for by them.</li> </ul> <p>C. The pain is not better accounted for by another diagnosis of chronic pain.</p> <p><b>Coding Note:</b> Code also the causing condition</p>
<b>MG30.1Y</b>	Other specified chronic cancer related pain
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.1Z</b>	Chronic cancer related pain, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.2</b>	<p><b>Chronic postsurgical or post traumatic pain</b></p> <p>Chronic postsurgical or post traumatic pain is pain developing or increasing in intensity after a surgical procedure or a tissue injury (involving any trauma including burns) and persisting beyond the healing process, i.e. at least 3 months after surgery or tissue trauma. The pain is either localized to the surgical field or area of injury, projected to the innervation territory of a nerve situated in this area, or referred to a dermatome (after surgery/injury to deep somatic or visceral tissues). Other causes of pain including infection, malignancy etc. need to be excluded as well as pain continuing from a pre-existing pain problem.</p> <p><b>Coding Note:</b> The postsurgical or posttraumatic aetiology of the pain should be highly probable; if it is vague, consider using codes in the section of chronic primary pain.</p> <p><b>Coded Elsewhere:</b> Complex regional pain syndrome (MG30.04)</p>

<b>MG30.20</b>	Chronic post traumatic pain  Chronic post traumatic pain is pain developing or increasing in intensity after a tissue injury (involving any trauma including burns) and persisting beyond the healing process, i.e. at least 3 months after the tissue trauma. The pain is either localized to the area of injury, projected to the innervation territory of a nerve situated in this area, or referred to a dermatome (after surgery/injury to deep somatic or visceral tissues). Other causes of pain including infection, malignancy etc. need to be excluded as well as pain continuing from a pre-existing pain problem.
<b>Coding Note:</b>	The posttraumatic aetiology of the pain should be highly probable; if it is vague, consider using codes in the section of chronic primary pain.
<b>Coded Elsewhere:</b>	Chronic central neuropathic pain associated with spinal cord injury (MG30.50)
	Chronic central neuropathic pain associated with brain injury (MG30.50)
	Chronic neuropathic pain after peripheral nerve injury (MG30.51)
	Complex regional pain syndrome type II (MG30.04)
<b>MG30.21</b>	Chronic postsurgical pain  Chronic postsurgical pain is chronic pain developing or increasing in intensity after a surgical procedure and persisting beyond the healing process, i.e. at least 3 months after surgery. The pain is either localised to the surgical field, projected to the innervation territory of a nerve situated in this area, or referred to a dermatome (after surgery/injury to deep somatic or visceral tissues). Other causes of pain including infection, malignancy etc. need to be excluded as well as pain continuing from a pre-existing pain problem. Dependent on type of surgery, chronic postsurgical pain often may be neuropathic pain.
<b>Coding Note:</b>	The postsurgical aetiology of the pain should be highly probable; if it is vague, consider using codes in the section of chronic primary pain.
<b>MG30.2Y</b>	Other specified chronic postsurgical or post traumatic pain
<b>Coding Note:</b>	The postsurgical or posttraumatic aetiology of the pain should be highly probable; if it is vague, consider using codes in the section of chronic primary pain.
<b>MG30.2Z</b>	Chronic postsurgical or post traumatic pain, unspecified
<b>Coding Note:</b>	The postsurgical or posttraumatic aetiology of the pain should be highly probable; if it is vague, consider using codes in the section of chronic primary pain.

<b>MG30.3</b>	<p><b>Chronic secondary musculoskeletal pain</b></p> <p>Chronic secondary musculoskeletal pain is chronic pain arising from bone(s), joint(s), muscle(s), vertebral column, tendon(s) or related soft tissue(s). It is a heterogeneous group of chronic pain conditions originating in persistent nociception in joint, bone, muscle, vertebral column, tendons and related soft tissues, with local and systemic aetiologies, but also related to deep somatic lesions. The pain may be spontaneous or movement-induced.</p>
<b>Coding Note:</b>	<p>If the pain is related to visceral lesions, it should be considered whether a diagnosis of chronic visceral pain is appropriate;</p> <p>if it is related to neuropathic mechanisms, it should be coded under chronic neuropathic pain;</p> <p>and if the pain mechanisms are non-specific, chronic musculoskeletal pain should be coded under chronic primary pain.</p>
<b>Exclusions:</b>	<p>Acute pain (MG31)</p> <p>Chronic neuropathic pain (MG30.5)</p> <p>Chronic primary pain (MG30.0)</p> <p>Chronic secondary visceral pain (MG30.4)</p>
<b>MG30.30</b>	<p>Chronic secondary musculoskeletal pain from persistent inflammation</p> <p>Chronic secondary musculoskeletal pain from persistent inflammation is chronic pain due to inflammatory mechanisms in joint(s), bone(s), tendon(s), muscle(s), soft tissue(s) or vertebral column. The pain may be spontaneous or movement-induced. It is characterised by clinical features of inflammation, including increased sensitivity of the part to stimuli.</p>
<b>Coding Note:</b>	<p>Code also the causing condition</p>
<b>MG30.31</b>	<p>Chronic secondary musculoskeletal pain associated with structural changes</p> <p>Chronic secondary musculoskeletal pain associated with structural changes is chronic pain of unknown mechanism(s) that is attributable to anatomical changes in joint(s), bone(s) or tendon(s). The structural change needs to be inferred from clinical examination and/or demonstrable on imaging. The pain may be spontaneous or movement-induced. It is characterised by clinical features such as swelling, allodynia or restricted movement.</p> <p>Diagnostic Criteria:</p> <p>Conditions A to D are fulfilled:</p> <p>A) Chronic pain (persistent or recurrent for longer than 3 months) in joint(s), bone(s), or tendon(s) is present. The pain may be spontaneous or movement induced.</p> <p>B) At least one of the following fulfilled:</p> <p>B1) Swelling is present.</p> <p>B2) Allodynia over the part is present.</p> <p>C) The structural change is inferred from clinical examination or imaging.</p> <p>D) The pain is not better accounted for by another diagnosis of chronic pain.</p>
<b>Coding Note:</b>	<p>Code also the causing condition</p>
	<p><b>Coded Elsewhere:</b> Chronic pain after musculoskeletal injury (MG30.20)</p>

<b>MG30.32</b>	Chronic secondary musculoskeletal pain due to disease of the nervous system Chronic secondary musculoskeletal pain due to diseases of the nervous system is chronic pain localized in joint(s), bone(s), tendon(s) or muscle(s) that is related to peripheral or central neurological disorders classified elsewhere. It includes pain due to altered motor function and altered sensory function. Altered biomechanical function due to the neurological disease is responsible for the activation of nociceptors in musculoskeletal tissue. The pain may be spontaneous or movement-induced.
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.3Y</b>	Other specified chronic secondary musculoskeletal pain
<b>Coding Note:</b>	If the pain is related to visceral lesions, it should be considered whether a diagnosis of chronic visceral pain is appropriate; if it is related to neuropathic mechanisms, it should be coded under chronic neuropathic pain; and if the pain mechanisms are non-specific, chronic musculoskeletal pain should be coded under chronic primary pain.
<b>MG30.3Z</b>	Chronic secondary musculoskeletal pain, unspecified
<b>Coding Note:</b>	If the pain is related to visceral lesions, it should be considered whether a diagnosis of chronic visceral pain is appropriate; if it is related to neuropathic mechanisms, it should be coded under chronic neuropathic pain; and if the pain mechanisms are non-specific, chronic musculoskeletal pain should be coded under chronic primary pain.
<b>MG30.4</b>	<b>Chronic secondary visceral pain</b> Chronic visceral pain is persistent or recurrent pain originating from internal organs of the head/neck region and of the thoracic, abdominal and pelvic cavities. The visceral etiology of the pain should be highly probable; if it is vague, consider using codes in the section of Chronic Primary Pain.
<b>Coding Note:</b>	Code also the causing condition
	<b>Exclusions:</b> Neuropathic pain (8E43.0)
	<b>Coded Elsewhere:</b> Chronic visceral cancer pain (MG30.10)
<b>MG30.40</b>	Chronic visceral pain from mechanical factors Chronic visceral pain from mechanical factors is chronic pain deriving from a) the obstruction of hollow viscera as a consequence of internal migrating obstacles (e.g., stones) or stenosis, with dilation above the obstacle/stenosis or b) from the traction of ligaments and vessels of internal organs or the external compression of internal organs.
<b>Coding Note:</b>	Code also the causing condition

<b>MG30.41</b>	Chronic visceral pain from vascular mechanisms Chronic visceral pain from vascular mechanisms is chronic visceral pain due to alterations of arterial and/or venous blood vessels to/from viscera of the head/neck region, thoracic, abdominal and pelvic cavities or pain conditions of the vascular system producing pain in other locations.
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.42</b>	Chronic visceral pain from persistent inflammation Chronic visceral pain from persistent inflammation is chronic pain due to longlasting inflammation of internal organs of the head/neck region and of the thoracic, abdominal, or pelvic cavities.
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.4Y</b>	Other specified chronic secondary visceral pain
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.4Z</b>	Chronic secondary visceral pain, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.5</b>	<p><b>Chronic neuropathic pain</b></p> <p>Chronic neuropathic pain is chronic pain caused by a lesion or disease of the somatosensory nervous system. The pain may be spontaneous or evoked, as an increased response to a painful stimulus (hyperalgesia) or a painful response to a normally nonpainful stimulus (allodynia). The diagnosis of chronic neuropathic pain requires a history of nervous system injury or disease and a neuroanatomically plausible distribution of the pain. Negative (for example, decreased or loss of sensation) and positive sensory symptoms or signs (for example, allodynia or hyperalgesia) indicating the involvement of the somatosensory nervous system must be compatible with the innervation territory of the affected nervous structure.</p>
<b>Coding Note:</b>	Code also the causing condition
	<b>Coded Elsewhere:</b> Chronic neuropathic orofacial pain (MG30.62)
	Chronic neuropathic cancer pain (MG30.10)
<b>MG30.50</b>	Chronic central neuropathic pain
	Chronic central neuropathic pain is chronic pain caused by a lesion or disease of the central somatosensory nervous system. The pain may be spontaneous or evoked, as an increased response to a painful stimulus (hyperalgesia) or a painful response to a normally nonpainful stimulus (allodynia). The diagnosis of central neuropathic pain requires a history of central nervous system injury or disease and a neuroanatomically plausible distribution of the pain. Negative (e.g., decreased or loss of sensation) and positive sensory symptoms or signs (e.g., allodynia or hyperalgesia) indicating the involvement of the central somatosensory nervous system must be compatible with the innervation territory of the affected nervous structure.
<b>Coding Note:</b>	Code also the causing condition

<b>MG30.51</b>	Chronic peripheral neuropathic pain Chronic peripheral neuropathic pain is chronic pain caused by a lesion or disease of the peripheral somatosensory nervous system. The pain may be spontaneous or evoked, as an increased response to a painful stimulus (hyperalgesia) or a painful response to a normally nonpainful stimulus (allodynia). The diagnosis of peripheral neuropathic pain requires a history of peripheral nervous system injury or disease and a neuroanatomically plausible distribution of the pain. Negative (e.g., decreased or loss of sensation) and positive sensory symptoms or signs (e.g., allodynia or hyperalgesia) indicating the involvement of the peripheral somatosensory nervous system must be compatible with the innervation territory of the affected nervous structure.

	Postzoster glossopharyngeal neuralgia (1E91.5)
	Postzoster trigeminal neuralgia (1E91.5)
<b>MG30.63</b>	<p>Headache or orofacial pain associated with chronic secondary temporomandibular disorders</p> <p>Chronic secondary temporomandibular disorder pain is chronic pain in the temporomandibular joint(s) or masseter or temporalis muscle(s) associated with persistent inflammation (due to e.g. infection, crystal deposition or autoimmune disorders), structural changes (such as osteoarthritis or spondylosis), injury, or diseases of the nervous system. It occurs on at least 50% of the days during at least three months. The duration of pain per day is at least 2 hours. If the etiology is vague, consider using codes in the section of chronic primary pain.</p>
<b>Coding Note:</b>	Code also the causing condition
<b>MG30.64</b>	<p>Chronic headache or orofacial pain associated with disorders of homoeostasis or their nonpharmacological treatment</p> <p>Chronic headache or orofacial pain associated with disorders of homeostasis or their nonpharmacological treatment is caused by disorders of homoeostasis or the nonpharmacological treatment thereof, and has a duration of more than three months. The pain occurs on at least 50% of the days during at least three months. The duration of pain per day is at least 2 hours.</p>
<b>MG30.65</b>	<p>Chronic headache or orofacial pain associated with cranial or cervical vascular disorder</p> <p>Chronic headache or orofacial pain associated with cranial or cervical vascular disorder is caused by vascular cervical or cranial disorders, and has a duration of more than three months. The pain occurs on at least 50% of the days during at least three months. The duration of pain per day is at least 2 hours.</p>

<b>MG30.66</b>	Chronic headache or orofacial pain associated with non-vascular intracranial disorder  Chronic headache or orofacial pain associated with non-vascular intracranial disorder is caused by non-vascular intracranial disorders, and has a duration of more than three months. The pain occurs on at least 50% of the days during at least three months. The duration of pain per day is at least 2 hours.
<b>MG30.67</b>	Chronic headache associated with a substance or its withdrawal  Chronic headache associated with a substance or its withdrawal is caused by use of, exposure to or withdrawal from a substance, and has a duration of more than three months. The pain occurs on at least 50% of the days during at least three months. The duration of pain per day is at least 2 hours.  <b><i>Exclusions:</i></b> Medication-overuse headache (8A84)
<b>MG30.6Y</b>	Other specified chronic secondary headache or orofacial pain
<b>Coding Note:</b>	If the aetiology is vague, consider using codes in the section of chronic primary pain.
<b>MG30.6Z</b>	Chronic secondary headache or orofacial pain, unspecified
<b>Coding Note:</b>	If the aetiology is vague, consider using codes in the section of chronic primary pain.
<b>MG30.Y</b>	<b>Other specified chronic pain</b>
<b>Coding Note:</b>	This code should be used if a pain condition persists or recurs for longer than 3 months.
<b>MG30.Z</b>	<b>Chronic pain, unspecified</b>
<b>Coding Note:</b>	This code should be used if a pain condition persists or recurs for longer than 3 months.
<b>MG31</b>	<b>Acute pain</b> Pain with a duration of less than 3 months.  This code should be used only when there is no further specification of site.
<b>MG31.0</b>	<b>Acute pain in the face, not elsewhere classified</b>
<b>MG31.1</b>	<b>Acute headache, not elsewhere classified</b>
<b>MG31.2</b>	<b>Acute postoperative pain, not elsewhere classified</b> Pain at the intervention site or caused by an intervention.
<b>MG31.Y</b>	<b>Other specified acute pain</b>
<b>MG31.Z</b>	<b>Acute pain, unspecified</b>
<b>MG3Z</b>	<b>Pain, unspecified</b>

**MG40**

### **Shock**

Shock is a life-threatening medical condition that occurs due to inadequate substrate for aerobic cellular respiration. In the early stages this is generally an inadequate tissue level of oxygen. Shock, not elsewhere classified is a shock that isn't classified elsewhere.

**Exclusions:** Traumatic shock, not elsewhere classified (NF0A.4)

Toxic shock syndrome (1C45)

lightening shock (NF08.0)

electric shock (NF08.4)

Psychic shock (QE84)

Anaphylactic shock NOS (4A84)

Anaphylaxis due to allergic reaction to food (4A84.0)

anaphylactic shock due to serum (NE80.3)

**Coded Elsewhere:** Sepsis with septic shock (1G41)

Shock following abortion, ectopic or molar pregnancy (JA05.3)

Shock during or following labour or delivery (JB0D.1)

**MG40.0**

### **Cardiogenic shock**

**Exclusions:** Cardiogenic shock, unrelated to mechanical complications, as current complication following acute myocardial infarction (BA60.9)

**MG40.1**

### **Hypovolaemic shock**

**Exclusions:** traumatic hypovolemic shock (NF0A.4)

**MG40.Y**

### **Other specified shock**

**MG40.Z**

### **Shock, unspecified**

**MG41**

### **Sleep disturbance, not elsewhere classified**

**Exclusions:** Sleep-wake disorders (Chapter 07)

**MG42**

### **Somnolence, not elsewhere classified**

**Inclusions:** Drowsiness

**Exclusions:** Sleep-wake disorders (Chapter 07)

**MG43**

### **Symptoms and signs concerning food and fluid intake**

Symptoms and signs concerning food and fluid intake include anorexia, polydipsia, polyphagia, feeding difficulties and mismanagement, abnormal weight loss, abnormal weight gain, insufficient intake of food and water due to self neglect and other symptoms and signs concerning food and fluid intake.

**Exclusions:** Feeding or eating disorders (6B80-6B8Z)

malnutrition (5B50-5B7Z)

<b>MG43.0</b>	<b>Polydipsia</b>
	<i>Inclusions:</i> Excessive thirst
<b>MG43.1</b>	<b>Overeating</b>
	The consumption of excess food in relation to energy and nutritional requirements.
	<i>Inclusions:</i> Excessive eating
	<i>Exclusions:</i> Bipolar or related disorders (6A60-6A6Z)
	Depressive disorders (6A70-6A7Z)
	Feeding or eating disorders (6B80-6B8Z)
<b>MG43.2</b>	<b>Abulia</b>
	Abulia is state of poverty of behaviour and speech output, lack of initiative, loss of emotional responses, psychomotor slowing, and prolonged speech latency.
<b>MG43.3</b>	<b>Feeding difficulties</b>
	<i>Exclusions:</i> Feeding problems of newborn (KD32)
	Feeding or eating disorders (6B80-6B8Z)
	Anorexia Nervosa (6B80)
	Bulimia Nervosa (6B81)
	Binge eating disorder (6B82)
	Avoidant-restrictive food intake disorder (6B83)
	Pica (6B84)
	Rumination-regurgitation disorder (6B85)
	Cyclic vomiting syndrome (8A80.4)
<b>MG43.30</b>	Feeding problem of infant
	<i>Exclusions:</i> Feeding problems of newborn (KD32)
	Avoidant-restrictive food intake disorder (6B83)
<b>MG43.31</b>	Feeding problem of child
	<i>Exclusions:</i> Feeding or eating disorders (6B80-6B8Z)
	Anorexia Nervosa (6B80)
	Avoidant-restrictive food intake disorder (6B83)
	Pica (6B84)
	Rumination-regurgitation disorder (6B85)
	Binge eating disorder (6B82)
	Bulimia Nervosa (6B81)
	Cyclic vomiting syndrome in children (DD93)

<b>MG43.32</b>	Feeding problem of adult
	<b>Exclusions:</b>
	Anorexia Nervosa (6B80)
	Bulimia Nervosa (6B81)
	Binge eating disorder (6B82)
	Avoidant-restrictive food intake disorder (6B83)
	Pica (6B84)
	Rumination-regurgitation disorder (6B85)
	Feeding or eating disorders (6B80-6B8Z)
	Cyclic vomiting syndrome (8A80.4)
<b>MG43.3Z</b>	Feeding difficulties, unspecified
<b>MG43.4</b>	<b>Insufficient intake of food and water due to self neglect</b>
	<b>Exclusions:</b>
	starvation due to privation of food (PD27)
	thirst due to privation of water (PD28)
	Anorexia Nervosa (6B80)
	Avoidant-restrictive food intake disorder (6B83)
	Bulimia Nervosa (6B81)
	Feeding or eating disorders (6B80-6B8Z)
<b>MG43.40</b>	Refusal of food, not elsewhere classified
	<b>Exclusions:</b>
	Intentional self-harm by lack of food (PD27)
	Anorexia (MG43.7)
<b>MG43.41</b>	Refusal of fluid, not elsewhere classified
	<b>Exclusions:</b>
	Intentional self-harm by lack of water (PD28)
	Dehydration (5C70.0)
<b>MG43.4Y</b>	Other specified insufficient intake of food and water due to self neglect
<b>MG43.4Z</b>	Insufficient intake of food and water due to self neglect, unspecified
<b>MG43.5</b>	<b>Excessive weight loss</b>
	A reduction of total body mass, due to loss of fluid, body fat or adipose tissue, or lean (muscle) mass that is sufficient in quantity or rate to create risk to the individual's health.
<b>MG43.6</b>	<b>Excessive weight gain</b>
	An increase in total body mass, due to increase in fluid, fat or adipose tissue, or lean (muscle) mass that is outside the expected range for normal growth and development and is sufficient in quantity or rate to create risk to the individual's health.
	<b>Exclusions:</b>
	Obesity (5B81)
	<b>Coded Elsewhere:</b> Excessive weight gain in pregnancy (JA65.2)

<b>MG43.7</b>	<b>Anorexia</b> Anorexia is a pathological lack or loss of appetite.
	<b>Inclusions:</b> Loss of appetite
	<b>Exclusions:</b> loss of appetite of nonorganic origin (6B80-6B8Z) anorexia nervosa (6B80) Decreased appetite (MG43.8)
<b>MG43.8</b>	<b>Decreased appetite</b> Intermittent or persistent decreased motivation or desire to eat food as compared to what is typical for the individual.
<b>MG43.9</b>	<b>Increased appetite</b> Intermittent or persistent increased motivation or desire to eat food as compared to what is typical for the individual.
<b>MG43.Y</b>	<b>Other specified symptoms and signs concerning food and fluid intake</b>
<b>MG44</b>	<b>Symptoms peculiar to infancy</b>
<b>MG44.0</b>	<b>Excessive crying of infant</b> <b>Inclusions:</b> Irritable infant <b>Exclusions:</b> neonatal cerebral irritability (KB03)
<b>MG44.1</b>	<b>Lack of expected normal physiological development</b> Lack of expected normal physiological development includes delayed milestone of development and other lack of expected normal physiological development including gross and fine motor development, language, social milestones. <b>Exclusions:</b> Delayed puberty (5A91) Disorders of intellectual development (6A00)
<b>MG44.10</b>	Delayed milestone <b>Inclusions:</b> Delayed attainment of expected physiological developmental stage
<b>MG44.11</b>	Failure to thrive in infant or child When an infant or child's current weight or rate of weight gain is significantly below that of other children of similar age and gender. <b>Exclusions:</b> Failure to thrive in newborn (KD32.4) Anorexia Nervosa (6B80) Avoidant-restrictive food intake disorder (6B83) Cachexia (MG20)

<b>MG44.12</b>	<p>Short stature of child Short stature is when a child is significantly shorter than children of the same age and gender</p> <p><b>Exclusions:</b>      Short stature due to growth hormone resistance (5A61.0)                           Short stature, not elsewhere classified (5B11)</p>
<b>MG44.13</b>	<p>Constitutional delay of growth and puberty Delayed development concerning maturation of bones and their growth at prepubertal and pubertal ages of children. Occurs with or without short stature below the third percentile of body height. Height velocity is usually temporarily below the mean. Bone age is always delayed. Puberty starts late, but spontaneously. Other causes of delayed growth (with or without short stature below the third percentile of body height) or of delayed puberty must be excluded.</p> <p><b>Exclusions:</b>      Short stature, not elsewhere classified (5B11)                           Short stature due to growth hormone resistance (5A61.0)</p>
<b>MG44.14</b>	<p>Familial short stature Short stature of a child or adolescent (below 3rd percentile) with one or both parents with an adult height below 3rd percentile. Combination with constitutional delay of growth and puberty may occur.</p> <p><b>Exclusions:</b>      Short stature, not elsewhere classified (5B11)                           Short stature due to growth hormone resistance (5A61.0)</p>
<b>MG44.1Y</b>	Other specified lack of expected normal physiological development
<b>MG44.1Z</b>	Lack of expected normal physiological development, unspecified
<b>MG44.Y</b>	<b>Other specified symptoms peculiar to infancy</b>
<b>MG44.Z</b>	<b>Symptoms peculiar to infancy, unspecified</b>

**MG45****Syncope and collapse**

Syncope is also called fainting, temporary loss of consciousness. Syncope and collapse is temporary loss of consciousness with a fall down.

**Inclusions:** Fainting

Blackout

**Exclusions:** Heat syncope (NF01.1)

carotid sinus syncope (8D88)

Shock during or following labour or delivery (JB0D.1)

unconsciousness NOS (MB20.1)

Cardiogenic shock (MG40.0)

Shock following abortion, ectopic or molar pregnancy (JA05.3)

shock: NOS (MG40)

Orthostatic hypotension (BA21)

neurogenic orthostatic hypotension (8D87.0)

**Coded Elsewhere:** Reflex syncope (8D89.0)

Syncope due to autonomic failure (8D89.1)

**MG45.0****Cardiac syncope****MG45.Y****Other specified syncope and collapse****MG45.Z****Syncope and collapse, unspecified****MG46****Systemic inflammatory response syndrome of noninfectious origin**

**Coding Note:**

Code also the underlying condition.

**Exclusions:** Systemic inflammatory response syndrome of infectious origin  
(Chapter 01)

**MG47****Toxicosis not further specified**

**Exclusions:** Harmful effects of substances (NE60-NE6Z)

**MG48****Unknown and unspecified causes of morbidity**

**Inclusions:** Undiagnosed disease, not specified as to the site or system involved

**MG49****Hangover**

**Exclusions:** Alcohol withdrawal (6C40.4)

**MG4A****Multi organ failure**

Failure of function of more than one organ or organ system, not otherwise specified

**Coding Note:**

Code also the causing condition

**MG4Y****Other specified general symptoms**

Finding of microorganism resistant to antimicrobial drugs (MG50-MG5Z)

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50**

**Finding of gram negative bacteria resistant to antimicrobial drugs**

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.0**

**Antibiotic resistant Acinetobacter baumannii**

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.00**

Tetracycline resistant Acinetobacter baumannii

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.01**

Aminoglycoside resistant Acinetobacter baumannii

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.02**

Carbapenem resistant Acinetobacter baumannii

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.03**

Polymyxin resistant Acinetobacter baumannii

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.0Y**

Acinetobacter resistant to other antibiotic

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG50.0Z**

Acinetobacter resistant to unspecified antibiotic

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG50.1</b>	<b>Antibiotic resistant Campylobacter</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.10</b>	Fluoroquinolone resistant Campylobacter
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.1Y</b>	Other specified antibiotic resistant Campylobacter
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.1Z</b>	Campylobacter resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.2</b>	<b>Antibiotic resistant Escherichia coli</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.20</b>	Sulfonamide or trimethoprim resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.21</b>	Fluoroquinolone resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.22</b>	Third generation cephalosporin resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG50.23</b>	Fourth-generation cephalosporins resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.24</b>	Carbapenem resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.25</b>	Polymyxin resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.26</b>	Penicillin resistant Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.27</b>	Extended spectrum beta-lactamase producing Escherichia coli
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.2Y</b>	Escherichia coli resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.
<b>MG50.2Z</b>	Escherichia coli resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.
<b>MG50.3</b>	<b>Antibiotic resistant Haemophilus influenzae</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.

<b>MG50.30</b>	Ampicillin resistant Haemophilus influenzae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.3Y</b>	Other specified antibiotic resistant Haemophilus influenzae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.3Z</b>	Antibiotic resistant Haemophilus influenzae, unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.4</b>	<b>Antibiotic resistant Helicobacter pylori</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.40</b>	Clarithromycin resistant Helicobacter pylori
<b>MG50.4Y</b>	Other specified antibiotic resistant Helicobacter pylori
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.4Z</b>	Antibiotic resistant Helicobacter pylori, unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.5</b>	<b>Antibiotic resistant Klebsiella pneumoniae</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.50</b>	Sulfonamide or trimethoprim resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG50.51</b>	Fluoroquinolone resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.52</b>	Third-generation cephalosporin resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.53</b>	Fourth-generation cephalosporin resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.54</b>	Carbapenem resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.55</b>	Polymyxin resistant Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.56</b>	Extended-spectrum beta-lactamase producing Klebsiella pneumoniae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.5Y</b>	Klebsiella pneumoniae resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.
<b>MG50.5Z</b>	Klebsiella pneumoniae resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.

<b>MG50.6</b>	<b>Antibiotic resistant Neisseria gonorrhoeae</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.60</b>	Third generation cephalosporin resistant Neisseria gonorrhoeae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.61</b>	Macrolide resistant Neisseria gonorrhoeae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.62</b>	Aminocyclitol resistant Neisseria gonorrhoeae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.63</b>	Fluoroquinolone resistant Neisseria gonorrhoeae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.64</b>	Aminoglycoside resistant Neisseria gonorrhoeae
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.6Y</b>	Neisseria gonorrhoeae resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.6Z</b>	Neisseria gonorrhoeae resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.

<b>MG50.7</b>	<b>Antibiotic resistant Neisseria meningitidis</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.70</b>	Penicillin resistant Neisseria meningitidis
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.7Y</b>	Other specified antibiotic resistant Neisseria meningitidis
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.7Z</b>	Antibiotic resistant Neisseria meningitidis, unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.8</b>	<b>Antibiotic resistant Pseudomonas aeruginosa</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.80</b>	Carbapenem-resistant Pseudomonas aeruginosa
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.81</b>	Polymyxin-resistant Pseudomonas aeruginosa
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.8Y</b>	Pseudomonas aeruginosa resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.

<b>MG50.8Z</b>	Pseudomonas aeruginosa resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.9</b>	<b>Antibiotic resistant Salmonella</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.90</b>	Fluoroquinolone resistant Salmonella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.91</b>	Third generation cephalosporin resistant Salmonella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.92</b>	Carbapenem resistant Salmonella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.9Y</b>	Salmonella resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.9Z</b>	Salmonella resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.A</b>	<b>Antibiotic resistant Shigella</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.

<b>MG50.A0</b>	Carbapenem resistant Shigella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.A1</b>	Fluoroquinolone resistant Shigella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.A2</b>	Third-generation cephalosporins resistant Shigella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.A3</b>	Macrolides resistant Shigella
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.AY</b>	Shigella resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.AZ</b>	Shigella resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.B</b>	<b>Antibiotic resistant Vibrio</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.B0</b>	Fluoroquinolone resistant Vibrio
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG50.BY</b>	Vibrio resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.BZ</b>	Vibrio resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.C</b>	<b>Other antibiotic resistant Enterobacterales</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.C0</b>	Other carbapenem resistant Enterobacterales
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.C1</b>	Other third-generation cephalosporin resistant Enterobacterales
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.CY</b>	Other specified other antibiotic resistant Enterobacterales
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG50.CZ</b>	Other antibiotic resistant Enterobacterales, unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.

<b>MG50.Y</b>	<b>Other specified finding of gram negative bacteria resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG50.Z</b>	<b>Finding of gram negative bacteria resistant to antimicrobial drugs, unspecified</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51</b>	<b>Finding of gram positive bacteria resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.0</b>	<b>Antibiotic resistant <i>Staphylococcus aureus</i></b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.
<b>MG51.00</b>	Methicillin resistant <i>Staphylococcus aureus</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.01</b>	Vancomycin resistant <i>Staphylococcus aureus</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.02</b>	Penicillinase-stable beta lactams resistant <i>Staphylococcus aureus</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.0Y</b>	Other specified antibiotic resistant <i>Staphylococcus aureus</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.  In case of multiple resistances, code each one separately if listed below.

<b>MG51.0Z</b>	Antibiotic resistant <i>Staphylococcus aureus</i> , unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.1</b>	<b>Antibiotic resistant <i>Streptococcus pneumoniae</i></b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.10</b>	Penicillin resistant <i>Streptococcus pneumoniae</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.11</b>	Sulfonamide and trimethoprim resistant <i>Streptococcus pneumoniae</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.12</b>	Third-generation cephalosporins resistant <i>Streptococcus pneumoniae</i>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.1Y</b>	<i>Streptococcus pneumoniae</i> resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.1Z</b>	<i>Streptococcus pneumoniae</i> resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.2</b>	<b>Antibiotic resistant <i>Enterococcus</i></b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.

<b>MG51.20</b>	Vancomycin resistant Enterococcus
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.2Y</b>	Enterococcus resistant to other antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.2Z</b>	Enteroccus resistant to unspecified antibiotic
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG51.Y</b>	<b>Other specified finding of gram positive bacteria resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG51.Z</b>	<b>Finding of gram positive bacteria resistant to antimicrobial drugs, unspecified</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG52</b>	<b>Finding of bacteria, neither gram negative nor positive, resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG52.0</b>	<b>Antibiotic resistant Mycobacterium</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG52.00</b>	Multi-drug resistant Mycobacterium tuberculosis
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG52.01</b>	Antibiotic resistant non-tuberculous Mycobacterium
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG52.02</b>	Extensively drug-resistant mycobacterium tuberculosis
	Extensively drug-resistant tuberculous mycobacteria are resistant to at least four of the core anti-TB drugs. XDR-TB mycobacteria are resistant to the two most powerful anti-TB drugs, isoniazid and rifampicin, also known as multidrug-resistance, in addition to resistance to any of the fluoroquinolones (such as levofloxacin or moxifloxacin) and to at least one of the three injectable second-line drugs (amikacin, capreomycin or kanamycin).
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG52.0Y</b>	Other specified antibiotic resistant Mycobacterium
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG52.0Z</b>	Antibiotic resistant Mycobacterium, unspecified
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
	In case of multiple resistances, code each one separately if listed below.
<b>MG52.Y</b>	<b>Other specified finding of bacteria, neither gram negative nor positive, resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG52.Z</b>	<b>Finding of bacteria, neither gram negative nor positive, resistant to antimicrobial drugs, unspecified</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG53</b>	<b>Finding of virus resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

<b>MG53.0</b>	<b>Antiretroviral therapy resistant Human immunodeficiency virus</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG53.Y</b>	<b>Other specified finding of virus resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG53.Z</b>	<b>Finding of virus resistant to antimicrobial drugs, unspecified</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG54</b>	<b>Finding of fungus resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG55</b>	<b>Finding of parasite resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG55.0</b>	<b>Artemisinin resistant Plasmodium falciparum</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG55.Y</b>	<b>Other specified finding of parasite resistant to antimicrobial drugs</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.
<b>MG55.Z</b>	<b>Finding of parasite resistant to antimicrobial drugs, unspecified</b>
<b>Coding Note:</b>	These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG56      Finding of microorganism resistant to other multiple antimicrobial drugs**

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG5Y      Finding of other microorganism resistant to antimicrobial drugs**

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

**MG5Z      Finding of microorganism resistant to antimicrobial drugs, unspecified**

**Coding Note:** These categories should never be used in primary coding. The codes are provided for use as supplementary or additional codes when it is desired to identify the resistance, non-responsiveness and refractive properties of a condition to antimicrobials.

Clinical findings in specimens from other specified organs, systems and tissues (MG60-MG6Y)

**Coded Elsewhere:** Meconium staining (KD38)

**MG60      Abnormal level of enzymes in specimens from other organs, systems and tissues**

**MG61      Abnormal level of hormones in specimens from other organs, systems and tissues**

**MG62      Abnormal level of drugs, medicaments and biological substances in specimens from other organs, systems and tissues**

**MG63      Abnormal level of substances chiefly nonmedicinal as to source in specimens from other organs, systems and tissues**

**MG64      Abnormal immunological findings in specimens from other organs, systems and tissues**

**MG65      Abnormal microbiological findings in specimens from other organs, systems and tissues**

**MG66      Abnormal cytological findings in specimens from other organs, systems and tissues**

**MG67      Abnormal histological findings in specimens from other organs, systems and tissues**

**MG6Y      Other specified clinical findings in specimens from other specified organs, systems and tissues**

Abnormal results, not elsewhere classified (MG70-MG7Z)

**MG70      Abnormal diagnostic imaging results not elsewhere classified**

<b>MG71</b>	<b>Abnormal laboratory results, not elsewhere classified</b>
<b>MG71.0</b>	<b>Abnormal findings on neonatal screening</b>
<b>MG71.Y</b>	<b>Other specified abnormal laboratory results, not elsewhere classified</b>
<b>MG71.Z</b>	<b>Abnormal laboratory results, not elsewhere classified, unspecified</b>
<b>MG72</b>	<b>Abnormal results of function studies of other organs and systems</b>
<b>MG7Y</b>	<b>Other specified abnormal results, not elsewhere classified</b>
<b>MG7Z</b>	<b>Abnormal results, not elsewhere classified, unspecified</b>

---

<b>MG9Y</b>	<b>Other specified general symptoms, signs or clinical findings</b>
-------------	---

### III-defined and unknown causes of mortality (MH10-MH15)

**Exclusions:** Fetal death, cause not specified (KD3B)  
Obstetric death of unspecified cause (JB60)

<b>MH10</b>	<b>Brain death</b>
	Persistent apnoeic coma due to irreversible cessation brainstem, cerebellar and cortical activity as seen clinically by no eye opening or eye movement to noxious stimuli, no motor and verbal response, no brain stem and spinal reflexes corneal, cough, vestibuloocular and respiratory, and no cerebral electrical activity as seen by EEG, no cerebral blood flow as seen by cerebral angiogram (conventional, MR, CT, Doppler) and no metabolic activity evidenced by SPECT or PET lasting for more than 24 hours due to irreversible diffuse lesion of the brain not due to hypothermia, sedative drug, neuromuscular blocker overdose or metabolic abnormality without evidence of peripheral circulatory shock.

<b>MH11</b>	<b>Sudden infant death syndrome</b>
	Sudden infant death syndrome is the abrupt and unexplained death of an apparently healthy infant under one year of age, remaining unexplained after a thorough case investigation, including performance of a complete autopsy, examination of the death scene, and review of the clinical history.

<b>MH11.0</b>	<b>Sudden infant death syndrome with mention of autopsy</b>
<b>MH11.1</b>	<b>Sudden infant death syndrome without autopsy</b>
<b>MH11.Z</b>	<b>Sudden infant death syndrome, unspecified</b>
<b>MH12</b>	<b>Other sudden death, cause unknown</b>
	<b>Exclusions:</b> Sudden infant death syndrome (MH11)
<b>MH12.0</b>	<b>Instantaneous death</b>
	<b>Inclusions:</b> Sudden unexplained death in adult

MH12.1	<b>Death occurring less than 24 hours from onset of symptoms, not otherwise explained</b>
	<i>Inclusions:</i>
	Death known not to be violent or instantaneous for which no cause can be discovered
	Death without sign of disease
MH12.Y	<b>Other specified sudden death, cause unknown</b>
MH13	<b>Unattended death</b>
	<i>Inclusions:</i>
	Found dead
MH14	<b>Other ill-defined and unspecified causes of mortality</b>
	<i>Inclusions:</i>
	Unknown cause of mortality
MH15	<b>Sudden unexpected death in epilepsy</b>
	Sudden unexpected death in epilepsy (SUDEP) is a category of death in people with epilepsy that occurs under benign circumstances and in the absence of known structural causes of death (i.e. not due to drowning, injury, intoxication and other internal or external factors). Evidence of a preceding seizure may be present or not. A “definite SUDEP” is confirmed if a postmortem examination does not reveal an alternative cause of death. If such examination lacks, but potentially lethal alternative causes are excluded and all other criteria are met, the death is labelled as “probable SUDEP”. The term “possible SUDEP” is used in cases with competing causes of death or when data are insufficient to reasonably allow their classification. The term “SUDEP plus” applies when a patient also suffered from other diseases that may have contributed to the death, but there are no clues that the alternative condition has truly caused it. Cases in which cardiopulmonary resuscitation prevented the death are called “near-SUDEP”.

# **CHAPTER 22**

---

## **Injury, poisoning or certain other consequences of external causes**

This chapter has 236 four-character categories.

Code range starts with NA00

In the ICD, injury means physical or physiological bodily harm resulting from interaction of the body with energy (mechanical, thermal, electrical, chemical or radiant, or due to extreme pressure) in an amount, or at a rate of transfer, that exceeds physical or physiological tolerance. Injury can also result from lack of vital elements, such as oxygen. Poisoning by and toxic effects of substances are included, as is damage of or due to implanted devices.

Injury usually has rapid onset in response to a well-defined event (e.g. a car crash, striking the ground after falling, drinking a strongly alkaline liquid, an overdose of a medication, a burn sustained during a surgical procedure). These events are often referred to as external causes of injury. The injurious energy can, however, originate from the injured person and/or from his or her immediate environment (e.g. a person running on a hot day sustains heat exhaustion), and injury can be caused by the injured person (i.e. intentional self-harm).

Injury includes manifestations that are evident immediately after onset, which may persist or not, and manifestations that first become evident at a later date.

<b><i>Exclusions:</i></b>	Stress fracture, not elsewhere classified (FB80.A)
	Pathological fracture (FB80.B)
	Certain specified obstetric trauma (JB0A)
	Malunion of fracture (FB80.7)
	Birth injury (KA40-KA4Z)
	Nonunion of fracture (FB80.8)

This chapter contains the following top level blocks:

- Injuries to the head
- Injuries to the neck
- Injuries to the thorax
- Injuries to the abdomen, lower back, lumbar spine or pelvis
- Injuries to the shoulder or upper arm
- Injuries to the elbow or forearm
- Injuries to the wrist or hand
- Injuries to the hip or thigh
- Injuries to the knee or lower leg
- Injuries to the ankle or foot
- Injuries involving multiple body regions

- Injuries to unspecified part of trunk, limb or body region
- Effects of foreign body entering through natural orifice
- Burns
- Frostbite
- Harmful effects of substances
- Injury or harm arising from surgical or medical care, not elsewhere classified
- Other or unspecified effects of external causes

## Injuries to the head (NA00-NA0Z)

**Coding Note:** This Block includes the following:

- injuries of face [any part]
- injuries of gum
- injuries of jaw
- injuries of oral cavity
- injuries of palate
- injuries of perioral area
- injuries of scalp
- injuries of temporomandibular joint area
- injuries of tongue
- injuries of tooth

**Exclusions:** Foreign body in ear (ND71)

Foreign body in mouth (ND73.0)

Foreign body in larynx (ND72.3)

Foreign body in pharynx (ND72.2)

Foreign body in nostril (ND72.1)

Burns (ND90-NE2Z)

Frostbite (NE40-NE4Z)

Foreign body on external eye (ND70)

**Coded Elsewhere:** Epilepsy due to injuries to the head (8A60.5)

Birth injury to face (KA43.3)

**NA00**

### Superficial injury of head

Damage inflicted on the surface or shallow tissues of the head as the direct or indirect result of an external force, with or without disruption of structural continuity.

**Exclusions:** Injury of eye or orbit (NA06)

cerebral contusion (diffuse) focal (NA07.4)

**NA00.0**

### Superficial injury of scalp

**Coded Elsewhere:** Birth injury to scalp (KA42)

<b>NA00.00</b>	Abrasions of scalp
<b>NA00.01</b>	Contusions of scalp  <b>Coded Elsewhere:</b> Bruising of scalp due to birth injury (KA42.0)
<b>NA00.02</b>	Superficial foreign body in scalp
<b>NA00.0Y</b>	Other specified superficial injury of scalp
<b>NA00.0Z</b>	Superficial injury of scalp, type unspecified
<b>NA00.1</b>	<b>Superficial injury of eyelid or periocular area</b>
<b>NA00.10</b>	Abrasions of eyelid or periocular area

	<b><i>Inclusions:</i></b> Fracture of malar
<b>NA02.7</b>	<b>Fracture of mandible</b>
	Fracture of the largest and strongest bone of the face constituting the lower jaw.
	<b><i>Coded Elsewhere:</i></b> Mandibular bone fracture due to birth injury (KA45.20)

**NA02.70** Fracture of condylar process of mandible  
Condylar process fractures are defined as fractures running above or posterior to a line confined by the sigmoid notch line and the masseteric notch line. The mandibular condylar process comprises three fracture levels and is subdivided into the head region, the condylar neck, and the condylar base. Fractures of the condylar head show typical fracture lines either within the lateral pole zone, which may lead to loss of vertical height, or medially to the pole zone, with the latter ones usually not compromising the vertical condyle to disc and fossa relation. Fractures of the condylar neck and base can be differentiated according to radiologically based rules with regard to the proportion of the fracture line above and below the level of the sigmoid notch, and are basically subdivided according to the presence or absence of displacement or dislocation. Further parameters for definition are presence or absence of fragmentation, sideward displacement (medially or laterally), angulation of the superior main fragment and fracture-site geometry (e.g. straight or oblique, interfragmentary interdigitation)

**Exclusions:** Fracture of ramus of mandible (NA02.73)  
Fracture of subcondylar process of mandible (NA02.71)

**NA02.71** Fracture of subcondylar process of mandible

**NA02.72** Fracture of coronoid process of mandible

**NA02.73** Fracture of ramus of mandible

**NA02.74** Fracture of angle of mandible

**NA02.75** Fracture of alveolar margin of mandible

**NA02.76** Fracture of symphysis of mandible

**NA02.7Y** Other specified fracture of mandible

**NA02.7Z** Fracture of mandible, unspecified

**NA02.8** **Multiple fractures involving skull or facial bones**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**NA02.Y** **Fracture of other specified skull or facial bones**

**NA02.Z** **Fracture of skull and facial bones, part unspecified**

**NA03** **Dislocation or strain or sprain of joints or ligaments of head**

**NA03.0** **Dislocation of jaw**

Displacement of the mandible, the largest and strongest bone of the face constituting the lower jaw. Dislocation of the temporomandibular joint is a painful condition that occurs when the mandibular condyle becomes fixed in the anterosuperior aspect of the articular eminence.

TMJ dislocation is due to either trauma or, more commonly, excessive opening of the mandible. Spasm of the masseter, temporalis, and internal pterygoid muscles results in trismus, preventing return of the condyle to the temporal fossa.

**Exclusions:** disc displacement (internal derangement of the TMJ) (DA0E.8)

<b>NA03.1</b>	<b>Dislocation of septal cartilage of nose</b>
<b>NA03.3</b>	<b>Strain or sprain of jaw</b> A collective term for muscle and ligament injuries of the tissues associated with the mandible without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
<b>NA03.Y</b>	<b>Dislocation or sprain of other specified joints or ligaments of head</b>

**NA05.0**      **Injury of intracranial vessels of head**

**NA05.1**      **Injury of extracranial vessels of head**

**NA05.Z**      **Injury of blood vessels of head, unspecified**

**NA06**      **Injury of eye or orbit**

**Exclusions:**      Orbital fracture (NA02.2)  
                        Injury of optic nerve, unilateral (NA04.10)  
                        Injury of oculomotor nerve (NA04.2)  
                        superficial injury of eyelid (NA00.1)

**Coded Elsewhere:** Birth injury to eye (KA41)

**NA06.0**      **Eyelid trauma**

**Coded Elsewhere:** Contusion of eyelid or periocular area (NA00.11)  
                        Chemical burn of eyelid and periocular area (NE00)

**NA06.00**      **Eyelid avulsion**  
  
This is an injury in which a body structure is forcibly detached from its normal point of insertion by either trauma or surgery. The term most commonly refers to a surface trauma where all layers of the skin have been torn away, exposing the underlying structures (i.e. subcutaneous tissue, muscle, tendons, or bone). This is similar to an abrasion but more severe, where the eyelid can be partially or fully detached from the body.

**NA06.01**      Haematoma of eyelid

**NA06.02**      Oedema of eyelid

**NA06.03**      Retained foreign body in eyelid

**NA06.04**      Open wound of eyelid or periocular area

**NA06.0Y**      Other specified eyelid trauma

**NA06.0Z**      Eyelid trauma, unspecified

**NA06.1**      **Penetrating wound of orbit with or without foreign body**

**Exclusions:**      Retained foreign body following penetrating wound of orbit (NA06.2)

<b>NA06.2</b>	<b>Retained foreign body following penetrating wound of orbit</b>
	<b><i>Exclusions:</i></b> Penetrating wound of orbit with or without foreign body (NA06.1) Traumatic injury to eyeball (NA06.8)
<b>NA06.3</b>	<b>Traumatic orbital haemorrhage</b> This is the loss of blood or blood escaping from the circulatory system, of the cavity or socket of the skull in which the eye and its appendages are situated.
<b>NA06.4</b>	<b>Injury of conjunctiva or corneal abrasion without mention of foreign body</b>
	<b><i>Exclusions:</i></b> Foreign body in cornea (ND70.0) Foreign body in conjunctival sac (ND70.1)
<b>NA06.5</b>	<b>Trauma to the iris sphincter</b> This refers to trauma to the muscle in the part of the eye called the iris. It encircles the pupil of the iris, appropriate to its function as a constrictor of the pupil.
<b>NA06.6</b>	<b>Traumatic injuries of the retina</b> This refers to traumatic injuries of the light-sensitive layer of tissue, lining the inner surface of the eye. The optics of the eye create an image of the visual world on the retina, which serves much the same function as the film in a camera.
<b>NA06.60</b>	Traumatic macular hole <b><i>Exclusions:</i></b> Non-traumatic macular hole (9B75.1)
<b>NA06.61</b>	Choroidal rupture
<b>NA06.62</b>	Commotio retinae
<b>NA06.63</b>	Optic nerve avulsion
<b>NA06.6Y</b>	Other specified traumatic injuries of the retina
<b>NA06.6Z</b>	Traumatic injuries of the retina, unspecified
<b>NA06.7</b>	<b>Traumatic retinal haemorrhage</b>
<b>NA06.8</b>	<b>Traumatic injury to eyeball</b> <b><i>Coded Elsewhere:</i></b> Chemical burn with resulting rupture or destruction of eyeball (NE00)
<b>NA06.80</b>	Retained intraocular magnetic foreign body, unilateral <b><i>Inclusions:</i></b> old magnetic foreign body in eyeball
<b>NA06.81</b>	Retained intraocular nonmagnetic foreign body, unilateral
<b>NA06.82</b>	Closed eyeball trauma, unilateral
<b>NA06.83</b>	Closed eyeball trauma, bilateral
<b>NA06.84</b>	Penetrating wound of eyeball without foreign body, unilateral

<b>NA06.85</b>	Avulsion of eye, unilateral  <b>Inclusions:</b> Traumatic enucleation
<b>NA06.86</b>	Avulsion of eye, bilateral
<b>NA06.87</b>	Ocular laceration or rupture with prolapse or loss of intraocular tissue, unilateral Forcible or traumatic tearing or breaking of the eyeball with protrusion or loss of the tissues and fluids located within the eyeball.
<b>NA06.88</b>	Ocular laceration or rupture with prolapse or loss of intraocular tissue, bilateral
<b>NA06.89</b>	Penetrating injury of eyeball, bilateral
<b>NA06.8A</b>	Perforating injury of eyeball, bilateral
<b>NA06.8B</b>	Retained intraocular magnetic foreign body, bilateral
<b>NA06.8C</b>	Retained intraocular nonmagnetic foreign body, bilateral
<b>NA06.8D</b>	Ocular laceration without prolapse or loss of intraocular tissue, unilateral
<b>NA06.8E</b>	Ocular laceration without prolapse or loss of intraocular tissue, bilateral
<b>NA06.8Y</b>	Other specified traumatic injury to eyeball
<b>NA06.8Z</b>	Traumatic injury to eyeball, unspecified
<b>NA06.9</b>	<b>Contusion of eyeball or orbital tissues</b> Injuries to the eyeball and surrounding tissue resulting in haemorrhage, usually manifested in the skin.  <b>Exclusions:</b> black eye (NA00.11) Contusion of eyelid or periocular area (NA00.11)
<b>NA06.A</b>	<b>Injury of lens</b>  <b>Coded Elsewhere:</b> Contusion of lens (NA06.9) Retained magnetic foreign body in lens, unilateral (NA06.80) Retained nonmagnetic foreign body in lens, unilateral (NA06.81) Ocular laceration or rupture with hernia of lens, unilateral (NA06.87) Penetrating injury of lens without foreign body, unilateral (NA06.84) Penetrating wound of lens with foreign body, unilateral (NA06.8Y)
<b>NA06.Y</b>	<b>Other specified injury of eye or orbit</b>
<b>NA06.Z</b>	<b>Injury of eye or orbit, unspecified</b>

<b>NA07</b>	<b>Intracranial injury</b>
	Damage inflicted on the tissues of the brain as the direct or indirect result of an external force, with or without disruption of structural continuity.
	<b>Coded Elsewhere:</b> Intracranial laceration or haemorrhage due to birth injury (KA40.0)
	Epilepsy due to injuries to the head (8A60.5)
<b>NA07.0</b>	<b>Concussion</b>
	Loss or diminution of consciousness due to injury.
<b>Coding Note:</b>	Code also the causing condition
	<b>Inclusions:</b> Commotio cerebri
<b>NA07.00</b>	Concussion with incomplete loss of consciousness with amnesia
<b>NA07.01</b>	Concussion with incomplete loss of consciousness without amnesia
<b>NA07.02</b>	Concussion with loss of consciousness, short duration of less than 30 minutes
<b>NA07.03</b>	Concussion with loss of consciousness, short duration of 30 minutes to less than one hour
<b>NA07.04</b>	Concussion with loss of consciousness, short duration of one hour to less than 6 hours
<b>NA07.05</b>	Concussion with loss of consciousness, intermediate duration of 6 hours to less than 24 hours
<b>NA07.06</b>	Concussion with loss of consciousness, persisting longer than 24 hours or until discharge or latest assessment
<b>NA07.07</b>	Concussion with loss of consciousness, persisting until death
<b>NA07.08</b>	Concussion with loss of consciousness, duration unspecified or unknown due to effects of therapy
<b>NA07.09</b>	Concussion with loss of consciousness, duration unspecified or unknown due to lack of information
<b>NA07.Y</b>	Other specified concussion
<b>Coding Note:</b>	Code also the causing condition
<b>NA07.0Z</b>	Concussion, unspecified
<b>Coding Note:</b>	Code also the causing condition
<b>NA07.1</b>	<b>Traumatic intracerebral haemorrhage</b>
	<b>Inclusions:</b> traumatic intracerebral haematoma
<b>NA07.2</b>	<b>Traumatic cerebral oedema</b>
	<b>Coded Elsewhere:</b> Cerebral oedema due to birth injury (KA40.1)
<b>NA07.20</b>	Diffuse traumatic cerebral oedema
<b>NA07.21</b>	Focal traumatic cerebral oedema

<b>NA07.2Y</b>	Other specified traumatic cerebral oedema
<b>NA07.2Z</b>	Traumatic cerebral oedema, unspecified
<b>NA07.3</b>	<b>Diffuse brain injury</b>

Superficial injury of ear auricle (NA00.2)
- NA0C** **Injury of middle or inner ear**
- NA0D** **Injury of teeth or supporting structures**
- Damage inflicted on the surface of the tooth as the direct or indirect result of an external force, with disruption of continuity of the tooth substance, and/or impairment of the tooth-supporting structures (periodontium).
- Exclusions:** Abfraction (DA08.13)  
Dental caries (DA08.0)  
Excessive attrition of teeth (DA08.10)  
Abrasion of teeth (DA08.11)  
Erosion of teeth (DA08.12)  
Chronic dental injuries (DA08.2)  
Nontraumatic fracture of tooth (DA08.3)  
Certain specified disorders of teeth or supporting structures (DA0A)
- NA0D.0** **Injury of hard dental tissues and pulp**
- NA0D.00** Enamel infraction  
An incomplete fracture (crack) of the enamel without loss of tooth substance.
- NA0D.01** Enamel fracture  
Uncomplicated crown fracture. A fracture with loss of tooth substance confined to the enamel.
- NA0D.02** Enamel-dentin fracture  
Uncomplicated crown fracture. A fracture with loss of tooth substance confined to enamel and dentin, but not involving the pulp.
- NA0D.03** Complicated crown fracture  
A fracture involving enamel and dentin, and exposing the pulp.

- NA0D.04** Uncomplicated crown-root fracture  
A fracture involving enamel, dentin and cementum, but not exposing the pulp.
- NA0D.05** Complicated crown-root fracture  
A fracture involving enamel, dentin and cementum, and exposing the pulp.
- NA0D.06** Root fracture  
A fracture involving dentin, cementum and the pulp.
- NA0D.0Y** Other specified injury of hard dental tissues and pulp
- NA0D.0Z** Injury of hard dental tissues and pulp, unspecified
- NA0D.1** **Injury of periodontal tissues**
- NA0D.10** Concussion of periodontal tissue  
An injury to the tooth-supporting structures without abnormal loosening or displacement of the tooth. There is marked reaction to percussion.
- NA0D.11** Subluxation of tooth  
An injury to the tooth-supporting structures with abnormal loosening, but without displacement of the tooth.
- NA0D.12** Extrusive luxation of tooth  
Peripheral dislocation, partial avulsion. Partial displacement of the tooth out of its socket.
- NA0D.13** Lateral luxation of tooth  
Displacement of the tooth in a direction other than axially. This is accompanied by comminution or fracture of the alveolar socket.
- NA0D.14** Intrusive luxation of tooth  
Central dislocation. Displacement of the tooth into the alveolar bone. This injury is accompanied by comminution or fracture of the alveolar socket.
- NA0D.15** Avulsion of tooth  
Exarticulation. Complete displacement of the tooth out of its socket.
- NA0D.1Y** Other specified injury of periodontal tissues
- NA0D.1Z** Injury of periodontal tissues, unspecified
- NA0D.Y** **Other specified injury of teeth or supporting structures**
- NA0D.Z** **Injury of teeth or supporting structures, unspecified**

**NA0Z      Injuries to the head, unspecified**

**Coding Note:** This Block includes the following:

- injuries of face [any part]
- injuries of gum
- injuries of jaw
- injuries of oral cavity
- injuries of palate
- injuries of periocular area
- injuries of scalp
- injuries of temporomandibular joint area
- injuries of tongue
- injuries of tooth

**Injuries to the neck (NA20-NA6Z)**

**Coding Note:** This Block includes the following:

- injuries of nape
- injuries of supraclavicular region
- injuries of throat

**Exclusions:**      injury of spinal cord NOS (ND51)

                  Frostbite (NE40-NE4Z)

                  injury of trunk NOS (ND50-ND5Z)

                  fracture of spine NOS (ND50)

                  effects of foreign body in: larynx (ND72.3)

                  effects of foreign body in: oesophagus (ND73.1)

                  effects of foreign body in: pharynx (ND72.2)

                  effects of foreign body in: trachea (ND72.4)

                  burns and corrosions (ND90)

**NA20****Superficial injury of neck**

**Coded Elsewhere:** Sequelae of superficial injury or open wound of neck or trunk (NF2Y)

**NA20.0      Abrasion of throat**

**NA20.1      Contusion of throat**

**NA20.2      Other or unspecified superficial injuries of throat**

**NA20.3      Multiple superficial injuries of neck**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

<b>NA20.Y</b>	<b>Other specified superficial injury of neck</b>
<b>NA20.Z</b>	<b>Superficial injury of neck, unspecified</b>
<b>NA21</b>	<b>Open wound of neck</b>
	<b><i>Inclusions:</i></b> Decapitation (NA63)
<b>NA21.0</b>	<b>Laceration without foreign body of neck</b>
	<b><i>Inclusions:</i></b> laceration of skin of neck
<b>NA21.1</b>	<b>Laceration with foreign body of neck</b>
<b>NA21.2</b>	<b>Puncture wound without foreign body of neck</b>
<b>NA21.3</b>	<b>Puncture wound with foreign body of neck</b>
<b>NA21.4</b>	<b>Open bite of neck</b>
<b>NA21.5</b>	<b>Multiple open wounds of neck</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NA21.Y</b>	<b>Other specified open wound of neck</b>
<b>NA21.Z</b>	<b>Open wound of neck, unspecified</b>
<b>NA22</b>	<b>Fracture of neck</b>
	<b><i>Inclusions:</i></b>
	fracture of cervical neural arch
	fracture of cervical spine
	fracture of cervical spinous process
	fracture of cervical transverse process
	fracture of cervical vertebra
	fracture of cervical vertebral arch
<b>NA22.0</b>	<b>Fracture of first cervical vertebra</b>
<b>NA22.00</b>	Fracture of first cervical vertebra, burst fracture
<b>NA22.01</b>	Fracture of posterior arch of first cervical vertebra

<b>NA22.03</b>	Other fracture of first cervical vertebra
<b>NA22.0Z</b>	Fracture of first cervical vertebra, unspecified
<b>NA22.1</b>	<b>Fracture of second cervical vertebra</b>
<b>NA22.10</b>	Traumatic spondylolisthesis of second cervical vertebra, type III
<b>NA22.11</b>	Other traumatic spondylolisthesis of second cervical vertebra
<b>NA22.12</b>	Fracture of odontoid process

<b>NA22.13</b>	Other fracture of second cervical vertebra
<b>NA22.1Z</b>	Fracture of second cervical vertebra, unspecified
<b>NA22.2</b>	<b>Fracture of other specified cervical vertebra</b>
<b>NA22.3</b>	<b>Multiple fractures of cervical spine</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NA22.Z</b>	<b>Fracture of neck, unspecified</b>
<b>NA23</b>	<b>Dislocation or strain or sprain of joints or ligaments at neck level</b>
<b>NA23.0</b>	<b>Traumatic rupture of cervical intervertebral disc</b>
<b>NA23.1</b>	<b>Dislocation of cervical vertebra</b> Displacement of one or more bones of the cervical spine
<b>NA23.10</b>	Cranio-cervical dissociation
<b>NA23.11</b>	Atlanto-axial dislocation
<b>NA23.12</b>	Dislocation of other specified cervical vertebra
<b>NA23.1Z</b>	Dislocation of cervical vertebra, unspecified
<b>NA23.2</b>	<b>Dislocation of other or unspecified parts of neck</b>
<b>NA23.3</b>	<b>Multiple dislocations of neck</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NA23.4</b>	<b>Strain or sprain of cervical spine</b> A collective term for muscle and ligament injuries of the tissues associated with the cervical spine without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
	<b>Inclusions:</b> Whiplash injury
<b>NA23.40</b>	Acute whiplash associated disorder with complaint of neck pain, stiffness or tenderness only
	<b>Exclusions:</b> Chronic whiplash injury associated pain (MG30.20)
<b>NA23.41</b>	Acute whiplash associated disorder with complaint of neck pain with musculoskeletal signs
	<b>Exclusions:</b> Chronic whiplash injury associated pain (MG30.20)
<b>NA23.42</b>	Acute whiplash associated disorder with complaint of neck pain with neurological signs
	<b>Exclusions:</b> Chronic whiplash injury associated pain (MG30.20)
<b>NA23.4Y</b>	Other specified strain or sprain of cervical spine

<b>NA23.4Z</b>	Strain or sprain of cervical spine, unspecified
<b>NA23.5</b>	<b>Strain or sprain of thyroid region</b>
<b>NA23.Y</b>	<b>Other specified dislocation or strain or sprain of joints or ligaments at neck level</b>
<b>NA23.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments at neck level, unspecified</b>

Injury of nerves or spinal cord at neck level (NA30-NA4Z)

Injury of spinal cord at neck level (NA30-NA3Z)

<b>NA30</b>	<b>Concussion or oedema of cervical spinal cord</b>
<b>NA31</b>	<b>Certain specified injuries of cervical spinal cord</b>
<b>NA31.0</b>	<b>Complete lesion of cervical spinal cord</b>
<b>NA31.1</b>	<b>Central cord syndrome of cervical spinal cord</b>
<b>NA31.2</b>	<b>Anterior cord syndrome of cervical spinal cord</b>
<b>NA31.3</b>	<b>Posterior cord syndrome of cervical spinal cord</b>
<b>NA31.4</b>	<b>Brown-Sequard syndrome of cervical spinal cord</b>
<b>NA31.5</b>	<b>Other incomplete cord syndrome of cervical spinal cord</b>
<b>NA3Z</b>	<b>Injury of cervical spinal cord, unspecified</b>

Injury of nerves at neck level (NA40-NA4Z)

<b>NA40</b>	<b>Injury of nerve root of cervical spine</b>
<b>NA41</b>	<b>Injury of brachial plexus</b>
	<b>Coded Elsewhere:</b> Brachial plexus palsy in newborn (KA44.1)
<b>NA41.0</b>	<b>Injury of brachial plexus cord</b>
<b>NA41.1</b>	<b>Injury of brachial plexus division</b>
<b>NA41.2</b>	<b>Injury of brachial plexus trunk</b>
<b>NA41.Y</b>	<b>Other specified injury of brachial plexus</b>
<b>NA41.Z</b>	<b>Injury of brachial plexus, unspecified</b>
<b>NA42</b>	<b>Injury of peripheral nerves of neck</b>
<b>NA42.0</b>	<b>Injury of supraclavicular nerve</b>
<b>NA42.1</b>	<b>Injury to anterior cutaneous nerve of neck</b>
<b>NA42.Y</b>	<b>Injury of other specified peripheral nerves of neck</b>

<b>NA42.Z</b>	<b>Injury of peripheral nerves of neck, unspecified</b>

<b>NA44</b>	<b>Injury of phrenic nerve</b> <i>Coded Elsewhere:</i> Phrenic nerve paralysis due to birth injury (KA44.2)
<b>NA4Y</b>	<b>Injury of other specified nerves at neck level</b>
<b>NA4Z</b>	<b>Injury of nerves at neck level, unspecified</b>
<b>NA60</b>	<b>Injury of blood vessels at neck level</b>
<b>NA60.0</b>	<b>Injury of carotid artery</b>
<b>NA60.00</b>	Laceration of carotid artery, minor  <i>Inclusions:</i> incomplete transection of carotid artery laceration of carotid artery NOS superficial laceration of carotid artery
<b>NA60.01</b>	Laceration of carotid artery, major  <i>Inclusions:</i> complete transection of carotid artery traumatic rupture of carotid artery
<b>NA60.0Y</b>	Other specified injury of carotid artery
<b>NA60.0Z</b>	Injury of carotid artery, unspecified
<b>NA60.1</b>	<b>Injury of vertebral artery</b>
<b>NA60.10</b>	Laceration of vertebral artery, minor  <i>Inclusions:</i> incomplete transection of vertebral artery laceration of vertebral artery NOS superficial laceration of vertebral artery
<b>NA60.11</b>	Laceration of vertebral artery, major  <i>Inclusions:</i> complete transection of vertebral artery traumatic rupture of vertebral artery
<b>NA60.1Y</b>	Other specified injury of vertebral artery
<b>NA60.1Z</b>	Injury of vertebral artery, unspecified
<b>NA60.2</b>	<b>Injury of external jugular vein</b>
<b>NA60.20</b>	Laceration of external jugular vein, minor  <i>Inclusions:</i> incomplete transection of external jugular vein laceration of external jugular vein NOS superficial laceration of external jugular vein

<b>NA60.21</b>	Laceration of external jugular vein, major
	<i>Inclusions:</i>
	complete transection of external jugular vein
	traumatic rupture of external jugular vein
<b>NA60.2Y</b>	Other specified injury of external jugular vein
<b>NA60.2Z</b>	Injury of external jugular vein, unspecified
<b>NA60.3</b>	<b>Injury of internal jugular vein</b>
<b>NA60.30</b>	Laceration of internal jugular vein, minor
	<i>Inclusions:</i>
	incomplete transection of internal jugular vein
	laceration of internal jugular vein NOS
	superficial laceration of internal jugular vein
<b>NA60.31</b>	Laceration of internal jugular vein, major
	<i>Inclusions:</i>
	complete transection of internal jugular vein
	traumatic rupture of internal jugular vein
<b>NA60.3Y</b>	Other specified injury of internal jugular vein
<b>NA60.3Z</b>	Injury of internal jugular vein, unspecified
<b>NA60.4</b>	<b>Injury of multiple blood vessels at neck level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NA60.Y</b>	<b>Injury of other specified blood vessels at neck level</b>
<b>NA60.Z</b>	<b>Injury of blood vessels at neck level, unspecified</b>
<b>NA61</b>	<b>Injury of muscle, fascia or tendon at neck level</b>
<b>NA61.0</b>	<b>Strain or sprain of muscle, fascia or tendon at neck level</b>
<b>NA61.1</b>	<b>Laceration of muscle, fascia or tendon at neck level</b>
<b>NA61.Y</b>	<b>Other specified injury of muscle, fascia or tendon at neck level</b>
<b>NA61.Z</b>	<b>Injury of muscle, fascia or tendon at neck level, unspecified</b>
<b>NA62</b>	<b>Crushing injury of neck</b>
<b>NA62.0</b>	<b>Crushing injury of larynx or trachea</b>
<b>NA62.Y</b>	<b>Crushing injury of other specified site of neck</b>
<b>NA62.Z</b>	<b>Crushing injury of neck, unspecified</b>
<b>NA63</b>	<b>Traumatic amputation at neck level</b>

**NA64**

### **Multiple injuries of neck**

**Coding Note:**

Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NA6Y**

### **Other specified injuries to the neck**

**Coding Note:**

This Block includes the following:

- injuries of nape
- injuries of supraclavicular region
- injuries of throat

**NA6Z**

### **Injuries to the neck, unspecified**

**Coding Note:**

This Block includes the following:

- injuries of nape
- injuries of supraclavicular region
- injuries of throat

## **Injuries to the thorax (NA80-NB3Z)**

**Exclusions:**

- injuries of spinal cord NOS (ND51)
- injuries of shoulder (NC10-NC1Z)
- Injuries of trunk NOS (ND51)
- insect bite or sting, venomous (NE61)
- fracture of spine NOS (ND50)
- injuries of clavicle (NC10-NC1Z)
- injuries of scapular region (NC10-NC1Z)
- Frostbite (NE40-NE4Z)
- injuries of axilla (NC10-NC1Z)
- effects of foreign body in lung (ND72)
- effects of foreign body in bronchus (ND72.5)
- Foreign body in trachea (ND72.4)
- Foreign body in oesophagus (ND73.1)
- Burns (ND90-NE2Z)

**Coded Elsewhere:** Birth injury of thorax (KA45.3)

**NA80**

### **Superficial injury of thorax**

Damage inflicted on the surface or shallow tissues of the thorax as the direct or indirect result of an external force, with or without disruption of structural continuity.

**Coded Elsewhere:** Sequelae of superficial injury or open wound of neck or trunk (NF2Y)

<b>NA80.0</b>	<b>Abrasion of breast</b>
<b>NA80.1</b>	<b>Contusion of breast</b>
<b>NA80.2</b>	<b>Other or unspecified superficial injuries of breast</b>
<b>NA80.3</b>	<b>Other superficial injuries of front wall of thorax</b>
<b>NA80.4</b>	<b>Other superficial injuries of back wall of thorax</b>
<b>NA80.5</b>	<b>Abrasion of thorax</b>
<b>NA80.6</b>	<b>Contusion of thorax</b>
<b>NA80.7</b>	<b>Multiple superficial injuries of thorax</b>

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

<b>NA80.Y</b>	<b>Other specified superficial injury of thorax</b>
<b>NA80.Z</b>	<b>Superficial injury of thorax, unspecified</b>

### **NA81 Open wound of thorax**

**Inclusions:** open wound thoracic wall NOS

**Exclusions:** Traumatic pneumothorax (NB32.0)

Traumatic haemothorax (NB32.1)

Traumatic haemopneumothorax (NB32.2)

<b>NA81.0</b>	<b>Laceration without foreign body of thorax</b>
	<b>Inclusions:</b> laceration of skin of thorax

<b>NA81.1</b>	<b>Laceration with foreign body of thorax</b>
---------------	---

<b>NA81.2</b>	<b>Puncture wound without foreign body of thorax</b>
---------------	--

<b>NA81.3</b>	<b>Puncture wound with foreign body of thorax</b>
---------------	---

<b>NA81.4</b>	<b>Open bite of thorax</b>
---------------	----------------------------

<b>NA81.5</b>	<b>Multiple open wounds of thoracic wall</b>
---------------	--

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

<b>NA81.Y</b>	<b>Other specified open wound of thorax</b>
<b>NA81.Z</b>	<b>Open wound of thorax, unspecified</b>

### **NA82 Fracture of rib, sternum or thoracic spine**

**Exclusions:** Fracture of scapula (NC12.1)

Fracture of clavicle (NC12.0)

<b>NA82.0</b>	<b>Fracture of thoracic vertebra</b>
---------------	--------------------------------------

<b>NA82.1</b>	<b>Multiple fractures of thoracic spine</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NA82.2</b>	<b>Fracture of sternum</b>
<b>NA82.3</b>	<b>Fracture of rib</b>
<b>NA82.30</b>	Fracture of rib, posterior or posterior and lateral
<b>NA82.3Y</b>	Other specified fracture of rib
<b>NA82.3Z</b>	Fracture of rib, unspecified
<b>NA82.4</b>	<b>Multiple fractures of ribs</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NA82.5</b>	<b>Flail chest</b>
<b>NA82.Y</b>	<b>Other specified fracture of rib, sternum or thoracic spine</b>
<b>NA82.Z</b>	<b>Fracture of rib, sternum or thoracic spine, unspecified</b>
<b>NA83</b>	<b>Dislocation or strain or sprain of joints or ligaments of thorax</b>
	<b>Exclusions:</b> Intervertebral disc degeneration of thoracic spine with prolapsed disc (FA80.5)
<b>NA83.0</b>	<b>Traumatic rupture of thoracic intervertebral disc</b>
<b>NA83.1</b>	<b>Dislocation of thoracic vertebra</b>
<b>NA83.2</b>	<b>Dislocation of other or unspecified parts of thorax</b>
<b>NA83.3</b>	<b>Strain or sprain of ligaments of thoracic spine</b>
<b>NA83.4</b>	<b>Strain or sprain of ribs or sternum</b>
<b>NA83.40</b>	Strain or sprain of sternum
<b>NA83.41</b>	Strain or sprain of sterno-clavicular joint or ligament
<b>NA83.42</b>	Strain or sprain of chondro-sternal joint Aberrant biomechanical functions of the joints between the ribs and the sternum, which may be as a result of local disease, systemic disease, postural strain or trauma.
<b>NA83.4Y</b>	Strain or sprain of other specified site of ribs or sternum
<b>NA83.4Z</b>	Strain or sprain of ribs or sternum, unspecified
<b>NA83.Y</b>	<b>Other specified dislocation or strain or sprain of joints or ligaments of thorax</b>
<b>NA83.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments of thorax, unspecified</b>

Injury of nerves or spinal cord at thorax level (NA90-NB2Z)

**Exclusions:** Injury of brachial plexus (NA41)

Injury of spinal cord at thorax level (NA90-NA9Z)

<b>NA90</b>	<b>Concussion or oedema of thoracic spinal cord</b>
<b>NA91</b>	<b>Certain specified injuries of thoracic spinal cord</b>
<b>NA91.0</b>	<b>Complete lesion of thoracic spinal cord</b>
<b>NA91.1</b>	<b>Central cord syndrome of thoracic spinal cord</b>
<b>NA91.2</b>	<b>Anterior cord syndrome of thoracic spinal cord</b>
<b>NA91.3</b>	<b>Posterior cord syndrome of thoracic spinal cord</b>
<b>NA91.4</b>	<b>Brown-Séquard syndrome of thoracic spinal cord</b>
<b>NA91.5</b>	<b>Other incomplete cord syndrome of thoracic spinal cord</b>
<b>NA9Z</b>	<b>Injury of thoracic spinal cord, unspecified</b>

Injury of nerves at thorax level (NB00-NB0Y)

<b>NB00</b>	<b>Injury of nerve root of thoracic spine</b>
<b>NB01</b>	<b>Injury of peripheral nerves of thorax</b>
<b>NB02</b>	<b>Injury of thoracic sympathetic nerves</b>
<b>NB0Y</b>	<b>Injury of other specified nerves at thorax level</b>
<b>NB2Y</b>	<b>Other specified injury of nerves or spinal cord at thorax level</b>
<b>NB2Z</b>	<b>Injury of nerves or spinal cord at thorax level, unspecified</b>
<b>NB30</b>	<b>Injury of blood vessels of thorax</b>
<b>NB30.0</b>	<b>Injury of thoracic aorta</b>
<b>NB30.00</b>	Minor laceration of thoracic aorta  <b>Inclusions:</b> incomplete transection of thoracic aorta laceration of thoracic aorta NOS superficial laceration of thoracic aorta
<b>NB30.01</b>	Major laceration of thoracic aorta  <b>Inclusions:</b> complete transection of thoracic aorta traumatic rupture of thoracic aorta
<b>NB30.0Y</b>	Other specified injury of thoracic aorta
<b>NB30.0Z</b>	Injury of thoracic aorta, unspecified

<b>NB30.1</b>	<b>Injury of innominate or subclavian artery</b>
<b>NB30.10</b>	Minor laceration of innominate or subclavian artery  <i>Inclusions:</i> incomplete transection of innominate or subclavian artery laceration of innominate or subclavian artery NOS superficial laceration of innominate or subclavian artery
<b>NB30.11</b>	Major laceration of innominate or subclavian artery  <i>Inclusions:</i> complete transection of innominate or subclavian artery traumatic rupture of innominate or subclavian artery
<b>NB30.1Y</b>	Other specified injury of innominate or subclavian artery
<b>NB30.1Z</b>	Injury of innominate or subclavian artery, unspecified
<b>NB30.2</b>	<b>Injury of superior vena cava</b>
<b>NB30.20</b>	Minor laceration of superior vena cava  <i>Inclusions:</i> incomplete transection of superior vena cava laceration of superior vena cava NOS superficial laceration of superior vena cava
<b>NB30.21</b>	Major laceration of superior vena cava  <i>Inclusions:</i> complete transection of superior vena cava traumatic rupture of superior vena cava
<b>NB30.2Y</b>	Other specified injury of superior vena cava
<b>NB30.2Z</b>	Injury of superior vena cava, unspecified
<b>NB30.3</b>	<b>Injury of innominate or subclavian vein</b>
<b>NB30.30</b>	Minor laceration of innominate or subclavian vein  <i>Inclusions:</i> incomplete transection of innominate or subclavian vein laceration of innominate or subclavian vein NOS superficial laceration of innominate or subclavian vein
<b>NB30.31</b>	Major laceration of innominate or subclavian vein  <i>Inclusions:</i> complete transection of innominate or subclavian vein traumatic rupture of innominate or subclavian vein
<b>NB30.3Y</b>	Other specified injury of innominate or subclavian vein
<b>NB30.3Z</b>	Injury of innominate or subclavian vein, unspecified
<b>NB30.4</b>	<b>Injury of pulmonary blood vessels</b>

<b>NB30.40</b>	Minor laceration of pulmonary blood vessels
	<b>Inclusions:</b>
	incomplete transection of pulmonary blood vessels
	laceration of pulmonary blood vessels NOS
	superficial laceration of pulmonary blood vessels
<b>NB30.41</b>	Major laceration of pulmonary blood vessels
	<b>Inclusions:</b>
	complete transection of pulmonary blood vessels
	traumatic rupture of pulmonary blood vessels
<b>NB30.4Y</b>	Other specified injury of pulmonary blood vessels
<b>NB30.4Z</b>	Injury of pulmonary blood vessels, unspecified
<b>NB30.5</b>	<b>Injury of intercostal blood vessels</b>
<b>NB30.50</b>	Laceration of intercostal blood vessels
<b>NB30.5Y</b>	Other specified injury of intercostal blood vessels
<b>NB30.5Z</b>	Injury of intercostal blood vessels, unspecified
<b>NB30.6</b>	<b>Injury of multiple blood vessels of thorax</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NB30.Y</b>	<b>Injury of other specified blood vessels of thorax</b>
<b>NB30.Z</b>	<b>Injury of unspecified blood vessels of thorax</b>
<b>NB31</b>	<b>Injury of heart</b>
<b>NB31.0</b>	<b>Injury of heart with haemopericardium</b>
<b>NB31.00</b>	Contusion of heart with haemopericardium
<b>NB31.01</b>	Minor laceration of heart with haemopericardium
	<b>Inclusions:</b>
	laceration of heart without penetration of heart chamber
<b>NB31.02</b>	Moderate laceration of heart with haemopericardium
	<b>Inclusions:</b>
	laceration of heart with penetration of heart chamber
<b>NB31.03</b>	Major laceration of heart with haemopericardium
	<b>Inclusions:</b>
	laceration of heart with penetration of multiple heart chambers
<b>NB31.0Y</b>	Other specified injury of heart with haemopericardium
<b>NB31.0Z</b>	Injury of heart with haemopericardium, unspecified
<b>NB31.1</b>	<b>Injury of heart without haemopericardium</b>
<b>NB31.10</b>	Contusion of heart without haemopericardium
<b>NB31.11</b>	Laceration of heart without haemopericardium
<b>NB31.1Y</b>	Other specified injury of heart without haemopericardium

<b>NB31.1Z</b>	Injury of heart without haemopericardium, unspecified
<b>NB31.2</b>	<b>Injury of heart, unspecified without open wound into thoracic cavity</b>
<b>NB31.3</b>	<b>Injury of heart, unspecified with open wound into thoracic cavity</b>
<b>NB31.4</b>	<b>Injury of heart valve</b>
<b>NB31.40</b>	Injury to mitral valve
<b>NB31.4Y</b>	Injury of other specified heart valve
<b>NB31.4Z</b>	Injury of heart valve, unspecified
<b>NB31.Y</b>	<b>Other specified injury of heart</b>
<b>NB31.Z</b>	<b>Injury of heart, unspecified</b>

**NB32      Injury of other or unspecified intrathoracic organs**

***Exclusions:***      injury of cervical oesophagus (NA20-NA6Z)

                        injury of trachea (cervical) (NA20-NA6Z)

***Coded Elsewhere:*** Oesophagitis due to external causes (DA24.2)

                        Injury of oesophagus (DA20.3Y)

<b>NB32.0</b>	<b>Traumatic pneumothorax</b>
<b>NB32.1</b>	<b>Traumatic haemothorax</b>
<b>NB32.2</b>	<b>Traumatic haemopneumothorax</b>
<b>NB32.3</b>	<b>Certain injuries of lung</b>
<b>NB32.30</b>	Contusion of lung
<b>NB32.31</b>	Laceration of lung
<b>NB32.32</b>	Inhalation injury of lung
<b>NB32.33</b>	Primary blast injury of lung
<b>NB32.3Y</b>	Other injury of lung
<b>NB32.3Z</b>	Injury of lung, unspecified
<b>NB32.4</b>	<b>Injury of bronchus</b>
<b>NB32.40</b>	Contusion of bronchus
<b>NB32.41</b>	Minor laceration of bronchus

***Inclusions:***      laceration of bronchus less than 1 cm  
                        laceration of bronchus NOS

<b>NB32.42</b>	Moderate laceration of bronchus
	<b>Inclusions:</b> laceration of bronchus 1 to 3 cm
	<b>Exclusions:</b> Multiple moderate lacerations of bronchus (NB32.43)
<b>NB32.43</b>	Major laceration of bronchus
	<b>Inclusions:</b> laceration of bronchus greater than 3 cm
	massive laceration of bronchus
	multiple moderate lacerations of bronchus
	stellate laceration of bronchus
<b>NB32.4Y</b>	Other specified injury of bronchus
<b>NB32.4Z</b>	Injury of bronchus, unspecified
<b>NB32.5</b>	<b>Injury of thoracic trachea</b>
	<b>Coded Elsewhere:</b> Tracheal haemorrhage of newborn due to airway trauma (KB2G)
<b>NB32.50</b>	Contusion of thoracic trachea
<b>NB32.51</b>	Minor laceration of thoracic trachea
	<b>Inclusions:</b> laceration of thoracic trachea less than 1 cm
	laceration of thoracic trachea NOS
<b>NB32.52</b>	Moderate laceration of thoracic trachea
	<b>Inclusions:</b> laceration of thoracic trachea 1 to 3 cm
	<b>Exclusions:</b> Multiple moderate lacerations of thoracic trachea (NB32.53)
<b>NB32.53</b>	Major laceration of thoracic trachea
	<b>Inclusions:</b> laceration of thoracic trachea greater than 3 cm
	massive laceration of thoracic trachea
	multiple moderate lacerations of thoracic trachea
	stellate laceration of thoracic trachea
<b>NB32.5Y</b>	Other specified injury of thoracic trachea
<b>NB32.5Z</b>	Injury of thoracic trachea, unspecified
<b>NB32.6</b>	<b>Injury of pleura</b>
<b>NB32.60</b>	Laceration of pleura
<b>NB32.6Y</b>	Other specified injury of pleura
<b>NB32.6Z</b>	Injury of pleura, unspecified

<b>NB32.7</b>	<b>Multiple injuries of intrathoracic organs</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NB32.Y</b>	<b>Other specified injury of other or unspecified intrathoracic organs</b>
<b>NB32.Z</b>	<b>Unspecified injury of unspecified intrathoracic organs</b>
<b>NB33</b>	<b>Crushing injury of thorax or traumatic amputation of part of thorax</b>
<b>NB33.0</b>	<b>Crushed chest</b>
	<b>Exclusions:</b> Flail chest (NA82.5)
<b>NB33.1</b>	<b>Traumatic amputation of breast</b>
<b>NB33.10</b>	Traumatic amputation of part of breast
<b>NB33.11</b>	Traumatic amputation of entire breast
<b>NB33.1Z</b>	Traumatic amputation of breast, unspecified
<b>NB33.2</b>	<b>Traumatic amputation of other or unspecified part of thorax</b>

<b>NB34</b>	<b>Injury of muscle, fascia or tendon at thorax level</b>
<b>NB34.0</b>	<b>Strain or sprain of muscle, fascia or tendon at thorax level</b>
<b>NB34.1</b>	<b>Laceration of muscle, fascia or tendon at thorax level</b>
<b>NB34.Y</b>	<b>Other specified injury of muscle, fascia or tendon at thorax level</b>
<b>NB34.Z</b>	<b>Injury of muscle, fascia or tendon at thorax level, unspecified</b>
<b>NB35</b>	<b>Multiple injuries of thorax</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NB3Y</b>	<b>Other specified injuries to the thorax</b>
<b>NB3Z</b>	<b>Injuries to the thorax, unspecified</b>

## Injuries to the abdomen, lower back, lumbar spine or pelvis (NB50-NB9Z)

**Exclusions:**

- insect bite or sting, venomous (NE61)
- Foreign body in anus or rectum (ND73.5)
- Foreign body in genitourinary tract (ND74)
- Burns (ND90-NE2Z)
- Foreign body in colon (ND73.4)
- Fracture of spine, level unspecified (ND50)
- injuries of trunk NOS (ND51)
- injuries of spinal cord NOS (ND51)
- Frostbite (NE40-NE4Z)
- Foreign body in stomach (ND73.2)
- Foreign body in small intestine (ND73.3)

### NB50

#### **Superficial injury of abdomen, lower back or pelvis**

Damage inflicted on the surface or shallow tissues of the abdomen, lower back and pelvis as the direct or indirect result of an external force, with or without disruption of structural continuity.

**Exclusions:** superficial injury of hip (NC70)

**Coded Elsewhere:** Sequelae of superficial injury or open wound of neck or trunk (NF2Y)

<b>NB50.0</b>	<b>Abrasions of lower back or pelvis</b>
<b>NB50.1</b>	<b>Contusions of lower back or pelvis</b>
<b>NB50.2</b>	<b>Abrasions of abdominal wall</b>
<b>NB50.3</b>	<b>Contusions of abdominal wall</b>
<b>NB50.4</b>	<b>Abrasions of external genital organs</b> <b>Coded Elsewhere:</b> Birth injury to external genitalia (KA43.1)
<b>NB50.5</b>	<b>Contusions of external genital organs</b> <b>Coded Elsewhere:</b> Birth injury to external genitalia (KA43.1)
<b>NB50.6</b>	<b>Multiple superficial injuries of abdomen, lower back or pelvis</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NB50.Y</b>	<b>Other specified superficial injury of abdomen, lower back or pelvis</b>
<b>NB50.Z</b>	<b>Superficial injury of abdomen, lower back or pelvis, unspecified</b>
<b>NB51</b>	<b>Open wound of abdomen, lower back or pelvis</b>
	<b>Exclusions:</b>
	open wound of hip (NC71)
	traumatic amputation of part of abdomen, lower back and pelvis (NB93)

<b>NB51.0</b>	<b>Laceration without foreign body of abdomen, lower back or pelvis</b>
	<b>Inclusions:</b> laceration of skin of abdomen, lower back or pelvis
<b>NB51.1</b>	<b>Laceration with foreign body of abdomen, lower back or pelvis</b>
<b>NB51.2</b>	<b>Puncture wound without foreign body of abdomen, lower back or pelvis</b>
<b>NB51.3</b>	<b>Puncture wound with foreign body of abdomen, lower back or pelvis</b>
<b>NB51.4</b>	<b>Open bite of abdomen, lower back or pelvis</b>
<b>NB51.5</b>	<b>Multiple open wounds of abdomen, lower back or pelvis</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NB51.Y</b>	<b>Other specified open wound of abdomen, lower back or pelvis</b>
<b>NB51.Z</b>	<b>Open wound of abdomen, lower back or pelvis, unspecified</b>
<b>NB52</b>	<b>Fracture of lumbar spine or pelvis</b>
	Broken bone in the lumbar spine or pelvis.
	<b>Exclusions:</b> fracture of hip NOS (NC72.2)
<b>NB52.0</b>	<b>Fracture of lumbar vertebra</b>
<b>NB52.1</b>	<b>Fracture of pelvic bone without disruption of posterior arch of pelvic ring</b>
<b>NB52.10</b>	Fracture of sacrum without disruption of pelvic ring
<b>NB52.11</b>	Fracture of coccyx
<b>NB52.12</b>	Fracture of ilium without disruption of pelvic ring
<b>NB52.13</b>	Fracture of acetabulum without disruption of pelvic ring
<b>NB52.14</b>	Fracture of pubis without disruption of pelvic ring
<b>NB52.15</b>	Fracture of ischium without disruption of pelvic ring
<b>NB52.1Y</b>	Fracture of other specified pelvic bone without disruption of posterior arch of pelvic ring
<b>NB52.1Z</b>	Fracture of unspecified pelvic bone without disruption of posterior arch of pelvic ring
<b>NB52.2</b>	<b>Fracture of the pelvic ring with incomplete disruption of posterior arch</b>
<b>NB52.3</b>	<b>Fracture of pelvic ring with complete disruption of posterior arch</b>
<b>NB52.4</b>	<b>Multiple fractures of lumbar spine or pelvis</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NB52.Y</b>	<b>Other specified fracture of lumbar spine or pelvis</b>
<b>NB52.Z</b>	<b>Fracture of lumbar spine or pelvis, unspecified</b>

<b>NB53</b>	<b>Dislocation or strain or sprain of joints or ligaments of lumbar spine or pelvis</b>
	<b>Exclusions:</b> Dislocation or strain or sprain of joint or ligaments of hip (NC73)
	Obstetric damage to pelvic joints or ligaments (JB0A.7)
<b>NB53.0</b>	<b>Traumatic rupture of lumbar intervertebral disc</b>
<b>NB53.1</b>	<b>Dislocation of lumbar vertebra</b>
<b>NB53.2</b>	<b>Dislocation of sacroiliac or sacrococcygeal joint without disruption of pelvic ring</b>
<b>NB53.3</b>	<b>Dislocation of other or unspecified parts of lumbar spine or pelvis without disruption of pelvic ring</b>
<b>NB53.4</b>	<b>Traumatic rupture of symphysis pubis without disruption of pelvic ring</b>
<b>NB53.5</b>	<b>Strain or sprain of lumbar spine</b> A collective term for muscle and ligament injuries of the tissues associated with the lumbar spine without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
<b>NB53.6</b>	<b>Strain or sprain of sacroiliac joint</b> Aberrant biomechanical functions of the joints between the ilia and the sacrum, which may be as a result of local disease, systemic disease, postural strain or trauma.
<b>NB53.Y</b>	<b>Other specified dislocation or strain or sprain of joints or ligaments of lumbar spine or pelvis</b>
<b>NB53.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments of lumbar spine or pelvis, unspecified</b>

Injury of nerves or lumbar spinal cord at abdomen, lower back or pelvis level (NB60-NB7Z)

Injury of spinal cord at abdomen, lower back or pelvis level (NB60-NB6Z)

<b>NB60</b>	<b>Concussion or oedema of lumbar spinal cord</b>
<b>NB61</b>	<b>Concussion or oedema of sacral spinal cord</b>
<b>NB62</b>	<b>Certain specified injuries of lumbar spinal cord</b>
<b>NB62.0</b>	<b>Complete lesion of lumbar spinal cord</b>
<b>NB62.1</b>	<b>Central cord syndrome of lumbar spinal cord</b>
<b>NB62.2</b>	<b>Anterior cord syndrome of lumbar spinal cord</b>
<b>NB62.3</b>	<b>Posterior cord syndrome of lumbar spinal cord</b>

<b>NB62.4</b>	<b>Brown-Sequard syndrome of lumbar spinal cord</b>
<b>NB62.5</b>	<b>Other incomplete cord syndrome of lumbar spinal cord</b>
<b>NB62.6</b>	<b>Puncture wound or laceration of dura mater of lumbar spinal cord</b>
<b>NB63</b>	<b>Certain specified injuries of sacral spinal cord</b>
<b>NB63.0</b>	<b>Complete injury of sacral spinal cord</b>
<b>NB63.1</b>	<b>Incomplete injury of sacral spinal cord</b>
<b>NB63.Z</b>	<b>Injury of sacral spinal cord, unspecified</b>
<b>NB6Z</b>	<b>Injury of spinal cord at abdomen, lower back or pelvis level, unspecified</b>

Injury of nerves at abdomen, lower back or pelvis level (NB70-NB7Z)

<b>NB70</b>	<b>Injury of nerve root of lumbar spine</b>
<b>NB71</b>	<b>Injury of nerve root of sacral spine</b>
<b>NB72</b>	<b>Injury of cauda equina</b>
<b>NB73</b>	<b>Injury of lumbosacral plexus</b>
<b>NB74</b>	<b>Injury of lumbar, sacral or pelvic sympathetic nerves</b>
<b>NB75</b>	<b>Injury of peripheral nerve of abdomen, lower back or pelvis</b>
<b>NB7Y</b>	<b>Other specified injury of nerves at abdomen, lower back or pelvis level</b>
<b>NB7Z</b>	<b>Injury of nerves at abdomen, lower back or pelvis level, unspecified</b>
<b>NB90</b>	<b>Injury of blood vessels at abdomen, lower back or pelvis level</b>
<b>NB90.0</b>	<b>Injury of abdominal aorta</b> <i>Exclusions:</i> injury aorta NOS (NB30.0)
<b>NB90.00</b>	Minor laceration of abdominal aorta <i>Inclusions:</i> incomplete transection of abdominal aorta laceration of abdominal aorta NOS superficial laceration of abdominal aorta
<b>NB90.01</b>	Major laceration of abdominal aorta <i>Inclusions:</i> complete transection of abdominal aorta traumatic rupture of abdominal aorta
<b>NB90.0Y</b>	Other specified injury of abdominal aorta
<b>NB90.0Z</b>	Injury of abdominal aorta, unspecified

<b>NB90.1</b>	<b>Injury of inferior vena cava</b>
	<b><i>Exclusions:</i></b> injury vena cava NOS (NB30.2)
<b>NB90.10</b>	Minor laceration of inferior vena cava
	<b><i>Inclusions:</i></b> incomplete transection of inferior vena cava laceration of inferior vena cava NOS superficial laceration of inferior vena cava
<b>NB90.11</b>	Major laceration of inferior vena cava
	<b><i>Inclusions:</i></b> complete transection of inferior vena cava traumatic rupture of inferior vena cava
<b>NB90.1Y</b>	Other specified injury of inferior vena cava
<b>NB90.1Z</b>	Injury of inferior vena cava, unspecified
<b>NB90.2</b>	<b>Injury of coeliac artery</b>
<b>NB90.20</b>	Minor laceration of coeliac artery
	<b><i>Inclusions:</i></b> incomplete transection of coeliac artery laceration of coeliac artery NOS superficial laceration of celiac artery
<b>NB90.21</b>	Major laceration of coeliac artery
	<b><i>Inclusions:</i></b> complete transection of coeliac artery traumatic rupture of coeliac artery
<b>NB90.2Y</b>	Other specified injury of coeliac artery
<b>NB90.2Z</b>	Injury of coeliac artery, unspecified
<b>NB90.3</b>	<b>Injury of mesenteric artery</b>
<b>NB90.30</b>	Minor laceration mesenteric artery
	<b><i>Inclusions:</i></b> incomplete transection of mesenteric artery laceration of mesenteric artery NOS superficial laceration of mesenteric artery
<b>NB90.31</b>	Major laceration of mesenteric artery
	<b><i>Inclusions:</i></b> complete transection of mesenteric artery traumatic rupture of mesenteric artery
<b>NB90.3Y</b>	Other specified injury of mesenteric artery
<b>NB90.3Z</b>	Injury of mesenteric artery, unspecified
<b>NB90.4</b>	<b>Injury of portal or splenic vein</b>

<b>NB90.40</b>	Minor laceration of portal or splenic vein  <b>Inclusions:</b> incomplete transection of portal or splenic vein laceration of portal or splenic vein NOS superficial laceration of portal or splenic vein
<b>NB90.41</b>	Major laceration of portal or splenic vein  <b>Inclusions:</b> complete transection of portal or splenic vein traumatic rupture of portal or splenic vein
<b>NB90.4Y</b>	Other specified injury of portal or splenic vein
<b>NB90.4Z</b>	Injury of portal or splenic vein, unspecified
<b>NB90.5</b>	<b>Injury of renal blood vessels</b>
<b>NB90.50</b>	Minor laceration of renal blood vessels  <b>Inclusions:</b> incomplete transection of renal blood vessels superficial laceration of renal blood vessels laceration of renal blood vessels NOS
<b>NB90.51</b>	Major laceration of renal blood vessels  <b>Inclusions:</b> complete transection of renal blood vessels traumatic rupture of renal blood vessels
<b>NB90.5Y</b>	Other specified injury of renal blood vessels
<b>NB90.5Z</b>	Injury of renal blood vessels, unspecified
<b>NB90.6</b>	<b>Injury of iliac blood vessels</b>
<b>NB90.60</b>	Minor laceration of iliac blood vessels  <b>Inclusions:</b> incomplete transection of iliac blood vessels laceration of iliac blood vessels NOS superficial laceration of iliac blood vessels
<b>NB90.61</b>	Major laceration of iliac blood vessels  <b>Inclusions:</b> complete transection of iliac blood vessels traumatic rupture of iliac blood vessels
<b>NB90.6Y</b>	Other specified injury of iliac blood vessels
<b>NB90.6Z</b>	Injury of iliac blood vessels, unspecified
<b>NB90.7</b>	<b>Injury of multiple blood vessels at abdomen, lower back or pelvis level</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NB90.Y</b>	<b>Injury of other specified blood vessels at abdomen, lower back or pelvis level</b>
<b>NB90.Z</b>	<b>Injury of unspecified blood vessel at abdomen, lower back or pelvis level</b>

<b>NB91</b>	<b>Injury of intra-abdominal organs</b>
	<b>Coded Elsewhere:</b> Adrenal haemorrhage due to birth injury (KA46.2)
<b>NB91.0</b>	<b>Injury of spleen</b>
	<b>Coded Elsewhere:</b> Birth injury to spleen (KA46.1)
<b>NB91.00</b>	Contusion of spleen, minor  <b>Inclusions:</b> contusion of spleen less than 2 cm
<b>NB91.01</b>	Contusion of spleen, major  <b>Inclusions:</b> contusion of spleen greater than 2 cm
<b>NB91.02</b>	Laceration of spleen, minor  <b>Inclusions:</b> laceration of spleen less than 1 cm
<b>NB91.03</b>	Laceration of spleen, moderate  <b>Inclusions:</b> laceration of spleen 1 to 3 cm  <b>Exclusions:</b> Multiple moderate lacerations of spleen (NB91.04)
<b>NB91.04</b>	Laceration of spleen, major  <b>Inclusions:</b> laceration of spleen greater than 3 cm massive laceration of spleen multiple moderate lacerations of spleen stellate laceration of spleen  <b>Exclusions:</b> Avulsion of spleen (NB91.05)
<b>NB91.05</b>	Avulsion of spleen
<b>NB91.0Y</b>	Other specified injury of spleen
<b>NB91.0Z</b>	Injury of spleen, unspecified
<b>NB91.1</b>	<b>Injury of liver</b>  Damage inflicted on the liver as the direct or indirect result of an external force, with or without disruption of structural continuity.  <b>Coded Elsewhere:</b> Birth injury to liver (KA46.0)
<b>NB91.10</b>	Contusion of liver
<b>NB91.11</b>	Laceration of liver, minor  <b>Inclusions:</b> laceration of liver involving capsule only, or, without significant involvement of hepatic parenchyma [i.e., less than 1 cm deep]

<b>NB91.12</b>	Laceration of liver, moderate
	<b>Inclusions:</b> laceration of liver involving parenchyma but without major disruption of parenchyma [i.e., less than 10 cm long and less than 3 cm deep]
	<b>Exclusions:</b> Multiple moderate lacerations of liver, with or without haematoma (NB91.13)
<b>NB91.13</b>	Laceration of liver, major
	<b>Inclusions:</b> laceration of liver with significant disruption of hepatic parenchyma [i.e., greater than 10 cm long and 3 cm deep] multiple moderate lacerations of liver, with or without haematoma stellate laceration of liver
<b>NB91.14</b>	Injury of hepatic duct
<b>NB91.1Y</b>	Other specified injury of liver
<b>NB91.1Z</b>	Injury of liver, unspecified
<b>NB91.2</b>	<b>Injury of gallbladder</b>
	<b>Coded Elsewhere:</b> Common bile duct trauma (NB91.3)
<b>NB91.3</b>	<b>Injury of bile duct</b>
<b>NB91.4</b>	<b>Injury of pancreas</b>
<b>NB91.40</b>	Contusion of pancreas
<b>NB91.41</b>	Laceration of pancreas, minor
	<b>Inclusions:</b> laceration of pancreas less than 1 cm laceration of pancreas NOS superficial capsular laceration of pancreas
<b>NB91.42</b>	Laceration of pancreas, moderate
	<b>Inclusions:</b> laceration of pancreas 1 to 3 cm
	<b>Exclusions:</b> Multiple moderate lacerations of pancreas (NB91.43)
<b>NB91.43</b>	Laceration of pancreas, major
	<b>Inclusions:</b> laceration of pancreas greater than 3 cm multiple moderate lacerations of pancreas massive laceration of pancreas stellate laceration of pancreas
<b>NB91.4Y</b>	Other specified injury of pancreas
<b>NB91.4Z</b>	Injury of pancreas, unspecified
<b>NB91.5</b>	<b>Injury of stomach</b>

<b>NB91.50</b>	Contusion of stomach
<b>NB91.51</b>	Laceration of stomach without perforation
<b>NB91.52</b>	Laceration of stomach with perforation, avulsion or massive damage
<b>NB91.53</b>	Ingestion injury of stomach without perforation  <i>Exclusions:</i> Chemical burn or corrosion of stomach (NE02)
<b>NB91.54</b>	Ingestion injury of stomach with perforation  <i>Exclusions:</i> Chemical burn or corrosion of stomach (NE02)
<b>NB91.5Y</b>	Other specified injury of stomach
<b>NB91.5Z</b>	Injury of stomach, unspecified
<b>NB91.6</b>	<b>Injury of duodenum</b>
<b>NB91.60</b>	Contusion of duodenum
<b>NB91.61</b>	Laceration of duodenum
<b>NB91.62</b>	Primary blast injury of duodenum
<b>NB91.63</b>	Perforation of duodenum  Perforation of duodenum is a penetration of the wall of the duodenum, resulting in luminal contents in duodenum flowing into the abdominal cavity or retroperitoneal wall.  <i>Inclusions:</i> Perforation of duodenum due to injury
<b>NB91.6Y</b>	Other specified injury of duodenum
<b>NB91.6Z</b>	Injury of duodenum, unspecified
<b>NB91.7</b>	<b>Injury of small intestine</b>
	<i>Inclusions:</i> Iatrogenic injury of small intestine
	<i>Exclusions:</i> Injury of duodenum (NB91.6)
<b>NB91.70</b>	Contusion of small intestine  An injury to small intestine resulting from a blow in which the subsurface tissue is injured and often internally bled but the skin is not broken.  <i>Exclusions:</i> Contusion of duodenum (NB91.60)
<b>NB91.71</b>	Laceration of small intestine  A tear or wound of small intestine.  <i>Exclusions:</i> Laceration of duodenum (NB91.61)
<b>NB91.72</b>	Primary blast injury of small intestine  An injury to small intestine resulting from direct or indirect exposure to explosion. Primary injuries are caused by high-order explosives or shock waves  <i>Exclusions:</i> Primary blast injury of duodenum (NB91.62)

<b>NB91.7Y</b>	Other specified injury of small intestine
<b>NB91.7Z</b>	Injury of small intestine, unspecified
<b>NB91.8</b>	<b>Injury of colon</b>
<b>NB91.80</b>	Contusion of colon  An injury to large intestine resulting from a blow in which the subsurface tissue is injured and often internally bled but the skin is not broken.
<b>NB91.81</b>	Laceration of colon  A tear or wound of large intestine.
<b>NB91.82</b>	Primary blast injury of colon  An injury to large intestine resulting from direct or indirect exposure to explosion. Primary injuries are caused by high-order explosives or shock waves.
<b>NB91.8Y</b>	Other specified injury of colon
<b>NB91.8Z</b>	Injury of colon, unspecified
<b>NB91.9</b>	<b>Injury of rectum</b>
<b>NB91.90</b>	Contusion of rectum
<b>NB91.91</b>	Laceration of rectum
<b>NB91.92</b>	Primary blast injury of rectum
<b>NB91.9Y</b>	Other specified injury of rectum
<b>NB91.9Z</b>	Injury of rectum, unspecified
<b>NB91.A</b>	<b>Injury of mesentery</b>
<b>NB91.B</b>	<b>Injury of multiple intra-abdominal organs</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NB91.Y</b>	<b>Injury of other specified intra-abdominal organs</b>
<b>NB91.Z</b>	<b>Injury of intra-abdominal organs, unspecified</b>
<b>NB92</b>	<b>Injury of urinary or pelvic organs</b>
	<b>Exclusions:</b> peritoneum and retroperitoneum (NB91)
	<b>Coded Elsewhere:</b> Female Genital Mutilation (GC51)
	Sequelae of injury of intra-abdominal or pelvic organs (NB91.Y)
<b>NB92.0</b>	<b>Injury of kidney</b>

<b>NB92.00</b>	Contusion of kidney, minor  <i>Inclusions:</i> contusion of kidney less than 2 cm contusion of kidney NOS
<b>NB92.01</b>	Contusion of kidney, major  <i>Inclusions:</i> contusion of kidney greater than 2 cm
<b>NB92.02</b>	Laceration of kidney, minor  <i>Inclusions:</i> laceration of kidney less than 1 cm laceration of kidney NOS
<b>NB92.03</b>	Laceration of kidney, moderate  <i>Inclusions:</i> laceration of kidney 1 to 3 cm  <i>Exclusions:</i> Multiple moderate lacerations of kidney (NB92.04)
<b>NB92.04</b>	Laceration of kidney, major  <i>Inclusions:</i> avulsion of kidney laceration of kidney greater than 3 cm massive laceration of kidney stellate laceration of kidney multiple moderate lacerations of kidney
<b>NB92.0Y</b>	Other specified injury of kidney
<b>NB92.0Z</b>	Injury of kidney, unspecified
<b>NB92.1</b>	<b>Injury of ureter</b>
<b>NB92.10</b>	Contusion of ureter
<b>NB92.11</b>	Laceration of ureter
<b>NB92.1Y</b>	Other specified injury of ureter
<b>NB92.1Z</b>	Injury of ureter, unspecified
<b>NB92.2</b>	<b>Injury of bladder</b>  <i>Exclusions:</i> Obstetric injury to bladder (JB0A.6)
<b>NB92.20</b>	Contusion of bladder
<b>NB92.21</b>	Laceration of bladder
<b>NB92.2Y</b>	Other specified injury of bladder
<b>NB92.2Z</b>	Injury of bladder, unspecified
<b>NB92.3</b>	<b>Injury of urethra</b>
<b>NB92.30</b>	Contusion of urethra
<b>NB92.31</b>	Laceration of urethra

<b>NB92.3Y</b>	Other specified injury of urethra
<b>NB92.3Z</b>	Injury of urethra, unspecified
<b>NB92.4</b>	<b>Injury of ovary</b>
<b>NB92.40</b>	Contusion of ovary
<b>NB92.41</b>	Laceration of ovary
<b>NB92.4Y</b>	Other specified injury of ovary
<b>NB92.4Z</b>	Injury of ovary, unspecified
<b>NB92.5</b>	<b>Injury of fallopian tube</b>
<b>NB92.6</b>	<b>Injury of uterus</b>
<b>NB92.7</b>	<b>Injury of urinary tract</b>
<b>NB92.8</b>	<b>Injury of multiple pelvic organs</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NB92.Y</b>	<b>Injury of other specified pelvic organs</b>
<b>NB92.Z</b>	<b>Injury of urinary or pelvic organs, unspecified</b>
<b>NB93</b>	<b>Crushing injury or traumatic amputation of part of abdomen, lower back or pelvis</b>
<b>NB93.0</b>	<b>Crushing injury of external genital organs</b>
	<b>Coded Elsewhere:</b> Birth injury to external genitalia (KA43.1)
<b>NB93.00</b>	Crushing injury of penis
<b>NB93.01</b>	Crushing injury of testes or scrotum
<b>NB93.02</b>	Crushing injury of vulva
<b>NB93.0Z</b>	Crushing injury of external genital organs, unspecified
<b>NB93.1</b>	<b>Crushing injury of other or unspecified parts of abdomen, lower back or pelvis</b>
<b>NB93.2</b>	<b>Traumatic amputation of external genital organs</b>
<b>NB93.20</b>	Traumatic amputation of entire penis
	<b>Inclusions:</b> Traumatic amputation of penis
<b>NB93.21</b>	Traumatic amputation of part of penis
<b>NB93.22</b>	Traumatic amputation of entire testes or scrotum
<b>NB93.23</b>	Traumatic amputation of part of testes or scrotum

<b>NB93.24</b>	Traumatic amputation of entire vulva  <b>Inclusions:</b> Traumatic amputation of vulva <b>Exclusions:</b> Female Genital Mutilation (GC51)
<b>NB93.25</b>	Traumatic amputation of part of vulva  <b>Exclusions:</b> Female Genital Mutilation (GC51)
<b>NB93.2Z</b>	Traumatic amputation of external genital organs, unspecified
<b>NB93.3</b>	<b>Traumatic amputation of other or unspecified parts of abdomen, lower back or pelvis</b>  <b>Exclusions:</b> transection of abdomen (ND35)
<b>NB94</b>	<b>Injury of muscle, fascia or tendon of abdomen, lower back or pelvis</b>
<b>NB94.0</b>	<b>Strain or sprain of muscle, fascia or tendon of abdomen</b>
<b>NB94.1</b>	<b>Strain or sprain of muscle, fascia or tendon of lower back</b>
<b>NB94.2</b>	<b>Strain or sprain of muscle, fascia or tendon of pelvis</b>
<b>NB94.3</b>	<b>Laceration of muscle, fascia or tendon of abdomen</b>
<b>NB94.4</b>	<b>Laceration of muscle, fascia or tendon of lower back</b>
<b>NB94.5</b>	<b>Laceration of muscle, fascia or tendon of pelvis</b>
<b>NB94.Y</b>	<b>Other specified injury of muscle, fascia or tendon of abdomen, lower back or pelvis</b>
<b>NB94.Z</b>	<b>Injury of muscle, fascia or tendon of abdomen, lower back or pelvis, unspecified</b>
<b>NB95</b>	<b>Injury of intra-abdominal organ with pelvic organ</b>  <b>Coded Elsewhere:</b> Sequelae of injury of intra-abdominal or pelvic organs (NB91.Y)
<b>NB96</b>	<b>Other multiple injuries of abdomen, lower back or pelvis</b>  <b>Coding Note:</b> Assign additional codes for the specific injuries.
<b>NB97</b>	<b>Certain specified injuries of abdomen, lower back or pelvis</b>
<b>NB97.0</b>	<b>Retroperitoneal haemorrhage or haematoma</b>
<b>NB97.1</b>	<b>Fractured penis</b>
<b>NB98</b>	<b>Injury to female genital organ without further specification</b>  <b>Exclusions:</b> Crushing injury of external genital organs (NB93.0)
<b>NB99</b>	<b>Injury to male genital organ without further specification</b>  <b>Exclusions:</b> Crushing injury of external genital organs (NB93.0)
<b>NB9Y</b>	<b>Other specified injuries to the abdomen, lower back, lumbar spine or pelvis</b>

<b>NB9Z</b>	<b>Injuries to the abdomen, lower back, lumbar spine or pelvis, unspecified</b>
-------------	---

### Injuries to the shoulder or upper arm (NC10-NC1Z)

- Exclusions:**
- Burns (ND90-NE2Z)
  - Other injuries of arm, level unspecified (ND53)
  - Frostbite (NE40-NE4Z)
  - Insect bite or sting, venomous (NE61)
  - Injuries to the elbow or forearm (NC30-NC3Z)

#### **NC10 Superficial injury of shoulder or upper arm**

- NC10.0 Abrasion of shoulder or upper arm**
- NC10.1 Contusion of shoulder or upper arm**
- NC10.2 Multiple superficial injuries of shoulder or upper arm**

**Coding Note:** Assign additional codes for the specific injuries.

- NC10.Y Other specified superficial injury of shoulder or upper arm**

- NC10.Z Superficial injury of shoulder or upper arm, unspecified**

#### **NC11 Open wound of shoulder or upper arm**

**Exclusions:** Traumatic amputation of shoulder or upper arm (NC18)

- NC11.0 Laceration without foreign body of shoulder or upper arm**
- Inclusions:** laceration of skin of shoulder or upper arm
- NC11.1 Laceration with foreign body of shoulder or upper arm**
- NC11.2 Puncture wound without foreign body of shoulder or upper arm**
- NC11.3 Puncture wound with foreign body of shoulder or upper arm**
- NC11.4 Open bite of shoulder or upper arm**
- NC11.5 Multiple open wounds of shoulder or upper arm**

**Coding Note:** Assign additional codes for the specific injuries.

- NC11.Y Other specified open wound of shoulder or upper arm**

- NC11.Z Open wound of shoulder or upper arm, unspecified**

#### **NC12 Fracture of shoulder or upper arm**

- NC12.0 Fracture of clavicle**

A break in one or both of the clavicles.

**Coded Elsewhere:** Fracture of clavicle due to birth injury (KA45.5)

<b>NC12.00</b>	Fracture of sternal end of clavicle
<b>NC12.01</b>	Fracture of shaft of clavicle
<b>NC12.02</b>	Fracture of acromial end of clavicle
<b>NC12.03</b>	Multiple fractures of clavicle, alone
<b>NC12.0Y</b>	Other specified fracture of clavicle
<b>NC12.0Z</b>	Fracture of clavicle, unspecified
<b>NC12.1</b>	<b>Fracture of scapula</b> A break in one or both of the scapulae.
<b>NC12.10</b>	Multiple fractures of scapula
<b>NC12.1Y</b>	Other specified fracture of scapula
<b>NC12.1Z</b>	Fracture of scapula, unspecified
<b>NC12.2</b>	<b>Fracture of upper end of humerus</b>
<b>NC12.20</b>	Fracture of upper end of humerus, head
<b>NC12.21</b>	Fracture of surgical neck of humerus
<b>NC12.22</b>	Fracture of anatomical neck of humerus
<b>NC12.23</b>	Fracture of greater tuberosity of humerus
<b>NC12.24</b>	Fracture of lesser tuberosity of humerus
<b>NC12.2Z</b>	Fracture of upper end of humerus, unspecified site
<b>NC12.3</b>	<b>Fracture of shaft of humerus</b>
<b>NC12.4</b>	<b>Fracture of lower end of humerus</b> <i>Inclusions:</i> fracture of articular process of humerus <i>Exclusions:</i> fracture of elbow NOS (NC32.0)
<b>NC12.40</b>	Supracondylar fracture of humerus
<b>NC12.41</b>	Fracture of lateral epicondyle of humerus
<b>NC12.42</b>	Fracture of medial epicondyle of humerus
<b>NC12.43</b>	Fracture of lateral condyle of humerus
<b>NC12.44</b>	Fracture of medial condyle of humerus
<b>NC12.4Y</b>	Other specified fracture of lower end of humerus
<b>NC12.4Z</b>	Fracture of lower end of humerus, unspecified
<b>NC12.5</b>	<b>Multiple fractures of clavicle, scapula or humerus</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

NC12.7	<b>Fracture of shoulder girdle, part unspecified</b>
NC12.Z	<b>Fracture of shoulder or upper arm, unspecified</b>
<b>NC13</b>	<b>Dislocation or strain or sprain of joints or ligaments of shoulder girdle</b>
NC13.0	<b>Dislocation of shoulder joint</b> Displacement of the humerus from the scapula.
NC13.1	<b>Dislocation of acromioclavicular joint</b>
NC13.2	<b>Dislocation of sternoclavicular joint</b>
NC13.3	<b>Dislocation of scapula</b>
NC13.4	<b>Dislocation of other or unspecified parts of shoulder girdle</b>
NC13.5	<b>Strain or sprain of shoulder joint</b> A collective term for muscle and ligament injuries of the tissues associated with the shoulder joint without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
NC13.6	<b>Strain or sprain of acromioclavicular joint</b>
NC13.7	<b>Strain or sprain of sternoclavicular joint</b> Aberrant biomechanical functions of the joints between the clavicle and the sternum, which may be as a result of local disease, systemic disease or trauma.
NC13.8	<b>Strain or sprain of other or unspecified parts of shoulder girdle</b>
NC13.Y	<b>Dislocation or sprain of other specified joints and ligaments of shoulder girdle</b>
NC13.Z	<b>Dislocation or strain or sprain of joints or ligaments of shoulder girdle, unspecified</b>
<b>NC14</b>	<b>Injury of nerves at shoulder or upper arm level</b>
	<b><i>Exclusions:</i></b> Injury of brachial plexus (NA41)
NC14.0	<b>Injury of ulnar nerve at upper arm level</b>
	<b><i>Exclusions:</i></b> ulnar nerve NOS (NC34.0)
NC14.1	<b>Injury of median nerve at upper arm level</b>
	<b><i>Exclusions:</i></b> median nerve NOS (NC34.1)
NC14.2	<b>Injury of radial nerve at upper arm level</b>
	<b><i>Exclusions:</i></b> radial nerve NOS (NC34.2)
NC14.3	<b>Injury of axillary nerve</b>
NC14.4	<b>Injury of musculocutaneous nerve</b>

**NC14.5      Injury of cutaneous sensory nerve at shoulder or upper arm level**

**NC14.6      Injury of multiple nerves at shoulder or upper arm level**

**Coding Note:** Assign additional codes for the specific injuries.

**NC14.Y      Injury of other specified nerves at shoulder or upper arm level**

**NC14.Z      Injury of unspecified nerve at shoulder or upper arm level**

**NC15      Injury of blood vessels at shoulder or upper arm level**

**Exclusions:**     injury of subclavian artery (NB30.1)  
                      injury of subclavian vein (NB30.3)

**NC15.0      Injury of axillary artery**

**NC15.00     Laceration of axillary artery**

**NC15.0Y     Other specified injury of axillary artery**

**NC15.0Z     Injury of axillary artery, unspecified**

**NC15.1      Injury of brachial artery**

**NC15.10     Laceration of brachial artery**

**NC15.1Y     Other specified injury of brachial artery**

**NC15.1Z     Injury of brachial artery, unspecified**

**NC15.2      Injury of axillary or brachial vein**

**NC15.20     Laceration of axillary or brachial vein**

**NC15.2Y     Other specified injury of axillary or brachial vein**

**NC15.2Z     Injury of axillary or brachial vein, unspecified**

**NC15.3      Injury of superficial vein at shoulder or upper arm level**

**NC15.30     Laceration of superficial vein at shoulder or upper arm level**

**NC15.3Y     Other specified injury of superficial vein at shoulder or upper arm level**

**NC15.3Z     Injury of superficial vein at shoulder or upper arm level, unspecified**

**NC15.4      Injury of multiple blood vessels at shoulder or upper arm level**

**Coding Note:** Assign additional codes for the specific injuries.

**NC15.Y      Injury of other specified blood vessels at shoulder or upper arm level**

**NC15.Z      Injury of unspecified blood vessel at shoulder or upper arm level**

**NC16      Injury of muscle, fascia, tendon or bursa at shoulder or upper arm level**

**Exclusions:**     injury of muscle and tendon at or below elbow (NC36)

**NC16.0      Injury of muscle or tendon of the rotator cuff of shoulder**

<b>NC16.00</b>	Strain or sprain of muscle or tendon of the rotator cuff of shoulder
<b>NC16.01</b>	Laceration of muscle or tendon of the rotator cuff of shoulder
<b>NC16.0Y</b>	Other specified injury of muscle or tendon of the rotator cuff of shoulder
<b>NC16.0Z</b>	Injury of muscle or tendon of the rotator cuff of shoulder, unspecified
<b>NC16.1</b>	<b>Injury of muscle, fascia or tendon of long head of biceps</b>
<b>NC16.10</b>	Strain or sprain of muscle, fascia or tendon of long head of biceps
<b>NC16.11</b>	Laceration of muscle, fascia or tendon of long head of biceps
<b>NC16.1Y</b>	Other specified injury of muscle, fascia or tendon of long head of biceps
<b>NC16.1Z</b>	Injury of muscle, fascia or tendon of long head of biceps, unspecified
<b>NC16.2</b>	<b>Injury of muscle, fascia or tendon of other parts of biceps</b>
<b>NC16.20</b>	Strain or sprain of muscle, fascia or tendon of other parts of biceps
<b>NC16.21</b>	Laceration of muscle, fascia or tendon of other parts of biceps
<b>NC16.2Y</b>	Other specified injury of muscle, fascia or tendon of other parts of biceps
<b>NC16.2Z</b>	Injury of muscle, fascia or tendon of other parts of biceps, unspecified
<b>NC16.3</b>	<b>Injury of muscle, fascia or tendon of triceps</b>
<b>NC16.30</b>	Strain or sprain of muscle, fascia or tendon of triceps
<b>NC16.31</b>	Laceration of muscle, fascia or tendon of triceps
<b>NC16.3Y</b>	Other specified injury of muscle, fascia or tendon of triceps
<b>NC16.3Z</b>	Injury of muscle, fascia or tendon of triceps, unspecified
<b>NC16.4</b>	<b>Injury of multiple muscles or tendons at shoulder or upper arm level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC16.40</b>	Strain or sprain of multiple muscles or tendons at shoulder or upper arm level
<b>NC16.41</b>	Laceration of multiple muscles or tendons at shoulder or upper arm level
<b>NC16.4Y</b>	Other specified injury of multiple muscles or tendons at shoulder or upper arm level
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC16.4Z</b>	Injury of multiple muscles or tendons at shoulder or upper arm level, unspecified
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC16.5</b>	<b>Injury of bursa of shoulder</b>
<b>NC16.Y</b>	<b>Injury of other specified muscle, fascia, tendon or bursa at shoulder or upper arm level</b>
<b>NC16.Z</b>	<b>Injury of unspecified muscle, fascia or tendon at shoulder or upper arm level</b>

<b>NC17</b>	<b>Crushing injury of shoulder or upper arm</b>
	<b>Exclusions:</b> Crushing injury of elbow (NC37.0)
<b>NC18</b>	<b>Traumatic amputation of shoulder or upper arm</b>
	<b>Exclusions:</b> traumatic amputation of arm, level unspecified (ND53) traumatic amputation at elbow level (NC38)
<b>NC18.0</b>	<b>Traumatic amputation at right shoulder joint</b>
<b>NC18.1</b>	<b>Traumatic amputation at left shoulder joint</b>
<b>NC18.2</b>	<b>Traumatic amputation at shoulder joint, bilateral</b>
<b>NC18.3</b>	<b>Traumatic amputation at level between right shoulder and elbow</b>
<b>NC18.4</b>	<b>Traumatic amputation at level between left shoulder and elbow</b>
<b>NC18.5</b>	<b>Traumatic amputation at level between shoulder and elbow, bilateral</b>
<b>NC18.Z</b>	<b>Traumatic amputation of shoulder or upper arm, unspecified</b>
<b>NC19</b>	<b>Multiple injuries of shoulder or upper arm</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NC1Y</b>	<b>Other specified injuries to the shoulder or upper arm</b>
<b>NC1Z</b>	<b>Injuries to the shoulder or upper arm, unspecified</b>
<b>Injuries to the elbow or forearm (NC30-NC3Z)</b>	
<b>Exclusions:</b>	Injuries to the wrist or hand (NC50-NC5Z) Insect bite or sting, venomous (NE61) Burns (ND90-NE2Z) Frostbite (NE40-NE4Z) Other injuries of arm, level unspecified (ND53)
<b>NC30</b>	<b>Superficial injury of forearm</b>
	<b>Exclusions:</b> Superficial injury of wrist or hand (NC51)
<b>NC30.0</b>	<b>Abrasions of elbow</b>
<b>NC30.1</b>	<b>Contusion of elbow</b>
<b>NC30.2</b>	<b>Abrasions of other or unspecified parts of forearm</b>
<b>NC30.3</b>	<b>Contusion of other or unspecified parts of forearm</b>

<b>NC30.4</b>	<b>Multiple superficial injuries of forearm</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NC30.Y</b>	<b>Other specified superficial injury of forearm</b>
<b>NC30.Z</b>	<b>Superficial injury of forearm, unspecified</b>
<b>NC31</b>	<b>Open wound of forearm</b>
	<b>Exclusions:</b> Open wound of wrist or hand (NC52) Traumatic amputation of forearm (NC38)
<b>NC31.0</b>	<b>Laceration without foreign body of forearm</b>
	<b>Inclusions:</b> laceration of skin of forearm
<b>NC31.1</b>	<b>Laceration with foreign body of forearm</b>
<b>NC31.2</b>	<b>Puncture wound without foreign body of forearm</b>
<b>NC31.3</b>	<b>Puncture wound with foreign body of forearm</b>
<b>NC31.4</b>	<b>Open bite of forearm</b>
<b>NC31.5</b>	<b>Multiple open wounds of forearm</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC31.Y</b>	<b>Other specified open wound of forearm</b>
<b>NC31.Z</b>	<b>Open wound of forearm, unspecified</b>
<b>NC32</b>	<b>Fracture of forearm</b>
	A break in one or both of the radius and/or ulna.
	<b>Exclusions:</b> Fracture at wrist or hand level (NC53)
<b>NC32.0</b>	<b>Fracture of upper end of ulna</b>
	<b>Exclusions:</b> supracondylar elbow fracture (NC12.4)
<b>NC32.1</b>	<b>Fracture of upper end of radius</b>
<b>NC32.2</b>	<b>Fracture of shaft of ulna</b>
<b>NC32.3</b>	<b>Fracture of shaft of radius</b>
<b>NC32.4</b>	<b>Fracture of shafts of both ulna and radius</b>
<b>NC32.5</b>	<b>Fracture of lower end of radius</b>
<b>NC32.50</b>	Fracture of lower end of radius, dorsal tilt
<b>NC32.51</b>	Fracture of lower end of radius, volar tilt
<b>NC32.5Y</b>	Other specified fracture of lower end of radius

- NC32.5Z** Fracture of lower end of radius, unspecified
- NC32.6** Fracture of lower end of both ulna and radius
- NC32.7** Multiple fractures of forearm
- Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Exclusions:** Fracture of shafts of both ulna and radius (NC32.4)  
Fracture of lower end of both ulna and radius (NC32.6)

- NC32.Y** Fracture of other specified parts of forearm

- NC32.Z** Fracture of forearm, unspecified

**NC33 Dislocation or strain or sprain of joints or ligaments of elbow**

A collective term for muscle and ligament injuries of the tissues associated with, or displacement of the bones of, the elbow.

- NC33.0** Dislocation of radial head

**Inclusions:** Radiohumeral joint

**Exclusions:** Monteggia fracture-dislocation (NC32.0)

- NC33.1** Dislocation of elbow

- NC33.2** Traumatic rupture of radial collateral ligament

- NC33.3** Traumatic rupture of ulnar collateral ligament

- NC33.4** Strain or sprain of elbow

A collective term for muscle and ligament injuries of the tissues associated with the elbow without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.

- NC33.Y** Dislocation or sprain of other specified joints or ligaments of elbow

- NC33.Z** Dislocation or strain or sprain of joints or ligaments of elbow, unspecified

**NC34 Injury of nerves at forearm level**

**Exclusions:** Injury of nerves at wrist or hand level (NC55)

- NC34.0** Injury of ulnar nerve at forearm level

- NC34.1** Injury of median nerve at forearm level

- NC34.2** Injury of radial nerve at forearm level

- NC34.3** Injury of cutaneous sensory nerve at forearm level

- NC34.4** Injury of multiple nerves at forearm level

**Coding Note:** Assign additional codes for the specific injuries.

- NC34.Y** Injury of other specified nerves at forearm level

<b>NC34.Z</b>	<b>Injury of unspecified nerve at forearm level</b>
<b>NC35</b>	<b>Injury of blood vessels at forearm level</b>
	<b>Exclusions:</b> Injury of blood vessels at wrist or hand level (NC56) injury of brachial vessels (NC15.2)
<b>NC35.0</b>	<b>Injury of ulnar artery at forearm level</b>
<b>NC35.00</b>	Laceration of ulnar artery at forearm level
<b>NC35.0Y</b>	Other specified injury of ulnar artery at forearm level
<b>NC35.0Z</b>	Injury of ulnar artery at forearm level, unspecified
<b>NC35.1</b>	<b>Injury of radial artery at forearm level</b>
<b>NC35.10</b>	Laceration of radial artery at forearm level
<b>NC35.1Y</b>	Other specified injury of radial artery at forearm level
<b>NC35.1Z</b>	Injury of radial artery at forearm level, unspecified
<b>NC35.2</b>	<b>Injury of vein at forearm level</b>
<b>NC35.20</b>	Laceration of vein at forearm level
<b>NC35.2Y</b>	Other specified injury of vein at forearm level
<b>NC35.2Z</b>	Injury of vein at forearm level, unspecified
<b>NC35.3</b>	<b>Injury of multiple blood vessels at forearm level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC35.Y</b>	<b>Injury of other specified blood vessels at forearm level</b>
<b>NC35.Z</b>	<b>Injury of unspecified blood vessel at forearm level</b>
<b>NC36</b>	<b>Injury of muscle, fascia, tendon or bursa at forearm level</b>
	<b>Exclusions:</b> injury of muscle and tendon at or below wrist (NC57)
<b>NC36.0</b>	<b>Injury of flexor muscle, fascia or tendon of thumb at forearm level</b>
<b>NC36.00</b>	Strain or sprain of flexor muscle, fascia or tendon of thumb at forearm level
<b>NC36.01</b>	Laceration of flexor muscle, fascia or tendon of thumb at forearm level
<b>NC36.0Y</b>	Other specified injury of flexor muscle, fascia or tendon of thumb at forearm level
<b>NC36.0Z</b>	Injury of flexor muscle, fascia or tendon of thumb at forearm level, unspecified
<b>NC36.1</b>	<b>Injury of long flexor muscle, fascia or tendon of other finger at forearm level</b>
<b>NC36.10</b>	Strain or sprain of long flexor muscle, fascia or tendon of other finger at forearm level
<b>NC36.11</b>	Laceration of long flexor muscle, fascia or tendon of other finger at forearm level

<b>NC36.1Y</b>	Other specified injury of long flexor muscle, fascia or tendon of other finger at forearm level
<b>NC36.1Z</b>	Injury of long flexor muscle, fascia or tendon of other finger at forearm level, unspecified
<b>NC36.2</b>	<b>Injury of other flexor muscle, fascia or tendon at forearm level</b>
<b>NC36.20</b>	Strain or sprain of other flexor muscle, fascia or tendon at forearm level
<b>NC36.21</b>	Laceration of other flexor muscle, fascia or tendon at forearm level
<b>NC36.2Y</b>	Other specified injury of other flexor muscle, fascia or tendon at forearm level
<b>NC36.2Z</b>	Injury of other flexor muscle, fascia or tendon at forearm level, unspecified
<b>NC36.3</b>	<b>Injury of extensor or abductor muscles or tendons of thumb at forearm level</b>
<b>NC36.30</b>	Strain or sprain of extensor or abductor muscles or tendons of thumb at forearm level
<b>NC36.31</b>	Laceration of extensor or abductor muscles or tendons of thumb at forearm level
<b>NC36.3Y</b>	Other specified injury of extensor or abductor muscles or tendons of thumb at forearm level
<b>NC36.3Z</b>	Injury of extensor or abductor muscles or tendons of thumb at forearm level, unspecified
<b>NC36.4</b>	<b>Injury of extensor muscle, fascia or tendon of other finger at forearm level</b>
<b>NC36.40</b>	Strain or sprain of extensor muscle, fascia or tendon of other finger at forearm level
<b>NC36.41</b>	Laceration of extensor muscle, fascia or tendon of other finger at forearm level
<b>NC36.4Y</b>	Other specified injury of extensor muscle, fascia or tendon of other finger at forearm level
<b>NC36.4Z</b>	Injury of extensor muscle, fascia or tendon of other finger at forearm level, unspecified
<b>NC36.5</b>	<b>Injury of other extensor muscle, fascia or tendon at forearm level</b>
<b>NC36.50</b>	Strain or sprain of other extensor muscle, fascia or tendon at forearm level
<b>NC36.51</b>	Laceration of other extensor muscle, fascia or tendon at forearm level
<b>NC36.5Y</b>	Other specified injury of other extensor muscle, fascia or tendon at forearm level
<b>NC36.5Z</b>	Injury of other extensor muscle, fascia or tendon at forearm level, unspecified
<b>NC36.6</b>	<b>Injury of multiple muscles or tendons at forearm level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC36.7</b>	<b>Injury of bursa of elbow</b>
<b>NC36.Y</b>	<b>Injury of other specified muscle, fascia, tendon or bursa at forearm level</b>
<b>NC36.Z</b>	<b>Injury of unspecified muscle, fascia, tendon or bursa at forearm level</b>

<b>NC37</b>	<b>Crushing injury of forearm</b>
	<b><i>Exclusions:</i></b> Crushing injury of wrist or hand (NC58)
<b>NC37.0</b>	<b>Crushing injury of elbow</b>
<b>NC37.Y</b>	<b>Crushing injury of other specified part of forearm</b>
<b>NC37.Z</b>	<b>Crushing injury of forearm, unspecified</b>
<b>NC38</b>	<b>Traumatic amputation of forearm</b>
	<b><i>Exclusions:</i></b> Traumatic amputation of wrist or hand (NC59)
<b>NC38.0</b>	<b>Traumatic amputation at right elbow level</b>
<b>NC38.1</b>	<b>Traumatic amputation at left elbow level</b>
<b>NC38.2</b>	<b>Traumatic amputation at elbow level, bilateral</b>
<b>NC38.3</b>	<b>Traumatic amputation at level between right elbow and wrist</b>
<b>NC38.4</b>	<b>Traumatic amputation at level between left elbow and wrist</b>
<b>NC38.5</b>	<b>Traumatic amputation between elbow and wrist, bilateral</b>
<b>NC38.Z</b>	<b>Traumatic amputation of forearm, unspecified</b>
<b>NC39</b>	<b>Multiple injuries of forearm</b>
<b><i>Coding Note:</i></b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NC3Y</b>	<b>Other specified injuries to the elbow or forearm</b>
<b>NC3Z</b>	<b>Injuries to the elbow or forearm, unspecified</b>

### Injuries to the wrist or hand (NC50-NC5Z)

***Exclusions:***      Burns (ND90-NE2Z)  
                           Frostbite (NE40-NE4Z)  
                           Other injuries of arm, level unspecified (ND53)  
                           Insect bite or sting, venomous (NE61)

<b>NC50</b>	<b>Injury to fingernail</b>
<b>NC51</b>	<b>Superficial injury of wrist or hand</b>
<b>NC51.0</b>	<b>Superficial injury of finger or thumb</b>
<b>NC51.00</b>	Abrasions of finger or thumb
<b>NC51.01</b>	Contusions of finger or thumb
<b>NC51.0Y</b>	Other specified superficial injury of finger or thumb

- NC51.0Z** Superficial injury of finger or thumb, unspecified
- NC51.1** **Superficial injury of other parts of wrist or hand**
- Exclusions:** Superficial injury of finger or thumb (NC51.0)
- NC51.10** Contusion of other parts of wrist or hand
- NC51.11** Nonvenomous insect bite of other parts of wrist or hand
- NC51.1Y** Other specified superficial injury of other parts of wrist or hand
- NC51.1Z** Superficial injury of other parts of wrist or hand, unspecified
- NC51.2** **Multiple superficial injuries of wrist or hand**

**Coding Note:** Assign additional codes for the specific injuries.

- NC52** **Open wound of wrist or hand**
- Exclusions:** Traumatic amputation of wrist or hand (NC59)
- NC52.0** **Open wound of finger or thumb**
- Exclusions:** Traumatic amputation of other single finger (NC59.1)
- NC52.00** Laceration without foreign body of finger or thumb
- NC52.01** Laceration with foreign body of finger or thumb
- NC52.02** Puncture wound without foreign body of finger or thumb
- NC52.03** Puncture wound with foreign body of finger or thumb
- NC52.04** Open bite of finger or thumb
- NC52.0Y** Other specified open wound of finger or thumb
- NC52.0Z** Open wound of finger or thumb, unspecified
- NC52.1** **Open wound of other parts of wrist or hand**
- NC52.10** Laceration without foreign body of other parts of wrist or hand
- Inclusions:** laceration of skin of wrist or hand
- NC52.11** Laceration with foreign body of other parts of wrist or hand
- NC52.12** Puncture wound with foreign body of other parts of wrist or hand
- NC52.13** Puncture wound without foreign body of other parts of wrist or hand
- NC52.14** Open bite of other parts of wrist or hand
- NC52.1Y** Other specified open wound of other parts of wrist or hand
- NC52.1Z** Open wound of other parts of wrist or hand, unspecified
- NC52.2** **Multiple open wounds of wrist or hand**

**Coding Note:** Assign additional codes for the specific injuries.

<b>NC53</b>	<b>Fracture at wrist or hand level</b>
	A break in one of the bones of the wrist or hand.
	<b>Exclusions:</b> fracture of distal parts of ulna and radius (NC32.6)
<b>NC53.0</b>	<b>Fracture of scaphoid bone of hand</b>
<b>NC53.1</b>	<b>Fracture of other carpal bone</b>
	A break in one or more of the carpal bones of the wrist
<b>NC53.2</b>	<b>Fracture of first metacarpal bone</b>
	A break in the first metacarpal bone, that which is part of the thumb.
<b>NC53.3</b>	<b>Fracture of other metacarpal bone</b>
<b>NC53.30</b>	Fracture of shaft of other metacarpal bone
<b>NC53.31</b>	Fracture of neck of other metacarpal bone
<b>NC53.3Y</b>	Fracture of other specified part of other metacarpal bone
<b>NC53.3Z</b>	Fracture of other metacarpal bone, unspecified
<b>NC53.4</b>	<b>Multiple fractures of metacarpal bones</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC53.5</b>	<b>Fracture of thumb bone</b>
	<b>Exclusions:</b> Fracture of first metacarpal bone (NC53.2)
<b>NC53.6</b>	<b>Fracture of other finger bone</b>
	A break in one or more of the phalanges
<b>NC53.60</b>	Fracture of index finger
<b>NC53.61</b>	Fracture of middle finger
<b>NC53.62</b>	Fracture of ring finger
<b>NC53.63</b>	Fracture of little finger
<b>NC53.6Y</b>	Other specified fracture of other finger bone
<b>NC53.6Z</b>	Fracture of other finger bone, unspecified
<b>NC53.7</b>	<b>Multiple fractures of fingers</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC53.Y</b>	<b>Fracture at other specified part of wrist or hand level</b>
<b>NC53.Z</b>	<b>Fracture at wrist or hand level, unspecified</b>
<b>NC54</b>	<b>Dislocation or strain or sprain of joints or ligaments at wrist or hand level</b>

<b>NC54.0</b>	<b>Dislocation of wrist</b> Displacement of one or more of the bones of the wrist
<b>NC54.00</b>	Dislocation of distal radioulnar joint
<b>NC54.01</b>	Dislocation of radiocarpal joint
<b>NC54.02</b>	Dislocation of midcarpal joint
<b>NC54.03</b>	Dislocation of carpometacarpal joint of thumb
<b>NC54.04</b>	Dislocation of other carpometacarpal joint
<b>NC54.05</b>	Dislocation of metacarpal bone, proximal end
<b>NC54.0Y</b>	Dislocation of other specified part of wrist
<b>NC54.0Z</b>	Dislocation of wrist, unspecified
<b>NC54.1</b>	<b>Dislocation of thumb</b>
<b>NC54.10</b>	Dislocation of metacarpophalangeal joint of thumb
<b>NC54.11</b>	Dislocation of interphalangeal joint of thumb
<b>NC54.1Y</b>	Dislocation of other specified part of thumb
<b>NC54.1Z</b>	Dislocation of thumb, unspecified
<b>NC54.2</b>	<b>Dislocation of finger</b> Displacement of one or more of the phalanges
	<i>Inclusions:</i> Dislocation of phalanx, hand
<b>NC54.20</b>	Dislocation of metacarpophalangeal joint of finger
<b>NC54.21</b>	Dislocation of interphalangeal joint of finger
<b>NC54.2Y</b>	Dislocation of other specified part of finger
<b>NC54.2Z</b>	Dislocation of finger, unspecified
<b>NC54.3</b>	<b>Multiple dislocations of fingers</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC54.4</b>	<b>Traumatic rupture of ligament of wrist or carpus</b>
<b>NC54.40</b>	Traumatic rupture of scapholunate ligament
<b>NC54.41</b>	Traumatic rupture of radiocarpal ligament
<b>NC54.42</b>	Traumatic rupture of ulnocarpal ligament
<b>NC54.43</b>	Traumatic rupture of lunotriquetral ligament
<b>NC54.4Y</b>	Traumatic rupture of other specified ligament of wrist or carpus
<b>NC54.4Z</b>	Traumatic rupture of ligament of wrist or carpus, unspecified

<b>NC54.5</b>	<b>Traumatic rupture of ligament of finger at metacarpophalangeal or interphalangeal joint</b>
<b>NC54.50</b>	Traumatic rupture of collateral ligament of finger at metacarpophalangeal or interphalangeal joint
<b>NC54.51</b>	Traumatic rupture of palmar ligament of finger at metacarpophalangeal or interphalangeal joint
<b>NC54.52</b>	Traumatic rupture of volar plate of finger at metacarpophalangeal or interphalangeal joint
<b>NC54.53</b>	Traumatic rupture of other ligament of finger at metacarpophalangeal or interphalangeal joint
<b>NC54.5Z</b>	Traumatic rupture of ligament of finger at metacarpophalangeal or interphalangeal joint, unspecified
<b>NC54.6</b>	<b>Strain or sprain of wrist</b>
	A collective term for muscle and ligament injuries of the tissues associated with the wrist without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
<b>NC54.60</b>	Strain or sprain of carpal joint
<b>NC54.61</b>	Strain or sprain of radiocarpal joint
<b>NC54.62</b>	Strain or sprain of carpometacarpal joint
<b>NC54.6Y</b>	Sprain of other specified part of wrist
<b>NC54.6Z</b>	Strain or sprain of wrist, unspecified
<b>NC54.7</b>	<b>Strain or sprain of thumb</b>
<b>NC54.70</b>	Strain or sprain of metacarpophalangeal joint of thumb
<b>NC54.71</b>	Strain or sprain of interphalangeal joint of thumb
<b>NC54.7Y</b>	Sprain or strain of other specified part of thumb
<b>NC54.7Z</b>	Strain or sprain of thumb, unspecified
<b>NC54.8</b>	<b>Strain or sprain of finger</b>
<b>NC54.80</b>	Strain or sprain of metacarpophalangeal joint of finger
<b>NC54.81</b>	Strain or sprain of interphalangeal joint of finger
<b>NC54.8Y</b>	Sprain of other specified part of finger
<b>NC54.8Z</b>	Strain or sprain of finger, unspecified
<b>NC54.Y</b>	<b>Dislocation or sprain of other specified joints or ligaments at wrist or hand level</b>
<b>NC54.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments at wrist or hand level, unspecified</b>

<b>NC55</b>	<b>Injury of nerves at wrist or hand level</b>
NC55.0	<b>Injury of ulnar nerve at wrist or hand level</b>
NC55.1	<b>Injury of median nerve at wrist or hand level</b>
NC55.2	<b>Injury of radial nerve at wrist or hand level</b>
NC55.3	<b>Injury of multiple nerves at wrist or hand level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
NC55.Y	<b>Injury of other specified nerves at wrist or hand level</b>
NC55.Z	<b>Injury of unspecified nerve at wrist or hand level</b>
<b>NC56</b>	<b>Injury of blood vessels at wrist or hand level</b>
NC56.0	<b>Injury of ulnar artery at wrist or hand level</b>
NC56.00	Laceration of ulnar artery at wrist or hand level
NC56.01	Contusion of ulnar artery at wrist or hand level
NC56.0Y	Other specified injury of ulnar artery at wrist or hand level
NC56.0Z	Injury of ulnar artery at wrist or hand level, unspecified
NC56.1	<b>Injury of radial artery at wrist or hand level</b>
NC56.10	Laceration of radial artery at wrist or hand level
NC56.11	Contusion of radial artery at wrist or hand level
NC56.1Y	Other specified injury of radial artery at wrist or hand level
NC56.1Z	Injury of radial artery at wrist or hand level, unspecified
NC56.2	<b>Injury of superficial palmar arch</b>
NC56.20	Laceration of superficial palmar arch
NC56.21	Contusion of superficial palmar arch
NC56.2Y	Other specified injury of superficial palmar arch
NC56.2Z	Injury of superficial palmar arch, unspecified
NC56.3	<b>Injury of deep palmar arch</b>
NC56.30	Laceration of deep palmar arch
NC56.31	Contusion of deep palmar arch
NC56.3Y	Other specified injury of deep palmar arch
NC56.3Z	Injury of deep palmar arch, unspecified
NC56.4	<b>Injury of blood vessel of thumb</b>

<b>NC56.40</b>	Laceration of blood vessel of thumb
<b>NC56.41</b>	Contusion of blood vessel of thumb
<b>NC56.4Y</b>	Other specified injury of blood vessel of thumb
<b>NC56.4Z</b>	Injury of blood vessel of thumb, unspecified
<b>NC56.5</b>	<b>Injury of blood vessel of other finger</b>
<b>NC56.50</b>	Laceration of blood vessel of other finger
<b>NC56.51</b>	Contusion of blood vessel of other finger
<b>NC56.5Y</b>	Other specified injury of blood vessel of other finger
<b>NC56.5Z</b>	Injury of blood vessel of other finger, unspecified
<b>NC56.6</b>	<b>Injury of multiple blood vessels at wrist or hand level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC56.60</b>	Laceration of multiple blood vessels at wrist or hand level
<b>NC56.61</b>	Contusion of multiple blood vessels at wrist or hand level
<b>NC56.6Y</b>	Other specified injury of multiple blood vessels at wrist or hand level
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC56.6Z</b>	Injury of multiple blood vessels at wrist or hand level, unspecified
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC56.Y</b>	<b>Injury of other specified blood vessels at wrist and hand level</b>
<b>NC56.Z</b>	<b>Injury of unspecified blood vessel at wrist or hand level</b>
<b>NC57</b>	<b>Injury of muscle, fascia or tendon at wrist or hand level</b>
<b>NC57.0</b>	<b>Injury of long flexor muscle, fascia or tendon of thumb at wrist or hand level</b>
<b>NC57.00</b>	Strain or sprain of long flexor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.01</b>	Laceration of long flexor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.0Y</b>	Other specified injury of long flexor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.0Z</b>	Injury of long flexor muscle, fascia or tendon of thumb at wrist or hand level, unspecified
<b>NC57.1</b>	<b>Injury of flexor muscle, fascia or tendon of other finger at wrist or hand level</b>
<b>NC57.10</b>	Strain or sprain of flexor muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.11</b>	Laceration of flexor muscle, fascia or tendon of other finger at wrist or hand level

<b>NC57.1Y</b>	Other specified injury of flexor muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.1Z</b>	Injury of flexor muscle, fascia or tendon of other finger at wrist or hand level, unspecified
<b>NC57.2</b>	<b>Injury of extensor muscle, fascia or tendon of thumb at wrist or hand level</b>
<b>NC57.20</b>	Strain or sprain of extensor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.21</b>	Laceration of extensor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.2Y</b>	Other specified injury of extensor muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.2Z</b>	Injury of extensor muscle, fascia or tendon of thumb at wrist or hand level, unspecified
<b>NC57.3</b>	<b>Injury of extensor muscle, fascia or tendon of other finger at wrist or hand level</b>
<b>NC57.30</b>	Strain or sprain of extensor muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.31</b>	Laceration of extensor muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.3Y</b>	Other specified injury of extensor muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.3Z</b>	Injury of extensor muscle, fascia or tendon of other finger at wrist or hand level, unspecified
<b>NC57.4</b>	<b>Injury of intrinsic muscle, fascia or tendon of thumb at wrist or hand level</b>
<b>NC57.40</b>	Strain or sprain of intrinsic muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.41</b>	Laceration of intrinsic muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.4Y</b>	Other specified injury of intrinsic muscle, fascia or tendon of thumb at wrist or hand level
<b>NC57.4Z</b>	Injury of intrinsic muscle, fascia or tendon of thumb at wrist or hand level, unspecified
<b>NC57.5</b>	<b>Injury of intrinsic muscle, fascia or tendon of other finger at wrist or hand level</b>
<b>NC57.50</b>	Strain or sprain of intrinsic muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.51</b>	Laceration of intrinsic muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.5Y</b>	Other specified injury of intrinsic muscle, fascia or tendon of other finger at wrist or hand level
<b>NC57.5Z</b>	Injury of intrinsic muscle, fascia or tendon of other finger at wrist or hand level, unspecified

<b>NC57.6</b>	<b>Injury of multiple flexor muscles or tendons at wrist or hand level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC57.7</b>	<b>Injury of multiple extensor muscles or tendons at wrist or hand level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC57.Y</b>	<b>Injury of other specified muscle, fascia or tendon at wrist or hand level</b>
<b>NC57.Z</b>	<b>Injury of unspecified muscle, fascia or tendon at wrist or hand level</b>
<b>NC58</b>	<b>Crushing injury of wrist or hand</b>
<b>NC58.0</b>	<b>Crushing injury of thumb</b>
<b>NC58.1</b>	<b>Crushing injury of other finger</b>
<b>NC58.2</b>	<b>Crushing injury of hand</b>
<b>NC58.3</b>	<b>Crushing injury of wrist</b>
<b>NC58.Y</b>	<b>Crushing injury of other specified part of wrist or hand</b>
<b>NC58.Z</b>	<b>Crushing injury of wrist or hand, unspecified</b>
<b>NC59</b>	<b>Traumatic amputation of wrist or hand</b>
<b>NC59.0</b>	<b>Traumatic amputation of thumb</b>
	<b><i>Exclusions:</i></b> avulsion of fingernail (NC50)
<b>NC59.00</b>	Traumatic amputation at or near base of right thumb
<b>NC59.01</b>	Traumatic amputation at or near base of left thumb
<b>NC59.02</b>	Traumatic amputation at or near base of thumb, bilateral
<b>NC59.0Y</b>	Other specified traumatic amputation of thumb
<b>NC59.0Z</b>	Traumatic amputation of thumb, unspecified
<b>NC59.1</b>	<b>Traumatic amputation of other single finger</b>
	<b><i>Exclusions:</i></b> avulsion of fingernail (NC50)
<b>NC59.2</b>	<b>Traumatic amputation of two or more fingers alone</b>
	<b><i>Exclusions:</i></b> avulsion of fingernail (NC50)
<b>NC59.20</b>	Traumatic amputation of two or more fingers at or near base, right hand
<b>NC59.21</b>	Traumatic amputation of two or more fingers at or near base, left hand
<b>NC59.22</b>	Traumatic amputation of two or more fingers alone at or near base, bilateral
<b>NC59.2Y</b>	Other specified traumatic amputation of two or more fingers alone
<b>NC59.2Z</b>	Traumatic amputation of two or more fingers alone, unspecified
<b>NC59.3</b>	<b>Combined traumatic amputation of finger with other parts of wrist or hand</b>

**NC59.4**      **Traumatic amputation of hand at metacarpal level**

**NC59.Z**      **Traumatic amputation of wrist or hand, unspecified**

**NC5A**      **Multiple injuries of wrist or hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.0**      **Injury of multiple sites of hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.1**      **Injury of multiple sites of wrist**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.Y**      **Other specified multiple injuries of wrist or hand**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5A.Z**      **Multiple injuries of wrist or hand, unspecified**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC5Y**      **Other specified injuries to the wrist or hand**

**NC5Z**      **Injuries to the wrist or hand, unspecified**

## Injuries to the hip or thigh (NC70-NC7Z)

**Exclusions:**      Frostbite (NE40-NE4Z)

                          Burns (ND90-NE2Z)

                          Insect bite or sting, venomous (NE61)

                          Other injuries of leg, level unspecified (ND55)

**NC70**      **Superficial injury of hip or thigh**

**NC70.0**      **Abrasions of hip**

**NC70.1**      **Contusion of hip**

**NC70.2**      **Abrasions of thigh**

- NC70.3**      **Contusion of thigh**  
**NC70.4**      **Multiple superficial injuries of hip or thigh**  
**Coding Note:** Assign additional codes for the specific injuries.  
**NC70.Y**      **Other specified superficial injury of hip or thigh**  
**NC70.Z**      **Superficial injury of hip or thigh, unspecified**

- NC71**      **Open wound of hip or thigh**  
**Exclusions:**      Traumatic amputation of hip or thigh (NC78)  
**NC71.0**      **Laceration without foreign body of hip or thigh**  
**Inclusions:**      laceration of skin of hip or thigh  
**NC71.1**      **Laceration with foreign body of hip or thigh**  
**NC71.2**      **Puncture wound without foreign body of hip or thigh**  
**NC71.3**      **Puncture wound with foreign body of hip or thigh**  
**NC71.4**      **Open bite of hip or thigh**  
**NC71.5**      **Multiple open wounds of hip or thigh**  
**Coding Note:** Assign additional codes for the specific injuries.

- NC71.Y**      **Other specified open wound of hip or thigh**  
**NC71.Z**      **Open wound of hip or thigh, unspecified**

- NC72**      **Fracture of femur**  
A break in the femur, longest and largest bone of the skeleton, situated between the hip and the knee.
- NC72.0**      **Fracture of head of femur**  
**NC72.1**      **Fracture of upper epiphysis of femur**  
**NC72.2**      **Fracture of neck of femur**  
**NC72.20**      Fracture of neck of femur, subcapital  
**NC72.21**      Fracture of neck of femur, mid-cervical  
**NC72.22**      Fracture of base of neck of femur  
**NC72.23**      Intracapsular fracture of femur  
**NC72.2Y**      Other specified fracture of neck of femur  
**NC72.2Z**      Fracture of neck of femur, unspecified  
**NC72.3**      **Fracture of trochanteric section of femur**  
**Inclusions:**      Trochanteric fracture  
**NC72.30**      Intertrochanteric fracture of femur

<b>NC72.31</b>	Petrochanteric fracture of femur
<b>NC72.3Y</b>	Fracture of other specified trochanteric section of femur
<b>NC72.3Z</b>	Fracture of unspecified trochanteric section of femur
<b>NC72.4</b>	<b>Subtrochanteric fracture of femur</b>
<b>NC72.5</b>	<b>Fracture of shaft of femur</b>
<b>NC72.6</b>	<b>Fracture of lower end of femur</b>
<b>NC72.60</b>	Fracture of lower end of femur not extending into joint, simple
<b>NC72.61</b>	Fracture of lower end of femur not extending into joint, wedge
<b>NC72.62</b>	Fracture of lower end of femur not extending into joint, complex
<b>NC72.63</b>	Fracture of lower end of femur extending into joint, lateral condyle
<b>NC72.64</b>	Fracture of lower end of femur extending into joint, medial condyle
<b>NC72.65</b>	Fracture of lower end of femur extending into joint, frontal
<b>NC72.66</b>	Fracture of lower end of femur extending into joint, complete articular
<b>NC72.6Y</b>	Other specified fracture of lower end of femur
<b>NC72.6Z</b>	Fracture of lower end of femur, unspecified
<b>NC72.7</b>	<b>Multiple fractures of femur</b>

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

<b>NC72.8</b>	<b>Fractures of other parts of femur</b>
<b>NC72.Y</b>	<b>Other specified fracture of femur</b>
<b>NC72.Z</b>	<b>Fracture of femur, unspecified</b>

### **NC73 Dislocation or strain or sprain of joint or ligaments of hip**

A collective term for muscle and ligament injuries of the tissues associated with, or displacement of the bones of, the hip.

<b>NC73.0</b>	<b>Dislocation of hip</b>
<b>NC73.00</b>	Posterior dislocation of hip
<b>NC73.01</b>	Obturator dislocation of hip
<b>NC73.02</b>	Other anterior dislocation of hip
<b>NC73.03</b>	Central dislocation of hip
<b>NC73.0Y</b>	Other specified dislocation of hip
<b>NC73.0Z</b>	Dislocation of hip, unspecified

<b>NC73.1</b>	<b>Strain or sprain of hip</b> A collective term for muscle and ligament injuries of the tissues associated with the hip without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
<b>NC73.10</b>	Iliofemoral ligament strain or sprain of hip
<b>NC73.11</b>	Ischiocapsular ligament strain or sprain of hip
<b>NC73.1Y</b>	Other specified strain or sprain of hip
<b>NC73.1Z</b>	Strain or sprain of hip, unspecified
<b>NC74</b>	<b>Injury of nerves at hip or thigh level</b>
<b>NC74.0</b>	<b>Injury of sciatic nerve at hip or thigh level</b>
<b>NC74.1</b>	<b>Injury of femoral nerve at hip or thigh level</b>
<b>NC74.2</b>	<b>Injury of cutaneous sensory nerve at hip or thigh level</b>
<b>NC74.3</b>	<b>Injury of multiple nerves at hip or thigh level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC74.Y</b>	<b>Injury of other specified nerves at hip or thigh level</b>
<b>NC74.Z</b>	<b>Injury of unspecified nerve at hip or thigh level</b>
<b>NC75</b>	<b>Injury of blood vessels at hip or thigh level</b>
	<b>Exclusions:</b> Injury of popliteal artery (NC95.0)
<b>NC75.0</b>	<b>Injury of femoral artery</b>
<b>NC75.00</b>	Laceration of femoral artery, minor <b>Inclusions:</b> incomplete transection of femoral artery laceration of femoral artery NOS superficial laceration of femoral artery
<b>NC75.01</b>	Laceration of femoral artery, major <b>Inclusions:</b> complete transection of femoral artery traumatic rupture of femoral artery
<b>NC75.0Y</b>	Other specified injury of femoral artery
<b>NC75.0Z</b>	Injury of femoral artery, unspecified
<b>NC75.1</b>	<b>Injury of femoral vein at hip or thigh level</b>
<b>NC75.10</b>	Laceration of femoral vein at hip or thigh level, minor <b>Inclusions:</b> incomplete transection of femoral vein at hip or thigh level laceration of femoral vein at hip or thigh level NOS superficial laceration of femoral vein at hip or thigh level

<b>NC75.11</b>	Laceration of femoral vein at hip or thigh level, major  <b>Inclusions:</b> complete transection of femoral vein at hip or thigh level traumatic rupture of femoral vein at hip and thigh level
<b>NC75.1Y</b>	Other specified injury of femoral vein at hip or thigh level
<b>NC75.1Z</b>	Injury of femoral vein at hip or thigh level, unspecified
<b>NC75.2</b>	<b>Injury of greater saphenous vein at hip or thigh level</b>  <b>Exclusions:</b> Injury of greater saphenous vein at lower leg level (NC95.4)
<b>NC75.20</b>	Laceration of greater saphenous vein at hip or thigh level, minor  <b>Inclusions:</b> incomplete transection of greater saphenous vein at hip or thigh level laceration of greater saphenous vein at hip or thigh level NOS superficial laceration of greater saphenous vein at hip or thigh level
<b>NC75.21</b>	Laceration of greater saphenous vein at hip or thigh level, major  <b>Inclusions:</b> complete transection of greater saphenous vein at hip or thigh level traumatic rupture of greater saphenous vein at hip or thigh level
<b>NC75.2Y</b>	Other specified injury of greater saphenous vein at hip or thigh level
<b>NC75.2Z</b>	Injury of greater saphenous vein at hip or thigh level, unspecified
<b>NC75.3</b>	<b>Injury of multiple blood vessels at hip or thigh level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC75.Y</b>	<b>Injury of other specified blood vessels at hip and thigh level</b>
<b>NC75.Z</b>	<b>Injury of unspecified blood vessel at hip or thigh level</b>
<b>NC76</b>	<b>Injury of muscle, fascia, tendon or bursa at hip or thigh level</b>
<b>NC76.0</b>	<b>Injury of muscle, fascia or tendon of hip</b>
<b>NC76.00</b>	Strain or sprain of muscle, fascia or tendon of hip
<b>NC76.01</b>	Laceration of muscle, fascia or tendon of hip
<b>NC76.0Y</b>	Other specified injury of muscle, fascia or tendon of hip
<b>NC76.0Z</b>	Injury of muscle, fascia or tendon of hip, unspecified
<b>NC76.1</b>	<b>Injury of quadriceps muscle or tendon</b>
<b>NC76.10</b>	Strain or sprain of quadriceps muscle or tendon
<b>NC76.11</b>	Laceration of quadriceps muscle or tendon
<b>NC76.1Y</b>	Other specified injury of quadriceps muscle or tendon

<b>NC76.1Z</b>	Injury of quadriceps muscle or tendon, unspecified
<b>NC76.2</b>	<b>Injury of adductor muscle, fascia or tendon of thigh</b>
<b>NC76.20</b>	Strain or sprain of adductor muscle, fascia or tendon of thigh
<b>NC76.21</b>	Laceration of adductor muscle, fascia or tendon of thigh
<b>NC76.2Y</b>	Other specified injury of adductor muscle, fascia or tendon of thigh
<b>NC76.2Z</b>	Injury of adductor muscle, fascia or tendon of thigh, unspecified
<b>NC76.3</b>	<b>Injury of muscle, fascia or tendon of the posterior muscle group at thigh level</b>
<b>NC76.30</b>	Strain or sprain of muscle, fascia or tendon of the posterior muscle group at thigh level
<b>NC76.31</b>	Laceration of muscle, fascia or tendon of the posterior muscle group at thigh level
<b>NC76.3Y</b>	Other specified injury of muscle, fascia or tendon of the posterior muscle group at thigh level
<b>NC76.3Z</b>	Injury of muscle, fascia or tendon of the posterior muscle group at thigh level, unspecified
<b>NC76.4</b>	<b>Injury of multiple muscles or tendons at hip or thigh level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC76.40</b>	Injury of bursa of hip
<b>NC76.4Y</b>	Other specified injury of multiple muscles or tendons at hip or thigh level
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC76.4Z</b>	Injury of multiple muscles or tendons at hip or thigh level, unspecified
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC76.Y</b>	<b>Injury of other specified muscle, fascia, tendon or bursa at hip or thigh level</b>
<b>NC76.Z</b>	<b>Injury of unspecified muscle, fascia, tendon or bursa at hip or thigh level</b>
<b>NC77</b>	<b>Crushing injury of hip or thigh</b>
<b>NC77.0</b>	<b>Crushing injury of hip</b>
<b>NC77.1</b>	<b>Crushing injury of thigh</b>
<b>NC77.2</b>	<b>Crushing injury of hip with thigh</b>
<b>NC77.Z</b>	<b>Crushing injury of hip or thigh, unspecified</b>
<b>NC78</b>	<b>Traumatic amputation of hip or thigh</b>
<b>Exclusions:</b>	traumatic amputation of leg, level unspecified (ND55)
<b>NC78.0</b>	<b>Traumatic amputation at right hip joint</b>
<b>NC78.1</b>	<b>Traumatic amputation at left hip joint</b>

- NC78.2      **Traumatic amputation at hip joint, bilateral**
- NC78.3      **Traumatic amputation at level between right hip and knee**
- NC78.4      **Traumatic amputation at level between left hip and knee**
- NC78.5      **Traumatic amputation at level between hip and knee, bilateral**
- NC78.Z      **Traumatic amputation of hip or thigh, unspecified**

**NC79      Multiple injuries of hip or thigh**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

- NC7Y      Other specified injuries to the hip or thigh**

- NC7Z      Injuries to the hip or thigh, unspecified**

### Injuries to the knee or lower leg (NC90-NC9Z)

- Exclusions:**
- Burns (ND90-NE2Z)
  - Frostbite (NE40-NE4Z)
  - Insect bite or sting, venomous (NE61)
  - Other injuries of leg, level unspecified (ND55)
  - Injuries to the ankle or foot (ND10-ND1Z)

**NC90      Superficial injury of knee or lower leg**

- Exclusions:**      Superficial injury of ankle or foot (ND11)

- NC90.0      **Abrasions of knee**
- NC90.1      **Contusion of knee**
- NC90.2      **Abrasions of other or unspecified parts of lower leg**
- NC90.3      **Contusion of other or unspecified parts of lower leg**
- NC90.4      **Multiple superficial injuries of lower leg**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

- NC90.Y      Other specified superficial injury of knee or lower leg**

- NC90.Z      Superficial injury of knee or lower leg, unspecified**

**NC91      Open wound of knee or lower leg**

- Exclusions:**
- Traumatic amputation of lower leg (NC98)
  - Open wound of ankle or foot (ND12)

<b>NC91.0</b>	<b>Laceration without foreign body of lower leg</b>
	<b>Inclusions:</b> laceration of skin of lower leg Laceration without foreign body of knee
<b>NC91.1</b>	<b>Laceration with foreign body of lower leg</b>
<b>NC91.2</b>	<b>Puncture wound without foreign body of lower leg</b>
<b>NC91.3</b>	<b>Puncture wound with foreign body of lower leg</b>
<b>NC91.4</b>	<b>Open bite of lower leg</b>
<b>NC91.5</b>	<b>Multiple open wounds of lower leg</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC91.Y</b>	<b>Other specified open wound of knee or lower leg</b>
<b>NC91.Z</b>	<b>Open wound of knee or lower leg, unspecified</b>
<b>NC92</b>	<b>Fracture of lower leg, including ankle</b>
	<b>Exclusions:</b> Fracture of foot, except ankle (ND13)
<b>NC92.0</b>	<b>Fracture of patella</b> A break in the patellar bone (kneecap)
<b>NC92.1</b>	<b>Fracture of upper end of tibia</b>
<b>NC92.10</b>	Avulsion of cruciate ligament insertion
<b>NC92.11</b>	Avulsion of tibial tuberosity
<b>NC92.12</b>	Metaphyseal fracture of upper end of tibia
<b>NC92.13</b>	Fracture of upper end of tibia, lateral condyle
<b>NC92.14</b>	Fracture of upper end of tibia, medial condyle
<b>NC92.1Y</b>	Other specified fracture of upper end of tibia
<b>NC92.1Z</b>	Fracture of upper end of tibia, unspecified
<b>NC92.2</b>	<b>Fracture of shaft of tibia</b>
<b>NC92.3</b>	<b>Fracture of lower end of tibia</b> <b>Exclusions:</b> Fracture of medial malleolus (NC92.5)
<b>NC92.4</b>	<b>Fracture of fibula</b> <b>Exclusions:</b> Fracture of lateral malleolus (NC92.6)
<b>NC92.40</b>	Avulsion of fibular head
<b>NC92.4Y</b>	Other specified fracture of fibula
<b>NC92.4Z</b>	Fracture of fibula, unspecified

<b>NC92.5</b>	<b>Fracture of medial malleolus</b> A fracture of the medial malleolus, the bony landmark located on the distal end of the tibia
<b>NC92.6</b>	<b>Fracture of lateral malleolus</b>
<b>NC92.7</b>	<b>Complex fractures of ankle</b>
<b>NC92.70</b>	Fracture, avulsion or collateral ligament rupture of lateral malleolus below syndesmosis with fracture, avulsion or collateral ligament rupture of medial malleolus
<b>NC92.71</b>	Fracture, avulsion or collateral ligament rupture of lateral malleolus below syndesmosis with fracture, avulsion or collateral ligament rupture of medial malleolus and fracture of posterior margin of distal tibia
<b>NC92.72</b>	Fracture of lateral malleolus at syndesmosis with fracture, avulsion or collateral ligament rupture of medial malleolus
<b>NC92.73</b>	Fracture of lateral malleolus at syndesmosis with fracture, avulsion or collateral ligament rupture of medial malleolus and fracture of posterior margin of distal tibia
<b>NC92.74</b>	Fracture, avulsion or collateral ligament rupture of medial malleolus with fracture of fibula above syndesmosis
<b>NC92.75</b>	Fracture, avulsion or collateral ligament rupture of medial malleolus with fracture of fibula above syndesmosis and fracture of posterior margin of distal tibia
<b>NC92.76</b>	Bimalleolar fracture of ankle, not otherwise specified
<b>NC92.77</b>	Trimalleolar fracture of ankle, not otherwise specified
<b>NC92.7Y</b>	Other specified complex fractures of ankle
<b>NC92.7Z</b>	Complex fractures of ankle, unspecified
<b>NC92.8</b>	<b>Multiple fractures of lower leg</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC92.Y</b>	<b>Fracture of other specified part of lower leg, including ankle</b>
<b>NC92.Z</b>	<b>Fracture of lower leg, including ankle, unspecified</b>
<b>NC93</b>	<b>Dislocation or strain or sprain of joints or ligaments of knee</b>
	<b>Exclusions:</b>
	dislocation of knee recurrent (FA34.2)
	Internal derangement of knee (FA33)
	derangement of patella (FA32)
	dislocation of knee old (FA34.2)
<b>NC93.0</b>	<b>Acute internal damage of knee</b>
<b>NC93.1</b>	<b>Dislocation of patella</b> Displacement of the patella from the femoral groove.

<b>NC93.10</b>	Lateral dislocation of patella
<b>NC93.1Y</b>	Other specified dislocation of patella
<b>NC93.1Z</b>	Dislocation of patella, unspecified
<b>NC93.2</b>	<b>Dislocation of knee</b>
<b>NC93.20</b>	Anterior dislocation of proximal end of tibia
<b>NC93.21</b>	Posterior dislocation of proximal end of tibia
<b>NC93.22</b>	Medial dislocation of proximal end of tibia
<b>NC93.23</b>	Lateral dislocation of proximal end of tibia
<b>NC93.2Y</b>	Other specified dislocation of knee
<b>NC93.2Z</b>	Dislocation of knee, unspecified
<b>NC93.3</b>	<b>Tear of meniscus, current</b>
	<b><i>Exclusions:</i></b> old bucket-handle tear (FA33)
<b>NC93.30</b>	Tear of medial meniscus
<b>NC93.31</b>	Tear of lateral meniscus
<b>NC93.3Y</b>	Other specified tear of meniscus, current
<b>NC93.3Z</b>	Tear of meniscus, current, unspecified
<b>NC93.4</b>	<b>Tear of articular cartilage of knee</b>
<b>NC93.5</b>	<b>Strain or sprain involving fibular or tibial collateral ligament of knee</b>
<b>NC93.50</b>	Strain or sprain of medial collateral ligament of knee, excluding rupture
<b>NC93.51</b>	Strain or sprain of lateral collateral ligament of knee, excluding rupture
<b>NC93.52</b>	Rupture of medial collateral ligament of knee
<b>NC93.53</b>	Rupture of lateral collateral ligament of knee
<b>NC93.5Y</b>	Other specified strain or sprain involving fibular or tibial collateral ligament of knee
<b>NC93.5Z</b>	Strain or sprain involving fibular or tibial collateral ligament of knee, unspecified
<b>NC93.6</b>	<b>Strain or sprain involving anterior or posterior cruciate ligament of knee</b>
<b>NC93.60</b>	Strain or sprain of anterior cruciate ligament of knee, excluding rupture
<b>NC93.61</b>	Strain or sprain of posterior cruciate ligament of knee, excluding rupture
<b>NC93.62</b>	Rupture of anterior cruciate ligament
<b>NC93.63</b>	Rupture of posterior cruciate ligament
<b>NC93.6Y</b>	Other specified strain or sprain involving anterior or posterior cruciate ligament of knee

<b>NC93.6Z</b>	Strain or sprain involving anterior or posterior cruciate ligament of knee, unspecified
<b>NC93.7</b>	<b>Strain or sprain of other or unspecified parts of knee</b> A collective term for muscle and ligament injuries of other and unspecified tissues associated with the knee without dislocation or fracture; a joint injury in which some of the fibers of a supporting ligament are ruptured but the continuity of the ligament remains intact. A strain is an overstretching or overexertion of some part of the musculature.
	<b>Exclusions:</b> sprain of patellar ligament (NC76.1)
<b>NC93.8</b>	<b>Injury to multiple structures of knee</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>NC93.Y</b>	<b>Other specified dislocation or strain or sprain of joints or ligaments of knee</b>
<b>NC93.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments of knee, unspecified</b>
<b>NC94</b>	<b>Injury of nerves at lower leg level</b>
	<b>Exclusions:</b> Injury of nerves at ankle or foot level (ND15)
<b>NC94.0</b>	<b>Injury of tibial nerve at lower leg level</b>
<b>NC94.1</b>	<b>Injury of peroneal nerve at lower leg level</b>
<b>NC94.2</b>	<b>Injury of cutaneous sensory nerve at lower leg level</b>
<b>NC94.3</b>	<b>Injury of multiple nerves at lower leg level</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC94.Y</b>	<b>Injury of other specified nerves at lower leg level</b>
<b>NC94.Z</b>	<b>Injury of unspecified nerve at lower leg level</b>
<b>NC95</b>	<b>Injury of blood vessels at lower leg level</b>
	<b>Exclusions:</b> Injury of blood vessels at ankle or foot level (ND16)
<b>NC95.0</b>	<b>Injury of popliteal artery</b>
<b>NC95.00</b>	Laceration of popliteal artery
<b>NC95.0Y</b>	Other specified injury of popliteal artery
<b>NC95.0Z</b>	Injury of popliteal artery, unspecified
<b>NC95.1</b>	<b>Injury of anterior tibial artery</b>
<b>NC95.10</b>	Laceration of anterior tibial artery
<b>NC95.1Y</b>	Other specified injury of anterior tibial artery
<b>NC95.1Z</b>	Injury of anterior tibial artery, unspecified

<b>NC95.2</b>	<b>Injury of posterior tibial artery</b>
<b>NC95.20</b>	Laceration of posterior tibial artery
<b>NC95.2Y</b>	Other specified injury of posterior tibial artery
<b>NC95.2Z</b>	Injury of posterior tibial artery, unspecified
<b>NC95.3</b>	<b>Injury of peroneal artery</b>
<b>NC95.30</b>	Laceration of peroneal artery
<b>NC95.3Y</b>	Other specified injury of peroneal artery
<b>NC95.3Z</b>	Injury of peroneal artery, unspecified
<b>NC95.4</b>	<b>Injury of greater saphenous vein at lower leg level</b>
<b>NC95.40</b>	Laceration of greater saphenous vein at lower leg level
<b>NC95.4Y</b>	Other specified injury of greater saphenous vein at lower leg level
<b>NC95.4Z</b>	Injury of greater saphenous vein at lower leg level, unspecified
<b>NC95.5</b>	<b>Injury of lesser saphenous vein at lower leg level</b>
<b>NC95.50</b>	Laceration of lesser saphenous vein at lower leg level
<b>NC95.5Y</b>	Other specified injury of lesser saphenous vein at lower leg level
<b>NC95.5Z</b>	Injury of lesser saphenous vein at lower leg level, unspecified
<b>NC95.6</b>	<b>Injury of popliteal vein</b>
<b>NC95.60</b>	Laceration of popliteal vein
<b>NC95.6Y</b>	Other specified injury of popliteal vein
<b>NC95.6Z</b>	Injury of popliteal vein, unspecified
<b>NC95.7</b>	<b>Injury of multiple blood vessels at lower leg level</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>NC95.Y</b>	<b>Injury of other specified blood vessels at lower leg level</b>
<b>NC95.Z</b>	<b>Injury of unspecified blood vessel at lower leg level</b>
<b>NC96</b>	<b>Injury of muscle, fascia, tendon or bursa at lower leg level</b>
	<b>Exclusions:</b> Injury of muscle, fascia or tendon at ankle or foot level (ND17) injury of patellar ligament (tendon) (NC76.1)
<b>NC96.0</b>	<b>Injury of Achilles tendon</b>
<b>NC96.00</b>	Strain or sprain of Achilles tendon
<b>NC96.01</b>	Laceration of Achilles tendon

<b>NC96.02</b>	Rupture of Achilles tendon
<b>NC96.0Y</b>	Other specified injury of Achilles tendon
<b>NC96.0Z</b>	Injury of Achilles tendon, unspecified
<b>NC96.1</b>	<b>Injury of other muscle, fascia or tendon of posterior muscle group at lower leg level</b>
<b>NC96.10</b>	Strain or sprain of other muscle, fascia or tendon of posterior muscle group at lower leg level
<b>NC96.11</b>	Laceration of other muscle, fascia or tendon of posterior muscle group at lower leg level
<b>NC96.1Y</b>	Other specified injury of other muscle, fascia or tendon of posterior muscle group at lower leg level
<b>NC96.1Z</b>	Injury of other muscle, fascia or tendon of posterior muscle group at lower leg level, unspecified
<b>NC96.2</b>	<b>Injury of muscle, fascia or tendon of anterior muscle group at lower leg level</b>
<b>NC96.20</b>	Strain or sprain of muscle, fascia or tendon of anterior muscle group at lower leg level
<b>NC96.21</b>	Laceration of muscle, fascia or tendon of anterior muscle group at lower leg level
<b>NC96.2Y</b>	Other specified injury of muscle, fascia or tendon of anterior muscle group at lower leg level
<b>NC96.2Z</b>	Injury of muscle, fascia or tendon of anterior muscle group at lower leg level, unspecified
<b>NC96.3</b>	<b>Injury of muscle, fascia or tendon of peroneal muscle group at lower leg level</b>
<b>NC96.30</b>	Strain or sprain of muscle, fascia or tendon of peroneal muscle group at lower leg level
<b>NC96.31</b>	Laceration of muscle, fascia or tendon of peroneal muscle group at lower leg level
<b>NC96.3Y</b>	Other specified injury of muscle, fascia or tendon of peroneal muscle group at lower leg level
<b>NC96.3Z</b>	Injury of muscle, fascia or tendon of peroneal muscle group at lower leg level, unspecified
<b>NC96.4</b>	<b>Injury of multiple muscles, fasciae or tendons at lower leg level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>NC96.5</b>	<b>Injury of bursa of knee</b>
<b>NC96.Y</b>	<b>Injury of other specified muscle, fascia, tendon or bursa at lower leg level</b>
<b>NC96.Z</b>	<b>Injury of unspecified muscle, fascia, tendon or bursa at lower leg level</b>
<b>NC97</b>	<b>Crushing injury of lower leg</b>
	<b>Exclusions:</b> Crushing injury of ankle or foot (ND18)

**NC97.0**      **Crushing injury of knee**

**NC97.Y**      **Crushing injury of other specified part of lower leg**

**NC97.Z**      **Crushing injury of lower leg, unspecified**

**NC98**      **Traumatic amputation of lower leg**

**Exclusions:**      Traumatic amputation of ankle or foot (ND19)  
                          traumatic amputation of leg, level unspecified (ND55)

**NC98.0**      **Traumatic amputation of right lower leg at knee level**

**NC98.1**      **Traumatic amputation of left lower leg at knee level**

**NC98.2**      **Traumatic amputation at knee level, bilateral**

**NC98.3**      **Traumatic amputation at level between right knee and ankle**

**NC98.4**      **Traumatic amputation at level between left knee and ankle**

**NC98.5**      **Traumatic amputation at level between knee and ankle, bilateral**

**NC98.Y**      **Other specified traumatic amputation of lower leg**

**NC98.Z**      **Traumatic amputation of lower leg, unspecified**

**NC99**      **Multiple injuries of lower leg**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**NC9Y**      **Other specified injuries to the knee or lower leg**

**NC9Z**      **Injuries to the knee or lower leg, unspecified**

**Injuries to the ankle or foot (ND10-ND1Z)**

**Exclusions:**      fracture of ankle and malleolus (NC92.5)  
                          Other injuries of leg, level unspecified (ND55)  
                          Frostbite (NE40-NE4Z)  
                          Burns (ND90-NE2Z)  
                          Insect bite or sting, venomous (NE61)

**ND10**      **Injury to toenail**

**ND11**      **Superficial injury of ankle or foot**

**ND11.0**      **Abrasions of ankle**

**ND11.1**      **Contusion of ankle**

**ND11.2**      **Nonthermal blister of ankle**

<b>ND11.3</b>	<b>Nonvenomous insect bite of ankle</b>
<b>ND11.4</b>	<b>Superficial foreign body in ankle</b>
<b>ND11.40</b>	Splinter in ankle
<b>ND11.4Y</b>	Other specified superficial foreign body in ankle
<b>ND11.4Z</b>	Superficial foreign body in ankle, unspecified
<b>ND11.5</b>	<b>Abrasions of toe</b>
<b>ND11.6</b>	<b>Contusion of toe</b>
<b>ND11.7</b>	<b>Abrasions of other or unspecified parts of foot</b>
<b>ND11.8</b>	<b>Contusions of other or unspecified parts of foot</b>
<b>ND11.9</b>	<b>Nonthermal blister of other or unspecified parts of foot</b>
<b>ND11.A</b>	<b>Nonvenomous insect bite of other or unspecified parts of foot</b>
<b>ND11.B</b>	<b>Superficial foreign body in other or unspecified parts of foot</b>
<b>ND11.B0</b>	Splinter in other or unspecified parts of foot
<b>ND11.BY</b>	Other specified superficial foreign body in other or unspecified parts of foot
<b>ND11.BZ</b>	Superficial foreign body in other or unspecified parts of foot, unspecified
<b>ND11.C</b>	<b>Multiple superficial injuries of ankle or foot</b>

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND11.Y** Other specified superficial injury of ankle or foot

**ND11.Z** Superficial injury of ankle or foot, unspecified

## **ND12 Open wound of ankle or foot**

**Exclusions:** Traumatic amputation of ankle or foot (ND19)

**ND12.0 Laceration without foreign body of ankle or foot**

**Inclusions:** laceration of skin of ankle or foot

**ND12.1 Laceration with foreign body of ankle or foot**

**ND12.2 Puncture wound with foreign body of ankle or foot**

**ND12.3 Puncture wound without foreign body of ankle or foot**

**ND12.4 Open bite of ankle or foot**

**ND12.5 Multiple open wounds of ankle or foot**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND12.6 Open wound of toe**

<b>ND12.60</b>	Laceration without foreign body of toe  <b><i>Exclusions:</i></b> Injury to toenail (ND10)
<b>ND12.61</b>	Laceration with foreign body of toe
<b>ND12.62</b>	Puncture wound without foreign body of toe
<b>ND12.63</b>	Puncture wound with foreign body of toe
<b>ND12.64</b>	Open bite of toe
<b>ND12.6Y</b>	Other specified open wound of toe
<b>ND12.6Z</b>	Open wound of toe, unspecified
<b>ND12.Y</b>	<b>Other specified open wound of ankle or foot</b>
<b>ND12.Z</b>	<b>Open wound of ankle or foot, unspecified</b>
<b>ND13</b>	<b>Fracture of foot, except ankle</b>
	<b><i>Exclusions:</i></b> Fracture of medial malleolus (NC92.5) Fracture of lower leg, including ankle (NC92) Fracture of lateral malleolus (NC92.6)
<b>ND13.0</b>	<b>Fracture of calcaneus</b>
<b>ND13.1</b>	<b>Fracture of talus</b>  <b><i>Inclusions:</i></b> Fracture of astragalus
<b>ND13.2</b>	<b>Fracture of unspecified tarsal bone</b>
<b>ND13.3</b>	<b>Fracture of metatarsal bone</b> A break in one or more of the metatarsal bones of the foot  <b><i>Exclusions:</i></b> march fracture (FB80.A)
<b>ND13.4</b>	<b>Fracture of great toe</b>
<b>ND13.5</b>	<b>Fracture of other toe</b>
<b>ND13.6</b>	<b>Multiple fractures of foot</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>ND13.7</b>	<b>Fracture of cuboid bone</b>
<b>ND13.8</b>	<b>Fracture of lateral cuneiform</b>
<b>ND13.9</b>	<b>Fracture of intermediate cuneiform</b>
<b>ND13.A</b>	<b>Fracture of medial cuneiform</b>
<b>ND13.B</b>	<b>Fracture of navicular of foot</b>
<b>ND13.Y</b>	<b>Fracture of other specified part of foot, except ankle</b>

<b>ND13.Z</b>	<b>Fracture of foot, except ankle, unspecified</b>
<b>ND14</b>	<b>Dislocation or strain or sprain of joints or ligaments at ankle or foot level</b>
<b>ND14.0</b>	<b>Dislocation of ankle joint</b> Displacement of one or more bones of the ankle, including the tarsals <i>Inclusions:</i> Dislocation of astragalus Dislocation of talus
<b>ND14.1</b>	<b>Dislocation of great toe</b>
<b>ND14.10</b>	Dislocation of metatarsophalangeal joint of great toe
<b>ND14.11</b>	Dislocation of interphalangeal joint of great toe
<b>ND14.1Z</b>	Dislocation of great toe, unspecified
<b>ND14.2</b>	<b>Dislocation of other toe</b>
<b>ND14.20</b>	Dislocation of metatarsophalangeal joint of lesser toe
<b>ND14.21</b>	Dislocation of interphalangeal joints of lesser toe
<b>ND14.2Y</b>	Dislocation of other specified toe
<b>ND14.2Z</b>	Dislocation of other toe, unspecified
<b>ND14.3</b>	<b>Dislocation of tarsal joint</b>
<b>ND14.4</b>	<b>Dislocation of tarsometatarsal joint</b>
<b>ND14.5</b>	<b>Rupture of ligaments at ankle or foot level</b>
<b>ND14.6</b>	<b>Dislocation of other or unspecified parts of foot</b>
<b>ND14.7</b>	<b>Strain or sprain of ankle</b> <i>Exclusions:</i> Injury of Achilles tendon (NC96.0)
<b>ND14.70</b>	Strain or sprain of calcaneofibular ligament
<b>ND14.71</b>	Strain or sprain of deltoid ligament
<b>ND14.72</b>	Strain or sprain of tibiofibular ligament
<b>ND14.73</b>	Strain or sprain of other ligament of ankle
<b>ND14.7Z</b>	Strain or sprain of ankle, unspecified
<b>ND14.8</b>	<b>Strain or sprain of other toe</b> <i>Exclusions:</i> Strain or sprain of great toe (ND14.9)
<b>ND14.80</b>	Strain or sprain of metatarsophalangeal joint of lesser toe
<b>ND14.81</b>	Strain or sprain of interphalangeal joints of lesser toe
<b>ND14.8Y</b>	Strain or sprain of other specified toe

<b>ND14.8Z</b>	Strain or sprain of other toe, unspecified
<b>ND14.9</b>	<b>Strain or sprain of great toe</b>
<b>ND14.90</b>	Strain or sprain of metatarsophalangeal joint of great toe
<b>ND14.91</b>	Strain or sprain of interphalangeal joint of great toe
<b>ND14.9Z</b>	Strain or sprain of great toe, unspecified
<b>ND14.A</b>	<b>Strain or sprain of other or unspecified parts of foot</b>
<b>ND14.Y</b>	<b>Other specified dislocation or strain or sprain of joints or ligaments at ankle or foot level</b>
<b>ND14.Z</b>	<b>Dislocation or strain or sprain of joints or ligaments at ankle or foot level, unspecified</b>

**ND15      Injury of nerves at ankle or foot level**

<b>ND15.0</b>	<b>Injury of lateral plantar nerve</b>
<b>ND15.1</b>	<b>Injury of medial plantar nerve</b>
<b>ND15.2</b>	<b>Injury of deep peroneal nerve at ankle or foot level</b>
<b>ND15.3</b>	<b>Injury of cutaneous sensory nerve at ankle or foot level</b>
<b>ND15.4</b>	<b>Injury of multiple nerves at ankle or foot level</b>

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

<b>ND15.Y</b>	<b>Injury of other specified nerves at ankle and foot level</b>
<b>ND15.Z</b>	<b>Injury of unspecified nerve at ankle or foot level</b>

**ND16      Injury of blood vessels at ankle or foot level**

**Exclusions:**      Injury of posterior tibial artery (NC95.2)

<b>ND16.0</b>	<b>Injury of dorsal artery of foot</b>
<b>ND16.00</b>	Laceration of dorsal artery of foot
<b>ND16.0Y</b>	Other specified injury of dorsal artery of foot
<b>ND16.0Z</b>	Injury of dorsal artery of foot, unspecified
<b>ND16.1</b>	<b>Injury of plantar artery of foot</b>
<b>ND16.10</b>	Laceration of plantar artery of foot
<b>ND16.1Y</b>	Other specified injury of plantar artery of foot
<b>ND16.1Z</b>	Injury of plantar artery of foot, unspecified
<b>ND16.2</b>	<b>Injury of dorsal vein of foot</b>

<b>ND16.20</b>	Laceration of dorsal vein of foot
<b>ND16.2Y</b>	Other specified injury of dorsal vein of foot
<b>ND16.2Z</b>	Injury of dorsal vein of foot, unspecified
<b>ND16.3</b>	<b>Injury of multiple blood vessels at ankle or foot level</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>ND16.Y</b>	<b>Injury of other specified blood vessels at ankle and foot level</b>
<b>ND16.Z</b>	<b>Injury of unspecified blood vessel at ankle or foot level</b>
<b>ND17</b>	<b>Injury of muscle, fascia or tendon at ankle or foot level</b>
	Damage inflicted on the muscular or tendinous tissues of the ankle or foot as the direct or indirect result of an external force, with or without disruption of structural continuity.
	<b>Exclusions:</b> Injury of Achilles tendon (NC96.0)
<b>ND17.0</b>	<b>Injury of muscle, fascia or tendon of long flexor muscle of toe at ankle or foot level</b>
<b>ND17.00</b>	Strain or sprain of muscle, fascia or tendon of long flexor muscle of toe at ankle or foot level
<b>ND17.01</b>	Laceration of muscle, fascia or tendon of long flexor muscle of toe at ankle or foot level
<b>ND17.0Y</b>	Other specified injury of muscle, fascia or tendon of long flexor muscle of toe at ankle or foot level
<b>ND17.0Z</b>	Injury of muscle, fascia or tendon of long flexor muscle of toe at ankle or foot level, unspecified
<b>ND17.1</b>	<b>Injury of muscle, fascia or tendon of long extensor muscle of toe at ankle or foot level</b>
<b>ND17.10</b>	Strain or sprain of muscle, fascia or tendon of long extensor muscle of toe at ankle or foot level
<b>ND17.11</b>	Laceration of muscle, fascia or tendon of long extensor muscle of toe at ankle or foot level
<b>ND17.1Y</b>	Other specified injury of muscle, fascia or tendon of long extensor muscle of toe at ankle or foot level
<b>ND17.1Z</b>	Injury of muscle, fascia or tendon of long extensor muscle of toe at ankle or foot level, unspecified
<b>ND17.2</b>	<b>Injury of intrinsic muscle, fascia or tendon at ankle or foot level</b>
<b>ND17.20</b>	Strain or sprain of intrinsic muscle, fascia or tendon at ankle or foot level
<b>ND17.21</b>	Laceration of intrinsic muscle, fascia or tendon at ankle or foot level
<b>ND17.2Y</b>	Other specified injury of intrinsic muscle, fascia or tendon at ankle or foot level

<b>ND17.2Z</b>	Injury of intrinsic muscle, fascia or tendon at ankle or foot level, unspecified
<b>ND17.3</b>	<b>Injury of multiple muscles or tendons at ankle or foot level</b>
<b>Coding Note:</b>	Assign additional codes for the specific injuries.
<b>ND17.Y</b>	<b>Injury of other specified muscle, fascia or tendon at ankle or foot level</b>
<b>ND17.Z</b>	<b>Injury of unspecified muscle, fascia or tendon at ankle or foot level</b>
<b>ND18</b>	<b>Crushing injury of ankle or foot</b>
<b>ND18.0</b>	<b>Crushing injury of ankle</b>
<b>ND18.1</b>	<b>Crushing injury of toe</b>
<b>ND18.2</b>	<b>Crushing injury of other parts of ankle or foot</b>
<b>ND18.Z</b>	<b>Crushing injury of ankle or foot, unspecified</b>
<b>ND19</b>	<b>Traumatic amputation of ankle or foot</b>
<b>ND19.0</b>	<b>Traumatic amputation of right foot at ankle level</b>
<b>ND19.1</b>	<b>Traumatic amputation of left foot at ankle level</b>
<b>ND19.2</b>	<b>Traumatic amputation of foot at ankle level, bilateral</b>
<b>ND19.3</b>	<b>Traumatic amputation of right foot at metatarsal level</b>
<b>ND19.4</b>	<b>Traumatic amputation of left foot at metatarsal level</b>
<b>ND19.5</b>	<b>Traumatic amputation of foot at metatarsal level, bilateral</b>
<b>ND19.6</b>	<b>Traumatic amputation of one toe</b> <i>Exclusions:</i> avulsion of toenail (ND10)
<b>ND19.7</b>	<b>Traumatic amputation of two or more toes</b> <i>Exclusions:</i> avulsion of toenail (ND10)
<b>ND19.8</b>	<b>Traumatic amputation of other parts of foot</b> <i>Inclusions:</i> Combined traumatic amputation of toe(s) and other parts of foot
<b>ND19.Z</b>	<b>Traumatic amputation of ankle or foot, unspecified</b>
<b>ND1A</b>	<b>Multiple injuries of ankle or foot</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.
<b>ND1Y</b>	<b>Other specified injuries to the ankle or foot</b>
<b>ND1Z</b>	<b>Injuries to the ankle or foot, unspecified</b>

## Injuries involving multiple body regions (ND30-ND37)

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Exclusions:**

- Frostbite (NE40-NE4Z)
- Sunburn (EJ40)
- Burns (ND90-NE2Z)

### ND30

#### **Superficial injuries involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

### ND31

#### **Open wounds involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Exclusions:** Traumatic amputations involving multiple body regions (ND35)

### ND32

#### **Fractures involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Coded Elsewhere:** Fractures involving multiple body regions due to birth injury (KA45.Y)

### ND33

#### **Dislocations, strains or sprains involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

### ND34

#### **Crushing injuries involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

### ND35

#### **Traumatic amputations involving multiple body regions**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Inclusions:** avulsion involving multiple body regions

**Exclusions:** traumatic amputation of leg NOS (ND55)

traumatic amputation of arm NOS (ND53)

Open wounds involving multiple body regions (ND31)

Decapitation (NA63)

traumatic amputation of: trunk NOS (NB33)

### ND36

#### **Other injuries involving multiple body regions, not elsewhere classified**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND37****Unspecified multiple injuries**

**Coding Note:** Each injury should be coded separately. This code should be used alone only when the detail of the specific injuries is unknown, or it is not possible to code each injury. This code may also be used in postcoordination to identify cases of complex trauma.

**Exclusions:**      injury NOS (ND56)

**Injuries to unspecified part of trunk, limb or body region (ND50-ND5Z)**

**Exclusions:**      Injuries involving multiple body regions (ND30-ND37)

    Insect bite or sting, venomous (NE61)

    Burns (ND90-NE2Z)

    Frostbite (NE40-NE4Z)

**ND50****Fracture of spine, level unspecified**

**Exclusions:**      multiple fractures of spine, level unspecified (ND32)

**Coded Elsewhere:** Fracture, dislocation or subluxation of spine due to birth injury  
(KA45.4)

**ND51****Other injuries of spine or trunk, level unspecified**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**Exclusions:**      multiple internal injuries of trunk (ND36)  
                        crushing injury of trunk NOS (ND34)  
                        transection of trunk (ND35)

**ND51.0              Dislocation or strain or sprain of unspecified joint or ligament of trunk**

**Coded Elsewhere:** Fracture, dislocation or subluxation of spine due to birth injury  
(KA45.4)

**ND51.1              Injury of unspecified nerve, spinal nerve root or plexus of trunk**

**ND51.2              Injury of spinal cord, level unspecified**

**Coded Elsewhere:** Birth injury to spine or spinal cord (KA40.2)

**ND51.3              Injury of unspecified muscle, fascia or tendon of trunk**

**ND51.4              Crushing injury of spine or trunk, level unspecified**

**ND51.Y              Other specified injuries of spine or trunk, level unspecified**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**ND51.Z              Unspecified injuries of spine or trunk, level unspecified**

**Coding Note:** Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

<b>ND52</b>	<b>Fracture of arm, level unspecified</b>
	<b><i>Exclusions:</i></b> Fractures involving multiple regions of one arm (ND32)
<b>ND53</b>	<b>Other injuries of arm, level unspecified</b>
	<b><i>Exclusions:</i></b> crushing injury of arm NOS (ND34) Fracture of arm, level unspecified (ND52) Injuries involving multiple body regions (ND30-ND37)
<b>ND53.0</b>	<b>Crushing injury of arm, level unspecified</b>
<b>ND53.Y</b>	<b>Other specified injuries of arm, level unspecified</b>
<b>ND54</b>	<b>Fracture of leg, level unspecified</b>
	<b><i>Exclusions:</i></b> Fractures involving multiple regions of one leg (ND32)
<b>ND55</b>	<b>Other injuries of leg, level unspecified</b>
	<b><i>Exclusions:</i></b> Fracture of leg, level unspecified (ND54) Injuries involving multiple body regions (ND30-ND37)
<b>ND56</b>	<b>Injury of unspecified body region</b>
	Damage inflicted on the body in an unspecified area as the direct or indirect result of an external force, with or without disruption of structural continuity.
	<b><i>Exclusions:</i></b> Injuries involving multiple body regions (ND30-ND37) multiple injuries NOS (ND37)
<b>ND56.0</b>	<b>Superficial injury of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple superficial injuries NOS (ND30)
	<b><i>Coded Elsewhere:</i></b> Haematoma of surgical wound of skin (NE81.00) Superficial incisional site infection (NE81.20)
<b>ND56.1</b>	<b>Open wound of unspecified body region</b>
	<b><i>Exclusions:</i></b> Traumatic amputations involving multiple body regions (ND35) Open wounds involving multiple body regions (ND31) traumatic amputation NOS (ND56.8)
<b>ND56.2</b>	<b>Fracture of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple fractures NOS (ND32)
<b>ND56.3</b>	<b>Dislocation or strain or sprain of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple dislocations, sprains and strains NOS (ND33)
<b>ND56.4</b>	<b>Injury of nerve of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple injuries of nerves NOS (ND36)
<b>ND56.5</b>	<b>Injury of blood vessel of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple injuries of blood vessels NOS (ND36)

<b>ND56.6</b>	<b>Injury of muscles or tendons of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple injuries of tendons and muscles NOS (ND36)
<b>ND56.7</b>	<b>Crushing injury of unspecified body region</b>
<b>ND56.8</b>	<b>Traumatic amputation of unspecified body region</b>
	<b><i>Exclusions:</i></b> multiple: crushing injuries NOS (ND34) multiple traumatic amputations NOS (ND35)
<b>ND56.9</b>	<b>Injury complicating pregnancy</b>
<b>ND56.Y</b>	<b>Other specified injury of unspecified body region</b>
<b>ND56.Z</b>	<b>Unspecified injury to unspecified part of trunk, limb or body region</b>
<b>ND57</b>	<b>Secondary effect of trauma</b>
	<b><i>Inclusions:</i></b> deformity NOS scarring resulting from previous injury old amputation
	<b><i>Exclusions:</i></b> Post traumatic stress disorder (6B40) Post traumatic wound infection, not elsewhere classified (NF0A.3)
<b>ND5Y</b>	<b>Other specified injuries to unspecified part of trunk, limb or body region</b>
<b>ND5Z</b>	<b>Injuries to unspecified part of trunk, limb or body region, unspecified</b>

#### Effects of foreign body entering through natural orifice (ND70-ND7Z)

	<b><i>Exclusions:</i></b> foreign body accidentally left in operation wound (PL11.3) Residual foreign body in soft tissue (FB56.1)
<b>ND70</b>	<b>Foreign body on external eye</b>
	<b><i>Exclusions:</i></b> Retained foreign body following penetrating wound of orbit (NA06.2) Retained foreign body in eyelid (NA06.03)
<b>ND70.0</b>	<b>Foreign body in cornea</b>
<b>ND70.1</b>	<b>Foreign body in conjunctival sac</b>
<b>ND70.2</b>	<b>Foreign body in multiple parts of external eye</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>ND70.Y</b>	<b>Foreign body in other specified part of external eye</b>
<b>ND70.Z</b>	<b>Foreign body on external eye, unspecified</b>

<b>ND71</b>	<b>Foreign body in ear</b> Objects that inadvertently enter the ear from the environment.
<b>ND72</b>	<b>Foreign body in respiratory tract</b>
<b>ND72.0</b>	<b>Foreign body in nasal sinus</b>
<b>ND72.1</b>	<b>Foreign body in nostril</b>
<b>ND72.2</b>	<b>Foreign body in pharynx</b> Objects that inadvertently enter the pharynx from the environment.
<b>ND72.20</b>	Asphyxia on mucous in nasopharynx
<b>ND72.2Y</b>	Other specified foreign body in pharynx
<b>ND72.2Z</b>	Foreign body in pharynx, unspecified
<b>ND72.3</b>	<b>Foreign body in larynx</b>
<b>ND72.4</b>	<b>Foreign body in trachea</b>
<b>ND72.5</b>	<b>Foreign body in bronchus</b>
<b>ND72.6</b>	<b>Foreign body in multiple parts of respiratory tract</b>
<b>Coding Note:</b>	Each injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.
<b>ND72.Y</b>	<b>Foreign body in other parts of respiratory tract</b>
<b>ND72.Z</b>	<b>Foreign body in unspecified part of respiratory tract</b>
<b>ND73</b>	<b>Foreign body in alimentary tract</b>
	<i>Inclusions:</i> foreign body in digestive system NOS
	<i>Exclusions:</i> Foreign body in pharynx (ND72.2)
<b>ND73.0</b>	<b>Foreign body in mouth</b>
<b>ND73.1</b>	<b>Foreign body in oesophagus</b> Mechanical impaction or retention of foreign body in the oesophagus
<b>ND73.2</b>	<b>Foreign body in stomach</b> Mechanical impaction or retention of foreign body in the stomach.
<b>ND73.20</b>	Trichobezoar A hair ball which is formed from ingested hairs in the stomach which may cause bowel obstruction.
<b>ND73.2Y</b>	Other specified foreign body in stomach
<b>ND73.2Z</b>	Foreign body in stomach, unspecified
<b>ND73.3</b>	<b>Foreign body in small intestine</b> Mechanical impaction or retention of foreign body in the small intestine.

- ND73.4**      **Foreign body in colon**
- ND73.5**      **Foreign body in anus or rectum**
- ND73.Y**      **Foreign body in other specified part of alimentary tract**
- ND73.Z**      **Foreign body in alimentary tract, unspecified**
- ND74**      **Foreign body in genitourinary tract**
- Exclusions:*      Presence of contraceptive device (QB51.C)
- ND74.0**      **Foreign body in urethra**
- ND74.1**      **Foreign body in bladder**
- ND74.2**      **Foreign body in vulva or vagina**
- ND74.3**      **Foreign body in uterus, any part**
- ND74.Y**      **Foreign body in other specified part of genitourinary tract**
- ND74.Z**      **Foreign body in genitourinary tract, unspecified**
- ND7Z**      **Effects of foreign body entering through natural orifice, unspecified**

## Burns (ND90-NE2Z)

A burn is an injury to the tissues caused by a pathological flux of energy which causes cellular destruction and irreversible denaturation of proteins and is primarily caused by thermal or other acute trauma.

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

**Inclusions:**

- internal chemical burn or corrosion
- external chemical burn or corrosion
- burns from hot objects
- burns from friction
- burns from hot air and hot gases
- burns from lightning

**Exclusions:**

- Sunburn (EJ40)
- Adverse cutaneous effects of therapeutic ionizing irradiation (EL60-EL63)
- Adverse effects of phototherapy (Chapter 14)
- Photosensitivity due to drug (EH75)
- Phototoxic reactions to skin contact with photoactive agents (EK20-EK2Z)
- Neonatal phototherapy burn (KC50)

### Burns of external body surface, specified by site (ND90-ND9Z)

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

#### **ND90**

##### **Burn of head or neck except face**

Injury to the tissues of the head and neck caused by contact with, for example, heat, steam, chemicals, or electricity.

**Exclusions:**

- Burn of eye or ocular adnexa (NE00)
- Burn of mouth or pharynx (NE02)

**ND90.0**      **Burn of head or neck except face, epidermal burn**

**ND90.1**      **Burn of head or neck except face, superficial partial thickness burn**

**ND90.2**      **Burn of head or neck except face, deep partial thickness burn**

**ND90.3**      **Burn of head and neck except face, full thickness burn**

**ND90.4**      **Burn of head or neck except face, deep full thickness or complex burn**

**ND90.Z**      **Burn of head and neck except face, depth of burn unspecified**

#### **ND91**

##### **Burn of face except eye or ocular adnexa**

**ND91.0**      **Burn of face except eye or ocular adnexa, epidermal burn**

**ND91.1**      **Burn of face except eye or ocular adnexa, superficial partial thickness burn**

<b>ND91.2</b>	<b>Burn of face except eye or ocular adnexa, deep partial thickness burn</b>
<b>ND91.3</b>	<b>Burn of face except eye or ocular adnexa, full thickness burn</b>
<b>ND91.4</b>	<b>Burn of face except eye or ocular adnexa, deep full thickness or complex burn</b>
<b>ND91.Z</b>	<b>Burn of face except eye, depth of burn unspecified</b>
<b>ND92</b>	<b>Burn of trunk except perineum or genitalia</b> Injury to the tissues of the trunk caused by contact with, for example, heat, steam, chemicals, or electricity.  <i>Exclusions:</i> burn and corrosion of scapular region (ND94) burn and corrosion of axilla (ND94)
<b>ND92.0</b>	<b>Burn of trunk except perineum or genitalia, epidermal burn</b>
<b>ND92.00</b>	Burn of breast, epidermal burn
<b>ND92.01</b>	Burn of chest wall, epidermal burn
<b>ND92.02</b>	Burn of abdominal wall, epidermal burn
<b>ND92.03</b>	Burn of back, any part, epidermal burn
<b>ND92.0Y</b>	Other specified burn of trunk except perineum or genitalia, epidermal burn
<b>ND92.0Z</b>	Burn of trunk except perineum or genitalia, epidermal burn, unspecified
<b>ND92.1</b>	<b>Burn of trunk except perineum or genitalia, superficial partial thickness burn</b>
<b>ND92.2</b>	<b>Burn of trunk except perineum or genitalia, deep partial thickness burn</b>
<b>ND92.3</b>	<b>Burn of trunk except perineum or genitalia, full thickness burn</b>
<b>ND92.4</b>	<b>Burn of trunk except perineum or genitalia, deep full thickness or complex burn</b>
<b>ND92.Z</b>	<b>Burn of trunk except perineum and genitalia, depth of burn unspecified</b>
<b>ND93</b>	<b>Burn of perineum or genitalia</b>
<b>ND93.0</b>	<b>Burn of perineum or genitalia, epidermal burn</b>
<b>ND93.1</b>	<b>Burn of perineum or genitalia, superficial partial thickness burn</b>
<b>ND93.2</b>	<b>Burn of perineum or genitalia, deep partial thickness burn</b>
<b>ND93.3</b>	<b>Burn of perineum or genitalia, full thickness burn</b>
<b>ND93.4</b>	<b>Burn of perineum or genitalia, deep full thickness or complex burn</b>
<b>ND93.Z</b>	<b>Burn of perineum and genitalia, depth of burn unspecified</b>

**ND94**

**Burn of shoulder or arm, except wrist or hand**

Injury to the tissues of the shoulder and arm (except wrist and hand) caused by contact with, for example, heat, steam, chemicals, or electricity.

**Exclusions:**      burn and corrosion of interscapular region (ND92)

    Burn of wrist or hand (ND95)

**ND94.0**

**Burn of shoulder or arm, except wrist or hand, epidermal burn**

**ND94.1**

**Burn of shoulder or arm, except wrist or hand, superficial partial thickness burn**

**ND94.10**

Burn of forearm and elbow, superficial partial thickness burn

**ND94.1Y**

Other specified burn of shoulder or arm, except wrist or hand, superficial partial thickness burn

**ND94.1Z**

Burn of shoulder or arm, except wrist or hand, superficial partial thickness burn, unspecified

**ND94.2**

**Burn of shoulder or arm, except wrist or hand, deep partial thickness burn**

**ND94.20**

Burn of forearm or elbow, deep partial thickness burn

**ND94.2Y**

Other specified burn of shoulder or arm, except wrist or hand, deep partial thickness burn

**ND94.2Z**

Burn of shoulder or arm, except wrist or hand, deep partial thickness burn, unspecified

**ND94.3**

**Burn of shoulder or arm, except wrist or hand, full thickness burn**

**ND94.4**

**Burn of shoulder or arm, except wrist or hand, deep full thickness or complex burn**

**ND94.Z**

**Burn of shoulder and arm except wrist and hand, depth of burn unspecified**

**ND95**

**Burn of wrist or hand**

Injury to the tissues of the wrist and hand caused by contact with, for example, heat, steam, chemicals, or electricity.

**ND95.0**

**Burn of wrist or hand, epidermal burn**

**ND95.1**

**Burn of wrist or hand, superficial partial thickness burn**

**ND95.2**

**Burn of wrist or hand, deep partial thickness burn**

**ND95.3**

**Burn of wrist or hand, full thickness burn**

**ND95.4**

**Burn of wrist or hand, deep full thickness or complex burn**

**ND95.Z**

**Burn of wrist and hand, depth of burn unspecified**

**ND96**

**Burn of hip or leg, except ankle or foot**

Injury to the tissues of the hip and leg (except ankle and foot) caused by contact with, for example, heat, steam, chemicals, or electricity.

**Exclusions:**      Burn of ankle or foot (ND97)

<b>ND96.0</b>	<b>Burn of hip or leg, except ankle or foot, epidermal burn</b>
<b>ND96.1</b>	<b>Burn of hip or leg, except ankle or foot, superficial partial thickness burn</b>
<b>ND96.2</b>	<b>Burn of hip or leg, except ankle or foot, deep partial thickness burn</b>
<b>ND96.3</b>	<b>Burn of hip or leg, except ankle or foot, full thickness burn</b>
<b>ND96.4</b>	<b>Burn of hip or leg, except ankle or foot, deep full thickness or complex burn</b>
<b>ND96.Z</b>	<b>Burn of hip and leg except ankle and foot, depth of burn unspecified</b>
<b>ND97</b>	<b>Burn of ankle or foot</b> Injury to the tissues of the ankle and foot caused by contact with, for example, heat, steam, chemicals, or electricity.
<b>ND97.0</b>	<b>Burn of ankle or foot, epidermal burn</b>
<b>ND97.1</b>	<b>Burn of ankle or foot, superficial partial thickness burn</b>
<b>ND97.2</b>	<b>Burn of ankle or foot, deep partial thickness burn</b>
<b>ND97.3</b>	<b>Burn of ankle or foot, full thickness burn</b>
<b>ND97.4</b>	<b>Burn of ankle or foot, deep full thickness or complex burn</b>
<b>ND97.Z</b>	<b>Burn of ankle and foot, depth of burn unspecified</b>
<b>ND99</b>	<b>Acute skin injury due to skin contact with corrosive substance</b>
<b>ND99.1</b>	<b>Chemical burn due to skin contact with corrosive substance</b> A chemical skin burn is an acute, severe irritant reaction to skin contact with corrosive or caustic substances sufficient to cause cell necrosis. The corrosive potential of substances depends on their chemical properties, concentration and pH, and on the duration and type of skin contact. Occlusion has an additive effect.
<b>ND9Y</b>	<b>Burns of external body surface, other specified site</b>
<b>Coding Note:</b>	Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.
<b>ND9Z</b>	<b>Burns of external body surface, unspecified site</b>
<b>Coding Note:</b>	Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

#### Burns of eye or internal organs (NE00-NE0Z)

Injury confined to the tissues of the eye and internal organs caused by contact with, for example, heat, steam, chemicals, or electricity.

<b>NE00</b>	<b>Burn of eye or ocular adnexa</b>
	Injury confined to the tissues of the eye and adnexa caused by contact with, for example, heat, steam, chemicals, or electricity.

**NE01**

### **Burn of respiratory tract**

Injury to the tissues of the respiratory tract caused by contact with, for example, heat, steam, chemicals, or electricity.

**NE02**

### **Burn of other internal organs**

Injury to other internal organs caused by contact with, for example, heat, steam, chemicals, or electricity.

**NE0Z**

### **Burns of unspecified internal organ**

Burns of multiple or unspecified body regions (NE10-NE11)

Injury to the tissues of the multiple and unspecified body regions caused by contact with, for example, heat, steam, chemicals, or electricity.

**Coding Note:** Each burn should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**NE10**

### **Burns of multiple body regions**

**Coding Note:** Each burn should be coded separately. This code should be used only when the detail of the specific burn is unknown, or it is not possible to code each burn.

**NE11**

### **Burn of unspecified body region**

---

**NE2Z**

### **Burns, unspecified**

**Coding Note:** Code also the size of burn as the percentage of total body surface area burned to any depth, and the percentage with full-thickness or deep full thickness burns.

Frostbite (NE40-NE4Z)

Frostbite is injury from ice formation within tissues resulting from contact with cold air, liquids or metals. It is most commonly due to excessive exposure of skin to sub-zero environmental temperatures. The risk of injury is exacerbated by wind. The most commonly affected sites are fingers, toes, ears, nose, cheeks and chin with injury limited to skin and soft tissues. Full thickness skin necrosis and injury to deeper structures including muscles and bone may occur with prolonged exposure to cold.

**Exclusions:** Hypothermia (NF02)

**NE40**

### **Superficial frostbite**

Frostbite in which injury is confined to the skin, where there may be epidermal blistering and sloughing but no significant tissue necrosis.

**Inclusions:** frostbite with partial-thickness skin loss

**Exclusions:** Superficial frostbite involving multiple body regions (NE42)

**NE41**

### **Frostbite with tissue necrosis**

Frostbite with localised tissue necrosis of skin and deeper tissues

**Exclusions:** Frostbite with tissue necrosis involving multiple body regions (NE42)

**NE42**

**Frostbite involving multiple body regions**

Frostbite is damage to tissues as the result of exposure to low environmental temperatures.

**Coding Note:**

Each frostbite injury should be coded separately. This code should be used only when the detail of the specific injuries is unknown, or it is not possible to code each injury.

**NE4Z**

**Frostbite, unspecified**

## Harmful effects of substances (NE60-NE6Z)

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

**NE60**

**Harmful effects of drugs, medicaments or biological substances, not elsewhere classified**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

**Exclusions:** Alcohol intoxication (6C40.3)

pathological drug intoxication (6C40-6C5Z)

hypersensitivity reaction to correctly administered drug  
(4A80-4A8Z)

Reactions or intoxications due to drugs administered to fetus  
or newborn (KD34)

**NE61**

**Harmful effects of or exposure to noxious substances, chiefly nonmedicinal as to source, not elsewhere classified**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

**Exclusions:** corrosions (ND90-NE2Z)

Bacterial foodborne intoxications (1A10-1A1Z)

**NE6Z**

**Harmful effects of unspecified substance**

**Coding Note:** When a specified harmful effect of a substance or substances is known, code to the specific condition.

Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

- Exclusions:**
- Attention to artificial openings (QB62)
  - adverse effects of drugs and medicaments (NE60)
  - Fitting or adjustment of external prosthetic device (QB31.0)
  - burns and corrosions from local applications and irradiation (ND90-NE2Z)
  - poisoning and toxic effects of drugs and chemicals (NE60)
  - Colostomy malfunction (DE12.0)
  - Disorders of fluid, electrolyte or acid-base balance (5C70-5C7Z)
  - Other functional disturbances following cardiac surgery (BE11)
  - Dumping syndrome (DE11)
  - Postmastectomy lymphoedema syndrome (BE1B.0)
  - Postsurgical blind-loop syndrome (DE13)

- Coded Elsewhere:**
- Complications of intrauterine procedures, not elsewhere classified (KD39)
  - Complications of anaesthesia during pregnancy (JA67)
  - Complications of anaesthesia during labour or delivery (JB0C)
  - Complications of anaesthesia during the puerperium (JB43)

<b>NE80</b>	<b>Injury or harm arising following infusion, transfusion or therapeutic injection, not elsewhere classified</b>
	<b>Exclusions:</b>
	bone-marrow transplant rejection (NE84)
	toxic endophthalmitis (9C21)
<b>NE80.0</b>	<b>Air embolism following infusion, transfusion or therapeutic injection</b>
<b>NE80.1</b>	<b>ABO incompatibility reaction</b>
	<b>Inclusions:</b>
	Reaction to blood-group incompatibility in infusion or transfusion
<b>NE80.2</b>	<b>Rh incompatibility reaction</b>
	<b>Inclusions:</b>
	Reaction due to Rh factor in infusion or transfusion
<b>NE80.3</b>	<b>Other serum reactions</b>
	<b>Exclusions:</b>
	serum hepatitis (1E50.1)
	<b>Coded Elsewhere:</b>
	Serum sickness vasculitis (4A44.Y)
	Anaphylactic shock due to serum (4A84.Y)
<b>NE80.Y</b>	<b>Other specified injury or harm arising following infusion, transfusion or therapeutic injection, not elsewhere classified</b>
<b>NE80.Z</b>	<b>Injury or harm arising following infusion, transfusion or therapeutic injection, not elsewhere classified, unspecified</b>

<b>NE81</b>	<p><b>Injury or harm arising from a procedure, not elsewhere classified</b></p> <p>Any complication attributable to a medical, surgical or other clinical procedure which cannot be more precisely coded elsewhere in the classification.</p> <p><b>Exclusions:</b></p> <ul style="list-style-type: none"> <li>Harmful effects of drugs, medicaments or biological substances, not elsewhere classified (NE60)</li> <li>Failure or rejection of transplanted organs or tissues (NE84)</li> <li>Injury or harm arising following infusion, transfusion or therapeutic injection, not elsewhere classified (NE80)</li> </ul>
<b>NE81.0</b>	<p><b>Haemorrhage or haematoma complicating a procedure, not elsewhere classified</b></p> <p><b>Inclusions:</b> Haemorrhage at any site resulting from a procedure</p> <p><b>Coded Elsewhere:</b> Haematoma of obstetric wound (JB44.2)</p>
<b>NE81.00</b>	<p>Haematoma of surgical wound of skin</p> <p>Collection of blood within skin and soft tissues following surgical wound of skin usually resulting from defective haemostasis</p>
<b>NE81.01</b>	Haemorrhage and haematoma of eye or ocular adnexa complicating a procedure
<b>NE81.0Z</b>	Haemorrhage or haematoma of other or unspecified site complicating a procedure, not elsewhere classified

<b>NE81.21</b>	<p>Deep incisional site infection</p> <p>A surgical site infection involving deep soft tissues of the incision (e.g. fascia and muscle layers).</p>
<b>NE81.22</b>	<p>Organ or organ space surgical site infection</p> <p>A surgical site infection that involves any part of the body deeper than the fascial or muscle layers, that is opened or manipulated during the operative procedure.</p>
<b>NE81.2Y</b>	Other specified surgical site infection
<b>NE81.2Z</b>	Surgical site infection, unspecified

<b>NE81.3</b>	<b>Postsurgical leak</b>
	<p><b>Exclusions:</b> Malfunction or complication of external stoma of digestive organs (DE12)</p> <p>Tracheostomy malfunction (CB60)</p>
<b>NE81.Y</b>	<b>Other specified injury or harm arising from a procedure, not elsewhere classified</b>
<b>NE81.Z</b>	<b>Injury or harm arising from a procedure, not elsewhere classified, unspecified</b>
<b>NE82</b>	<b>Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified</b>
	<p><b>Coded Elsewhere:</b> Pacemaker or implantable cardioverter defibrillator battery at end of battery life (BC91)</p>
<b>NE82.0</b>	<b>Pacemaker or implantable cardioverter defibrillator complication</b>
	An event or occurrence related to a pacemaker or an implantable cardioverter defibrillator (ICD) or one of its components that is associated with a healthcare intervention, is a departure from the desired course of events, and may cause, or be associated with, a suboptimal outcome.
<b>NE82.00</b>	<p>Pacemaker or implantable cardioverter defibrillator pocket erosion</p> <p>Any breakdown of the implant site or skin overlying pacemaker or an implantable cardioverter defibrillator (ICD) pocket.</p>
<b>NE82.01</b>	<p>Pacemaker or implantable cardioverter defibrillator pocket muscle stimulation</p> <p>Inappropriate muscular stimulation in or near a pacemaker or implantable cardioverter defibrillator (ICD) generator pocket that cannot be managed with device reprogramming and results in patient discomfort or need for reoperation.</p>
<b>NE82.02</b>	Pacemaker or implantable cardioverter defibrillator phrenic nerve stimulation
<b>NE82.03</b>	<p>Pacing-induced cardiomyopathy</p> <p>Pacing-induced cardiomyopathy is ventricular dilation, dysfunction (systolic and/or diastolic) and dyskinesia associated with chronic ventricular pacing in the absence of other causes of cardiomyopathy.</p>
<b>NE82.0Y</b>	Other specified pacemaker or implantable cardioverter defibrillator complication
<b>NE82.0Z</b>	Pacemaker or implantable cardioverter defibrillator complication, unspecified
<b>NE82.1</b>	<b>Pacemaker or implantable cardioverter defibrillator dysfunction</b>
	Any abnormality of pacemaker or implantable cardioverter defibrillator (ICD) device function.
<b>NE82.10</b>	<p>Inappropriate implantable cardioverter defibrillator shock</p> <p>One or more implantable cardioverter defibrillator (ICD) high energy discharges delivered in response to an event other than an appropriately sensed ventricular arrhythmia meeting criteria for therapy. Examples of such events include artefactual sensing (e.g., T-wave oversensing or noise), supraventricular arrhythmias (e.g., atrial fibrillation or flutter, supraventricular tachycardia (SVT)) and sinus tachycardia.</p>

**NE82.11** Pacemaker syndrome  
Cardiovascular signs or symptoms following pacemaker implantation due to suboptimal atrioventricular synchrony, regardless of the pacing mode

**NE82.12** Pacemaker generator dysfunction  
Pacemaker pulse generator malfunction for any reason except routine battery exhaustion.

**NE82.1Y** Other specified pacemaker or implantable cardioverter defibrillator dysfunction

**NE82.1Z** Pacemaker or implantable cardioverter defibrillator dysfunction, unspecified

**NE82.2** **Pacemaker or implantable cardioverter defibrillator lead complication**

**NE82.20** Pacemaker or implantable cardioverter defibrillator lead fracture

**NE82.21** Pacemaker or implantable cardioverter defibrillator lead dislodgement

**NE82.22** Pacemaker or implantable cardioverter defibrillator lead insulation break

**NE82.2Y** Other specified pacemaker or implantable cardioverter defibrillator lead complication

**NE82.2Z** Pacemaker or implantable cardioverter defibrillator lead complication, unspecified

**NE82.3** **Pacemaker or implantable cardioverter defibrillator lead dysfunction**

**NE82.Y** **Other specified dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified**

**NE82.Z** **Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified, unspecified**

**NE83** **Injury or harm arising from other device, implant or graft, not elsewhere classified**

**Coded Elsewhere:** Wear of articular bearing surface of joint prosthesis (FA35)  
Postsurgical osteolysis (FC01.8)  
Cardiac conduit failure (BE14.B)  
Systemic-to-pulmonary arterial shunt obstruction (BE14.B)  
Systemic-to-pulmonary arterial shunt failure (BE14.B)

**NE83.0** **Destruction or cartilage wear of joint with hemiarthroplasty**

**NE83.1** **Infection arising from device, implant or graft, not elsewhere classified**

**Coding Note:** This code should not be used if the type of infection is specified

**Coded Elsewhere:** Infection due to pacemaker or implantable cardioverter defibrillator (NE82.0Y)

**NE83.Y** **Other specified injury or harm arising from other device, implant or graft, not elsewhere classified**

**NE84** **Failure or rejection of transplanted organs or tissues**

**NE85** **Complications peculiar to reattachment or amputation**

<b>NE85.0</b>	<b>Complications of reattached upper extremity</b>
<b>NE85.1</b>	<b>Complications of reattached lower extremity</b>
<b>NE85.2</b>	<b>Complications of other reattached body part</b>
<b>NE85.3</b>	<b>Neuroma of amputation stump</b>
<b>NE85.4</b>	<b>Infection of amputation stump</b>
<b>NE85.5</b>	<b>Necrosis of amputation stump</b>
<b>NE85.6</b>	<b>Other or unspecified complications of amputation stump</b>

**Exclusions:** Phantom limb syndrome (8E43.00)

#### **NE86**

##### **Malignant hyperthermia due to anaesthesia**

A condition caused by hypermetabolism in response to certain anaesthetic drugs. This condition is characterised by hyperthermia, tachycardia, tachypnoea, increased carbon dioxide production, increased oxygen consumption, acidosis, muscle rigidity, and rhabdomyolysis. This condition may be associated with genetic mutation.

#### **NE87**

##### **Failed or difficult intubation**

Intubation complicated by patient anatomy or physiology which complicates, prolongs or prevents intubation.

Complication is defined as saturations falling more than 20% below baseline, significant damage to lips, teeth or tongue, or regurgitation and aspiration of gastric contents. Prolongation is defined as either intubation using special techniques (fibroscopic intubation) or three or more attempts at intubation using direct laryngoscopy or videolaryngoscopy when performed by a fully trained and expert anesthetist. Failure is defined as the abandonment of the attempt at intubation.

**Exclusions:** Failed or difficult intubation during pregnancy (JA67.5)  
Failed or difficult intubation during labour or delivery (JB0C.7)  
Failed or difficult intubation during the puerperium (JB43.5)

#### **NE88**

##### **Drug toxicity associated with harm in surgical or medical care, not elsewhere classified**

#### **NE89**

##### **Awareness under general anaesthesia**

The experience by patients whose expectation was oblivion under general anaesthesia of awareness of their surroundings. This may include some or all of the following sensations: visual, auditory, tactile (including presence of a tracheal tube or airway device, manipulation), motion, pain and paralysis.

**Exclusions:** Awareness of heartbeat (MC81.2)

#### **NE8Y**

##### **Other specified injury or harm arising from surgical or medical care, not elsewhere classified**

#### **NE8Z**

##### **Injury or harm arising from surgical or medical care, not elsewhere classified, unspecified**

## Other or unspecified effects of external causes (NF00-NF0Z)

**Coded Elsewhere:** Anaphylaxis (4A84)

**NF00**

### Effects of radiation, not elsewhere classified

- Inclusions:** Sunburn (EJ40)  
Burns (ND90-NE2Z)  
specified adverse effects of radiation, such as leukaemia (2A20-2B3Z)  
Radiation gastritis (DA42.81)  
Acute pulmonary manifestations due to radiation (CA82.0)  
Radiation duodenitis (DA51.53)  
Radiation oesophagitis (DA24.22)  
Radiation-induced colitis (DB33.41)

**NF01**

### Effects of heat

Adverse effects resulting from a failure to maintain normal body core temperature on exposure to excessive heat. Vigorous exercise, insulation by clothing (e.g. protective clothing) or an inability to sweat normally (e.g. genetic hypohidrosis or autonomic neuropathy) may be contributory factors.

- Inclusions:** heat prostration NOS  
**Exclusions:** Sunburn (EJ40)  
Burns (ND90-NE2Z)  
Malignant hyperthermia due to anaesthesia (NE86)  
Dermatoses provoked by heat or electricity (EJ10-EJ1Y)

**NF01.0**

### Heat stroke

Elevation of core body temperature above 40.6 degrees centigrade due to environmental heat exposure and a failure of thermoregulation. This is a potentially fatal disorder, particularly in infants and children.

- Exclusions:** Exertional heat stroke (NF06.0)

**Coded Elsewhere:** Environmental hyperthermia of newborn (KD10)

**NF01.1**

### Heat syncope

Fainting attributable to exposure to heat

- Inclusions:** Heat collapse

**NF01.2**

### Heat exhaustion due to fluid depletion

A failure of thermoregulatory sweating on exposure to heat as a result of water deprivation and/or inadequate replacement of fluids lost through sweating or by other means (e.g. severe diarrhoea). If untreated this may progress to heat stroke.

- Inclusions:** Heat prostration due to water depletion

**NF01.3**

### Heat fatigue, transient

**NF01.Y**

### Other specified effects of heat

NF01.Z	<b>Effects of heat, unspecified</b>
NF02	<p><b>Hypothermia</b></p> <p><b>Inclusions:</b> Accidental hypothermia</p> <p><b>Exclusions:</b> Hypothermia, not associated with low environmental temperature (MG28)</p> <p>Frostbite (NE40-NE4Z)</p> <p><b>Coded Elsewhere:</b> Hypothermia of newborn (KD12)</p>
NF03	<p><b>Other effects of reduced temperature</b></p> <p><b>Exclusions:</b> Frostbite (NE40-NE4Z)</p> <p>Hypothermia (NF02)</p>
NF03.0	<p><b>Chilblains</b></p> <p>Chilblains are the result of cold-induced damage principally to the microvasculature of acral skin in susceptible individuals. They are commonest in the winter months in cold, damp climates. They present as itchy or painful red-purple macules, papules or plaques, most commonly affecting the fingers and toes, though other body extremities including the heels, nose and ears can be involved. Because of insulation from core body temperature, other areas, especially the lateral thighs, may be involved in areas where there is a thick layer of subcutaneous fat.</p>
NF03.1	<p><b>Immersion hand or foot</b></p> <p>Injury to the skin and soft tissues of the feet and, less commonly, the hands due to prolonged exposure to non-freezing cold and wet conditions. Originally reported in soldiers as trench foot during World War I, it is now more commonly seen in the homeless either because of vagrancy or as the result of conflict. Affected extremities are initially cold, numb, swollen and pulseless; this is followed by a period of intense hyperaemia and pain which then gives way to increased sweating and cold sensitivity.</p>
NF03.Y	<b>Other specified effects of reduced temperature</b>
NF03.Z	<b>Unspecified effects of reduced temperature</b>
NF04	<b>Effects of air pressure or water pressure</b>
NF04.0	<p><b>Otitic barotrauma</b></p> <p><b>Inclusions:</b> Aero-otitis media</p>
NF04.1	<p><b>Sinus barotrauma</b></p> <p><b>Inclusions:</b> Aerosinusitis</p> <p>Effects of change in ambient atmospheric pressure on sinuses</p>
NF04.2	<p><b>Caisson disease</b></p> <p><b>Inclusions:</b> Compressed-air disease</p> <p><b>Exclusions:</b> Osteonecrosis due to trauma (FB81.3)</p>
NF04.3	<b>Effects of high-pressure fluids</b>

<b>NF04.Y</b>	<b>Other specified effects of air pressure or water pressure</b>
<b>NF04.Z</b>	<b>Effects of air pressure or water pressure, unspecified</b>
<b>NF05</b>	<b>Asphyxiation</b>
	<p><b><i>Inclusions:</i></b> Respiratory distress of newborn (KB23)            Adult acute respiratory distress syndrome (CB00)            asphyxia from carbon monoxide (NE61)            asphyxia from inhalation of food or foreign body (ND72)</p>
<b>NF06</b>	<b>Effects of strenuous physical exercise</b>
<b>NF06.0</b>	<b>Exertional heat stroke</b>
<b>NF06.1</b>	<b>Post exercise postural hypotension</b>
<b>NF06.2</b>	<b>Post exertional dehydration</b>
<b>NF06.3</b>	<b>Exercise muscle cramp</b>
<b>NF06.Y</b>	<b>Other specified effects of strenuous physical exercise</b>
<b>NF06.Z</b>	<b>Effects of strenuous physical exercise, unspecified</b>
<b>NF07</b>	<b>Effects of other deprivation</b>
<b>NF07.0</b>	<b>Effects of hunger</b>
	<p><b><i>Inclusions:</i></b> Deprivation of food            Starvation</p>
<b>NF07.1</b>	<b>Effects of thirst</b>
	<p><b><i>Inclusions:</i></b> Deprivation of water</p>
<b>NF07.2</b>	<b>Exhaustion due to exposure</b>
<b>NF07.Y</b>	<b>Other specified effects of deprivation</b>
<b>NF07.Z</b>	<b>Effects of other deprivation, unspecified</b>
<b>NF08</b>	<b>Effects of certain specified external causes</b>
	<p><b><i>Inclusions:</i></b> electric burns (ND90-NE2Z)            Adverse effects, not elsewhere classified (NF09)</p>
<b>NF08.0</b>	<b>Effects of lightning</b>
<b>NF08.1</b>	<b>Drowning or nonfatal submersion</b>
	<p><b><i>Inclusions:</i></b> Immersion</p>
<b>NF08.2</b>	<b>Effects of vibration</b>
	<p><b><i>Coded Elsewhere:</i></b> Vibratory angioedema (EB01.Y)</p>

**NF08.20** Hand and arm vibration syndrome  
Hand Transmitted Vibration is mechanical vibration arising from powered processes or tools which enters the body at the fingers or the palm of the hands. As a consequence of this exposure some people develop a secondary Raynaud's phenomenon and / or peripheral sensory neuropathy affecting the hands.

**Exclusions:** Carpal tunnel syndrome (8C10.0)

**NF08.2Y** Other specified effects of vibration

**NF08.2Z** Effects of vibration, unspecified

**NF08.3** Motion sickness

**NF08.4** Effects of electric current

## **NF09**

### **Adverse effects, not elsewhere classified**

Adverse effects which cannot be attributed to any more specific cause and thus excluding but not limited to injury, allergy, hypersensitivity, toxic effects and complications of surgical and medical care.

**Exclusions:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

Anaphylaxis (4A84)

anaphylactic shock due to serum (NE80.3)

Allergic or hypersensitivity disorders involving skin or mucous membranes (4A82)

Allergic or hypersensitivity disorders involving the gastrointestinal tract (4A83)

Allergic or hypersensitivity disorders involving the respiratory tract (4A80)

anaphylactic shock due to adverse food reaction (4A84.0)

Harmful effects of substances (NE60-NE6Z)

## **NF0A**

### **Certain early complications of trauma, not elsewhere classified**

**Exclusions:** Injury or harm arising from surgical or medical care, not elsewhere classified (NE80-NE8Z)

Respiratory distress of newborn (KB23)

Adult acute respiratory distress syndrome (CB00)

**NF0A.0** Air embolism, traumatic, not elsewhere classified

**Exclusions:** air embolism complicating abortion or ectopic or molar pregnancy (JA05.2)

air embolism complicating pregnancy, childbirth and the puerperium (JB42.0)

<b>NF0A.1</b>	<b>Fat embolism, traumatic, not elsewhere classified</b>
	<p><b><i>Exclusions:</i></b></p> <p style="margin-left: 20px;">fat embolism complicating abortion or ectopic or molar pregnancy (JA05.2)</p> <p style="margin-left: 20px;">fat embolism complicating: pregnancy, childbirth and the puerperium (JB42)</p>
<b>NF0A.2</b>	<b>Traumatic secondary or recurrent haemorrhage, not elsewhere classified</b>
<b>NF0A.3</b>	<b>Post traumatic wound infection, not elsewhere classified</b> Infection of skin and soft tissue secondary to trauma
<b>NF0A.4</b>	<b>Traumatic shock, not elsewhere classified</b>
	<p><b><i>Exclusions:</i></b></p> <p style="margin-left: 20px;">obstetric shock (JB0D.1)</p> <p style="margin-left: 20px;">nontraumatic shock NEC (MG40)</p> <p style="margin-left: 20px;">Shock following abortion, ectopic or molar pregnancy (JA05.3)</p> <p style="margin-left: 20px;">lightening shock (NF08.0)</p> <p style="margin-left: 20px;">electric shock (NF08.4)</p> <p style="margin-left: 20px;">anaphylactic shock NOS (4A84)</p> <p style="margin-left: 20px;">shock anaphylactic: due to: correct medicinal substance properly administered (4A84.1)</p> <p style="margin-left: 20px;">shock: anaphylactic: due to adverse food reaction (4A84.0)</p> <p style="margin-left: 20px;">anaphylactic due to serum (NE80.3)</p>
<b>NF0A.5</b>	<b>Traumatic anuria, not elsewhere classified</b>
	<p><b><i>Inclusions:</i></b></p> <p style="margin-left: 20px;">Crush syndrome</p> <p style="margin-left: 20px;">Renal failure following crushing</p>
<b>NF0A.6</b>	<b>Traumatic ischaemia of muscle, not elsewhere classified</b>
	<p><b><i>Inclusions:</i></b></p> <p style="margin-left: 20px;">Traumatic compartment syndrome</p> <p><b><i>Exclusions:</i></b></p> <p style="margin-left: 20px;">anterior tibial syndrome (FB54)</p>
<b>NF0A.7</b>	<b>Traumatic subcutaneous emphysema, not elsewhere classified</b>
	<p><b><i>Exclusions:</i></b></p> <p style="margin-left: 20px;">emphysema (subcutaneous) resulting from a procedure (NE81)</p>
<b>NF0A.Y</b>	<b>Other early complication of trauma, not elsewhere classified</b>
<b>NF0A.Z</b>	<b>Early complications of trauma, not elsewhere classified</b>
<b>NF0Y</b>	<b>Other specified effects of external causes</b>
<b>NF0Z</b>	<b>Unspecified effects of external causes</b>
<b>NF2Y</b>	<b>Other specified injury, poisoning or certain other consequences of external causes</b>
<b>NF2Z</b>	<b>Unspecified injury, poisoning or certain other consequences of external causes</b>

# CHAPTER 23

---

## External causes of morbidity or mortality

This chapter has 568 four-character categories.

Code range starts with PA00

The WHO definition of an 'injury' is: 'Injuries are caused by acute exposure to physical agents such as mechanical energy, heat, electricity, chemicals, and ionizing radiation interacting with the body in amounts or at rates that exceed the threshold of human tolerance. In some cases, (for example, drowning and frostbite), injuries result from the sudden lack of essential agents such as oxygen or heat. Injuries may be categorized in a number of ways. However, for most analytical purposes and for identifying intervention opportunities, it is especially useful to categorize injuries according to whether or not they were deliberately inflicted and by whom. Commonly used categories are:

- unintentional (i.e. accidental)
- intentional (i.e. deliberate):
- interpersonal (e.g. assault and homicide)
- self-harm (e.g. abuse of drugs and alcohol, self-mutilation, suicide)
- legal intervention (e.g. action by police or other law enforcement personnel)
- war, civil insurrection and disturbances (e.g. demonstrations and riots)
- undetermined intent

Regarding the collection of events that cause injuries, a set of definitions apply. See section 'Definition related to transport accidents'.

This chapter contains the following top level blocks:

- Unintentional causes
- Intentional self-harm
- Assault
- Undetermined intent
- Exposure to extreme forces of nature
- Maltreatment
- Legal intervention
- Armed conflict
- Causes of healthcare related harm or injury

Unintentional causes (PA00-PB6Z)

Unintentional transport injury event (PA00-PA5Z)

[Definitions in relation to transport injury events]  
(<https://icdcdn.who.int/icd11referenceguide/en/html/index.html#descriptions-related-to-transport-injury-events>)

**Unintentional land transport road traffic injury event (PA00-PA0Z)**

- PA00**      Unintentional land transport traffic event injuring a pedestrian
- PA01**      Unintentional land transport traffic event injuring the user of a pedestrian conveyance
- PA02**      Unintentional land transport traffic event injuring a pedal cyclist
- PA03**      Unintentional land transport traffic event injuring a motor cyclist
  - Exclusions:**      Unintentional land transport traffic event injuring an occupant of a low powered passenger vehicle (PA09)
- PA04**      Unintentional land transport traffic event injuring a car occupant
- PA05**      Unintentional land transport traffic event injuring an occupant of a bus or coach
- PA06**      Unintentional land transport traffic event injuring an occupant of a light goods vehicle
- PA07**      Unintentional land transport traffic event injuring an occupant of a heavy goods vehicle
- PA08**      Unintentional land transport traffic event injuring an occupant of a streetcar or tram
- PA09**      Unintentional land transport traffic event injuring an occupant of a low powered passenger vehicle
- PA0A**      Unintentional land transport traffic event injuring a user of a special vehicle mainly used in agriculture
- PA0B**      Unintentional land transport traffic event injuring a user of a special vehicle mainly used on industrial premises
- PA0C**      Unintentional land transport traffic event injuring a user of a special construction vehicle
- PA0D**      Unintentional land transport traffic event injuring a user of an all-terrain vehicle
- PA0E**      Unintentional land transport traffic event injuring a rider of an animal
- PA0F**      Unintentional land transport traffic event injuring an occupant of an animal-drawn vehicle
- PA0Y**      Unintentional land transport traffic event injuring a user of other specified land transport
- PA0Z**      Unintentional land transport traffic event injuring a user of unspecified land transport

Unintentional land transport off-road nontraffic injury event (PA10-PA1Z)

- PA10** Unintentional land transport nontraffic event injuring a pedestrian
- PA11** Unintentional land transport nontraffic event injuring the user of a pedestrian conveyance
- PA12** Unintentional land transport nontraffic event injuring a pedal cyclist
- PA13** Unintentional land transport nontraffic event injuring a motor cyclist
- PA14** Unintentional land transport nontraffic event injuring a car occupant
- PA15** Unintentional land transport nontraffic event injuring an occupant of a bus or coach
- PA16** Unintentional land transport nontraffic event injuring an occupant of a light goods vehicle
- PA17** Unintentional land transport nontraffic event injuring an occupant of a heavy goods vehicle
- PA18** Unintentional land transport nontraffic event injuring an occupant of a streetcar or tram
- PA19** Unintentional land transport nontraffic event injuring an occupant of a low powered passenger vehicle
- PA1A** Unintentional land transport nontraffic event injuring a user of a special vehicle mainly used in agriculture
- PA1B** Unintentional land transport nontraffic event injuring a user of a special vehicle mainly used on industrial premises
- PA1C** Unintentional land transport nontraffic event injuring a user of a special construction vehicle
- PA1D** Unintentional land transport nontraffic event injuring a user of an all-terrain vehicle
- PA1E** Unintentional land transport nontraffic event injuring a rider of an animal
- PA1F** Unintentional land transport nontraffic event injuring an occupant of an animal-drawn vehicle
- PA1Y** Unintentional land transport nontraffic event injuring a user of other specified land transport
- PA1Z** Unintentional land transport nontraffic event injuring a user of unknown or unspecified land transport

Unintentional land transport injury event unknown whether road traffic or off-road nontraffic (PA20-PA2Z)

- PA20** Unintentional land transport event unknown whether traffic or nontraffic injuring a pedestrian
- PA21** Unintentional land transport event unknown whether traffic or nontraffic injuring the user of a pedestrian conveyance
- PA22** Unintentional land transport event unknown whether traffic or nontraffic injuring a pedal cyclist
- PA23** Unintentional land transport event unknown whether traffic or nontraffic injuring a motor cyclist
- PA24** Unintentional land transport event unknown whether traffic or nontraffic injuring a car occupant
- PA25** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a bus or coach
- PA26** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a light goods vehicle
- PA27** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a heavy goods vehicle
- PA28** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a streetcar or tram
- PA29** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a low powered passenger vehicle
- PA2A** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a special vehicle mainly used in agriculture
- PA2B** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a special vehicle mainly used on industrial premises
- PA2C** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of a special construction vehicle
- PA2D** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of an all-terrain vehicle
- PA2E** Unintentional land transport event unknown whether traffic or nontraffic injuring a rider of an animal
- PA2F** Unintentional land transport event unknown whether traffic or nontraffic injuring an occupant of an animal-drawn vehicle
- PA2Y** Unintentional land transport injury event unknown whether traffic or nontraffic injuring a user of other specified transport

**PA2Z** Unintentional land transport injury event unknown whether traffic or nontraffic injuring a user of unspecified transport

Unintentional railway transport injury event (PA30-PA3Z)

**PA30** Unintentional railway transport injury event with collision or derailment

**PA31** Unintentional railway transport injury event without collision or derailment

**PA3Z** Unintentional railway transport injury event of unspecified type

Unintentional water transport injury event (PA40-PA4Z)

**PA40** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed

**PA40.0** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning

**PA40.1** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing other injury

**PA40.Z** Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing unspecified injury

**PA41** Unintentional water transport injury event with water vessel damaged, disabled or destroyed

**PA41.0** Unintentional water transport injury event with water vessel damaged, disabled or destroyed, causing submersion or drowning

*Inclusions:* drowning and submersion due to boat sinking

*Exclusions:* Unintentional water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning (PA40.0)

**PA41.Z** Unintentional water transport injury event with water vessel damaged, disabled or destroyed, causing unspecified injury

**PA4Z** Unintentional water transport injury event with damage to water vessel unspecified

**PA50** Unintentional air or space transport injury event

**PA50.0** Unintentional air or space transport injury event with aircraft or spacecraft not damaged, disabled or destroyed

**PA50.1** Unintentional air or space transport injury event with aircraft or spacecraft damaged, disabled or destroyed

**PA50.Z** Unintentional air or space transport injury event, unspecified

**PA5Y** Other specified unintentional transport injury event

**PA5Z**

**Unintentional transport injury event, unspecified**

Unintentional fall (PA60-PA6Z)

- Exclusions:**
- Fall in health care (PL14.E)
  - Tendency to fall (MB47.C)
  - Unintentional land transport traffic event injuring a rider of an animal (PA0E)
  - Fall from animal (PA1E)
  - Fall from burning building or structure (PB10)
  - Fall into fire (PB10-PB1Z)
  - Unintentional immersion, submersion or falling into water (PA90-PA9Z)
  - Fall into or from machinery (PB50-PB5B)
  - Fall from railway train or railway vehicle (PA31)

**PA60**

**Unintentional fall on the same level or from less than 1 metre**

- Exclusions:**
- Fall in health care (PL14.E)
  - Fall while in hospital (PL14.E)
  - Fall from hospital bed (PL14.E)

**PA61**

**Unintentional fall from a height of 1 metre or more**

- Exclusions:**
- Fall in health care (PL14.E)
  - Fall from animal (PA1E)

**PA6Z**

**Unintentional fall from unspecified height**

Unintentional contact with person, animal or plant (PA70-PA7Z)

**PA70**

**Unintentionally struck, kicked, or bumped by person**

**PA71**

**Unintentionally struck, kicked, or bumped by animal**

**PA72**

**Unintentionally stepped on or crushed by person**

**PA73**

**Unintentionally stepped on or crushed by animal**

**PA74**

**Unintentionally bitten by person**

**PA75**

**Unintentionally bitten by animal**

**PA76**

**Unintentionally scratched or clawed by person**

**PA77**

**Unintentionally scratched or clawed by animal**

**PA78**

**Unintentionally stung or envenomated by animal**

**PA79**

**Unintentionally injured by contact with plant**

<b>PA7Y</b>	<b>Other specified type of unintentional contact with person, animal or plant</b>
<b>PA7Z</b>	<b>Unintentional contact with person, animal or plant, type unspecified</b>

Unintentional exposure to object, not elsewhere classified (PA80-PA8Z)

**Exclusions:** Intentional self-harm by exposure to object, not elsewhere classified (PC50-PC5Z)

Assault by exposure to object not elsewhere classified (PE20-PE4Z)

Unintentional contact with person, animal or plant (PA70-PA7Z)

<b>PA80</b>	<b>Unintentionally struck by projectile from firearm</b>
-------------	--

**PA80.0** **Unintentionally struck by projectile from handgun**

**Inclusions:** gun for single hand use

**PA80.1** **Unintentionally struck by projectile from rifle, shotgun or larger firearm**

**PA80.2** **Unintentional exposure to other and unspecified firearm**

**Inclusions:** shot NOS

<b>PA81</b>	<b>Unintentionally struck by moving object</b>
-------------	--

<b>PA82</b>	<b>Unintentional striking against stationary object</b>
-------------	---

<b>PA83</b>	<b>Unintentionally cut or pierced by sharp object</b>
-------------	---

**PA83.0** Unintentionally cut or pierced by knife, sword, or dagger

**PA83.1** Unintentionally cut or pierced by sharp glass

**PA83.2** Unintentionally cut or pierced by other or unspecified sharp object

<b>PA84</b>	<b>Unintentionally struck by blunt object</b>
-------------	---

<b>PA85</b>	<b>Unintentionally caught, crushed, jammed or pinched between objects</b>
-------------	---

<b>PA8Y</b>	<b>Unintentional exposure to other specified object, not elsewhere classified</b>
-------------	---

<b>PA8Z</b>	<b>Unintentional exposure to object, unspecified</b>
-------------	--

Unintentional immersion, submersion or falling into water (PA90-PA9Z)

<b>PA90</b>	<b>Unintentional drowning or submersion, while in body of water</b>
-------------	---

<b>PA91</b>	<b>Unintentional drowning or submersion, following fall into body of water</b>
-------------	--

<b>PA92</b>	<b>Unintentional injury other than drowning following fall into body of water</b>
-------------	---

**PA9Z**      **Unintentional immersion, submersion or falling into water, unspecified**

Unintentional threat to breathing (PB00-PB0Z)

- PB00**      **Unintentional threat to breathing by suffocation from object covering mouth or nose**
- PB01**      **Unintentional threat to breathing by hanging**
- PB02**      **Unintentional threat to breathing by strangulation**
- PB03**      **Unintentional threat to breathing by external compression of airways or chest**
  - Exclusions:***      Unintentional threat to breathing by hanging (PB01)  
                          Unintentional threat to breathing by strangulation (PB02)
- PB04**      **Unintentional threat to breathing by inhalation or ingestion of gastric contents**
- PB05**      **Unintentional threat to breathing by inhalation or ingestion of liquids**
- PB06**      **Unintentional threat to breathing by inhalation or ingestion of food**
- PB07**      **Unintentional threat to breathing by inhalation or ingestion of other objects or materials**
- PB08**      **Unintentional threat to breathing from low oxygen environment**
- PB0Y**      **Unintentional threat to breathing by other specified means**
- PB0Z**      **Unintentional threat to breathing by unspecified means**

Unintentional exposure to thermal mechanism (PB10-PB1Z)

- PB10**      **Unintentional exposure to uncontrolled fire**
- PB11**      **Unintentional exposure to controlled fire**
- PB12**      **Unintentional exposure to ignition or melting of material**
- PB13**      **Unintentional contact with hot object or liquid**
- PB14**      **Unintentional exposure to steam, hot vapour, air or gases**
- PB15**      **Unintentional exposure to excessive heat**
- PB16**      **Unintentional exposure to excessive cold**
- PB1Y**      **Unintentional exposure to other specified thermal mechanism**
- PB1Z**      **Unintentional exposure to unspecified thermal mechanism**

Unintentional exposure to or harmful effects of substances (PB20-PB36)

Unintentional harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

Unintentional exposure to or harmful effects of drugs, medicaments or biological substances (PB20-PB29)

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

**PB20      Unintentional exposure to or harmful effects of opioids or related analgesics**

**Inclusions:** accidental overdose of opioids or related analgesics

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB21      Unintentional exposure to or harmful effects of sedative hypnotic drugs or other CNS depressants**

**Inclusions:** accidental overdose by sedative hypnotic drugs or other CNS depressants

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB22      Unintentional exposure to or harmful effects of psychostimulants**

**Inclusions:** accidental overdose of psychostimulants

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB23      Unintentional exposure to or harmful effects of cannabinoids or hallucinogens**

**Inclusions:** accidental overdose of cannabinoids or hallucinogens

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB24      Unintentional exposure to or harmful effects of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs**

**Inclusions:** accidental overdose of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB25      Unintentional exposure to or harmful effects of antidepressants**

**Inclusions:** accidental overdose of antidepressants

**Exclusions:** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB26** **Unintentional exposure to or harmful effects of antipsychotics**

***Inclusions:*** accidental overdose of antipsychotics

***Exclusions:*** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB27** **Unintentional exposure to or harmful effects of antiepileptics or antiparkinsonism drugs**

***Inclusions:*** accidental overdose of antiepileptics or antiparkinsonism drugs

***Exclusions:*** Substances associated with injury or harm in therapeutic use  
(PL00-PL0Z)

**PB28** **Unintentional exposure to or harmful effects of other or unspecified drug, medicament or biological substance**

**PB29** **Unintentional exposure to or harmful effects of multiple drugs, medicaments or biological substances**

***Inclusions:*** accidental overdose of multiple drugs, medicaments or biological substances

Unintentional exposure to or harmful effects of substances chiefly nonmedicinal as to source (PB30-PB36)

- PB30 Unintentional exposure to or harmful effects of alcohols
- PB31 Unintentional exposure to or harmful effects of organic solvents
- PB32 Unintentional exposure to or harmful effects of carbon monoxide
- PB33 Unintentional exposure to or harmful effects of pesticides
- PB34 Unintentional exposure to or harmful effects of corrosive substances
- PB35 Unintentional exposure to or harmful effects of halogen derivatives of aliphatic or aromatic hydrocarbons
- PB36 Unintentional exposure to or harmful effects of other or unspecified substances chiefly nonmedicinal as to source

#### Unintentional exposure to other mechanism (PB50-PB5B)

- PB50** Unintentional exposure to foreign body in orifice
- PB51** Unintentional exposure to electric current
- PB52** Unintentional exposure to sunlight
- PB53** Unintentional exposure to radiation
- PB54** Unintentional exposure to high or low air pressure or changes in air pressure

<b>PB55</b>	<b>Unintentional exposure to explosion</b>
<b>PB55.0</b>	<b>Unintentional exposure to chemical explosion</b>
<b>PB55.1</b>	<b>Unintentional exposure to explosion or rupture of pressurised materials or object</b>
<b>PB55.Y</b>	<b>Other specified unintentional exposure to explosion</b>
<b>PB55.Z</b>	<b>Unintentional exposure to explosion, unspecified</b>
<b>PB56</b>	<b>Unintentional exposure to physical overexertion</b>
<b>PB57</b>	<b>Unintentional lack of food</b>
<b>PB58</b>	<b>Unintentional lack of water</b>
<b>PB59</b>	<b>Unintentional other specified privation</b>
<b>PB5A</b>	<b>Unintentional abandonment</b>
<b>PB5B</b>	<b>Unintentional neglect</b>
<hr/>	
<b>PB6Y</b>	<b>Other unintentional cause of morbidity or mortality</b>
<b>PB6Z</b>	<b>Unspecified unintentional cause of morbidity or mortality</b>

### Intentional self-harm (PB80-PD3Z)

Intentional self-harm by transport injury event (PB80-PC2Z)

<b>PB80</b>	<b>Intentional self-harm by land transport road traffic injury event</b>
<b>PB81</b>	<b>Intentional self-harm by land transport off-road nontraffic injury event</b>
<b>PB82</b>	<b>Intentional self-harm by land transport injury event unknown whether traffic or nontraffic</b>
<b>PB83</b>	<b>Intentional self-harm by railway transport injury event</b>

Intentional self-harm by water transport injury event (PB90-PB9Z)

<b>PB90</b>	<b>Intentional self-harm by water transport injury event with water vessel damaged, disabled or destroyed</b>
<b>PB91</b>	<b>Intentional self-harm by water transport injury event with water vessel not damaged, disabled or destroyed</b>
<b>PB91.0</b>	<b>Intentional self-harm by water transport injury event with water vessel not damaged, disabled or destroyed causing submersion or drowning</b>

- PB91.1      Intentional self-harm by water transport injury event with water vessel not damaged, disabled or destroyed causing other injury
- PB91.Z      Intentional self-harm by water transport injury event with water vessel not damaged, disabled or destroyed, unspecified
- PB9Z**      **Intentional self-harm by water transport injury event with damage to water vessel unspecified**

Intentional self-harm by air or space transport injury event (PC00-PC0Z)

- PC00**      **Intentional self-harm by air or space transport injury event with aircraft or spacecraft damaged, disabled or destroyed**
- PC01**      **Intentional self-harm by air or space transport injury event with aircraft or spacecraft not damaged, disabled or destroyed**
- PC0Z**      **Intentional self-harm by air or space transport injury event with damage to aircraft or spacecraft unspecified**
- PC2Y**      **Intentional self-harm by other specified transport injury event**
- PC2Z**      **Intentional self-harm by transport injury event, unspecified**

Intentional self-harm by fall or jump (PC30-PC3Z)

- Inclusions:*      intentional fall from one level to another
- PC30**      **Intentional self-harm by fall or jump on same level or from less than 1 metre**
  - PC31**      **Intentional self-harm by fall or jump from a height of 1 metre or more**
  - PC3Y**      **Other specified intentional self-harm by fall or jump**
  - PC3Z**      **Intentional self-harm by fall or jump, unspecified**

Intentional self-harm by contact with person, animal or plant (PC40-PC4Z)

- PC40**      **Intentional self-harm by being struck, kicked, or bumped by person**
- PC41**      **Intentional self-harm by being struck, kicked, or bumped by animal**
- PC42**      **Intentional self-harm by being stepped on or crushed by person**
- PC43**      **Intentional self-harm by being stepped on or crushed by animal**
- PC44**      **Intentional self-harm by being bitten by animal**
- PC45**      **Intentional self-harm by being scratched or clawed by person**
- PC46**      **Intentional self-harm by being scratched or clawed by animal**
- PC47**      **Intentional self-harm by being stung or envenomated by animal**

<b>PC48</b>	<b>Intentional self-harm by contact with plant</b>
<b>PC4Y</b>	<b>Other specified type of intentional self-harm by contact with person, animal or plant</b>
<b>PC4Z</b>	<b>Intentional self-harm by contact with person, animal or plant, type unspecified</b>
Intentional self-harm by exposure to object, not elsewhere classified (PC50-PC5Z)	
<b>PC50</b>	<b>Intentional self-harm by being struck by projectile from firearm</b>
<b>PC50.0</b>	<b>Intentional self-harm by projectile from handgun</b>
<b>PC50.1</b>	<b>Intentional self-harm by projectile from rifle, shotgun or larger firearm</b>
<b>PC50.Y</b>	<b>Other specified intentional self-harm by being struck by projectile from firearm</b>
<b>PC50.Z</b>	<b>Intentional self-harm by being struck by projectile from firearm, unspecified</b>
<b>PC51</b>	<b>Intentional self-harm by being struck by moving object, not elsewhere classified</b>
<b>PC52</b>	<b>Intentional self-harm by striking against stationary object</b>
<b>PC53</b>	<b>Intentional self-harm by being cut or pierced by sharp object</b>
<b>PC53.0</b>	<b>Intentional self-harm by being cut or pierced by knife, sword or dagger</b>
<b>PC53.1</b>	<b>Intentional self-harm by being cut or pierced by sharp glass</b>
<b>PC53.Y</b>	<b>Other specified intentional self-harm by being cut or pierced by sharp object</b>
<b>PC53.Z</b>	<b>Intentional self-harm by being cut or pierced by sharp object, unspecified</b>
<b>PC54</b>	<b>Intentional self-harm by being struck by blunt object</b>
<b>PC55</b>	<b>Intentional self-harm by being caught, crushed, jammed or pinched between objects</b>
<b>PC5Y</b>	<b>Intentional self harm by contact with other specified type of weapon</b>
<b>PC5Z</b>	<b>Intentional self harm by contact with weapon, type unspecified</b>

Intentional self-harm by immersion, submersion or falling into water (PC60-PC6Z)

<b>PC60</b>	<b>Intentional self-harm by drowning or submersion while in body of water</b>
<b>PC61</b>	<b>Intentional self-harm by drowning or submersion following fall into body of water</b>
<b>PC62</b>	<b>Intentional self-harm by injury other than drowning while in body of water</b>

**PC63** Intentional self-harm by injury other than drowning following fall into body of water

**PC6Z** Intentional self-harm by immersion, submersion or falling into water, unspecified

Intentional self-harm by threat to breathing (PC70-PC7Z)

**PC70** Intentional self-harm by threat to breathing by suffocation from object covering mouth or nose

**PC71** Intentional self-harm by threat to breathing by hanging

**PC72** Intentional self-harm by threat to breathing by strangulation

**PC73** Intentional self-harm by threat to breathing by external compression of airways or chest

**Exclusions:** Intentional self-harm by threat to breathing by hanging (PC71)  
Intentional self-harm by threat to breathing by strangulation (PC72)

**PC74** Intentional self-harm by inhalation or ingestion of gastric contents

**PC75** Intentional self-harm by threat to breathing by inhalation or ingestion of liquids

**PC76** Intentional self-harm by threat to breathing by inhalation or ingestion of food

**PC77** Intentional self-harm by threat to breathing by inhalation or ingestion of other objects or materials

**PC78** Intentional self-harm by threat to breathing from low oxygen environment

**PC7Y** Other specified intentional self-harm by threat to breathing

**PC7Z** Intentional self-harm by threat to breathing, unspecified

Intentional self-harm by exposure to thermal mechanism (PC80-PC8Z)

**PC80** Intentional self-harm by exposure to controlled fire

**PC81** Intentional self-harm by exposure to uncontrolled fire

**PC82** Intentional self-harm by exposure to ignition or melting of material

**PC83** Intentional self-harm by contact with hot object or liquid

**PC84** Intentional self-harm by exposure to steam, hot vapour, air or gases

**PC85** Intentional self-harm by exposure to excessive heat

**PC86** Intentional self-harm by exposure to excessive cold

- PC8Y**      **Intentional self-harm by exposure to other specified thermal mechanism**
- PC8Z**      **Intentional self-harm by exposure to unspecified thermal mechanism**

Intentional self-harm by exposure to or harmful effects of substances (PC90-PD05)

Intentional self harm by harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

Use additional extension code, if desired, to identify substance.

**Exclusions:**      Substances associated with injury or harm with therapeutic intent (PL00-PL0Z)

Intentional self-harm by exposure to or harmful effects of drugs, medicaments or biological substances (PC90-PC99)

- PC90**      **Intentional self-harm by exposure to or harmful effects of opioids or related analgesics**
- PC91**      **Intentional self-harm by exposure to or harmful effects of sedative hypnotic drugs or other CNS depressants**
- PC92**      **Intentional self-harm by exposure to or harmful effects of psychostimulants**
- PC93**      **Intentional self-harm by exposure to or harmful effects of cannabinoids or hallucinogens**
- PC94**      **Intentional self-harm by exposure to or harmful effects of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs**
- PC95**      **Intentional self-harm by exposure to or harmful effects of antidepressants**
- PC96**      **Intentional self-harm by exposure to or harmful effects of antipsychotics**
- PC97**      **Intentional self-harm by exposure to or harmful effects of antiepileptics or antiparkinsonism drugs**
- PC98**      **Intentional self-harm by exposure to other and unspecified drug, medicament and biological substance**
- PC99**      **Intentional self-harm by exposure to or harmful effects of multiple drugs, medicaments or biological substances**

Intentional self-harm by exposure to or harmful effects of substances chiefly nonmedicinal as to source (PD00-PD05)

- PD00**      **Intentional self-harm by exposure to or harmful effects of alcohols**

- PD01** Intentional self-harm by exposure to or harmful effects of organic solvents
- PD02** Intentional self-harm by exposure to or harmful effects of carbon monoxide
- PD03** Intentional self-harm by exposure to or harmful effects of pesticides
- PD04** Intentional self-harm by exposure to or harmful effects of corrosive substances
- PD05** Intentional self-harm by exposure to or harmful effects of other or unspecified substances chiefly nonmedicinal as to source

Intentional self-harm by exposure to other mechanism (PD20-PD29)

- PD20** Intentional self-harm by foreign body in orifice
- PD21** Intentional self-harm by exposure to electric current
- PD22** Intentional self-harm by exposure to sunlight
- PD23** Intentional self-harm by exposure to radiation
- PD24** Intentional self-harm by exposure to high or low air pressure or changes in air pressure
- PD25** Intentional self-harm by explosion or rupture of pressurised materials or object
- PD26** Intentional self-harm by physical overexertion
- PD27** Intentional self-harm by lack of food
- PD28** Intentional self-harm by lack of water
- PD29** Intentional self-harm by other specified privation

- 
- PD3Y** Other specified intentional self-harm
  - PD3Z** Intentional self-harm, unspecified

Assault (PD50-PF2Z)

Assault by transport events (PD50-PD9Z)

- PD50** Assault by land transport road traffic injury event
- PD51** Assault by land transport off-road nontraffic injury event
- PD52** Assault by land transport injury event unknown whether road traffic or off-road nontraffic

**PD53**      **Assault by railway transport injury event**

Assault by water transport injury event (PD60-PD6Z)

- PD60**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed**
- PD60.0**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing submersion or drowning**
- PD60.1**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing other injury**
- PD60.Z**      **Assault by water transport injury event with water vessel damaged, disabled or destroyed, causing unspecified injury**
- PD61**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed**
- PD61.0**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing submersion or drowning**
- PD61.1**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing other injury**
- PD61.Y**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, causing unspecified injury**
- PD61.Z**      **Assault by water transport injury event with water vessel not damaged, disabled or destroyed, unspecified**
- PD6Z**      **Assault by water transport injury event with damage to water vessel unspecified**

Assault by air or space transport injury event (PD70-PD7Z)

- PD70**      **Assault by air or space transport injury event with aircraft or spacecraft damaged, disabled or destroyed**
- PD71**      **Assault by air or space transport injury event with aircraft or spacecraft not damaged, disabled or destroyed**
- PD7Z**      **Assault by air or space transport injury event with damage to aircraft or spacecraft unspecified**
- PD9Y**      **Other specified assault by transport injury event**
- PD9Z**      **Assault by transport injury event, unspecified**

Assault by causing a fall or jump (PE00-PE0Z)

- PE00**      **Assault by causing a fall or jump on same level or from less than 1 metre**

**PE01**      **Assault by causing a fall or jump from a height of 1 metre or more**

**PE0Z**      **Assault by causing a fall or jump from unspecified height**

Assault by contact with person, animal or plant (PE10-PE1Z)

**PE10**      **Assault by being struck, kicked or bumped by person**

**PE11**      **Assault by being struck, kicked or bumped by animal**

**PE12**      **Assault by being crushed or stepped on by person**

**PE13**      **Assault by being crushed or stepped on by animal**

**PE14**      **Assault by being bitten by person**

**PE15**      **Assault by being bitten by animal**

**PE16**      **Assault by being scratched or clawed by person**

**PE17**      **Assault by being scratched or clawed by animal**

**PE18**      **Assault by being stung or envenomated by animal**

**PE19**      **Assault by contact with plant**

**PE1Y**      **Other specified type of assault by contact with person, animal or plant**

**PE1Z**      **Assault by contact with person, animal or plant, type unspecified**

Assault by exposure to object not elsewhere classified (PE20-PE4Z)

**PE20**      **Assault by projectile from firearm**

**PE20.0**      **Assault by projectile from handgun**

**PE20.1**      **Assault by projectile from rifle, shotgun or larger firearm**

**PE20.Y**      **Assault by being struck by projectile from other specified firearm**

**PE20.Z**      **Assault by being struck by projectile from unspecified firearm**

**PE21**      **Assault by being struck by moving object, not elsewhere classified**

**PE22**      **Assault by striking against stationary object**

Assault by being cut or pierced by sharp object (PE30-PE3Z)

**Inclusions:**      assault by being stabbed NOS

**PE30**      **Assault by being cut or pierced by knife, sword, or dagger**

**PE31**      **Assault by being cut or pierced by sharp glass**

**PE3Z**      **Assault by being cut or pierced by other or unspecified sharp object**

- PE40      Assault by being struck by blunt object**
- PE41      Assault by being caught, crushed, jammed or pinched between objects**
- PE4Y      Assault by contact with other specified object, not elsewhere classified**
- PE4Z      Assault by exposure to unspecified object, not elsewhere classified**

Assault by immersion, submersion or falling into water (PE50-PE52)

- PE50      Assault by drowning or submersion, while in body of water**
- PE51      Assault by drowning or submersion following fall into body of water**
- PE52      Assault by injury other than drowning while in body of water**
- PE53      Assault by injury other than drowning following fall into body of water**
- PE5Y      Other specified assault by immersion, submersion or falling into water**
- PE5Z      Assault by immersion, submersion or falling into water, unspecified**

## Assault by threat to breathing (PE60-PE6Z)

- PE60      Assault by threat to breathing, suffocation from object covering mouth or nose**
- PE61      Assault by threat to breathing by hanging**
- PE62      Assault by threat to breathing by strangulation**
- PE63      Assault by threat to breathing by external compression of airways or chest**
  - Exclusions:***      Assault by threat to breathing by hanging (PE61)
  - Assault by threat to breathing by strangulation (PE62)
- PE64      Assault by threat to breathing by inhalation or ingestion of liquids**
- PE65      Assault by threat to breathing by inhalation or ingestion of food**
- PE66      Assault by threat to breathing by inhalation or ingestion of other objects or materials**
- PE67      Assault by threat to breathing by low oxygen environment**
- PE6Y      Other specified assault by threat to breathing**
- PE6Z      Assault by threat to breathing, unspecified**

## Assault by exposure to thermal mechanism (PE70-PE7Z)

**PE70**      **Assault by exposure to uncontrolled fire**

<b>PE71</b>	<b>Assault by exposure to controlled fire</b>
<b>PE72</b>	<b>Assault by exposure to ignition or melting of materials</b>
<b>PE73</b>	<b>Assault by contact with hot object or liquid</b>
<b>PE74</b>	<b>Assault by contact with steam, hot vapour, air or gases</b>
<b>PE75</b>	<b>Assault by exposure to excessive heat</b>
<b>PE76</b>	<b>Assault by exposure to excessive cold</b>
<b>PE7Y</b>	<b>Assault by exposure to other specified thermal mechanism</b>
<b>PE7Z</b>	<b>Assault by exposure to unspecified thermal mechanism</b>

Assault by exposure to or harmful effects of substances (PE80-PE95)

Assault by harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

Use additional extension code, if desired, to identify substance.

**Exclusions:** Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

Assault by exposure to or harmful effects of drugs, medicaments or biological substances (PE80-PE8Z)

**Inclusions:**

- homicidal poisoning by (any) biological substance
- homicidal poisoning by (any) drug
- homicidal poisoning by (any) medicament

<b>PE80</b>	<b>Assault by exposure to or harmful effects of opioids or related analgesics</b>
<b>PE81</b>	<b>Assault by exposure to or harmful effects of sedative, hypnotic drugs or other CNS depressants</b>
<b>PE82</b>	<b>Assault by exposure to or harmful effects of psychostimulants</b>
<b>PE83</b>	<b>Assault by exposure to or harmful effects of cannabinoids or hallucinogens</b>
<b>PE84</b>	<b>Assault by exposure to or harmful effects of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs</b>
<b>PE85</b>	<b>Assault by exposure to or harmful effects of antidepressants</b>
<b>PE86</b>	<b>Assault by exposure to or harmful effects of antipsychotics</b>
<b>PE87</b>	<b>Assault by exposure to or harmful effects of antiepileptics or antiparkinsonism drugs</b>

- PE88**      **Assault by exposure to or harmful effects of other or unspecified drug, medicament or biological substance**
- PE89**      **Assault by exposure to or harmful effects of multiple drugs, medicaments or biological substances**
- PE8Y**      **Other specified assault by exposure to or harmful effects of drugs, medicaments or biological substances**
- PE8Z**      **Assault by exposure to or harmful effects of drugs, medicaments or biological substances, unspecified**

Assault by exposure to or harmful effects of substances chiefly nonmedicinal as to source (PE90-PE95)

- PE90**      **Assault by exposure to or harmful effects of alcohols**
- PE91**      **Assault by exposure to or harmful effects of organic solvents**
- PE92**      **Assault by exposure to or harmful effects of carbon monoxide**
- PE93**      **Assault by exposure to or harmful effects of pesticides**
- PE94**      **Assault by exposure to or harmful effects of corrosive substances**
- PE95**      **Assault by exposure to or harmful effects of other or unspecified substances chiefly nonmedicinal as to source**

Assault by exposure to other mechanism (PF10-PF1B)

- PF10**      **Assault by foreign body in orifice or eye**
- PF11**      **Assault by exposure to electric current**
- PF12**      **Assault by exposure to sunlight**
- PF13**      **Assault by exposure to radiation**
- PF14**      **Assault by exposure to high or low air pressure or changes in air pressure**
- PF15**      **Assault by exposure to explosion**
- PF15.0**      **Assault by exposure to chemical explosion**
- PF15.1**      **Assault by explosion or rupture of materials or object**
- PF15.Y**      **Other specified assault by exposure to explosion**
- PF15.Z**      **Assault by exposure to explosion, unspecified**
- PF16**      **Assault by physical overexertion**
- PF17**      **Assault by lack of food**

<b>PF18</b>	<b>Assault by lack of water</b>
<b>PF19</b>	<b>Assault by other specified privation</b>
<b>PF1A</b>	<b>Assault by abandonment</b>
<b>PF1B</b>	<b>Assault by neglect</b>
<hr/>	
<b>PF2Y</b>	<b>Other specified assault</b>
<b>PF2Z</b>	<b>Assault, unspecified</b>

### Undetermined intent (PF40-PH8Z)

Transport injury event of undetermined intent (PF40-PG4Z)

Land transport road traffic injury event of undetermined intent (PF40-PF4Z)

<b>PF40</b>	<b>Land transport traffic injury event of undetermined intent injuring a pedestrian</b>
<b>PF41</b>	<b>Land transport traffic injury event of undetermined intent injuring the user of a pedestrian conveyance</b>
<b>PF42</b>	<b>Land transport traffic injury event of undetermined intent injuring a pedal cyclist</b>
<b>PF43</b>	<b>Land transport traffic injury event of undetermined intent injuring a motor cyclist</b>
<b>PF44</b>	<b>Land transport traffic injury event of undetermined intent injuring a car occupant</b>
<b>PF45</b>	<b>Land transport traffic injury event of undetermined intent injuring a bus or coach occupant</b>
<b>PF46</b>	<b>Land transport traffic injury event of undetermined intent injuring an occupant of light goods vehicle</b>
<b>PF47</b>	<b>Land transport traffic injury event of undetermined intent injuring an occupant of heavy goods vehicle</b>
<b>PF48</b>	<b>Land transport traffic injury event of undetermined intent injuring an occupant of a streetcar or tram</b>
<b>PF49</b>	<b>Land transport traffic injury event of undetermined intent injuring an occupant of a low powered passenger vehicle</b>
<b>PF4A</b>	<b>Land transport traffic injury event of undetermined intent injuring a user of a special vehicle mainly used in agriculture</b>

- PF4B** Land transport traffic injury event of undetermined intent injuring a user of a special vehicle mainly used on industrial premises
- PF4C** Land transport traffic injury event of undetermined intent injuring a user of a special construction vehicle
- PF4D** Land transport traffic injury event of undetermined intent injuring a user of an all-terrain vehicle
- PF4E** Land transport traffic injury event of undetermined intent injuring a rider of an animal
- PF4F** Land transport traffic injury event of undetermined intent injuring an occupant of an animal-drawn vehicle
- PF4Y** Land transport traffic injury event of undetermined intent injuring a user of other specified land transport
- PF4Z** Land transport traffic injury event of undetermined intent injuring a user of unknown or unspecified land transport

Land transport off-road nontraffic injury event of undetermined intent (PF50-PF5Z)

- PF50** Land transport nontraffic injury event of undetermined intent injuring a pedestrian
- PF51** Land transport nontraffic injury event of undetermined intent injuring the user of a pedestrian conveyance
- PF52** Land transport nontraffic injury event of undetermined intent injuring a pedal cyclist
- PF53** Land transport nontraffic injury event of undetermined intent injuring a motor cyclist
- PF54** Land transport nontraffic injury event of undetermined intent injuring a car occupant
- PF55** Land transport nontraffic injury event of undetermined intent injuring a bus or coach occupant
- PF56** Land transport nontraffic injury event of undetermined intent injuring an occupant of light goods vehicle
- PF57** Land transport nontraffic injury event of undetermined intent injuring an occupant of heavy goods vehicle
- PF58** Land transport nontraffic injury event of undetermined intent injuring an occupant of a streetcar or tram
- PF59** Land transport nontraffic injury event of undetermined intent injuring an occupant of a low powered passenger vehicle
- PF5A** Land transport nontraffic injury event of undetermined intent injuring a user of a special vehicle mainly used in agriculture

- PF5B** Land transport nontraffic injury event of undetermined intent injuring a user of a special vehicle mainly used on industrial premises
- PF5C** Land transport nontraffic injury event of undetermined intent injuring a user of a special construction vehicle
- PF5D** Land transport nontraffic injury event of undetermined intent injuring a user of an all-terrain vehicle
- PF5E** Land transport nontraffic injury event of undetermined intent injuring a rider of an animal
- PF5F** Land transport nontraffic injury event of undetermined intent injuring an occupant of an animal-drawn vehicle
- PF5Y** Land transport nontraffic injury event of undetermined intent injuring a user of other specified land transport
- PF5Z** Land transport nontraffic injury event of undetermined intent injuring a user of unknown or unspecified land transport

Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic (PF60-PF6Z)

- PF60** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a pedestrian
- PF61** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring the user of a pedestrian conveyance
- PF62** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a pedal cyclist
- PF63** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a motor cyclist
- PF64** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a car occupant
- PF65** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a bus or coach occupant
- PF66** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring an occupant of light goods vehicle
- PF67** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring an occupant of heavy goods vehicle
- PF68** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring an occupant of a streetcar or tram

- PF69** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring an occupant of a low powered passenger vehicle
- PF6A** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of a special vehicle mainly used in agriculture
- PF6B** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of a special vehicle mainly used on industrial premises
- PF6C** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of a special construction vehicle
- PF6D** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of an all-terrain vehicle
- PF6E** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a rider of an animal
- PF6F** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring an occupant of an animal-drawn vehicle
- PF6Y** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of an other specified vehicle
- PF6Z** Land transport injury event of undetermined intent, unknown whether road traffic or off-road nontraffic injuring a user of an unknown or unspecified vehicle

#### Railway transport injury event of undetermined intent (PF70-PF7Z)

- PF70** Railway transport injury event of undetermined intent with collision or derailment
- PF71** Railway transport injury event of undetermined intent without collision or derailment
- PF7Z** Railway transport injury event of undetermined intent of unspecified type

#### Water transport injury event of undetermined intent (PF80-PG1Z)

Water transport injury event of undetermined intent with water vessel damaged, disabled or destroyed (PF80-PF8Z)

- PF80** Water transport injury event of undetermined intent with water vessel damaged, disabled or destroyed causing submersion or drowning

**PF8Y** **Water transport injury event of undetermined intent with water vessel damaged, disabled or destroyed causing other injury**

**PF8Z** **Water transport injury event of undetermined intent with water vessel damaged, disabled or destroyed causing unspecified injury**

Water transport injury event of undetermined intent with water vessel not damaged, disabled or destroyed (PF90-PF9Z)

**PF90** **Water transport injury event of undetermined intent with water vessel not damaged, disabled or destroyed causing submersion or drowning**

**PF9Y** **Water transport injury event of undetermined intent with water vessel not damaged, disabled or destroyed causing other injury**

**PF9Z** **Water transport injury event of undetermined intent with water vessel not damaged, disabled or destroyed causing unspecified injury**

---

**PG1Z** **Water transport injury event of undetermined intent, damage to water vessel unspecified**

Air or space transport injury event of undetermined intent (PG20-PG2Z)

**PG20** **Air or space transport injury event of undetermined intent with aircraft or spacecraft damaged, disabled or destroyed**

**PG21** **Air or space transport injury event of undetermined intent with aircraft or spacecraft not damaged, disabled or destroyed**

**PG2Z** **Air or space transport event injury of undetermined intent, damage to aircraft or spacecraft unspecified**

---

**PG4Y** **Other specified transport injury event of undetermined intent**

**PG4Z** **Unspecified transport injury event of undetermined intent**

Fall or jump with undetermined intent (PG50-PG5Z)

**PG50** **Fall or jump of undetermined intent on the same level or from less than 1 metre**

**PG51** **Fall or jump of undetermined intent from a height of 1 metre or more**

**PG5Z** **Fall or jump of undetermined intent, height unspecified**

Contact with person, animal or plant with undetermined intent (PG60-PG6Z)

**PG60** **Struck, kicked, or bumped with undetermined intent by person**

<b>PG61</b>	<b>Struck, kicked, or bumped with undetermined intent by animal</b>
<b>PG62</b>	<b>Stepped on or crushed with undetermined intent by person</b>
<b>PG63</b>	<b>Stepped on or crushed with undetermined intent by animal</b>
<b>PG64</b>	<b>Bitten with undetermined intent by person</b>
<b>PG65</b>	<b>Bitten with undetermined intent by animal</b>
<b>PG66</b>	<b>Scratched or clawed with undetermined intent by person</b>
<b>PG67</b>	<b>Scratched or clawed with undetermined intent by animal</b>
<b>PG68</b>	<b>Stung or envenomated with undetermined intent by animal</b>
<b>PG69</b>	<b>Contact with plant of undetermined intent</b>
<b>PG6Y</b>	<b>Other specified type of contact with person, animal or plant of undetermined intent</b>
<b>PG6Z</b>	<b>Unspecified type of contact with person, animal or plant of undetermined intent</b>

Contact with object, not elsewhere classified with undetermined intent (PG70-PH0Z)

Struck by projectile from firearm of undetermined intent (PG70-PG7Z)

<b>PG70</b>	<b>Struck by projectile from handgun of undetermined intent</b>
<b>PG71</b>	<b>Struck by projectile from rifle, shotgun or larger firearm of undetermined intent</b>
<b>PG7Z</b>	<b>Struck by projectile from other and unspecified firearm with unknown intent</b>
<b>PG80</b>	<b>Struck by moving object, not elsewhere classified of undetermined intent</b>
<b>PG81</b>	<b>Striking against stationary object of undetermined intent</b>

Cut or pierced by sharp object of undetermined intent (PG90-PG9Z)

<b>PG90</b>	<b>Cut or pierced by knife, sword or dagger of undetermined intent</b>
<b>PG91</b>	<b>Cut or pierced by sharp glass of undetermined intent</b>
<b>PG9Z</b>	<b>Cut or pierced by other or unspecified sharp object, undetermined intent</b>
<b>PH00</b>	<b>Struck by blunt object with undetermined intent</b>

- PH01** Caught, crushed, jammed or pinched between objects with undetermined intent
  - PH0Y** Contact with other specified object, not elsewhere classified with undetermined intent
  - PH0Z** Exposure to unspecified object, not elsewhere classified, undetermined intent
- Immersion, submersion or falling into water with undetermined intent (PH10-PH1Z)
- PH10** Drowning or submersion while in body of water with undetermined intent
  - PH11** Drowning or submersion following fall into body of water with undetermined intent
  - PH12** Injury other than drowning while in body of water with undetermined intent
  - PH13** Injury other than drowning following fall into body of water with undetermined intent
  - PH1Z** Immersion, submersion or falling into water with undetermined intent, unspecified

Threat to breathing with undetermined intent (PH20-PH2Z)

- PH20** Threat to breathing by suffocation from object covering mouth or nose with undetermined intent
- PH21** Threat to breathing by hanging with undetermined intent
- PH22** Threat to breathing by strangulation with undetermined intent
- PH23** Threat to breathing by external compression of airways or chest with undetermined intent
 

**Exclusions:**

  - Threat to breathing by hanging with undetermined intent (PH21)
  - Threat to breathing by strangulation with undetermined intent (PH22)
- PH24** Threat to breathing by inhalation or ingestion of liquids with undetermined intent
- PH25** Threat to breathing by inhalation or ingestion of food with undetermined intent
- PH26** Threat to breathing by inhalation or ingestion of other objects or materials with undetermined intent
- PH27** Threat to breathing by low oxygen environment with undetermined intent

**PH2Y**      Other specified threat to breathing with undetermined intent

**PH2Z**      Threat to breathing with undetermined intent, unspecified

Exposure to thermal mechanism with undetermined intent (PH30-PH3Z)

**PH30**      Exposure to uncontrolled fire with undetermined intent

**PH31**      Exposure to controlled fire with undetermined intent

**PH32**      Exposure to ignition or melting of materials with undetermined intent

**PH33**      Contact with hot object or liquid with undetermined intent

**PH34**      Contact with steam, hot vapour, air or gases with undetermined intent

**PH35**      Exposure to excessive heat with undetermined intent

**PH36**      Exposure to excessive cold with undetermined intent

**PH3Y**      Exposure to other specified thermal mechanism with undetermined intent

**PH3Z**      Exposure to unspecified thermal mechanism with undetermined intent

Exposure to or harmful effects of substances, undetermined intent (PH40-PH56)

Undetermined intent of harmful effects of and exposure to noxious substances that occur outside of a therapeutic use context.

**Exclusions:**      Substances associated with injury or harm in therapeutic use (PL00-PL0Z)

Exposure to or harmful effects of undetermined intent of drugs, medicaments or biological substances (PH40-PH49)

**PH40**      Exposure to or harmful effects of undetermined intent of opioids or related analgesics

**PH41**      Exposure to or harmful effects of undetermined intent of sedative hypnotic drugs or other CNS depressants

**PH42**      Exposure to or harmful effects of undetermined intent of psychostimulants

**PH43**      Exposure to or harmful effects of undetermined intent of cannabinoids or hallucinogens

**PH44**      Exposure to or harmful effects of undetermined intent of analgesics, antipyretics or nonsteroidal anti-inflammatory drugs

**PH45**      Exposure to or harmful effects of undetermined intent of antidepressants

- PH46**      **Exposure to or harmful effects of undetermined intent of antipsychotics**
- PH47**      **Exposure to or harmful effects of undetermined intent of antiepileptics or antiparkinsonism drugs**
- PH47.0**      **Harmful effects of or exposure to mixed antiepileptics, not elsewhere classified, undetermined intent**
- PH47.Z**      **Undetermined intent: Harmful effects of and exposure to noxious substances: Drugs, medicaments or biological substances: Unspecified antiepileptics or antiparkinsonism drugs**
- PH48**      **Exposure to or harmful effects of undetermined intent of other or unspecified drugs, medicaments or biological substances**
- PH49**      **Exposure to or harmful effects of undetermined intent of multiple drugs, medicaments or biological substances**

Exposure to or harmful effects of undetermined intent of substances chiefly nonmedicinal as to source (PH50-PH56)

- PH50**      **Exposure to or harmful effects of undetermined intent of alcohols**
- PH51**      **Exposure to or harmful effects of undetermined intent of organic solvents**
- PH52**      **Exposure to or harmful effects of undetermined intent of carbon monoxide**
- PH53**      **Exposure to or harmful effects of undetermined intent of pesticides**
- PH54**      **Exposure to or harmful effects of undetermined intent of corrosive substances**
- PH55**      **Exposure to or harmful effects of undetermined intent of halogen derivatives of aliphatic or aromatic hydrocarbons**
- PH56**      **Exposure to or harmful effects of undetermined intent of other or unspecified substances chiefly nonmedicinal as to source**

Exposure to other mechanism with undetermined intent (PH70-PH7B)

- PH70**      **Exposure to foreign body in orifice or eye with undetermined intent**
- PH71**      **Exposure to electric current with undetermined intent**
- PH72**      **Exposure to sunlight with undetermined intent**
- PH73**      **Exposure to radiation with undetermined intent**
- PH74**      **Exposure to high or low air pressure or changes in air pressure with undetermined intent**

<b>PH75</b>	<b>Exposure to explosion with undetermined intent</b>
<b>PH75.0</b>	<b>Exposure to chemical explosion with undetermined intent</b>
<b>PH75.1</b>	<b>Exposure to explosion or rupture of pressurised materials or object with undetermined intent</b>
<b>PH75.Y</b>	<b>Other specified exposure to explosion with undetermined intent</b>
<b>PH75.Z</b>	<b>Exposure to explosion with undetermined intent, unspecified</b>
<b>PH76</b>	<b>Physical overexertion with undetermined intent</b>
<b>PH77</b>	<b>Lack of food with undetermined intent</b>
<b>PH78</b>	<b>Lack of water with undetermined intent</b>
<b>PH79</b>	<b>Other specified privation with undetermined intent</b>
<b>PH7A</b>	<b>Abandonment with undetermined intent</b>
<b>PH7B</b>	<b>Neglect with undetermined intent</b>
<hr/>	
<b>PH8Y</b>	<b>Other specified injury event of undetermined intent</b>
<b>PH8Z</b>	<b>Unspecified injury event of undetermined intent</b>

**Exposure to extreme forces of nature (PJ00-PJ0Z)**

<b>PJ00</b>	<b>Victim of lightning</b>
<b>PJ01</b>	<b>Victim of earthquake</b>
<b>PJ02</b>	<b>Victim of cataclysmic earth movements caused by earthquake</b>
<b>PJ03</b>	<b>Victim of tsunami</b>
<b>PJ04</b>	<b>Victim of volcanic eruption</b>
<b>PJ05</b>	<b>Victim of avalanche, landslide or other earth movements</b>
<b>PJ06</b>	<b>Victim of cataclysmic storm</b>
<b>PJ07</b>	<b>Victim of flood</b>
<b>PJ0Y</b>	<b>Exposure to other specified forces of nature</b>
<b>PJ0Z</b>	<b>Exposure to unspecified forces of nature</b>

## Maltreatment (PJ20-PJ2Z)

Non-accidental acts of physical force, forced or coerced sexual acts, verbal or symbolic acts, or significant caregiving omissions that result in harm or have a reasonable potential for harm. These categories are applied to the victim of the maltreatment, not the perpetrator.

**PJ20**

### **Physical maltreatment**

Non-accidental acts of physical force that result, or have reasonable potential to result, in physical harm or that evoke significant fear. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ21**

### **Sexual maltreatment**

In adults, forced or coerced sexual acts or sexual acts with someone who is unable to consent; in children, sexual acts involving a child that are intended to provide sexual gratification to an adult. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ22**

### **Psychological maltreatment**

Non-accidental verbal or symbolic acts that result in significant psychological harm. The category is applied to the victim of the maltreatment, not the perpetrator.

**PJ2Y**

### **Other specified maltreatment**

**PJ2Z**

### **Maltreatment, unspecified**

## Legal intervention (PJ40-PJ4Z)

**Coding Note:** Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

**PJ40**

### **Legal intervention involving projectile from firearm**

**Inclusions:** Legal intervention involving rifle pellet or rubber bullet

**PJ41**

### **Legal intervention involving other projectile**

**PJ42**

### **Legal intervention involving blunt object**

**Inclusions:** Hit, struck by blunt object during legal intervention

**PJ43**

### **Legal intervention involving sharp object**

**Inclusions:** Cut during legal intervention

**PJ44**

### **Legal intervention involving electric weapon**

**PJ45**

### **Legal intervention involving explosive**

**PJ46**

### **Legal intervention involving gas**

**PJ47**

### **Legal intervention involving application of physical force**

**PJ4Y**

**Legal intervention involving other means**

**Coding Note:** Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

**PJ4Z**

**Legal intervention involving unspecified means**

**Coding Note:** Injuries inflicted by the police or other law-enforcing agents, including military on duty, in the course of arresting or attempting to arrest lawbreakers, suppressing disturbances, maintaining order, or other legal action.

## Armed conflict (PJ60-PK6Z)

Explosion of marine weapons during armed conflict (PJ60-PJ6Z)

**PJ60**

**Explosion of depth-charge or marine mine during armed conflict**

**PJ61**

**Explosion of torpedo during armed conflict**

**PJ62**

**Explosion of sea-based artillery shell during armed conflict**

**PJ6Y**

**Explosion of other marine weapons during armed conflict**

**PJ6Z**

**Explosion of unspecified marine weapon**

Attack on or destruction of aircraft during armed conflict (PJ70-PJ7Z)

**PJ70**

**Attack on or destruction of aircraft during armed conflict due to enemy fire or explosives**

**PJ71**

**Attack on or destruction of aircraft during armed conflict due to collision with other aircraft**

**PJ7Y**

**Other destruction of aircraft during armed conflict**

**PJ7Z**

**Unspecified destruction of aircraft during armed conflict**

Other explosions or fragments during armed conflict (PJ80-PJ8Z)

**Exclusions:** Attack on or destruction of aircraft during armed conflict due to enemy fire or explosives (PJ70)

Use of nuclear weapons during armed conflict (PK10-PK1Z)

Injury event occurring after cessation of armed conflict (PK40-PK4Z)

**PJ80**

**Explosion of missile during armed conflict**

**PJ81**

**Explosion of aerial bomb during armed conflict**

**PJ82**

**Explosion of munitions or weapons during armed conflict**

**PJ83**

**Explosion of improvised explosive device during armed conflict**

- PJ8Y**      Other explosion or fragments during armed conflict
- PJ8Z**      Unspecified explosion or fragments during armed conflict

Fires, conflagrations or hot substances during armed conflict (PJ90-PJ9Z)

- PJ90**      Use of gasoline bomb during armed conflict
- PJ91**      Use of flamethrower during armed conflict
- PJ92**      Use of incendiary bullets during armed conflict
- PJ9Y**      Other specified fires, conflagrations or hot substances during armed conflict
- PJ9Z**      Unspecified fire, conflagration or hot substance during armed conflict

Firearm discharge or other forms of conventional warfare during armed conflict (PK00-PK0Z)

- PK00**      Use of rubber bullets during armed conflict
- PK01**      Use of firearm pellets during armed conflict
- PK02**      Other firearms discharge during armed conflict
- PK03**      Other weapons use during armed conflict
- PK04**      Unarmed combat during armed conflict
- PK0Z**      Other and unspecified forms of conventional weapons use during armed conflict

Use of nuclear weapons during armed conflict (PK10-PK1Z)

- PK10**      Thermal or blast effects of nuclear weapon during armed conflict
- PK11**      Nuclear radiation effects of nuclear weapon during armed conflict
- PK1Z**      Other and unspecified effect of nuclear weapon during armed conflict

Use of biological weapons during armed conflict (PK20-PK2Z)

- PK20**      Use of weaponised micro-organisms during armed conflict
- PK2Y**      Use of other specified biological weapons during armed conflict
- PK2Z**      Use of unspecified biological weapons during armed conflict

Chemical weapons or other forms of unconventional warfare during armed conflict (PK30-PK3Z)

- PK30**      Use of chemical weapons during armed conflict

<b>PK31</b>	<b>Use of lasers or other energetic beams or fields during armed conflict</b>
<b>PK32</b>	<b>Use of electric weapons during armed conflict</b>
<b>PK33</b>	<b>Use of autonomous or semi-autonomous machines as weapons during armed conflict</b>
<b>PK3Z</b>	<b>Other and unspecified forms of unconventional warfare during armed conflict</b>

Injury event occurring after cessation of armed conflict (PK40-PK4Z)

<b>PK40</b>	<b>Explosion of mine after cessation of armed conflict</b>
<b>PK41</b>	<b>Explosion of bomb after cessation of armed conflict</b>
<b>PK4Z</b>	<b>Other and unspecified event after cessation of armed conflict</b>

---

<b>PK6Y</b>	<b>Other specified weapon or attack during armed conflict</b>
<b>PK6Z</b>	<b>Unspecified weapon or attack during armed conflict</b>

Causes of healthcare related harm or injury (PK80-PL14.Z)

Surgical or other medical procedures associated with injury or harm in diagnostic or therapeutic use (PK80-PK8Z)

**Coding Note:** Code first the injury or harm caused by the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK80</b>	<b>Medical or surgical procedure associated with injury or harm in therapeutic use</b>
-------------	--

**Coding Note:** Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.0</b>	<b>Neurological procedure associated with injury or harm in therapeutic use</b>
---------------	---

**Coding Note:** Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.00</b>	Neurological procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.01</b>	Neurological procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.02</b>	Neurological procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.0Y</b>	Neurological procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.0Z</b>	Neurological procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.1</b>	<b>Cardiac procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.10</b>	Cardiac procedure for repair of congenital anomaly associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.11</b>	Cardiac procedure for repair of congenital anomaly associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.12</b>	Cardiac procedure for repair of congenital anomaly associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.13</b>	Cardiac procedure for repair of congenital anomaly associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.14</b>	Other cardiac procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.15</b>	Other cardiac procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.16</b>	Other cardiac procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.17</b>	Other cardiac procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm caused by the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.1Y</b>	Unspecified type of cardiac procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK80.1Z</b>	Unspecified type of cardiac procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.2</b>	<b>Thoracic procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<p><b>Exclusions:</b> Cardiac procedure associated with injury or harm in therapeutic use (PK80.1)</p> <p>Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)</p>
<b>PK80.20</b>	Thoracic procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<p><b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)</p>
<b>PK80.21</b>	Thoracic procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<p><b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)</p>
<b>PK80.22</b>	Thoracic procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<p><b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)</p>
<b>PK80.2Y</b>	Thoracic procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.2Z</b>	Thoracic procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK80.3</b>	<b>Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.30</b>	Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.31</b>	Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.32</b>	Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.3Y</b>	Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.3Z</b>	Gastrointestinal, abdominal, or abdominal wall procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.4</b>	<b>Endocrine procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.40</b>	Endocrine procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.41</b>	Endocrine procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.42</b>	Endocrine procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.4Y</b>	Endocrine procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.4Z</b>	Endocrine procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.5</b>	<b>Gynaecological or breast procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
	Procedures related to abortion (PK80.7)
<b>PK80.50</b>	Gynaecological or breast procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.51</b>	Gynaecological or breast procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.52</b>	Gynaecological or breast procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.53</b>	Gynaecological or breast procedure associated with injury or harm in therapeutic use, per orifice approach
<b>PK80.5Y</b>	Gynaecological or breast procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.5Z</b>	Gynaecological or breast procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.6</b>	<b>Urological procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.60</b>	Urological procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.61</b>	Urological procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.62</b>	Urological procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.6Y</b>	Urological procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.6Z</b>	Urological procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.7</b>	<b>Obstetric procedure associated with injury or harm in therapeutic use</b> Surgical procedure on the pregnant woman for conditions associated with pregnancy, labour, or the puerperium
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.70</b>	Caesarean section or other obstetric procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.71</b>	Obstetric procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.72</b>	Obstetric procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.73</b>	Obstetric procedure associated with injury or harm in therapeutic use, per orifice approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.7Y</b>	Caesarean section or other obstetric procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.7Z</b>	Caesarean section or other obstetric procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.8</b>	<b>Musculoskeletal procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.80</b>	Musculoskeletal procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.81</b>	Musculoskeletal procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
	<b>Coded Elsewhere:</b> Bone marrow aspiration or biopsy associated with injury or harm in therapeutic use (PK81.4)
<b>PK80.82</b>	Musculoskeletal procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.8Y</b>	Musculoskeletal procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK80.8Z</b>	Musculoskeletal procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.9</b>	<b>Vascular procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.90</b>	Vascular procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.91</b>	Vascular procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.92</b>	Vascular procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.9Y</b>	Vascular procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.9Z</b>	Vascular procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.A</b>	<b>Ear, nose, oral, or throat procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.A0</b>	Ear, nose, oral, or throat procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.A1</b>	Ear, nose, oral, or throat procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.A2</b>	Ear, nose, oral, or throat procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.AY</b>	Ear, nose, oral, or throat procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.AZ</b>	Ear, nose, oral, or throat procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.B</b>	<b>Dental procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.B0</b>	Dental procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.B1</b>	Dental procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.B2</b>	Dental procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.BY</b>	Dental procedure associated with injury or harm, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.BZ</b>	Dental procedure associated with injury or harm, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.C</b>	<b>Skin or integument procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.C0</b>	Skin or integument procedure associated with injury or harm, open approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.C1</b>	Skin or integument procedure associated with injury or harm, percutaneous approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK80.C2</b>	Skin or integument procedure associated with injury or harm, endoscopic approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK80.CY</b>	Skin or integument procedure associated with injury or harm in therapeutic use, other specified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.CZ</b>	Skin or integument procedure associated with injury or harm in therapeutic use, unspecified approach
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK80.D</b>	<b>Ophthalmic procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK81</b>	<b>Certain medical procedures associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>Coded Elsewhere:</b>	Skin complications of BCG immunisation (EA51)
<b>PK81.0</b>	<b>Ventilation associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.1</b>	<b>Extracorporeal life support procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK81.2</b>	<b>Aspiration or drainage of body cavity or fluid collection associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.3</b>	<b>Acupuncture or related therapies associated with injury or harm in therapeutic use</b>
	Injury or harm associated with insertion of needles into certain points of the body for treatment.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.30</b>	Acupuncture cupping associated with injury or harm in therapeutic use
<b>PK81.3Y</b>	Other specified acupuncture or related therapies associated with injury or harm in therapeutic use
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK81.3Z</b>	Acupuncture or related therapies associated with injury or harm in therapeutic use, unspecified
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK81.4</b>	<b>Bone marrow aspiration or biopsy associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.5</b>	<b>Biopsy procedure, not elsewhere classified, associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Bone marrow aspiration or biopsy associated with injury or harm in therapeutic use (PK81.4)
	Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK81.6</b>	<b>Dialysis associated with injury or harm in therapeutic use</b> Replacing kidney function, a procedure to filter blood, including haemodialysis and peritoneal dialysis.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.7</b>	<b>Injection or infusion for therapeutic or diagnostic purposes associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.8</b>	<b>Insertion of tube associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.9</b>	<b>Joint aspiration associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.A</b>	<b>Lumbar puncture associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.B</b>	<b>Manipulative therapies associated with injury or harm in therapeutic use</b> Manipulation and/or movement of one or more parts of the human body for correction and treatment.
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

<b>PK81.C</b>	<b>Radiation therapy associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.D</b>	<b>Other specified medical procedure associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.E</b>	<b>Cardiopulmonary resuscitation associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)
<b>PK81.F</b>	<b>Needle stick associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first injury or harm associated with procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK8Y</b>	<b>Other specified surgical or other medical procedures associated with injury or harm in diagnostic or therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm caused by the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK8Z</b>	<b>Surgical or other medical procedures associated with injury or harm in diagnostic or therapeutic use, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm caused by the procedure. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

Surgical or other medical devices, implants or grafts associated with injury or harm in therapeutic use (PK90-PK9C.4)

Medical devices could be associated with injury or harm in therapeutic use through different mechanisms: failure, malfunction, dislodgement, misconnection, removal, unclean/unsterile, use error, inappropriate for related task, poor presentation or packaging, lack of presentation

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** medical devices associated with adverse incidents due to external causes classified elsewhere (PL12)

**PK90**

### **Anaesthesia devices associated with injury or harm**

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK90.0** **Anaesthesia devices associated with injury or harm, diagnostic or monitoring devices**

An anaesthesia device was involved in an incident that occurred in a diagnostic or monitoring task

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK90.1** **Anaesthesia devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices**

An anaesthesia device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task

**Coding Note:** Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

**Exclusions:** Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**PK90.2** **Anaesthesia devices associated with injury or harm, prosthetic or other implants, materials or accessory devices**

Anaesthesia related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident

**Coding Note:** Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK90.3</b>	<b>Anaesthesiology devices associated with injury or harm, surgical instruments, materials or devices</b> Anaesthesiology related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK90.4</b>	<b>Anaesthesiology devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK90.Y</b>	<b>Other specified anaesthesiology devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK90.Z</b>	<b>Anaesthesiology devices associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91</b>	<b>Cardiovascular devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91.0</b>	<b>Cardiovascular devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
	<b>Coded Elsewhere:</b> Cardiovascular devices associated with injury or harm, central venous catheter (PK91.15)
<b>PK91.1</b>	<b>Cardiovascular devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
	<b>Coded Elsewhere:</b> Extracorporeal life support procedure associated with injury or harm in therapeutic use (PK81.1)

<b>PK91.10</b>	Cardiovascular devices associated with injury or harm, pacemaker
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Pacemaker or implantable cardioverter defibrillator battery at end of battery life (BC91)  Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.11</b>	Cardiovascular devices associated with injury or harm, implantable defibrillator
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Pacemaker or implantable cardioverter defibrillator battery at end of battery life (BC91)  Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.12</b>	Cardiovascular devices associated with injury or harm, left ventricular assist devices
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.13</b>	Cardiovascular devices associated with injury or harm, intra-aortic balloon pump
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.14</b>	Cardiovascular devices associated with injury or harm, IVC filter
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.15</b>	Cardiovascular devices associated with injury or harm, central venous catheter
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.16</b>	Cardiovascular devices associated with injury or harm: peripheral venous catheter
<b>Coding Note:</b>	Code first injury or harm associated with the device.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK91.1Y</b>	Other specified cardiovascular devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91.1Z</b>	Cardiovascular devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices, unspecified
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91.2</b>	<b>Cardiovascular devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>  A cardiovascular prosthetic or other implant, or cardiovascular material or an accessory device was associated with an adverse incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Ventricular assist devices (PK91.1Z)  Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.20</b>	Cardiovascular devices associated with injury or harm, grafts
<b>Coding Note:</b>	Code first injury or harm associated with the device.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.21</b>	Cardiovascular devices associated with injury or harm, stents
<b>Coding Note:</b>	Code first injury or harm associated with the device.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.22</b>	Cardiovascular devices associated with injury or harm, mechanical or bioprosthetic valves
<b>Coding Note:</b>	Code first injury or harm associated with the device.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.2Y</b>	Other specified cardiovascular devices associated with injury or harm, prosthetic or other implants, materials or accessory devices
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91.2Z</b>	Cardiovascular devices associated with injury or harm, prosthetic or other implants, materials or accessory devices, unspecified
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK91.3</b>	<b>Cardiovascular devices associated with injury or harm, surgical instruments, materials or devices</b> A cardiovascular surgical instrument, material or device (including sutures) was associated with an adverse incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.4</b>	<b>Cardiovascular devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK91.Y</b>	<b>Other specified cardiovascular devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK91.Z</b>	<b>Cardiovascular devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK92</b>	<b>Otorhinolaryngological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK92.0</b>	<b>Otorhinolaryngological devices associated with injury or harm, diagnostic or monitoring devices</b> An otorhinolaryngological device was involved in an incident that occurred in a diagnostic or monitoring task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK92.1</b>	<b>Otorhinolaryngological devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b> An otorhinolaryngological device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK92.2</b>	<b>Otorhinolaryngological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b> Otorhinolaryngological related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK92.3</b>	<b>Otorhinolaryngological devices associated with injury or harm, surgical instruments, materials or devices</b> Otorhinolaryngological related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK92.4</b>	<b>Otorhinolaryngological devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK92.Y</b>	<b>Other specified otorhinolaryngological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK92.Z</b>	<b>Otorhinolaryngological devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK93</b>	<b>Gastroenterology or urology devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.0</b>	<b>Gastroenterology or urology devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.1</b>	<b>Gastroenterology or urology devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	A gastroenterology or urology device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.10</b>	Gastroenterology or urology devices associated with injury or harm, urinary catheter
<b>Coding Note:</b>	Code first injury or harm associated with the device.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.1Y</b>	Other specified gastroenterology or urology devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK93.1Z</b>	Gastroenterology or urology devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices, unspecified
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK93.2</b>	<b>Gastroenterology or urology devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK93.3</b>	<b>Gastroenterology or urology devices associated with injury or harm, surgical instruments, materials or devices</b>
	Gastroenterology or urology related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.4</b>	<b>Gastroenterology or urology devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK93.Y</b>	<b>Other specified gastroenterology or urology devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK93.Z</b>	<b>Gastroenterology or urology devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK94</b>	<b>General hospital or personal use devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK94.0</b>	<b>General hospital or personal use devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK94.1</b>	<b>General hospital or personal use devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b> A general hospital and personal-use device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK94.2</b>	<b>General hospital or personal use devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b> General hospital and personal-use related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK94.3</b>	<b>General hospital or personal use devices associated with injury or harm, surgical instruments, materials or devices</b> General hospital and personal-use related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK94.4</b>	<b>General hospital or personal use devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK94.Y</b>	<b>Other specified general hospital or personal use devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK94.Z</b>	<b>General hospital or personal use devices associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK95</b>	<b>Neurological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.0</b>	<b>Neurological devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.1</b>	<b>Neurological devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.2</b>	<b>Neurological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b> Neurological related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK95.20</b>	Neurological devices associated with injury or harm, ventricular shunt
<b>Coding Note:</b>	Code first injury or harm associated with the device.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.2Y</b>	Other specified neurological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK95.2Z</b>	Neurological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices, unspecified
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK95.3</b>	<b>Neurological devices associated with injury or harm, surgical instruments, materials or devices</b>
	Neurological related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.4</b>	<b>Neurological devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK95.Y</b>	<b>Other specified neurological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK95.Z</b>	<b>Neurological devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK96</b>	<b>Obstetric or gynaecological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK96.0</b>	<b>Obstetric or gynaecological devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK96.1</b>	<b>Obstetric or gynaecological devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	An obstetric or gynaecological device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK96.2</b>	<b>Obstetric or gynaecological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK96.3</b>	<b>Obstetric or gynaecological devices associated with injury or harm, surgical instruments, materials or devices</b>
	Obstetric or gynaecological related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK96.4</b>	<b>Obstetric or gynaecological devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK96.Y</b>	<b>Other specified obstetric or gynaecological devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK96.Z</b>	<b>Obstetric or gynaecological devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK97</b>	<b>Ophthalmic devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK97.0</b>	<b>Ophthalmic devices associated with injury or harm, diagnostic or monitoring devices</b>
	An ophthalmic device was involved in an incident that occurred in a diagnostic or monitoring task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK97.1</b>	<b>Ophthalmic devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	An ophthalmic device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK97.2</b>	<b>Ophthalmic devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
	Ophthalmic related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK97.3</b>	<b>Ophthalmic devices associated with injury or harm, surgical instruments, materials or devices</b>
	Ophthalmic related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK97.4</b>	<b>Ophthalmic devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK97.Y</b>	<b>Other specified ophthalmic devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK97.Z</b>	<b>Ophthalmic devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK98</b>	<b>Radiological devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK98.0</b>	<b>Radiological devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK98.1</b>	<b>Radiological devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	A radiological device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK98.2</b>	<b>Radiological devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
	Radiological related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK98.3</b>	<b>Radiological devices associated with injury or harm, surgical instruments, materials or devices</b> Radiological related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK98.4</b>	<b>Radiological devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK98.Y</b>	<b>Other specified radiological devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK98.Z</b>	<b>Radiological devices associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK99</b>	<b>Orthopaedic devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK99.0</b>	<b>Orthopaedic devices associated with injury or harm, diagnostic or monitoring devices</b> An orthopaedic device was involved in an incident that occurred in a diagnostic or monitoring task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK99.1</b>	<b>Orthopaedic devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b> An orthopaedic device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK99.2</b>	<b>Orthopaedic devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b> Orthopaedic related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Wear of articular bearing surface of joint prosthesis (FA35) Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK99.3</b>	<b>Orthopaedic devices associated with injury or harm, surgical instruments, materials or devices</b> Orthopaedic related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK99.4</b>	<b>Orthopaedic devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK99.Y</b>	<b>Other specified orthopaedic devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK99.Z</b>	<b>Orthopaedic devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9A</b>	<b>Physical medicine devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK9A.0</b>	<b>Physical medicine devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9A.1</b>	<b>Physical medicine devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	A physical medicine device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9A.2</b>	<b>Physical medicine devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
	Physical medicine related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident (e.g., infection following use of unclean acupuncture needles)
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9A.20</b>	Communication system devices associated with adverse incidents
<b>PK9A.21</b>	Communication system devices associated with adverse incidents in a physical medicine care environment
<b>PK9A.22</b>	Environmental control system devices associated with adverse incidents
<b>PK9A.23</b>	Mobility aids associated with adverse incidents
<b>PK9A.24</b>	Orthotic devices associated with adverse incidents
<b>PK9A.2Y</b>	Other specified physical medicine devices associated with injury or harm, prosthetic or other implants, materials or accessory devices
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9A.2Z</b>	Physical medicine devices associated with injury or harm, prosthetic or other implants, materials or accessory devices, unspecified
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK9A.3</b>	<b>Physical medicine devices associated with injury or harm, surgical instruments, materials or devices</b> Physical medicine related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident.
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9A.4</b>	<b>Physical medicine devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9A.Y</b>	<b>Other specified physical medicine devices associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9A.Z</b>	<b>Physical medicine devices associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9B</b>	<b>General or plastic surgery devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9B.0</b>	<b>General or plastic surgery devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

<b>PK9B.1</b>	<b>General or plastic surgery devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b> A general- or plastic-surgery device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9B.2</b>	<b>General or plastic surgery devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b> General- or plastic-surgery related prosthetic and other implants, materials and accessory devices were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9B.3</b>	<b>General or plastic surgery devices associated with injury or harm, surgical instruments, materials or devices</b> General- or plastic-surgery related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9B.4</b>	<b>General or plastic surgery devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9B.Y</b>	<b>Other specified general or plastic surgery devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9B.Z</b>	<b>General or plastic surgery devices, implants or grafts associated with injury or harm, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9C</b>	<b>Other or unspecified medical devices, implants or grafts associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK9C.0</b>	<b>Other or unspecified medical devices associated with injury or harm, diagnostic or monitoring devices</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9C.1</b>	<b>Other or unspecified medical devices associated with injury or harm, therapeutic, nonsurgical or rehabilitative devices</b>
	An other or unspecified medical device was involved in an adverse incident that occurred in a therapeutic (nonsurgical) and rehabilitative task
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9C.2</b>	<b>Other or unspecified medical devices associated with injury or harm, prosthetic or other implants, materials or accessory devices</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9C.3</b>	<b>Other or unspecified medical devices associated with injury or harm, surgical instruments, materials or devices</b>
	Other or unspecified medical related surgical instruments like materials and devices (including sutures) were involved in an adverse related incident
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
	<b>Exclusions:</b> Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
<b>PK9C.30</b>	Mechanical complication of nonabsorbable surgical material, not otherwise specified
<b>PK9C.31</b>	Mechanical complication of permanent sutures
<b>PK9C.3Y</b>	Other specified other or unspecified medical devices associated with injury or harm, surgical instruments, materials or devices
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PK9C.3Z</b>	Other or unspecified medical devices associated with injury or harm, surgical instruments, materials or devices, unspecified
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PK9C.4</b>	<b>Other or unspecified medical devices associated with injury or harm, miscellaneous devices, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)
Substances associated with injury or harm in therapeutic use (PL00-PL0Z)	
Situations where a substance (drug or medicament) causes harm, in the context of intentional use for therapeutic purposes	
<b>Coding Note:</b>	Code first the injury or harm associated with the substance. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	accidents in the technique of administration of drugs, medicaments and biological substances in medical and surgical procedures (PL13)
<b>PL00</b>	<b>Drugs, medicaments or biological substances associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the substance. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>Exclusions:</b>	Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm (QA70-QA7Z)
<b>PL01</b>	<b>Complementary or traditional medicines associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL01.0</b>	<b>Complementary or traditional medicines associated with injury or harm in therapeutic use, Herbal Preparations or Formulas</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL01.1</b>	<b>Complementary or traditional medicines associated with injury or harm in therapeutic use, Dietary Supplements, Vitamins or Minerals</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL01.2</b>	<b>Complementary or traditional medicines associated with injury or harm in therapeutic use, Complementary or Traditional Medicines, not elsewhere classified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.

<b>PL01.Y</b>	<b>Other specified complementary or traditional medicines associated with injury or harm in therapeutic use</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL01.Z</b>	<b>Complementary or traditional medicines associated with injury or harm in therapeutic use, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the complementary or traditional medicine. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL0Z</b>	<b>Substances associated with injury or harm in therapeutic use, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the substance. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL10</b>	<b>Other health care related causes of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the mode or mechanism that explains the main way the cause leads to injury or harm.
<b>PL11</b>	<b>Mode of injury or harm associated with a surgical or other medical procedure</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Mode of injury or harm associated with exposure to a drug, medicament or biological substance (PL13)
<b>PL11.0</b>	<b>Cut, puncture or tear, as mode of injury or harm</b>
	The cut or puncture occurs when a solid organ or blood vessel or nerve is unintentionally lacerated or otherwise damaged during a surgical or medical procedure. The cut or puncture must not be required for the successful completion of the procedure. A perforation occurs when a hollow viscous, such as the bowel or urinary bladder, is injured during a surgical procedure such that the contents of the viscous leak into the surrounding tissues or space.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
<b>PL11.1</b>	<b>Burn arising during procedure, as mode of injury or harm</b>
	A burn occurs when tissue is damaged by heat, electricity or fire. It can occur, for example, as the direct result of cautery equipment, warming efforts, or because of a fire.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Burn from ionising radiation (PB53)

<b>PL11.2</b>	<b>Embolisation, as mode of injury or harm</b> An embolisation occurs when a solid object within the venous or arterial circulation propagates to a distal location and becomes lodged there.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Obstruction of device, as mode of injury or harm (PL12.3) Embolisation without injury or harm (QA50)
<b>PL11.20</b>	Air embolism, as mode of injury
<b>PL11.2Y</b>	Other specified embolisation, as mode of injury or harm
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
<b>PL11.2Z</b>	Embolisation, as mode of injury or harm, unspecified
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
<b>PL11.3</b>	<b>Foreign body accidentally left in body, as mode of injury or harm</b> A foreign body is any solid material not normally found in the human body. It is accidentally left in the body if there was no specific intention to keep it in the body, either because it was indicated for medical purposes or because it was unsafe to retrieve.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Foreign body accidentally left in body without injury or harm (QA51)
<b>PL11.4</b>	<b>Failure of sterile precautions, as mode of injury or harm</b> An infection occurred because standard procedures designed to minimize the risk of hospital acquired infection were not followed or were insufficient.
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Failure of sterile precautions without injury or harm (QA52)
<b>PL11.5</b>	<b>Procedure undertaken at wrong site or wrong side, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Patient received diagnostic test or treatment intended for another patient (PL14.C)
<b>PL11.6</b>	<b>Pressure, as mode of injury or harm</b> Includes factors such as: body positioning, retractors, or other instruments causing tissue damage through direct pressure
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure or intervention. Code also the cause of harm which identifies the procedure or intervention.
	<b>Exclusions:</b> Pressure as potential mode of injury without injury or harm (QA53)

<b>PL11.Y</b>	<b>Other specified mode of injury or harm associated with a surgical or other medical procedure</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the cause of harm which identifies the procedure or intervention.
<b>PL11.Z</b>	<b>Unspecified mode of injury or harm associated with a surgical or other medical procedure</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the procedure. Code also the cause of harm which identifies the procedure or intervention.
<b>PL12</b>	<b>Mode of injury or harm associated with a surgical or other medical device, implant or graft</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
<b>PL12.0</b>	<b>Structural device failure, as mode of injury or harm</b> Harm arising due to mechanical or material device failure not related to the installation of the device.
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Wear of articular bearing surface of joint prosthesis (FA35) Combination or interaction of operator error and device failure, as mode of injury or harm (PL12.6) Structural device failure without injury or harm (QA60)
<b>PL12.1</b>	<b>Functional device failure, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Pacemaker or implantable cardioverter defibrillator dysfunction (NE82.1) Pacemaker or implantable cardioverter defibrillator battery at end of battery life (BC91) Combination or interaction of operator error and device failure, as mode of injury or harm (PL12.6) Functional device failure without injury or harm (QA61)
<b>PL12.2</b>	<b>Perforation or protrusion by device, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Cut, puncture or tear, as mode of injury or harm (PL11.0)
<b>PL12.3</b>	<b>Obstruction of device, as mode of injury or harm</b> Obstruction associated with prosthetic devices, grafts or implants
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Obstruction of device without injury or harm (QA63)

<b>PL12.4</b>	<b>Dislodgement, misconnection or de-attachment, as mode of injury or harm</b> Harm arising from loss of connection of device
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Wear of articular bearing surface of joint prosthesis (FA35) Pacemaker or implantable cardioverter defibrillator lead complication (NE82.2) Dislodgement, misconnection or de-attachment of a surgical or medical device without injury or harm (QA62)
<b>PL12.5</b>	<b>Operator error, as mode of injury or harm</b> Harm arising due to process or procedural issues associated with the use and/or maintenance of a device not related to device failure.
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Combination or interaction of operator error and device failure, as mode of injury or harm (PL12.6) Operator error without injury or harm (QA64)
<b>PL12.6</b>	<b>Combination or interaction of operator error and device failure, as mode of injury or harm</b> Harm arising due to a combination of device failure and process/procedural error in device use or maintenance.
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
	<b>Exclusions:</b> Operator error, as mode of injury or harm (PL12.5) Structural device failure, as mode of injury or harm (PL12.0) Functional device failure, as mode of injury or harm (PL12.1) Combination or interaction of operator error and device failure without injury or harm (QA65)
<b>PL12.Y</b>	<b>Other specified mode of injury or harm associated with a surgical or other medical device, implant or graft</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
<b>PL12.Z</b>	<b>Mode of injury or harm associated with a surgical or other medical device, implant or graft, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the device. Code also the cause of harm which identifies the type of device.
<b>PL13</b>	<b>Mode of injury or harm associated with exposure to a drug, medicament or biological substance</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.

<b>PL13.0</b>	<b>Overdose of substance, as mode of injury or harm</b>
	Incorrect dose - too high
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>Inclusions:</b>	<p>overdose of prescribed drug</p> <p>medication error leading to excess level or effect of prescribed drug</p>
<b>Exclusions:</b>	<p>Overdose of substance without injury or harm (QA70)</p> <p>Unintentional exposure to or harmful effects of drugs, medicaments or biological substances (PB20-PB29)</p> <p>Intentional self-harm by exposure to or harmful effects of drugs, medicaments or biological substances (PC90-PC99)</p> <p>Assault by exposure to or harmful effects of drugs, medicaments or biological substances (PE80-PE8Z)</p> <p>Exposure to or harmful effects of undetermined intent of drugs, medicaments or biological substances (PH40-PH49)</p>
<b>PL13.1</b>	<b>Underdosing, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.2</b>	<b>Drug-related injury or harm in the context of correct administration or dosage, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.3</b>	<b>Incorrect substance, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.5</b>	<b>Incorrect administration of drug or medicament, as mode of injury</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
	<b>Exclusions:</b> Overdose of substance, as mode of injury or harm (PL13.0)
<b>PL13.50</b>	Incorrect route of drug or medicament, as mode of injury
	<b>Exclusions:</b> Overdose of substance, as mode of injury or harm (PL13.0)
<b>PL13.51</b>	Incorrect rate of drug or medicament, as mode of injury
	<b>Exclusions:</b> Overdose of substance, as mode of injury or harm (PL13.0)
<b>PL13.52</b>	Incorrect timing of drug or medicament, as mode of injury
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance.
	<b>Exclusions:</b> Problem with delayed treatment (PL14.B)
	Overdose of substance, as mode of injury or harm (PL13.0)

<b>PL13.53</b>	Incorrect duration of drug or medicament, as mode of injury
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance.
<b>Exclusions:</b>	Overdose of substance, as mode of injury or harm (PL13.0) Underdosing, as mode of injury or harm (PL13.1)
<b>PL13.5Y</b>	Other specified incorrect administration of drug or medicament, as mode of injury
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.5Z</b>	Incorrect administration of drug or medicament, as mode of injury, unspecified
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.6</b>	<b>Medication or substance that is known to be an allergen, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.7</b>	<b>Medication or substance that is known to be contraindicated for the patient, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
	<b>Exclusions:</b> Medication or substance that is known to be an allergen, as mode of injury or harm (PL13.6)
<b>PL13.8</b>	<b>Expired or deteriorated medication or substance, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.9</b>	<b>Drug or substance interactions, as mode of injury or harm</b> Medication or substance that is known to interact with another medication or substance that the patient is taking or is expected to take. Code also all involved substances.
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.A</b>	<b>Inappropriate stoppage or discontinuation of drug, as mode of injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.Y</b>	<b>Other specified mode of injury or harm associated with exposure to a drug, medicament or biological substance</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.
<b>PL13.Z</b>	<b>Mode of injury or harm associated with exposure to a drug, medicament or biological substance, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with the drug, medicament or substance. Code also the cause of harm which identifies the substance.

<b>PL14</b>	<b>Mode of injury or harm associated with other health care related causes</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>Exclusions:</b>	Mode of injury or harm associated with a surgical or other medical device, implant or graft (PL12) Mode of injury or harm associated with a surgical or other medical procedure (PL11) Mode of injury or harm associated with exposure to a drug, medicament or biological substance (PL13)
<b>PL14.0</b>	<b>Non-administration of necessary drug</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>Exclusions:</b>	Underdosing, as mode of injury or harm (PL13.1)
<b>PL14.1</b>	<b>Non provision of necessary procedure</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>Exclusions:</b>	Delayed treatment (PL14.B)
<b>PL14.2</b>	<b>Problem associated with physical transfer of patient</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.3</b>	<b>Mismatched blood used in transfusion</b>
	Mismatched blood was used in transfusion and led to injury.
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.4</b>	<b>Other problem associated with transfusion</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.5</b>	<b>Problem associated with physical restraints</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.6</b>	<b>Problem associated with isolation protocol</b>
	Isolation of patient for infection cause injury to occur
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)

<b>PL14.7</b>	<b>Problem associated with clinical documentation</b> Clinical documentation error or omission led to injury of patient
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.8</b>	<b>Problem associated with clinical software</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.9</b>	<b>Incorrect diagnosis</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.A</b>	<b>Delayed diagnosis</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.B</b>	<b>Delayed treatment</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
	<b>Exclusions:</b> Incorrect timing of drug or medicament, as mode of injury (PL13.0)
	Non provision of necessary procedure (PL14.1)
<b>PL14.C</b>	<b>Patient received diagnostic test or treatment intended for another patient</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
	<b>Exclusions:</b> Procedure undertaken at wrong site or wrong side, as mode of injury or harm (PL11.5)
<b>PL14.D</b>	<b>Problem associated with transitions of care, hand offs, or handovers</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.E</b>	<b>Fall in health care</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.Y</b>	<b>Other specified aspects of care associated with injury or harm</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)
<b>PL14.Z</b>	<b>Mode of injury or harm associated with other health care related causes, unspecified</b>
<b>Coding Note:</b>	Code first the injury or harm associated with other health care interventions. Code also the cause of harm (i.e. PL10 Other health care related causes of injury or harm)

---

**PL2Y      Other specified external causes of morbidity or mortality**

**PL2Z      External causes of morbidity or mortality, unspecified**

# CHAPTER 24

---

## Factors influencing health status or contact with health services

This chapter has 334 four-character categories.

Code range starts with QA00

Categories in this chapter are provided for occasions when circumstances other than a disease, injury or external cause classifiable elsewhere are recorded as "diagnoses" or "problems". This can arise in two main ways:

1. When a person who may or may not be sick encounters the health services for some specific purpose, such as to receive limited care or service for a current condition, to donate an organ or tissue, to receive prophylactic vaccination or to discuss a problem which is in itself not a disease or injury.
2. When some circumstance or problem is present which influences the person's health status but is not in itself a current illness or injury. Such circumstance or problem may be elicited during population surveys, when the person may or may not be currently sick, or be recorded as additional information to be borne in mind when the person is receiving care for some illness or injury.

This chapter contains the following top level blocks:

- Reasons for contact with the health services
- Factors influencing health status

Reasons for contact with the health services (QA00-QD3Z)

**Coded Elsewhere:** Gender incongruence (HA60-HA6Z)

Contact with health services for purposes of examination or investigation (QA00-QA0Z)

**Exclusions:** examinations related to pregnancy and reproduction (QA20-QA4Z)

Clinical findings in blood, blood-forming organs, or the immune system  
(MA10-MA1Y)

**QA00**

**General examination or investigation of persons without complaint or reported diagnosis**

**Exclusions:**

- Special screening examination for infectious diseases (QA08)
- Examination or encounter for administrative purposes (QA01)
- Special screening examination for neoplasms (QA09)
- Special screening examination for other diseases or disorders (QA0A)

<b>QA00.0</b>	<b>General adult medical examination</b> Encounter for periodic examination (annual) (physical) and any associated laboratory and radiologic examinations on adult.
	<b><i>Exclusions:</i></b> Routine child health examination (QA00.1) Routine general health check-up of defined subpopulation (QA03) Routine newborn health examination (QA00.2) Symptoms, signs or clinical findings, not elsewhere classified (Chapter 21)
<b>QA00.1</b>	<b>Routine child health examination</b> Routine health check for child over 28 days of age through 19 years of age.
	<b><i>Exclusions:</i></b> Health supervision or care of abandoned infant (QC22) Health supervision or care of other healthy infant or child (QC20-QC2Z)
<b>QA00.2</b>	<b>Routine newborn health examination</b> Health examination for infant under 29 days of age
	<b><i>Exclusions:</i></b> Routine child health examination (QA00.1)
<b>QA00.3</b>	<b>General mental examination</b> <b><i>Exclusions:</i></b> examination requested for medicolegal reasons (QA04)
<b>QA00.4</b>	<b>Examination of potential donor of organ or tissue</b>
<b>QA00.5</b>	<b>Examination for normal comparison or control in clinical research programme</b>
<b>QA00.6</b>	<b>Examination of eyes or vision</b> <b><i>Exclusions:</i></b> Examination for driving license (QA01.4)
<b>QA00.61</b>	Normal Visual Field
<b>QA00.62</b>	No vision impairment
<b>QA00.6Y</b>	Other specified examination of eyes or vision
<b>QA00.6Z</b>	Examination of eyes or vision, unspecified
<b>QA00.7</b>	<b>Examination of ears and hearing</b>
<b>QA00.8</b>	<b>Dental examination</b>
<b>QA00.9</b>	<b>Gynaecological examination</b> <b><i>Exclusions:</i></b> routine examination for contraceptive maintenance (QA21.5) Pregnancy examination or test (QA40)
<b>QA00.A</b>	<b>Skin or other sensitisation tests</b>

<b>QA00.B</b>	<b>Radiological examination</b>
	<b><i>Exclusions:</i></b> Special screening examination for neoplasm of breast (QA09.3)
<b>QA00.C</b>	<b>Laboratory examination</b>
<b>QA00.D</b>	<b>Encounter for blood typing</b>
<b>QA00.E</b>	<b>Encounter for antibody response examination</b>
	<b><i>Exclusions:</i></b> Skin or other sensitisation tests (QA00.A)
<b>QA00.Y</b>	<b>Other specified general examination or investigation of persons without complaint or reported diagnosis</b>
<b>QA00.Z</b>	<b>General examination or investigation of persons without complaint or reported diagnosis, unspecified</b>
<b>QA01</b>	<b>Examination or encounter for administrative purposes</b>
<b>QA01.0</b>	<b>Examination for admission to educational institution</b>
<b>QA01.1</b>	<b>Pre-employment examination</b>
	<b><i>Exclusions:</i></b> Occupational health examination (QA03.0)
<b>QA01.2</b>	<b>Examination for admission to residential institutions</b>
	<b><i>Exclusions:</i></b> Routine general health check-up of inhabitants of institutions (QA03.1)
<b>QA01.3</b>	<b>Examination for recruitment to armed forces</b>
	<b><i>Exclusions:</i></b> Routine general health check-up of armed forces (QA03.2)
<b>QA01.4</b>	<b>Examination for driving license</b>
<b>QA01.5</b>	<b>Examination for participation in sport</b>
	<b><i>Exclusions:</i></b> Blood-alcohol or blood-drug test (QA04.0)
	Routine general health check-up of sports teams (QA03.3)
<b>QA01.6</b>	<b>Examination for insurance purposes</b>
<b>QA01.7</b>	<b>Issue of medical certificate</b>
	<b><i>Exclusions:</i></b> General adult medical examination (QA00.0)
<b>QA01.8</b>	<b>Encounter for adoption services</b> Encounter to provide pre or post-adoption services to assist prospective adoptive parents in making an informed decision prior to adoption or to address the medical history and current health of the child and provide parental guidance
<b>QA01.Y</b>	<b>Other specified examination or encounter for administrative purposes</b>
<b>QA01.Z</b>	<b>Examination or encounter for administrative purposes, unspecified</b>

**QA02****Medical observation or evaluation for suspected diseases or conditions, ruled out**

Persons without signs or symptoms or a diagnosis when suspected of having an abnormal condition which requires study, but who, after examination and observation, show no need for further treatment or medical care because suspected condition has been ruled out.

**Coding Note:**

Includes persons who present some symptoms or evidence of an abnormal condition which requires study, but who, after examination and observation, show no need for further treatment or medical care

**Exclusions:** Person with feared complaint in whom no diagnosis is made (QA1C)

**QA02.0****Observation for suspected tuberculosis, ruled out**

Cases presenting with signs susceptible to be due to Tuberculosis, but where after observation and examination it was confirmed that this was not Tuberculosis - and no other disease had been identified that could explain the symptoms.

**QA02.1****Observation for suspected Dengue, ruled out****QA02.2****Observation for suspected malignant neoplasm, ruled out**

**Exclusions:** Special screening examination for neoplasms (QA09)

**QA02.3****Observation for suspected mental or behavioural disorders, ruled out****QA02.4****Observation for suspected nervous system disorder, ruled out****QA02.5****Observation for suspected toxic effect from ingested substance, ruled out**

**Inclusions:** observation for suspected adverse effect from drug  
observation for suspected poisoning

**QA02.6****Observation and evaluation of newborn for suspected condition, ruled out****QA02.7****Observation for suspected suicide ideation or attempt, ruled out****QA02.8****Observation for suspected allergy or hypersensitivity, ruled out**

Observation for a suspected allergy or hypersensitivity, not confirmed or no evidence found at the time of evaluation.

**QA02.Y****Medical observation or evaluation for other suspected diseases or conditions, ruled out****Coding Note:**

Includes persons who present some symptoms or evidence of an abnormal condition which requires study, but who, after examination and observation, show no need for further treatment or medical care

**QA03****Routine general health check-up of defined subpopulation**

**Exclusions:** Examination or encounter for administrative purposes (QA01)

**QA03.0****Occupational health examination**

**Exclusions:** Pre-employment examination (QA01.1)

<b>QA03.1</b>	<b>Routine general health check-up of inhabitants of institutions</b>
	<b><i>Exclusions:</i></b> Examination or encounter for administrative purposes (QA01)
<b>QA03.2</b>	<b>Routine general health check-up of armed forces</b>
	<b><i>Exclusions:</i></b> Examination for recruitment to armed forces (QA01.3)
<b>QA03.3</b>	<b>Routine general health check-up of sports teams</b>
	<b><i>Exclusions:</i></b> Examination for participation in sport (QA01.5) Blood-alcohol or blood-drug test (QA04.0)
<b>QA03.Y</b>	<b>Other specified routine general health check-up of defined subpopulation</b>
<b>QA03.Z</b>	<b>Routine general health check-up of defined subpopulation, unspecified</b>
<b>QA04</b>	<b>Examination or observation for reasons other than suspected diseases or conditions or administrative purposes</b>
<b>QA04.0</b>	<b>Blood-alcohol or blood-drug test</b>
	<b><i>Exclusions:</i></b> Finding of alcohol in blood (MA13.1) presence of drugs in blood (MA12)
<b>QA04.1</b>	<b>Alcohol and drug testing other than by blood</b>
<b>QA04.2</b>	<b>Examination or observation following transport accident</b>
	<b><i>Exclusions:</i></b> Examination or observation following work accident (QA04.3)
<b>QA04.3</b>	<b>Examination or observation following work accident</b>
<b>QA04.4</b>	<b>Examination or observation following accident other than work or transport</b>
<b>QA04.5</b>	<b>Examination or observation for suspected maltreatment</b>
<b>QA04.50</b>	Examination or observation for suspected physical maltreatment Observation and evaluation for suspected or alleged physical abuse which, after study, is ruled out.
<b>QA04.51</b>	Examination or observation for suspected sexual maltreatment Observation and evaluation for suspected or alleged sexual abuse or rape which, after study is ruled out.
<b>QA04.52</b>	Examination or observation for suspected psychological maltreatment Observation and evaluation for suspected or alleged psychological abuse which, after study, is ruled out.
<b>QA04.53</b>	Examination or observation for suspected neglect or abandonment Observation and evaluation for suspected or alleged neglect or abandonment which, after study, is ruled out.
<b>QA04.5Y</b>	Other specified examination or observation for suspected maltreatment
<b>QA04.5Z</b>	Examination or observation for suspected maltreatment, unspecified

QA04.6	<b>General mental examination, requested by authority</b>
QA04.7	<b>Examination for medicolegal reasons</b>
QA04.Y	<b>Other specified examination or observation for reasons other than suspected diseases or conditions or administrative purposes</b>
QA04.Z	<b>Examination or observation for reasons other than suspected diseases or conditions or administrative purposes, unspecified</b>
<b>QA05</b>	<b>Person consulting for explanation of investigation findings</b>
<b>QA06</b>	<b>Follow-up examination after treatment for malignant neoplasms</b> <p><i>Inclusions:</i> medical surveillance following treatment for malignant neoplasms</p> <p><i>Exclusions:</i> follow-up medical care and convalescence (QB70-QB7Z) Attention to surgical dressings, drains or sutures (QB85)</p>
<b>QA07</b>	<b>Follow-up examination after treatment for conditions other than malignant neoplasms</b> <p><i>Inclusions:</i> medical surveillance following treatment for conditions other than malignant neoplasms</p> <p><i>Exclusions:</i> Fitting, adjustment or management of devices (QB30-QB3Z) Surveillance of contraceptive device (QA21.6) Follow-up examination after treatment for malignant neoplasms (QA06) Convalescence (QB70-QB7Z)</p>
QA07.0	<b>Follow-up examination after organ transplant</b>
QA07.Y	<b>Other specified follow-up examination after treatment for conditions other than malignant neoplasms</b>
QA07.Z	<b>Follow-up examination after treatment for conditions other than malignant neoplasms, unspecified</b>
<b>QA08</b>	<b>Special screening examination for infectious diseases</b> <p>A reason for encounter to screen for an infection with a bacterial, viral, fungal, or parasitic source.</p>
QA08.0	<b>Special screening examination for intestinal infectious diseases</b>
QA08.1	<b>Special screening examination for respiratory tuberculosis</b>
QA08.2	<b>Special screening examination for other bacterial diseases</b>
QA08.3	<b>Special screening examination for infections with a predominantly sexual mode of transmission</b>
QA08.4	<b>Special screening examination for human immunodeficiency virus</b>

<b>QA08.5</b>	<b>Special screening examination for other viral diseases</b>
	<b><i>Exclusions:</i></b> Viral intestinal infections (1A20-1A2Z)
	Special screening examination for infections with a predominantly sexual mode of transmission (QA08.3)
	Special screening examination for human immunodeficiency virus (QA08.4)
<b>QA08.6</b>	<b>Special screening examination for other protozoal diseases or helminthiases</b>
	<b><i>Exclusions:</i></b> Protozoal intestinal infections (1A30-1A3Z)
<b>QA08.Y</b>	<b>Special screening examination for other specified infectious diseases</b>
<b>QA08.Z</b>	<b>Special screening examination for unspecified infectious diseases</b>
<b>QA09</b>	<b>Special screening examination for neoplasms</b>
<b>QA09.0</b>	<b>Special screening examination for neoplasm of stomach</b>
<b>QA09.1</b>	<b>Special screening examination for neoplasm of intestinal tract</b>
<b>QA09.2</b>	<b>Special screening examination for neoplasm of respiratory organs</b>
<b>QA09.3</b>	<b>Special screening examination for neoplasm of breast</b>
	<b><i>Exclusions:</i></b> routine mammogram (QA00.B)
<b>QA09.4</b>	<b>Special screening examination for neoplasm of cervix</b>
	<b><i>Exclusions:</i></b> Gynaecological examination (QA00.9)
<b>QA09.5</b>	<b>Special screening examination for neoplasm of prostate</b>
	<b><i>Exclusions:</i></b> Prostate specific antigen positive (MA14.1B)
<b>QA09.6</b>	<b>Special screening examination for neoplasm of bladder</b>
<b>QA09.7</b>	<b>Special screening examination for neoplasm of skin</b> Attendance for special screening for skin cancer including whole skin surface photographic or dermoscopic documentation of patients with multiple melanocytic naevi or naevoid basal cell carcinoma syndrome.
<b>QA09.Y</b>	<b>Other specified special screening examination for neoplasms</b>
<b>QA09.Z</b>	<b>Special screening for neoplasm of unspecified site</b>
<b>QA0A</b>	<b>Special screening examination for other diseases or disorders</b>
<b>QA0A.0</b>	<b>Special screening examination for diseases of the blood or blood-forming organs or certain disorders involving the immune mechanism</b>
<b>QA0A.1</b>	<b>Special screening examination for endocrine and metabolic disorder</b>
<b>QA0A.10</b>	Special screening examination for diabetes mellitus
<b>QA0A.1Y</b>	Other specified special screening examination for endocrine and metabolic disorder

- QA0A.1Z** Special screening examination for endocrine and metabolic disorder, unspecified
- QA0A.2** Special screening examination for nutritional disorders
- QA0A.3** Special screening examination for mental or behavioural disorders
- QA0A.4** Special screening examination for certain developmental disorders in childhood
- Exclusions:** routine development testing of infant or child (QA00.1)
- QA0A.5** Special screening examination for eye or ear disorders
- QA0A.6** Special screening examination for cardiovascular disorders
- QA0A.7** Special screening examination for allergic and hypersensitivity conditions
- QA0A.Y** Special screening for diseases and disorders not elsewhere classified
- QA0A.Z** Special screening examination for other diseases or disorders, unspecified

**QA0B** **Preprocedural examination**

Evaluation and testing for assessment and proactive management of risks of perioperative morbidity and mortality and implements measurements to minimize risks.

**QA0Y** **Other examination or investigation**

**QA0Z** **Examination or investigation, unspecified**

Contact with health services for counselling (QA10-QA1Z)

- Exclusions:** Mental, behavioural or neurodevelopmental disorders (Chapter 06)  
Contact with health services for menopausal counselling (QA4B)  
Contact with health services for preconception counselling (QA33)  
Contact with health services for fertility preservation counselling (QA34)

**Coded Elsewhere:** Contact with health services for genetic counselling (QA31)

**QA10** **Contact with health services for dietary counselling or surveillance**

**QA11** **Contact with health services for alcohol use counselling or surveillance**

- Exclusions:** Alcohol rehabilitation (QB95.2)  
Disorders due to use of alcohol (6C40)

**QA12** **Contact with health services for drug use counselling or surveillance**

- Exclusions:** Drug rehabilitation (QB95.3)  
Disorders due to substance use or addictive behaviours (6C40-6C5Z)

<b>QA13</b>	<b>Contact with health services for tobacco use counselling</b>
	<b>Exclusions:</b> Tobacco rehabilitation (QB95.8) Disorders due to use of nicotine (6C4A)
<b>QA14</b>	<b>Contact with health services for human immunodeficiency virus counselling</b>
	Human immunodeficiency virus counselling can be defined as accessible HIV counselling services that meet the needs of clients and providers in an equitable and acceptable manner, within the resources available and in line with national guidelines. Counselling should increase knowledge of HIV prevention and help the client to focus on solutions to risk reduction.
<b>QA15</b>	<b>Counselling related to sexuality</b>
	<b>Exclusions:</b> Contact with health services for contraceptive management (QA21)  Conditions related to sexual health (Chapter 17)  Contact with health services for procreative management (QA30-QA3Z)
<b>QA15.0</b>	<b>Counselling related to sexual attitudes</b>
<b>QA15.1</b>	<b>Counselling related to sexual behaviour and orientation or sexual relationships of the person</b>
<b>QA15.2</b>	<b>Counselling related to sexual behaviour and orientation or sexual relationships of third party</b>
<b>QA15.3</b>	<b>Counselling related to combined sexual attitudes, sexual behaviour and sexual relationships</b>
<b>QA15.Y</b>	<b>Other specified counselling related to sexuality</b>
<b>QA15.Z</b>	<b>Counselling related to sexuality, unspecified</b>
<b>QA16</b>	<b>Individual psychological or behavioural counselling</b>
<b>QA17</b>	<b>Marital or couples counselling</b>
<b>QA18</b>	<b>Family counselling</b>
<b>QA19</b>	<b>Group counselling</b>
<b>QA1A</b>	<b>Discussion of issues surrounding impending death</b>
<b>QA1B</b>	<b>Concern about or fear of medical treatment</b>
<b>QA1C</b>	<b>Person with feared complaint in whom no diagnosis is made</b>
	<b>Exclusions:</b> Medical observation or evaluation for suspected diseases or conditions, ruled out (QA02)
<b>QA1Y</b>	<b>Contact with health services for other specified counselling</b>
<b>QA1Z</b>	<b>Contact with health services for unspecified counselling</b>

Contact with health services for reasons associated with reproduction (QA20-QA4Z)

**Coded Elsewhere:** Contact with health services for concerns about body image related to pregnancy (QD31)

Contact with health services for preimplantation genetic diagnosis (QA3Y)

Contact with health services for preimplantation genetic screening (QA3Y)

**QA20**

**Contact with health services for concerns about pregnancy**

**QA21**

**Contact with health services for contraceptive management**

**QA21.0**

**Contact with health services for postcoital contraception**

**QA21.1**

**Contact with health services for general counselling or advice on contraception**

**QA21.2**

**Contact with health services for insertion of contraceptive device**

**QA21.3**

**Contact with health services for sterilisation**

**QA21.4**

**Contact with health services for menstrual extraction**

**QA21.5**

**Surveillance of contraceptive drugs**

**QA21.6**

**Surveillance of contraceptive device**

**QA21.60**

Retained intrauterine device without injury or harm in non-pregnant uterus

**QA21.6Y**

Other specified surveillance of contraceptive device

**QA21.6Z**

Surveillance of contraceptive device, unspecified

**QA21.Y**

**Other specified contact with health services for contraceptive management**

**QA21.Z**

**Contact with health services for contraceptive management, unspecified**

Contact with health services for procreative management (QA30-QA3Z)

**Exclusions:** complications associated with artificial fertilization (GA32)

**QA30**

**Contact with health services for medically assisted reproduction**

Medically Assisted Reproduction (MAR): reproduction brought about through ovulation induction, controlled ovarian stimulation, ovulation triggering, ART procedures, and intrauterine, intracervical, and intravaginal insemination with semen of husband/partner or donor.

**QA30.0**

**Contact with health services for assisted insemination**

Artificial insemination is a treatment for infertility that involves directly inserting sperm into a woman's uterus.

**QA30.00**

Contact with health services for gamete intrafallopian transfer

**QA30.01**

Contact with health services for procreative management by artificial insemination

- QA30.02** Contact with health services for medically assisted sperm insemination  
Noncoital insemination by intrauterine, intracervical, or intravaginal route using sperm from either a woman's partner or a sperm donor.
- QA30.0Y** Contact with health services for other specified assisted insemination
- QA30.0Z** Contact with health services for unspecified assisted insemination
- QA30.1** **Contact with health services for assisted reproductive technology**  
All treatments or procedures that include the in vitro handling of both human oocytes and sperm or embryos, for the purpose of establishing a pregnancy. This includes, but is not limited to, in vitro fertilization and embryo transfer, gamete intrafallopian transfer, zygote intrafallopian transfer, tubal embryo transfer, gamete and embryo cryopreservation, oocyte and embryo donation, and gestational surrogacy. ART does not include assisted insemination (artificial insemination) using sperm from either a woman's partner or a sperm donor.
- QA30.10** Contact with health services for in vitro fertilisation
- QA30.11** Contact with health services for egg retrieval  
Ovarian follicular aspiration performed with the aim to retrieve oocytes.
- QA30.12** Contact with health services for embryo transfer  
The procedure in which one or more embryos are placed in the uterus or Fallopian tube.
- QA30.13** Contact with health services for ovum implantation
- QA30.14** Contact with health services for harvesting ovum for in vitro fertilisation
- QA30.15** Contact with health services for harvesting or implantation of ova
- QA30.1Y** Contact with health services for other specified assisted reproductive technology
- QA30.1Z** Contact with health services for unspecified assisted reproductive technology
- QA30.2** **Contact with health services for other assisted fertilisation methods**
- QA30.20** Contact with health services for controlled ovarian stimulation for assisted reproductive technology  
Medical treatment in which women are stimulated to induce the development of multiple ovarian follicles to obtain multiple oocytes at follicular aspiration.
- QA30.21** Contact with health services for controlled ovarian stimulation for non-assisted reproductive technology cycles  
Pharmacological treatment for women with normal ovulatory cycles in which the ovaries are stimulated to ovulate more than one oocyte.
- QA30.22** Contact with health services for ovulation induction  
Ovulation Induction (OI): Pharmacological treatment for women with anovulation or oligo-ovulation to result in normal ovulatory cycles.
- QA30.2Y** Contact with health services for other specified assisted fertilisation methods

- QA30.2Z** Contact with health services for unspecified assisted fertilisation methods
- QA30.Y** Other specified contact with health services for medically assisted reproduction
- QA30.Z** Contact with health services for medically assisted reproduction, unspecified
- QA31** Contact with health services for genetic counselling
- QA32** Contact with health services for tuboplasty or vasoplasty after previous sterilisation
- QA33** Contact with health services for preconception counselling  
A reason for encounter to counsel an individual's queries or complaints regarding conception.
- QA34** Contact with health services for fertility preservation counselling  
A reason for encounter to counsel an individual's queries or complaints regarding fertility preservation.
- QA35** Contact with health services by gestational carrier  
A female who is carrying a pregnancy and who has agreed to give the neonate to the intended parents after childbirth. Gametes may be harvested from the intended parent(s) or from a third party.
- QA3Y** Contact with health services for other specified procreative management
- QA3Z** Contact with health services for procreative management, unspecified
- QA40** Pregnancy examination or test
- QA41** Pregnant state
- QA42** Supervision of normal pregnancy
- QA42.0** Supervision of normal first pregnancy
- QA42.Y** Supervision of other specified normal pregnancy
- QA42.Z** Supervision of normal pregnancy, unspecified
- QA43** Supervision of high-risk pregnancy
- QA43.0** Supervision of pregnancy with history of infertility
- QA43.1** Supervision of pregnancy with history of abortive outcome  
*Exclusions:* Recurrent pregnancy loss (GA33)  
Pregnancy care of habitual aborter (JA65.4)
- QA43.2** Supervision of pregnancy with other poor reproductive or obstetric history
- QA43.3** Supervision of pregnancy with history of insufficient antenatal care
- QA43.30** Concealed pregnancy

- QA43.3Y** Other specified supervision of pregnancy with history of insufficient antenatal care
- QA43.3Z** Supervision of pregnancy with history of insufficient antenatal care, unspecified
- QA43.4** **Supervision of elderly primigravida**
- QA43.5** **Supervision of very young primigravida**
- QA43.6** **Supervision of high-risk pregnancy due to social problems**
- QA43.Y** **Other specified supervision of high-risk pregnancy**
- QA43.Z** **Supervision of high-risk pregnancy, unspecified**

**QA44** **Expectant parent pre-birth visit**

Encounter for the provision of prenatal counselling to prospective parents where there is no identified fetal condition/anomaly or consultative services when referred by another physician due to an identified fetal condition/anomaly.

**QA45** **Antenatal screening**

Antenatal screening is a way of assessing whether the unborn baby could develop or has developed an abnormality or other condition during pregnancy.

**Exclusions:** routine prenatal care (QA42)  
Clinical findings on antenatal screening of mother (JA66)

- QA45.0** **Antenatal screening for chromosomal anomalies**
- QA45.1** **Antenatal screening due to raised alphafetoprotein level**
- QA45.Y** **Other specified antenatal screening**
- QA45.Z** **Antenatal screening, unspecified**

**QA46** **Outcome of delivery**

**Coding Note:** This category is intended for use as an additional code to identify the outcome of delivery on the mother's record.

**QA46.0** **Single live birth**  
Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.

**QA46.1** **Single stillbirth**  
Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  
Stillbirths are distinct from cases of induced abortion.  
When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.

- QA46.2      Twins, both liveborn**  
Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- QA46.3      Twins, one liveborn and one stillborn**  
Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.  
Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  
Stillbirths are distinct from cases of induced abortion.  
When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.4      Twins, both stillborn**  
Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  
Stillbirths are distinct from cases of induced abortion.  
When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.5      Triplets, all liveborn**  
Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- QA46.6      Triplets, some liveborn**  
Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.  
Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  
Stillbirths are distinct from cases of induced abortion.  
When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.

- QA46.7      Triplets, all stillborn**
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.8      Quadruplets, all liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- QA46.9      Quadruplets, some liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.A      Quadruplets, all stillborn**
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.B      Quintuplets, all liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.

- QA46.C      Quintuplets, some liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.D      Quintuplets, all stillborn**
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.E      Sextuplets, all liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- QA46.F      Sextuplets, some liveborn**
- Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
- QA46.G      Sextuplets, all stillborn**
- Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.
- Stillbirths are distinct from cases of induced abortion.
- When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.

<b>QA46.H</b>	<b>Other multiple births, all liveborn</b> Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.
<b>QA46.J</b>	<b>Other multiple births, some liveborn</b> Live birth is the complete expulsion or extraction from a woman of a fetus, irrespective of the duration of the pregnancy, which, after such separation, shows signs of life.  Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  Stillbirths are distinct from cases of induced abortion.  When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
<b>QA46.K</b>	<b>Other multiple births, all stillborn</b> Stillbirth is the complete expulsion or extraction from a woman of a fetus, following its death prior to the complete expulsion or extraction, at 22 or more completed weeks of gestation.  Stillbirths are distinct from cases of induced abortion.  When information on gestational age is unavailable use birthweight 500 grams and more as the criteria.
<b>QA46.Z</b>	<b>Outcome of delivery, unspecified</b> <b>Coding Note:</b> This category is intended for use as an additional code to identify the outcome of delivery on the mother's record.
<b>QA47</b>	<b>Liveborn infants according to place of birth</b>
<b>QA47.0</b>	<b>Singleton, born in hospital</b>
<b>QA47.00</b>	Single liveborn infant, delivered vaginally
<b>QA47.01</b>	Single liveborn infant, delivered by caesarean
<b>QA47.0Y</b>	Other specified singleton, born in hospital
<b>QA47.0Z</b>	Singleton, born in hospital, unspecified
<b>QA47.1</b>	<b>Singleton, born outside hospital</b>
<b>QA47.2</b>	<b>Singleton, unspecified as to place of birth</b>
<b>QA47.3</b>	<b>Twin, born in hospital</b>
<b>QA47.30</b>	Twin liveborn infant, delivered vaginally
<b>QA47.31</b>	Twin liveborn infant, delivered by caesarean
<b>QA47.3Y</b>	Other specified twin, born in hospital

<b>QA47.3Z</b>	Twin, born in hospital, unspecified
<b>QA47.4</b>	<b>Twin, born outside hospital</b>
<b>QA47.5</b>	<b>Twin, unspecified as to place of birth</b>
<b>QA47.6</b>	<b>Multiple other than twins, born in hospital</b>
<b>QA47.60</b>	Multiple other than twins, delivered vaginally
<b>QA47.61</b>	Multiple other than twins, delivered by caesarean section
<b>QA47.6Y</b>	Other specified multiple other than twins, born in hospital
<b>QA47.6Z</b>	Multiple other than twins, born in hospital, unspecified
<b>QA47.7</b>	<b>Multiple other than twins, born outside hospital</b>
<b>QA47.8</b>	<b>Other multiple, unspecified as to place of birth</b>
<b>QA47.Z</b>	<b>Liveborn infants according to place of birth, unspecified</b>
<b>QA48</b>	<b>Postpartum care or examination</b>
<b>QA48.0</b>	<b>Care or examination immediately after delivery</b>
	<i><b>Exclusions:</b></i> Complications predominantly related to the puerperium (JB40-JB4Z)
<b>QA48.1</b>	<b>Care or examination of lactating mother</b>
	<i><b>Exclusions:</b></i> Certain specified disorders of breast or lactation associated with childbirth (JB46)
<b>QA48.2</b>	<b>Routine postpartum follow-up</b>
<b>QA48.Y</b>	<b>Other specified postpartum care or examination</b>
<b>QA48.Z</b>	<b>Postpartum care or examination, unspecified</b>
<b>QA49</b>	<b>Problems related to unwanted pregnancy</b>
	<i><b>Exclusions:</b></i> Supervision of high-risk pregnancy due to social problems (QA43.6)
<b>QA4A</b>	<b>Problems related to multiparity</b>
	<i><b>Exclusions:</b></i> Supervision of pregnancy with grand multiparity (QA43)
<b>QA4B</b>	<b>Contact with health services for menopausal counselling</b>
	A reason for encounter to counsel an individual's queries or complaints regarding menopause.
<b>QA4Y</b>	<b>Other specified contact with health services for reasons associated with reproduction</b>
<b>QA4Z</b>	<b>Contact with health services for reasons associated with reproduction, unspecified</b>

Health care related circumstances influencing the episode of care without injury or harm  
(QA50-QB0Z)

Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm (QA50-QA5Z)

**Exclusions:** Mode of injury or harm associated with a surgical or other medical procedure  
(PL11)

**QA50**

**Embolisation without injury or harm**

An embolisation without documented injury or harm occurs when a solid object within the venous or arterial circulation propagates to a distal location and becomes lodged there.

**Exclusions:** Embolisation, as mode of injury or harm (PL11.2)

**QA51**

**Foreign body accidentally left in body without injury or harm**

A foreign body is any solid material not normally found in the human body. It is accidentally left in the body if there was no specific intention to keep it in the body.

**Exclusions:** Foreign body accidentally left in body, as mode of injury or harm (PL11.3)

**QA52**

**Failure of sterile precautions without injury or harm**

Standard procedures designed to minimize the risk of hospital acquired infection were not followed or were insufficient, without documented injury or harm.

**Exclusions:** Failure of sterile precautions, as mode of injury or harm  
(PL11.4)

**QA53**

**Pressure as potential mode of injury without injury or harm**

Pressure as a potential mode of injury, includes factors such as: body positioning, retractors, or other instruments with direct pressure, without documented injury or harm.

**Exclusions:** Pressure, as mode of injury or harm (PL11.6)

**QA5Y**

**Other specified circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm**

**QA5Z**

**Circumstances associated with a surgical or other medical procedure influencing the episode of care, without injury or harm, unspecified**

Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm (QA60-QA6Z)

**Exclusions:** Mode of injury or harm associated with a surgical or other medical device, implant or graft (PL12)

**QA60**

**Structural device failure without injury or harm**

Mechanical or material device failure not related to the installation of the device without any documented injury or harm.

**Exclusions:** Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)

Structural device failure, as mode of injury or harm (PL12.0)

**QA61**

**Functional device failure without injury or harm**

A device not working or operating correctly, or that has stopped functioning after a period of function, but without documented injury or harm to the patient.

**Exclusions:** Retained intrauterine device without injury or harm in non-pregnant uterus (QA21.60)

Retained intrauterine contraceptive device in pregnancy (JA65.5)

Breakage of device without documented injury or harm (QA60)

Functional device failure, as mode of injury or harm (PL12.1)

**QA62**

**Dislodgement, misconnection or de-attachment of a surgical or medical device without injury or harm**

A device that has moved out of place, become disconnected, loosened or unstable, but without documented injury or harm.

**Exclusions:** Dislodgement, misconnection or de-attachment, as mode of injury or harm (PL12.4)

**QA63**

**Obstruction of device without injury or harm**

A device that has become obstructed or blocked but without any documented injury or harm.

**Exclusions:** Obstruction of device, as mode of injury or harm (PL12.3)

**QA64**

**Operator error without injury or harm**

Incorrect, or improper maintenance or installation of device without documented injury or harm due to operator error.

**Exclusions:** Operator error, as mode of injury or harm (PL12.5)

**QA65**

**Combination or interaction of operator error and device failure without injury or harm**

Combination of device failure (structural or functional) and process/procedural error (poor training, maintenance, incorrect installation) in device use or maintenance without documented injury or harm.

**Exclusions:** Combination or interaction of operator error and device failure, as mode of injury or harm (PL12.6)

**QA6Y**

**Other specified circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm**

**QA6Z**

**Circumstances associated with a surgical or other medical device influencing the episode of care without injury or harm, unspecified**

Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm (QA70-QA7Z)

**Exclusions:** Mode of injury or harm associated with exposure to a drug, medicament or biological substance (PL13)

**QA70**

**Overdose of substance without injury or harm**

Overdose of a substance occurs when a patient is given more of a prescribed drug or other substance than is intended. Can be the result of inaccurate measurement of drug, including oral administration. No injury or harm occurred as a result.

**Exclusions:** Overdose of substance, as mode of injury or harm (PL13.0)

**QA71**

**Underdosing without injury or harm**

Under-dosing occurs when a patient takes less of a medication than is prescribed by the provider or the manufacturer's instructions without documented injury or harm. This can be the result of inaccurate measurement of a drug, including oral administration. No injury or harm occurred as a result.

**Exclusions:** Underdosing, as mode of injury or harm (PL13.1)

**QA72**

**Incorrect substance without injury or harm**

Incorrect substance administration occurs when a substance is given which was not the intended or prescribed drug and does not result in injury or harm.

**Exclusions:** Incorrect substance, as mode of injury or harm (PL13.3)

**QA73**

**Incorrect route of administration without injury or harm**

Incorrect or wrong route of administration without documented injury or harm.

**Exclusions:** Incorrect route of drug or medicament, as mode of injury (PL13.50)

**QA74**

**Unspecified appropriateness of dosing or administration without injury or harm**

Unspecified administration of dosage or route without documented injury or harm.

**Exclusions:** Delayed treatment without injury or harm (QA8B)

**QA75**

**Incorrect duration of administration or course of therapy without injury or harm**

Incorrect duration of administration or course of therapy including extended period of time or too brief in duration without documented injury or harm.

**Exclusions:** Incorrect duration of drug or medicament, as mode of injury (PL13.53)

**QA76**

**Medication or substance that is known to be an allergen without injury or harm**

Medication that has previously been identified as an allergen to the patient is administered, but does not result in injury or harm.

**Exclusions:** Medication or substance that is known to be an allergen, as mode of injury or harm (PL13.6)

**QA77**

**Medication or substance that is known to be contraindicated for the patient without injury or harm**

Prescription or non-prescription drug or other substance that has a medical reason for why it should not be used that is administered and does not result in injury or harm.

**Exclusions:** Medication or substance that is known to be an allergen without injury or harm (QA76)

Medication or substance that is known to be contraindicated for the patient, as mode of injury or harm (PL13.7)

**QA78**

**Expired or deteriorated medication or substance without injury or harm**

Administration of a medication that has passed the manufacturer's expiration date. Administration of a medication which has become impaired or inferior in quality, functioning, or condition. No injury or harm occurred as a result.

**Exclusions:** Expired or deteriorated medication or substance, as mode of injury or harm (PL13.8)

**QA79**

**Drug or substance interactions without injury or harm**

A drug interaction is a situation in which a substance affects the activity of another drug when both are administered together. Includes increased effectiveness, decreased effectiveness or a new effect that is not produced from either drug on its own. No injury or harm occurred as a result.

**Exclusions:** Drug or substance interactions, as mode of injury or harm (PL13.9)

**QA7A**

**Inappropriate stoppage or discontinuation of drug without injury or harm**

Drug administration cancelled before prescribed or patient stopped taking drug without provider instructions. No injury or harm occurred as a result.

**Exclusions:** Inappropriate stoppage or discontinuation of drug, as mode of injury or harm (PL13.A)

**QA7Y**

**Other specified circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm**

**QA7Z**

**Circumstances associated with exposure to a drug, medicament or biological substance influencing the episode of care without injury or harm, unspecified**

Circumstances associated with other aspects of care influencing the episode of care without injury or harm (QA80-QA8Z)

**QA80**

**Non-administration of necessary drug without injury or harm**

Prescribed drug not given. Missed dose, drug not started, drug delayed resulting in missed dose, but no documented injury or harm resulted.

**Exclusions:**

Delayed treatment without injury or harm (QA8B)

Non-administration of necessary drug (PL14.0)

**QA81**

**Non-provision of necessary procedure without injury or harm**

Medically ordered procedure not performed in the episode of care (interrupted, cancelled).

**Exclusions:**

Delayed treatment without injury or harm (QA8B)

Non provision of necessary procedure (PL14.1)

**QA82**

**Problem associated with physical transfer of patient without injury or harm**

Fall, bump, slip, entanglement, drop of patient during movement with healthcare personnel, without documented injury or harm

**Exclusions:**

Problem associated with physical transfer of patient (PL14.2)

**QA83**

**Mismatched blood used in transfusion without injury or harm**

Blood product (e.g. packed red blood cells, platelets, plasma) improperly matched with patient; wrong blood product administered to patient without documented injury or harm.

**Exclusions:**

Mismatched blood used in transfusion (PL14.3)

**QA84**

**Other problem with transfusion without injury or harm**

Transfusion interruption or delay (e.g. took too long to administer – clotted or had to be discarded); transfusion line issues: cracked, leaked a substantial amount of blood so that insufficient amount reached patient; large amount of air infused without documented injury or harm.

**Exclusions:**

Other problem associated with transfusion (PL14.4)

**QA85**

**Problem with physical restraints without injury or harm**

Restraints not attached properly and not effective (e.g. restraints came undone); restraint broken; restraint too tight but problem identified before injury occurred

**Exclusions:**

Problem associated with physical restraints (PL14.5)

**QA86**

**Problem with isolation protocol without injury or harm**

Patient not monitored as frequently as required or ordered; or patient mistakenly or inappropriately put on isolation; or isolation technique broken and contamination possible by patient, health provider, or visitor. No injury or harm resulted.

**Exclusions:**

Problem associated with isolation protocol (PL14.6)

**QA87**

**Problem with clinical documentation without injury or harm**

Documentation on wrong patient; incomplete documentation; incorrect documentation identified as inconsistent with other source, but without documented injury or harm to the patient.

**Exclusions:** Problem associated with clinical documentation (PL14.7)

**QA88**

**Problem with clinical software without injury or harm**

Software malfunction causing interruption in processing of patient orders, laboratory or other diagnostic results, data entry, electronic communication, or data output, but without documented injury or harm.

**Exclusions:** Problem associated with clinical software (PL14.8)

**QA89**

**Incorrect diagnosis without injury or harm**

Diagnosis changed after further study and as a result, treatment was incorrect; misdiagnosis; conflicting diagnoses

**Exclusions:** Incorrect diagnosis (PL14.9)

**QA8A**

**Delayed diagnosis without injury or harm**

Diagnosis not established in a timely manner; symptoms but no diagnosis were documented. In this situation, no documented injury or harm resulted.

**Exclusions:** Delayed diagnosis (PL14.A)

**QA8B**

**Delayed treatment without injury or harm**

Delayed commencement of therapy (e.g. drug therapy, physical therapy, occupational therapy, radiation therapy, surgery, psychological or psychiatric therapy, dressing change, irrigation, etc.).

delayed surgery or procedure

delayed administration of drug or medicament

**Exclusions:** Delayed treatment (PL14.B)

**QA8C**

**Problem with transitions of care, hand offs, or handovers without injury or harm**

Miscommunication, errors, or no communication when changing setting of care from one patient care unit, department, or institution to another

**Exclusions:** Problem associated with transitions of care, hand offs, or handovers (PL14.D)

**QA8D**

**Patient received diagnostic test or treatment intended for another patient without injury or harm**

Patient order for testing or treatment performed on wrong patient (e.g. lab test, diagnostic imaging test, physical or psychological therapy, dressing change, irrigation, etc.).

Patient received drug or medicament meant for another patient, but no harm resulted.

**Exclusions:** Patient received diagnostic test or treatment intended for another patient (PL14.C)

- QA8E** **Fall in health care without injury or harm**  
**Exclusions:** Fall in health care with injury or harm (PL14.E)
- QA8F** **Needle stick without injury or harm**  
**Exclusions:** Needle stick associated with injury or harm in therapeutic use (PK81.F)
- QA8Y** **Other specified circumstances associated with other aspects of care influencing the episode of care without injury or harm**
- QA8Z** **Circumstances associated with other aspects of care influencing the episode of care without injury or harm, unspecified**
- QB0Y** **Other specified health care related circumstances influencing the episode of care without injury or harm**
- QB0Z** **Health care related circumstances influencing the episode of care without injury or harm, unspecified**

Factors related to medical facilities and other health care (QB10-QB1Z)

- QB10** **Medical services not available in home**  
**Exclusions:** Difficulty or need for assistance with activities (QF20-QF2Z)
- QB11** **Person awaiting admission to adequate facility elsewhere**
- QB12** **Waiting period for investigation or treatment other than awaiting admission to adequate facility elsewhere**
- QB12.0** **Organ transplant candidate**
- QB12.Y** **Other specified waiting period for investigation or treatment other than awaiting admission to adequate facility elsewhere**
- QB12.Z** **Waiting period for investigation or treatment other than awaiting admission to adequate facility elsewhere, unspecified**
- QB13** **Unavailability or inaccessibility of helping agencies other than health care facilities**
- QB14** **Unavailability or inaccessibility of health care facilities**  
**Exclusions:** bed unavailable (QB11)
- QB15** **Medical services not available in current medical facility**
- QB16** **Respite care**  
 Provision of temporary health-care facilities to a person normally cared for at home.
- QB1Y** **Other specified factors related to medical facilities and other health care**
- QB1Z** **Factors related to medical facilities and other health care, unspecified**

Donors of organs or tissues (QB20-QB2Z)

**Exclusions:** Examination of potential donor of organ or tissue (QA00.4)

**Coded Elsewhere:** Stem cell donor (QB20)

**QB20**

**Blood donor**

Blood donor is a human being who is a source of blood for the purpose of transfusion.

**QB21**

**Bone marrow donor**

Bone marrow donor is a human being who is a source of bone marrow for the purpose of transplantation.

**QB22**

**Kidney donor**

Kidney donor is a human being, who is a source of a kidney for the purpose of transplantation.

**QB23**

**Cornea donor**

Cornea donor is a human being, who is a source of a cornea for the purpose of transplantation.

**QB24**

**Liver donor**

Liver donor is a human being, who is a source of a liver for the purpose of transplantation.

**QB25**

**Heart donor**

Heart donor is a human being, who is a source of a heart for the purpose of transplantation.

**QB2Y**

**Donors of other specified organs or tissues**

**QB2Z**

**Donors of organs or tissues, unspecified**

Fitting, adjustment or management of devices (QB30-QB3Z)

**Exclusions:** Contact with health services for issue of repeat prescription (QB92)

Presence of devices other than cardiac or vascular implants (QB51)

malfunction or other complications of device (NE80-NE8Z)

**QB30**

**Adjustment or management of implanted devices**

**QB30.0**

**Adjustment or management of implanted hearing device**

**QB30.00**

Adjustment or management of bone conduction device

**QB30.01**

Adjustment or management of cochlear device

**QB30.0Y**

Adjustment or management of other implanted hearing device

**QB30.0Z**

Adjustment or management of implanted hearing device, unspecified

**QB30.1**

**Adjustment or management of infusion pump**

<b>QB30.2</b>	<b>Adjustment or management of cardiac devices</b>
	<b><i>Exclusions:</i></b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)
<b>QB30.20</b>	Adjustment or management of cardiac pacemaker
	<b><i>Exclusions:</i></b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)
<b>QB30.21</b>	Adjustment or management of cardiac resynchronization therapy defibrillator
	<b><i>Exclusions:</i></b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)
<b>QB30.22</b>	Adjustment or management of cardiac resynchronization therapy pacemaker
	<b><i>Exclusions:</i></b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)
<b>QB30.23</b>	Adjustment or management of cardioverter-defibrillator
	<b><i>Exclusions:</i></b> Dysfunction or complication of pacemaker, pacemaker lead or implantable cardioverter defibrillator, not elsewhere classified (NE82)
<b>QB30.2Y</b>	Other specified adjustment or management of cardiac devices
<b>QB30.2Z</b>	Adjustment or management of cardiac devices, unspecified
<b>QB30.3</b>	<b>Adjustment or management of vascular access device</b>
<b>QB30.4</b>	<b>Adjustment or management of implanted gastric device</b>
<b>QB30.5</b>	<b>Fitting or adjustment of urinary device</b>
<b>QB30.6</b>	<b>Adjustment or management of breast implant</b>
<b>QB30.7</b>	<b>Adjustment or removal of myringotomy stent or tube</b>
<b>QB30.8</b>	<b>Adjustment and management of a neurostimulator</b>
<b>QB30.9</b>	<b>Fitting or adjustment of cerebrospinal fluid drainage device</b>
<b>QB30.A</b>	<b>Fitting or adjustment of neuropacemaker</b>
<b>QB30.Y</b>	<b>Fitting, adjustment or management of other specified implanted devices</b>
<b>QB30.Z</b>	<b>Adjustment or management of implanted devices, unspecified</b>

<b>QB31</b>	<b>Fitting, adjustment or management of external devices</b>
	<b>Coded Elsewhere:</b> Fitting or adjustment of urinary device (QB30.5)
	Adjustment and management of a neurostimulator (QB30.8)
	Fitting or adjustment of cerebrospinal fluid drainage device (QB30.9)
	Fitting or adjustment of neuromodulator (QB30.A)
	Fitting or adjustment of devices related to nervous system or special senses (QB30.Z)
<b>QB31.0</b>	<b>Fitting or adjustment of external prosthetic device</b>
	<b>Exclusions:</b> presence of prosthetic device (QB50-QB5Z)
<b>QB31.00</b>	Fitting or adjustment of artificial arm
<b>QB31.01</b>	Fitting or adjustment of artificial leg
<b>QB31.02</b>	Fitting or adjustment of artificial eye
<b>QB31.03</b>	Fitting or adjustment of external breast prosthesis
<b>QB31.0Y</b>	Other specified fitting or adjustment of external prosthetic device
<b>QB31.0Z</b>	Fitting or adjustment of external prosthetic device, unspecified
<b>QB31.1</b>	<b>Fitting or adjustment of orthopaedic device</b>
<b>QB31.2</b>	<b>Fitting or adjustment of orthodontic device</b>
<b>QB31.3</b>	<b>Fitting or adjustment of dental prosthetic device</b>
<b>QB31.4</b>	<b>Fitting or adjustment of hearing aid</b>
<b>QB31.5</b>	<b>Fitting or adjustment of spectacles or contact lenses</b>
<b>QB31.Y</b>	<b>Fitting, adjustment or management of other specified external devices</b>
<b>QB31.Z</b>	<b>Fitting, adjustment or management of external devices, unspecified</b>
<b>QB3Z</b>	<b>Fitting, adjustment or management of devices, unspecified</b>

Dependence on enabling machines or devices (QB40-QB4Z)

<b>QB40</b>	<b>Dependence on aspirator</b>
<b>QB41</b>	<b>Dependence on respirator</b>
<b>QB42</b>	<b>Dependence on renal dialysis</b>
	<b>Inclusions:</b> renal dialysis status
	<b>Exclusions:</b> dialysis preparation, treatment or session (QB94)
<b>QB43</b>	<b>Dependence on artificial heart</b>
<b>QB44</b>	<b>Dependence on wheelchair</b>

**QB4Y**      **Dependence on other specified machine or device**

**QB4Z**      **Dependence on unspecified machine or device**

Presence of device, implants or grafts (QB50-QB5Z)

**QB50**      **Presence of cardiac or vascular implants or grafts**

**QB50.0**      **Presence of electronic cardiac devices**

*Exclusions:*      Adjustment or management of cardiac devices (QB30.2)

**QB50.00**      Presence of cardiac pacemaker

**QB50.01**      Presence of cardiac resynchronization therapy defibrillator

**QB50.02**      Presence of cardiac resynchronization therapy pacemaker

**QB50.03**      Presence of cardioverter-defibrillator

**QB50.0Y**      Other specified presence of electronic cardiac devices

**QB50.0Z**      Presence of electronic cardiac devices, unspecified

**QB50.1**      **Presence of aortocoronary bypass graft**

**QB50.2**      **Presence of prosthetic heart valve**

**QB50.3**      **Presence of xenogenic heart valve**

**QB50.4**      **Presence of coronary angioplasty implant or graft**

**QB50.Y**      **Presence of other specified cardiac or vascular implants or grafts**

**QB50.Z**      **Presence of unspecified cardiac or vascular implants or grafts**

**QB51**      **Presence of devices other than cardiac or vascular implants**

*Exclusions:*      Fitting, adjustment or management of devices (QB30-QB3Z)

**QB51.0**      **Presence of a neurostimulator**

**QB51.1**      **Presence of urogenital implants**

**QB51.2**      **Presence of intraocular lens**

**QB51.3**      **Presence of otological or audiological implants**

**QB51.4**      **Presence of artificial larynx**

**QB51.5**      **Presence of endocrine implants**

*Inclusions:*      presence of insulin pump

**QB51.6**      **Presence of tooth-root or mandibular implants**

**QB51.7**      **Presence of orthopaedic joint implants**

**QB51.8**      **Presence of artificial eye**

<b>QB51.9</b>	<b>Presence of artificial limb</b>
<b>QB51.A</b>	<b>Presence of dental prosthetic device</b>
<b>QB51.B</b>	<b>Presence of external hearing-aid</b>
<b>QB51.C</b>	<b>Presence of contraceptive device</b>
	<b><i>Exclusions:</i></b> Contact with health services for insertion of contraceptive device (QA21.2)
	Surveillance of contraceptive device (QA21.6)
<b>QB51.D</b>	<b>Presence of cerebrospinal fluid drainage device</b>
<b>QB51.Y</b>	<b>Presence of other specified devices other than cardiac or vascular implants</b>
<b>QB5Z</b>	<b>Presence of unspecified device</b>

Surgical or postsurgical states (QB60-QB6Z)

***Exclusions:*** Convalescence (QB70-QB7Z)

***Coded Elsewhere:*** After-cataract (9B10.22)

Presence of intraocular lens (QB51.2)

Presence of cataract surgery (9B1Z)

<b>QB60</b>	<b>Presence of arthrodesis</b>
-------------	--------------------------------

<b>QB61</b>	<b>Presence of artificial opening</b>
-------------	---------------------------------------

***Exclusions:*** Malfunction or complication of external stoma of urinary tract (GC74)

Attention to artificial openings (QB62)

Tracheostomy malfunction (CB60)

Malfunction or complication of external stoma of digestive organs (DE12)

<b>QB61.0</b>	<b>Presence of tracheostomy</b>
---------------	---------------------------------

<b>QB61.1</b>	<b>Presence of thoracostomy</b>
---------------	---------------------------------

<b>QB61.2</b>	<b>Presence of gastrostomy</b>
---------------	--------------------------------

<b>QB61.3</b>	<b>Presence of enterostomy</b>
---------------	--------------------------------

<b>QB61.30</b>	Presence of ileostomy
----------------	-----------------------

<b>QB61.3Y</b>	Other specified presence of enterostomy
----------------	---

<b>QB61.3Z</b>	Presence of enterostomy, unspecified
----------------	--------------------------------------

<b>QB61.4</b>	<b>Presence of colostomy</b>
---------------	------------------------------

<b>QB61.5</b>	<b>Presence of cystostomy</b>
---------------	-------------------------------

<b>QB61.6</b>	<b>Presence of nephrostomy</b>
---------------	--------------------------------

<b>QB61.7</b>	<b>Presence of ureterostomy</b>
<b>QB61.8</b>	<b>Presence of urethrostomy</b>
<b>QB61.Y</b>	<b>Presence of other artificial opening</b>
<b>QB61.Z</b>	<b>Presence of artificial opening, unspecified</b>
<b>QB62</b>	<b>Attention to artificial openings</b>
	<p><b>Inclusions:</b> fitting and adjustment of prosthetic and other devices (QB30-QB3Z)</p> <p>complications of external stoma (CB60)</p> <p>artificial opening status only, without need for care (QB61)</p> <p>Malfunction or complication of external stoma of digestive organs (DE12)</p> <p>Malfunction or complication of external stoma of urinary tract (GC74)</p>
<b>QB62.0</b>	<b>Attention to tracheostomy</b>
<b>QB62.1</b>	<b>Attention to gastrostomy</b>
<b>QB62.2</b>	<b>Attention to ileostomy</b>
<b>QB62.3</b>	<b>Attention to colostomy</b>
<b>QB62.4</b>	<b>Attention to cystostomy</b>
<b>QB62.5</b>	<b>Attention to artificial vagina</b>
<b>QB62.6</b>	<b>Attention to nephrostomy</b>
<b>QB62.7</b>	<b>Attention to ureterostomy</b>
<b>QB62.8</b>	<b>Attention to urethrostomy</b>
<b>QB62.Y</b>	<b>Attention to other artificial openings</b>
<b>QB62.Z</b>	<b>Attention to artificial openings, unspecified</b>
<b>QB63</b>	<b>Presence of transplanted organ or tissue</b>
	<p><b>Inclusions:</b> organ or tissue replaced by heterogenous or homogenous transplant</p> <p><b>Exclusions:</b> Failure or rejection of transplanted organs or tissues (NE84)</p> <p>Presence of cardiac or vascular implants or grafts (QB50)</p> <p>Presence of xenogenic heart valve (QB50.3)</p>
<b>QB63.0</b>	<b>Presence of transplanted kidney</b>
	<p><b>Inclusions:</b> kidney transplant status</p>
<b>QB63.1</b>	<b>Presence of transplanted heart</b>
	<p><b>Exclusions:</b> Presence of heart-valve replacement other than prosthetic or xenogenic (QB50)</p>

<b>QB63.2</b>	<b>Presence of transplanted lung</b>
<b>QB63.3</b>	<b>Presence of transplanted liver</b>
<b>QB63.4</b>	<b>Presence of transplanted skin</b>
<b>QB63.5</b>	<b>Presence of transplanted bone</b>
<b>QB63.6</b>	<b>Presence of transplanted bone marrow</b>
<b>QB63.7</b>	<b>Presence of transfused blood</b>
<b>QB63.8</b>	<b>Presence of transplanted stem cell</b>
<b>QB63.9</b>	<b>Presence of transplanted cornea</b>
<b>QB63.Y</b>	<b>Presence of other transplanted organ or tissue</b>
<b>QB63.Z</b>	<b>Presence of transplanted organ or tissue, unspecified</b>
<b>QB6Y</b>	<b>Other specified surgical or postsurgical states</b>
<b>QB6Z</b>	<b>Surgical or postsurgical states, unspecified</b>

**Convalescence (QB70-QB7Z)**

Convalescence is the period in which the body recovers from a serious illness, injury or surgery.

<b>QB70</b>	<b>Convalescence following chemotherapy</b>
<b>QB71</b>	<b>Convalescence following psychotherapy</b>
<b>QB72</b>	<b>Convalescence following treatment of fracture</b>
<b>QB73</b>	<b>Convalescence following combined treatment</b> Convalescence following any combination of rehabilitation treatments including cardiac rehabilitation, alcohol rehabilitation, drug rehabilitation, psychotherapy, and physical therapy
<b>QB7Y</b>	<b>Other specified convalescence</b>
<b>QB7Z</b>	<b>Convalescence, unspecified</b>

**Contact with health services for specific surgical interventions (QB80-QB8Z)**

**Coding Note:** Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.

**Exclusions:** follow-up examination for medical surveillance after treatment (QA00-QA0Z)

<b>QB80</b>	<b>Contact with health services for prophylactic surgery</b>
-------------	--

<b>QB80.0</b>	<b>Contact with health services for prophylactic surgery for risk-factors related to malignant neoplasms</b>
<b>QB80.Y</b>	<b>Other specified contact with health services for prophylactic surgery</b>
<b>QB80.Z</b>	<b>Contact with health services for prophylactic surgery, unspecified</b>
<b>QB81</b>	<b>Contact with health services for plastic surgery for unacceptable cosmetic appearance other than hair transplant</b>
	<i><b>Exclusions:</b></i> plastic and reconstructive surgery following healed injury or operation (QB83)
<b>QB82</b>	<b>Contact with health services for routine or ritual circumcision</b>
<b>QB83</b>	<b>Follow-up care involving plastic surgery</b>
	<i><b>Inclusions:</b></i> plastic and reconstructive surgery following healed injury or operation repair of scarred tissue
<b>QB84</b>	<b>Follow-up care involving removal of fracture plate or other internal fixation device</b>
	<i><b>Exclusions:</b></i> removal of external fixation device (QB80-QB8Z)
<b>QB85</b>	<b>Attention to surgical dressings, drains or sutures</b>
<b>QB86</b>	<b>Contact with health services for hair transplant</b>
<b>QB8Y</b>	<b>Contact with health services for other specified surgical interventions</b>
<b>Coding Note:</b>	Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.
<b>QB8Z</b>	<b>Contact with health services for specific surgical interventions, unspecified</b>
<b>Coding Note:</b>	Codes in this category are intended for use to indicate a reason for care when no specific diagnosis has been documented. They may be used for patients who have already been treated for a disease or injury, but who are receiving follow-up or prophylactic care, convalescent care, or care to consolidate the treatment, to deal with residual states, to ensure that the condition has not recurred, or to prevent recurrence.

Contact with health services for nonsurgical interventions not involving devices (QB90-QB9Z)

<b>QB90</b>	<b>Contact with health services for ear piercing</b>
<b>QB91</b>	<b>Contact with health services for piercing of body site other than ear</b>

**QB92****Contact with health services for issue of repeat prescription**

- Exclusions:** Issue of medical certificate (QA01.7)  
repeat prescription for contraceptive (QA21.5)

**QB93****Contact with health services for orthodontic care****QB94****Care involving dialysis**

Care involving dialysis includes the preparation and maintenance of the patient and carer(s) on dialysis whether extracorporeal or peritoneal dialysis. This includes, but is not confined to: education, counselling, assessment and management of comorbidities, prevention and management of infections (particularly blood borne) and psychosocial assessment and support.

- Inclusions:** dialysis preparation and treatment

- Exclusions:** renal dialysis status (QB42)

**QB94.0****Preparatory care for dialysis**

Preparatory care for dialysis may include the assessment, education and counselling of the patient and carer(s) to facilitate psychosocial adjustment, choice of dialysis modality (including site – home, satellite, hospital) and timing of commencement, identification and management of social and physical barriers to dialysis or specific modalities. This may include preparation of the patient for dialysis access modalities including creation of fistula and/or insertion of dialysis catheter.

**QB94.1****Care involving extracorporeal dialysis****QB94.2****Care involving peritoneal dialysis****QB94.Y****Care involving other specified dialysis****QB94.Z****Care involving dialysis, unspecified****QB95****Care involving use of rehabilitation procedures**

- Exclusions:** Contact with health services for counselling (QA10-QA1Z)

**QB95.0****Cardiac rehabilitation**

Cardiac rehabilitation is a medically supervised program that helps improve the health and well-being of people who have heart problems.

Cardiac rehabilitation aims to reverse limitations experienced by patients who have suffered the adverse pathophysiologic and psychological consequences of cardiac events.

**QB95.1****Physical rehabilitation**

- Exclusions:** Cardiac rehabilitation (QB95.0)

**QB95.2****Alcohol rehabilitation**

Alcohol rehabilitation is defined as the process that begins when alcohol users come into contact with a health provider or service, and continues through a succession of specific interventions until the highest attainable level of health and well-being is reached.

<b>QB95.3</b>	<b>Drug rehabilitation</b> Drug rehabilitation is defined as the process that begins when drug users come into contact with a health provider or service, and continues through a succession of specific interventions until the highest attainable level of health and well-being is reached.
	<b><i>Exclusions:</i></b> Tobacco rehabilitation (QB95.8)
<b>QB95.4</b>	<b>Psychotherapy</b>
<b>QB95.5</b>	<b>Speech therapy</b>
<b>QB95.6</b>	<b>Orthoptic training</b>
<b>QB95.7</b>	<b>Occupational therapy or vocational rehabilitation</b>
<b>QB95.8</b>	<b>Tobacco rehabilitation</b>
<b>QB95.Y</b>	<b>Care involving use of other specified rehabilitation procedures</b>
<b>QB95.Z</b>	<b>Care involving use of rehabilitation procedures, unspecified</b>
<b>QB96</b>	<b>Radiotherapy session</b>
<b>QB97</b>	<b>Chemotherapy session for neoplasm</b>
<b>QB98</b>	<b>Blood transfusion without reported diagnosis</b>
<b>QB99</b>	<b>Apheresis</b>
<b>QB9A</b>	<b>Preparatory care for subsequent treatment</b> <b><i>Exclusions:</i></b> Preparatory care for dialysis (QB94.0)
<b>QB9B</b>	<b>Palliative care</b> Palliative care is an approach that improves the quality of life of patients and their families facing the problems associated with life-threatening illness, through the prevention and relief of suffering by means of early identification and impeccable assessment, and treatment of pain and other problems – physical, psychosocial and spiritual.
<b>QB9C</b>	<b>Allergen immunotherapy</b> Allergen immunotherapy (AIT) is the stimulation of the immune system with the administration of gradually increasing doses of the substance/allergen to which the patient is allergic. AIT is indicated in the treatment of many allergic conditions, such as allergic rhinitis, allergic asthma, allergic conjunctivitis, IgE-mediated food allergies among others.
<b>QB9Y</b>	<b>Other specified contact with health services for nonsurgical interventions not involving devices</b>
<b>QB9Z</b>	<b>Contact with health services for nonsurgical interventions not involving devices, unspecified</b>

Contact with health services related to immunizations or certain other prophylactic measures  
(QC00-QC0Z)

**QC00**

**Need for immunization against single bacterial diseases**

<b>QC6Z</b>	<b>Family history of health problems, unspecified</b>
<b>QC8Y</b>	<b>Other specified personal or family history or late effect of prior health problems</b>
<b>QC8Z</b>	<b>Personal or family history or late effect of prior health problems, unspecified</b>

Risk factors associated with infectious or certain other conditions (QC90-QD2Z)

<b>QC90</b>	<b>Contact with or exposure to communicable diseases</b>
QC90.0	<b>Contact with or exposure to intestinal infectious diseases</b>
QC90.00	Exposure to cholera
QC90.0Y	Other specified contact with or exposure to intestinal infectious diseases
QC90.0Z	Contact with or exposure to intestinal infectious diseases, unspecified

## Carrier of infectious disease agent (QD00-QD0Z)

**Coded Elsewhere:** Carrier of viral hepatitis (obsolete concept) (1E51.Y)

QD00	<b>Carrier of salmonella typhi</b>
QD01	<b>Carrier of intestinal infectious agents</b>
QD01.0	<b>Asymptomatic enteric carriage of Entamoeba</b>
QD01.Y	<b>Other specified carrier of intestinal infectious agents</b>
QD01.Z	<b>Carrier of intestinal infectious agents, unspecified</b>
QD02	<b>Carrier of corynebacterium diphtheriae</b>
QD03	<b>Carrier of infectious agents with a predominantly sexual mode of transmission</b>
QD04	<b>Asymptomatic colonization of the skin by virulent or therapy resistant bacteria</b>  The presence on the skin of bacteria which may pose an elevated risk of disease either to the carrier or to others as a result of therapy resistance or increased virulence.  <b><i>Exclusions:</i></b> Certain skin disorders attributable to bacterial infection (EA40-EA5Z)
QD0Y	<b>Carrier of other specified infectious disease agent</b>
QD0Z	<b>Carrier of infectious disease agent, unspecified</b>
QD2Y	<b>Other specified health status associated with infectious or certain specified conditions</b>

**QD2Z**      **Unspecified health status associated with infectious or certain specified conditions**

Concern about body appearance (QD30-QD3Z)

*Exclusions:*      Body dysmorphic disorder (6B21)

**QD30**      **Concern about breast appearance**

*Exclusions:*      Body dysmorphic disorder (6B21)

**QD31**      **Contact with health services for concerns about body image related to pregnancy**

**QD3Y**      **Other specified concern about body appearance**

**QD3Z**      **Concern about body appearance, unspecified**

Factors influencing health status (QD50-QF2Z)

Problems associated with finances (QD50-QD5Z)

**QD50**      **Poverty**

**QD51**      **Low income**

**QD5Y**      **Other specified problems associated with finances**

**QD5Z**      **Problems associated with finances, unspecified**

Problems associated with drinking water or nutrition (QD60-QD6Z)

**QD60**      **Problems associated with inadequate drinking-water**

*Exclusions:*      Effects of thirst (NF07.1)

**QD61**      **Inadequate food**

*Exclusions:*      Effects of hunger (NF07.0)

Problems with inappropriate diet or eating habits (QE23)

malnutrition (5B50-5B7Z)

**QD6Z**      **Problems associated with drinking water or nutrition, unspecified**

Problems associated with the environment (QD70-QD7Z)

**QD70**      **Problems associated with the natural environment or human-made changes to the environment**

*Exclusions:*      Occupational exposure to risk-factors (QD84)

**Coded Elsewhere:** Problems associated with inadequate drinking-water (QD60)

<b>QD70.0</b>	<b>Problems associated with exposure to noise</b>
<b>QD70.1</b>	<b>Problems associated with exposure to air pollution</b>
	<b><i>Exclusions:</i></b> Problems associated with exposure to tobacco smoke (QD70.5)
<b>QD70.2</b>	<b>Problems associated with exposure to water pollution</b>
	<b><i>Exclusions:</i></b> Problems associated with inadequate drinking-water (QD60)
<b>QD70.3</b>	<b>Problems associated with exposure to soil pollution</b>
<b>QD70.4</b>	<b>Problems associated with exposure to radiation</b>
<b>QD70.5</b>	<b>Problems associated with exposure to tobacco smoke</b>
	<b><i>Exclusions:</i></b> Tobacco use (QE13)
	Personal history of psychoactive substance abuse (QC46)
	Disorders due to use of nicotine (6C4A)
	<b><i>Coded Elsewhere:</i></b> Exposure to tobacco smoke in the perinatal period (KD37)
<b>QD70.6</b>	<b>Problems associated with inadequate access to electricity</b>
	Inadequate power that may restrict healthy living.
<b>QD70.Z</b>	<b>Problems associated with the natural environment or human-made changes to the environment, unspecified</b>
<b>QD71</b>	<b>Problems associated with housing</b>
	<b><i>Exclusions:</i></b> Problems associated with inadequate drinking-water (QD60)
<b>QD71.0</b>	<b>Homelessness</b>
<b>QD71.1</b>	<b>Inadequate housing</b>
	<b><i>Exclusions:</i></b> Problems associated with the natural environment or human-made changes to the environment (QD70)
<b>QD71.2</b>	<b>Problems related to living in residential institution</b>
	<b><i>Exclusions:</i></b> Institutional upbringing (QE94)
<b>QD71.Z</b>	<b>Problems associated with housing, unspecified</b>
<b>QD7Y</b>	<b>Other specified problems associated with the environment</b>
<b>QD7Z</b>	<b>Problems associated with the environment, unspecified</b>

Problems associated with employment or unemployment (QD80-QD8Z)

***Exclusions:*** problems related to housing and economic circumstances (QD71)

***Coded Elsewhere:*** Problem associated with relationships with people at work (QE50.2)

**QD80** **Problem associated with unemployment**

**QD81** **Problem associated with change of job**

<b>QD82</b>	<b>Problem associated with threat of job loss</b>
<b>QD83</b>	<b>Problem with employment conditions</b>
<b>QD83.0</b>	<b>Problem associated with uncongenial work</b>
<b>QD83.1</b>	<b>Problem associated with stressful work schedule</b>
<b>QD83.Y</b>	<b>Other specified problem with employment conditions</b>
<b>QD83.Z</b>	<b>Problem with employment conditions, unspecified</b>
<b>QD84</b>	<b>Occupational exposure to risk-factors</b>
<b>QD84.0</b>	<b>Occupational exposure to dust</b> Occupational exposure to dust is exposure to dust during work, at the work location, or from the work location. The primary route of exposure is inhalation.  Dusts are technically defined as dry particle aerosols produced by mechanical processes such as breaking, grinding, and pulverizing. Dusts may be of biological or nonbiological origin.
<b>QD84.1</b>	<b>Occupational exposure to toxic agents in agriculture</b>
<b>QD84.2</b>	<b>Occupational exposure to toxic agents in industries other than agriculture</b>
<b>QD84.3</b>	<b>Occupational exposure to vibration</b>
<b>QD84.4</b>	<b>Occupational exposure to ergonomic risk</b>
<b>QD84.Y</b>	<b>Other specified occupational exposure to risk-factors</b>
<b>QD84.Z</b>	<b>Occupational exposure to risk-factors, unspecified</b>
<b>QD85</b>	<b>Burnout</b> Burnout is a syndrome conceptualized as resulting from chronic workplace stress that has not been successfully managed. It is characterised by three dimensions: 1) feelings of energy depletion or exhaustion; 2) increased mental distance from one's job, or feelings of negativism or cynicism related to one's job; and 3) a sense of ineffectiveness and lack of accomplishment. Burn-out refers specifically to phenomena in the occupational context and should not be applied to describe experiences in other areas of life.  <b>Exclusions:</b> Adjustment disorder (6B43) Disorders specifically associated with stress (6B40-6B4Z) Anxiety or fear-related disorders (6B00-6B0Z) Mood disorders (6A60-6A8Z)
<b>QD8Y</b>	<b>Other specified problems associated with employment or unemployment</b>
<b>QD8Z</b>	<b>Problems associated with employment or unemployment, unspecified</b>

Problems associated with education (QD90-QD9Z)

**Exclusions:** factors associated with psychological development (Chapter 06)

**Coded Elsewhere:** Relationships with teachers or classmates (QE50.1)

**QD90** **Problem associated with illiteracy or low-level literacy**

**QD91** **Problem associated with education unavailable or unattainable**

**QD92** **Problem with educational progress**

**Exclusions:** Disorders of intellectual development (6A00)

**QD9Y** **Other specified problems associated with education**

**QD9Z** **Problems associated with education, unspecified**

Problems associated with social or cultural environment (QE00-QE0Z)

**Coded Elsewhere:** Acute stress reaction (QE84)

**QE00** **Acculturation difficulty**

Problems resulting from the inability to adjust to a different culture or environment.

**Exclusions:** Disorders specifically associated with stress (6B40-6B4Z)

**QE01** **Stress, not elsewhere classified**

**Exclusions:** Problems associated with employment or unemployment (QD80-QD8Z)

**QE02** **Social role conflict**

**QE03** **Social exclusion or rejection**

Exclusion and rejection on the basis of personal characteristics such as physical appearance, sexual orientation, gender identity and expression, illness or behaviour.

**Exclusions:** Target of perceived adverse discrimination or persecution (QE04)

**QE04** **Target of perceived adverse discrimination or persecution**
